PREFACE

Traffic Trend

A comparison of the 2009 over 2008 annual traffic volume data shows that state highway travel increased in 2007. This year's increase in vehicle miles of travel on California highways compares with prior years as follows:

2009 over 2008……..-0.6%
2008 over 2007……..+3.5%
2007 over 2006……..+0.1%
2006 over 2005……..+0.3%
2005 over 2004……..+1.0%

Traffic Profile

This booklet lists 2008 traffic volumes for all count locations on the California state highway system. Peak hours, peak month ADTs and annual ADTs are shown at each count location. Significant volume changes (breakpoints) in the traffic profile along each route are counted and identified by name and milepost value. In addition to the profile breakpoints, the booklet lists county lines and well-known landmarks to aid in orientation.

The figures shown in the booklet above each profile breakpoint apply to the highway immediately back of the breakpoint and the figures shown below apply immediately ahead of the breakpoint. Therefore, between any two successive breakpoints along the route it may be assumed that traffic volumes will vary from one breakpoint to the next at a reasonably uniform rate of increase or decrease. Where only a single set of figures appears between two breakpoints, a constant volume of traffic may be assumed for the intervening section of highway.

All traffic volume figures listed in this booklet include traffic in both directions unless otherwise indicated.

Route Number

All California state highways are listed in this booklet in order of Legislative Route number.

Milepost

Each profile breakpoint is identified by the milepost value corresponding to that point on the highway. The milepost values increase from the beginning of a route within a county to the next county line. The milepost values start over again at each county line. Milepost values usually increase from South to North or West to East depending upon the general direction the route follows within the state.

The milepost at a given location will remain the same year after year. When a section of road is relocated, new mileposts (usually noted by an alphabetical prefix such as "R" or "M") are established for it.

Annual Average Daily Traffic (Annual ADT)

Annual average daily traffic is the total traffic volume for the year divided by 365* days. The traffic count year is from October 1st through September 30th. Very few locations in California are actually counted continuously. Traffic counting is generally performed by electronic counting instruments moved from location to location throughout the State in a program of continuous traffic count sampling. The resulting counts are adjusted to an estimate of annual average daily traffic by compensating for seasonal influence, weekly variation and other variables which may be present. Annual ADT is necessary for presenting a statewide picture of traffic flow, evaluating traffic trends, computing accident rates, planning and designing highways and other purposes.

Peak Month ADT

The peak month ADT is the average daily traffic for the month of heaviest traffic flow. This data is obtained because on many routes, high traffic volumes which occur during a certain season of the year are more representative of traffic conditions than the annual ADT.

Peak Hour

This publication includes an estimate of the "peak hour" traffic at all points on the state highway system. This value is useful to traffic engineers in estimating the amount of congestion experienced, and shows how near to capacity the highway is operating. Unless otherwise indicated, peak hour values indicate the volume in both directions.

A few hours each year are higher than the "peak hour," but not many. In urban and suburban areas, the peak hour normally occurs every weekday, and 200 or more hours will all be about the same. On roads with large seasonal fluctuations in traffic, the peak hour is the hour near the maximum for the year but excluding a few (30 to 50 hours) that are exceedingly high and are not typical of the frequency of the high hours occurring during the season.

Peak Hour Traffic Directional Split

The Peak Hour Traffic Directional Split listing is given after the last route. The listing is by district, route, control station, milepost, leg, one-way peak hour volume (1-way PHV) and shows the 2-way peak hour percent of AADT (K Factor), the percent traffic in the peak direction (D Factor), the 1-way peak hour percent of AADT (KD Factor), the ending hour, day, and month for the AM and the PM peak hours. The data given is for the latest year available at each of the control stations counted in the last three years. A glossary is also included.

---

* The routes listed on page iv were closed during the year for one month or more. The locations are listed in three groups: A. Regular Winter Closure, B. Closure Due to Flooding, Mudslide or Washout, and C. Closure Due to Construction. The ADT shown reflects travel while the route is open.

