SF	Square Feet
USFS	United States Forest Services
USFWS	United States Fish and Wildlife Service
VegCAMP	Vegetation Classification and Mapping Program

1. INTRODUCTION

California Department of Transportation' (Caltrans') Advance Mitigation Program (AMP) was created through the Road Repair and Accountability Act of 2017 (Stats. 2017, Ch.5, Sec.35) and amended by Senate Bill 103, Committee on Budget and Fiscal Review Transportation, (Stats. 2017, Ch. 95, Sec. 10 – 15), both of which established the AMP under Streets and Highways Code (SHC) §800 et seq. The purpose of the legislation (SHC §800 (a)) is to:

- Accelerate transportation project delivery;
- Enhance communications between Caltrans and stakeholders to protect natural resources through project mitigation, to meet or exceed applicable environmental requirements, and to mitigate, to the maximum extent required by law, environmental impacts from transportation infrastructure projects; and
- Consult with the California Department of Fish and Wildlife (CDFW) on all activities pursuant to SHC §800 et seq., including activities pursuant to Chapter 9 of Division 2 of the Fish and Game Code (FGC §1850 et seq.).

Prior to expending any program funds, the Caltrans' Director must make a determination and justification that the expenditure will likely accelerate the delivery of specific transportation projects (SHC §800.6(i)). In support of that determination and justification, the AMP implements a multi-step advance mitigation planning process, which starts with an assessment of needs, identifies appropriate regions, advances advance mitigation concepts, scopes projects and receives approval for funding allocation. The steps are:

- Statewide Advance Mitigation Needs Assessment (SAMNA): the SAMNA is a Geographic Information System (GIS)-based assessment that is performed on future planned state transportation projects that are identified on forecasted transportation plans. Assumptions are made on the general types of transportation project activities as to what extent, if any, they may potentially incur an off-pavement footprint. These potential footprints are overlaid with natural resource data layers that model species habitat and aquatic resources. Analyses are run on a District-wide basis and impacts to specific resources within specific ecoregions or watersheds are estimated. The SAMNA will be performed, at a minimum, on a biennial basis. The SAMNA is the subject of this report.
- Geographic Area of Interest (GAI) Selection: following completion of the SAMNA, the AMP coordinates with the Districts to identify which specific natural resources would be of the greatest benefit to implement through an advance mitigation approach, and to identify an ecoregion or watershed-based region within which to develop an advance mitigation project. This region is referred to as the GAI.
- Regional Advance Mitigation Needs Assessment (RAMNA): the RAMNA is a document that elaborates on the needs identified in the SAMNA for a given GAI and seeks to maximize the environmental and conservation benefits from potential mitigation actions and provides the Districts with sufficient information to

conceptualize advance mitigation projects that can be scoped and submitted for the Director's Approval.

- Advance Mitigation Project Scoping and Initiation: based on the RAMNA, Districts will identify and scope advance mitigation project alternatives and document how these alternatives will likely accelerate the delivery of transportation projects documented in the SAMNA and RAMNA. The AMP will screen the proposals and make recommendations to the Director.
- Director's Approval: the Director will review the advance mitigation projects scoping and nomination documents and the AMP's recommendations and make a determination and justification that funding the advance mitigation project is likely to accelerate transportation project delivery, per SHC §800.6 (i). Once the determination and justification have been made, the Districts can request a fund allocation from the Advance Mitigation Account for the advance mitigation project, and delivery of that advance mitigation project can commence.

Advance mitigation planning is conducted early in transportation planning and is a proactive approach to mitigation, with the goal of meeting both conservation goals and objectives as well as accelerate delivery of transportation projects by strategically citing mitigation projects so that they provide the correct type and amount of compensatory mitigation and contribute materially to environmental recovery efforts. Advance mitigation project delivery timelines therefore are decoupled from, and in advance of, transportation project delivery timelines and strive to maximize the environmental benefit by aggregating the estimated impacts of multiple future transportation projects. Advance mitigation planning thus is fundamentally geospatial in its scope, and conducive to GIS based solutions.

This report presents the methods and results of the SAMNA performed on the list of projects in the State Highway Operations and Protection Program (SHOPP) Ten Year Project Book for the Second Quarter of the 2025/2026 Fiscal Year. In order to develop meaningful and appropriate advance mitigation projects, an understanding of the potential impact to resources in the geographic area must be developed. For this reason, GIS is utilized as a decision-making tool for developing advance mitigation projects. Core GIS processes employed in this assessment are informed by a methodology published by UC Davis.[1] The workflow involves the consolidation, processing, and analysis of a variety of GIS data layers from authoritative State and Federal agencies. GIS layers considered fall into resource categories that correspond to Project mitigation needs. Those categories are terrestrial and aquatic special-status species (and sub-species), wetlands, riparian and water.

