However, if the RAP Agent determines that the displacee needs to obtain a loan in order to relocate, e.g., in the case of an owner-occupant with a partial interest who must obtain a loan to purchase a replacement property, the cost of obtaining the loan could be considered "necessary" and would be an eligible expense.

49 CFR 24.401(c)(1) requires that the RHP for an owner-occupant with "partial interest" in the property being acquired is computed using the full acquisition cost of the displacement dwelling. To receive the maximum payment, an owner-occupant with a partial interest must spend his or her share of the acquisition payment, plus the amount of the computed RHP, in order to receive the maximum computed RHP. Owner-occupants with partial interests who cannot secure financing or who cannot afford to purchase comparable replacement housing may be treated as tenants and receive an RD. The Department is not required to provide owner-occupants with partial interests a greater level of assistance to purchase a replacement dwelling than what would have been required to provide such persons if they owned fee-simple title to the displacement property.

© 1994-2025 California Department of Transportation. All rights reserved.

10.04.27.00 State Rental Prior to Acquisition

Whenever a tenant-occupied property has been appraised, the owner has received the Department's offer, and control of the property by the Department (by Grant Deed, Order for Possession, Right of Entry, or other means) is imminent, the District may enter into an agreement with the owner whereby the Department will rent the property if it becomes vacant. Such properties include, but are not limited to, apartment units, commercial buildings, and mobile home park spaces.

The District must consider and document whether or not:

- Comparable vacant rental properties in the subject area are scarce.
- There is a good probability that the property would be re-rented prior to the Department gaining control of the property.
- The Department's possible cost of relocation benefits to any subsequent tenants (Non-Tenured) will exceed the cost to rent back the property from the owner.
- Reoccupation of the parcel might delay Right of Way's delivery of the property for construction.

If justified and approved, the Acquisition Agent will offer to rent the property in accordance with procedures in the Acquisition Chapter of the Right of Way Manual.

Rental payments to the owner must cease when the Department gains control of the property.

10.04.28.00 Mixed-Use Properties

If the displacement dwelling was part of a property that contained another dwelling unit and/or space used for nonresidential purposes, and/or is located on a lot larger than typical for residential purposes, only that portion of the acquisition payment which is actually attributable to the displacement dwelling shall be considered its acquisition cost when computing the PD.

Where a displacee lives on the same premises as a displaced business, multi-use/mixed use property, farm, or nonprofit organization, a determination must be made as to whether that living situation falls within the definition of "dwelling" in the federal guidelines. 49 CFR 24.2(a) "Dwelling" defines "dwelling" as "the place of permanent or customary and usual residence of a person, according to local custom or law, including a single family house; a single family unit in a two-family, multi-family, or multi-purpose property; a unit

© 1994-2025 California Department of Transportation. All rights reserved.

of a condominium or cooperative housing project; a mobile home; or any other residential unit." If the displacee was legitimately living in such a circumstance, then the residential value must be segregated (10.06.18.00).

10.04.29.00 Multiple Households of Displacement Property

If two or more individuals are living together and occupying one dwelling unit as one household, the Department is not obligated to provide them with more than one replacement dwelling. Relocation eligibility is based upon the displacee's share of the replacement dwelling.

However, when two or more occupants maintain separate households within the same dwelling, they have separate entitlements to relocation payments. The decision as to whether two separate households were maintained within the same dwelling is a judgment determination by the RAP Senior. The parcel file should be sufficiently documented to support the decision reached.

Issues to consider are:

- The use of the dwelling (sharing of cooking and food storage facilities, bathroom facilities).
- The relationship of the occupants. Note: Students sharing a house together shall be considered as one household.
- One or more of the occupants are paying rent to others in the household as evidenced by rent receipts, tax returns claiming a renter's credit, or tax returns claiming rental income.

AND

- It is clear (by signed statements) that the occupants are not moving to a replacement site together.

The payment computation for each household should be based on the part of the dwelling that the household occupies and the space that is shared with others. An attempt should be made to locate similar comparable DS&S living facilities that the households can share – if it is the most cost-effective method. The record should be sufficiently documented to support the decision reached.

See 10-EX-34 for additional guidance on determining multiple households.

© 1994-2025 California Department of Transportation. All rights reserved.

NOTE: If the owner rents or leases a room(s) in the displacement dwelling to another party, there should be no reduction of rooms when considering a most comparable replacement dwelling for the owner.

10.04.29.01 Multiple Households of Replacement Property

Displacees may choose to rent or purchase a replacement property with another party who is not part of the relocation. Relocation eligibility must be based on the displacee's share of the replacement property. If a displacee enters into a rental agreement with another party, the RAP Agent must determine the percentage of financial responsibility that the displacee has accepted. Generally, each party will be paying one-half of the rent and utilities, so that a one-half share of their replacement dwelling rental rate must be used to determine the "spend-to-get" requirement before paying any portion of the RD.

If the displacee chooses to purchase a replacement property with another person who was not part of the relocation, then the percentage of ownership as indicated in the title documents must be used to determine the "spend-to-get" requirement before paying any portion of the RHP (either PD/MD/IE or a DP).

Example 1: An elderly 90-day owner-occupant chooses to purchase a replacement property with her recently divorced daughter. Title to the replacement property indicates that each has a divided one-half interest. Therefore, the displacee's PD/MD/IE will be based on one-half of the purchase price, mortgage amount, and incidental expenses.

Example 2: Parents pay cash to help their child buy a replacement dwelling. Title to the replacement property indicates that each has an undivided one-half interest. While the parents must be on the title, this will not affect the computation of the PD that may be placed into escrow.

© 1994-2025 California Department of Transportation. All rights reserved.

10.04.29.02 Documentation for Multiple Households

If there is more than one family in residence in a dwelling unit, the Acquisition or RAP Agent should obtain the following additional information:

- Names of heads of household.
- Makeup of each family.
- Relationship among the various heads of household.
- Number of rooms each family privately occupies.
- Move-in date of each family.
- Amount of rent or other consideration each additional family or individual pays to the owner.

This data is used to apportion relocation payments among the families or make more than one relocation payment when the property is vacated, if necessary. This additional data is also on the Certificate of Occupancy (RW 10-25). Any variation between information previously obtained (e.g., from the appraisal report or appraisal section data cards) and that obtained from the initial RAP interview must be explained in the RAP Diary.

10.04.29.03 Proration When One Household Splits into Two or More

Eligible occupants who subsequently separate or divorce and establish separate households, whether by choice or by litigation, qualify for payments as one displaced family.

The payments may be divided between the occupants (husband and wife or other adult household members who are listed on the rental agreement or the title report) in any proportion on which they agree. This requires a written agreement establishing the method of division and the percentage each party may claim. The agreement may not be changed without the written consent of both parties.

© 1994-2025 California Department of Transportation. All rights reserved.

EXAMPLE:

Comparable DS&S replacement rent for a 4-bedroom home is $850/month plus $100/month for utilities = $950/month.

Displacement property is 3 bedrooms and rents for $500/month, which includes all utilities, except electricity, which averaged $50 per month, for a total of $550/month.

Household consists of 7 persons: husband and wife on title, husband's father on title, and four children.

RD = $16,800

Husband and wife choose to separate. The husband's father will relocate with him, which requires a one-bedroom replacement property. The wife will relocate with the 4 children, which requires a 3-bedroom replacement property. The husband and wife agree to split the RD and the FMS in half. The husband will be entitled to one-half of the RD if he rents a one-bedroom for at least $425/month. With the added utilities of $50 (one-half of the estimated $100), he will be entitled to $8,400. The wife must spend at least $425/month (plus utilities) on a 3-bedroom DS&S replacement property to be entitled to one-half of the Rent Differential.

Separated or divorced displacees may agree to divide moving costs differently than their RHPs. All RHPs, however, must be based on the same percentage division. For instance, the parties may agree on a 90%-10% division of moving costs and a 50%-50% split of RHP payments. However, they cannot agree that one party may receive 70% of the PD and 10% of the IE.

Payments of moving expense can be based on actual costs or scheduled room-count method, but the two methods cannot be mixed. Payments are not made until all occupants have vacated the property except that partial payment can be made if denial will cause a hardship. The District has the option to issue a Notice to Vacate to any remaining occupants.

If the parties cannot reach agreement, entitlement is calculated as if they relocated together. Payment is determined by type of eligibility established by the first party to relocate and file a claim. Although only one party needs to sign the claim forms, checks must be payable to both individuals.

© 1994-2025 California Department of Transportation. All rights reserved.

EXAMPLE:

The tenants are eligible for moving expenses and may be eligible for either an RD or DP. If the first party to relocate elects a rental unit and files a claim for payment, the family maximum entitlement is based on this specific type of relocation. No other claim will be honored by the Region/District except where the initial claim was less than the maximum entitlement and the parties eventually reach agreement and file amended claims within the normal filing period.

If a divorce or separation occurs and one spouse vacates the property prior to the initiation of negotiations, the spouse who remains in occupancy is eligible for all relocation benefits that may accrue.

See Exhibit 10-EX-25.

10.04.30.00 Seasonal Residents (49 CFR 24.302)

Persons owning or renting seasonal residences are generally not eligible for any relocation payments other than for moving expenses. A seasonal residence can be distinguished from a domicile in that a domicile is the place of a person's fixed, permanent home and principal establishment and to which place the person, when absent, has full intention of returning. The occupant of a seasonal residence would most likely receive a fixed move payment. Appendix A regarding 49 CFR 24.302 also allows the use of actual moving expenses. They are generally not eligible for RHPs.

Under 49 CFR 24.302(a), an agency may determine that the storage of personal property is a reasonable and necessary moving expense for a displaced person under this part. The determination shall be based on the needs of the displaced person; the nature of the move; the plans for permanent relocation; the amount of time available for the relocation process; and, whether storage will facilitate relocation. If the agency determines that storage is reasonable and necessary in conjunction with a fixed cost moving payment made under this section, the agency shall pay the actual, reasonable, and necessary storage expenses in accordance with §24.301(g)(4). However, regardless of whether storage is approved, the Fixed Residential Move Cost Schedule provides a one-time payment for one move from the displacement dwelling to the replacement dwelling, or storage facility. Consequently, displaced persons must be fully informed that reimbursement of costs to move the personal property to storage and the cost of approved storage, if applicable, represent a full reimbursement of their eligibility for moving costs under this part. (See Appendix A, 24.302.)

