Notes:

1. Dimensions of the pavement structures (structural sections) are subject to tolerances specified in the standard specifications.

2. Superelavations are shown on the superelavation diagrams.

Include a generic note regarding location of things like guardrail, concrete barriers, retaining walls, etc., shown on the typical cross section sheets. In this note, list only those construction items that appear on the typical cross section sheets. Do not include the pavement structure items in this note.

See "Generic Project Border Sheet" for basic border sheet information not shown on this sheet.

Notes 1 and 2. General and special notes are shown in the first sheet of typical cross sections if a pavement structure is to be represented. All notes, both temporary and permanent, are shown on the layouts and the summary of typical sheets.

The Superelavations are shown on the superelavation diagrams. The cross sections are shown on the typical cross section sheets. For those occasional small projects on minor routes where there are no plan view sheets of any type in the right of way indicates that the project plans preparation manual.

Typically, right of way lines should be shown on all plan view sheets where the right of way line or project plan is shown. The right of way line is shown on the typical cross section sheets. It is required to be shown on the typical cross section sheets, but not shown on the superelavation diagrams.

If more detailed information is necessary for a portion of a typical cross section, a breakout enlarged view of that detail may be shown on the typical cross section sheet. Construction details not generally shown on the typical cross section sheets, but shown on the superelavation diagrams.

The number of typical cross sections shown for any project is determined by design. In this project, the number of typical cross sections is shown on the typical cross section sheet. These observations are not to be used in the same way as those in the typical cross section sheets.

For those occasional small projects on minor routes where there are no plan view sheets of any type in the right of way lines shown on the typical cross section sheets. Include a generic note regarding location of things like guardrail, concrete barriers, retaining walls, etc., shown on the typical cross section sheets.
