

Select State Highway System Project Outcomes

5-Year Summary of Projects Completed Between July 2018 to June 2023

January 2025

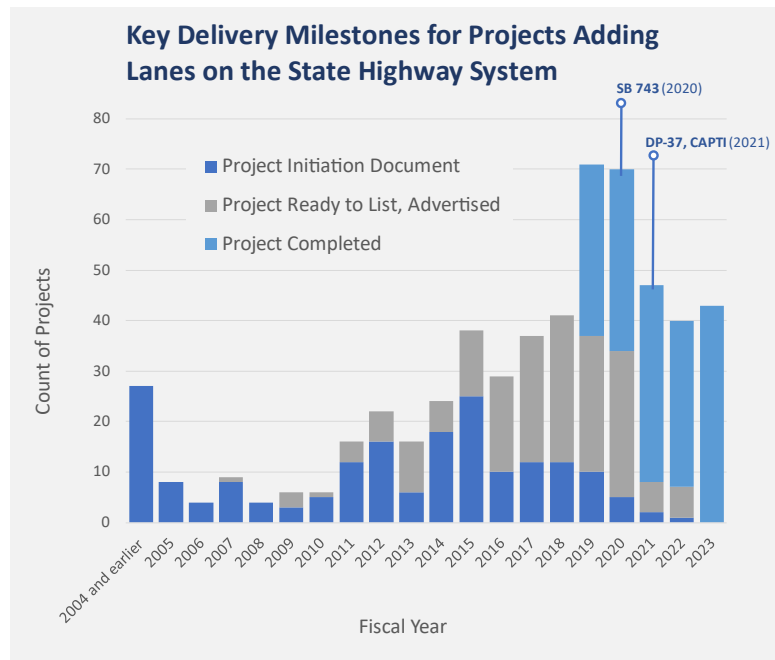

January 1, 2025

Prepared by
California Department of Transportation
in accordance with Streets and Highways Code, Section 235

Executive Summary

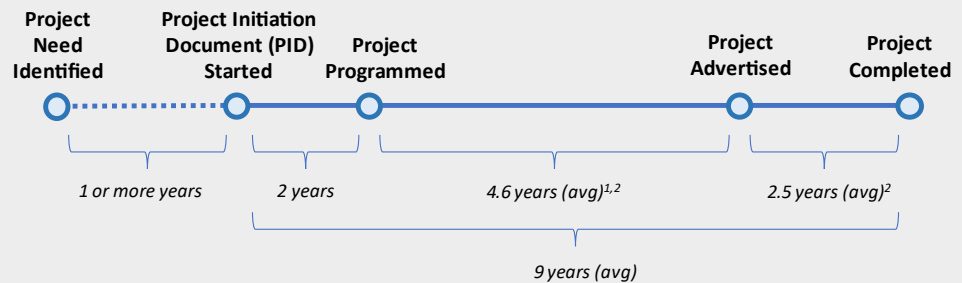

The California Department of Transportation has prepared this inaugural report, “Select State Highway System Project Outcomes Report,” in accordance with changes to the California Streets and Highway Code § 235, enacted by Senate Bill 695 (Chapter 629, Statutes of 2023). This report summarizes select project level outcomes for the State Highway System (SHS) from all funding sources for the fiscal years 2018-19 to 2022-23.

The project outcomes quantified within this report come from more than 5,100 SHS projects completed during the five-year reporting period that were screened and/or manually evaluated to capture the information presented within this report. The reporting reflects projects from many different funding programs and includes planning efforts over the past 20 years, as shown in the figure to the right. It is important to recognize that the vast majority of projects reported were planned prior to significant policy changes put in place in 2020 and 2021.

An evaluation of the projects included in this report indicates that an average of nine years is required for projects to progress from planning stages to completion. This duration defines a reasonable expected timeframe for policy changes to be observed in completed projects included in future annual reporting going forward.

SHOPP Project Development Timeline

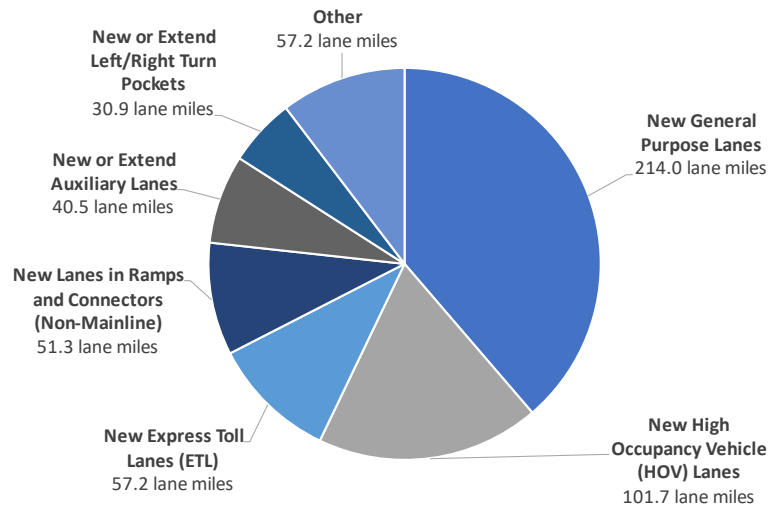

Sources: ¹Caltrans Project Management Dashboard, August 2024, average durations based on SHOPP Major projects greater than \$5M capital costs, PA&ED from FY 2018/19 to 2022/23
²Project Resource and Schedule Management (PRSM), August 2024, all programs

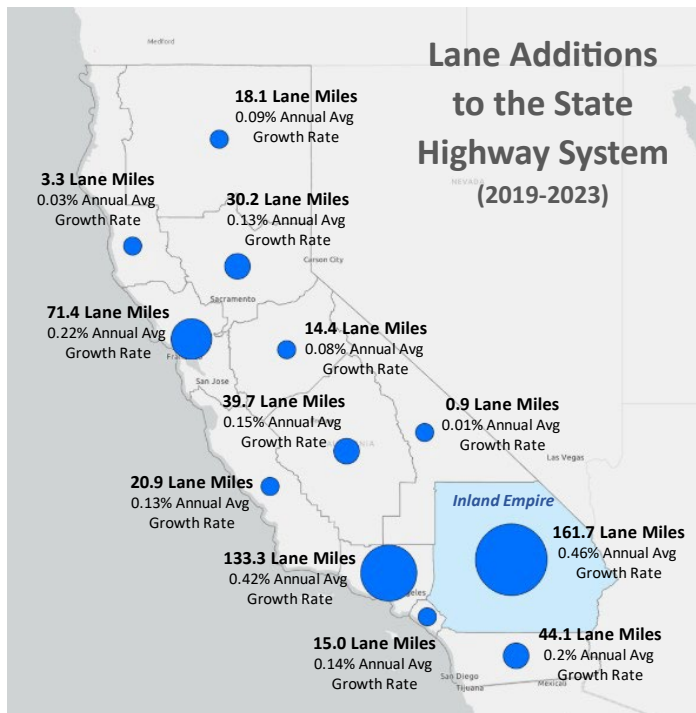

Project level attribute reporting is required in the Streets and Highway Code for the following items:

- Quantification of State Highway System lane additions by type of lane.
- Quantification of the pedestrian facilities rehabilitated or constructed.
- Quantification of new bicycle facilities constructed.
- Quantification of relinquishment of portions of the State Highway System
- Homes and businesses relocated by State Highway System Projects

Lane Additions to the State Highway System over 5 Years

For the 5-year reporting period, a total of approximately 550 lane miles were added to the SHS. This represents a growth rate of the system of approximately 0.2% annually, which is about half the national growth rate during this same period. A breakdown of the types of lanes added over the reporting period is presented in Chapter 4 of this report.

The majority of new lanes added to the SHS were general purpose lanes and high occupancy vehicles lanes. These two lane usage types account for just under 60% of all new lanes added to the SHS.

Lane addition concentrations were seen in rapidly growing areas of California. The Inland Empire has seen the most lane additions to support the rapid growth of housing and freight centers that have placed additional demands on the SHS.

Other regions have seen voter approval, in some cases by large margins, for local transportation tax measures to fund transportation improvements. About half of all counties in California now have their own local transportation tax measures in

place to improve transportation in the region. In some cases, these regional measures identify specific highway system improvements to reduce congestion.

Approximately 77 miles of new or reconstructed sidewalks were reported in projects and 160 miles of new bikeways were added to the SHS.

Facility Type	Miles
New Sidewalks	48
Reconstructed Sidewalks	29
New Bikeways	160

Periodically, the people of California are best served by transferring ownership of portions of the SHS to the local agency, for example where the SHS serves as a community main street. Caltrans will enter into conversations with cities, counties, and Metropolitan Planning Organizations (MPO) to evaluate how best to serve the transportation community. In some situations, the parties may negotiate a relinquishment of a portion of the SHS to the local agency. All relinquishments of the SHS are required to be approved by legislation and receive approval from the California Transportation Commission before they are finalized. For the 5-year reporting period, a total of 132 lane miles of SHS were relinquished.

The Streets and Highway Code calls for Caltrans to report the number of homes or businesses that have been relocated by SHS projects. For the five-year period, a total of 306 business and 317 homes were relocated in conjunction with 13 projects. These 13 projects reflect policies that were prevalent at the time that planning was undertaken.

This inaugural report presents the project outcomes from five fiscal years of completed projects (2018-19 to 2022-23). Significant transportation policies, such as the *Climate Action Plan for Transportation Infrastructure (CAPTI)*, put in place in recent years are leading to an evolution of existing projects as well as a new generation of projects that better align with current policies related to air quality, reduction in vehicle miles traveled, reduced displacement, and implementation of pedestrian and bicycle infrastructure. The projects included in this report all predate recently implemented transportation policies as they began planning and constructing under the prevalent policies at the time. Given the noted duration from planning to completed construction, this reporting serves as a pre-policy baseline that future reporting can be compared against to measure the impact of newer transportation policies.

Widening of the I-5 Santa Ana Freeway

A congestion bottleneck was identified in the late 90s at the boundary of Los Angeles and Orange Counties, resulting in significant travel delays on Interstate 5. The realignment and widening of Interstate 5 from the Orange County line to the 710 freeway formed the congestion relief project, identified in the nearly \$5 billion *Traffic Congestion Relief Act of 2000*¹⁴ (AB 2928 and SB 1662) as Project 42. Planning efforts for the overall project concept began in 2000, and a portion of the project, Orange County to I-605, was ultimately constructed through a series of smaller projects. Of the thirteen total projects identified in the five reported years in this report, five are components of this corridor improvement project. These five projects account for just over 90% of all home and business relocations that were completed in the 2018-2023 reporting period.

1 Introduction

The California Department of Transportation is pleased to present our inaugural report documenting “Select State Highway System Project Outcomes” required by Streets and Highway Code Section 235. This report documents select outcomes for projects constructed by the Department of Transportation (Caltrans or department) and our transportation partners on the State Highway System (SHS) for the five fiscal years 2018-19 to 2022-23.

Senate Bill (SB) 695 (Chapter 629, Statutes of 2023)¹ amended the California Streets and Highway code to require Caltrans to report on specific project scope for all State Highway System projects. The first report, due on January 1, 2025, includes the projects that were completed from July 1, 2018 to June 30, 2023. Streets and Highway Code Section 235 requires Caltrans to prepare historic project data and information for the following items:

- (1) The number of total lane miles in the state highway system.
- (2) The number of new total lane miles added to the state highway system.
- (3) Of the lane miles added to the state highway system, a breakdown of the number of miles added by type, including, but not limited to, general purpose lanes, auxiliary lanes, managed lanes, including high-occupancy vehicle lanes, and interchanges, as well as information on improvements to interchanges.
- (4) A project description of each project that added lane miles to the state highway system.
- (5) The number of miles of the state highway system that were relinquished.
- (6) The number of miles of the state highway system that were converted from a general purpose lane to a managed lane, including a high-occupancy vehicle lane, and a high-occupancy vehicle lane to a high-occupancy toll lane or other type of lane.
- (7) The number of homes and businesses that were relocated due to the acquisition of rights-of-way for the new lane miles on the state highway system.
- (8) The number of new bike lane miles added to state highways, broken down by Class I, Class II, Class III, and Class IV.
- (9) The number of new sidewalk miles added to state highways and the number of existing sidewalks that were reconstructed to improve accessibility and the safety of pedestrians.

Additionally, the department is required to prepare and make available on its internet website data and information on planned, pending projects on the state highway system. The department, in consultation with the commission, is required to develop a format for the data and information. The data and information is required to include the following:

¹ SB 695 Department of Transportation: Internet Website: State Highway System Data and Information, https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202320240SB695

- (1) A description of each project, including the location. Location information shall allow the public to clearly understand where the project is being undertaken and may include, to the extent available, specific highway routes, project boundaries, and geolocation data.
- (2) The date each project initiation document was completed.
- (3) The status of each project including the current phase of development, designated as environmental, design, right-of-way, or construction.
- (4) A determination of the primary purpose and need of each project, if available.

The department is required to present the data and information to the California Transportation Commission (CTC or commission) at a regularly scheduled commission meeting on or before April 1, 2025.

Section 236 was also added to the Streets and Highway Code that requires the following:

- (1) The department shall prepare and make available on an annual basis on its internet website data and information about projects on the state highway system covering the prior fiscal year. The department shall make this data and information available no later than January 1, 2026, and January 1 of each year thereafter.
- (2) For the data and information required to be made available no later than January 1, 2026, pursuant to paragraph (1), the department shall also include data and information about projects on the state highway system covering the 2023–24 fiscal year.

The data and information shall include, but is not limited to, all of the following:

- (1) All of the data and information described in paragraphs (1) to (9), inclusive, of subdivision (a) of Section 235.
- (2) A quantification of an increase or decrease in greenhouse gas emissions associated with the lane miles added to the state highway system, if available.
- (3) A quantification of an increase or decrease in vehicle miles traveled on the state highway system associated with the lane miles added to the state highway system.
- (4) A quantification of the mitigation required by Section 21099 of the Public Resources Code as part of the projects that resulted in additional lane miles on the state highway system.
- (5) The number of connections made with locally owned walk and bike facilities.

The department is required to present the data and information required by this section to the commission at a regularly scheduled commission meeting on or before April 1 of each year.

2 Policy Implementation and Project Delivery Timing

Transportation policies change over time to reflect current state goals and incorporate current thinking, research, best practices, and lessons learned. Past policies have focused on building out a network of highways to move more vehicles in pursuit of congestion relief. Current policies strive to provide access to destinations for all users through a variety of transportation modes and acknowledge that we cannot expand our way out of congestion. Providing equitable transportation access is important, and when access can be achieved through less polluting modes everyone wins. Like policy changes in the past, it takes time for these policies to be reflected in the planning, design, and construction of infrastructure projects due to the large pipeline of on-going projects and the length of time needed to complete projects that include newer policies. This section reviews some of the recently enacted policies and the typical timeframes associated with transportation projects.

2.1 Key Policies Influencing Lane Additions and Bike and Pedestrian Infrastructure

Through legislation and policy development, California has made significant progress in recent decades in shifting the approach to transportation, recognizing air quality and climate impacts. SB 375², signed into law in 2008, introduced new provisions to address the transportation and land use components of greenhouse gas emissions. A number of key policies and practices pertaining to highway expansion, enacted during the 5-year period in which the projects presented in this report were completed, are anticipated to expedite these changes in the coming years.

SB 743 (Chapter 386, Statutes of 2013)³, incorporated into the State’s California Environmental Quality Act (CEQA) Guidelines in 2018, better aligned CEQA with the State’s climate goals. The bill amended several sections of the California Government Code, leading to changes in transportation impact analysis under CEQA for projects on the State Highway System to focus on reducing total driving, or vehicle miles traveled (VMT). The bill’s environmental provisions pertaining to VMT were implemented⁴ into Caltrans policy and practices for projects beginning environmental review on or after September 15, 2020⁵.

SB 743: Rethinking How We Build so Californians Can Drive Less

“All projects on the SHS that reach Caltrans’ Milestone 020 (“Begin Environmental”) on or after September 15, 2020, will include a VMT-based transportation impact significance determination in the draft environmental document.”

COMPLETE STREETS

"...all transportation projects funded or overseen by Caltrans will provide comfortable, convenient, and connected complete streets facilities for people walking, biking, and taking transit or passenger rail ..."

Caltrans Director’s Policy 37 (DP-37)⁶ on Complete Streets, enacted in December 2021, directed all transportation projects funded or overseen by Caltrans to provide comfortable, convenient, and connected facilities for people walking, biking, and taking transit. The policy applied to all projects under development that had not been programmed at the time of policy implementation.

The Climate Action Plan for Transportation Infrastructure (CAPTI)⁷ was adopted on July 12, 2021 by the California State Transportation Agency (CalSTA) to implement Governors Executive Order N-19-19. The plan details how the state recommends investing billions of discretionary transportation dollars annually to align with climate, public health, safety, and equity goals.

Central to CAPTI is the guiding principle: *“Promoting projects that do not significantly increase passenger vehicle travel, particularly in congested urbanized settings where other mobility options can be provided and where projects are shown to induce significant auto travel. These projects should generally aim to reduce VMT and not induce significant VMT growth. When addressing congestion, consider alternatives to highway capacity expansion, such as providing multimodal options in the corridor, employing pricing strategies, and using technology to optimize operations.”*

CAPTI
Climate Action Plan for Transportation Infrastructure

CAPTI is a holistic framework and statement of intent for aligning state transportation infrastructure investments with state climate, health, and equity goals, built on the foundation of the “fix-it-first” approach established in SB1.

⁷ Climate Action Plan for Transportation Infrastructure (CAPTI), <https://calsta.ca.gov/subject-areas/climate-action-plan>

2.2 Timing of Project Delivery

Transportation policies enacted in the recent years, such as SB 743, DP-37, and CAPTI, are expected to bring significant changes to the State Highway System in the future with an emphasis on providing additional options and modes of transportation to all Californians and a reducing climate impacts. However, it is important to understand that these changes will occur gradually over many years. The time required to develop and deliver the projects that incorporate these policy changes, for instance through the State Highway Operation and Protection Program (SHOPP), can approach nine or more years, as shown in Figure 1.

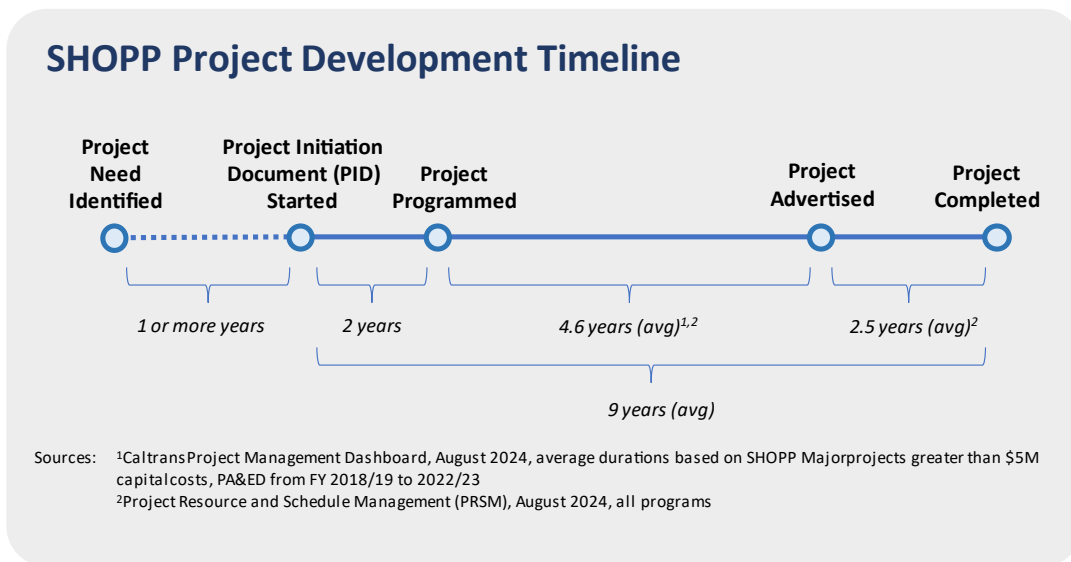

Figure 1 – Typical SHOPP Project Development Timeline

Projects included in this report that were completed in Fiscal Years (FY) 2018-19 through FY 2022-23 began with project development in the preceding years. Figure 2 shows the FYs in which this set of projects reached key project delivery milestones. This includes the development of the *Project Initiation Document (PID)*, providing decision-makers with a broad understanding of the transportation deficiency and the proposed project’s objective to resolve the deficiency; the year the project was *Ready-to-List (RTL)* and advertised for construction contract; and finally, the year in which the project was completed, designated as *Construction Contract Acceptance (CCA)*.

Notable in the figure, projects completed in the most recent five-year period have their origins in PIDs developed mainly in the mid-2010s, however, some PIDs date back as far as FY 1990-91. These same projects were advertised for construction contracts in the mid to late 2010s and early 2020s.

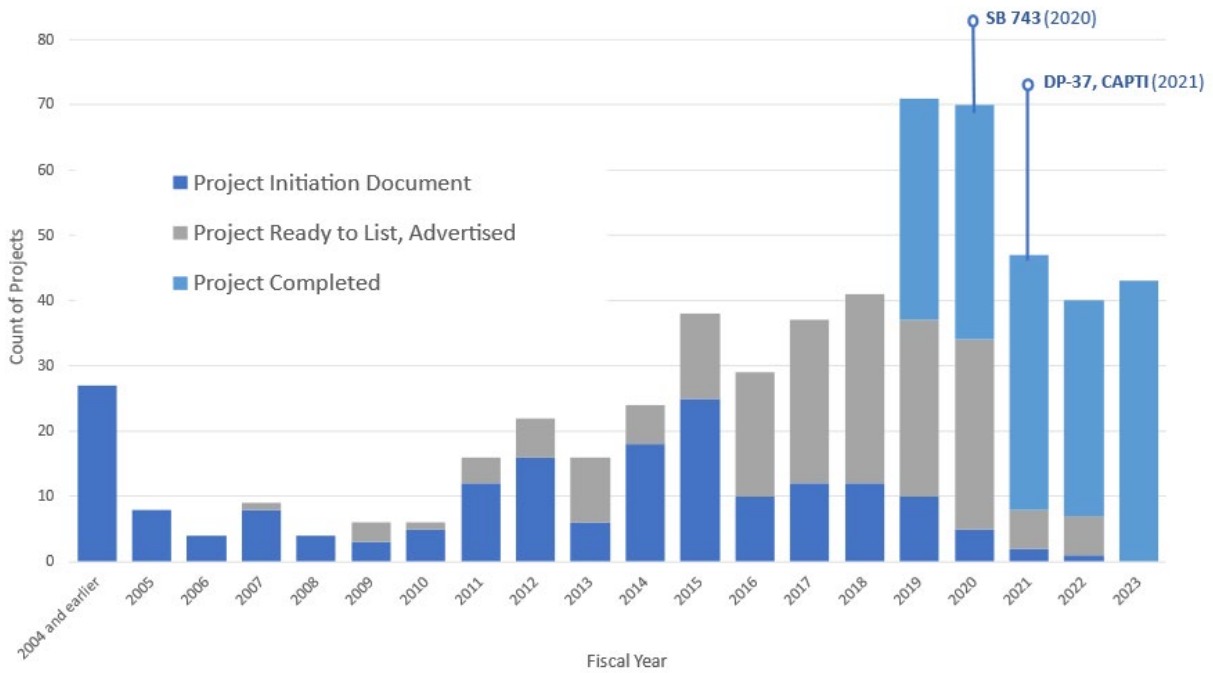

Figure 2 – Key Delivery Milestones for Projects Adding Lanes on the SHS

Transportation policies put in place during PID development and the earlier planning years are highly effective in directing project specific and overall transportation project portfolio outcomes. However, it becomes increasingly challenging to make changes as projects evolve through subsequent design and construction phases because the scope, funding and schedule for the projects have already been fully defined by Caltrans and approved by the CTC and contracts have been signed for project delivery.

