Inspection of Electrical, Mechanical, Water and Wastewater Work

It is the Structure Representative’s responsibility to ensure that all electrical, mechanical, water and wastewater (EMW&W) work complies with the plans and specifications. However, EMW&W work is a specialized and complex type of work with which the Structure Representative may not be totally familiar.

In order to be assured that the EMW&W work complies with the plans and specifications, the Structure Representative is encouraged to contact the Electrical, Mechanical, Water and Wastewater Branch (Telephone 916-227-8337 calnet 498-8337) to keep them informed of the work progress, to discuss any problems encountered, and to make arrangements to have EMW&W personnel make periodic inspections of the work as it progresses towards completion.
