#### **Forecast Summary**

- 1,100 non-farm jobs will be created in Santa Cruz County during 2019. Over the following five years, an average of 400 new jobs are expected per year.
- Employment growth will be led by leisure services, education and healthcare, and government. These sectors will account for 82 percent of net job creation through 2024.
- The unemployment rate averaged 4.9 percent in 2018, and is expected to fall to 4.8 percent in 2019. The county has now reached a "full employment" scenario, and little further improvement in the unemployment rate is expected.
- The population declined in 2018. It will grow relatively slowly during the forecast period.
- Housing production has increased in recent years, but has not kept pace with population growth. Consequently, coastal county home prices have risen faster than resident incomes, sharply reducing housing affordability.

#### Job Growth

- The expected slowdown in job creation is underway. Santa Cruz County is vulnerable to a contraction in employment in 2020 or 2021 if the economy falls into recession.
- The leading industries in 2018 were manufacturing, leisure and hospitality, and government.
- The largest employment contraction was observed in retail trade.
- Between 2012 and 2018, non-farm employment grew by 2.2 percent per year.

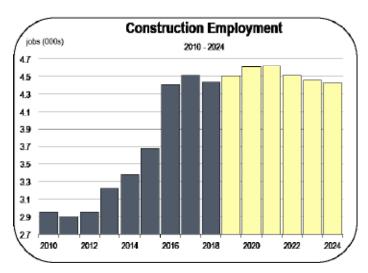

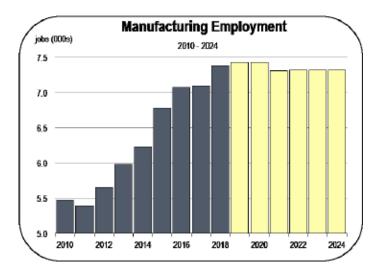

- Between 2018 and 2024, growth is forecast to average 0.5 percent per year.
- Approximately 1,100 non-farm jobs will be created during 2019.
- Through 2024, an average of 350 new non-farm wage and salary jobs are expected per year.

#### **Construction Employment**

- Most Santa Cruz County construction workers are involved with residential projects. Slightly fewer homes were built in 2018 than the previous year, leading to minor downsizing at local firms.
- Only a modest number of jobs are expected to be created in the next few years. The building cycle has largely peaked in most parts of California, although more homes could break ground over the next few years in Santa Cruz County.

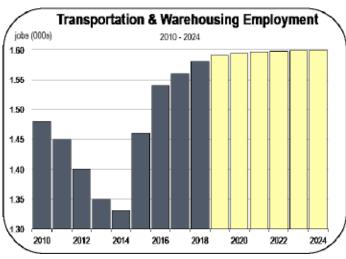

### Manufacturing Employment

- The Santa Cruz County manufacturing sector is mainly comprised of food packaging and processing in Watsonville, driven by the presence of Dole, Driscoll's, and other agriculture operations.
- The county also has prominent supplement makers in Scotts Valley (Planetary Herbals and Source Naturals), and a large telephone company (Plantronics) northwest of Downtown Santa Cruz.
- The manufacturing industry has largely peaked for the current economic cycle, and a small number of manufacturing jobs could be lost over the next few years.

### **Transportation and Warehousing Employment**

 Transportation and warehousing had been creating jobs rapidly, largely due to the transition towards online shopping. Because more goods are being shipped directly to consumers rather than

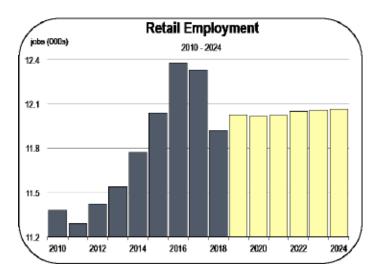

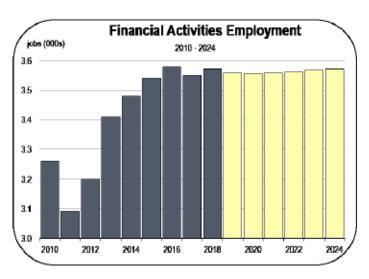

to physical store locations, demand has increased for delivery drivers at companies like UPS and FedEx.

- Very few jobs were generated in 2017 and 2018, and almost no new jobs are expected in 2019 or 2020.
- This sector is vulnerable to job contraction if the economy lapses into recession.