SB 743, signed into law in 2013 and implemented into Caltrans procedures in 2020, prompted a change in the way the state measures the environmental impacts of new development and highway projects that increase capacity. In the past, projects were evaluated based on a mobility metric called Level of Service. The new approach (VMT) looks at the number and length of car trips induced by development projects and transportation. A better understanding of the impacts of SB 743 will be observable in this report in future years. Similarly, the impacts of CAPTI and DP-37 in 2021 will become more prominent in the future as the new policies are incorporated into the project development process.

To understand project delivery timing, consider a project being planned during the time these policies were being implemented in the latter half of the 2021 calendar year. In the SHOPP, some of the newly added projects that were guided by the policy changes would have been introduced for programming in the 2022 to 2026 timeframe. These projects would be advertised for construction at earliest around FY 2025-26 and, on average, reach completion in FY 2029-30. Many of the projects under the new policies, however, would not see completion until later.

3 Compilation and Analysis of Project Data

The department implemented a comprehensive analysis approach to determine the quantities summarized in this report. An exhaustive project data review effort was carried out across multiple departmental project data sources to identify any projects potentially reportable under the SB 695 requirements. Projects meeting initial screening criteria were manually reviewed by district and headquarters teams. In addition to reviewing project records, the teams extracted data from project documents and plans as needed.

3.1 General Reporting Assumptions and Limitations

The projects reported in this document were considered based the following analysis assumptions:

- All reporting is based on state FYs. For instance, FY 2022-2023 spans the period between July 1, 2022, through June 30, 2023.
- Projects reported for a given FY are based on the projects reaching the *Construction Contract Acceptance (CCA)* milestone, considered the completion of the project.
- Projects included in the analysis were initially screened for inclusion based on data readily available in Caltrans project data systems, including accounting program, quantities of specific types of work defined in the scope and keywords in the project descriptions.
- Activities on the SHS performed under encroachment permits were not considered in the analysis.

The CCA milestone was selected as the basis for inclusion of projects in this report, as this is the point in time in the project development process⁸ when all construction work is completed, project history file and as-built plans are completed, final right-of-way activities completed, claims are resolved, and mitigation is completed. Information reported at project completion represents final quantities and scope, some of which can change over the course of project development through construction.

Caltrans teams made every reasonable effort to identify projects meeting the requirements of the new law. Much of the information required for this report was not initially identified or historically captured in data form requiring an extensive review effort. This included the manual review of approximately 1,000 past project plans and reports to extract the required information. Even with this extensive effort, it is possible that some projects may have been inadvertently excluded from reporting.

⁸ How Caltrans Builds Projects (2011), <https://dot.ca.gov/-/media/dot-media/programs/esta/documents/2011-how-caltrans-builds-projects-a11y.pdf>

3.2 Analysis Approach

In preparation of this report, Caltrans identified all projects that may have added, converted, or relinquished lanes, while also characterizing the lane usage, bike and pedestrian facility quantities, and homes or business relocated due to lane additions. Caltrans carried out the analysis in a progressive sequence of increasingly detailed screenings and reviews over the course of several months, as shown in Figure 3.

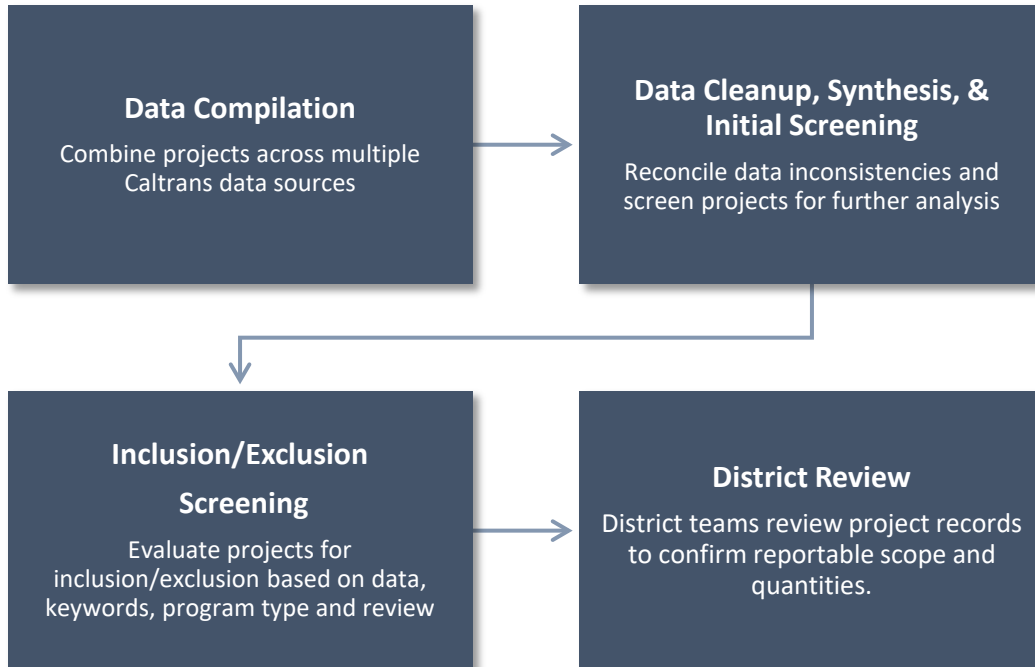

Figure 3 – Analysis Overview

3.2.1 Data Compilation

In this initial step, Caltrans prepared an exhaustive listing of all projects from multiple project tracking and accounting data systems. These systems included the California Transportation Improvement Program System (CTIPS)⁹, Quality Management Reporting System (QMRS), Project Resource and Schedule Management (PRSM), AMS Advantage, CalSMART, Build California, the Asset Management Tool (AM Tool), and other department reporting sources.

The availability of data across these systems specific to the requirements of this report varied widely. For instance, while the AM Tool contained detailed quantities for many of the reporting elements (e.g., length of bikeways, sidewalks, auxiliary lanes, etc.), this was only reliable for larger SHOPP projects active since 2017 and the implementation of asset management policies and procedures within Caltrans.

While this effort primarily focused on projects completed over the 5-year reporting period, a much larger time window was examined. This is because some of the projects originated from work programmed as far back as the early 1990s and evolved over time to recently delivered projects resulting from multiple child projects. These projects could have had relocations of homes or businesses in an earlier stage of development, and an effort was made to identify these occurrences to the extent possible.

3.2.2 Data Cleanup, Synthesis, and Initial Screening

A data cleanup process was initiated to address data inconsistencies, conflicts, gaps, and duplication across the multiple data sources. As data for one project often persist across multiple data systems, a process of synthesizing the data was carried out using the authoritative data sources to the extent possible. Over 5,100 projects remained following the screening in this step of the analysis.

3.2.3 Inclusion/Exclusion Screening

Thousands of project records were screened for descriptions containing keywords or phrases that could indicate reportable scope, such as widenings, lane additions and conversions, bikeways, sidewalks, relinquishments, and/or relocations of homes or businesses. Various permutations of keywords and phrases were considered (e.g., “aux,” “auxiliary,” “bike,” “bicycle,” etc.) This approach was employed, as project report and/or plan level reviews were not feasible for the thousands of projects requiring screening at this stage of the process. In addition to keyword screening, certain types of projects were categorically excluded (in the absence of a keyword match) based on funding program constraints. For example, projects where highway, bike, or pedestrian related scope are not possible, such as highway planting, facility improvements, legal support, etc. 951 projects remained following this screening step.

⁹ California Transportation Improvement Program System (CTIPS), <https://dot.ca.gov/programs/financial-programming/ca-transportation-improvement-program-system-ctips>

3.2.4 District Review

The screened listing of 951 projects and associated data were provided to twelve Caltrans District teams for further in-depth review. The district teams were led by the District Asset Manager, or a designee, who coordinated with other functional units within the district to conduct the data compilation and validation process. A standard data template was developed along with detailed instructions. The template included key project identifiers, descriptions, and project data pertaining to scope, schedule, and cost. Where available from Caltrans data systems, primarily CTIPS and the AM Tool, quantities of lane miles, bikeways, and sidewalk were pre-populated in the listing. Direction and guidance were provided to district teams on completing the reviews, verifying reportable project data and quantities and providing any missing projects or data elements.

3.3 Funding Programs

Maintenance, rehabilitation, and enhancements on the SHS are supported by a range of local, regional, state, and federal funding programs. Many of the projects summarized in this report are funded by more than one of the following programs:

- State Highway Operation and Protection Program (SHOPP)
- Local State Transportation Improvement Program (STIP)
- Inter-Regional Transportation Improvement Program (ITIP)
- Active Transportation Program (ATP)
- Highway Maintenance (HM) Program
- Solutions for Congested Corridors (SCCP)
- Local Partnership Program (LPP)
- State-Local Partnership Program (SLPP)
- Transit Intercity Rail Capital Program (TIRCP)
- Trade Corridor Enhancement Program (TCEP)
- Trade Corridors Improvement Fund (TCIF)
- Traffic Congestion Relief Program (TCRP)

4 Summary of Results

This section summarizes, in accordance with Streets and Highways Code 235 and 236, quantities of the total of SHS lane miles, lane mile additions, relinquishments, lanes converted from general purpose to managed lanes, homes and businesses relocated due to lane additions, new bikeways, and new and reconstructed sidewalks for projects completed between July 2018 through June 2023.

4.1 State Highway System Total Size

A 5-year summary of the total number of lane miles and centerline miles on the State Highway System (SHS) is presented in Table 1. As noted below, the total mileage on the SHS, measured both in centerline and lane miles, has actually decreased slightly over the last five years. Mileage on the SHS is derived from the Highway Performance Monitoring System (HPMS) as reported annually in the *California Public Road Data (PRD) Report*¹⁰ and *Caltrans Facts*¹¹. The most recent data was published in the November 2023 PRD Report based on the 2022 HPMS. At the time of report preparation, the final 2023 PRD Report was not available.

Table 1 - State Highway System Total Size

Fiscal Year	2019	2020	2021	2022	2023*
SHS Centerline Miles	15,058	15,022	15,027	15,017	15,016*
SHS Lane Miles	52,144	52,039	52,044	52,016	52,038*

**Note: The miles cited for 2023 represent provisional HPMS data submitted to FHWA at the time of this report preparation. Lane miles may fluctuate from year to year due to new construction and relinquishments.*

A centerline mile is a measure of total length of highway, regardless of the number of lanes. A lane mile represents the total length of traveled pavement surface and is calculated using the centerline length multiplied by the number of lanes.

¹⁰ California Public Road Data Report, <https://dot.ca.gov/programs/research-innovation-system-information/highway-performance-monitoring-system>

¹¹ Caltrans Facts, <https://dot.ca.gov/programs/research-innovation-system-information/caltrans-facts>

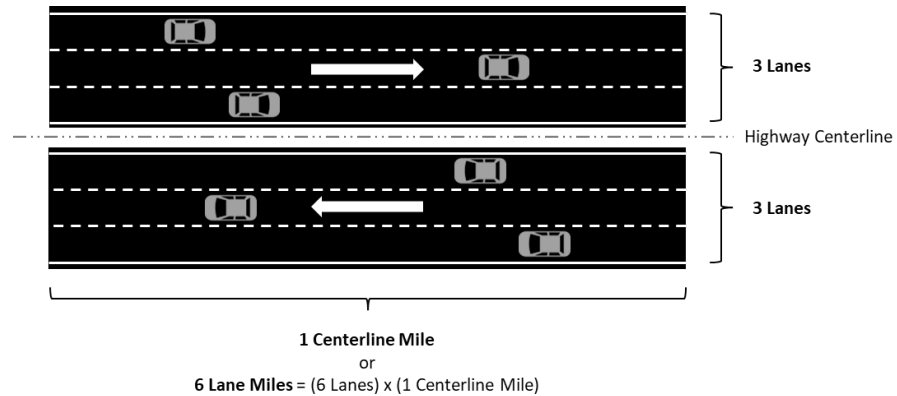

Figure 4 – Example of Centerline Miles vs Lane Miles

4.2 Number of New Total Lane Miles Added to the State Highway System

A 5-year summary of lane miles added to the State Highway System is presented in Table 2. Lane additions are quantified by year using data from 185 projects completed in FY 2018-19 through 2022-23. Lane additions account for an average annual growth rate of approximately 0.2% over the 5-year analysis period.

Table 2 – 5-Year Summary of Lane Miles Added to the State Highway System

Fiscal Year	2019	2020	2021	2022	2023	Total
Lane Miles Added to the SHS	155.4	73.2	108.2	86.0	130.1	552.9
Annual Growth (%)	0.30%	0.14%	0.21%	0.17%	0.25%	0.21%/yr.

Note, year-over-year lane additions represented as project outcomes in this report may differ from those calculated from the annual SHS total lane miles presented in Table 1 due to differences in timing of reporting. Changes to SHS miles from project work can take as much as 18 months before being reflected in the annual Public Road Data Report. The total magnitude of the State Highway System may be increased through lane additions or decreased through relinquishments. The overall system size reflects the net of these two activities.

4.2.1 Breakdown of the Number of Lane Miles Added to the State Highway System by Type

The analysis carried out for this report assessed projects that included several types of lane additions to the SHS. Lane additions adjacent and parallel to the mainline highway lanes include:

- **General Purpose Lanes** – Mainline lane that supports all forms of vehicular highway traffic.
- **Auxiliary Lanes** – The portion of the roadway for weaving, truck climbing, speed change, or for other purposes supplementary to through movement.

- **Truck Climbing Lanes** – Lane that is designed and designated for the purpose of slower vehicle travel such as tractor trailers and single unit trucks. Their main purpose is to serve slower vehicles that block existing flows of traffic.
- **Acceleration/Deceleration Lanes** – A speed-change lane that allows vehicles to accelerate to highway speeds before entering the through traffic lanes of a highway or decelerate when exiting the highway.
- **High Occupancy Vehicle (HOV) Lanes** - An exclusive lane for vehicles carrying the posted number of minimum occupants or carpools, either part time or full time.
- **High Occupancy Toll (HOT) Lanes** – An HOV lane that allows vehicles qualified as carpools to use the facility without a fee, while vehicles containing less than the required number of occupants have to pay a toll. Tolls may change based on real time conditions (dynamic) or according to a schedule (static).
- **Express Toll Lanes (ETL)** – Facilities in which all users are required to pay a toll, although HOVs may be offered a discount. Tolls may be dynamic or static.
- **Transit Lanes** – Lanes dedicated exclusively for transit vehicles, either full-time or during days/times with peak traffic congestion.

Other types of lane additions were also considered in the analysis, including:

- **Interchange Lanes** – Lanes that are part of a system of interconnecting roadways in conjunction with one or more grade separations that provides for the movement of vehicles between two or more roadways on different levels.
- **Lanes in Ramps and Connectors** – Lanes that are part of a connecting roadway between a freeway or expressway and another highway, road, or roadside area.
- **Left/Right Turn Pockets and Two-Way Left Turn Lanes** – Lanes designed to expedite the movement of through traffic by controlling the movement of turning traffic.

Figure 5 illustrates several types of lane additions on the SHS. Additional information about the different lane types and definitions can be found in the Highway Design Manual¹².

¹² Caltrans Highway Design Manual, 7th Edition, 2020, <https://dot.ca.gov/-/media/dot-media/programs/design/documents/hdm-complete--092923-a11y3.pdf>

Types of Lane Additions

General Purpose Lane

Truck Climbing Lane

Auxiliary Lane

Two-Way Left Turn Lane

Acceleration Lane

HOV, HOT, ETL, and Transit Lanes

Deceleration Lane

Figure 5 – Types of Lane Additions on the SHS

A 5-year summary of new lane additions by type is presented in Table 3. Eleven different types of lane additions were quantified by year using project level data from projects completed in FY 2018-19 through 2022-23. 214 lane miles of new General Purpose lanes were added to the SHS over the 5-year period, accounting for the largest share (39%) of all lane miles added. New HOV lanes also comprised a significant portion of lane additions (19%).

Table 3 – 5-Year Summary of Lane Additions by Type on the State Highway System

Type of Lane Addition (Lane Miles)	2019	2020	2021	2022	2023	Total	Annual Avg Growth Rate (%)
New General Purpose Lanes	84.2	15.3	44.5	23.3	46.7	214.0	0.08%
New High Occupancy Vehicle (HOV) Lanes	5.4	26.8	21.4	31.4	16.8	101.7	0.04%
New Express Toll Lanes (ETL)	28.8	0.0	0.0	0.0	28.4	57.2	0.02%
New Lanes in Ramps and Connectors (Non-Mainline)	6.0	9.3	17.5	6.0	12.5	51.3	0.02%
New or Extend Auxiliary Lanes	5.1	11.1	6.1	7.2	11.0	40.5	0.02%
New or Extend Left/Right Turn Pockets	8.4	4.8	5.7	6.1	5.8	30.9	0.01%
New or Extend Acceleration/Deceleration Lanes	4.7	1.9	7.7	6.1	4.3	24.7	0.01%
New Interchange Lanes	9.0	1.3	5.0	2.9	2.2	20.4	0.01%
New or Extend Truck Climbing Lanes	3.8	2.6	0.2	3.1	1.1	10.7	0.00%
New Transit Lanes	0.0	0.0	0.0	0.0	1.4	1.4	0.00%
New High Occupancy Toll (HOT) Lanes	0.0	0.0	0.0	0.0	0.0	0.0	0.00%
Total Added Lanes*	155.4	73.2	108.2	86.0	130.1	552.9	0.21%

*Note: Totals may not add because due to rounding.

The Southern California region saw the largest share of lane additions over this reporting period, largely centered in the metropolitan area in Riverside and San Bernardino Counties known as the Inland Empire (one of the fastest-growing regions of the state), as well as the greater Los Angeles area. Figure 6 presents a map of the distribution of all lane additions across the twelve Caltrans districts.

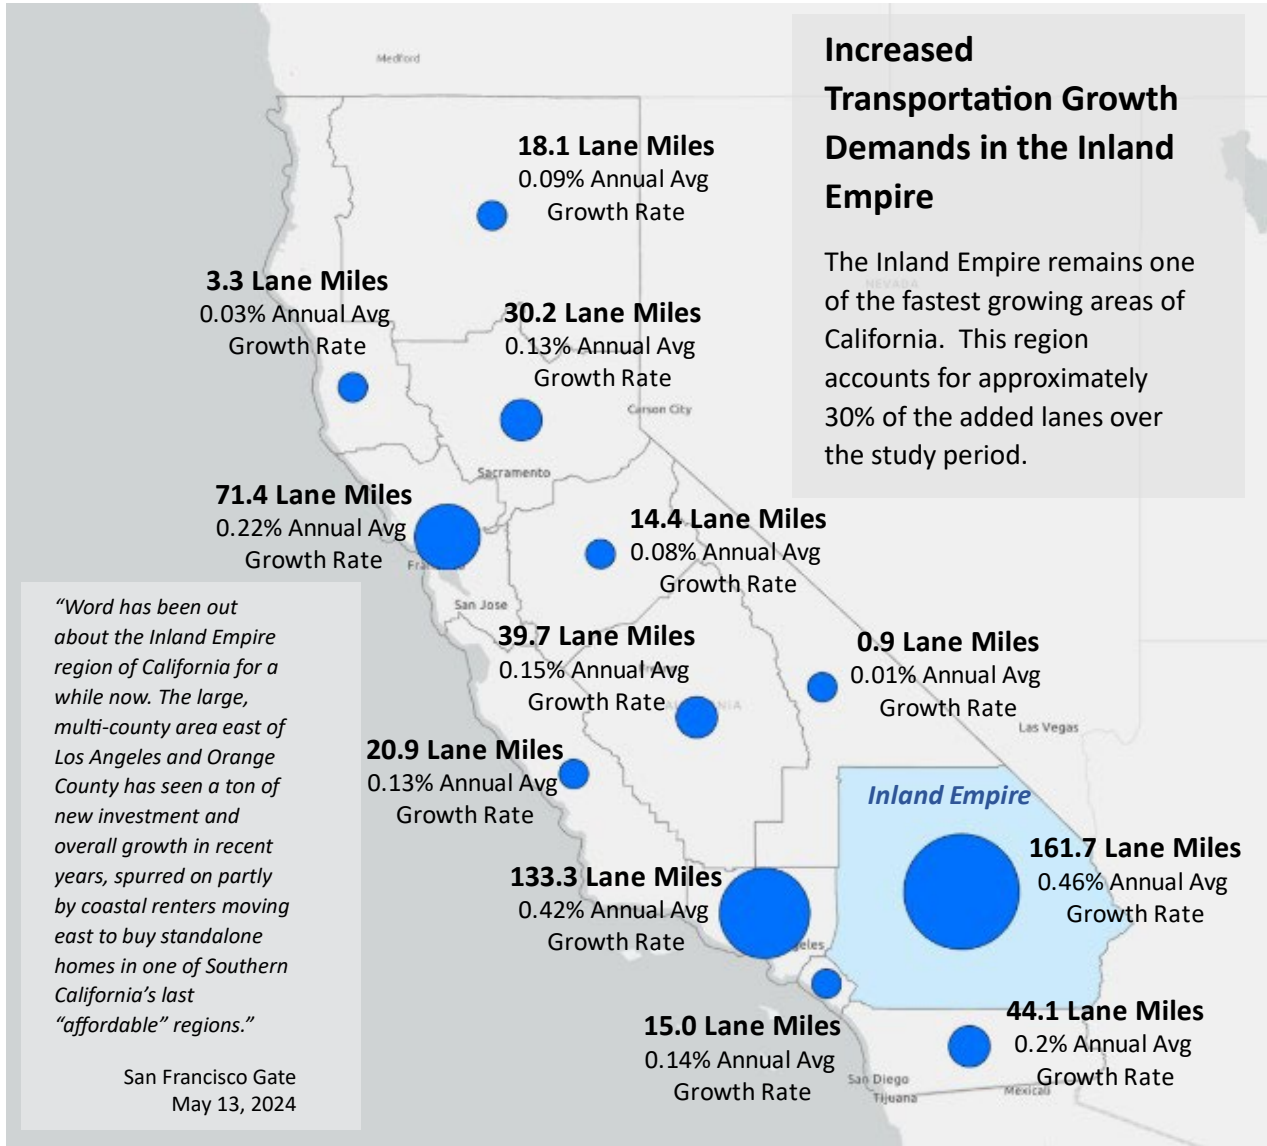

Figure 6 – SHS Lane Additions by Region

*Note: The Annual Average Growth Rate percentage represents the average lane miles added per year over the last five years relative to the current total lane miles for each of the twelve Caltrans districts.

A chart showing groupings of the primary funding programs supporting lane additions on the SHS for the projects completed in the 5-year period from July 2018 to June 2023 is presented in Figure 7 and Table 4. The pie chart groups all Competitive funded projects (i.e., TCIF, TCEP, TCRP, SLPP, and LPP) in a single slice. Projects that are entirely SHOPP or STIP funded are shown as separate slices. The slice for Local includes projects funded by local agency sources. Lane additions through the SHOPP address safety and operational need without increasing through capacity – for example via climbing lanes or new lanes in ramps or connectors - in accordance with SHOPP Guidelines¹³.