[1] Thorne, James H; Bjorkman, Jacquelyn; & Huber, Patrick R. (2015). A Reference Manual for Caltrans Staff on Regional Advance Mitigation Impact Assessment Methods. UC Davis: Information Center for the Environment. Retrieved from: http://escholarship.org/uc/item/76n8793q

Planned projects were identified in the Caltrans Asset Management Tool database. Potential Project impact footprints were developed using a combination of manual and automated workflows. The potential project footprints were then intersected with the natural resources features resulting in a modeled potential impacts layer. The resulting data layer was analyzed and processed to generate reports that allow Caltrans districts to assess natural resources impacts for future transportation projects.

The Advance Mitigation Needs Assessment Methods are only intended to produce an estimate of potential mitigation need for the purpose of justifying, authorizing, proposing and scoping an advance mitigation project. They are not intended to provide transportation project level assessment for impacts, scoping, providing environmental analysis, or permitting transportation projects. Transportation projects still need to go through environmental and permitting processes and must demonstrate avoidance and minimization prior to compensation. Additionally, use of these methods does not imply endorsement of a transportation project alternative. Transportation projects must also include mitigation costs in the scoping and programming of their budgets, as they are required under law to reimburse the Program for use of mitigation produced by the Program (SHC §800.6(b)).

2. METHODS

The basic analysis for assessing the acreage of habitat and waters impacts to specifically defined terrestrial and aquatic resources is an intersection of modeled transportation project footprints and natural resource spatial layers. These two input layers did not exist as geospatial products in forms that were readily available. Overlay analysis had to be created from existing data products. The creation of these input data layers involved the management of hundreds of data layer inputs, and given the volume of data, the processing capacity required to compile the data layers and run the tools described below was complex. The methods presented here generally follow the methods presented in Thorne et al., 2015.

2.1 Project Footprint Development

Future Project estimated footprints were developed to estimate the impact of a given Project. The first step to building the Project footprints was to gather Project information from Caltrans Asset Management Tool database. Data from the Asset Management Tool was queried to represent data available after December 2025. Data required a degree of conditioning to identify a unique identification number and the county, route, and post-mile for the beginning and end of each Project.

Only project activities that typically result in impacts to sensitive natural resources were utilized and activity details that are not typically subject to potential mitigation needs were filtered from consideration. Locations for project activities were developed by separating activities into three categories: culverts, bridges, and other activities. Bridge and culvert related activities were identified using a bridge report exported from the Asset

Management Tool database, Highway Maintenance Culvert Inspection Program listing the drainage projects, and existing GIS data files that provide locations of bridges and culverts as point and linear geometry features. Other activities (non-bridge and non-culvert) were located by utilizing Caltrans County Route Post Mile (CRPM) locations included in an activity report exported from the Asset Management Tool database. Geometric representations of the project extent described in Caltrans reports is generated using structured and manual GIS processing steps.

Caltrans projects identification indicators, also known as SHOPP IDs, are used to uniquely identify each project through the life cycle of the processing and reporting. Once linear representations of each Project extent were available, edge of pavement was approximated by developing buffers. Caltrans' 2024 Transportation System Network was consulted to obtain roadway travel way and shoulder widths, whose combined widths were separated in half and applied as buffer radii. The buffer varied depending on whether the highway was divided or undivided. On undivided highways, the edge of pavement buffer was calculated using the travel way and outside shoulder widths on both sides of the roadway. On divided highways, the edge of pavement buffer was calculated using the travel way, inside shoulder, and outside shoulder widths associated with each roadway alignment. For example, an undivided highway with a 20 feet travel way width and eight feet outside shoulder width on both sides of the roadway would have a total roadway width of 56 feet, resulting in a 28 feet buffer from the centerline of the roadway segment. Similarly, for a divided highway with a 60 feet travel way width, a 10 feet inside shoulder width, and a 10 feet outside shoulder width for both the left and right roadway alignments would have a total roadway width of 80 feet for each alignment, resulting in a 40 feet buffer from the centerline of each roadway alignment.