© 1994-2025 California Department of Transportation. All rights reserved.

10.04.31.00 Subsequent Occupants

A subsequent occupant is a residential occupant(s) that moved into the property after initiation of negotiations. Subsequent occupants must be in occupancy on the day the Department obtains control of the property (close of escrow, effective order of possession, effective right of entry) in order to receive monetary benefits.

Even though these occupants are not eligible for relocation benefits until the Department has control, the RAP Agent should provide the potential displacees with a Notice of Eligibility – Subsequent Occupants (10-EX-41) that states they must remain in occupancy until the Department has control or they will not be entitled to relocation assistance payments. The RAP Agent must also provide a 90-Day Information Notice but without addresses of comparable properties, since their eligibility for relocation assistance payments has not yet been established. At the first meeting with the potential displacees, the RAP Agent can obtain preliminary information that will help in determining possible relocation payments. Such information may include legal residency, income, household numbers, and/or functional needs. The RAP Agent must verify all information on the date the Department obtains control prior to providing any entitlements.

In addition to the Conditional Entitlement Letter for Subsequent Occupants (10-EX-42), the RAP Agent must provide the subsequent occupants with a 30-Day Notice to Vacate with addresses of comparable replacement property.

10.04.32.00 Personal Property Only (49 CFR 24.301[e])

49 CFR 24.301(e) allows for the reimbursement of eligible expenses for a person who is required to move personal property from real property but is not required to move from a dwelling. This could apply to residences, businesses, farms, and nonprofits. Situations in which this could occur are partial acquisition in which the nonresidential or residential displacee may still operate or live on the remainder; personal property to be moved out of a mini-storage facility, or personal property that is stored on vacant land being acquired by the Department. Eligible expenses include those described under Transportation, Packing, Disconnecting, Storage, and Insurance (including replacement value). Residents may also be reimbursed in accordance with the provisions outlined under Low Value/High Bulk (10.05.05.14) if the occupants were not required to move from the site. RAP Agents will provide displacees with the Notice of Eligibility for Personal Property Only (10-EX-46).

© 1994-2025 California Department of Transportation. All rights reserved.

Under Appendix A regarding 49 CFR 24.301(e), a residential personal property move, there may be situations in which the costs of obtaining moving bids may exceed the cost to move. In those situations, the agency may allow an eligibility determination and payment based upon the use of the "additional room" category of the Fixed Residential Move Cost Schedule (see sections 10.04.02.03 and 10.04.02.04 of the manual).

© 1994-2025 California Department of Transportation. All rights reserved.

10.05.00.00 – MOVING AND RELATED EXPENSES – NONRESIDENTIAL (BUSINESS, FARMS, AND NONPROFIT ORGANIZATIONS)

NONRESIDENTIAL DEFINITIONS

- Salvage Value (49 CFR 24.2(a) "Salvage value"): The probable sale price of an item, if offered for sale on the condition that it will be removed from the property at the buyer's expense, allowing a reasonable period of time to find a person buying with knowledge of the uses and purposes for which it is adaptable and capable of being used, including separate use of serviceable components and scrap when there is no reasonable prospect of sale except on that basis.

- Small Business (49 CFR 24.2(a) "Small business"): A business having not more than 500 employees working at the site being acquired or displaced by a program or project, which site is the location of economic activity. Sites occupied solely by outdoor advertising signs, displays, or devices do not qualify as a business for purposes receiving a reestablishment expense payment.

- Nonprofit Organization (49 CFR 24.2(a) "Nonprofit organization"): An organization that is incorporated under the applicable laws of a State as a nonprofit organization, and exempt from paying Federal income taxes under Section 501 of the Internal Revenue Code (26 U.S.C. 501).

- Contribute Materially (49 CFR 24.2(a) "Contribute materially"): During the two taxable years prior to the taxable year in which displacement occurs, or during such other period as the Region/District determines to be more equitable, a business or farm operation:
    1) Had average annual gross receipts of at least $5,000; or
    2) Had average annual net earnings of at least $1,000; or
    3) Contributed at least 33 1/3 percent of the owner's/operator's average annual gross income from all sources.
    4) If the application of the above criteria creates an inequity or hardship in any given case, the agency may approve the use of other criteria as determined appropriate. (See Appendix A of this part and section 24.305(e).)

© 1994-2025 California Department of Transportation. All rights reserved.

- Business (49 CFR 24.2(a) "Business"): Any lawful activity, except a farm operation, that is conducted primarily:
    1) For the purchase, sale, lease, and/or rental of personal and/or real property, and/or for the manufacture, processing, and/or marketing of products, commodities, and/or any other personal property; or
    2) For the sale of services to the public; or
    3) As an outdoor advertising display, when the display must be moved as a result of the project; or
    4) By a nonprofit organization that has established its nonprofit status under applicable Federal or State law.

- Farm Operation (49 CFR 24.2(a) "Farm operation"): Any activity conducted solely or primarily for the production of one or more agricultural products or commodities, including timber, for sale or home use, and customarily producing such products or commodities in sufficient quantity to be capable of contributing materially to the operator's support.

10.05.01.00 Relocation Benefits

Any business, farm operation, or nonprofit organization (nonresidential) which qualifies as a displacee (49 CFR 24.2(a) "Displaced person") is entitled to relocation benefits if the acquisition of the property in whole or part causes a need to relocate the operation and/or personalty to another location. Relocation can be to the remaining portion of the property if a partial acquisition has occurred. (See 10.05.13.01,"Reestablishment Payments on the Remainder.")

Relocation benefits are limited to advisory assistance and payments for actual moving and related expenses as the Department determines to be reasonable and necessary. The majority of this section describes the specific moving entitlements.

The Uniform Act does not require that nonresidential displacees be made whole and thus they receive fewer benefits under the Uniform Act than residential displacees. Payments are limited to just moving and related expenses, with no provision to assist in acquiring a replacement property (similar to the residential RHP). However, nonresidential displacees may qualify for a Reestablishment Payment to mitigate some of the expenses associated with establishing their operation at the new site (10.05.13.00).

© 1994-2025 California Department of Transportation. All rights reserved.

10.05.01.01 Persons Not Lawfully Present in the United States

Moving expenses for an unincorporated business, farm, or nonprofit organization will be paid if an owner, manager, or operating officer certifies the other owners, signs the claim forms, and provides the necessary documentation for himself/herself. The sole owner of a business, farm, or nonprofit organization who cannot or will not certify as to their U.S. residency status is not entitled to any relocation benefits, including advisory assistance.

Any partnership that includes persons who cannot or will not certify as to their U.S. residency status is not entitled to any relocation benefits, including advisory assistance. The remaining partners are entitled to moving expenses, but the payments must be prorated based on the number of U.S. versus non-U.S. residents. Example: A partnership of five (5) persons, two (2) of whom can certify as to their U.S. residency status, will receive 2/5ths of the actual, reasonable, and necessary expenses. This proration must be applied to all moving expenses, including reestablishment, search expenses, and the in-lieu payment.

Moving expenses for an incorporated business will be paid if the corporation certifies that it is authorized to conduct business within the U.S.

© 1994-2025 California Department of Transportation. All rights reserved.

10.05.02.00 Relocation Planning

49 CFR 24.205(c)(2)(i)(A-F) requires each business be interviewed by the RAP Agent prior to the ION. After the RAP Senior receives the Parcel Occupancy Data Sheet and assigns the file, the RAP Agent will schedule an interview with each business that has received a Notice of Intent to Appraise (or similar document). The RAP Agent will also interview each business lessee identified on the Parcel Occupancy Data Sheet. To increase the effectiveness of the interview, the RAP Agent may accompany the appraiser during the initial and/or subsequent inspections. RAP Agents may use the "Nonresidential Interview Checklist" (10-EX-35) (internal Caltrans link) as the basis for the interview. The purpose of each interview is to:

1. Determine the relocation needs and preferences of each business entity to be displaced such as:
   - Replacement site requirements.
   - Current lease terms and other contractual obligations. Note: This information may have already been obtained by the appraiser, so the RAP Agent should check with the appraiser first before asking for additional copies from the lessee. However, the RAP Agent can certainly obtain clarification or additional information, if needed, and share the same with the appraiser.
   - Financial capacity of the business to accomplish the move. This will help identify any advance relocation payments required for the move. Note: HQ must approve advance moving payments.
   - Professional services required to assist in planning the move, assist in the actual move, and reinstall machinery and/or other personal property.
2. Explain the relocation assistance program, ensuring the occupant understands that they must still be in occupancy at the ION in order to receive any benefits.
3. Identify and resolve personalty and realty issues, working closely with the appraiser to ensure that the FMV includes the contributory value of all fixtures, and that there is a separate M&E appraisal as appropriate.
4. Estimate the time required for the business to vacate so that the displacee's operation has limited downtime, and the move is phased in segments to reduce loss of income.
5. Estimate the anticipated difficulty in locating a replacement property.

© 1994-2025 California Department of Transportation. All rights reserved.