Closures List

A. Regular Winter Closure

Route	Location/Miles Closed
2	.1 mile East of Kratka Ridge Skilift to Vincent Gap, 11.7 miles.
4	Ebbetts Pass, Mt. Reba Road to Jct. Route 89, 29 miles.
89	Monitor Pass, Jct. Route 395 to Jct. Route 4, 17.5 miles.
108	Sonora Pass, 6 miles East of Strawberry to 7 miles West of Jct. Route 395, 35 miles.
120	Tioga Pass, Crane Flat to 5 miles West of Jct. Route 395, 55 miles.
120	Mono-Milss Road, 2 miles East of Jct. Route 395 to 6 miles West of Jct. Route 6, 37.6 miles.
158	June Lake Loop, Powerhouse to North Jct. Route 395, 8.6 miles.
168	Bishop Creek Road, Aspendell to Lake Sabrina, 1.25 miles.
172	Mill Creek, Mill Creek P.O. to East Jct. Route 36, 3.2 miles.
173	Deer Park Road to Hesperia Road, 1.6 miles.
180	Kings Canyon National Park, Hume Lake Road to Deer Cove Creek, 19.8 miles.
203	Mammoth Lakes Road, Beginning at Mno/Mad. County line to 1 mile East, 1 mile.

TRAFFIC CENSUS DEFINITIONS

Definition of Legs:

Highway segments are defined according to postmile designation, which is a location on the state highway system. Counts are taken ahead or in back of a given location on the state highway system. There are also legs assigned to onramps and offramps, and other count locations. The legs are listed below.

A = ahead leg
B = back leg
S = cross street
N = onramp
F = offramp
O = equal traffic volume for back and ahead legs
X = interchange (with counts collected in the middle of the interchange).

Definitions of AADTs

Back annual average daily traffic (AADT) usually represents traffic South or West of the count location and is the total volume for the year divided by 365 days. Ahead annual average daily traffic (AADT) usually represents traffic North or East of the count location and is the total volume for the year divided by 365 days.

AADT's represent both directions of travel, and summing them together will result in erroneous data.

Some locations in California are counted continuously. Traffic counting is generally performed by Automatic Traffic Recorders (ATR's) that are placed in various locations through out the state in a program of continuous traffic sampling. The resulting counts are adjusted to an estimate of annual average daily traffic by compensating for seasonal influence, weekly variation and other variables which may be present.

Peak Hour usually represents an estimate of the heaviest traffic flow which usually occurs between 7 to 9 AM and 5 to 7 PM. Peak Hour values indicate the volume in both directions. In urban and suburban areas, the peak hour normally occurs every weekday. On roads with large seasonal fluctuations in traffic, the peak hour is the hour near the maximum for the year but excluding a few (30 to 50 hours) that are exceedingly high and are not typical of the frequency of the high hours occurring during the season.

Peak Month ADT is the average daily traffic for the month of heaviest traffic flow, usually July or August. This data is obtained because on many routes, high traffic volumes which occur during a certain season of the year are more representative of traffic conditions than the annual ADT.

Postmile Prefiix

New postmile values are assigned whenever a length of highway is changed due to construction or realignment. To differentiate the new values from the old, an alpha code is added prefixing the postmile for new values.

Postmile Prefix Codes

C- Commercial Lanes
D- Duplicate postmile at meandering county line
G- Reposting of duplicate postmile oat end of route
H- Overlap of D mileage
L- Overlap postmile
M- Realignment of R mileage
N- Realignment of M mileage
R- First realignment
S- Spur
T- Temporary connection

Types of Counts

The Census program measures traffic volumes, vehicle classification, and weigh-in-motion. Volumes and classification are measured on a continuous, short-term, and quarterly basis. Continuous counts and quarterly counts are referred to collectively as *control counts.*

Counts collected at selected continuous counts sites are to be submitted to Caltrans Headquarters on a monthly basis, and a subset of these are then submitted to FHWA, also on a monthly basis. The counts submitted to Headquarters are known as *trend counts*, and those that are then submitted to FHWA are known as *FHWA counts.*

Counting equipment is designed to count:
• Axles;
• Vehicles;
• Vehicles by class (classification counts); and
• Vehicle weights, using weigh-in-motion (WIM) technology.
Table 2.1 summarizes the names, duration, and frequency of Caltrans Census Counts.

Types, Duration, and Frequency of Census Program Counts
Name Duration Submittal Frequency

1. FHWA: Continuous Monthly

2. Trend: Continuous Monthly

3. Control: Seven-day period on a quarterly rotation (every third month, for example, October-January-April-July) every year

