

## Memorandum

*Flex your power!  
Be energy efficient!*

To: DISTRICT DIRECTORS

Date: October 5, 2012

From: **ROBERT PIEPLOW**   
Acting Deputy Director  
Project Delivery

Subject: **AMERICANS WITH DISABILITIES ACT (ADA) COMPLIANCE**

Caltrans is committed to improving mobility for all travelers on the State highway system. Design Information Bulletin (DIB) 82 "*Pedestrian Accessibility Guidelines for Highway Projects*" provides ADA design guidance and standards to comply with various federal and state laws and regulations on pedestrian accessibility. It is imperative that every highway project be designed in accordance with DIB 82 to comply with applicable ADA requirements, including all Encroachment Permit projects, within the state highway right-of-way, regardless of the project's sponsor. DIB 82 requires project engineers to certify at Ready-to-List (RTL) that the project plans and specifications comply with DIB 82.

Similarly, it is imperative that every such highway project complies with the ADA standards in DIB 82 prior to Construction Contract Acceptance (CCA). Therefore, the district directors are to meet with their deputy district directors for design and construction to establish district procedures to ensure they are compliant. The district established procedures must include as part of the process a statement signed by both the deputy district directors for design and construction certifying that the project "as-built" complies with the ADA standards in DIB 82. Certification may be delegated to the lowest responsible level (e.g. the project engineer and resident engineer) at the discretion of the District. Effective October 16, 2012, the district certification will become a requirement before a project can achieve CCA or before the Notice of Completion is provided for a permit project.

If you have any questions, please contact Tim Craggs, Acting Design Division Chief at (916) 653-1027.