Apart from culvert projects, the Project impact was defined as a buffer from the edge of pavement. Different buffer widths were used depending on the activity identified for the Project. Culvert project impact was defined as a buffer from Project culvert GIS geometry, with the edge of pavement removed from that buffer geometry.

For SHOPP projects, each Project has an Activity ID field. The buffers applied are presented in Table 1 below. All activities absent from Table 1 were not given a buffer and are not represented in this analysis. Buffers have been modified from previous SAMNA methods based on empirical testing of the SAMNA performance between 2018 and 2024.

Table 1. SHOPP Project Activity Code Buffer Widths

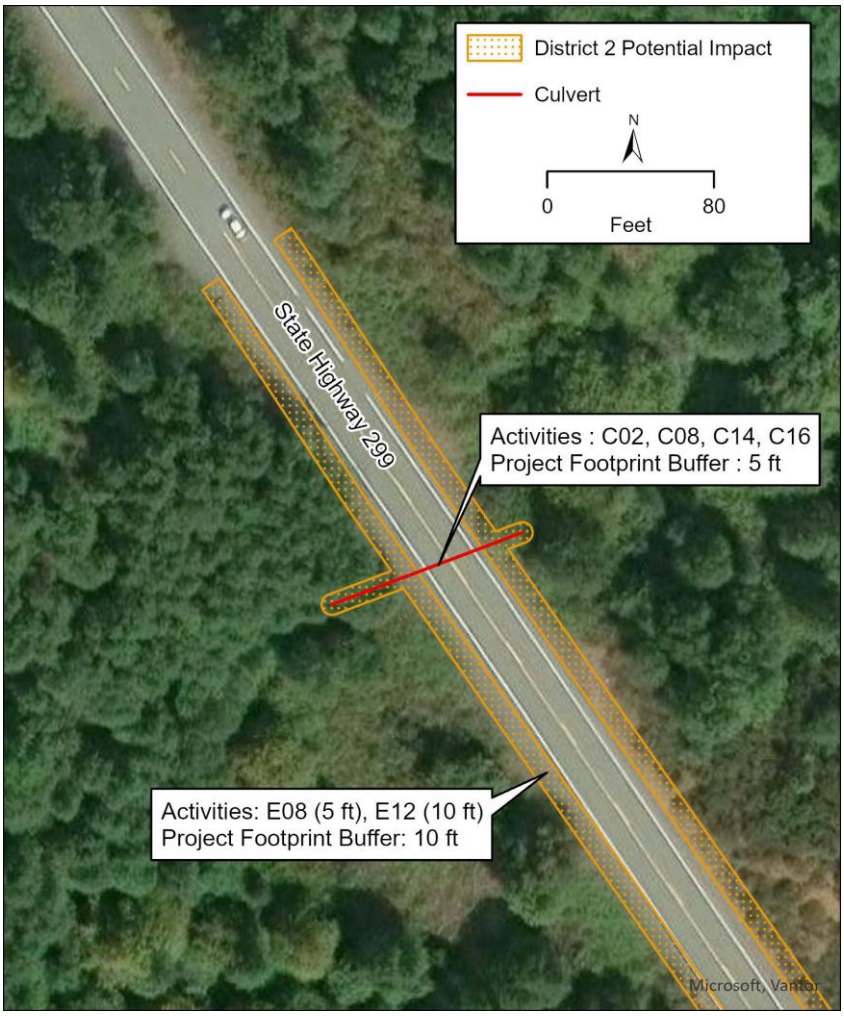

Activity ID	Activity Category	Activity Description	Activity Unit**	Buffer Distance (Ft)
A01	Bridge	Bridge Preservation	SF	5

* E03 Activity Code is treated as a drainage project

** Acronyms – EA (Estimate Area); LF (Linear Feet); SF (Square Feet); CY (Cubic Yards)

Many projects included multiple activities. In those cases, the largest buffer took priority and was assigned to the Project for the potential impact analysis. The resulting geometry estimates the potential impact area for each proposed Project, which can be overlaid with resource data in subsequent steps. An example of a Project image polygon is shown below in Figure 1.

Project SHOPP ID 21700 in Shasta County

Improved Highway Geometry	E08	10
Pave Shoulders	E12	5

Figure 1. Map of Example Project Impact on State Highway 299 in Shasta County (Impact Buffer = Maximum of 10 ft)

Once a baseline set of project footprints were established in quarter two of 2019-2020, subsequent footprint mapping efforts leveraged a database to compare each new quarter's reports with the previous quarter's reports. This comparison process carried

through footprints for projects that hadn't changed, removed projects that were no longer included, and identified projects that had changed for updates. This process streamlined the footprint mapping process to allow for quarterly updates to be more efficiently developed.

