

Traffic Operations

May 2025

Project Title: Safety Service Patrol (SSP) Pooled Fund Study (PFS)

Task Number: 4019

Start Date: April 8, 2022

Completion Date: June 30, 2025

Task Manager:

Jose Camacho Jr.
Transportation Engineer (Electrical)

TPF-5(489) - Safety Service Patrol (SSP) Standardization and Management Practices

A research project lead by Federal Highway Administration (FHWA) to support the development of recognized industry standards by establishing tools and technical reports that identify best practices and aligns those best practices to assist organizations in addressing issues that are common among agencies that manage and operate SSPs.

WHAT IS THE NEED?

The Safety Service Patrol Pool Fund Study (SSP PFS) will provide an opportunity to facilitate information sharing and documenting the successful practices of established SSP programs. The SSP Industry Association (SSPIA) will partner with the PFS to establish a repository of information for all existing and future agency members of the SSPIA.

Many jurisdictions throughout the country operate full-function SSPs that are equipped to provide a wide range of complex, on-scene assistance to help mitigate an incident. SSP Operators are often first on the scene of an incident and provide immediate and invaluable assistance to law enforcement, involved parties, and other first responders. In many programs, SSP Operators remain on the scene throughout its duration, which increases their exposure to traffic and threatens their personal safety.

The collective experience gained from agencies managing these programs will provide invaluable knowledge to improve the safety of SSP Operators, first responders, and the public. The PFS is intended to expand upon the FHWA-led 2017 study entitled, "Safety Service Patrol Priorities and Best Practices" (FHWA-HOP-16-047) that largely focused on which agencies currently have SSP programs, the programs' overall objectives, items for new program managers to consider, and performance metrics used by those programs. The PFS is looking to further identify best practices that can support standards in the application of emergency traffic control; safety protocols for SSP vehicles and associated equipment; and guidelines for staffing, training, and certification of SSP staff. Agencies providing SSP services prioritize the safety of

DRISI provides solutions and knowledge that improves California's transportation system.

their operators, first responders, and the public. The results of this PFS will support those agencies with that top priority by providing guidance for SSP program management; documentation of standard for emergency traffic control and SSP support activities; and best practices in staffing and training initiatives employed by existing SSP programs.

WHAT ARE WE DOING?

The primary objective of this PFS study will be to gain technical information related to SSP program management, standards associated with SSP response protocol and the implementation of traffic control, and references and guidance related to staffing, training, and resource allocations within SSP programs.

WHAT IS OUR GOAL?

The goals of this project are:

1. Assemble best practices and lessons learned from existing programs.
2. Develop guidance documents based on lessons learned from existing programs.
3. Reference or create tools that will help agencies make informed program decisions such as route selection, staffing levels, and resource allocation.

WHAT IS THE BENEFIT?

The State would benefit from the collective experience gained from all the agencies managing the SSP programs as it will provide invaluable knowledge to improve the safety of SSP Operators, first responders, and the public.

WHAT IS THE PROGRESS TO DATE?

Ongoing Research has had significant updates. The Phase 1 report was completed. The Phase 2 portion is in the planning stages. In addition, the first quarterly meeting took place virtually on January 15th.

The pooled fund had its first in person annual meeting across May 3rd and 4th, 2023 hosted by NCDOT in Raleigh. The pooled fund had its second in person annual meeting across May 1st and 2nd, 2024 hosted by the USDOT Volpe Center. The pooled fund has developed a draft for the synthesis report, Safety Service Patrol (SSP) Overview: A Synthesis Report, which will be the deliverable for Phase 1 of the initial PFS research project.

The pooled fund has developed an outline for a synthesis report: Proven Vehicle Set-Ups and Roadway Layouts for Effective Response that aims to be a single consolidated resource to describe and classify roadway response layouts and vehicle loadouts from existing SSP programs. This document is intended to be used as a reference for transportation agencies seeking to create, improve, or standardize parts of their SSP program.
