L. Fong

Subject: Longitudinal Encroachment – 16” Gas Main

Your encroachment exception request, dated September 3, 2002, (received October 8, 2002, to allow for an existing 16” gas line to be relocated and portions to remain in place, within access controlled rights of way, is conditionally approved.

This \$55 million Department widening project on Route 15, through the City of San Diego, will provide auxiliary lanes, HOV lanes and direct ramp access for buses. A 16” gas main owned by SGDE, was installed in 1949 with an alignment skewed approximately 30 degrees to the centerline of Route 15. The gas main was recently inspected by the owner and the current service life was estimated to be forty years.

This request for longitudinal encroachment is to perpetuate the existing alignment of the 16” gas main. A segment of the gas main near the east side of Route 15 will be lowered to provide clearances to the proposed highway facilities. No other future improvements are anticipated for this segment of Route 15.

Condition of Approval:

1. This approval does not set any precedents.
2. All work within the State right of way shall conform to the Departments' construction and safety policies, guidelines and standards.