2.2 Terrestrial and Aquatic Special-Status Species Habitat Value Layer Development

To characterize habitat across California, a seamless and continuous layer of habitat was developed with habitat values for each of the considered species and sub-species. This layer was limited to the ranges of each species and sub-species. Habitat is represented in California by the CDFW California Wildlife Habitat Relationship (CWHR) program. The CWHR program identifies grouping of vegetation communities and evaluates each community for suitability for special-status amphibians, reptiles, birds, and mammals. In addition to identifying special-status species habitat preferences, the CWHR program provides an average habitat suitability index value from 0 to 1, 0 being no habitat and 1 being most suitable.

Bounding or range polygons, that represent the limits of where a species or sub-species may be found within California, were also needed. Animal ranges were sourced from CDFW's Biogeographic Information Observation System (BIOS), U.S. Fish & Wildlife Service's (USFWS) Environmental Conservation Online System (ECOS), and a variety of research from academic publications. Plant ranges were sourced from UC Berkeley's Jepson Floristic Provinces, USFWS's ECOS, and research from an academic publication.

CWHR habitat types are included as attributes in many California wide vegetation layers. Mirroring the UC Davis publication, all vegetation layers were merged in an order of priority using best data available approach. The most recent and accurate data to represent CWHR habitat was determined to be the CDFW's Vegetation Classification and Mapping Program (VegCAMP) GIS layers. These layers map vegetation primarily in private and state-owned lands. The next priority was given to the United States Forest Service (USFS) Classification and Assessment with LandSat of Visible Ecological Groupings (CALVEG) program data which maps vegetation for nearly the entire state and provides a CWHR type attribute for each polygon. Any gaps not addressed by VegCAMP and CALVEG data were filled by CalFire's FVEG layer. A summary of the data sources is presented in Table 2.

Table 2. CWHR Data Sources

Priority	Layer Name	Source Agency	Data Layer Link
1	VegCAMP	CDFW	https://www.wildlife.ca.gov/Data/VegCAMP
2	CALVEG	USFS Region 5	http://www.fs.usda.gov/detail/r5/landmanagement/resourcemanagement/?cid=stelprdb5347192
3	FVEG	CalFire	https://frap.fire.ca.gov/mapping/gis-data/

Once the CWHR type layer was established, GIS workflows were developed to assign a habitat value for each considered special-status species and sub-species to relevant CHWR habitat types. These habitat values were then assigned to polygons within the range of each species.

Polygons of habitat were assigned a species habitat suitability index value if any part intersected that species range polygon. This approach resulted in polygons of habitat that were only partially within a species or sub-species range polygon being attributed with that species or sub-species habitat value. This approach reflects a conservative approach as range polygons are not real physical barriers to a species movement and continuous areas of habitat may be used by a given species or sub-species beyond the range polygon extent.

As habitat suitability and range for special-status amphibians, reptiles, birds, and mammals were available from the CWHR program, that information was gathered and applied to each polygon of habitat within the CWHR type layer. Habitat value and range for special-status plant and invertebrate species were also considered in the CWHR type layer. As habitat suitability values were not available from the CWHR program, each species was assigned 1 for suitable and 0 for not suitable.

Habitat types and Jepson Herbarium[2] codes for listed plants were cross-walked from the California Native Plant Society Rare Plant Inventory plant habitat classifications and the geometry for special-status plant range polygons were sourced from a floristic province GIS layer developed by the Jepson Herbarium. The GIS layer is called “Geographic Subdivisions“ which has polygons that represent the California Floristic Provinces as used in the Jepson Manual. Each special-status plant was assigned a CWHR type based on the crosswalk. Each plant was assigned a geographic range limited to the appropriate floristic province by joining the species table and the GIS data layer “Geographic Subdivisions” by Jepson Herbarium code.

For invertebrates, a CDFW-sanctioned GIS layer for the ranges of each listed invertebrate species was not found. For listed invertebrates, the suitable habitat types for each invertebrate species were cross walked from CDFW’s RareFind 5 database to the

[2] Jepson Flora Project (eds.) 2017. Jepson eFlora, http://ucjeps.berkeley.edu/eflora/ [accessed on May 25, 2017]

appropriate CWHR vegetation type. Ranges for invertebrate species were obtained from the best available data gleaned from a variety of scientific research papers.