SUGGESTED INFORMATION TO BE OBTAINED DURING A BUSINESS INTERVIEW:

1. What is the type and general characteristics of the business displacee?
    - Manufacturing: What type of product? What is the source of materials?
    - Wholesale: What is the product mix? What are the transportation requirements?
    - Retail: What is the type of business? Does it have a specialty clientele?
    - Service Business: What is the service? Who are the clientele? What is the competition?
    - Ownership/Structure – Sole proprietorship, family business, partnership, corporation or institution?
2. General Information:
    - Employment: How many employees?
    - Number of years in operation?
    - How long at current location?
    - Other locations?
    - Amount of payroll?
    - Amount of gross sales?
3. Issues related to the replacement site:
    - Facility: Parking, zoning, building type, special building requirements, taxes, utility requirements.
    - Preferences of owner: Location, price, terms, future expansion capability.
    - Other considerations: Street accessibility for walk-in trade or delivery, rail access, access to specialized utilities (high consumption, large disposal requirements), landscaping, structural capacity, traffic requirements.
4. Other issues to be discussed during the interview process:
    - Do you anticipate losses created by interruption of the business? If so, how can we mitigate?
    - Can the move be phased to minimize hardships and reduce downtime?
    - Do you anticipate costs to adapt a new location to your current requirements?
    - What other increased costs are anticipated, such as taxes, insurance, utilities, transportation, etc.?
    - What are the anticipated problems with zoning and licensing at a replacement location?

© 1994-2025 California Department of Transportation. All rights reserved.

10.05.03.00 First RAP Call

A nonresidential displacee, owner, or lessee is entitled to the same information in the same time frame as the residential displacee. An explanation of benefits to an owner must be made at the First Written Offer, and within 14 days to a tenant/lessee. In addition to the Occupancy Certification (RW 10-25), the RAP Agent must obtain a Certification of U.S. Residency (RW 10-44).

During the first call, the RAP Agent must look at all personal property on the displacement parcel and request a certified inventory of these items from the displacee. The Agent should note in the diary the general nature of the operation and the type of personalty. The Agent should review the Appraisal and the Right of Way Contract to determine which items are being treated as realty and which items are personalty.

10.05.04.00 Advisory Assistance

49 CFR 24.205(c)(2) requires that a minimum level of advisory assistance (AA) be provided to a nonresidential displacee from the time the appraiser inspects the displacement property until the displacee is completely relocated and reimbursed all eligible expenses. AA includes the following:

a. Determine Need: The RAP Agent should obtain enough information about the nonresidential displacee's operation to determine the type of relocation assistance that it will need to resume operations at the new site, such as zoning requirements, licensing requirements, environmental restrictions, type of site improvements needed, and the appropriate time frame and timing to relocate. An on-site inspection and an interview with the nonresidential displacee are the best way to obtain the information on the requirements it will have to relocate to the replacement site.

b. Provide current and continuing information: The RAP Agent should provide the nonresidential displacee with possible addresses of replacement sites that will accommodate their operation based on their needs as determined in item a. The RAP Agent should obtain feedback from the displacee for each replacement site offered to ensure that the information provided meets the needs of the displacee. In addition, the information should be updated and revised based on changes in the market and need expressed by the displacee's feedback. Referral to a real estate broker does not satisfy the requirement that the RAP Agent continuously work with the displacee

© 1994-2025 California Department of Transportation. All rights reserved.

to provide information on replacement sites. The RAP Agent has an obligation to keep in close contact with the displacee during the entire relocation process even if the nonresidential displacee does not immediately accept the offer of assistance at the First RAP Call.

c. Minimize hardship: The RAP Agent has a responsibility to work closely with the nonresidential displacee to minimize the hardships of relocating to a replacement site. The nonresidential displacee who relocates may experience a decrease in operations due to downtime or limited hours during its search for a replacement site, or during the actual move and reestablishment at the replacement site. This downtime may also impact employees' hours and service level to customers. The RAP Agent can mitigate some of the hardships by obtaining accurate information on the moving options, requesting bids from qualified moving companies and specialized contractors, being on-site when moving companies are preparing estimates, and monitoring the move at the displacement and replacement sites. The RAP Agent is obligated to provide ongoing advice relative to planning the move, explaining various methods to accomplish more specific objectives, and help with resolving encountered problems.

d. Research and supply compatible aid programs that could be of benefit: The RAP Agent should maintain a current list of services that are available to nonresidential displacees such as Small Business Administration (SBA), Service Corps of Retired Executives (SCORE), California Minority and Women Business Enterprise (M/WBE), Department of Housing and Urban Development (HUD), USDA Farm Service Agency, local Chamber of Commerce, local development commissions and property management firms, as well as lists of specialized moving companies and professional moving consultants that can be of use to the displacee. The RAP Agent should explore all possible sources of relocation planning, counseling, and financing that may be utilized by the displacee. Local officials should also be encouraged to provide incentives for the displacee to relocate within the community, if only to avoid adverse economic impacts due to a loss of jobs and a corresponding increase in unemployment. Local agencies can provide incentives such as being flexible with zoning and building requirements, offering tax abatements or special financing, or waiving Conditional Use Permit fees.

© 1994-2025 California Department of Transportation. All rights reserved.

The ability to assist a nonresidential displacee depends on the RAP Agent's knowledge of the business, how it functions and what it requires to be successful. As such, RAP Agents should devote a considerable amount of time to meeting with the nonresidential displacee and obtaining a thorough knowledge of the operation.

The Relocation Assistance Brochure is a good tool for guiding discussion during the First RAP Call and subsequent meetings. In addition, the Notice of Eligibility provides written reinforcement of the explanation of benefits and level of advisory assistance. The RAP Agent must specifically point out to the nonresidential displacee the mandatory notification of the displacee's obligation to provide an inventory and permit monitoring of the move as noted in 49 CFR 24.301(i).

10.05.05.00 Moving Expenses – Eligible

The following sections outline various eligible moving expenses as provided for by 49 CFR 24.301 and 49 CFR 24.303.

10.05.05.01 Transportation of Personal Property

Eligible displacees are entitled to the cost to transport personal property and other items of personalty not acquired (e.g., trade fixtures, inventory) to the replacement property, not to exceed 50 miles from the displacement property. The Department may extend the 50-mile limit if no other replacement property is available or suitable for the displaced business, farm, or nonprofit organization.

Transportation includes packing, unpacking, crating, and uncrating, including any special packaging or equipment that must be used to protect sensitive or high valued items (e.g., computers, rare or exotic inventory, and photosensitive equipment).

The displacee executes the agreement with the moving company, vendor, or specialist, and may assign reimbursement for the preapproved amount directly to the moving company, vendor, or specialist. The Department does not enter into the agreement between the two parties.

© 1994-2025 California Department of Transportation. All rights reserved.

10.05.05.02 Disconnecting/Dismantling

Displacees may also be entitled to the cost to move all non-acquired personalty which also includes disconnecting, dismantling, removing, reassembling, and reinstalling personal property. This includes movable machinery, equipment, substitute personal property (not loss of tangible personal property), and connections to utilities available within the building.

10.05.05.03 Utility and Service Lines

According to Appendix A regarding 49 CFR 24.303(a), the actual, reasonable, and necessary reimbursement for connection to available utilities is for the necessary improvements to utility services currently available at the replacement property. Another possible moving expense is the cost of connection to available nearby utilities from the right of way to improvements at the replacement site. Utilities may include the following internal service lines: water, gas, electrical, compressed air, vacuum, vent, sewer, and oil. They may be located overhead, underground, or on the surface.

The cost of installing the typical service connections is not an allowable expense such as: utility distribution centers (water meters, gas meters, and main electrical service panels), perimeter and overhead electrical outlets for lighting and power, normal gas or water lines. From a RAP viewpoint, these in-place service connections are real property improvements and the values associated with them become part of the real estate. Again, these costs become part of the real estate and are not allowable moving expenses. They may be eligible, however, as a reestablishment expense up to $33,200.

An eligible business or farm is entitled to reimbursement of costs for reinstalling movable machinery and equipment (M&E) and other personal property, including substitute personal property described in 49 CFR 24.301(g)(16). This includes connection to utilities available nearby and modifications necessary to adapt the utilities at the replacement site to the personal property.

From a relocation standpoint, the Department can pay the cost to connect or hook up any item of M&E or other personal property from the piece of equipment to the nearest available utility connection, but only to the extent these services were required at the displacement property. This connection might be an outlet located nearby or a subpanel located some distance away that is necessary for a particular piece of equipment necessary to the business. The Department can only pay to connect M&E and other personal property (or substitute personal property as noted above) the Department is paying to relocate. All such costs must be actual and reasonable. Items

© 1994-2025 California Department of Transportation. All rights reserved.

acquired by the State and subsequently repurchased by the displaced business and realty items retained by the owner as specified in the Right of Way Contract are not eligible relocation expenses. The Department will also not pay to connect any newly added items of M&E, other personal property, or for any betterments.

The cost to adapt or convert relocated M&E to a different type of power supply may also be an allowable moving expense. Examples of alternative power supplies include conversion from direct current to alternating current, from three (3)-phase to single-phase, from 440 volts to 220 volts, or from one heat source to another (e.g., from bottled or natural gas to electricity). Examples of ways to adapt either the M&E or the power supply include new motors, transformers, rectifiers, and similar equipment necessary to accomplish the required conversion. Except in unusual circumstances, actual payment shall be limited to the least expensive alternative; that is, the cost to adapt the M&E to available utilities or to provide compatible utilities to the existing M&E.

Examples given of reimbursement for utility and service lines by Appendix A regarding 49 CFR 24.303(a) are as follows:

a. a Laundromat business that requires a larger service tap than the typical business service tap already on the property, and
b. a business that requires an upgrade or enhancement of the existing single phase electrical service to provide 3-phase electrical service.

10.05.05.04 Telephone Equipment

Businesses may be reimbursed for the following telephone service fees/costs if incurred in the relocation process:

- Reconnection of Existing System
- Purchase of New System (if the old system was pulse type and the relocation site only accepts Touch-Tone phones)
- Long Distance Service Transfer Fees
- Computer and Data Dedicated Lines

If a business is able to relocate its existing system to its new location but chooses to purchase/lease a more elaborate system, a credit for phone relocation costs is provided toward the new system.

© 1994-2025 California Department of Transportation. All rights reserved.

If a new system is the only alternative for the business, the RAP Agent should obtain two bids to document the reasonableness of the charges. In all cases, the file shall include a description of the existing phone system including:

- Number of phones, regular dial, multi-line, push button, PB + Hold, PBX.
- Special features such as hold, call forward, and conference calls.
- Names of local and long-distance companies and representatives, if assigned.

