- Providing protocols for species protection surveys.
- Pre-construction Survey and Report.
- Initial Monitoring Report.
- Weekly Monitoring Report(s).
- Incident Report(s).
- Annual Monitoring Report.
- Final Monitoring Report.

Galloway Enterprises will provide a qualified fisheries biologist(s) to conduct fish relocation, using methods approved by the National Marine Fisheries Service and California Department of Fish and Wildlife.

Duties and construction related tasks will consist of:

- Supervise the installation of a cofferdam or water bypass
- Capture and remove fish located within the dewatered area, then relocate the fish to an appropriate habitat downstream of the project site.
- Prepare and provide a Fish Removal and Relocation Summary Report.

Qualifications:

Senior biologist Jody Galloway will serve as Project Manager, and oversee the QA/QC's for the items included in this scope of work. Our Lead Biologist, Christine Schukraft, is the point of contact for the project and meets the fisheries requirements to perform the onsite fish relocation. Biologist, Melissa Murphy, will perform the majority of all other on-site monitoring and reporting. All Galloway Enterprises biological staff meets the qualifications listed in the specifications and are Caltrans, CDFW, and USFWS approved biological monitors. We have over 20 years of experience providing on-site emergency and environmental compliance monitoring throughout northern California. For more information please contact us at (530) 332-9909 or visit: www.gallowayenterprises.com. The resumes of our monitoring staff are supplied at your request.

Project Assumptions:

- The Contactor will conduct all vegetation management in consultation or supervision with Galloway.
- Galloway assumes that the project will be constructed over two construction seasons due to limitations of working in the creeks when flowing water is present.
- The Contractor will provide a schedule so that Galloway can conduct surveys within the appropriate time limits identified in Contract specifications.
- Fish relocation will not require the use of electroshocking equipment.
- Galloway assumes 1 round of edits on the NRPP and Final Report. Requests for additional edits or modifications after final submission will be invoiced on a time and material basis.
- If site grubbing has not been performed and work is performed between March 1 – June 15, additional nesting bird and raptor surveys maybe required.

Cost estimate:

The engineer has estimated the number of Contractor Supplied Biologist work days as sixteen (16). Per the Caltrans Special Provisions item 14.602C (6) Monitoring Schedule, nesting raptor and migratory bird surveys are required once every three (3) working days during the nesting season (March 1-August 31). The project work period per the California Department of Fish and Wildlife Streambed Alteration Agreement (1600-2013-2019-R2) is June 15 through October 15; therefore nesting bird surveys must be conducted once every 3 working days from June 15-August 31 for a total of eighteen (18) days per year. An additional 6 days are estimated for the kick-off meeting, pre-construction surveys, and fish relocation for a total of 24 days each year of work. Contingency days are provided in addition to the total monitoring cost estimate.