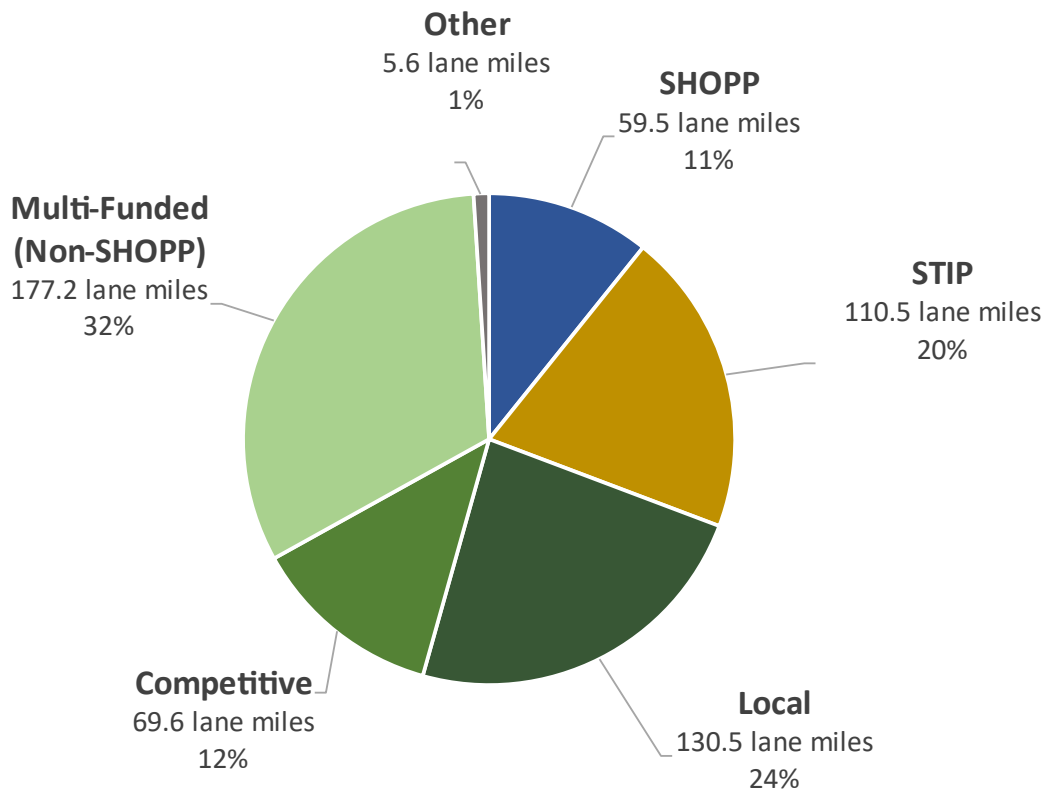

Figure 7 – Primary Funding Program for Lane Additions on the SHS

¹³ State Highway Operation and Protection Program Guidelines, December 6, 2024, <https://catc.ca.gov/-/media/ctc-media/documents/programs/shopp/2024/2024-shopp-guidelines-a11y.pdf>

Table 4 – Lane Addition Type by Funding Program

Type of Lane Addition (Lane Miles)	SHOPP ²	STIP	Local	Competitive	Multi-funded (Non-SHOPP)	Other	Total	Annual Avg Growth Rate (%)
New General Purpose Lanes	0.0	80.1	40.3	18.7	73.3	1.7	214.0	0.08%
New High Occupancy Vehicle (HOV) Lanes	0.0	0.2	38.2	22.0	41.3	0.0	101.7	0.04%
New Express Toll Lanes (ETL)	0.0	0.0	0.0	28.8	28.4	0.0	57.2	0.02%
New Lanes in Ramps and Connectors (Non-Mainline)	12.2	8.4	16.1	0.1	14.7	0.0	51.3	0.02%
New or Extend Auxiliary Lanes	15.9	3.1	8.1	0.0	9.5	3.9	40.5	0.02%
New or Extend Left/Right Turn Pockets	14.8	7.4	6.6	0.0	2.1	0.0	30.9	0.01%
New or Extend Acceleration/Deceleration Lanes	8.6	4.9	7.7	0.0	3.5	0.0	24.7	0.01%
New Interchange Lanes	1.3	2.6	12.1	0.0	4.4	0.0	20.4	0.01%
New or Extend Truck Climbing Lanes	6.8	3.9	0.0	0.0	0.0	0.0	10.7	0.00%
New Transit Lanes	0.0	0.0	1.4	0.0	0.0	0.0	1.4	0.00%
New High Occupancy Toll (HOT) Lanes	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.00%
Total	59.5	110.5	130.5	69.6	177.2	5.6	552.9	0.21%
Annual Average Growth Rate¹ (%)	0.02%	0.04%	0.05%	0.03%	0.07%	0.00%	0.21%	

Notes:

¹The Annual Average Growth Rate percentage represents the average lane miles added per year over the last five years relative to the current total lane miles by funding program.

²Includes lanes for safety and operational need without increasing through capacity in accordance with SHOPP Guidelines

4.2.2 Project Description of Each Project that Added Lane Miles to the State Highway System

A complete listing of projects with project identifiers, locations, descriptions, and breakdown of lane additions by type are provided in Appendix C: Listing of Projects with Lane Additions.

4.3 Number of Miles of the State Highway System Relinquished

The removal of a highway segment, either in whole or in part from the SHS, requires a relinquishment approved by the CTC. Through a relinquishment, all rights, title, interests, liability, and maintenance responsibilities of a state highway, or portion thereof, is transferred to another government entity. A total of 132.4 lane miles (54.3 centerline miles) were relinquished on the State Highway system in FY 2018-19 through 2022-23.

Table 5 – Lane Miles Relinquished on the State Highway System

Fiscal Year	2019	2020	2021	2022	2023	Total
SHS Centerline Miles Relinquished	17.3	15.4	16.9	1.7	3.1	54.3
Total SHS Centerline Miles	15,058	15,022	15,027	15,017	15,016	
SHS Lane Miles Relinquished	49.1	34.6	35.3	7.2	6.3	132.4
Total SHS Lane Miles	52,144	52,039	52,044	52,016	52,038	

The list of specific CTC actions on relinquishments is provided in Appendix D.

4.4 Number of Miles of the State Highway System Converted from a General Purpose Lane to a Managed Lane

A total of 185.5 lane miles on the State Highway system were converted from a General Purpose or other lane type to a Managed Lane through projects completed in FY 2018-19 through 2022-23. Managed Lanes include High Occupancy Vehicle (HOV) Lanes, High Occupancy Toll (HOT) Lanes, and Express Toll Lanes (ETL). The quantities presented in Table 6 include HOV lane conversions to another type of Managed Lane.

Table 6 - SHS Lane Miles Converted from a General Purpose Lane to a Managed Lane

Fiscal Year	2019	2020	2021	2022	2023	Total
Conversion of General Purpose Lane to HOV (Lane Miles)	0.9	0.0	0.0	0.0	0.0	0.9
Conversion of HOV Lane to ETL or HOT (Lane Miles)	97.6	7.7	0.0	64.2	15.1	184.6
Total Converted Lanes (Lane Miles)	98.5	7.7	0.0	64.2	15.1	185.5

The list of projects that included conversions from a General Purpose lane to a Managed Lane is provided in Appendix E.

4.5 Number of Homes and Businesses Relocated Due to the Acquisition of Rights-of-Way for the New Lane Miles on the State Highway System.

Table 7 presents a summary of homes and businesses relocated by fiscal year. A total of 623 homes and businesses were relocated by 13 projects with lane addition work. For purposes of quantifying relocations, the US Census Bureau’s definition of a “Housing Unit”¹⁴ was used, defined as “a house, an apartment, a group of rooms, or a single room occupied or intended for occupancy as separate living quarters.”

Table 7 – Homes and Businesses Relocated

Fiscal Year	2019	2020	2021	2022	2023	Total
Number of Homes Relocated	0	66	209	42	0	317
Number of Businesses Relocated	0	22	69	27	188	306
Total Relocations	0	88	278	69	188	623

The 13 projects leading to relocations were initially approved between 1998 and 2013. As further detailed below, five of these projects were part of the Interstate 5 realignment and widening initiative. These five projects accounted for over 90% of all home and business relocations during the reporting period. This highlights the substantial impact of the I-5 realignment project, which required significant rights-of-way acquisitions to accommodate the widened and realigned corridor. The list of projects that included relocations of homes or businesses is provided in Appendix F.

Widening of the I-5 Santa Ana Freeway

A congestion bottleneck was identified in the late 90s at the boundary of Los Angeles and Orange Counties, resulting in significant travel delays on Interstate 5. The realignment and widening of Interstate 5 from the Orange County line to the 710 freeway formed the congestion relief project, identified in the nearly \$5 billion *Traffic Congestion Relief Act of 2000*¹⁵ (AB 2928 and SB 1662, Chapters 91 and 656, respectively) as Project 42. Planning efforts for the overall project concept began in 2000, and a portion of the project, Orange County to

I-605, was ultimately constructed through a series of smaller projects. Of the thirteen total projects identified in the five reported years in this report, five are components of this corridor improvement project. These five projects account for just over 90% of all home and business relocations in projects completed in the 2018-2023 reporting period.

¹⁴ US Census Bureau, Definitions and Explanations, <https://www.census.gov/housing/hvs/definitions.pdf>

¹⁵ The Traffic Congestion Relief Act of 2000, <https://catc.ca.gov/-/media/ctc-media/documents/tcrp-statutes-a11y.pdf>

4.6 Number of New Bikeway Miles Added to State Highways

Four formal bikeway classification types are quantified in this report, as shown in Figure 8. Table 8 presents a summary of new bikeway miles added to the SHS over the five-year period with a breakdown by the four classes of bikeways.

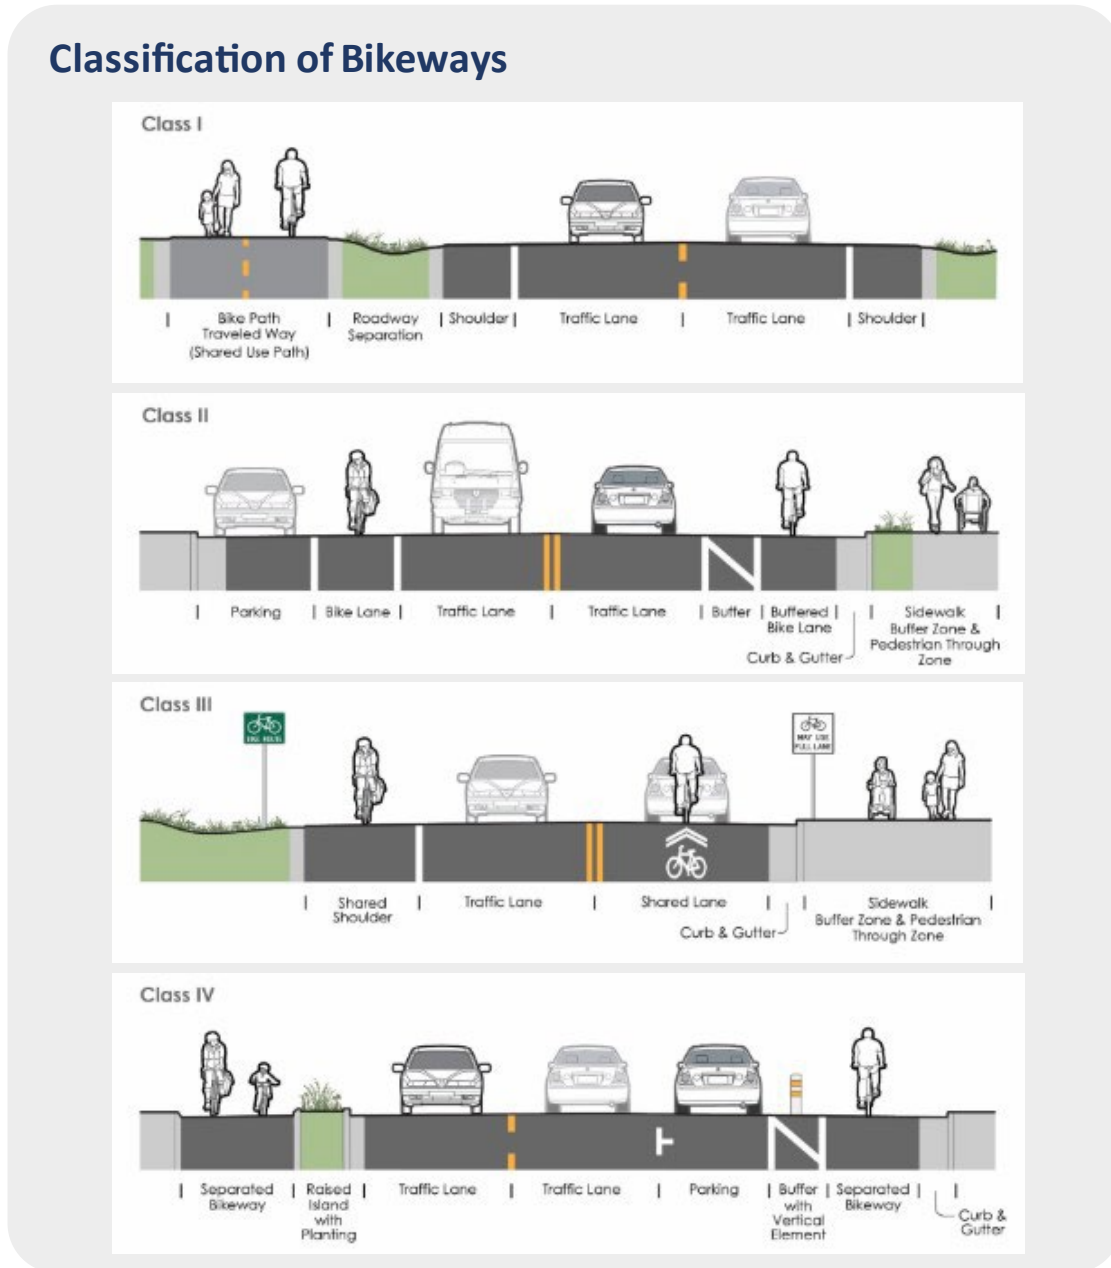

Figure 8 – Bikeways on the SHS

Table 8 – New Bikeway Miles Added to State Highways

Fiscal Year	2019	2020	2021	2022	2023	Total
New Bikeway Class I, II, IV (Lane Miles)	12.3	2.6	17.1	22.3	12.9	67.2
Class I (Bike Path)	2.1	0.7	1.5	6.0	1.5	11.8
Class II (Bike Lane)	10.1	1.8	13.9	16.1	11.2	53.1
Class IV (Separated Bikeway)	-	0.1	1.7	0.2	0.3	2.2
New Bikeway Class III (Bike Route) (Lane Miles)	37.9	1.8	17.0	4.9	31.4	93.0
Total Bikeways Added (Lane Miles)	50.2	4.4	34.1	27.2	44.3	160.2

The list of projects that included construction of new bikeways is provided in Appendix G.

Figure 9 shows the geographic distribution of new bikeway construction over the 5-year reporting period. Southern California, specifically the Inland Empire region, saw the largest growth in new bikeways. The largest additions were in the same region where much of the new lane additions were constructed, as presented earlier in Figure 6.

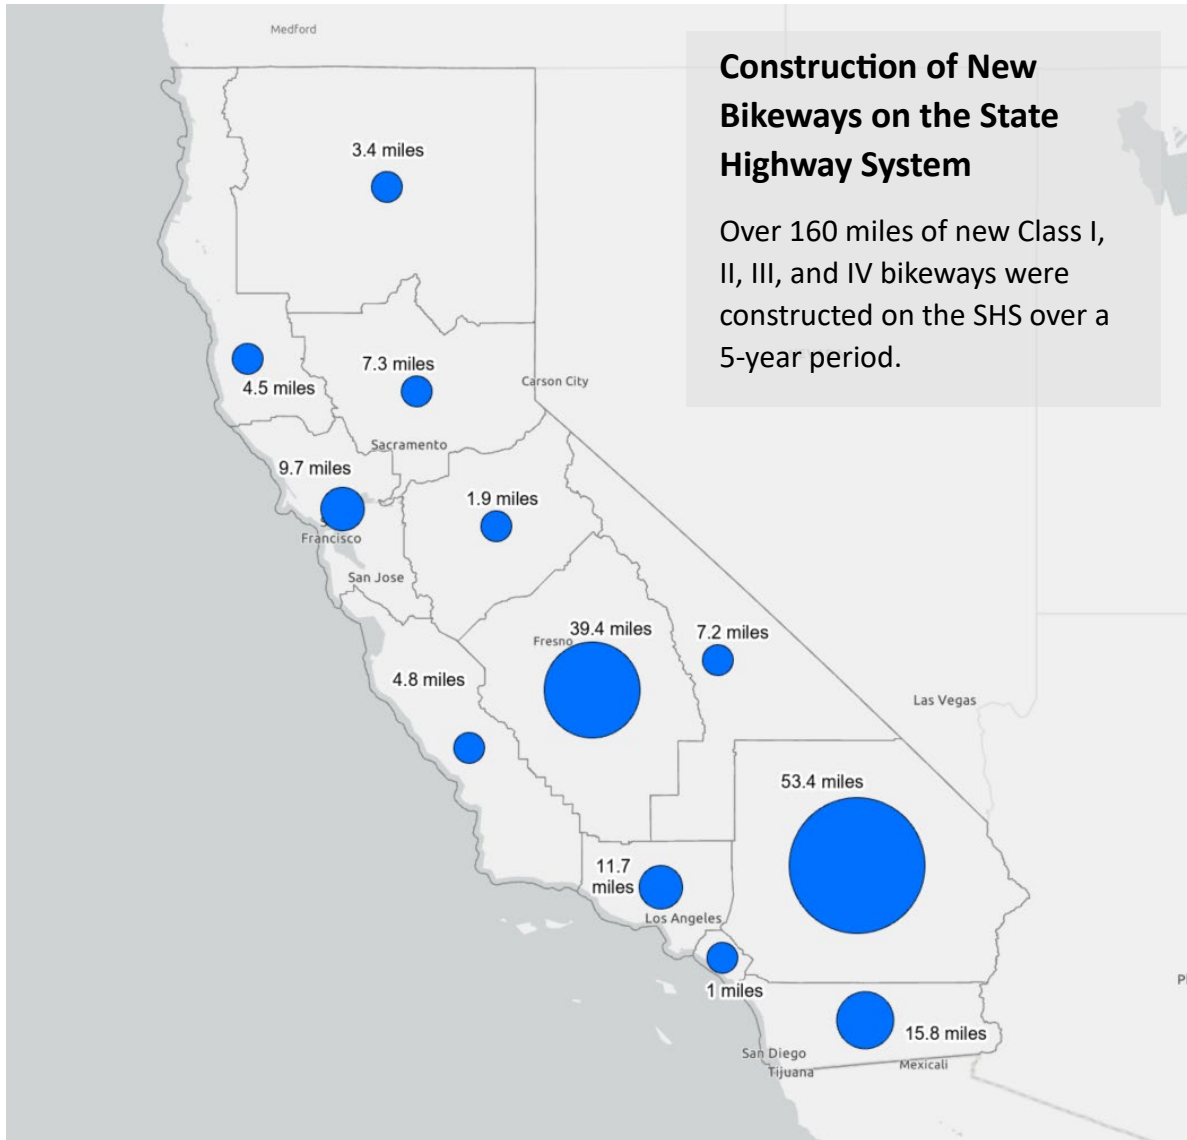

Figure 9 – New Bikeways by Region

4.7 New Sidewalk Miles Added and Existing Sidewalks Reconstructed on State Highways

Sidewalks added to state highways and existing sidewalks that were reconstructed to improve accessibility and safety of pedestrians are also quantified in this report. The sidewalk quantities represent those within the state Right-of-Way and include sidewalks adjacent to the mainline route, at on and off-ramp locations, at bridge under and over-crossings, and at state highway facilities (e.g., Park and Ride locations, Safety Roadside Rest Areas). Table 9 summarizes new sidewalk miles added and existing sidewalks reconstructed on State Highways.

Table 9 – New Sidewalk Miles Added and Existing Sidewalks Reconstructed on State Highways

Fiscal Year	2019	2020	2021	2022	2023	Total
New Sidewalks (Miles)	4.8	12.5	8.9	12.6	9.2	47.9
Reconstructed Sidewalks (Miles)	5.5	6.0	5.8	7.5	4.1	28.8
Total New and Reconstructed Sidewalks (Miles)	10.2	18.5	14.7	20.1	13.3	76.7

The list of projects that included new construction or reconstruction of sidewalks is provided in Appendix H.

5 Planned and Pending Projects on the State Highway System

2,086 planned and pending projects on the State Highway System were identified across all funding programs as of June 2023. These projects span over 34 years, some originating back to 1990, and are candidates for future programming. Some of the projects are the result of project splits and combines and may originate from the same Project Initiation Document (PID).

1,785 projects have been programmed and are in one of three phases of project development – *Environmental*, *Design* (which includes right-of-way acquisition), or *Construction*. 112 projects were identified where the PID was completed but the project has not been programmed. There were 189 other projects identified that have not progressed through the typical project development cycle but were included in the counts for completeness. These include mitigation projects and relinquishments. Table 10 summarizes the count of projects and the current phase of development.

Table 10 – Planned and Pending Projects on the SHS

Current Phase of Development	Number of Projects
Environmental	451
Design	396
Construction	938
PID Completed but Project Not Programmed	112
Other (i.e., mitigation, relinquishment)	189
Total	2,086

Appendix I provides a complete listing of these projects and includes the following attributes:

- A description of each project, including location information, where available, the specific highway routes, project boundaries, and geolocation data.
- The date each Project Initiation Document (PID) was completed.
- The status of each project including the current phase of development.
- A determination of the primary purpose and need of each project, if available.

Intentionally left blank

6 Looking Forward

This inaugural “Select State Highway System Project Outcomes” report analyzed completed project outcomes across eight identified areas. The analysis involved screening or manually reviewing over 5,100 projects that were completed during FY 2018-19 through 2022-23.

The report documents that all projects were planned and developed years ago. On average the projects included in this report took approximately nine years to progress from planning through completion. Given the longer lead times typical for transportation projects, recent policy changes have not yet been fully reflected in completed projects. These policy efforts include CAPTI, the designation of transportation emissions as a mitigatable environmental impact (SB 743), and Caltrans' internal policy changes on bicycle and pedestrian infrastructure.

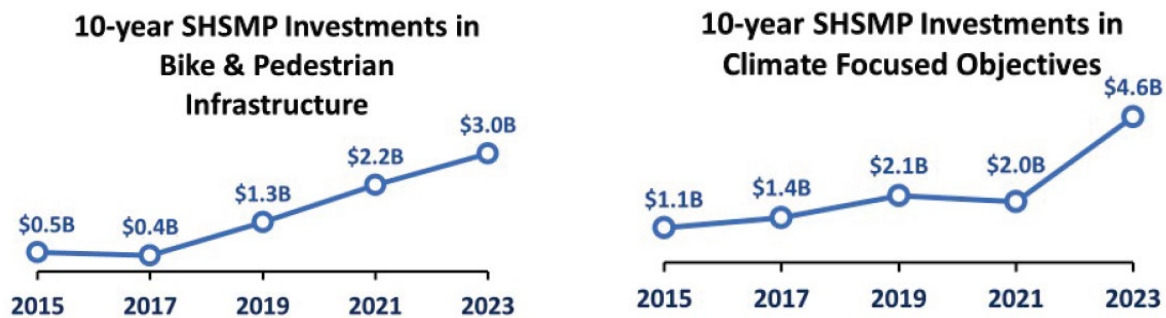

Figure 10 - Investments in the 2023 State Highway System Management Plan

Evidence of recent policy shifts are already visible in current planning and programming levels in the SHOPP. For example, planned investments in climate adaption, resilience, and bicycle and pedestrian infrastructure have increased and are well-documented in the State Highway System Management Plan (SHSMP) as shown in Figure 10.

All projects completed in 2018-2023 and included in this inaugural report predate the major policy shifts in 2020 and 2021, providing a baseline for future analysis as contemplated in SB 695. As more recently planned projects reach completion, future reports will offer greater insight into the impact of these recent policy changes. By 2030, approximately half of the reported projects are expected to reflect these policy changes and shifts in investment strategies, as shown in the charts above.

Intentionally left blank

Appendix A: Project Data and Analysis

A detailed description of the sources of data and analysis methodology and assumptions are provided in this section of the report.

A1 Compilation of Project Data from Caltrans Data Sources

A1.1 Primary Data Sources

The initial step in the analysis required compiling a list of all projects completed within the reporting period from all available departmental data sources. Table 11 summarizes the Caltrans data systems and sources used to compile the set of projects for initial screening. Both online departmental data systems and ad hoc data sets from Caltrans functional units were utilized in the preparation of the initial project list. For most of the data sources, project data was limited to projects completed within the reporting time period. However, for QMRS all project data for all programs and years was downloaded, including years preceding the required reporting period. This was necessary to support the tracing of projects resulting from multiple splits and combines over an extended number of years, in one instance going back to the early 1990s.