4. Profile: Sample, typically for a seven-day period every three years

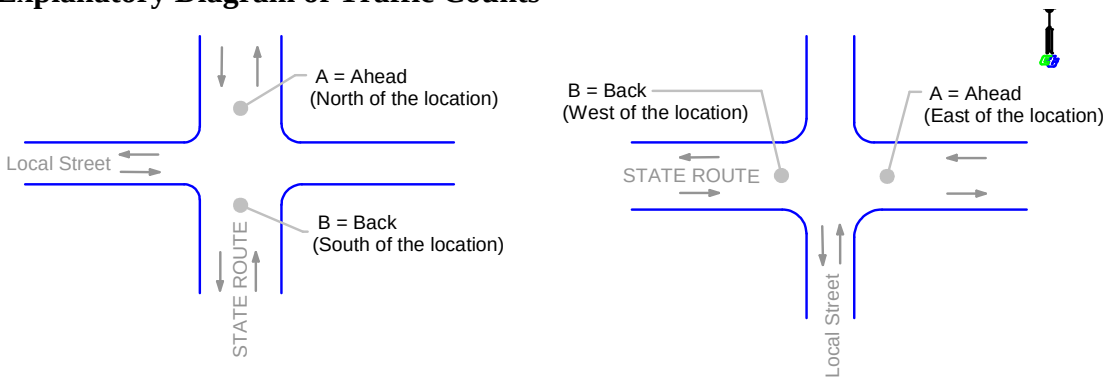
5. Ramp: Seven-day period every three years

6. Classification: Seven-day period or continuous

7. Quarterly/Rotation: (for example, October-January-April-July) every six years

8. Cross-Street: Minimum 48 hours every 10 years

Explanatory Diagram of Traffic Counts



Generally, in California West to East routes are even numbered, while South to North routes are odd numbered. In addition, the postmile values increase from South to North or West to East depending upon the general direction the highway follows within the state, except the following 5 backward routes, route 71 (North to South), route 224 (East to West), route 282 (East to West), route 580 (East to West), and route 780 (East to West).

PEAK HOUR VOLUME DATA

Peak hour volume data consists of hourly volume relationships and data location. The hourly volumes are expressed as a percentage of the Annual Average Daily Traffic (AADT). The percentages are shown for both the AM and the PM peak periods.

The principle data described here are the K factor, the D factor and their product (KD). The K factor is the percentage of AADT during the peak hour for both directions of travel. The D factor is the percentage of the peak hour travel in the peak direction. KD multiplied with the AADT gives the one way peak period directional flow rate or the design hourly volume (DHV). The design hourly volume is used for either Operational Analysis or Design Analysis. Refer to the 2000 Highway Capacity Manual for more details.

Following is a glossary of terms used in this listing of peak hour volume data:

Dir	Indicates direction of travel for peak volume
AADT	Annual Average Daily Traffic in vehicles per day (vpd).
AM Peak	Represents the morning peak period for traffic analysis
CS	Control Station Number, Caltrans identification number for monitoring site.
CO	County abbreviation used by Caltrans
D	D factor. The percentage of traffic in the peak direction during the peak hour. Values in this book are derived by dividing the measured PHV by the sum of both directions of travel during the peak hour.
DAY	Day of week for the peak volume.
DDHV	The directional design hour volume, in vehicles per hour (vph) DDHV=AADTxKxD. See equation (8-1) on page 8-11 of the 2000 Highway Capacity Manual.
DI	Caltrans has twelve transportation districts statewide. This abbreviation identifies the district in which the count station is located.
HR	The ending time for the peak hour volume listed. The volume observed fro 1 to 2 would be recorded as 2.

K	The percentage of the AADT in both directions during the peak hour. Values in this table are derived by dividing the measured 2-way PHV by the AADT.
KD	The product of K and D. The percentage of AADT in the peak direction during the peak hour. Values in this table are derived by dividing the measured 1-way PHV by the AADT.
LEG	For traffic counting purposes, a highway intersection or interchange is assigned two legs according to increasing postmiles (route direction) and with a postmile reference at the center of the intersection or interchange. The volume of traffic on each leg is denoted by an A, B or O. A = ahead leg, B = back leg, and O – traffic volume being same for both back and ahead legs.
MNTH	The month that the peak volume occurred.
PHV	Peak Hour Volume in the peak direction. A one way volume in vehicles per hour (vph) as used here. The PHV is analogous to the DDHV as used for design purposes.
PM	The Post Mile is the mileage measured from the county line, or from the beginning of a route. Each postmile along a route in a county is a unique location on the state highway system.
PM Peak	Represents the afternoon peak period for traffic analysis.
PRE	The postmile may have a prefix like R, T, L, M, etc. When a length of highway is changed due to construction or realigment, new postmile values are assigned. To distinguish the new values from the old, an alpha code is prefixed to the new postmile.
RTE	The state highway route number
YR	The year when the count was made. Traffic counting is on a 3-year cycle.