Telecommunications (data) and tele-video installations require special handling and should be separately inventoried and documented.

10.05.05.05 Modifications to Personal Property

49 CFR 24.301(g)(3) allows reimbursement for actual, reasonable and necessary expenses to modify personal property to comply with federal, state, or local law, code or ordinance. Modifications necessary to adapt personal property to the replacement structure, the replacement site, or the utilities at the replacement site are also authorized. Additionally, connection to available nearby utilities from the right of way line to the improvements at the replacement site may be allowed, if the RAP Senior determines they are actual, reasonable and necessary (49 CFR 24.303).

Displacees may be reimbursed for the cost of adapting personal property to the replacement structure, the replacement site, or the utilities at the replacement site. To be reimbursable, costs for personal property modifications must be necessary, unavoidable, and reasonable.

The modifications authorized by this section must be clearly and directly associated with the reinstallation of the personal property, and cannot be for general repairs or upgrading of equipment because of the personal choice of the displacee.

Costs for repairs, modifications, or improvements to the replacement real property due to the requirements of laws, codes, or ordinances can only be paid as a Reestablishment Expense.

Per 49 CFR 24.301(g)(4), modifications to personal property or to utilities: construction costs for a new building at the business replacement site, costs to substantially reconstruct a building, or rehabilitate a building are generally ineligible for reimbursement as are expenses for disconnecting, dismantling, removing, reassembling, and reinstalling relocated personal property.

© 1994-2025 California Department of Transportation. All rights reserved.

Authorized modifications include circumstances when personal property and equipment were "grandfathered" in the displacement structure, but changes or upgrading of the personalty is required by the Americans with Disabilities Act (ADA) and/or the Occupational Safety and Health Administration (OSHA).

The modifications must be clearly and directly associated with the reinstallation of the personal property and cannot be for general repairs or upgrading of equipment because of the personal choice of the business owner.

10.05.05.06 Physical Changes at New Location

Displacee may be reimbursed the cost of making physical changes in or to a building to which a business concern relocates.

Provisions and Limitations: Displacee may be eligible for reimbursement of costs to make physical changes at a new location as a moving expense under the following provisions and limitations:

- The physical changes must be necessary to permit the reinstallation of machinery or equipment or substitute machinery or equipment necessary for continued operation of the business.
- The cost of foundations and concrete pads or other similar construction required for reinstallation of relocated or substitute machinery or equipment may be eligible provided construction is necessary for proper operation of the equipment and compensation for a similar installation was not made as part of the price paid to acquire the former property.
- Changes in or to a building or structure may not increase the value of the building or structure for general purpose uses, may not increase the structural or mechanical capacity of the building or its components beyond the requirements of specific types of equipment moved from the old location or replaced with a substitute. No relocation payment for structural change shall be made for any items that were paid for on the acquired property.

Items acquired by the Department but repurchased by displacee and realty items contractually retained are not eligible for payment.

© 1994-2025 California Department of Transportation. All rights reserved.

Claiming Costs for Physical Changes: To qualify for reimbursement, the displaced business must submit the following documentation before the move:

- A detailed description or drawing of the old and new installation.
- A copy of all instructions given to the contractors.
- A statement explaining why the physical change is necessary and applicable codes and ordinances, if any.

The RAP Agent will:

- Review the documentation and determine whether the physical changes meet the requirements set forth above and whether the costs are reasonable.
- Ensure the Department has not previously paid for the items in the acquisition.

FHWA has provided specific guidance on three specific areas related to changes at the new location.

1. The cost of pits, pads, and foundations can be reimbursed as an eligible moving cost if they are necessary for the reinstallation of equipment or machinery or the installation of substitute items that are necessary for the business operation, unless the value of the pits, pads, and foundations was clearly included in the just compensation paid for the real property. Normally, pits, pads, and foundations only add value to a property for particular business operation and would not generally enhance real property. They should not be included in the valuation of the real property unless the highest and best use of the property being acquired is for the business operation for which it is being used, and the fair market value is determined on this basis.
2. Underground tanks are generally considered realty and purchased as part of the real estate. However, if under State law, the tanks are considered to be personal property, site preparation costs necessary for the installation of the tanks could be considered an eligible moving expense. The site preparation would have to be necessary for reinstallation of the tanks (or substitute tanks), and the installed tanks would have to be required for the operation of the particular business being created.

© 1994-2025 California Department of Transportation. All rights reserved.

10.05.05.07 Storage of Personal Property

A nonresidential displacee MAY be entitled to storage of the non-acquired personalty based on the Region/District RAP Senior's determination that is absolutely necessary in order to vacate the displacee for the project.

49 CFR 24.301(h)(11) specifically excludes personal property on real property already owned or leased by the displaced person, so a displacee cannot be reimbursed the cost to store personal property that was moved from the displacement property to another property already owned or leased by the displacee.

Storage of personalty is not an automatic benefit and should only be authorized when it is in the best interest of the public and the project. The RAP Senior must determine if the storage of personal property is a reasonable and necessary moving expense for the displacee. The determination should be based on the needs of the Region/District, the nature of the displacee's operation, the plans for permanent relocation, the amount of time available for the relocation process, and whether storage would facilitate relocation. It is the RAP Senior's responsibility to set the terms for storage, including prohibiting the storage site's use as a temporary business operating site and the length of time.

Examples of justifiable storage are:

- Displacee has diligently looked for replacement property but has not been able to locate something because of the unique nature of their operation or organization.
- Construction of the replacement property has been delayed by some unforeseen circumstance, again not the result of the displacee's actions.
- The project's time schedule supports relocating the displacee's personalty immediately, AND the displacee's operation or organization will not be adversely impacted by the storage of their personalty.

The displacee's storage must be preapproved by the RAP Senior based on the maximum period of time the displacee will need before permanent occupancy of the replacement property can take place, up to 12 months. Displacees are not automatically entitled to a full 12 months of storage.

Region/District may authorize a flat storage rate for the displacee's storage based on a market analysis of storage rates for comparable units. The displacee can be reimbursed at the end of the agreed-upon time period

© 1994-2025 California Department of Transportation. All rights reserved.

after submitting a claim, including invoices and paid receipts. An optional method of payment is for the displacee to execute an Assignment of Funds wherein the Region/District may advance the first and last month's storage rent to the Storage Facility, and make periodic payments (e.g., quarterly) for the agreed-upon time period.

All arrangements for storage should be documented in writing between the Region/District and the displacee, and if applicable, the storage facility.

Displacees are also entitled to the actual, reasonable, and necessary costs to move their personalty into and out of storage, up to 50 miles for each move (including necessary unloading and stacking). The Region/District is only responsible to move the same amount (or less) of inventory out of storage to the replacement site. The displacee must be advised to control their inventory (volume, weight) during the period of storage, or be responsible for the cost to move the additional items.

In unusual circumstances (e.g., displacee's inventory consists of 20 tractor trailers), the market rate analysis for a storage site may consider vacant lots, empty warehouses, or other secure sites.

Extensions beyond 12 months should be rare and only when the displacee's circumstances are so unusual that an additional month or two of storage is warranted.

10.05.05.08 Move and Storage Insurance

Displacees are entitled to insurance for the replacement value of the personalty in connection with the move and during storage.

In most situations, the displacee should elect to have the property insured based on its value rather than its weight. The moving company will provide an estimate of the replacement value, which should be confirmed with the displacee before electing that coverage. Special coverage may need to be obtained by the Department or the moving company for sensitive or high valued items of personalty (e.g., moving an antique company's Ming vases).

Direct payments to the displacee as a "self-move" (10.05.08.00) should be based on the lowest of three bids, including an appropriate amount for insurance. The RAP Agent should evaluate the potential risk to the personal property and select the appropriate coverage. A lower-cost insurance with a higher deductible would be an appropriate choice when there is a low risk of property loss. Example: The personal property is being moved in seven

© 1994-2025 California Department of Transportation. All rights reserved.

separate moving vans. The likelihood that all seven moving vans would have 100% of the personal property damaged is highly unlikely. In most cases, the displacee will arrange for any additional coverage through their own insurance company. The Department is not responsible for the highest price coverage, just the most reasonable. However, if there is damage to the personal property and the insurance requires a deductible, the Department must reimburse the displacee for the deductible.

10.05.05.09 Lost, Stolen, or Damaged Property

The displacee is entitled to the replacement value of property lost, stolen, or damaged in the process of moving (not through the fault or negligence of the displaced person, his or her agent, or employee) where insurance covering such loss, theft, or damage is not reasonably available.

If the insurance coverage includes a deductible payment, the Department will be responsible for reimbursing the displacee for that amount after the claim for damages has been paid.

10.05.05.10 Licenses, Permits, Fees and Certifications

The displacee is entitled to the cost of any license, permit, or certification required for the particular business or organization to operate at the replacement location that is not transferable to the replacement property. These fees can be a one-time cost, or a periodic fee. Service charges or nonrefundable fees required by law, licenses, or permits needed to operate at the new location are eligible costs. Examples: daycare license, alcohol and beverage control permit, resale license, sanitary inspection certification.

There are no limitations on the costs, which can be reimbursed for licenses, permits, or certifications required of the displacee at the replacement site. The costs participated in should be for those "actual, reasonable, and necessary" items charged by the licensing agency. However, the payment is based on the remaining useful life of the existing license, permit, or certification.

Example 1: A business is displaced from Local Agency "A" and moves to Local Agency "B." Local Agency "A" had no permit requirement at the displacement location. At the replacement location, Local Agency "B" requires a permit costing $1,000. The Department would reimburse the entire $1,000.

© 1994-2025 California Department of Transportation. All rights reserved.

Example 2: A business is displaced from Local Agency "A" and moves to Local Agency "B." Local Agency "A" required the displacee to have a business license costing $750 each year. Local Agency "B" charges a slightly higher fee ($1,000) for their annual business license, but also requires a solid waste permit that costs $1,200 each year. If the nonresidential displacee moved on July 1, 2011, reimbursement would be based on one-half of the $1,000 to be paid for 2011 to Local Agency "B," plus the entire cost of the new solid waste permit that was not required at the displacement site.