Table 11 – Primary Data Sources and Project List Compilation

Project Data Source	Data Set Description	Source Data Format	Date
CTIPS SHOPP	Approved projects in the 2010 through 2022 SHOPP. Data provided by HQ Financial Programming (SHOPP) and compiled by HQ Asset Management.	Spreadsheet	December 2023
CTIPS Non-SHOPP	All projects with construction allocation between FY 2013/14 through 2022/23 and within the state Right-of-Way (ROW). Data provided by HQ Office of Capital Improvement Programming.	Spreadsheet	January 2024
Minor SHOPP Approved List	Approved Minor SHOPP projects from FY 2018/19 through 2023/24 SHOPP. Data provided by HQ Financial Programming (Minor SHOPP) and compiled by HQ Asset Management	Spreadsheet	December 2023
HM Master List	Approved HM projects from FY 2018/19 through 2023/24. Data provided by HQ Maintenance and compiled by HQ Asset Management.	Spreadsheet	December 2023
QMRS Project Detail Report	All available project records for all programs and all years in the system. https://qmrs.dot.ca.gov/qmrs/f?p=ea:home	Website	December 2023
CalSMART Quarterly Reports	All available project records for ATP, SCCP, TCEP, and LPP programs for FY 2018/19 Q3 through FY 2023/24 Q1. Data accessed and compiled by HQ Asset Management. https://calsmart.ctpass.dot.ca.gov/	Website	January 2024
CalSMART Completion Reports	All available project records for FY 2018/19 through FY 2023/24. Data accessed and compiled by HQ Asset Management. https://calsmart.ctpass.dot.ca.gov/	Website	January 2024
ATP	ATP project records for FY 2018/19 through FY 2023/24. Data provided by HQ Office of State Programs	Spreadsheet	January 2024
Relinquishments	All available project records for FY 2018/19 through FY 2023/24. Data provided by HQ Division of Design.	Spreadsheet	December 2023
Rebuilding CA	All available project records for all programs. https://odp.dot.ca.gov/sb1/	Website	January 2024

A1.2 Ancillary Data Sources

Several additional ancillary data sources were used to augment project data that was not available in the primary source data systems cited in Table 11. Data from these ancillary systems included supporting data such as project descriptions, details on project scope, performance quantities, expenditures, and key milestone dates, among other data elements. Table 12 summarizes these ancillary data sources.

Table 12 – Ancillary Data Sources for Project Details

Project Data Source	Data Set Description	Source Data Format	Date
Combined and Un-paired SHOPP Projects	Compilation by HQ Asset Management of 5 years of projects. Only the projects advanced to construction were included in the project list	Spreadsheet	December 2024
AMS Datalink Report	Datalink Expenditure by Project Summary report. https://datalink.ctpass.dot.ca.gov/dwapp/ViewHome.aep2	Website	January 2024
Asset Management Tool	SHOPP, HM, and Minor project data scope, schedule, cost, location, and performance. http://amtool.dot.ca.gov/	Website	December 2024
TSN	Project list used to develop annual TSN provided by Division of Research, Innovation and System Information	Spreadsheet	January 2024
Relinquishment Database	CTC relinquishment data https://landsurveys.onramp.dot.ca.gov/relinquishments-vacations-additional-resources	Website	Jan 2024
STEVE	Environmental document data https://steve.dot.ca.gov/fmi/webd	Website	Jan 2024
Vision	Enterprise web application from Division of Engineering Services subdivisions to support program and task management. https://esims.dot.ca.gov/webapps/vision	Website	various
Project Reporting System	Web application managed by Caltrans District 6 with the assistance of local IT and our Statewide partners. The intent is to provide timely, accurate and relevant project-related information to those involved in Statewide Project Delivery from multiple data sources, including QMRS, PRSM, AMS, CTIPS, AM Tool, GIS and more. http://projrpt/	Website	various

A1.3 Data Reconciliation

A data reconciliation process was carried out across the data sets, as in some instances the information in one data source differed from data in others. Project data from CTIPS was generally used as the authoritative source where data conflicts arose. QMRS served as the authoritative source for project delivery milestones.

In some instances, additional investigation was required. While differences could be largely attributed to missing data, incomplete project records, differing data entry requirements for the systems, or data

entry errors, resolution required review by the HQ Asset Management team. Some examples of the data reconciliation process are as follows:

- In instances where the project status was indicated as “deleted” in QMRS but “complete” in CalSMART, HM, or other records, a review of expenditures in AMS was carried out to identify if there were any construction expenditures. This would suggest that the project advanced to the construction phase and, as such, these projects needed to be retained on the list for further screening.
- The data for projects from the HM Master list and Minor SHOPP Approved list were used as the main source to determine if projects were allocated for construction, as QMRS does not require reporting of milestones for HM and Minor SHOPP projects.

A2 Initial Project Screening for Reporting Period

An initial screening of the project set was carried out to identify candidate projects for inclusion in this report. These were comprised of projects completed in FY 2018/19 through FY 2022/23 based on the project delivery milestone, *Construction Contract Acceptance (CCA)*. Several other factors were also considered in the screening, as follows:

- All SHOPP Major projects reported in CTIPS were included.
- All non-SHOPP projects reported in CTIPS (e.g., STIP, TCRP, bond, etc.) within the state operational ROW where the CCA milestone was indicated as being 100% complete were included.
- All ATP, SCCP, TCEP, and LPP projects reported in CalSMART within the state operational ROW and with CCA from FY 2018/19 through 2022/23 were included.
- All SHOPP Minor projects allocated from FY 2018/19 through 2022/23 were included. For the initial screening the year of construction allocation was assumed to be year of completion (similar to CCA), as Minor projects typically are completed within a year. Validation of the date of project completion would be done in a subsequent review step.
- All HM projects in the Master List for FY 2018/19 through 2022/23 were included. For the initial screening the year of construction award was assumed to be year of completion (similar to CCA), as HM projects typically are completed within a year. Note, HM5 Facilities projects were not included in the project set, as the scope of these projects are on facilities outside of the operational ROW and do not add lanes or bike or pedestrian infrastructure.
- All projects with relinquishments were included.
- All projects on the *Rebuilding CA* website within the state operational ROW and reported as completed or in construction were included.

In total 5,1063 projects met the criteria for the initial screening process.

A3 Secondary Screening Using Exclusion and Inclusion Criteria

Criteria were developed and applied to the set of 5,106 projects to mark for inclusion for additional review, flag as likely exclusion, or neither, in which case no further examination was carried out. For projects where any of the screening criteria indicated a potential reportable project, the project was flagged for additional reviews.

A3.1 Projects Screened for Exclusion

Projects were initially flagged for exclusion based on two primary factors – program code and keywords in project descriptive fields. 1,422 projects met the criteria.

Projects under certain funding programs generally do not have work scope pertaining to lane additions or bicycle and pedestrian infrastructure. This includes projects, for example, funded specifically for broadband communications or legal support. Project funding was determined from project records in QMRS and AMS.

Specific types of projects were flagged for exclusion based on the project's program code, a ten-digit coding scheme used for resource allocation and financial management processes. Project program codes from QMRS and AMS data were used. These projects included those related to building facility work, as the scope of these projects are outside of the operational ROW and do not add lanes or bike or pedestrian infrastructure. Additionally, projects with activity codes for Director's Orders (DO) or District Director's Orders (DDO) were excluded, as these projects are typically in response to urgent emergency work and would generally not be used for the types of work required for reporting.

A keyword search of project descriptive data elements across the various data systems was conducted to identify projects where the primary project purpose would generally not include work scope to add lanes or bike or pedestrian infrastructure. These projects were largely focused on environmental mitigation, highway planting, and landscaping.

Note, projects screened for exclusion in this step of the process were not categorically eliminated from further evaluation. These projects were evaluated in the subsequent screening and retained for further evaluation if there were any indications that the project contained scope requiring inclusion in this report.

A3.2 Projects Screened for Inclusion

Projects were screened against criteria to identify projects with work scope related to lane additions, bicycle and pedestrian infrastructure, relinquishments, or relocation of homes or businesses. Four strategies were employed – (1) screening projects based on keywords, (2) screening projects based on activities captured in the Asset Management Tool or CTIPS, (3) screening for projects with relinquishments using the CTC relinquishment resolution data, and (4) screening projects for home or business relocations based on ROW capital project costs. In total, 951 projects met the screening criteria for inclusion.

Project data fields from source systems (e.g., QMRS, CTIPS, CalSMART, Asset Management Tool, etc) containing descriptions, locations, and work types were screened for various permutations of keywords

and phrases (e.g., “aux,” “auxiliary,” “bike,” “bicycle,” etc.) that could indicate reportable projects. The keyword searches focused on identifying six specific types of work scope:

- Highway Widening and Lane Additions
- Lane Conversions (HOV, HOT, Toll, Express)
- Bikeways
- Sidewalks
- Closing Bicycle and Pedestrian Gaps
- Relinquishments

The Asset Management Tool (AM Tool) was used to extract project-specific performance data for SHOPP, HM, and Minor projects. This data was comprised of specific activities and associated quantities (e.g., lane miles of auxiliary lanes constructed) on projects and served as an unambiguous indicator for projects that must be included in the report. Similarly, performance data reported in CTIPS, while more limited, was also used.

Project were identified by cross-referencing against CTC relinquishment resolutions involving a superseded highway, a legislative deletion, or resulted in a change to the TSN data.

Separately, a screening criterion was applied to identify projects where the relocation of businesses or homes was possible. This criterion used the ROW cost data from project data sources and indicated projects where ROW capital costs exceeded \$250k. This lower bound threshold was established after reviewing a range of costs where ROW acquisitions were known, and relocations for less than this value were not found. Not all projects had information regarding ROW costs. In these instances, projects flagged for widening or adding lanes were further reviewed for the potential of relocations.

For projects not in AM Tool, not meeting exclusion criteria, and not meeting inclusion criteria, a more detailed review of project records was carried out to determine if projects should be excluded. 667 projects were reviewed using data obtained from Vision, QMRS, Project Reporting System, and AMS. In addition to confirming inclusion or exclusion, this effort informed the refinement of the keyword screening criteria.

A3.3 Summary of Secondary Screening Criteria

These screening tools collectively served to positively identify projects required for reporting. Projects screened for inclusion in this step of the process were categorically retained for further evaluation by project teams in the districts. Projects flagged for exclusion in the prior screening, but also flagged for inclusion in this step, were also retained for further evaluation. Projects that did not meet any of the inclusion or exclusion criteria were removed from the project list from further evaluation.

A4 District Review of Project Data

The screened listing of 951 projects and associated data were provided to twelve Caltrans District teams for further in-depth review. The district teams were led by the District Asset Manager, or a designee, who coordinated with other functional units within the district to conduct the data compilation and

validation process. A standard data template was developed along with detailed instructions. The template included key project identifiers, descriptions, and project data pertaining to scope, schedule, and cost. Where available from Caltrans data systems, primarily CTIPS and the AM Tool, quantities of lane miles, bikeways, and sidewalk were pre-populated in the listing. Direction and guidance were provided to district teams on completing the reviews, verifying reportable project data and quantities and providing any missing data elements.

The district review process identified projects where the CCA date had changed due to a recent update or a data correction. The net effect was the removal of 74 projects from the list. The review also identified 472 projects that did not have the specific work scope meeting the reporting requirements and were therefore removed from the project set. As a result of this focused review effort, 407 projects were determined to contain the types of work required for reporting. A summary of the project screening and review process and resultant project counts are summarized in Table 13.

Table 13 – Summary of Project Screening and Review

Steps	Description	Number of Projects
Initial Screening	Screening criteria identified initial set of projects with CCA within the 5-year reporting period.	5,106
Exclusion Screening	Identified projects not likely requiring reporting based on keywords or program type.	-1,420
Inclusion Screening	Identified projects where data indicated reportable work scope. <ul style="list-style-type: none"> Retained projects meeting both inclusion and exclusion criteria for further review (+38 projects) Removed projects that did not meet either exclusion or inclusion criteria (-2,778 projects) Reviewed 667 excluded projects with no performance reported in AM Tool to confirm inclusion or exclusion (+7 projects) 	-2,733
District Review	Project data for review and updates by district teams.	953
CCA Milestone Dates	Revised project list to account for changes to CCA dates, resulting in projects outside of the reporting period.	-74
Project Scope Not Applicable	District teams identified projects where there were no work activities meeting requirements for inclusion in this report.	-472
Final Project Set	Projects Included in this Report	407

Appendix B: Internal Review of Procedures

Prior to publishing this initial “Select State Highway System Project Accomplishments” report, Caltrans conducted multiple internal reviews of the processes used to screen projects for inclusion in the report. Given the large number of past projects (over 5,100) that had completed during the identified five-year window, it was necessary to screen projects for the attributes required for this report. The process used to screen through the projects provided an opportunity for projects to be inadvertently screened out of consideration. All projects that were uncertain were included in the set to be manually reviewed by district and headquarters teams. In total, nearly 1,000 projects were manually reviewed to determine the project attributes identified in this new law.

A second internal review of the projects was conducted by an independent team within Headquarters Asset Management that were not involved in the earlier review and screening processes. The team reviewed a 1% random sampling of the project set to identify instances where projects may have been inadvertently screened out from the list of reported projects. The team reviewed project documents and data, including data in project management and tracking data systems, project reports, and plan sheets.

Caltrans Internal Audits Office also reviewed the documentation of the procedures used to develop the data included within this report. One outcome of their review is the expected recommendations for internal data and process changes to improve the efficiency of the development of this report in future years.

Appendix E: Listing of Projects with General Purpose Lane Conversions

Projects converted from a General Purpose lane to a Managed Lane are provided in Table 16.

Table 16 – Projects with General Purpose Lane Conversions

EA	Project ID	Dist	County	Route	Begin PM	End PM	Project Description	CCA FY	Total Converted Lanes (Lane Miles)
1J561	419000117	4	San Mateo/ Santa Clara	101	0.0/ 50.6	6.6/ 52.5	In Palo Alto, from 2 miles south of the Santa Clara County Line to Whipple Avenue Interchange. Convert existing HOV Lanes to Express Lanes.	2023	15.1
1K551	417000229	4	Santa Clara		22.4/ 45.9	23.9/ 52.4	On US 101 from State Route 237 to the Santa Clara/San Mateo County line and on State Route 85 from State Route 237 to the State Route 85/US 101 interchange. The project converts existing single carpool lanes to express lanes at the following locations: a. US 101 from near State Route 237 north to State Route 85 (in Mountain View) b. State Route 85 from State Route 237 north to US 101 (in Mountain View) including the existing US 101/State Route 85 carpool lane-to-carpool lane direct connector ramps. Convert existing double carpool lanes to double express lanes on US 101 from State Route 85 (in Mountain View) to the San Mateo County line in Palo Alto.	2022	19.3
3G920	414000507	4	Various	880	0	25.53	In Alameda and Santa Clara Counties, on Route 880 between Route 237 interchange and Hegenberger Road interchange, segments 04-Santa Clara County Line (SCL)-880 7.5/10.5 and Alameda County (ALA)-880 0.0/26.4. Conversion of High Occupancy Vehicle (HOV) lanes to express lanes.	2022	44.9
3G950	414000489	4	Alameda/ Contra Costa	680	R20.1/ R0.0	R21.9/ R14.0	Metropolitan Transportation Commission (MTC) in Contra Costa Route 680 express Lanes from Walnut Creek to Interstate 580. Convert High-Occupancy Vehicle (HOV) to Express Lanes.	2019	24.4
4H280	413000202	4	Santa Clara	237	2.3	8.4	On SR 237 from Mathilda Avenue in Sunnyvale to Zanker Road in San Jose. The project Converts existing single carpool lanes to express lanes on eastbound and westbound SR 237 (Phase 2).	2020	7.7
27440	700000514	7	Los Angeles	10	17.1	48.3	In Los Angeles County in various cities from Alameda and Union Station to Route 605 and on Route 110 from 182nd Street and Artesia Transit Center to Adams Boulevard. Convert existing HOV lanes into High Occupancy Toll (HOT) lanes on the I-10 Freeway between Alameda Street and I-605 and on I-110 Freeway between Adams Blvd and Artesia Transit Center.	2019	73.2
0F96E	1200020279	12	Orange	5	6.2	8.7	In Orange County, in Capistrano Beach and San Juan Capistrano from S Of Pacific Coast Hwy To San Juan Creek Road. Add High-Occupancy Vehicle (HOV) lanes in I-5.	2019	0.9

Intentionally left blank

Appendix F: Listing of Projects with Relocation of Homes and Businesses

Projects homes and businesses were relocated due to the acquisition of Rights-of-Way for the new lane miles on the State Highway System are provided in Table 17.

Table 17 – Projects with Home or Business Relocations

EA	Project ID	Dist	County	Route	Begin PM	End PM	Project Description	CCA FY	Number of businesses Relocated	Number of homes Relocated	Total Number of Relocations
2HT10	0612000287	6	Fresno	99	23.7	26.2	In the city of Fresno, on Route 99 from Clinton Avenue to Ashlan Avenue. Route 99 realignment.	2020	11	0	11
12030	0700000107	7	Los Angeles	405	28.0	39.0	In Los Angeles from I-10 to US 101. Construct one High-Occupancy Vehicle (HOV) Lane Northbound on Interstate 405 from I-10 to US 101. (TCRP #39)	2020	3	20	23
12184	0700000117	7	Los Angeles	5	26.7	29.4	In Los Angeles County, on Route 5, from Route 134 to south of Burbank Boulevard. Construct one HOV lane in each direction. (Phase 4 of 4)	2021	3	0	3
21593	0700001833	7	Los Angeles	5	2.4	4.2	In Norwalk from Shoemaker Avenue to Silverbow Avenue, add HOV and mixed flow lane in each direction. (Segment 3)	2020	7	42	49
21594	0700001834	7	Los Angeles	5	3.7	6.1	In Norwalk from Silverbow Avenue to Orr and Day Road Overhead. Widening I-5 with HOV and mixed flow lanes. (Segment 4)	2021	61	202	263
0J070	0800000282	8	San Bernardino	215	0.6	1.7	In the city of Grand Terrace. Reconstruct Barton Road interchange.	2021	3	0	3
34770	0800000616	8	San Bernardino	58	0.0	12.9	In Kramer Junction, from the Kern County line to 7.5 miles east of the Route 395 junction. Realign highway and construct grade separations.	2021	1	3	4
43230	0800000668	8	Riverside	15	3.0	4.0	In Riverside County, City of Temecula from Santiago Road overcrossing to Temecula Creek bridge at I-15 State Route 79 south interchange. Interchange improvements.	2021	1	0	1
0C472	0314000272	3	Yolo	16	20.5	31.8	Near Esparto, from 0.4 mile west of to 0.4 mile east of County Road 79; also from 0.1 mile east of Plainfield Street to 0.1 mile east of County Road 90. Shoulder widening, curve correction, left-turn channelization, signalization and two-way left-turn lanes.	2020	1	4	5
13820	0700000142	7	Los Angeles	47	3.4	4.6	In Long Beach, at Schuyler Heim Bridge. Replace steel bridge with cast-in-place reinforced concrete bridge.	2022	3	0	3
21595	0700001835	7	Los Angeles	5	5.8	7.6	Artesia Boulevard to 0.4 mi north of San Gabriel River Bridge. Widen I-5 with HOV and mixed flow lanes. (Segment 5)	2022	24	42	66
2159U	0715000160	7	Los Angeles	5	0.0	1.5	In La Mirada, from Artesia Boulevard to Coyote Creek Overcrossing. Widen with High-Occupancy Vehicle (HOV) and mixed flow lanes (Segment 2); replace asphalt with concrete pavement; replace median barriers, signs, lighting, and ramp meters; and improve drainage.	2023	188	0	188
34253	0600000382	6	Fresno	180	77.2	77.2	Near Centerville and Minkler, from 0.5 mile west of Smith Avenue to 0.6 mile east of Frankwood Avenue. Construct 4-lane expressway on existing alignment. Also near the city of Fresno, at Kings River Overflow Bridge No. 42-0074. Replace bridge. Kings Canyon Expressway (Segment 3)	2021	0	4	4

Intentionally left blank

Appendix G: Listing of Projects with Construction of New Bikeways

Projects that added new bikeways to the system are presented in Table 18.

Table 18 – Projects with Construction of New Bikeways

Appendix I: Listing of Planned and Pending Projects on the State Highway System

Planned and pending projects on the State Highway System as of June 2023 are presented in Table 20.

