S.A.M. Rhodes will provide profilograph testing services utilizing the High Speed Inertial Profiler (HSIP). The Inertial Profiler is equipped with the FHWA's engineering software ProVal which will be used to collect profiling data under AASHTO R56. The profiling data will include the raw profile data, ProVal ride quality analysis reports for IRI and MRI of each lane, ProVal smoothness assurance analysis reports for both left and right IRI's, GPS data file for each lane, and applicable IP calibration and verification test results. Per the specifications we will perform inertial profiling for each lane except areas as dictated by the specifications which require a 12 foot straightedge. The shifts for HSIP have been determined based on an 8-hour shift for pre-pave, post-grind, post pave, and or final profile with technician to mark sections that do not comply with the specification time per shift.