Glossary and Acronyms

AADT – Annual Average Daily Traffic are traffic volume estimates representing the average value of daily traffic over the course of a year.
AADTT – Annual Average Daily Truck Traffic.
AASHTO – American Association of State Highway and Transportation Officials.
AAWDT – Annual Average Weekday Traffic are traffic volume estimates representing the average value of weekday traffic over the course of a year.
ADT – Average Daily Traffic are the average of daily traffic for a specific time period, such as a month (MADT) or a year (AADT).
AVC – Automatic vehicle classifying counters.
Axle-Correction Factor – Estimated ratio of the number of axles to the number of vehicles operating at a count site or on a set of roads; used to convert axle counts (such as those collected using road tubes) to estimates of vehicle counts.
Caltrans – California Department of Transportation.
Classification Count – Traffic count by vehicle type, usually distinguished by number and location of axles or by vehicle length.
Control Station – A traffic segment on which quarterly or continuous counts are collected.
Control/Quarterly Count – Traffic count taken over a seven-day period quarterly (e.g., October-January-April-July) every three years. This count is used to establish traffic volume variations according to the time category.
Count Year – October 1 through September 30.
CR – County road.
Cross-Street Count – Counts on local streets that cross a state highway. These counts are required for TASAS.
DOT – Department of Transportation.
DOW – Day of week.
DVMT – Daily Vehicle Miles of Travel.
EPA – Environmental Protection Agency.
ESAL – Equivalent Single Axle Load.
FHWA – Federal Highway Administration.
FHWA Count – A subset of continuous counts that are submitted to the Federal Highway Administration (FHWA).
FHWA Functional Systems – A set of seven roadway functional systems used by FHWA and defined in the HPMS Field Manual. See Section 3.3.3 for a list of these functional systems.
GFG – Growth Factor Group, a group of traffic segments that have similar growth rates and which are factored for growth using the same growth factor.
GIS – Geographic Information System.
Growth Factor – A multiplier used to convert an estimate of AADT for one year to an estimate for a subsequent year, usually the following year.
HERS – Highway Economic Requirements System.
HPMS – Highway Performance Monitoring System (HPMS) – An FHWA database containing data submitted by Caltrans and other states summarizing

selected characteristics of all roads in the state, including local roads.
HTV – The Caltrans format for loading total vehicle traffic counts into the TSN.
ITS – Intelligent Transportation System.
Leg – Highway segments defined according to ascending postmiles and a postmile reference at the center of an intersection or interchange
LIDAR – Light detection and ranging devices.
MADT – Monthly Average Daily Traffic, representing the average daily volume over the course of a given month.
MPO – Metropolitan Planning Organization.
NAAQS – National Ambient Air Quality Standards.
NHS – National Highway System.
PeMS – (Freeway) Performance Monitoring System.
Postmile – Reference values used to establish relative locations along highways in terms of miles and their fractions.
Profile Count – Also called a sample count. A short-term count collected at least one day (but typically seven days) every three years.
Quarterly Count – Traffic count taken over a seven-day period quarterly (e.g., October-January-April-July) every three years. This count is used to establish traffic volume variation according to the time category.
Ramp Count – Traffic count taken at on- and off-ramps, which are used for ramp balancing.
Recording Counter – A counting machine that periodically records on storage media the number of vehicles counted during specific time periods.
Route Profile – The variation in traffic volumes by postmile along a highway.
SHS – State Highway System.
SR – State road.
TASAS – The legacy Traffic Accident Surveillance and Analysis System has been incorporated into the TSN.
TMC – Traffic Management Center.
TMG – Traffic Monitoring Guide.
TMS – Traffic Monitoring System (a system for monitoring or collecting traffic data), or Traffic Management System (a system for managing traffic operations).
TMS Detection – Automatic sensors deployed as part of the Transportation Management System. Although the sensors are used primarily for ramp metering, traveler information, and incident management, data from the sensors also may be used for traffic census.
Traffic Count – Tally of vehicles passing a given point on a roadway in a given period of time.
Traffic Segment – A segment of road for which a single value of AADT is estimated.
Traffic Station – A highway segment on which traffic is counted.
Traffic Volume – Count or estimate of the number of vehicles passing a given point on a road in a given period of time.
Trend Count – Counts that are collected continuously and submitted by districts to Caltrans Headquarters monthly.
TSN – Caltrans developed the Transportation System Network (TSN) as an

Oracle database to replace four legacy systems: TASAS, Traffic Volumes, HPMS, and the Pavement Management System.
VC – Vehicle classification.
VCR – The Caltrans format for loading vehicle classification data into the TSN.
VMT – Vehicle Miles of Travel.
WIM – Weigh-in-motion.