The application of these methods resulted in one Statewide vegetation layers with a habitat suitability attribute for each special-status species that is limited by the species range, such that these layers provide statewide coverage Special-Status Terrestrial and Aquatic Species and Sub-Species Report

The AMP created reports for each district by overlaying the Project footprint layer with species-attributed vegetation layer, extracting the area of each CWHR type within each Project footprint including habitat value attributes for each species that have a non-zero habitat value. The USFS Ecological Regions, United States Geological Survey National Hydrography Dataset (NHD) Hydrologic Unit Code (HUC) 8 sub-basins and HUC-10 watersheds are overlaid as well, so that the potential impacts can be summarized by Ecological Region (ecoregion) section and sub-section and NHD HUC-8 and HUC-10 basins. The report is exported with acreage summaries by habitat and by species.

2.3 Aquatic Resources Layer Development and Report

The process of developing an aquatic resources model was updated from previous reports. The update included utilizing additional data source resources and implementing new simplified data processing strategies. Riparian and vernal pool species range data were updated (to be used in addition to the three resources that existed in the older SAMNA model: waters, wetlands and fish ranges). All aquatic categories were combined to generate one report to include the four aquatic resources (vernal pool species ranges were added to aquatic species which included fish) instead of having separate reports for each resource (which was how the older SAMNA models were engineered).

The first step was gathering (from statewide and regional sources) the most current data and combining existing data of water bodies, waterways, wetlands (including vernal pools) and riparian. Polygonal datasets of all aquatic resources were collected and normalized by San Francisco Estuary Institute (SFEI) and brought into their California Aquatic Resources Inventory (CARI). Next, to include all known waters into the SAMNA model, linear datasets of waterways were buffered by their stream order and added to the CARI.

Next, updated riparian data was needed to be added to the aquatic resources model. In order to accomplish this, SFEI modelled Statewide riparian areas using some of the methods from their Riparian Zone Estimation Tool (RipZET). Caltrans organized the data to be consistent with their interpretation of riparian function. Full implementation of the RipZET was not possible since required data quality of elevation data and field verification was not feasible on a Statewide scale and did not represent Caltrans definition of riparian function.

The best available aquatic species ranges for listed fish and vernal pool species were collected from a variety of authoritative sources. Sources include data acquired from the University of California Davis, PISCES; USFWS, Environmental Conservation Online

System (ECOS); National Oceanic and Atmospheric Administration databases, and CDFW Biogeographic Information and Observation System (BIOS). These species habitats were coded as CARI aquatic categories where the value one (1) indicated suitable habitats and zero (0) indicated unsuitable habitats for each listed fish and vernal pool species. This range and habitat information was combined with the aquatic resources model, allowing an ability to estimate impacts for every aquatic species included in the model. Aquatic categories were created by assigning each CARI aquatic category to either waters, wetland or riparian. Additionally, the aquatic resource model was combined with ecoregion sections and sub-sections, HUC-8, HUC-10 and Coastal zones. Finally, the aquatic resource model was intersected with Caltrans project footprints providing an estimate of aquatic resources impacts of waters, wetland, riparian and aquatic species for each potential Caltrans project.

Potential impacts are summarized by species and aggregated by ecoregion section and sub-section, HUC-8 sub-basins, and HUC-10 watersheds. The fish, waters, and wetlands results are summarized in a single combined table, with potential impacts reported separately for each and aggregated by ecoregion section and subsection, HUC-8 sub-basin, and HUC-10 watershed.

2.4 Report Format

The report is exported as a comma separated values (CSV) file that can be manipulated in Microsoft Excel to summarize acreage of impact for each report subject matter. Reports are created for each district and include all SHOPP projects with footprints that have been coded to that district regardless of where the footprint of each Project falls on the ground. The results section details suggestions for how to interact and use the data in the reports.

2.5 Summary Reports

Several summary reports were developed from the CSV reports. These summary reports are provided in table format in the Appendices. One summary report lists the transportation projects along with the total footprint area within both ecoregion section and by HUC-8 sub-basin. The next series of tables depict the impact to species habitat within each ecoregion section. Each ecoregion section is represented by a separate table, with the first row of data depicting the total potential impact to each of the CWHR habitat types within that ecoregion section. These habitat totals represent the maximum potential impact within that ecoregion section per habitat type. The subsequent rows in each table detail how those potential habitat impacts could be impacts to the various special status species that the model indicated could use those habitats within their ranges. These tables are preceded by an index map, which shows the ecoregion sections and the transportation projects. The next section is preceded by an index map showing the HUC 8s and transportation projects. The map is followed by one additional summary table depicting potential impacts to aquatic resources by HUC-8 basin. The table summarizes total potential impacts to riparian areas, waters, and wetlands and identifies the associated fish species and habitats.

