### DIRECTIVE

Ungalvanized or weathering steel barrier rail elements deteriorate at a rapid rate and may not provide requisite protection. Steel joint subject to wet conditions and salt or coastal/marine conditions are a real concern. The use of this material shall be considered only where rainfall is minimal (under 8 inches per year) and there is no salt in the area. Any exception requires Traffic Liaison written approval.

IMPLEMENTATION

All new and existing installations of weathering steel or ungalvanized steel guardrail or median barrier shall be examined (annually) to determine their condition. Those installations showing signs of advanced deterioration shall be replaced as soon as possible. Advanced deterioration is defined as visible tubercular rust signs. Replacement metal parts shall be galvanized. Questions should be directed to Mr. Ellis Hirst, Chairman, Highway Safety Features New Products Committee (HSFNPC) at (916) 654-2465 or Calnet 8-464-2465.

BACKGROUND

Previous policy did not allow weathered or ungalvanized steel rail. Some exceptions were made allowing ungalvanized steel to be used in specific locations for aesthetic reasons.
DEFINITIONS

Meanings of "Shall," "Should," and "May"
To clarify the meanings intended in this Policy Directive by the use of these words, the following definitions apply:

1) **Shall** - A mandatory requirement. Mandatory requirements are those considered most essential to achievement of overall objectives of this Policy Directive. Mandatory requirements use the word "shall" and are printed in **Boldface** type.

2) **Should** - An advisory requirement. Advisory requirements are important also, but allow greater flexibility in application to accommodate varying conditions. Advisory requirements use the word "should" and are indicated by **Underlining**.

3) **May** - A permissive requirement. Permissive requirements use the word "may" and indicate that no requirement for application is intended.