Table 20 – Planned and Pending Projects on the State Highway System

EA	Project ID	Dist	County	Route	Begin PM	End PM	Project Description	Purpose and Need	Status	PID Completion Date
36150	0719000287	7	Los Angeles	001	35.2	46.9	In and near the cities of Santa Monica, Los Angeles, and Malibu, from Colorado Avenue to south of Cross Creek Road. Rehabilitate pavement, upgrade guardrail, Transportation Management System (TMS) elements, and culverts, and upgrade facilities to Americans with Disabilities Act (ADA) standards.	Rehabilitate pavement, upgrade guardrail, Transportation Management System (TMS) elements, and culverts, and upgrade facilities to Americans with Disabilities Act (ADA) standards.	Environmental	7/26/2021
35420	0718000323	7	Los Angeles	001	46.9	62.867	In and near Malibu, from north of Serra Road to the Ventura County line. Rehabilitate pavement, upgrade facilities to Americans with Disabilities Act (ADA) standards, and upgrade guardrail.	Rehabilitate pavement, upgrade facilities to Americans with Disabilities Act (ADA) standards, and upgrade guardrail.	Design	6/26/2019
32090	0716000043	7	Los Angeles	001	0.0	0.0	In Long Beach, at the San Gabriel River Bridge No. 53-0060. Widen bridge and upgrade bridge rail.	Widen bridge and upgrade bridge rail.	Design	5/29/2019
36700	0719000353	7	Los Angeles	001	0.0	11.5	In the cities of Long Beach and Los Angeles, from the Orange County line to Figueroa Street. Install stormwater treatment Best Management Practices (BMPs), including bioswales and Design Pollution Prevention Infiltration Areas (DPPIAs).	Install stormwater treatment Best Management Practices (BMPs), including bioswales and Design Pollution Prevention Infiltration Areas (DPPIAs).	Environmental	6/24/2021
35040	0718000180	7	Los Angeles	001	0.2	13.36	In Los Angeles County, on various routes at various locations. Upgrade existing fiber communication system and rehabilitate Transportation Management System (TMS) elements, including video cameras, ramp meters, and Changeable Message Signs (CMS).	Upgrade existing fiber communication system and rehabilitate Transportation Management System (TMS) elements, including video cameras, ramp meters, and Changeable Message Signs (CMS).	Construction	5/29/2019
36680	0719000348	7	Los Angeles	001	44.15	44.15	In Malibu, at Las Flores Creek Bridge No. 53-0034. Upgrade bridge rail and sidewalk, widen bridge, upgrade traffic signals, and upgrade facilities to Americans with Disabilities Act (ADA) standards.	Upgrade bridge rail and sidewalk, widen bridge, upgrade traffic signals, and upgrade facilities to Americans with Disabilities Act (ADA) standards.	Environmental	11/21/2023
36480	0719000180	7	Los Angeles	001	4.51	7.075	In Long Beach, from Temple Avenue to De Forest Avenue. Upgrade traffic signals, crosswalks, curb ramps, sidewalks, driveways, and Accessible Pedestrian Signals (APS) to Americans with Disabilities Act (ADA) standards.	Upgrade traffic signals, crosswalks, curb ramps, sidewalks, driveways, and Accessible Pedestrian Signals (APS) to Americans with Disabilities Act (ADA) standards.	Design	6/25/2020
35900	0719000179	7	Los Angeles	001	0.6	1.3	In Long Beach, at the Los Alamitos Bay Bridge No. 53-0064. Seismic retrofit.	Seismic retrofit.	Environmental	11/24/2020
37760	0721000165	7	Los Angeles	001	29.371	30.731	In and near the city of Los Angeles, near the neighborhood of Playa Vista, from 83rd Street to Fiji Way. Install left turn signals, restripe for left turn storage, upgrade vehicle and bicycle detection systems, and make pedestrian crossing improvements. This project will improve safety and reduce the number and severity of collisions.	Install left turn signals, restripe for left turn storage, upgrade vehicle and bicycle detection systems, and make pedestrian crossing improvements.	Construction	12/30/2021
35111	0722000044	7	Los Angeles	001	14.63	40.77	In Los Angeles County, at various locations. Upgrade video cameras, enhance highway worker safety, and construct concrete barriers, guardrail, and crash cushions. This project will ensure cameras are operational and will help with verification of field conditions and incident response.	Upgrade video cameras, enhance highway worker safety, and construct concrete barriers, guardrail, and crash cushions.	Construction	6/26/2019

EA	Project ID	Dist	County	Route	Begin PM	End PM	Project Description	Purpose and Need	Status	PID Completion Date
35032	0723000024	7	Los Angeles	001	11.8	27.1	In Los Angeles County, on various routes at various locations. Upgrade Transportation System Management (TMS) elements and enhance highway worker safety.	Upgrade Transportation System Management (TMS) elements and enhance highway worker safety.	Construction	6/27/2018
32580	0716000090	7	Los Angeles	001	18.0	33.3	In the cities of Torrance, Redondo Beach, Hermosa Beach, Manhattan Beach, El Segundo, and Los Angeles, from Paseo De Las Delicias to Dewey Street. Rehabilitate pavement, construct turn lanes and bus pads, install raised medians, and upgrade curb ramps to Americans with Disabilities Act (ADA) standards.	Rehabilitate pavement, construct turn lanes and bus pads, install raised medians, and upgrade curb ramps to Americans with Disabilities Act (ADA) standards.	Design	5/7/2024
29140	0712000094	7	Los Angeles	001	56.5	56.9	In Malibu, from Guernsey Avenue to Trancas Canyon Road/Broad Beach Road. Replace bridge.	Replace bridge.	Construction	1/18/2013
32160	0716000049	7	Los Angeles	001	0.00	18.00	In the cities of Long Beach, Los Angeles, Lomita, and Torrance, from Orange County line to Paseo De Las Delicias. Grind pavement, place Hot Mix Asphalt (HMA) and Rubberized Hot Mix Asphalt (RHMA) pavement to rehabilitate pavement, upgrade Americans with Disabilities Act (ADA) curb ramps and Accessible Pedestrian Signals (APS), add pedestrian and bike improvements as complete streets elements, and upgrade guardrail.	Grind pavement, place Hot Mix Asphalt (HMA) and Rubberized Hot Mix Asphalt (RHMA) pavement to rehabilitate pavement, upgrade Americans with Disabilities Act (ADA) curb ramps and Accessible Pedestrian Signals (APS), add pedestrian and bike improvements as complete streets elements, and upgrade guardrail.	Construction	9/8/2017
31350	0715000090	7	Los Angeles	001	37.7	62.8	In the cities of Los Angeles and Malibu, from 0.4 mile south of Temescal Canyon Road to Ventura County line; also in Ventura County, from Los Angeles County line to 0.1 mile north of Tonga Street (PM 0.0/0.9). Rehabilitate culverts and construct Solstice Creek Bridge for fish passage.	Rehabilitate culverts and construct Solstice Creek Bridge for fish passage.	Construction	6/15/2015
32720	0716000121	7	Los Angeles	001	R34.576	35.2	In and near Santa Monica, from Lincoln Boulevard to McClure Tunnel; also on Route 10 (PM R2.155/18.3), Route 2 (PM R18.7), Route 101 (PM 11.8), and Route 105 (PM R1.95). Upgrade the existing Transportation Management System (TMS) elements to improve traffic monitoring, data transmission, and network connectivity including the Los Angeles Regional Transportation Management Center (LARTMC) and communication hubs at Route 10, Route 101 and Route 105.	Upgrade the existing Transportation Management System (TMS) elements to improve traffic monitoring, data transmission, and network connectivity including the Los Angeles Regional Transportation Management Center (LARTMC) and communication hubs at Route 10, Route 101 and Route 105.	Construction	6/21/2017
4X970	0716000335	7	Los Angeles	001	42.5	42.5	In Malibu, south of Big Rock Drive. Shoreline embankment restoration by installing a secant pile wall.	Shoreline embankment restoration by installing a secant pile wall.	Construction	8/25/2017
34610	0718000071	7	Los Angeles	001	7.08	7.11	In Long Beach, at Los Angeles River Bridge No. 53-0341 and De Forest Avenue Undercrossing No. 53-1047. Seismic retrofit, upgrade bridge rails and lighting, and upgrade facilities to Americans with Disabilities Act (ADA) standards.	Seismic retrofit, upgrade bridge rails and lighting, and upgrade facilities to Americans with Disabilities Act (ADA) standards.	Design	5/16/2019
35490	0719000001	7	Los Angeles	001	43.9	44.4	In Malibu, from 0.2 mile south to 0.3 mile north of Las Flores Canyon Road. Install protected left-turn signal phases for southbound movements, upgrade signal poles, mast arms, and hardware, install speed feedback device, and upgrade advance flashing beacon warning system to improve safety. This project will reduce the number and severity of collisions.	Install protected left-turn signal phases for southbound movements, upgrade signal poles, mast arms, and hardware, install speed feedback device, and upgrade advance flashing beacon warning system to improve safety.	Construction	11/18/2019
35200	0718000212	7	Los Angeles	001	4.711	6.591	In Long Beach, from Stanley Avenue to Cedar Avenue. Upgrade traffic signals, install protected left-turn phases,	Upgrade traffic signals, install protected left-turn phases, install pedestrian push buttons and pedestrian signals,	Construction	6/27/2018

EA	Project ID	Dist	County	Route	Begin PM	End PM	Project Description	Purpose and Need	Status	PID Completion Date
							install pedestrian push buttons and pedestrian signals, and upgrade curb ramps to Americans with Disabilities Act (ADA) standards to improve pedestrian and bicycle safety. This project will reduce the number and severity of collisions.	and upgrade curb ramps to Americans with Disabilities Act (ADA) standards to improve pedestrian and bicycle safety.		
35960	0719000225	7	Los Angeles	001	18.87	19.94	In Redondo Beach, from Knob Hill Avenue to Diamond Street. Improve safety by upgrading traffic signals, adding protected left-turn signal phasing, and upgrading facilities to Americans with Disabilities (ADA) standards at the intersections of Knob Hill Avenue and Diamond Street with Route 1.	Improve safety by upgrading traffic signals, adding protected left-turn signal phasing, and upgrading facilities to Americans with Disabilities (ADA) standards at the intersections of Knob Hill Avenue and Diamond Street with Route 1.	Construction	12/4/2019
35970	0719000238	7	Los Angeles	001	11.208	11.208	In the city of Los Angeles, in the neighborhood of Wilmington, at the intersection of Wilmington Boulevard. Upgrade traffic signal with protected left-turn phases from north and south approaches, add Accessible Pedestrian Signal (APS) and countdown devices, and upgrade facilities to Americans with Disabilities Act (ADA) standards to improve safety. This project will reduce the number and severity of collisions.	Upgrade traffic signal with protected left-turn phases from north and south approaches, add Accessible Pedestrian Signal (APS) and countdown devices, and upgrade facilities to Americans with Disabilities Act (ADA) standards to improve safety.	Construction	1/28/2020
35950	0719000218	7	Los Angeles	001	32.71	32.71	In the city of Los Angeles, near the neighborhood of Venice, at the intersection with California Avenue. Upgrade signals to support left-turn phases, install Accessible Pedestrian Signal (APS) push buttons, install bicycle detection system, and upgrade facilities to Americans with Disabilities Act (ADA) standards to improve safety. This project will reduce the number and severity of collisions.	Upgrade signals to support left-turn phases, install Accessible Pedestrian Signal (APS) push buttons, install bicycle detection system, and upgrade facilities to Americans with Disabilities Act (ADA) standards to improve safety.	Construction	3/17/2020
34090	0717000182	7	Los Angeles	001	40.79	48.49	In the city of Malibu and un-incorporated areas of Los Angeles County. Traffic signal improvement, upgrading the communication system and system integration at the Los Angeles Regional Transportation Management Center Tour (LARTMC) on Route 2, at the Ela hub building on Route 5, and at Lax Hub building on Route 105.	Traffic signal improvement, upgrading the communication system and system integration at the Los Angeles Regional Transportation Management Center Tour (LARTMC) on Route 2, at the Ela hub building on Route 5, and at Lax Hub building on Route 105.	Construction	7/18/2018
31500	0715000162	7	Los Angeles	001	20.6	21.9	In Hermosa beach, between Herondo St/Anita St and Artesia Blvd. Mobility improvements (complete street).	Mobility improvements (complete street).	Environmental	12/8/2016
34100	0717000183	7	Los Angeles	001	47.4	49.3	In Los Angeles County, in the city of Malibu, between Webb Way and Puerco Canyon Road. Modify median to improve channelization, control turn movements and provide complete street design.	Modify median to improve channelization, control turn movements and provide complete street design.	Construction	3/25/2019
0P960	0418000030	4	Marin	001	0.42	22.96	Near Mill Valley, Stinson Beach, and Olema, at Coyote Creek Bridge No. 27-0018 (PM 0.42), Eskoot Creek Bridge No. 27-0077 (PM 12.37), Olema Creek Bridge No. 27-0020 (PM 22.81) and Olema Creek Bridge No. 27-0021 (PM 22.96). Upgrade bridge rails.	Upgrade bridge rails.	Design	2/26/2019
2J510	0414000524	4	Marin	001	40.3	40.3	Near Marshall, at 0.1 mile south of Clark Road. Replace culvert.	Replace culvert.	Design	6/12/2019
0AA45	0419000477	4	Marin	001	0.0	12.8	Near Mill Valley, from Route 101 to Calle Del Arroyo. Rehabilitate pavement, upgrade facilities to Americans with Disabilities Act (ADA) standards and improve pedestrian and bicycle infrastructure.	Rehabilitate pavement, upgrade facilities to Americans with Disabilities Act (ADA) standards and improve pedestrian and bicycle infrastructure.	Environmental	6/30/2023

EA	Project ID	Dist	County	Route	Begin PM	End PM	Project Description	Purpose and Need	Status	PID Completion Date
3AA50	042000064	4	Marin	001	5.1	5.1	Near Muir Beach, at 0.6 mile south of Pacific Way. Repair and extend retaining wall, replace culvert and guardrail, and repair pavement.	Repair and extend retaining wall, replace culvert and guardrail, and repair pavement.	Design	1/14/2022
0W710	042000281	4	Marin	001	37.2	37.2	Near Marshall, at 1.2 miles south of Marshall Petaluma Road. Place rock slope protection, replace fence, and repair pavement.	Place rock slope protection, replace fence, and repair pavement.	Environmental	5/5/2023
3W620	0421000409	4	Marin	001	22.67	22.67	Near San Rafael, at 5.1 miles north of Horseshoe Hill Road. Remediate fish passage by replacing existing culvert with a new bridge.	Remediate fish passage by replacing existing culvert with a new bridge.	Environmental	8/24/2023
3W630	0421000410	4	Marin	001	18.69	18.69	Near San Rafael, at 1.1 miles north of Horseshoe Hill Road. Remediate fish passage by replacing existing culvert system with a new bridge.	Remediate fish passage by replacing existing culvert system with a new bridge.	Environmental	8/24/2023
2Q53U	0422000077	4	Marin	001	13.05	45.1	Near Stinson Beach, Point Reyes, and Tomales, from north of Calle Del Arroyo to south of Tomales Petaluma Road at various locations. Rehabilitate drainage systems.	Rehabilitate drainage systems.	Design	6/21/2019
0G642	0413000350	4	Marin	001	28.4	28.6	Near Point Reyes Station, at Lagunitas Creek Bridge No. 27-0023 and Lagunitas Creek Overflow Bridge No. 27-0024. Replace bridges.	Replace bridges.	Design	12/12/2011
1J961	0423000303	4	Marin	001	22.8	33.0	Near Point Reyes Station and Olema, from Olema Creek Bridge to north of Cypress Road; also near Tomales, from south of Tomales-Petaluma Road to south of Valley Ford Road (PM 45.0/50.5). Plant establishment and monitoring work for pavement rehabilitation project EA 1J960.	Plant establishment and monitoring work for pavement rehabilitation project EA 1J960.	Other	6/29/2015
0J570	0414000014	4	Marin	001	33.4	33.5	Near Point Reyes Station, at Millerton Gulch Bridge No. 27-0114. Environmental mitigation for emergency project EA 4K500.	Environmental mitigation for emergency project EA 4K500.	Other	8/7/2014
1J960	0414000403	4	Marin	001	22.8	33.0	Near Point Reyes Station and Olema, from Olema Creek Bridge to 0.2 mile north of Cypress Road; also near Tomales, from 0.4 mile south of Tomales-Petaluma Road to 0.2 mile south of Valley Ford Road (PM 45.0/50.5). Rehabilitate pavement, widen paved shoulders, replace failed culverts, modify guardrail, and upgrade pedestrian curb ramps to conform with Americans with Disabilities Act (ADA) standards. This project will extend the pavement service life and improve ride quality.	Rehabilitate pavement, widen paved shoulders, replace failed culverts, modify guardrail, and upgrade pedestrian curb ramps to conform with Americans with Disabilities Act (ADA) standards.	Construction	6/29/2015
0AA44	0419000476	4	Marin	001	22.8	22.8	Near Five Brooks, at Giacomini Creek Bridge No. 27-0122. Four-year mitigation plant establishment for emergency project EA 4K850.	Four-year mitigation plant establishment for emergency project EA 4K850.	Other	12/5/2019
0AA48	0419000480	4	Marin	001	10.7	11.0	Near Stinson Beach, from 1.5 miles south to 1.2 miles south of Panoramic Highway. Four-year mitigation plant establishment and monitoring for emergency projects EA 4K240 and EA 4S220.	Four-year mitigation plant establishment and monitoring for emergency projects EA 4K240 and EA 4S220.	Other	12/3/2019
0W130	0420000179	4	Marin	001	11.5	11.5	Near Stinson Beach, at 0.7 mile south of Panoramic Highway. Implement permit requirements including plant establishment, noxious weed control, seed collection and propagation, and biological monitoring for emergency project EA 0P130.	Implement permit requirements including plant establishment, noxious weed control, seed collection and propagation, and biological monitoring for emergency project EA 0P130.	Construction	8/12/2020
2W870	0421000288	4	Marin	001	0	0.3	In Marin County, in the city of Marin City, at Manzanita Park-And-Ride Lot, on route 1 and at route 1/101	To address current flooding and sea level rise.	Not Programmed	6/28/2024

EA	Project ID	Dist	County	Route	Begin PM	End PM	Project Description	Purpose and Need	Status	PID Completion Date
							separation and on route 101 from Donahue Street to route 1/101 separation. To address current flooding and sea level rise.			
40110	0100000154	1	Mendocino	001	43.3	44.2	Near Albion, from 3.0 miles north of Route 128 Junction to 0.2 mile north of Albion River Bridge No. 10-0136. Bridge replacement. This is a Construction Manager/General Contractor (CMGC) project.	Bridge replacement.	Environmental	8/26/2009
0F650	0116000041	1	Mendocino	001	4.64	4.64	Near Anchor Bay, at Sunset Drive; also near Fort Bragg, at Tregoning Drive (PM 58.78). Improve fish passage. Includes federal Culvert Aquatic Organism Passage (AOP) Grant amount of \$15,000,000.	Improve fish passage.	Environmental	8/24/2023
0F710	0116000047	1	Mendocino	001	6.4	6.8	Near Gualala, from 0.2 mile north of Havens Neck Drive to Gypsy Flat Road; also from 0.5 mile to 0.3 mile south of Iverson Road (PM 9.3/9.5). Realign roadway and widen lanes and shoulders to improve safety. This project will reduce the number and severity of collisions.	Realign roadway and widen lanes and shoulders to improve safety	Construction	5/23/2017
0H600	0117000240	1	Mendocino	001	33.7	R51.0	Near the Mendocino community, from 0.2 mile south of Philo Greenwood Road to 0.2 mile north of Little Lake Road. Rehabilitate pavement, upgrade guardrail, and replace rumble strips. This project will extend pavement service life and improve ride quality.	Rehabilitate pavement, upgrade guardrail, and replace rumble strips. This project will extend pavement service life and improve ride quality.	Construction	6/27/2019
0L270	0121000091	1	Mendocino	001	0.0	105.50	Near Gualala, Fort Bragg, and Leggett, from Sonoma County line to Humboldt County line at various locations. Rehabilitate drainage systems, improve fish passage, construct pedestrian and bicycle infrastructure, widen shoulders, improve roadway geometry, and upgrade guardrail and Traffic Management System (TMS) elements.	Rehabilitate drainage systems, improve fish passage, construct pedestrian and bicycle infrastructure, widen shoulders, improve roadway geometry, and upgrade guardrail and Traffic Management System (TMS) elements.	Environmental	6/13/2023
0J940	0119000124	1	Mendocino	001	14.7	33.9	In and near Point Arena, from 0.2 mile south of Iverson Avenue to Philo Greenwood Road. Rehabilitate pavement by grinding and placing asphalt, upgrade guardrails, repair Transportation Management System (TMS) elements, and upgrade curb ramps to Americans with Disabilities Act (ADA) standards.	Rehabilitate pavement by grinding and placing asphalt, upgrade guardrails, repair Transportation Management System (TMS) elements, and upgrade curb ramps to Americans with Disabilities Act (ADA) standards.	Environmental	6/29/2020
0L280	0121000092	1	Mendocino	001	18.5	18.5	Near Point Arena, at Garcia River Bridge No. 10-0113. Mitigate bridge scour, paint bridge, and upgrade Traffic Management System (TMS) elements.	Mitigate bridge scour, paint bridge, and upgrade Traffic Management System (TMS) elements.	Environmental	6/23/2023
0J950	0119000125	1	Mendocino	001	78.90	87.85	Near DeHaven, from 0.2 mile south of Branscomb Road to South Fork Cottoncreek Creek Bridge. Rehabilitate pavement, pave bicycle turnouts, and upgrade guardrail.	Rehabilitate pavement, pave bicycle turnouts, and upgrade guardrail.	Environmental	2/8/2023
40141	0120000111	1	Mendocino	001	42.9	43.6	Near Albion, from 2.6 miles north of Route 128 Junction to 0.5 mile north of Salmon Creek Bridge No. 10-0134. Lead abatement for bridge replacement project EA 0M900.	Lead abatement for bridge replacement project EA 0M900.	Other	8/26/2009
43485	0123000046	1	Mendocino	001	R51.3	R52.1	Near the Mendocino community, at Jack Peters Creek Bridge No. 10-0150 (PM 51.87). Onsite and offsite mitigation and monitoring work for bridge rail upgrade project EA 43484. The work includes seed collecting, cultivating the plants for two years, and ten years of maintenance and monitoring at the revegetation sites.	Onsite and offsite mitigation and monitoring work for bridge rail upgrade project EA 43484. The work includes seed collecting, cultivating the plants for two years, and ten years of maintenance and monitoring at the revegetation sites.	Other	6/30/2011

EA	Project ID	Dist	County	Route	Begin PM	End PM	Project Description	Purpose and Need	Status	PID Completion Date
OE112	0123000037	1	Mendocino	001	31.4	31.4	Near Fort Bragg, at Elk Creek Bridge No. 10-0120; also at 0.4 mile north of Iversen Road (PM 10.17). Onsite and offsite mitigation and monitoring work for bridge replacement EA OE110. The work includes seed collecting, cultivating the plants for two years, and ten years of maintenance and monitoring at the revegetation sites.	The work includes seed collecting, cultivating the plants for two years, and ten years of maintenance and monitoring at the revegetation sites.	Other	6/18/2015
OM900	0123000091	1	Mendocino	001	42.4	43.3	Near Albion, from 2.2 miles north of Route 128 Junction to 0.2 mile north of Salmon Creek Bridge No. 10-0134. Replace bridge.	Replace bridge.	Environmental	8/26/2009
ON180	0123000158	1	Mendocino	001	1.0	1.0	Near Gualala, at intersection with Ocean Drive. Construct left-turn lane.	Construct left-turn lane.	Design	1/22/2014
OB220	0112000110	1	Mendocino	001	59.8	62.1	In Fort Bragg, from Route 20 to Pudding Creek Bridge. Construct Americans with Disabilities Act (ADA) compliant curb ramps and sidewalk, add high visibility signing and striping at crosswalks, construct retaining walls, and upgrade drainage.	Construct Americans with Disabilities Act (ADA) compliant curb ramps and sidewalk, add high visibility signing and striping at crosswalks, construct retaining walls, and upgrade drainage.	Design	1/26/2024
OF711	0124000099	1	Mendocino	001	6.4	R10.4	Near Gualala, from 0.4 mile north of Havens Neck Drive to 0.7 mile north of Iversen Road. Onsite and offsite plant revegetation mitigation and monitoring work for safety project OF710.	Onsite and offsite plant revegetation mitigation and monitoring work for safety project OF710.	Other	5/23/2017
43480	010000672	1	Mendocino	001	62.0	62.3	In Fort Bragg, at Pudding Creek Bridge No. 10-0158. Bridge rail upgrade and widening.	Bridge rail upgrade and widening.	Construction	6/29/2011
OG060	0116000120	1	Mendocino	001	71.3	71.3	Near Fort Bragg, at Abalobadiah Creek. Improve sight distance and place additional curve warning signs to improve safety. This project will reduce the number and severity of collisions.	Improve sight distance and place additional curve warning signs to improve safety.	Construction	6/16/2017
OG600	0117000026	1	Mendocino	001	R65.13	65.49	Near Cleone, from 0.1 mile north of Mill Creek Drive to 0.3 mile north of Ward Avenue. Widen shoulders.	Widen shoulders.	Construction	5/11/2018
OH590	0117000239	1	Mendocino	001	87.85	105.578	Near Leggett, from north of Rockport Street to Route 101. Rehabilitate pavement and upgrade guardrail and Transportation Management System (TMS) elements. This project will extend the pavement service life and improve ride quality.	Rehabilitate pavement and upgrade guardrail and Transportation Management System (TMS) elements.	Construction	6/27/2019
43484	0117000133	1	Mendocino	001	R51.3	R52.1	Near the Mendocino community, at Jack Peters Creek Bridge No. 10-0150. Upgrade bridge rails, widen bridge, overlay deck, modify drainage, and install erosion control.	Upgrade bridge rails, widen bridge, overlay deck, modify drainage, and install erosion control.	Construction	6/30/2011
OC55U	0123000047	1	Mendocino	001	41.8	42.5	Near Albion, from 1.5 miles north of Route 128 to 0.1 mile south of Navarro Ridge Road and at Navarro Ridge Road. Widen for standard shoulders, improve roadway cross slope, install rumble strips and guardrail to improve safety, improve drainage, restore eroded slopes and channels, and repair roadway. This project will reduce the number and severity of collisions, protect the roadway from erosion and provide stability. 4H581	0320000240	3	Sacramento	005	27.6	34.3	On Interstate 5 (I-5) in Sacramento County from 0.1 mile south of Arena Blvd Interchange to 0.4 mile south of Yolo County line. Construct acceleration and deceleration merge lanes and Intelligent transportation system (ITS) infrastructure.	The purpose of the proposed project is to increase freight throughput capacity to meet existing and forecasted freight truck volumes by addressing congestion that impacts freight capacity and improving freight travel time reliability and speeds through the project corridor. The section of I-5 within the proposed project limits experiences high travel demand especially during peak commute periods. As a result, the project area is subject to recurring congestion that impedes the movement of freight through the corridor and impairs mobility for vehicles and trucks further resulting in bottlenecks, increased emissions, increased travel costs, and reduced travel time reliability. The proposed project will be Phase 1 of the Sac-5 Corridor Improvement Project that will address freight mobility throughout the corridor.	Construction	8/14/2019
4H580	0318000336	3	Sacramento	005	22.4	34.4	In the City of Sacramento, on Interstate 5, from the Interstate 5/United States Highway 50 interchange to the Sacramento River Bridge (Br No 22-0025): construct managed lanes in both directions, ramp meters at southbound West El Camino Avenue and I Street ramps, and a southbound deceleration lane for the Elkhorn Rest Area.	Purpose: The purpose of the proposed project is to reduce congestion, increase person throughput, provide multimodal access, promote ride sharing, improve mobility, and improve traffic operations. Also, provide innovative transportation management technologies, and promote opportunities and support for economic development. Need: Currently, the section of I-5 within the proposed project limits experiences high travel demand especially during peak commute periods. As a result, the project area is subject to recurring congestion	Environmental	8/14/2019