3. RESULTS

Potential project impact boundaries were generated for 669 projects. A matrix of the number of proposed projects is provided below in Table 3.

Table 3. Potential Project Impact Boundaries by District for Q2

District	SHOPP Projects	SHOPP Activities
1	50	166
2	85	218
3	70	131
4	103	163
5	57	91
6	45	86
7	75	127
8	67	133
9	17	38
10	48	101
11	35	54
12	17	27
Total	669	1335

This analysis considered over 600 terrestrial and aquatic species and sub-species. It also considered 34 special-status species of fish (18 with designated critical habitat, and 16 without). All two reports were generated for all districts.

The final reports are complex and include attributes that enable district biologists to evaluate potential impacts district-wide, aggregated by ecoregion section, subsection for terrestrial resources and HUC-8 and 10 for aquatic resources, and by GAI. Each report was consolidated into an interactive Microsoft Excel “Pivot Table” format. Acreages of potentially impacted habitat can be filtered to Ecological Regions, HUCs, resource types, or even individual projects. These “Pivot Table” format reports are summarized by a project table and set of maps for each district (Appendices A through L).

4. DISCUSSION

The methods and results discussed in this document were developed working with subject matter experts and peer-reviewed literature and are subject to the status and condition of the data as of the publication of overlay reports. They are a snapshot in time and current only to the day the data was queried. As the assessment progressed, adjustments were made to the process and requirements were changed. The expectation is for the process to continue to be refined as the districts use the workflows, tools, and reports. This assessment was successful in developing a snapshot of potential impacts to natural resources by over 669 proposed projects within the state of CA with the goal of developing advance mitigation projects that can streamline the mitigation process during

project permitting and construction. A number of reports and map figures were developed that summarize the results of the analysis by district and are presented as appendices to this document (one for each district). Currently, the reports are being generated on a quarterly basis to provide each district with the most currently available information. This Project accomplishes the goal and lays the groundwork for a successful AMP.

Ecoregion Section Impact by Species

Special Status Species Acronym Key

District 1

FE = Federally Endangered
FT = Federally Threatened
SE = State Endangered
ST = State Threatened
FCT = Federal Candidate Threatened
FCE = Federal Candidate Endangered
SCT = State Candidate Threatened
SCE = State Candidate Endangered
SFP = State Fully Protected Species
SSC = State Species of Concern
SR = State Rare Species
FS = Federal Sensitive Species (includes USFS sensitive and/or BLM Sensitive)
SFS = State Fire Sensitive

Ecoregion Section Impact by Species

Special Status Species Acronym Key

District 2

FE = Federally Endangered
FT = Federally Threatened
SE = State Endangered
ST = State Threatened
FCT = Federal Candidate Threatened
FCE = Federal Candidate Endangered
SCT = State Candidate Threatened
SCE = State Candidate Endangered
SFP = State Fully Protected Species
SSC = State Species of Concern
SR = State Rare Species
FS = Federal Sensitive Species (includes USFS sensitive and/or BLM Sensitive)
SFS = State Fire Sensitive

This page is intentionally left blank.