Other eligible expenses are those costs previously paid as part of the Reestablishment Payment that related to the replacement site such as general occupancy licenses, occupancy permits, building permits, or one-time assessments (e.g., Conditional Use Permits) that any business would have to pay for occupancy of a property.

Impact fees or one-time assessments for anticipated heavy utility usage as determined by the Department is now an eligible moving expense rather than a reestablishment expense (49 CFR 24.303).

10.05.05.11 Professional Services [49 CFR 24.301(g)(12)]

Nonresidential displacees may be eligible for reimbursement to hire professional consultants to:

- Plan the move of the personal property (e.g., schematics, time frame)
- Move the personal property (e.g., organize and in phases)
- Install the relocated personal property at the replacement location
- Perform soil testing
- Perform feasibility and marketing studies

These services must be directly related to moving personal property. Conceptual building or site layouts intended for construction/reconstruction at the replacement site are not considered eligible expenses under 49 CFR 24.303(b).

Professional services performed prior to the purchase or lease of a replacement site to determine its suitability for the displaced person's business operation including, but not limited to, soil testing, feasibility and marketing studies (excluding any fees or commissions directly related to the purchase or lease of such site). The RAP Agent must establish a preapproved hourly rate based on reliable bids or estimates. If bids and estimates cannot be obtained, the RAP Agent may compare the rates of other similar professional providers in the area. Professional services performed prior to the purchase or

© 1994-2025 California Department of Transportation. All rights reserved.

lease of a replacement site to determine its suitability for the displaced person's business operation is an eligible expense. Professional services also include attorneys' fees for representation before zoning authorities, and the cost of obtaining a soil analysis necessary in the preparation of a replacement site. However, if any of the services identified under "professional services" are performed by a regular employee of the displacee (such as staff engineers) or professional contractors ordinarily used by the business for its everyday operations (such as legal counsel on retainer), these services (including the cost of the report or document) are considered ordinary costs of doing business and are not eligible for reimbursement.

Professional services should be arranged for specialty or complex moves (e.g., sand and gravel plant, koi fish farm that are not normally performed by a typical moving company). The consultant should prepare specifications (10-EX-36) that are detailed instructions as to how the move is to be performed in order to minimize the hardships on the displacee, and to be present during each phase of the move.

The RAP Senior must preapprove the use of professional consultants and require the displacee to obtain bids and Scopes of Work to plan and/or move the personalty to the replacement property. The RAP Senior should review the bids and authorize the displacee to hire the consultant with the lowest bid. As part of Advisory Assistance, the RAP Agent should conduct periodic reviews of the consultant's work to ensure the displacee is receiving adequate service.

The displacee enters into an agreement with the professional consultant and may assign reimbursement for the preapproved amount directly to the professional consultant. The Department does not enter into the agreement between the two parties.

The use of a professional consultant does not absolve the RAP Agent from the need to monitor the move.

© 1994-2025 California Department of Transportation. All rights reserved.

10.05.05.12 Relettering and Reprinting (49 CFR 24.301[g][14])

Displacee's existing inventory of stationery may become obsolete as a result of the move (e.g., new address, new phone number). Relettering signs and replacing stationery on hand at the time of displacement are eligible expenses. Other personalty items that may require changing the printed address or phone number are company vehicles, business cards, yellow page advertisement, and t-shirts or pens that are given to the public. Other items acknowledged by Appendix A, 49 CFR 24.301(g)(14) are: changes to the content of other media that need correcting due to the displacement, such as DVDs and CDs. This may also include modifications to websites that would modify and edit contact and new location information made necessary because of the move. The RAP Agent must determine if there is still some use to the items before authorizing reimbursement for relettering. It is important to note that the Department never confiscates obsolete items.

The displacee may be reimbursed the actual and reasonable cost to conform existing stationery by inking out and stamping in a new address, or the displacee may be entitled to the amount paid (less salvage value where appropriate) for printing a reasonable supply of printed matter to replace those made obsolete by the move. The RAP Agent and displacee should review the inventory on hand (estimating the amount that will be remaining on the date of the move) and reach an agreement on what stock must be modified, what must be replaced, and what can still be used at the new location (e.g., standard invoices, internal memos). The displacee should be advised that such an agreement should be reached prior to making any commitments with a printer for new stock.

The Agency will need to determine when these costs are actual, reasonable, and necessary per 49 CFR 24.301(g)(8).

© 1994-2025 California Department of Transportation. All rights reserved.

10.05.05.13 Searching for a Replacement Location (49 CFR 24.301[g][18])

A displaced business, farm operation, or nonprofit organization is entitled to reimbursement for actual expenses, not to exceed the regulatory limit of $5,000, as the Department determines to be reasonable, which are incurred in searching for a replacement location including transportation, meals and lodging, time spent searching, and searching fees paid to a real estate professional. Other eligible expenses include the actual time and effort required to obtain permits and to attend zoning hearings, but not the assessed fees for the actual permits (see 10.05.05.10). The time spent to actually negotiate the purchase of a replacement business site is also reimbursable, based on a reasonable salary or earnings rate. However, the rate should be based on a preapproved hourly rate that is reasonable and necessary.

The expenses incurred by the displacee and eligible for reimbursement must be:

- Incurred after the ION (FWO or NIA).
- For property that is suitable for the impacted business, not residential properties.
- Itemized on a statement attached to the claim form and incorporated by reference. The statement must list the dates of search chronologically, time spent, location of search, and reason for choosing or not choosing a location. (See 10-EX-02, Business Search Expense Summary.)
- Reimbursed at the current maximum State rates for mileage and per diem. Receipts are only required for lodging.

Time spent by the displacee and employees to locate a suitable replacement site can be reimbursed at the average hourly rate per a statement by the displacee. Broker and agent fees to locate a replacement site must be supported by paid receipts and copies of service agreements, and must be exclusive of any fees or commissions related to the purchase of such site. Under Appendix A, 49 CFR 24.301(g)(18), search expenses may be incurred anytime the business anticipates it may be displaced, including prior to project authorization or the initiation of negotiations. However, such expenses cannot be reimbursed until the business has received the notice in §24.203(b) and only after the agency has determined such costs to be actual, reasonable, and necessary as a result of the displacement. Commissions may not be reimbursable as part of the Related Nonresidential Eligible Expenses (10.05.12.00).

© 1994-2025 California Department of Transportation. All rights reserved.

Per 49 CFR 24.301(g)(18)(ii) and Appendix A, 49 CFR 24.301(g)(18), as an alternative to the preceding sentences in this section, Federal funding agencies may determine that it is appropriate to allow for payment of searching expenses of $1,000 with minimal or no documentation under this part. It is expected that each Federal funding agency will consider and address the potential for waste, fraud, or abuse and may develop additional requirements to implement this provision. Such requirements may include development of procedures or by requiring specific changes or inclusions in the written procedures approved by the Federal funding agency.

Additionally, Appendix A, 49 CFR 24.301(g)(18) allows that in special cases where the displacing agency determines it to be reasonable and necessary, certain additional categories of searching costs may be considered for reimbursement. These include those costs involved in investigating potential replacement sites and the time of the business owner, based on salary or earnings, required to apply for licenses or permits, zoning changes, and attendance at zoning hearings. Necessary attorney's fees required to obtain such licenses or permits are also reimbursable. Expenses negotiating the purchase of a replacement business site are also reimbursable based on a reasonable salary or earnings rate. In those instances when such additional costs to investigate and acquire the site exceed $5,000, the displacing agency may consider requesting a waiver of the cost limitation under the §24.7 waiver provision. Such a waiver should be subject to the approval of the Federal-funding agency in accordance with existing delegation of authority.

Reimbursement for mileage can only be for properties within the 50-mile radius, unless the Region/District determines that there are no suitable replacement properties within the 50-mile area. In such a case, search expenses and the actual move may be beyond 50 miles.

Displacees should document their time and expenses related to searching for a replacement site and attach it to their claim.

Note: Search costs are not reimbursable to a business that elects to receive an in-lieu payment.

© 1994-2025 California Department of Transportation. All rights reserved.

10.05.05.14 Low Value/High Bulk (49 CFR 24.301[g][19])

When the personal property to be moved is of low value and high bulk, and the cost of moving the property would be disproportionate to its value as determined by the RAP Senior, the allowable moving cost payment shall not exceed the lesser of:

1. The amount which would be received if the property were sold at the site, or
2. The replacement cost of a comparable quantity delivered to the new business location.

Examples of personalty include stockpiled sand, gravel, minerals, metals, scrap, building supplies, automobiles and automotive parts, and other similar items held in bulk.

The business owner should be permitted to make the decision on whether the material is to be moved to the new business location or discarded in some other fashion (donate, on-site sale, disposal); however, the amount of the reimbursement will be limited to the lesser of the two amounts.

NOTE: This provision also applies to the relocation of "personal property only" for residential and nonresidential displacees.

Example of a Low Value/High Bulk Payment:

Atkins Hardware has a 500-gallon kerosene tank with a remaining content of 100 gallons. Each gallon of the kerosene sells retail at the time of displacement for $2.00. The cost to provide a truck, pump the tank contents, filter it for water and foreign debris, deliver it to the new location is estimated at $400.00, which is greater than the material's value (100 gallons x $2.00/gallon = $200.00). Delivering new kerosene to the new store location would cost about $1.45 per gallon for a 500-gallon delivery, and about $1.75 per gallon for a 100-gallon delivery. Comparing the remaining 100 gallons of kerosene were sold at the old site ($200.00) to the cost of 100 gallons delivered to the new site ($175.00), the Agent can pay the displacee $175.00, but only after the tanks have been removed from the displaced site.

© 1994-2025 California Department of Transportation. All rights reserved.

10.05.05.15 Other Moving Expenses

49 CFR 24 allows the Department to reimburse eligible nonresidential displacees for other moving related expenses that are not listed as ineligible under 49 CFR 24.301(h). Headquarters RW must preapprove any additional expenses based on a written recommendation from the R/DDC.