0H920	0215000083	2	Various	005	0	0	In Shasta and Tehama counties at various locations from 0.5 mile north of Knighton Road Overcrossing to Fawndale Road Overcrossing and at northbound Cottonwood Scales. Description: Add a third through lane in the median as a truck only lane in each direction. Construct four auxiliary lanes. Widen seven bridges. Install an Advanced Lane Management System in the northbound direction and will have three overhead sign structures. Install two 350 kw Electric Vehicle Chargers for trucks and other vehicles.	Purpose: Improve operations on I-5 by reducing merging conflicts and congestions, upgrading signing and lighting, providing new ITS elements to improve safety and reduce collision concentrations; improve primary evacuation route for high fire severity zones; reduce adverse impacts of closures during winter storms; enhance reliability of the interstate and interregional goods movement; improve pavement quality to increase smoothness, reduce maintenance efforts, and minimize field maintenance exposure to traffic Need: Existing facility has aged beyond its design life and no longer adequately meets transportation demands within the project limits. The existing pavement needs to be preserved and the existing lighting, signing and median barrier are non-standard. Additional Transportation Management System elements are needed to improve freeway operations during emergency events. The mainline flow of traffic is degraded by a speed differential resulting from an increase in merging trucks and other vehicles at several consecutive ramps. Recent fires and winter storms developed long backups, delays, and major detours through and around the project area, demonstrating the current lack of system resiliency. This four-lane section of freeway is the last remaining bottleneck on I-5 in Shasta County from the Tehama County line to Shasta Lake City, restricting freeway operations and inter-regional goods movement. All these factors reduce the safety and operational effectiveness of the facility.	Design	2/19/2017

OG170	0800000190	8	Riverside	010	2.1	3.8	In Calimesa Fr 1.1 mile west to 0.8 mile E/O Cherry Valley Blvd overcrossing. Interchange improvements (Diverging Diamond Interchange).	Interchange improvements (Diverging Diamond Interchange).	Design	6/13/2018
OK730	0800000368	8	Riverside	010	53.9	55.5	On I-10 in Indio at Monroe Street Interchange: reconstruct/widen interchange from 2 to 4 through lanes including bridge over Whitewater River Channel from Avenue 42 to s/o Whitewater River Channel, reconstruct/widen on-ramps termini 1 to 2 lanes and off ramp termini 1 to 3 lanes including ramp meters, construct aux lanes on mainline b/t Monroe and Jackson Street, and extend ramps with acceleration/deceleration lanes. Construct Class Iv Bikeway and low speed electric vehicle path between Oleander and Avenue 42 with connections to CV-link and maintenance access roads to the Coachella Valley Storm Channel.	The purpose of the project is to increase capacity at the I-10/Monroe Street interchange to accommodate the forecast travel demand for the 2045 design year within the City of Indio. Accommodate multimodal travel consistent with the City of Indio's General Plan and regional plans. Improve operations by addressing existing non-standard shoulders on the ramps and Monroe Street, pedestrian, and bike facilities; non-standard compound curves, cross-falls, and profile grades; and aging seismic and scour susceptible bridges over I-10 and Whitewater River. The project addresses the following needs, transportation deficiencies and problems: The existing interchange and associated intersections are expected to operate at unacceptable level of service by year 2045 due to forecasted growth in traffic volumes in conjunction with the current capacity of the interchange. Existing gaps in pedestrian and bicycle infrastructure across the interchange break the multi-modal connection between communities and businesses on either side of I-10; and without the proposed improvements, and with anticipated daily traffic growth – the existing Monroe Street and corresponding I-10 ramps will experience increased delays and diminished operations within the interchange. The addition of protected bicycle, Low Speed Electric Vehicle, and ADA compliant pedestrian paths coupled with direct connectivity to the new CV-Link regional multi-modal pathway will encourage and promote active and alternate forms of transportation spurring healthy lifestyle opportunities for communities in the region.	Design	12/30/2016
OM910	0800020208	8	Riverside	010	54.9	56.5	In Indio at Jackson Street interchange, between Monroe Street and 0.4 mile W/O Golf Center parkway. 							Bernardino County in Ontario on Route 60, from 0.3 mile east of South Haven Avenue to 0.4 mile west of Milliken Avenue (PM R9.2/R9.5). Enhance highway worker safety by paving beyond gore areas, adding Maintenance Vehicle Pullouts (MVPs), and installing vegetation control.			
1J670	0818000090	8	Riverside	015	9.4	16.3	In and near Murrieta, from Murrieta Hot Springs Road to Bundy Canyon Road. Upgrade facilities to Americans with Disabilities Act (ADA) standards.	Upgrade facilities to Americans with Disabilities Act (ADA) standards.	Construction	6/14/2019
1J910	0818000135	8	Riverside	015	R0.5	47.4	In Riverside County, on Routes 10, 15, 60, 62, 91, 111, and 215 at various locations; also in San Bernardino County, on Route 215 in Colton at Iowa Avenue (PM 0.2). Upgrade Changeable Message Signs (CMS), guardrail shielding, and construct Maintenance Vehicle Pullouts (MVPs). This project will upgrade CMSs to current standards and improve communication with the Transportation Management Center (TMC).	Upgrade Changeable Message Signs (CMS), guardrail shielding, and construct Maintenance Vehicle Pullouts (MVPs).	Construction	6/28/2019
43272	0800020178	8	Riverside	015	6.6	9.7	In the city of Temecula. Construct a two-lane northbound collector distributor beginning at Routes 15/79 Junction and extending just north of Routes 15/215 Junction, with connectors to Routes 15 and 215.	The purpose and need of the project is to improve traffic flow, enhance safety by reducing congestion and eliminate existing deficiencies. The project is needed to reduce current and projected traffic congestion on the ramps and freeway mainline in the project area, improve safety and operations between Winchester Road and the I-15/I-215 Junction, provide alternative vehicular access to I-15 that will also provide operational improvement to the I-15/Winchester Road interchange, and to provide improvements to accommodate projected growth and to facilitate local circulation consistent with the General Plan of the Cities of Temecula and Murrieta as well as the County of Riverside. The project will improve traffic flow and air quality, enhance safety and highway operations by reducing congestion.	Construction	5/21/2002
0R801	0820000075	8	Riverside	015	48.9	52.3	In San Bernardino and Riverside Counties through the cities of Eastvale, Jurupa Valley, Ontario, and Rancho Cucamonga, on I-15 from Cantu-Galleano Road to Foothill Boulevard, construct auxiliary lanes and express lanes. An auxiliary lane will be added in the northbound direction from just south of Jurupa Street extending north to tie into existing auxiliary lanes north of Jurupa Street (1.21 miles). An additional northbound auxiliary lane will be added from just north of 4th Street to just south of Foothill Boulevard (1.6 miles). A new auxiliary lane will be added in the southbound direction from just south of the I-10/I-15 interchange to the Riverside County Line (2.05 miles). Express lanes will extend northerly from Cantu-Galleano Ranch Road/SR-60 to Foothill Boulevard. Express lanes will be constructed in the median of I-15 joining the Express Lanes in Riverside County.	Purpose: The purpose of the proposed project is to improve operational efficiency and safety, to reduce travel time within the corridor, and to improve trip reliability and mobility options through auxiliary lane improvements, freight bottleneck relief, and express toll lanes, managed through congestion-based pricing and HOV incentive policies. This will be part of transitioning I-15 into a truly managed corridor for multimodal movement of both freight and people.	Construction	9/23/2014

0A441	0818000047	8	Riverside	015	18.3	20	In the city of Lake Elsinore in Riverside County. The project will widen the Railroad Canyon Road under the freeway to eight lanes with dual left turn lanes to the southbound on-ramp, reconstruct the northbound ramps to a hook configuration to Grape Street, eliminate the existing northbound exit ramp and Railroad Canyon Road, construct auxiliary and deceleration lanes on Interstate 15, and widen the Railroad Canyon southbound exit ramp.	The purpose of the proposed project is to relieve congestion by improving traffic operation (through improvements of the Railroad Canyon Road interchange and correction of the merging/diverging freeway and ramp movements) and meeting traffic demands (through construction of a new freeway interchange).	Construction	9/5/2003

Construction	10/12/2018
2T240	1112000131	11	San Diego	015	30.6	32	On Route 15 in and near Escondido and in San Marcos from 0.4 mile south of Hale Avenue Overcrossing to 0.5 mile north of Route 15/78 Separation and on Route 78 from 0.3 mile west of Twin Oaks Valley Overcrossing to 0.2 mile west of the Rock Springs Road Overcrossing. Construct direct connectors between I-15 and SR 78, 3-miles of Managed Lanes on SR 78, and operational improvements. The project scope includes the construction of 1.16 miles of Class IV bike facility along Barham Drive/Woodland Parkway from California State San Marcos to the Inland Rail Trail (a separated regional bike facility).	The purpose of this project is to provide a reliable transportation option that reduces travel times, encourages multi-occupant vehicle usage, and reduces greenhouse gas emissions and air pollution. The project also aims to improve access to key employment, residential, health, and educational centers in the corridor, while supporting state and regional transportation goals of improving person throughput and reducing vehicle miles traveled. Over the past 25 years, the corridor has experienced a substantial amount of growth in its residential, job, and housing centers. This growth coupled with a lack of travel options has placed a strain on the I-15/SR 78 interchange and local streets in the cities of San Marcos and Escondido. The lack of improved local connections, managed facilities, and travel options are affecting travel times and air pollution, which are expected to increase while person throughput and mobility decrease.	Environmental	4/10/2015

The purpose of this project is to preserve and extend the service life of the existing pavement and improve ride quality. The project will also repair, replace, or extend culverts, upgrade sign panels, and incorporate Complete Streets elements.	Not Programmed	6/27/2024
0L000	0323000300	3	Colusa	020	0.0	R22.1	Near Williams, from Lake County line to Route 5. Widen shoulders, upgrade guardrail, add rumble strips, and place new striping to improve safety.	Widen shoulders, upgrade guardrail, add rumble strips, and place new striping to improve safety.	Environmental	6/19/2024
2J950	0322000142	3	Colusa	020	R0.6	R1.2	Near Williams, from 0.6 mile east to 1.2 mile east of Lake County line; also at the intersection with Route 16 (PM 3.5). Upgrade existing signs, add new signs and flashing beacons, grind and replace existing pavement with asphalt and High Friction Surface Treatment (HFST), and upgrade guardrail to improve safety. This project will reduce the number and severity of collisions.	Upgrade existing signs, add new signs and flashing beacons, grind and replace existing pavement with asphalt and High Friction Surface Treatment (HFST), and upgrade guardrail to improve safety.	Construction	6/20/2022
2J990	0322000158	3	Colusa	020	22.37	22.61	In the City of Williams, on State Route 20 at the Margurite Street intersection. Construct intersection control improvements (roundabout or traffic signal).	The purpose of this project is to improve traffic safety and operations. The intersection control improvements are needed to reduce the potential for vehicle collisions and improve traffic operations at this busy State Highway intersection. Caltrans D3 Traffic is completing traffic intersection counts, review of collision history, and a preliminary operational assessment. The City has requested a Caltrans Cooperative Agreement to proceed with PSR/PDS for project planning & programming. This SR 20 intersection has a high volume of truck traffic to/from the I-5 interchange just to the west with a high potential for traffic collisions due to the high traffic speeds on SR20. SR 20 serves as a major east-west regional route for commercial & agriculture trucking, recreational traffic, and commuters.	Design	6/5/2023
0K660	0120000130	1	Lake	020	16.74	18.02	Near Lucerne, from 0.1 mile east of Grove Street to 0.1 mile east of Country Club Drive. Construct pedestrian and bicycle facilities, and rehabilitate pavement and drainage systems.	Construct pedestrian and bicycle facilities, and rehabilitate pavement and drainage systems. 28120	0400000769	4	Napa	029	5	6.7	In Napa County. The project is an operational improvement located at the intersection of SR 29/SR 221/Soscol Ferry Road. The project will reconfigure the existing signalized intersection and build a new roundabout interchange with an elevated structure on SR 29 and roundabouts below grade, one north of SR 29, and one south of SR 29. The project will also construct a class I multiuse path on the north side of the intersection allowing bicycles and pedestrians to navigate the intersection.	Purpose: To alleviate congestion and improve operation by constructing an interchange separation at SR 221 and SR 29. Need: The signalized intersection of SR 221 and SR 29 is currently experiencing traffic congestion during AM and PM peak periods and is operating at or near capacity. The traffic projections indicate that the peak hour traffic volume would increase by about 50% by 2039.	Construction	9/29/2000

Convert from a 2-lane conventional highway to a 4-lane divided expressway. Near Lost Hills, from 1.0 mile west of Brown Material Road to 0.2 mile east of Pavilion Way. Rehabilitate pavement. This project will extend the pavement service life and improve ride quality.	The purpose of the project is to improve traffic operations, improve traffic safety, and convert this section of roadway from a 2-lane conventional highway to a four-lane divided expressway. The Project will increase the efficiency of goods movement by reducing accidents caused by the lack of safe passing opportunities. Companies moving freight through California use this corridor to access the Ports of Long Beach, Los Angeles, and Oakland to the north and south of the central coast and central valley. Destinations and origins within Kern County include logistic centers, agriculture packing facilities. By 2042 Kern Council of Governments' models show a 30% increase in truck movement along the corridor.	Construction	6/14/2005

								to meet all current design standards for a four-lane conventional highway.		
1K460	0518000210	5	San Luis Obispo	046	29.8	32.2	In Paso Robles, from Route 101 to east of Airport Road. Rehabilitate pavement, replace roadside signs and sign panels, install Transportation Management System (TMS) elements, and upgrade facilities to Americans with Disabilities Act (ADA) standards. This project will extend the pavement service life and improve ride quality.	Rehabilitate pavement, replace roadside signs and sign panels, install Transportation Management System (TMS) elements, and upgrade facilities to Americans with Disabilities Act (ADA) standards.	Construction	6/4/2019
1C150	0512000070	5	San Luis Obispo	046	30.7	32.4	In the City of El Paso de Robles, Construction Interchange improvements. The project proposes construction of a new interchange to improve safety, reduce delay and improve operations at a vital intersection along SR 46 Corridor in Paso Robles, a primary connector between I-5 and US 101. The proposed design will eliminate left-turn movements at two at-grade intersections on the 4-lane expressway, providing safer access to local roads for trucks and commuters, as well as improving connectivity for bicycles and pedestrians.	The SR 46E 2009 Comprehensive Corridor Study identified the intersection as a "high priority location for improvement" address several problems and deficiencies on the SR 46 mainline, local at-grade intersections, and on parallel arterial. If no improvements are made, the traffic problems will deteriorate as time goes by; including difficult to access Union Rd limited and unreliable connectivity between two sides of highway. Design interim improvements to the 46 Eat Union Road intersection to meet the increasing demands of to and through traffic on SR 46 by local and interregional travelers. The improvements will remove local traffic from SR46; improves north - south connectivity of the city's local traffic, and supports SCS growth in the north county. The project also addresses proactive Safety measures; Phase 1 + Phase 2 will eliminate all cross traffic movements, and Phase 1 (overpass) eliminates numerous cross over movements from the SR46 mainline.	Design	4/17/2014
3307A	0514000027	5	San Luis Obispo	046	49.7	54.6	Near Shandon, from 0.2 miles west of Shandon Safety Roadside Rest Area to 0.5 mile east of Jack Ranch Cafe. Convert to a 4 lane expressway.	Heavy trucks and RVs comprise a very high percentage of the total traffic on this portion of Route 46. These vehicles typically experience a reduction in running speed of 31 km/h. There are limited passing opportunities on this segment, which contributes to driver frustration and passing miscalculations. Traffic volumes are expected to grow at a rate that is correspondingly higher than local population growth projections. Growth in traffic volumes here will instead reflect the State of California growth rate overall, and traffic volumes on Route 46 will climb proportionally. Route 46 will continue to serve as a vital conduit for traffic to and from the San Joaquin Valley region and beyond, to the Central Coast. This project will improve congestion, enhance safety and provide passing opportunities, reduce driver frustration, improve the facilitation of goods movement, improve recreational travel and major east/west route from the San Joaquin Valley and Interstate 5 to the Central Coast and Route 101. Additionally, District 6 has programmed Route 46 widening in the western side of Kern County.	Construction	6/30/2001

31850	0715000304	7	Los Angeles	047	0.3	0.8	The project entails modifying the existing on- and off-ramps to improve safety, access, and the efficient operation of the SR-47 / Front Street / Harbor Blvd Interchange.	Currently, westbound SR-47 traffic and southbound I-110 traffic exit at Harbor Boulevard, creating safety and operational issues due to significant weaving as traffic approaches the intersection. Nonstandard weaving exists as merging traffic approaches the intersection from both the Westbound SR-47 off ramp and the Southbound I-110 off ramp. Nonstandard merging also exists on the Eastbound SR-47 on-ramp from Harbor Boulevard as traffic approaches the Vincent Thomas Bridge. Traffic routinely backs up onto both off-ramps during the peak period as a result of the two freeways (I-110 & SR-47) terminating at the same point. With the projected future background growth and the development of the Waterfront, the Harbor Department anticipates that traffic back up will increase and greatly reduce the operational efficiency of the interchange.	Construction	4/5/2017
0X752	1017000004	10	Amador	049	0.0	0.01	Near Jackson, at Mokelumne River Bridge No. 26-0012. Upgrade bridge rails, widen shoulders, and apply polyester concrete overlay on bridge deck.	Upgrade bridge rails, widen shoulders, and apply polyester concrete overlay on bridge deck.	Construction	5/3/2017

0J923	0321000212	3	Sacramento	050	R7.5	R7.6	In Sacramento and Sutter Counties, on Routes 20, 50, and 80 at various locations. Enhance crosswalk visibility, add bike lane delineation, install signs and countdown pedestrian signal heads, and construct curb ramps and pedestrian barricades to improve bicycle and pedestrian safety. This project will reduce the number and severity of collisions.	Enhance crosswalk visibility, add bike lane delineation, install signs and countdown pedestrian signal heads, and construct curb ramps and pedestrian barricades to improve bicycle and pedestrian safety.	Construction	10/12/2020
3E380	0300020439	3	Sacramento	050	15	17.2	In Sacramento County: Hazel Avenue between Folsom Boulevard and U.S. Highway 50; Modify the existing Hazel Avenue interchange at US 50 including US 50 eastbound off ramp modifications at Aerojet Road and Folsom Boulevard (PM 15.0/17.2), extend and grade-separate Hazel Avenue over Folsom Boulevard and the Sacramento Regional Transit District Gold Line corridor, and provide Class I path/multimodal from Folsom Boulevard to the American River Parkway.	The primary purpose of the project is to modify the existing interchange to reduce congestion, improve traffic operations, accommodate travel demand due to planned and approved developments, and improve safety of all modes of travel, including bicycles and pedestrians. The project will meet the following objectives. Improve operations by removing the close intersection spacing between the eastbound ramps and Folsom Boulevard, and minimizing conflict with heavy rail and light rail. This is accomplished by grade separating Hazel Avenue from Folsom Boulevard and the Sacramento Regional Transit District Gold Line corridor; Provide sufficient capacity in the ramps and roadways for future traffic volumes. This is accomplished through widening and lengthening on- and off-ramps; Maintain the Aerojet Road off-ramp connection to the approved development while improving the mainline operations. This is accomplished by removing the Aerojet Road exit from US 50 but still providing direct access to Aerojet Road through the eastbound Hazel Avenue off-ramp. The project is needed for the following reasons: Existing and forecasted traffic operations and congestion are below acceptable operating standards at the Hazel Avenue/US 50 Interchange; Planned and approved developments identified by the adopted Sacramento County General Plan and the Sacramento Area Council of Governments' Regional Transportation Plan, including the increased traffic volumes associated with the proposed Easton Project, will increase the traffic volumes at the Hazel Avenue/US 50 interchange beyond acceptable operating standards; Implementation of mitigation identified in the Easton Project Final Environmental Impact Report (EIR) (County of Sacramento 2008) is required in order to accommodate the increased traffic volumes associated with that development. The Easton Project mitigation includes reconstruction of the Hazel Avenue/US 50 interchange as well as grade separation of Hazel Avenue over Folsom Boulevard and the light rail tracks. The Easton Project will contribute its fair share of funding to the improvements.	Design	7/15/2014

1L640	0820000130	8	Riverside	060	9.3	14.6	In Riverside and San Bernardino Counties, at various locations on Routes 60 and 215. Improve safety and reduce wrong-way collisions by installing wrong-way pavement markers and sign panels, and upgrading pavement markings at onramps and offramps. This project will reduce the number and severity of collisions.	Improve safety and reduce wrong-way collisions by installing wrong-way pavement markers and sign panels, and upgrading pavement markings at onramps and offramps.	Construction	1/27/2021
0N69U	0812000307	8	Riverside	060	22.1	26.61	Near Beaumont, from Gilman Springs Road to 1.4 miles west of Jack Rabbit Trail. Rehabilitate pavement.	The portion of SR-60 between Gilman Springs Rd and Jack Rabbit Trail has high speed vehicle traffic trying to negotiate the winding road. The left lane is right up against the center median divider. Also, there is a very heavy percentage of slow moving trucks due to the steep grade. This mix of differing types of traffic and challenging road alignment leads to a difficult driving experience. The purpose of this project is to improve safety, reduce traffic congestion, and improve operational characteristics along this segment of SR60. Providing a truck climbing/truck descending lane would separate the slow moving trucks from passenger vehicles; it is expected that truck involvement in accidents will decrease.	Construction	8/16/2011
0M610	0815000159	8	Riverside	060	19	21	In the city of Moreno Valley between Moreno Beach drive and Theodore street. Improvements at Redlands Boulevard interchange.	Interchange improvements.	Environmental	6/20/2016

32303	0812000059	8	Riverside	060	18.8	19.6	This project is located on State Route 60 and Moreno Beach Drive in the City of Moreno Valley, County of Riverside. This specific project component is the second phase of an interchange project that will replace a 50-year-old 2-lane bridge with a new 6-lane bridge, reconfigure the north side of SR 60/Moreno Beach Drive Interchange, and build an associated freeway auxiliary lane. Because the bridge is so narrow, trucks are restricted on the eastbound offramp to right-hand (southerly) turns only.	This Project addresses a major freight mobility constraint along one of the nation's busiest trade corridors. The Project includes raising the height of the Moreno Beach Drive bridge and modernizing the interchange to improve access to existing and planned high-cube industrial warehousing and distribution centers, which support vital interstate commerce. State Route (SR) 60, a major trade corridor, carries goods moving through the nation's largest seaport complex of the ports of Los Angeles and Long Beach, goods moving in and out of Mexico via Interstates 15 and 215, and goods handled, processed, and produced at the nation's largest cluster of logistics facilities.	Construction	5/31/1990
0M590	0813000109	8	Riverside	060	20	22	In the city of Moreno Valley at world logistics center parkway/Theodore Street interchange between 0.3 mile W/O Redlands boulevard and 0.1 mile W/O Gilman	Interchange improvements (2 roundabouts with a vehicle bridge structure & pedestrian bridge). 4G080	0412000332	4	Solano	080	10.4	30.2	Through the cities of Fairfield and Vacaville in Solano County. Construct managed lanes on westbound and eastbound Interstate 80 (I-80) from west of Red Top Road to east of Interstate 505 (I-505) in Solano County, California. This project would construct approximately 18 miles of managed lanes, which include high occupancy vehicle (HOV) lanes and express lanes, through conversion of existing HOV lanes to express lanes and highway widening for new express lanes. The proposed improvements extend from post mile (PM) 10.4 to 30.2, through the cities of Fairfield and Vacaville. The project would also extend the Class I Ulatis Creek Trail under I-80 to eliminate an existing barrier for pedestrians and bicyclists between the Vacaville Transportation Center and downtown Vacaville, an MTC Priority Development Area.	The purpose of the project is to improve public transit utilization by reducing public transit travel times in the corridor, and to increase vehicle and passenger throughput and decrease congestion by better use of existing HOV lane capacity from Red Top Road to east of Air Base Parkway; increasing capacity to meet existing and future travel demand from east of Air Base Parkway to I-505; and offering non-HOV drivers a reliable travel time option. The project is needed because the project area experiences congestion during weekday peak periods as well as on weekends. Underused capacity in the HOV lanes results in increased congestion and slower speeds in the general purpose lanes. Future demand will increase congestion and reduce public transit service reliability. Managed lanes are needed to implement the STA's long-range transit plans and to support the numerous transit services and riders in the project area.	Construction	7/1/2012

35460	0718000343	7	Los Angeles	091	11.8	13.2	In the City of Long Beach on SR-91 from I-710 to Cherry Avenue undercrossing. The proposed improvements consist of adding one auxiliary lane in the eastbound direction, extending the outside #5 lane beyond the Atlantic Ave EB off-ramp to Cherry Ave. then dropping it before the Cherry Ave. undercrossing, and widening the Orange Ave. and Walnut Ave. Undercrossing.	The 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) projects a 46% increase in bidirectional daily truck trips on SR-91 between 2016 and 2045. By improving existing operational conditions including congestion and bottlenecks, operation deficiencies, and safety issues, the project aims to ensure the corridor has the ability to adequately accommodate future increases in freight travel demand. With the existing and anticipated corridor truck volumes, truck-involved safety incidents will continue to be a concern unless physical and operational improvements are made to address the outdated design standards and congested conditions that lead to safety incidents. The purpose of the Eastbound (EB) State Route 91 (SR-91) Atlantic Avenue to Cherry Avenue Auxiliary Lane Improvements Project (Project) is to enhance safety conditions on the EB SR-91 mainline, reduce congestion, and improve EB freeway operations (both mainline and ramps). Need - Eastbound SR-91 experiences substantial congestion due to operational deficiencies within the	Construction	7/25/2017

EA	Project ID	Dist	County	Route	Begin PM	End PM	Project Description	Purpose and Need	Status	PID Completion Date
								Project Area, which is forecast to increase if no physical and operational improvements are made to the facility. The Project is needed to address operational safety due to the short weaving distance along EB SR-91 between the closely spaced interchanges of the I-710 on-ramps, Atlantic Avenue, and Cherry Avenue which impacts mainline congestion.