#### **Retail Trade Employment**

- Retail sales are plateauing, and retail establishments are shedding jobs.
- The industry is diverging into three distinct segments:
  - Brick-and-mortar stores facing heavy online competition
  - Brick-and-mortar stores not facing heavy online competition
  - · Online retailers themselves
- Job losses have accelerated at stores that face online competition:
  - · Clothing stores
  - Department stores (i.e. Macy's)
  - · Sporting goods stores
  - Furniture Stores
  - · Consumer electronics stores
  - Book stores
  - · Office supply stores
- In most parts of the state, stores not facing heavy online competition are still creating jobs. But in Santa Cruz County, this segment also downsized in 2018:
  - · Grocery stores
  - · Gas stations
  - · Car dealers
  - Drug stores and healthcare stores

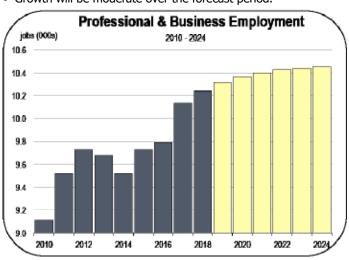

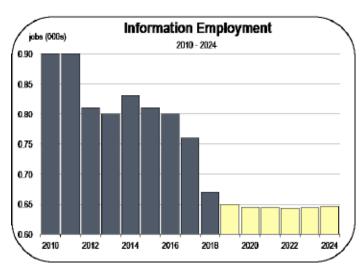

- Employment within the broad financial sector has been relatively stable over the last 4 years.
- A strengthening real state market has led to higher demand for real estate agents and property management professionals, but the banking industry is transitioning to online services, and fewer customers are visiting their local branches.
- Over the forecast period, employment growth will be minimal as the real estate sector plateaus, and as local banks expand their business lines without adding large numbers of employees.

### **Professional and Business Services Employment**

- This industry generated 100 new jobs in 2018.
- Most of these job gains were in high-skill sectors like scientific research, IT consulting, and accounting.
- Growth will be moderate over the forecast period.

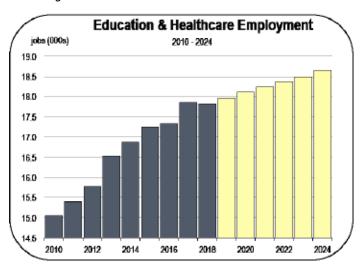

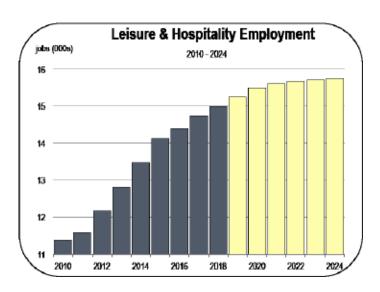

#### **Information Employment**

- The Information sector continues to contract, and no sustained growth will be observed over the forecast period.
- In Santa Cruz County, this industry is primarily comprised of newspaper companies, software firms, movie theaters, and telecommunications firms.
- Losses continue to mount at newspapers. Before the last recession, there were 10 newspaper companies, and each employed an average of 28 people. Now there are only 6 newspapers, with an average headcount of just 9 workers.
- Telecom companies are also declining, and even software publishers are now losing jobs in Santa Cruz County, with several companies moving to other markets.

### Private Education and Healthcare Employment

The healthcare sector gained approximately 100 jobs in 2018. All
of this growth was observed at doctors' offices and at centers that

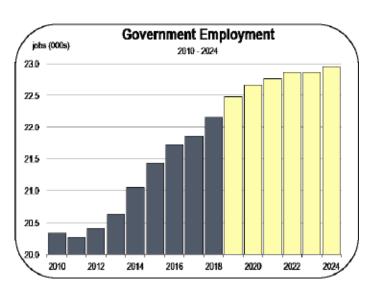

• Jobs were lost at private schools (public schools are included in the government industry).

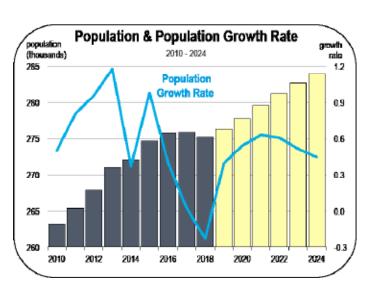

### Leisure and Hospitality Employment

- Increased consumer demand has led to higher spending at restaurants, generating 100 new restaurant jobs last year.
- Job growth also occurred at hotels and fitness centers.
- 500 new jobs will be created by 2020, due largely to expansion in the restaurant sector.

### **Government Employment**

• In 2018, government agencies generated 300 new jobs. 50 of these were at UC Santa Cruz and the local community colleges.