10.05.06.00 Certified Inventory

The nonresidential displacee must provide the RAP Agent with a certified inventory of the personal property eligible for relocation. The inventory should be prepared by the displacee and verified by the RAP Agent, who may choose to accompany the displacee during the preparation of the list. A complex operation (e.g., warehouse or auto parts distributor) may require the use of a professional consultant to prepare the inventory. The RAP Agent should arrange for this service to be performed and pay for the service using a claim form and Assignment of Funds.

The certified inventory must not contain any property classified as realty (and acquired), property on consignment, or real property items that were relocated in lieu of purchase (as reflected in the signed Right of Way Contract). The owner's certification shall contain a statement as follows:

> *I, (name of owner), certify that the above listed items represent a true and complete inventory of my personal property located at (address) as of (date).*

The RAP Agent should ensure that the owner understands this certification ensures that all the items are personal property, that the displacee has full ownership of the items, none of the items were acquired as part of the realty (e.g., fixtures and equipment), nor were any of the items reacquired by the owner at salvage value.

If personalty located on the displacement property is determined to be consignment goods, the owners of the consignment goods are considered displacees and thus eligible for relocation payments.

The certified inventory should be sufficiently detailed to allow ready identification of all items to be relocated. If an inventory is difficult to describe because of magnitude or complexity, consideration should be given to describing by gross weight, volume, or other reasonable measure, including photographs and videos where appropriate.

© 1994-2025 California Department of Transportation. All rights reserved.

In addition, the certified inventory should not include any items that will not be moved and subject to reimbursement under "Adjustments to Move" (10.05.11.00) so that the RAP Agent can obtain an accurate cost to move.

Review 10-EX-32, "Certified Inventory – Nonresidential."

10.05.06.01 Fluctuating Inventory

Inventories are rarely fixed and the RAP Agent should be aware of the nonresidential displacee's business activity in order to obtain accurate inventories for the bidding and moving processes. There are businesses whose inventory will change seasonally, or even daily. Subsequent to the actual move of a nonresidential displacee, the RAP Agent must review the inventory to establish what had to be moved. Substantial changes from the original or pre-move inventory should be addressed or reflect in an adjusted cost for the move. The inventory stage of the moving process is critical. Early and continuous involvement by the RAP Agent is essential.

The RAP Agent should also be aware of any inventory that belongs to someone other than the nonresidential displacee, such as items on hand for sale under consignment, i.e., convenience gas station, craft or hobby shop, secondhand store.

Due to the length of time between the first written offer and the actual relocation, the RAP Agent must obtain three complete inventories from the nonresidential displacee:

1. Within 30 days of the First RAP Call – in order to obtain accurate bids and provide the nonresidential displacee with a determination of the cost so that good business decisions can be made regarding when and how to move the personal property.
2. Within 30 days of the anticipated move – in order to ensure the lowest qualified bid is sufficient and not excessive to pay the cost to move the personal property that is expected to be on hand on the date of the move.
3. The day of the move – as part of the RAP Agent's responsibility to monitor the moving operation at the displacement and replacement sites.

The RAP Senior can waive the requirement to obtain three separate inventories for noncomplex operations with small inventories when the cost to obtain the inventories may exceed the minor variations in the moving cost.

© 1994-2025 California Department of Transportation. All rights reserved.

10.05.06.02 Notification and Inspection (49 CFR 24.301[i])

A nonresidential displacee must comply with certain requirements in order to receive reimbursement for all moving and related costs. The RAP Agent should ensure the displacee is aware of the restrictions and consequences by reviewing the Notice of Eligibility (10-EX-43), especially the conditions that state the displacee must:

1. Inform the RAP Agent with a minimum of 15 days advance written notice of the approximate date of the start of the move or disposition of the personal property. Notification of the actual move date must be received at least three (3) working days in advance.
2. Permit the RAP Agent to make reasonable and timely inspections of the personal property at both the displacement and replacement sites and to monitor the move. This includes photographs and videos as appropriate.
3. Provide the RAP Agent with a certified inventory of the items to be moved prior to obtaining cost estimates from moving companies, and again at least 15 days in advance of the estimated move date.

The RAP Senior may deny payment if displacee fails to comply with any of the above, noting in the diary and the file that the displacee was advised of the notification and monitoring requirements. However, if the displacee can produce verifiable records, bills, and receipts, documenting actual expenses incurred, and can identify the property moved, it may be difficult to support the denial based on the sole fact that the displacee did not notify the Region/District of the actual move date.

10.05.06.03 Monitoring (49 CFR 24.301[i][2])

The Uniform Act requires that all moving expenses be actual, reasonable, and necessary. To assure compliance with these requirements, the RAP Agent must provide surveillance of a move commensurate with its costs. The goal of monitoring is to protect the Department's interest while assisting the nonresidential displacee.

The RAP Unit shall monitor complicated or costly moves to ensure that all moving expenses are actual and reasonable and to verify that the items of personal property listed on the owner's certified inventory are moved from the displacement property to the replacement location. If the monitoring activities will involve a significant expenditure of time, the RAP Unit should consider using a resident engineer or private moving consultant.

© 1994-2025 California Department of Transportation. All rights reserved.

See 10-EX-37 for additional guidelines on monitoring.

10.05.07.00 Move by Commercial Carrier

Payment is based on actual reasonable cost of a move performed by a commercial mover or contractor. The following procedure shall be followed:

- Either the owner or the Agent will secure at least two firm bids (10.05.07.01) based on the certified inventory (10.05.06.00) from qualified carriers and submit them to the RAP Unit for approval prior to the move. With the Senior R/W Agent's approval, payment for a low cost or uncomplicated move may be based on a single bid or estimate. Justification and approval for the single bid must be kept in the file. The Agent should accompany the owner and the moving companies during the estimating process. The moving companies should be advised that the Department will pay for the move. Bids must contain the statement noted in Section 10.04.02.09, Actual Reasonable Cost of Move by For-Hire Carriers.
- After reviewing and approving the bids, the RAP Agent authorizes the displacee to employ the lowest responsible bidder to perform the move. The displacee may elect to use another mover, but the Department will limit reimbursement to the amount of the lowest bid, OR the amount of the displacee's mover, whichever is less.
- At its discretion, the RAP Unit may secure bids either as a service to the owner or where it questions the reasonableness of the bids submitted or qualifications of the bidder. A moving consultant may be used to evaluate bids for extremely complex commercial/industrial moves when the RAP Unit lacks the expertise to determine reasonableness of the bids.
- The owner shall submit Claim Form RW 10-30 and paid, receipted, and itemized bills to the District after moving from the premises. A responsible employee of the moving company must sign the bills. Written prearrangements or assignments for the Department to pay the mover directly may be used.
- The RAP Agent shall review and approve the bills. Payment of the authorized amount is in accordance with District delegations.

Displacee may authorize the RAP Unit to solicit competitive bids and enter into a contract on their behalf with the lowest responsible bidder to have the move performed. Payment is in accordance with current competitive bid procedures.

10.05.07.01 Obtaining Bids

A bid is an offer to perform a specific task at a specific price. It is a lump sum fixed amount to do an identified task. The Department does not solicit estimates to determine the cost to move personal property because they are generally a value or opinion of the cost without actually calculating costs based on weight or size. The RAP Agent should not accept open-ended bids such as time (hourly rate) and materials (price per item).

For a bid to be accurate, the terms of the move and the inventory must be clearly established. Special conditions related to the move, such as time of day, access to and through the building, dismantling and reassembly of complicated items, must be known by all the moving companies who have been tasked to prepare the bid.

Typically, the RAP Agent and the nonresidential displacee work together to select appropriate moving companies and specialists who will provide three bids to relocate the personal property. Each moving company is provided the certified inventory, moving specifications (see 10-EX-36) and afforded an opportunity to inspect the displacement and replacement sites. The moving companies submit the bids to the RAP Agent who will provide copies to the nonresidential displacee.

The RAP Agent determines the most qualified bid based on the cost and the accuracy of the bid. The nonresidential displacee can select any bidder, but the Department's obligation to participate in the costs will be limited to the selected bid.

Moving companies and contractors can also be reimbursed a reasonable fee for preparing the moving or cost estimates.

© 1994-2025 California Department of Transportation. All rights reserved.

10.05.07.02 Bid Adjustments

Complex moves are likely to require an adjustment to the work schedule or scope. These adjustments may require a change in the amount that the moving company should be paid; however, the RAP Agent must ensure that the adjustments are appropriate before agreeing to pay the moving company more than the bid.

Adjustments that are appropriate are those related to a change in the inventory that requires more or less time by the moving company. Adjustments that may be appropriate are those caused by bizarre circumstances that occur during the move such as a dramatic change in weather that requires more protection of personal property such as tarps or covered vehicles, or a power outage that shuts down the elevator that is being used to move the personal property.

Adjustments that are not appropriate are those increased costs due to time and materials that should have been considered in the initial bid. Some examples are: narrow steps to depart the building that slow down the move, no loading docks which require renting forklifts or using more laborers. Also, normal business risks are those unforeseen circumstances that are not the fault of the mover, but do not justify an increase in cost to the agency such as a flat tire on the way to a move which causes an hour delay and forces the move into overtime. Anyone in business must accept a certain degree of risk and the business profit is the reward for dealing with these risks.

Sometimes, the delay is due to the nonresidential displacee's intentional or unintentional actions such as not providing immediate access to the personal property, or delaying the dismantling of a piece of equipment that is scheduled for move. The RAP Agent should discuss these issues with the RAP Senior before agreeing to pay the moving company more money because of the nonresidential displacee's actions. The moving company and the nonresidential displacee should have a written contract that protects both parties should one of them fail to perform. The Department does not enter into the agreements with the moving company and the nonresidential displacee and should not pay additional costs due to the failure of either party to perform.

The RAP Agent should work closely with the moving companies that are providing bids to include the appropriate contingencies in the bids.

© 1994-2025 California Department of Transportation. All rights reserved.

