Pavement Rehabilitation & Complete Street Project Newsletter

Issue—9—5-11-2026

Welcome to this installment of the State Route—29 (SR-29) Pavement Rehabilitation and Complete Street Project Newsletter.

Work is gaining momentum as curbs are being filled in.

For this issue I would like to highlight bike lanes. SR-29 will have Class II and Class IV bike lanes implemented in different areas of the project. What does this mean?

A **Class II bike lane** is a striped lane on the street meant for people riding bicycles. It's not separated by a physical barrier, but with pavement markings and sometimes green paint to help it stand out.

Think of it like giving bicyclists their own dedicated space on the road, so everyone has a predictable place to be. Some of the features to the

bike lane are that they are usually 5 to 6 ft wide and often painted green for visibility. They are exclusive or semi-exclusive for bikes, cars should not drive in it except when turning or merging safely. They

Class II: Bike Lane

(Example of a Class II Bike Lane)

improve safety by giving bicyclists a clear, consistent space and reduce conflicts with drivers by making it a more predictable path of travel for everyone.

The other type of bike lane that will be featured on SR-29 is a Class IV. A **Class IV bike lane** gives bicyclist their own protected path right next to the road. The path usually separated with barriers the help keep bikes and cars apart.

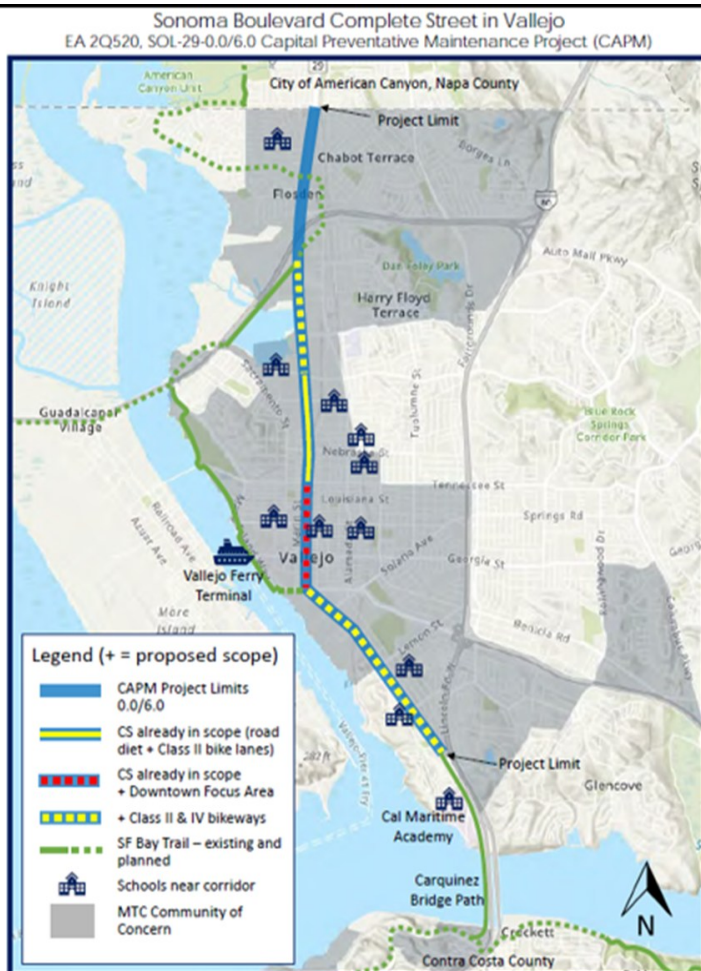

Class IV: Cycle Track or Separated Lane

(Above an example of a class IV bike lane.)

In addition you can see below of the map of SR-29 and where the bike lanes will be added and how they connect cyclist to the Carquinez Bridge.