0H240	0600020559	6	Fresno	099	15.8	17.6	In Fresno County, in Fresno, from Central Avenue Overcrossing to 0.4 mile north of North Avenue. Modify interchange.	Purpose: The purpose of the project is to reconstruct the existing split interchange on State Route 99 at North and Cedar Avenues by expanding the North Avenue Interchange to full interchange and bringing it into compliance with current Caltrans design standards, thereby improving the traffic operations at this location. Need: The existing split-interchange at Cedar and North Avenues does not meet current Caltrans design standards. The interchange was built in 1965, and the pavement is now old and highly deteriorated. Only two traffic lanes cross the existing structures over the highway, one lane for each direction of travel. The on- and off-ramps also have restrictive dimensions, making	Design	2/4/2019

EA	Project ID	Dist	County	Route	Begin PM	End PM	Project Description	Purpose and Need	Status	PID Completion Date
								it difficult for traffic, especially large trucks, to navigate them. Additionally, traffic is expected to increase in the project area due to the implementation of planned development on both sides of the highway. Caltrans traffic studies show the operation and performance of the interchanges need updating now because traffic conditions will continue to worsen if no improvements are made.

Improve curve and signs, construct bulb-outs, upgrade curb ramps, apply micro surfacing, and refresh pavement delineation to improve safety. This project will reduce the number and severity of collisions. In Eureka, from McCullen Avenue to Commercial Street. Upgrade curb ramps, driveways, and sidewalk, and add Accessible Pedestrian Signals (APS) upgrades to make compliant with Americans with Disabilities Act (ADA) standards; also install fiber optic communications connection from traffic signals to the Caltrans district office.	Improve curve and signs, construct bulb-outs, upgrade curb ramps, driveways, and sidewalk, and add Accessible Pedestrian Signals (APS) upgrades to make compliant with Americans with Disabilities Act (ADA) standards, apply micro surfacing, and refresh pavement delineation to improve safety; also install fiber optic communications connection from traffic signals to the Caltrans district office.	Construction	4/3/2017
48040	0100020301	1	Humboldt	101	98.4	100.7	In Humboldt County, on US 101, between the 6th Street Interchange (PM 98.4) and the Trinidad-Main Street Interchange (PM 100.7), and along Scenic Drive and Westhaven Drive, between the Community of Westhaven and Trinidad. Construction of a new interchange on Us 101, and new road connections from US 101 to Scenic Drive and Westhaven Drive. Associated pedestrian and bicycle improvements through the new interchange and along Scenic Drive and Westhaven Drive. other work will include associated grading, drainage, utility relocations, signage and striping, retaining walls, etc.	The only current assess to Rancheria lands from US 101 is Scenic Drive to the west of the Rancheria, and is no longer safe or sustainable due to geologically unstable soils, which often cause slides and slipouts throughout the length of Scenic Drive. Scenic Drive also does not have any accommodations for pedestrians or bicyclists. In addition, many intersections in the vicinity of the project will not accommodate projected increases in traffic due to planed future development.	Environmental	12/14/2017
36600	0100000127	1	Humboldt	101	79.8	85.8	In Eureka and Arcata, from Eureka Slough Bridge to Route 101/255 separation. Upgrade 4 lane facility (Alternative Y 4).	This US 101 corridor improvement project proposes long term safety improvements to seven at-grade intersections and will reduce operational conflicts and delays at these intersections. Improvements are necessary to decrease collisions, to minimize confusion related to merge and turn movements and to reduce wait times for turn movements. The proposed interchange at Indianola Cutoff will facilitate closing median crossings to provide a safe, reliable and modern transportation facility, consistent with State and Regional Transportation Planning. These improvements will result in a safer highway facility and will reduce operational conflicts.	Construction	9/14/2000

1A661	0415000291	4	Marin	101	8.4	8.7	Marin County in Larkspur from 0.1 mile North of Greenbrae Pedestrian Overcrossing to 0.2 mile North of Corte Madera Creek Bridge. Construct a new Class I multi-use path.	The existing pedestrian and bicycle facilities between Sir Francis Drake Boulevard and the Greenbrae POC do not provide an attractive option for pedestrians and bicyclists. To the north of the project limits, the CMFC path includes a new elevated pedestrian and bicycle crossing over Sir Francis Drake Boulevard, connecting the Cal Park Hill Multi-Use Path with an access ramp leading down to an existing multi-use path adjacent to the roadway. Crossing Corte Madera Creek, pedestrian and bicycle access is limited to a 4-foot wide path, and there are no dedicated pedestrian facilities along Old Redwood Highway. Accordingly, existing conditions do not promote the safe and efficient use of alternative	Construction	12/31/2010

								nonmotorized modes of transportation through the project area. The purpose of the project is to improve pedestrian and bicycle connectivity between the CMFC pathway and the Greenbrae POC.		
26472	0419000068	4	Marin	101	20.8	27.3	On Route 101, in Marin County, in and near city of Novato, from just south of the Franklin Avenue Overhead to 0.3 miles south of the Marin/Sonoma County line. The Project will widen Route 101 to construct a southbound HOV lane from 0.3 miles south of the Franklin Avenue Overhead (6.0 miles), and a northbound HOV lane from 1.7 miles north of the Atherton Avenue Overcrossing to 0.3 miles south of the Marin/Sonoma County line (3.5 miles). The Project includes roadway and bridge widening for HOV lanes and standard shoulders. The Project will also upgrade the horizontal and vertical roadway alignment (for a 70 mph design speed), modify the Redwood Landfill Interchange ramps to conform with the new alignment, and restripe a frontage road (Redwood Boulevard) for Class II bike lanes in Novato.	<p>Purpose: The purpose of this Project is to reduce congestion and improve mobility while providing an incentive for commuters to use buses, carpools, or vanpools for peak period travel; to improve freeway operations including providing safe access to and from the facility by addressing current deficiencies such as sight distance, substandard curves and narrow shoulders; to improve highway operations by replacing ramp metering equipment and other Traffic Operations System (TOS) elements; to improve bike connectivity by re-stripping a frontage road (Redwood Boulevard) for Class II bicycle lanes; and to integrate economic vitality in the region by improved access to adjacent economic centers.</p> <p>Need: The peak period traffic flows within the project limits are heavily directional, southbound in the morning and northbound in the evening, and the delay experienced by motorists using US 101 during the AM and PM peak commuting periods is among the worst in the San Francisco Bay Area</p>	Construction	6/30/2000

1M820	0520000076	5	San Luis Obispo	101	56.8	57.9	This project on US 101 proposes operational improvements to the US 101 northbound off ramp to State Route (SR) 46 East in the City of Paso Robles, in San Luis Obispo County. Improvements will increase the off-ramp capacity by adding a lane to the ramp and the US 101/SR 46 "Connector Bridge," Bridge Number (Br. No) 49-0228G.	The purpose of this project is to improve the off-ramp storage capacity and provide measured congestion relief on northbound US 101 at the SR 46 East off-ramp. The traffic volumes on the US 101 northbound off-ramp to SR 46 east intermittently exceed the storage capacity of the ramp. Seasonal and weekend congestion on the off-ramp spills back to the US 101 through lanes, resulting in slowing, congestion, and delays that will become a reoccurring issue over time. Due to these issues, some	Environmental	5/4/2021

EA	Project ID	Dist	County	Route	Begin PM	End PM	Project Description	Purpose and Need	Status	PID Completion Date
								drivers use the outside shoulder, as if to create a de facto auxiliary lane, while other drivers divert to routes not intended for interregional travel. Caltrans has determined that incremental improvements are needed to address the off-ramp storage capacity and congestion.		
1G480	0515000038	5	San Luis Obispo	101	20.9	21.3	In San Luis Obispo County, construct a roundabout, park-and-ride lot, sidewalks/shared use paths, bike lanes, and transit stop.	Improve the operations and multimodal access of the US 101/Avila Beach Drive interchange southbound and northbound intersections. The five-legged intersection of the southbound ramps, Avila Beach Drive, and Shell Beach Road experiences operational issues during the weekend peak travel times and the summer tourist seasons. The intersection is currently operating at Level of Service (LOS) "D" during the weekend peak period. Traffic patterns at the US 101 northbound off-ramp, Avila Beach Drive and Monte Road intersection are challenging, especially for bicyclists. Vehicles on the northbound offramp, which are not required to yield, approach the intersection at high speeds. The northbound off-ramp terminal intersection at Avila Beach Drive generally has a higher "total" crash rate compared to the state-wide average for similar facilities. The corner sight distance is limited for the minor movement turning left (the only movement possible) onto Monte Road from eastbound Avila Beach Drive.	Construction	5/9/2016
1G680	0515000063	5	San Luis Obispo	101	16	22.5	In San Luis Obispo County, in and near Pismo Beach from 0.2 mile south of Pismo Overhead to 0.2 mile north of North Avila Road Overcrossing, convert existing truck climbing lane to number 2 lane and replace inside shoulder with a part-time travel lane and construct park and ride lot with EV charging stations.	The purpose of the project is to improve southbound operations on US 101 during weekday post meridiem (P.M.) peak hours, seasonal (i.e., summer) peak hours, and weekend peak traffic events. The US 101 mainline southbound lanes are operating at or near capacity during weekday P.M. peak hours, seasonal peak hours, and weekend peak traffic events. The mainline southbound semi-congested to congested flow is further compounded by ramp merge and diverge movements and by merging at the truck lane drop.	Design	12/15/2015
1H640	0516000105	5	San Luis Obispo	101	26.5	27.3	In San Luis Obispo, at Prado Rd., extend Prado Road over U.S. Route 101 (US 101) to connect with Dalidio Drive, install protected bike lanes and sidewalks, reconstruct the existing US 101 northbound off-ramp connections with Prado, and construct an auxiliary lane on northbound US 101 between Prado Road and Madonna Road interchanges in order to provide congestion relief, operational efficiency, and multimodal connectivity.	The purpose of the project is to improve overall circulation and accessibility in the project area for all transportation modes. There is a need to provide better community connectivity between the existing and planned neighborhoods east and west of the US 101 and resolve forecasted operational deficiencies on State and City facilities. These connectivity needs extend to all transportation modes.	Environmental	4/12/2018
1F970	0514000082	5	San Luis Obispo	101	25.9	25.94	In the city of Bob Jones, to the sea trail on the US 101 right of way between post miles 25.9 and 25.94. There was a relinquishment of collateral facilities.	There was a relinquishment of collateral facilities.	Other	7/1/2014

Design	6/24/2019
4H360	0413000212	4	San Mateo	101	21.3	21.7	In the City of South San Francisco. Reconstruct and reconfigure existing interchange as follows: 1) Extend Utah Avenue to the west over US 101 to connect with San Mateo Avenue and provide access to southbound US 101 on-/off-ramps at Produce Avenue; 2) construct new sidewalks and Class 2 bike lanes on both sides of the east-west local street connection, and 3) modify ramp configurations at Produce Avenue.	Purpose: Enhance safety and improve traffic operations in the vicinity of Produce Avenue and US 101. Provide a local east-west connection across US 101 for the southern neighborhoods of the city. Improve bike and pedestrian facilities. Accommodate future planned growth in the vicinity of Produce Avenue and US 101 Need. The existing options for crossing US 101 in the vicinity of the Produce Avenue on-/off-ramps are circuitous and insufficient. There is no overcrossing of US 101 at Utah Avenue, and therefore traffic originating	Design	8/31/2015

EA	Project ID	Dist	County	Route	Begin PM	End PM	Project Description	Purpose and Need	Status	PID Completion Date
								from Utah Avenue east of US 101 has to make the reverse trip along South Airport Boulevard to access southbound US 101. Local traffic does not have an efficient route to the northbound and southbound US 101 ramps. The US 101 single-lane southbound off-ramp at Produce Avenue has a history of high accident rate at 1.96 accidents per million vehicle miles (MVM). Bicyclists share the lane with vehicles, and while the undercrossing is short, it is also relatively dark with reduced visibility. Pedestrian facilities are similarly inefficient as the undercrossing has narrow pedestrian walkways at the South Airport Boulevard undercrossing of US 101. The City of South San Francisco General Plan includes the project within its Lindenville Planning Subarea as "a new interchange at South Airport Boulevard"		
0Q640	0418000126	4	San Mateo	101	20.36	26.11	The project is located within the limits of Daly City, Brisbane, and Colma in the County of San Mateo. The project corridor is located along local arterials parallel to US-101 and I-280: Bayshore Blvd: US 101 (SF County Line) to Oyster Point Blvd; Tunnel Ave: Beatty Ave to Bayshore Blvd; Beatty Ave: US 101 to Tunnel Ave, Lagoon Rd: US 101 to Tunnel Ave; Junipero Serra Blvd: John Daly Blvd to Avalon Dr; Southgate Ave: Sullivan Ave to Junipero Serra Blvd; Serramonte Blvd: Junipero Serra Blvd to SR 82 (El Camino Real) – Colma Public Works Building fiber connection; 90th Street: Junipero Serra Blvd to Edgeworth Ave – City Hall fiber connection; Westlake Ave from Junipero Serra Blvd to the Daly City Corporation Yard – fiber connection; 111 Grand Ave, Oakland, CA (Caltrans District 4) - Center-to-Center integration. The San Mateo County Smart Corridor program focuses on minimizing the burden on local streets when an incident occurs along US 101 and I-280 by deploying ITS equipment, such as an interconnected traffic signal systems, closed circuit television (CCTV) cameras, trailblazer/arterial dynamic message signs, and vehicle detection systems, on predefined designated local streets and state routes.	The purpose of this project is to expand the San Mateo County Smart Corridor from its current northern terminus of I-380 further north to the San Francisco County line, encompassing arterials along US 101 and I-280. There are currently no clearly designated routes that traffic can follow to bypass a freeway incident, so traffic filters through the local network seeking a viable route around the incident.	Construction	10/31/2017
1J567	0420000048	4	San Mateo	101	0	21.8	This project is located within the cities of San Carlos, Millbrae, Burlingame, San Mateo, Belmont, Menlo Park, Redwood City, Palo Alto, and East Palo Alto in both Santa Clara and San Mateo County on U.S.101, from 2 miles South of the Santa Clara County line to 0.3 mile south of Grand Avenue Interchange. Establish follow-up highway landscape planting.	The purpose of the project is to replace damaged and removed plantings within two (2) years of acceptance of the contract for the Managed Lanes Project. In accordance with the Department policy titled Separate Contract Requirements for Highway Planting Work on Roadway Construction Projects, the replacement highway planting for this project will be accompanied by a separate contract that will include 3 years of plant establishment, as the cost estimate for the replacement highway planting exceeds \$300,000. 2G340	0413000213	4	Sonoma	101	20.7	21.8	In the City of Santa Rosa, Sonoma County, over US 101, north of College Avenue near Santa Rosa College, Santa Rosa High School and Coddington Mall. Construct a Class I ADA accessible and mode-separated bicycle and pedestrian overcrossing over US Highway 101, including new crosswalk, curb ramps and pedestrian lighting and ADA compliant ramps and touchdown landings on Elliott Avenue and Edwards Avenue.	Purpose: Provide a safe alternative for bicyclists and pedestrians crossing US 101 in the vicinity of schools and transit and provide a continuous and ADA-compliant pedestrian and bicycle path to improve east-west connectivity across US 101 in the northern half of the city. The "pedestrian/bicycle facilities miles constructed" for the overcrossing's mode-separated Class I pathway includes a dedicated 5-foot-wide walking lane and 8-foot wide two-way cycle track Need: Lack of bicycle and pedestrian connectivity in the northern half of the City of Santa Rosa between the residential and commercial areas west of U.S. 101 and the academic, residential, commercial and recreational areas east of US 101. US 101 creates a barrier between the existing and proposed bikeways on both sides of the freeway. Steele Lane and College Avenue are approximately one mile apart and provide the only crossings of US 101 for approximately two miles. This distance exceeds the comfortable range for pedestrians and many cyclists.	Design	10/25/2016
2640F	0400020132	4	Sonoma	101	4	7.3	In Sonoma, Highway 101 and 116 connections to 0.3 miles north of Corona Road. Construct HOV lanes and sound walls.	To reduce congestion and improve mobility while providing an incentive for commuters to use buses, carpools, or vanpools for peak period travel.	Construction	6/30/2000
4A1301	0400001106	4	Sonoma	101	18.5	18.5	The project is in the City of Santa Rosa, at the US 101/Hearn Avenue interchange/overcrossing. The project runs along Hearn Avenue from Corby Avenue to Santa Rosa Avenue and includes the southbound US 101 off-ramp at its intersection with Corby Avenue. The project will demolish and reconstruct/replace the US 101/Hearn Avenue overcrossing to increase vertical clearance over US 101 and provide two vehicle lanes in each direction, a median, sidewalks, and Class II and Class IV bikeways that will extend to Corby Avenue and Santa Rosa Avenue. The project will also widen the southbound US 101 off-ramp with turning lanes at its intersection with Corby Avenue, add lanes at the intersections of Hearn Avenue/Corby Avenue and Hearn Avenue/Santa Rosa Avenue, and add ADA elements and protected intersection facilities for bike crossings and detection to reduce potential conflicts between bikes and vehicles.	The purpose of the project is to: improve local traffic circulation and regional traffic operations; improve multimodal access, connectivity, and operations; and improve overall safety of the facility. Hearn Avenue is constrained to one lane in each direction over the existing OC, leading to vehicle backups at the approaches to the OC. The on- and off-ramp connections to Route 101 are offset from Hearn Avenue. The southbound ramps connect to Corby Avenue about 300 feet south of Hearn Avenue. The northbound ramps connect to Yolanda Avenue about 500 feet south of Hearn Avenue. Both the southbound and northbound freeway ramp connections are a configuration often referred to as "hook ramps" because of their compact design. These ramps have limited capacity for vehicle queuing because of their short lengths, especially for the Route 101 southbound off-ramp due to its close proximity of Corby Avenue. As a result, during peak periods, the high volume of vehicles using the single lane southbound Route 101 off-ramp results in a circuitous queue that can extend from the Hearn Avenue / Corby Road intersection onto the southbound off-ramp, and into the southbound Route 101 auxiliary lane. This extended queue can interfere not only with access from the freeway to Corby and Hearn Avenues, but also can contribute to congestion and the flow of freeway traffic in the southbound lanes of Route 101. The Hearn Avenue Interchange is an important connector that links the east and west sides of southern Santa Rosa and provides access to and from Route 101	Construction	1/18/2013

EA	Project ID	Dist	County	Route	Begin PM	End PM	Project Description	Purpose and Need	Status	PID Completion Date
								<p>to the shopping corridor on Santa Rosa Avenue, which includes retailers such as Costco, Best Buy, Trader Joe's, and REI. It also provides access to car dealerships, food, gas, and lodging adjacent to Route 101. The Hearn Avenue Interchange area also serves to connect local residents with public transportation. Hearn Avenue is served by the My Santa Rosa CityBus bus routes 12 and 19. Santa Rosa Avenue is served by the My Santa Rosa CityBus bus routes 5, 18 and 19, the Sonoma County Transit bus routes 44 and 48, and the Golden Gate Transit bus routes 72 and 74, which connect southern Santa Rosa to Rohnert Park, Petaluma, and San Francisco. Within the City of Santa Rosa, Route 101 serves as a barrier to bicycle and pedestrian access between each side of the freeway. Currently there are no bike lanes or continuous sidewalk access along Hearn Avenue between Corby Avenue and Santa Rosa Avenue. The proposed project improvements provide improved multimodal access, connectivity, and operations through the interchange area. Mode types include vehicles, pedestrians, bicyclists and transit.</p> <p>The existing Hearn Avenue OC has two approximately 13 foot wide traffic lanes and provides for pedestrian passage along a 5 foot wide sidewalk on the south side of the bridge only, with no sidewalks on either side of Hearn Avenue between the OC and Santa Rosa Avenue. Bicyclists must share the existing traffic lanes when crossing over the bridge. The existing Hearn Avenue OC has nonstandard vertical clearance of approximately 15.2 feet over the Route 101 freeway. It is proposed that the existing OC be replaced with a multi-lane facility with standard vertical clearance with bicycle and pedestrian facilities between Corby Avenue and Santa Rosa Avenue. Pedestrian and bicycle facilities will include 6 foot wide sidewalks on both sides of the new OC, a westbound 6' Class II Bike Lane, and on the southbound side of the OC a two-way Class IV Separated Bikeway. Pedestrian curb ramps will be upgraded/added with mid-walk pedestrian refuge areas provided for some long crosswalk locations. The southbound off-ramp will be widened at the approach to the intersection with Corby Avenue to provide additional vehicle storage within the ramp and reduce queues that can back up into the auxiliary lane on southbound Route 101.</p>