Examples of appropriate and unwarranted adjustments:

1. The snowstorm hits at noon with heavy icing of the roads. To be on the safe side, the mover recalls the truck to the warehouse. Another half-day is added to the move.
    - Adjustment is warranted if the snowstorm is unusual (Sacramento in May); it is unwarranted if snow is a contingency that should have been considered when providing the bid.
2. Summer heat slows the work effort, and the packing and loading takes three hours longer than planned.
    - Adjustment is unwarranted, as this contingency should have been planned for.
3. The moving personnel forgot the dollies and this causes a three-hour delay.
    - Adjustment is not warranted.
4. The nonresidential displacee shows the moving personnel a storage area omitted in the inventory.
    - Adjustment is warranted.
5. The moving firm is extremely busy and must send a less experienced work crew, so the move takes 25% longer.
    - Adjustment is not warranted as this is based on the moving company's business decision.
6. Chairs in the reception area are bolted to the floor, and the mover was not aware of this and sent no tools for removal.
    - Adjustment is warranted if it was not obvious the chairs were bolted during the bidding process, or that the chairs were to be dismantled before the movers came.
7. On the scheduled day of the move, heavy rain floods the loading dock areas. The carrying distance to the truck causes an increase in total loading time.
    - Adjustment is warranted.
8. The electrician informs you that he is not sure about the reinstallation of certain items of machinery. He suggests a manufacturer's technician to assist him. You point out that with this added cost, he will not be the low bid. He reminds you that he is in the middle of the move. Any delay in the move will be disastrous.
    - Adjustment is warranted.

© 1994-2025 California Department of Transportation. All rights reserved.

10.05.08.00 Self-Moves (49 CFR 24.301[d][2])

A Self-Move payment may be based on the lower of two bids or estimates prepared by a commercial mover or qualified RAP Agent. Low cost or uncomplicated moves may be based on a single bid or estimate.

If the nonresidential displacee elects to take full responsibility for the move of the operation, the Region/District may pay the displacee directly for the moving expenses, based on the lower of two acceptable bids or estimates.

The nonresidential displacee must advise the RAP Agent of their desire to complete all or part of the move themselves at least 30 days before the anticipated date to vacate the property. The displacee must still provide a certified inventory, with a copy attached to the Self-Move Agreement.

The displacee will be paid once all personal property identified has been relocated to the replacement site. Advance payments are discouraged.

The displacee may opt to complete only a part of the move (e.g., moving the office and office equipment) and request the Region/District pay the actual costs to move the remaining property (e.g., inventory in the warehouse, including reassembly of the shelves/racks).

A Self-Move by the displacee does not negate the Region/District's responsibility to pay other related expenses, e.g., search costs, reestablishment, or professional services.

The nonresidential displacee should be advised that a Self-Move will be based on the lowest qualified bid as outlined in 49 CFR 24, Non-Regulatory Supplement 49 CFR 24D.

© 1994-2025 California Department of Transportation. All rights reserved.

10.05.08.01 Self-Move Based on the Lower of Two Bids

The displacee who elects to take full responsibility for the move may receive a payment for the moving expenses in an amount not to exceed the lower of two acceptable bids or estimates obtained by the RAP Agent or prepared by a qualified Agent. It may be necessary to obtain several types of bids to cover all aspects of the move (e.g., disassembly/reassembly of the specialized equipment, separate move for computer equipment). The amount of the Self-Move is generally based on the lower of two bids from qualified moving companies for each aspect of the move; however, uncomplicated or low-cost moves can be based on one bid or estimate. The bids should reflect only the items on the certified inventory that the displacee has identified as personalty subject to the self-move. The total of the lowest of all the bids should be included in a Self-Move Agreement (10-EX-38).

The agreed-upon amount to be paid for a self-move should never include specialized moving costs that are performed by others; e.g., telephone, fire, and burglar alarm reinstallations. Costs for these specialized operations must be separately itemized and documented for reimbursement following completion of the work. (This does not apply to hardwired fire and burglar alarms since these are normally considered realty.)

The bidders should be advised to provide moving estimates exclusive of their charges for profit and overhead, and include the following statement:

> "This estimate was prepared for the State of California Relocation Assistance Program as a basis for determining the maximum reimbursement the displacee may receive to perform a "Self-Move."

The lowest bid is automatically used as the basis for the Self-Move Agreement. The hourly rate for equipment rental can be based on the actual cost of the equipment rental, but not exceed the cost a commercial mover would charge.

Moving companies and consultants can be reimbursed a reasonable fee for preparing the moving estimates.

A residential displacee cannot be paid for a Self-Move based on the lower of two bids or estimates.

© 1994-2025 California Department of Transportation. All rights reserved.

10.05.08.02 Bid by Qualified Department Staff Person for Moves Under $5,000

Under 49 CFR 24.301(d)(2)(iii), a qualified agency staff person may develop a move cost finding by estimating and determining the cost of a small, uncomplicated nonresidential personal property move of $5,000 or less, with the written consent of the person. This estimate may include only the cost of moving personal property, which does not require disconnect and reconnect and/or specialty moving services necessary for activities including crating, lifting, transportation, and setting the item in place.

10.05.09.00 Adjustments to the Move

There may be items of personalty that the displacee will not or cannot use at the replacement site. The displacee is entitled to the cost to move all personalty; but if the displacee decides not to move some of the personalty to the new location, there are two optional payments: Payment for Loss of Tangible Personal Property (if the item will not be replaced) OR Substitute Personal Property (if the item will be replaced). (See Table 10.05-A.)

The displacee must identify the items not to be moved on the certified inventory.

This section should not be followed if the nonresidential displacee abandons personal property at the displacement property. (See Section 10.05.23.00.)

10.05.09.01 Loss of Tangible Personal Property (49 CFR 24.301[g][15])

Displaced businesses, farms, and nonprofit organizations may be eligible for a payment for the actual direct loss of tangible personal property, which is incurred as a result of the move or discontinuance of the operation. This section only applies when equipment is not being moved to replacement site and therefore it becomes an actual loss of tangible personal property. The payment will be based on the lesser of:

1. The fair market value of the item as installed and set up (e.g., wired, bolted, permitted) for continued use at the displacement site, less the proceeds from its sale; or
2. The estimated cost of moving and reconnecting the item "as is," including cost to install and obtain permits within 50 miles, based on the lowest acceptable bid or estimate obtained by the Region/District.

© 1994-2025 California Department of Transportation. All rights reserved.

For the displacee to be eligible for this payment, the displacee must:

- Prepare a certified inventory identifying items that will not be moved, and whether they will be replaced at the new site.
- Identify the property NOT to be moved prior to the moving companies preparing their estimates to move all the items to the replacement property.
- Enter into a written agreement (10-EX-12) with the Region/District electing this method of payment and agreeing that the described personal property is not to be moved.
- Make a reasonable effort to sell the described personal property based on discussions with RAP Agent on any restrictions or limitations that must be followed.
- At the time of the move to the replacement property, dispose of the items listed in the inventory in a safe and legal manner (e.g., donation, refuse, sale, and gift). The Region/District is not responsible for removing these items from the displacement site.
- Submit a claim for reimbursement based on the lesser of the cost to move item "as is" or its fair market value "as is," along with all supporting documentation. Displacee may also submit a claim for reimbursement for costs related to the sale, or attempted sale, of the item, along with all supporting documentation. Note: Said claims cannot be paid until all other personal property has been removed from the displacement site.

To determine the cost to move the item, the moving companies should be advised in advance by the RAP Agent that they will need to prepare TWO estimates – one for all the personal property, and then one for all the personal property EXCEPT the item or items that will not be moved. The difference between the two estimates is the cost to move the item. It is possible that the cost to move a small item, e.g., a desk or a couple of chairs, will be minimal or zero. (See Table 10.05-B.)

When calculating the approximate cost to move the item, the RAP Agent should ensure that the amount:

- Does not include an allowance for storage.
- Does include all other related moving costs such as packing, unpacking, dismantling, and reassembly, including utilities and modifications to the personalty.
- Is based on a maximum of 50 miles. Note: If the business or farm operation is discontinued, the moving cost will be based on the maximum of 50 miles.

© 1994-2025 California Department of Transportation. All rights reserved.

- That the value of the goods held for resale is based on the cost to the business, and not the sales or listed price.

The owner of the property is entitled to payment for reasonable costs incurred in attempting to sell an item that is not being relocated (limited per 10.05.09.03). Payment may be made only after the owner has made a bona fide effort to sell the item, though the District RAP Senior can waive the requirement to sell. The sales price, if any, and the actual, reasonable costs of advertising and conducting the sale shall be supported by copies of the bill of sale or similar documents and any advertisements, offers to sell, auction records, and other items supporting the bona fide nature of the sale.

If the piece of equipment is operational at the acquired site, the estimated cost to reconnect the equipment shall be based on the cost to install the equipment as it currently exists, and shall not include the cost of code requirement betterments or upgrades that may apply at the replacement site. The allowable in-place value estimates (49 CFR 24.301[g][15][i]) and the moving cost estimate (49 CFR 24.301[g][15][ii]) must reflect only the "as is" condition and installation of the item at the displacement site. The in-place value estimate may not include costs that reflect code or other requirements that were not in effect at the displacement site; or include installation costs of machinery or equipment that is not operable or not installed at the displacement site.

Under 49 CFR 24.301(g)(15)(ii), if the item is not currently in use: the estimated cost of moving the item 50 miles, as is.

© 1994-2025 California Department of Transportation. All rights reserved.

Table 10.05-A
Differences between Loss of Tangible Personal Property
AND Substitute Personal Property

Business is discontinued or the item will not be moved and is not replaced in the relocated business = LOSS OF TANGIBLE rules.	Payment is the lesser of: • Fair market value of the item for continued use at the displacement site minus the proceeds from its sale. • Estimated cost of moving the item, not to exceed 50 miles, with no allowance for storage. If the business is discontinued, the estimated cost is based on a moving distance of 50 miles.
Business is relocated and an item of personal property used as part of the business is not moved, but is promptly replaced with a substitute item at the replacement site = SUBSTITUTE rules.	Payment is the lesser of: • Cost of substitute item, including installation costs at replacement site, minus any proceeds from sale or trade-in of replaced item. • Estimated cost of moving and reinstalling the item, not to exceed 50 miles, with no allowance for storage.

