Supports for Finishing Machines

**RAILS**

The Standard Specifications require that "Rails for support and operation of finishing machines or hand-operated strike-off devices shall be completely in place and firmly secured for the scheduled length for concrete placement before placing of concrete will be permitted."

"Rails" as used in this specification shall be interpreted to be the continuous structural members which are readily adjustable for elevation, and which support the finishing equipment. These "Rails" must be in place for the entire length of the pour.

Various devices may be placed on top of these rails for purposes of wearing or spacing. Such devices do not have to be full length and may be "leap-frogged" around the finishing equipment.