4K140	0417000267	4	Sonoma	121	9.7	10.3	Near Schellville, from 0.2 mile to 0.8 mile north of Ramal Road. Restore structural integrity of the existing roadway by injecting polyurethane to densify the soil below and minimizing future settlement, grind and replace asphalt concrete, and rehabilitate drainage systems.	Restore structural integrity of the existing roadway by injecting polyurethane to densify the soil below and minimizing future settlement, grind and replace asphalt concrete, and rehabilitate drainage systems.	Construction	6/5/2019
1Y170	0422000442	4	Sonoma	121	8	8.3	In Sonoma County, near Schellville, on State Route 121 from 0.1 miles west of 8th Street East to 0.2 miles east of 8th Street East. The project proposes roadway and intersection improvements to State Route 121 (Route 121) at the intersection of Route 121 and 8th Street East, located south of the City of Sonoma at approximately Postmile 8.1. Two build alternatives that maximize intersection safety and increase multimodal access, while achieving acceptable operations are being considered, a signal and a roundabout. Both alternatives also propose Class II Bikeways (Bike Lanes) along Route 121 and Class I Bike Paths (Shared Use Paths). The project also proposes high visibility crossings and pedestrian refuges.	Purpose: Provide an intersection that improves safety for all users and provides multimodal mobility through the intersection. Need: State Route (SR) 121 and 8th Street East are both regionally significant facilities that experience high commute volumes on SR 121, which results in insufficient gaps for left turns in and out of 8th Street East, inducing significant motorist delay and increased safety challenges. Additionally, the current intersection's lack of multimodal facilities act as a barrier for pedestrians, cyclists and other non-motorized users. Addressing the lack of multimodal features is also necessary to support future expansion of planned multimodal networks in the area.	Environmental	10/25/2023
2Y260	0423000091	4	Alameda	123	2.09	2.72	In Berkeley, from Oregon Street to Channing Way. Install pedestrian beacons, construct new curb ramps and pedestrian refuges, enhance crosswalk visibility, and install bicycle detection elements.	Install pedestrian beacons, construct new curb ramps and pedestrian refuges, enhance crosswalk visibility, and install bicycle detection elements.	Environmental	8/25/2023

Environmental	6/30/2021
2AC40	0420000117	4	Contra Costa	123	1.75	2.2	In City of El Cerrito on San Pablo Avenue from Potrero Avenue to Wall Avenue, on Cutting Boulevard from Key Boulevard to I-80, on Eastshore Avenue from Potrero Avenue to San Pablo Avenue, and on Hill Street from Liberty St to San Pablo Avenue. The scope of work consisting of new signalized crossings for pedestrians, new bicycle lanes, conversion of one-way to two-way streets, signalization changes on San Pablo Ave (SR123) at the intersection of Hill Street and Cutting Boulevard, signing, and streetscape enhancements.	The purpose of the proposed Project is to enhance the multi-modal transportation network surrounding El Cerrito del Norte BART Station, improve accessibility and safety for all modes of travel, and promote active transportation. San Pablo Avenue is a high-traffic thoroughfare with a variety of transportation options, including mass transit, automobiles, walking, and biking. The El Cerrito del Norte BART Station is located directly adjacent to San Pablo Avenue and serves as a major transit hub with multiple regional and local transit lines converging at the station. Parallel to San Pablo Avenue is Ohlone Greenway, a major and high-trafficked bikeway in the East Bay. Existing, recently constructed, and planned transit-oriented development within the northern Uptown area of San Pablo Avenue is leading to an increase in vehicular, pedestrian, and bicycle usage as well as increased transit ridership. Despite this, there are no bicycle facilities along San Pablo Avenue or Cutting Boulevard. Furthermore, San Pablo Avenue and Cutting Boulevard lack protected crossings at existing intersections and the roadways are wide, creating long crossing distances, which makes pedestrian access to transit facilities and commercial spaces difficult. Transit service is a key component for the area, as San Pablo Avenue has the third highest number of passengers of any AC Transit corridor. As currently configured, the existing transit stops along San Pablo Avenue are inadequately located, leading to longer transit travel times and mobility issues for transit riders. Buses must pull off of the travel lane to load and unload passengers, contributing to added transit delays.	Construction	5/16/2022
41140	1112000143	11	San Diego	125	9.6	13.2	In and near Lemon Grove, from 0.1 mile south of Elkelton Place Undercrossing to Route 94/125 Separation. Upgrade curb ramps and sidewalks to comply with the Americans with Disabilities Act (ADA) standards.	Construction	6/6/2017
40350	1000000424	10	Stanislaus	132	10.5	14.8	In Modesto, on Route 132 from 0.2 mile east of Stone Avenue to 6th Street, and on Route 99 from I Street to Woodland Avenue. Construct 2-lane expressway and improve Route 132/99 interchange.	This segment of SR 132 and the existing SR 132/99 interchange experience congestion due to the limitations of the existing facilities combined with an increase in commuters, trucks, local area vehicles, bikes, and pedestrian traffic. Additionally, the uncontrolled access to schools, churches, businesses, and residences along this segment adds to the slow-moving traffic and increases the potential for conflicts between bikes, pedestrians, and vehicles. The purpose of this project is to improve regional and interregional circulation, relieve congestion, enhance safety and improve operations.	Construction	6/30/1999
1E280	1015000027	10	Stanislaus	132	4.5	11.7	Near the City of Modesto, in Stanislaus County, on SR 132, from SR 132/Dakota Avenue to near SR 132/Gates Road/Paradise Road. Construct approximately 5 miles of a realigned, two-lane, access-controlled facility. Construct two grade separations with overpasses at Dakota Avenue and Hart Road. Construct a roundabout at new intersection with Russell Road.	The project will lower congested vehicle miles of travel, congested lane miles, and vehicle hours of delay in line with StanCOG's RTP/SCS goals, as well as the goals of the State of California outlined within the California Transportation Plan and related documents. The project will return Maze Boulevard to the neighborhood, allowing local traffic and local pedestrians and bicyclists to safely and efficiently travel between home and local points of interest, such as local restaurants and the nearby Franklin Elementary School. In turn, regional and interregional traffic will be able to travel with less congestion through West Modesto to Interstate 5 or SR 99. Phase 3A will connect to the work completed in Phase 1 to Gates Road/Paradise Road, which will merge the new alignment with the existing alignment westward to Interstate 5. Grade separations at Dakota Avenue and Hart Avenue will reduce congestion, while the new roundabout at Russell Road will provide a major safety improvement to an area known for collisions. This project is being constructed with design considerations for resiliency. Phase 3A will be constructed with continuously reinforced concrete pavement to withstand extreme heat and flooding. The design will allow for it to accommodate a 25-year storm event and two 10-year storm events back-to-back within 24 hours. SR 132 West is included in the California Freight Mobility	Design	6/30/2015

EA	Project ID	Dist	County	Route	Begin PM	End PM	Project Description	Purpose and Need	Status	PID Completion Date
								Plan as a key project to reduce vehicle hours of delay. The project will improve the reliability of the statewide freight network, allowing for trucks to travel with less congestion, thus reducing operating costs and improving their on-time performance.

							4. Commonwealth Ave. to Oakwood Ave. 5. West of La Tour Way to Alta Canyon Road	parks, houses of worship, and other community resources within the City about the I-210 and are impacted by unacceptable levels of noise and air pollution and related health impacts. At the request of local residents, the City funded, initiated and completed a Noise Barrier Scope Summary Report (NBSSR), IN 2007, to evaluate the I-210 noise impacts. The NBSSR found that existing freeway traffic noise levels in most locations along the freeway exceed the noise abatement criteria established by the Federal Highway Administration and Caltrans, and identified a need for 26 soundwalls. The proposed Project includes four different soundwall segments serving as a small part of the overall package of soundwall improvements.

Rehabilitate pavement, upgrade concrete median barrier, rehabilitate drainage systems, upgrade facilities to Americans with Disabilities Act (ADA) standards, and replace Whipple Avenue Pedestrian Overcrossing No. 34-0096.	Design	6/28/2019
OK820	0416000144	4	San Francisco	280	1.8	1.8	In San Francisco County, on I-280, from the start of the Southbound Ocean Avenue Off-Ramp to Ocean Avenue intersection. Realign the existing free-flow right turn off-ramp to a T-intersection with a traffic signal. Widen the off-ramp from one lane to two lanes and build a retaining wall. Construct bike lane on Ocean Avenue.	The current configuration of the SB I-280 off-ramp intersection with Ocean Avenue creates potential conflicts between multi-modal users. The current configuration is a single-lane, free-right turn onto WB Ocean Avenue just prior to the intersection with Howth Street. The ramp becomes a new rightmost lane as it joins WB Ocean Avenue. When vehicles on Westbound Ocean Avenue attempt to shift to the right lane immediately past the ramp merge area to turn right at Howth Street into CCSF, they are required to merge with vehicles exiting the off-ramp over a short distance of approximately 150 feet. The off-ramp is also a safety hazard for pedestrians and bicyclists crossing the off-ramp because the free right turn has limited sight distance for drivers exiting the freeway at high speed. To create a safer multi-modal environment, the San Francisco County Transportation Authority (SFCTA) in cooperation with the California Department of Transportation (Caltrans) proposes to modify the existing I-280 southbound off-ramp from a free-flow off-ramp to a T-intersection with traffic signal. 1K300	0416000226	4	Santa Clara	280	7.1	9.5	In Cupertino in Santa Clara County, on Interstate 280 from 0.2 mile north of Tantau Avenue Overcrossing to 0.1 mile south of Blaney Avenue Overcrossing. Reconstruct interchange.	The Purpose of the Project is to improve traffic operations and facilities for multimodal forms of transportation, including bicycle, pedestrian, and high occupancy vehicle uses, at the I-280/Wolfe Road Interchange in the City of Cupertino. Wolfe Road is a key connector between job locations and housing, commercial, and retail developments. The existing interchange at I-280 is congested with significant delays, which are projected to be worsen. Sidewalks and bike lanes are narrow and cross high-speed, at-grade ramp connections, which discourages use by pedestrians and bicyclists. The interchange configuration is not consistent with Caltrans' Complete Streets design guidelines or the Cupertino General Plan vision for a walkable, bikeable community.	Design	6/9/2017

1E220	1015000011	10	San Joaquin	580	12.6	14.3	The Project is located in the City of Tracy at the I-580 and International Parkway/Patterson Pass Road interchange. Due to increased commercial truck and traffic demand from existing fulfillment and distribution center growth and planned future development in San Joaquin County, the Project proposes to modify the interchange from the existing compact diamond (Type L-1) to a Diverging Diamond Interchange (DDI). The Project reduces congestion, increases truck throughput, and eliminates a bottleneck for trucks accessing I-580, a key freight highway. The Project will improve interregional goods movement for trucks traveling between the Port of Oakland, Bay Area, local warehouses, Southern California, and out-of-state.	The purpose of this project is to reduce congestion resulting from ongoing and planned development of the Cordes Ranch Specific Plan and to improve local circulation. This project is needed to accommodate the increase in traffic demand projected as part of the planned development in the Cordes Ranch Specific Plan Area and nearby areas in Tracy, and to discourage highway traffic from using local roadways, thereby improving local circulation.	Construction	6/30/2015
1M570	1021000008	10	San Joaquin	580	11.8	12.1	In San Joaquin County, on the I-580/Iron Horse Parkway (Hansen Rd) interchange. Construct a new interchange at I-580/Iron Horse Parkway.	Construct a new interchange at I-580/Iron Horse Parkway.	Environmental	11/17/2022

28680	0700020881	7	Los Angeles	605	18.8	19.5	The Interstate 605/Valley Boulevard Interchange Improvements Project (Project) will improve mobility and alleviate capacity constraints and address other related deficiencies at the I605/Valley Blvd Interchange (inadequate truck turn paths, nonstandard lane and shoulder widths along loop ramps, and non-compliant Americans with Disabilities Act [ADA] facilities, etc.) that contribute to congestion and high accident rates. Operational improvements and safety upgrades will be coordinated with traffic operations on freeway/ramps and local arterials (Valley Blvd and East Temple Avenue at-grade railroad crossing). The Project includes construction of retaining walls, sound walls and in addition curb ramps, sidewalks, driveways, signals (traffic and railroad), railroad gates and other vehicular/pedestrian/railroad facilities will be upgraded	The I-605/Valley Boulevard interchange currently experiences significant congestion, heavy truck traffic, and operational deficiencies which are forecasted to increase and exacerbate existing traffic conditions without any planned improvements. Operational deficiencies include inadequate vehicle queuing space on the existing off-ramps, and nonstandard roadway geometrics. The interchange currently operates at unacceptable levels of service (LOS) with accident rates that exceed the statewide average. Currently the Temple Avenue and Valley Boulevard intersection operates at a LOS F in the AM and PM peak periods. Additionally, the interchange does not have sufficient capacity to support the existing and planned traffic volumes. The new configuration and improvements are	Design	8/7/2014

2Q830	0419000056	4	Alameda	680	4.8	5	In Alameda County in Fremont on Route 680 from Route 238/680 separation to Washington Boulevard Overcrossing. Construct pedestrian and bike trail and overcrossing.	Construct pedestrian and bike trail and overcrossing.	Environmental	3/10/2021
1W640	0421000064	4	Alameda	680	4	6.4	In Alameda County in Fremont at various locations from Durham Road overcrossing to Route 680/238 separation. Construct interchange improvements at 3 interchanges along I-680 within the city of Fremont including: Auto Mall Parkway, Washington Blvd., and Mission Blvd.	Construct interchange improvements at 3 interchanges along I-680 within the city of Fremont including: Auto Mall Parkway, Washington Blvd., and Mission Blvd.	Not Programmed	3/13/2023
0Q920	0418000174	4	Alameda	680	14.8	15.5	Location: Along I-680 from Post Mile R14.8 to PMR15.5 and along Sunol Blvd and Arlington Drive to Castlewood Drive. Description: The interchange of 680 and Sunol Blvd will be modified by the addition of 3 new traffic signals at the on/off ramps and at Castlewood Drive, the addition of 2 new on ramp lanes (1 multipurpose and 1 high Occupancy lane), 6-7 new protected bicycle facilities on both sides of Sunol Blvd from Arlington Road through the interchange to Castlewood Dr., a 10-12 paved pathway for pedestrians and less experienced cyclists on the southside between Arlington Road through the interchange, a new protected intersection at Arlington Road and Sunol Blvd, widening of the bridge on I-680 over Sunol Blvd to accommodate lane acceleration, sound walls, and lane restriping.	Reduce congestion on Sunol Blvd, accommodate future traffic volume growth, and improve pedestrian and bicycle access through the interchange. Need: The project is needed to address existing congestion on Sunol Boulevard, which can have peak WB congestion that extends almost 2 miles, with LOS at intersections between E and F. The congestion at the interchange causes commuters to cut through the neighborhood at Arlington Road to use Happy Valley to get to the interchange from the west side. Cut through traffic speeds through the neighborhood, making it unsafe to back out of driveways. Lastly, the project will address gaps in sidewalks through the interchange and gaps in safe bicycle facilities through the interchange. The accident rate at this location is consistently in the top 5 of the City's yearly crash review analysis. Caltrans is expected to approve the Initial Study/Mitigated Negative Declaration document in September 2023.	Environmental	1/16/2020

0Q950	0418000187	4	Contra Costa	680	0	14.42	On northbound I-680, in Contra Costa County, between Bollinger Canyon Road and Ygnacio Valley Road interchange. Develop a Transit Bus on Shoulder (TBOS) pilot project on northbound Interstate 680 (I-680) from San Ramon Transit Center/Bishop Ranch (Bollinger Canyon Road interchange) (PM3.0) to the Walnut Creek Bay Area Rapid Transit (BART) station (Ygnacio Valley Road interchange) (PM14.8) in Contra Costa County to improve transit time reliability and facilitate transit travel along the corridor.	Reduce peak-period transit bus delays along the northbound I-680 corridor in Contra Costa County between San Ramon Transit Center/Bishop Ranch (Bollinger Canyon Road Interchange) and Walnut Creek BART Station (Ygnacio Valley Road Interchange); Improve public transit bus travel time reliability; Improve the viability of the corridor for public transit bus use.	Environmental	3/23/2023
0Q960	0418000188	4	Contra Costa	680	0	24.42	In Contra Costa County, on I-680 from south of the Alcosta Blvd Interchange to south of the North Main Rd Interchange. Construct ramp modification & metering in the northbound direction, and ITS and traffic detection improvements in the median and northbound lanes.	The purpose of the proposed project is to supplement the Caltrans Traffic Operations Systems (TOS) Project 04-1Q720 by adding system functionality and infrastructure improvements to: Proactively manage both recurrent and non-recurrent congestion in a coordinated, real-time manner to improve productivity and reliability of the I-680 corridor. Balance freeway performance objectives and ramp queues. Improve the detection of traffic and incidents to support real-time corridor adaptive ramp metering (CARM) and other traffic operations strategies. Encourage collaboration with local agencies for further implementation of intelligent transportation systems (ITS) and integrated real-time traffic operations strategies that address regional and local objectives. The recurrent and non-recurrent congestion on weekdays and weekends along the I-680 corridor in Contra Costa County results in traffic delays, reduction in traffic throughput and inconsistent travel-	Environmental	11/3/2021

EA	Project ID	Dist	County	Route	Begin PM	End PM	Project Description	Purpose and Need	Status	PID Completion Date
								time reliability. In some instances, this reportedly leads to natural diversion of freeway traffic onto the local street network. This will require that the following needs to be addressed by the proposed project. There is currently congestion in the northbound direction beginning at El Pintado Road during the AM peak period and at Treat Boulevard during the PM peak period, with both areas of congestion propagating and ultimately extending south to Sycamore Valley Road. Current ramp meter system does not automatically operate in response to crashes and lane blocking events on the freeway, coordinate metering rates across multiple ramps, and distribute queues on the ramps. Current traffic monitoring infrastructure provides lower resolution information on mainline traffic performance and incident identification. Demonstrate to local and regional stakeholders the benefits of advanced intelligent transportation systems (ITS) and real-time traffic operations strategies including corridor adaptive ramp metering.		
4H610	0413000216	4	Contra Costa	680	11.2	16.6	In Walnut Creek. Construct a HOV lane on southbound I-680, from Livorna Road to 0.2 miles north of Geary Road. Connect the existing HOV lanes in the SB I-680 corridor and encourage carpool and express bus usage	The purpose of the project is to connect the existing HOV lanes in the SB I-680 corridor and encourage carpool and express bus usage. The addition of an HOV lane will increase highway capacity, improve HOV traffic flow, and reduce peak hour traffic delays. Traffic delays along I-680 could be as high as 10-12 minutes at each of the two bottlenecks at Rudgear Road and North Main Street on-ramps.	Construction	9/11/2014
0Q310	0418000070	4	Contra Costa	680	11.3	23	In Contra Costa County, complete express lane gap and operational improvements on Northbound I-680 between north of I-680/SR-24 interchange to Arthur Road.	Reduce peak-period congestion and delay on Northbound I-680. Reduce travel time and improve travel time reliability for travelers in the corridor. Encourage use of high occupancy vehicles and transit service Optimize use of the existing HOV lane capacity in the I-680 corridor to better meet current and future traffic demand. Offer non-carpool eligible drivers a reliable travel time option Congestion - Northbound I-680 general purpose lanes in the project area experience substantial congestion - over 30 minutes of delay - during peak hours. System Continuity - There is a 7.5-mile gap in the existing Northbound I-680 managed lane system between Livorna Road and SR 242; system continuity is lacking through this area, diminishing the effectiveness of the managed lane system and increasing travel time for all users. Delay - The weaving movement between Lawrence Way and Treat Boulevard creates a bottleneck on NB I-680 and a traffic queue as far back as Livorna Road during the peak traffic period. The situation is compounded by the gap in the managed lane system.	Environmental	1/7/2019

37510	0721000056	7	Los Angeles	710	13	24.6	Project Location: LAC I-710 between SR-91 and SR-60. The Project will integrate and upgrade, as necessary, real-time traveler information and intelligent transportation system (ITS) technologies, currently managed by local agencies and Caltrans along the I-710 corridor between SR-91 and SR-60, into an integrated corridor management (ICM) system. The ICM system will actively manage all modes of travel during non-recurring congestion, specifically trucks, passenger vehicles, and active transportation on the nation's most vital goods movement corridor. The Project will support the freeway capacity to maintain truck travel speed during incidents, actively manage passenger vehicles off the I-710 onto adjacent arterials to minimize impacts from such traffic on local arterial network. No right-of-way needs are anticipated because the Project implementation will take place all within the existing right of way.	Purpose: The purpose of this project is to maximize system performance and improve traffic mobility and safety of the major regional arterials along the I-710 corridor across multiple jurisdictions and to develop a collaborative and integrated transportation management strategy to optimize all available infrastructure and transportation modes. The public benefits of this project would be significant, including advanced traveler information, improved travel mobility, and enhanced safety. Moreover, no controversial or adverse issues are anticipated. The project would be entirely within the public state and local right-of-way and would have no significant environmental impacts. Need: The I-710 serves both passenger and goods/freight movement vehicles and because of population growth, employment growth, increased demand for goods movement, increasing traffic volumes, and aging infrastructure, the I-710 Corridor experiences congestion and safety issues. The project is needed to improve traffic flow on the I-710 corridor and arterial routes with integrated systems operations for more efficient, coordinated responses to changing roadway traffic conditions.	Design	5/3/2022

0Q280	0418000067	4	Alameda	880	13	14.2	In the cities of Hayward and Union City. Interchange and local road improvements on I-880 from 0.6 mile south of Whipple Road/Industrial Parkway Southwest Interchange to 0.3 north of Industrial Parkway West Interchange.	Both I-880 interchanges operate at capacity, traffic queues from northbound off-ramp at the I-880 Industrial Parkway West interchange extend onto the freeway, ramp intersections with local roads get congested, bicycle and pedestrian accessibility through the interchanges is inadequate. Project will improve operations, safety and mobility through the interchanges.	Design	8/15/2018
1W440	0421000017	4	Alameda	880	10.1	10.5	The proposed interchange modernization project is located along Interstation I-880 freeway between 0.2 miles south of the I-880/Decoto Road Interchange and 0.2 miles north of the I-880/Decoto Road Interchange, and it is administered by the City of Fremont, in partnership with Alameda County Transportation Commission and Caltrans. The project will provide transit priority lanes and improve bicycle and pedestrian access through the interchange while maintaining or improving traffic operations within the Decoto Road interchange. The transit only lanes will be on the inside lanes in both eastbound and westbound directions, and it will extend between the projects eastern limit at the Decoto Road/Cabrillo Court intersection and the projects western limit at the southbound I-880 off-ramp. The proposed multi-purpose path will extend along the north side of Decoto Road through the interchange, also between the Decoto Road/Cabrillo Court intersection and the southbound I-880 off-ramp.	<p>The purpose of the project is to complete gap in bicycle and pedestrian infrastructure along the Decoto Road corridor, ultimately connect active transportation users to the existing bike paths on the Dumbarton Bridge. The project will also construct transit priority lanes across the I-880/Decoto Road interchange.</p> <p>The proposed interchange modernization project is one of three projects administered by the City of Fremont along the Decoto Road corridor that combined will construct a continuous Class I multi-purpose path from the Dumbarton Bridge to the Alameda Creek Trail, as well as provide a continuous transit priority lane along Decoto Road between Paseo Parkway intersection to the highway portion of SR-84 to the Dumbarton Bridge. The City is currently completing the design of a complete street project along Decoto Road from the Alameda Creek Trail to the Decoto Road/Cabrillo Court intersection, with the project scope consisting of dedicated transit lanes in both directions of travel as well as Class I multi-purpose paths along both sides of Decoto Road. The proposed I-880/Decoto Road Interchange Modernization Project would extend the Class I path and transit only lanes from the Decoto Road/Cabrillo Court intersection, through the I-880/Decoto Road interchange, and to the existing southbound I-880 off-ramp on the west side of the interchange. A third project that the City of Fremont is developing is a new Class I trail extending from the I-880/Decoto Road interchange to the existing bike lanes on Dumbarton Bridge.</p> <p>As a complete project package, the three projects will provide the much needed bike and pedestrian facility that is safe and comfortable for all users of all ages and abilities for both commute and recreational use, providing the only continuous active transportation facility between the East Bay and the peninsula.</p>	Environmental	10/26/2021