District 2 Great Valley Ecoregion Section Impact by Species Summary Table

Common Name	Species Name	Status	Annual Grassland	Deciduous Orchard; Irrigated Hayfield	Riverine	Valley Foothill Riparian
		Total:	0.05	0.04	0.02	0.11
Amphibians						
California Red-Legged Frog	*Rana draytonii*	FT,SSC	0.05	0.00	0.02	0.11
Foothill Yellow Legged Frog - North Coast DPS	*Rana boylii*	SSC, FS	0.05	0.00	0.02	0.05
Western Spadefoot	*Spea hammondii*	FCT,FS,SSC	0.05	0.04	0.02	0.00
Birds						
Bank Swallow	*Riparia riparia*	FS,ST	0.05	0.04	0.02	0.11
Burrowing Owl	*Athene cunicularia*	FS,SCE,SSC	0.05	0.04	0.00	0.11
Grasshopper Sparrow	*Ammodramus savannarum*	SSC	0.05	0.04	0.00	0.00
Least Bell's Vireo	*Vireo bellii pusillus*	FE,SE	0.00	0.00	0.00	0.06
Little Willow Flycatcher	*Empidonax traillii brewsteri*	SE	0.00	0.00	0.00	0.11
Loggerhead Shrike	*Lanius ludovicianus*	SSC	0.05	0.04	0.00	0.11
Northern Harrier	*Circus hudsonius*	SSC	0.05	0.04	0.02	0.11
Swainson's Hawk	*Buteo swainsoni*	FS,ST	0.05	0.04	0.00	0.11
Tricolored Blackbird	*Agelaius tricolor*	FS,SSC,ST	0.05	0.04	0.00	0.11
Western Yellow-Billed Cuckoo	*Coccyzus americanus occidentalis*	FS,FT,SE	0.00	0.04	0.00	0.11
White-Tailed Kite	*Elanus leucurus*	FS,SFP	0.05	0.04	0.00	0.11
Willow Flycatcher	*Empidonax traillii*	FS,SE	0.00	0.00	0.00	0.11
Yellow Warbler	*Setophaga petechia*	SSC	0.00	0.04	0.00	0.05
Yellow-Breasted Chat	*Icteria virens*	SSC	0.00	0.00	0.00	0.11
Yellow-Headed Blackbird	*Xanthocephalus xanthocephalus*	SSC	0.05	0.04	0.00	0.00
Mammals						
American Badger	*Taxidea taxus*	SSC	0.05	0.04	0.00	0.11
Gray Wolf	*Canis lupus*	FE,SE	0.05	0.04	0.02	0.05
Pallid Bat	*Antrozous pallidus*	FS,SSC	0.05	0.04	0.02	0.11
Townsend's Big-Eared Bat	*Corynorhinus townsendii*	FS,SSC	0.05	0.04	0.02	0.11
Western Red Bat	*Lasiurus frantzii*	SSC	0.05	0.04	0.02	0.11
Reptiles						
Blainville's Horned Lizard	*Phrynosoma blainvillii*	FS, SSC	0.05	0.00	0.00	0.11
Northwestern Pond Turtle	*Actinemys marmorata*	FCT,FS,SSC	0.05	0.00	0.02	0.11
Invertebrates						
Conservancy Fairy Shrimp	*Branchinecta conservatio*	FE	0.05	0.00	0.00	0.00
Valley Elderberry Longhorn Beetle	*Desmocerus californicus dimorphus*	FT	0.00	0.00	0.00	0.11
Vernal Pool Fairy Shrimp	*Branchinecta lynchi*	FT	0.05	0.00	0.00	0.00
Vernal Pool Tadpole Shrimp	*Lepidurus packardi*	FE	0.05	0.00	0.00	0.00
Plants						
Boggs Lake Hedge-Hyssop	*Gratiola heterosepala*	FS,SE	0.05	0.00	0.00	0.11
Indian Valley Brodiaea	*Brodiaea rosea*	FS,SE	0.05	0.00	0.00	0.00
Mason's Lilaeopsis	*Lilaeopsis masonii*	SR	0.00	0.00	0.00	0.11

Ecoregion Section Impact by Species

Special Status Species Acronym Key

District 4

FE = Federally Endangered
FT = Federally Threatened
SE = State Endangered
ST = State Threatened
FCT = Federal Candidate Threatened
FCE = Federal Candidate Endangered
SCT = State Candidate Threatened
SCE = State Candidate Endangered
SFP = State Fully Protected Species
SSC = State Species of Concern
SR = State Rare Species
FS = Federal Sensitive Species (includes USFS sensitive and/or BLM Sensitive)
SFS = State Fire Sensitive

District 4 Central California Coast Ranges Ecoregion Section Impact by Species Summary Table

