

2022 California TAMP Kick-Off Webinar

2022 California Transportation Asset Management Plan

The time has come to work on the next Transportation Asset Management Plan (TAMP) for California. The TAMP is required to be updated every 4 years and establishes the desired state of repair condition targets for National Highway System pavement and bridges over a 10-year period including State Highway System assets per California Transportation Commission guidance. One of the primary goals for this TAMP is to develop a plan that is more meaningful and useful that provides alignment with regional plans and creates a shared vision for the performance management of NHS assets moving forward.
