

PM Tools

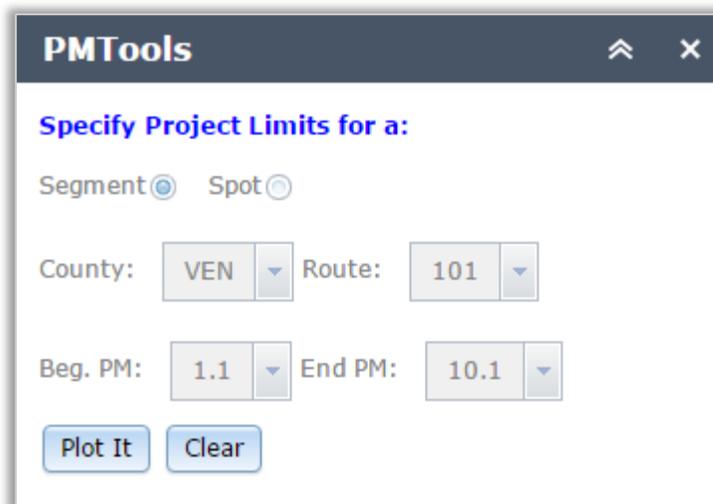

The purpose of the tutorial is to showcase the functionality of the **PM Tools**. The *PM Tools* lets you locate a *PM Segment* or *PM Spot* on the map.

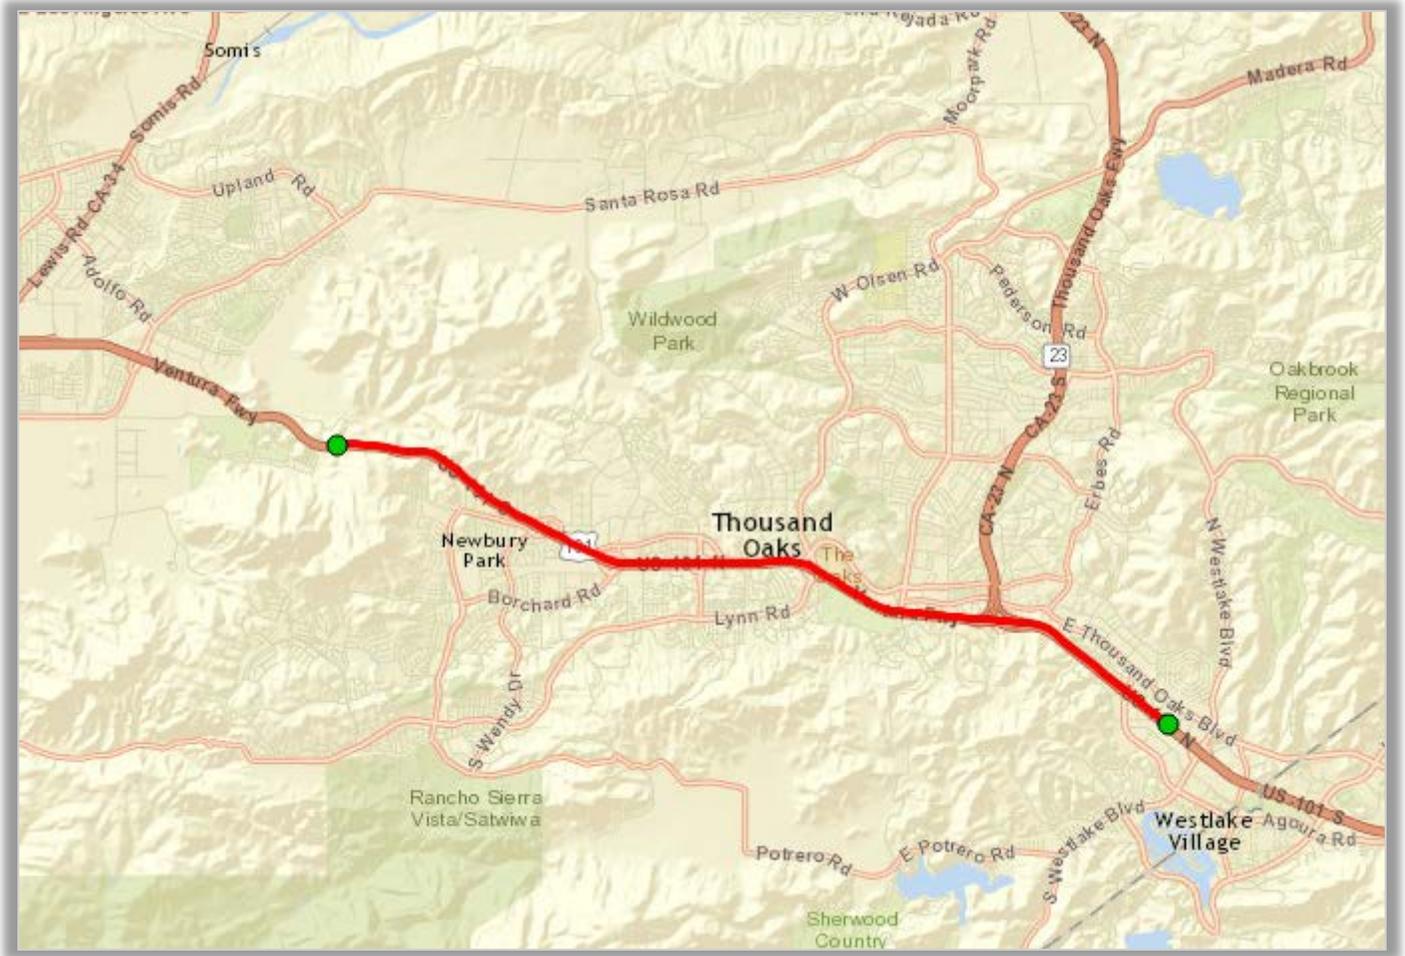

1. When you first log onto the *DEA Postmile Tools* application, the PM Tools bar will be displayed on the right.

2. Select to display a *Segment* line between postmiles, or a *Spot*, to locate a specific postmile.
3. When using the *Segment* line, select a *County*, the *Route*, and the *Beginning* and *Ending Postmile*.

4. Click the *Plot It* button to locate the postmile on the map.

5. When using a postmile *Spot*, choose the *County*, *Route*, and the *Beginning PM* to locate.

6. When ready, click the *Plot It* button to locate the postmile on the map.

7. Both the line segment and the postmile spot are still on the map.

8. Both will disappear from the map when you click the *Clear* button.