Common Name	Species Name	Status	Annual Grassland	Irrigated Row and Field Crops
		Total:	1.46	0.12
Amphibians				
California Red-Legged Frog	*Rana draytonii*	FT,SSC	1.46	0.00
California Tiger Salamander - Central California DPS	*Ambystoma californiense pop. 1*	FT,ST	1.46	0.00
Foothill Yellow Legged Frog - Central Coast DPS	*Rana boylii*	FT, SE, FS	0.38	0.00
Western Spadefoot	*Spea hammondii*	FCT,FS,SSC	1.08	0.00
Birds				
American Peregrine Falcon	*Falco peregrinus anatum*	SFS	0.39	0.00
Burrowing Owl	*Athene cunicularia*	FS,SCE,SSC	0.06	0.00
California Condor	*Gymnogyps californianus*	FE,SE,SFP,SFS	1.46	0.00
Golden Eagle	*Aquila chrysaetos*	FS,SFP,SFS	1.46	0.00
Grasshopper Sparrow	*Ammodramus savannarum*	SSC	1.46	0.00
Loggerhead Shrike	*Lanius ludovicianus*	SSC	1.46	0.00
Long-Eared Owl	*Asio otus*	SSC	1.46	0.00
Northern Harrier	*Circus hudsonius*	SSC	1.07	0.00
Tricolored Blackbird	*Agelaius tricolor*	FS,SSC,ST	1.46	0.12
White-Tailed Kite	*Elanus leucurus*	FS,SFP	1.46	0.12
Mammals				
American Badger	*Taxidea taxus*	SSC	1.46	0.12
Mountain Lion - Central Coast & Southern California DPS	*Puma concolor*	ST	1.46	0.00
Pallid Bat	*Antrozous pallidus*	FS,SSC	1.46	0.00
San Joaquin Kit Fox	*Vulpes macrotis mutica*	FE,ST	1.46	0.00
Townsend's Big-Eared Bat	*Corynorhinus townsendii*	FS,SSC	1.46	0.12
Western Mastiff Bat	*Eumops perotis californicus*	FS,SSC	1.46	0.12
Western Red Bat	*Lasiurus frantzii*	SSC	1.46	0.00
Reptiles				
Blainville's Horned Lizard	*Phrynosoma blainvillii*	FS, SSC	1.46	0.12
California Glossy Snake	*Arizona elegans occidentalis*	SSC	1.07	0.00
Northwestern Pond Turtle	*Actinemys marmorata*	FCT,FS,SSC	1.46	0.00
San Joaquin Coachwhip	*Masticophis flagellum ruddocki*	SSC	1.46	0.00
Invertebrates				
Conservancy Fairy Shrimp	Branchinecta conservatio	FE	0.78	0.00
Crotch's Bumble Bee	Bombus crotchii	SCE	0.58	0.00
Vernal Pool Fairy Shrimp	Branchinecta lynchi	FT	1.12	0.00
Vernal Pool Tadpole Shrimp	Lepidurus packardi	FE	0.50	0.00
Plants				
Adobe Sanicle	*Sanicula maritima*	FS,SR	0.26	0.00
Boggs Lake Hedge-Hyssop	*Gratiola heterosepala*	FS,SE	1.08	0.00
Contra Costa Goldfields	*Lasthenia conjugens*	FE	0.05	0.00
Dudley's Lousewort	*Pedicularis dudleyi*	FS,SR	0.26	0.00
Dwarf Goldenstar	*Bloomeria humilis*	FS,SR	0.13	0.00
Hearsts' Manzanita	*Arctostaphylos hookeri ssp. hearstiorum*	SE	0.01	0.00

Ecoregion Section Impact by Species

Special Status Species Acronym Key

District 6

FE = Federally Endangered
FT = Federally Threatened
SE = State Endangered
ST = State Threatened
FCT = Federal Candidate Threatened
FCE = Federal Candidate Endangered
SCT = State Candidate Threatened
SCE = State Candidate Endangered
SFP = State Fully Protected Species
SSC = State Species of Concern
SR = State Rare Species
FS = Federal Sensitive Species (includes USFS sensitive and/or BLM Sensitive)
SFS = State Fire Sensitive

Ecoregion Section Impact by Species

Special Status Species Acronym Key

District 9

FE = Federally Endangered
FT = Federally Threatened
SE = State Endangered
ST = State Threatened
FCT = Federal Candidate Threatened
FCE = Federal Candidate Endangered
SCT = State Candidate Threatened
SCE = State Candidate Endangered
SFP = State Fully Protected Species
SSC = State Species of Concern
SR = State Rare Species
FS = Federal Sensitive Species (includes USFS sensitive and/or BLM Sensitive)
SFS = State Fire Sensitive

Ecoregion Section Impact by Species

Special Status Species Acronym Key

District 12

FE = Federally Endangered
FT = Federally Threatened
SE = State Endangered
ST = State Threatened
FCT = Federal Candidate Threatened
FCE = Federal Candidate Endangered
SCT = State Candidate Threatened
SCE = State Candidate Endangered
SFP = State Fully Protected Species
SSC = State Species of Concern
SR = State Rare Species
FS = Federal Sensitive Species (includes USFS sensitive and/or BLM Sensitive)
SFS = State Fire Sensitive