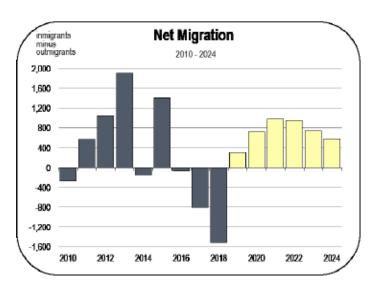

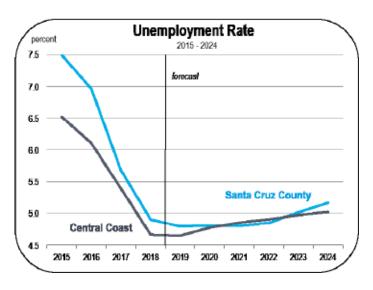

- 200 jobs were created at local public schools, and another 50 were generated at municipal agencies.
- Future job gains will depend on local population growth and government budgetary conditions.

#### **Population Growth**

- The Santa Cruz County population declined by more than 600 residents last year.
- 1,500 net migrants left the county, as people moved to places with more affordable homes.
- An average of 710 net migrants will enter the county each year from 2019 to 2024, attracted by lifestyle and the increase in new housing production.
- The population will expand by 0.5 percent per year, and the county will approach 285,000 residents by 2024.

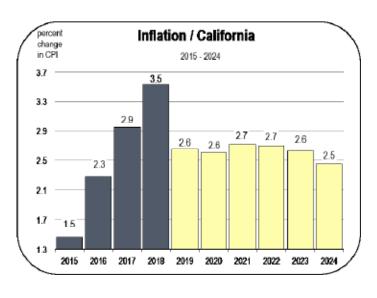

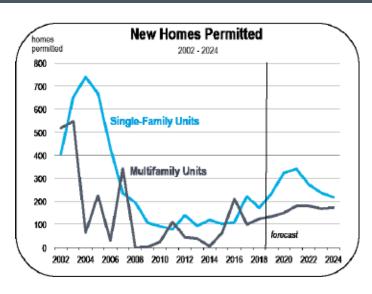

- The unemployment rate in Santa Cruz County averaged 4.9
  percent in 2018, which was higher than the composite rate for
  the Central Coast. Unemployment will fall to 4.8 percent in 2019.
- The county has reached it's "full employment" level, meaning that virtually everyone who wants a job has or can find a job. Under these conditions, little additional improvement in the unemployment rate is expected.
- Inflation accelerated in 2018 in California as energy prices increased and housing costs rose rapidly. Inflation will remain elevated in 2019 and 2020, and will likely be above 3 percent.

### **New Housing Production**

• From 2013 to 2018, an average of 225 homes were permitted per year.

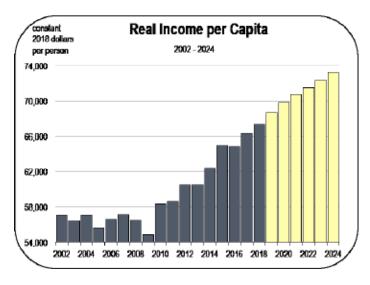

- Housing production is forecast to average 440 homes per year from 2019 to 2024. Most new units will be single-family homes.
- This is an improvement, but still insufficient to accommodate expected population growth.
- Housing affordability has become a principal social issue due to the growth in the demand for housing exceeding the growth in supply. The typical mortgage now accounts for more than half of pre-tax income for most households.

#### Income per Capita

- Income per capita in 2018 was \$67,300, which is significantly above the Central Coast average of \$60,500.
- Over the last six years, real incomes have risen at an average rate of 1.8 percent per year, which is similar to the Central Coast average of 1.9 percent per year.

 Over the next six years, real incomes are expected to rise by approximately 1.4 percent per year in Santa Cruz County, and by 1.5 percent per year across all Central Coast counties.

#### New vehicle registrations will only increase by 0.1 percent per year over the entire 2018—2024 forecast period, which is much solwer than expected population growth (0.5 percent per year).

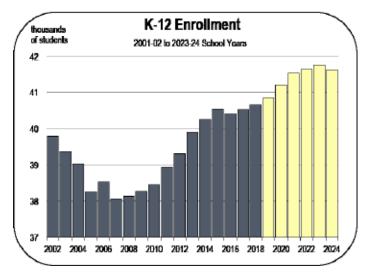

#### **Registered Vehicles**

- There were 263,200 registered vehicles in Santa Cruz County during 2018.
- By 2024, it is expected that the county will have approximately 264,600 registered vehicles.

#### **Public School Enrollment**

- In San Joaquin County, approximately 40,700 students were enrolled in K-12 public schools during the 2017—2018 school year.
- By 2024, there are expected to be 41,600 K-12 students in the county.