© 1994-2025 California Department of Transportation. All rights reserved.

Table 10.05-B
EXAMPLE OF LOSS OF TANGIBLE PERSONAL PROPERTY

An eligible business, "J&J Temporary Services," determines that the document shredder will not be moved to the replacement site because of its condition and the displacee will not replace it at the new location.

Fair Market Value in Place of the Document Shredder based on its use at the current location	$1,500
Proceeds: Price received from selling the Document Shredder	-$ 500
Net Value	$1,000

OR

Estimated cost to move based on the following information:	$ 150

The lowest move estimate for all the personal property - $5,000, compared to the same bidder's estimate to move all the personal property minus the document shredder - $4,900. The difference is only $100 because moving the shredder did not take a lot of extra time, effort, or equipment on the mover's part, so the difference is minimal. Add the estimated cost for disassembly/reassembly based on an estimate from a document shredder service company - $50 to reset the machine at the new location.

Based on the "lesser of," the amount of the "Loss of Tangible Personal Property" =	**$ 150**

In addition, the displacee is entitled to the reimbursement for all reasonable costs incurred in selling the document shredder (e.g., a couple of flyers at used office equipment stores and an ad in the local paper for $50) based on supporting documentation.

The trade-in value of old equipment may be used instead of the net proceeds of the sale. Amounts received in trade, net proceeds of the sale, and estimated cost of moving must be documented.

© 1994-2025 California Department of Transportation. All rights reserved.

The displacee is not entitled to a payment for Loss of Tangible Personal Property for:

- M&E that is classified as realty but is retained by displacee, nor
- Cost of moving structures, improvements, or other real property of which the displacee reserves ownership.

10.05.09.02 Purchase of Substitute Personal Property (49 CFR 301[g][17])

If an item of personal property, which is used as part of the business, farm, or nonprofit organization, is not moved, but is promptly replaced with a substitute item that performs a comparable function at the replacement site, the displacee is entitled to payment of the lesser of:

1. The cost of the substitute item, including installation costs at the replacement site, minus any proceeds from the sale or trade-in of the replaced item; OR
2. The estimated cost of moving and reinstalling the replaced item, based on the lowest acceptable bid or estimate obtained by the Department for eligible moving and related expenses, including dismantling and reassembly, and code requirements, but with no allowance for storage.

Estimating the cost to move the item is calculated in the same manner as an item identified under the "Loss of Tangible Personal Property." See Table 10.05-C.

© 1994-2025 California Department of Transportation. All rights reserved.

Table 10.05-C
EXAMPLE OF SUBSTITUTE PROPERTY

An eligible business, "A&A Construction Company," determines the copy machine will not be moved to the new location because it is now obsolete, but it will be replaced.

Cost of a substitute Copying Machine including installation costs at the replacement site	$3,000
Trade-in Allowance	- $2,500
Net Value	$ 500

OR

Estimated cost to move, including any disassembly/reassembly, including code requirements	$ 550

Based on the "lesser of," the amount of the "Substitute Personal Property" = **$ 500**

In addition, if the displacee had attempted to sell the copier before trading it in, there could be an additional reimbursement for all preapproved costs incurred in the attempt to sell it (e.g., $25 for advertising it at the "Used Office Equipment Are Us" store).

© 1994-2025 California Department of Transportation. All rights reserved.

WORKING WITH TANGIBLE PROPERTY LOSS and SUBSTITUTE PROPERTY:

The Maxtop Company has a large drill press that is personal property that is worth about $2,500 installed and about $1,500 if sold at an auction. A new drill press installed would cost the displacee $4,000, and the vendor would give the displacee a $1,200 credit to trade in the old drill press.

1. The large drill press is operational at the displacement site, and the displacee chooses to move the drill press. Cost to move is based on the cost to haul ($200), cost to take down including water and electrical disconnects ($180), set up with all utilities and floor mounting ($250), and the cost of a required enhanced personal safety barrier at the new location ($400). Total payment = $1,030.

2. The large drill press will not be needed at the replacement site and the displacee wants a "loss of tangible personal property payment." Displacee can sell it for $400. The payment is based on the lesser of: 1) The in-place value less sale ($2,500 - $400 = $2,100), or 2) the moving cost without the cost to modify the replacement property ($1,030 - $400 = $630). Total payment = $630.

3. The displacee has another drill press in storage that is not currently functional and does not want to move it. The payment is based on the lesser of: 1) the in-place value as is ($1,500), or 2) the moving cost without reconnect since it is in storage and not connected to utilities ($200). Total payment = $200.

4. The displacee needs to have a drill press at the replacement site but wants to update his operation and requests a payment based on "substitute property." The payment is based on lesser of: 1) cost of a new drill press including installation minus trade-in value ($4,000 - $1,200 = $2,800), or 2) the cost to move including installation ($1,030). Total payment = $1,030.

© 1994-2025 California Department of Transportation. All rights reserved.

10.05.09.03 Cost to Sell Personalty (49 CFR 24.301[g][16])

Reimbursement for costs associated with the sale, or attempted sale, of personalty not to be moved is an additional payment and not included in the "lesser of" calculation. However, reimbursement is limited to those costs that are "necessary." The RAP Agent and the displacee should discuss limitations to the method of sale. The cost for an auctioneer or an advertisement in the Wall Street Journal is not considered a reasonable expense when selling a low valued or easily disposed of item. The RAP Agent should ensure that the displacee understands that reimbursement is limited to the Region/District's determination of reasonableness.

10.05.09.04 Value in Place

The term "value in place as is for continued use" means the depreciated value of the item as it is installed at the displacement site as of the date of the acquisition. Generally, an item will be valued based on the current cost at the time as installed at the displacement site, and then depreciated to reflect the current condition and estimated remaining useful life. Standard professional personal property appraisal methods are acceptable. The in-place value "as is" condition may not include costs that reflect code or other requirements that were not actually in effect at the displacement site.

Per Appendix A, 24.301(g)(15)(i), the in-place value estimate may also not include installation costs for machinery or equipment that is not operable or not installed at the displacement site (49 CFR 24.301[g][15][ii]). Value in place can be obtained by hiring a machinery and equipment (M&E) appraiser or value can be estimated via websites available for M&E valuations. The Association of Machinery and Equipment Appraisers (AMEA) is a nonprofit professional association whose mission is to accredit certified equipment appraisers. Another example of available resources can be found at the American Society of Appraisers, a multi-discipline, nonprofit, international organization of professional appraisers. Should an agency find itself in need of a machinery and equipment appraisal, a web search for either "machinery and equipment appraisers" or "machinery and equipment appraiser's organizations" will provide a number of resources which can be used to find the necessary services and resources. It is important to note that FHWA does not endorse or recommend any organization, society, or professional group.

The estimated moving cost for an item is also to be limited to the "as is" condition of the item at the displacement site. Therefore, estimated reconnection costs may NOT include costs to meet code or other

© 1994-2025 California Department of Transportation. All rights reserved.

requirements that would be necessary to relocate the item to a replacement site. Since the item is claimed as a loss and is not to be relocated, allowable reconnect costs may only reflect an estimate of the cost that would be incurred to install the item as it currently exists at the displacement site. Also, the moving cost estimate may not include reconnect costs for an item that is not operable or installed at the displacement site.

10.05.10.00 Related Nonresidential Eligible Expenses (49 CFR 24.303)

The following expenses shall be provided if the Department determines that they are actual, reasonable and necessary:

1. Connection to available nearby utilities from the right of way to improvements at the replacement site (see 10.05.05.03).

2. Professional Services (see 10.05.05.11).

3. Impact fees or one-time assessment for anticipated heavy utility usage as determined by the Department (see 10.05.05.03).

   Under Appendix A, 49 CFR 24.303(c) limits impact fees or one-time assessments to those levied for anticipated heavy utility usage to utilities, e.g., water, sewer, gas, and electric. Impact fees and one-time assessments that may be levied on a nonresidential relocated person in their replacement location for other major infrastructure construction or use, such as roads, fire stations, regional drainage improvements, and parks, are not eligible. Providing information on the potential eligibility of impact fees for anticipated heavy utility usage is an important advisory service.

© 1994-2025 California Department of Transportation. All rights reserved.

10.05.11.00 Personal Property Only (49 CFR 24.301[e])

49 CFR 24.301(e) allows for the reimbursement of eligible expenses for a person who is required to move personal property from real property, but is not required to move from the site. Eligible expenses include those described under Transportation, Packing, Disconnecting, Storage, and Insurance (including replacement value), and Low Value/High Bulk (10.05.14.04). RAP Agents will provide displacees with the Notice of Eligibility for Personal Property Only (10-EX-46).

Personal property moves do not trigger eligibility for reestablishment payments, nor are they eligible for actual moving expense payments under 49 CFR 24.301(g)(9) through (g)(18):

1. Disconnecting and reassembly of mobile homes. (10.07.02.00)
2. Refundable mobile home park fees. (10.07.02.00)
3. Licenses, permits, fees required at the replacement site. (10.05.05.10)
4. Professional services to plan the move. (10.05.05.11)
5. Relettering of signs and replacement of stationery. (10.05.05.12)
6. Loss of Tangible Personal Property/Substitute Property. (10.05.09.01)
7. Searching expenses. (10.05.05.13)

Appendix A of 49 CFR 24.301(e) Personal property only – examples of personal property only moves might be: personal property that is located on a portion of property that is being acquired, but the business, farm, nonprofit or residence will not be acquired and the business can still operate after the acquisition; personal property that is located in a mini-storage facility that will be acquired or relocated; or, personal property that is stored on vacant land that is to be acquired.

For nonresidential personal property only moves, the owner of the personal property has the option of moving the personal property by using a commercial mover or a self-move. If a question arises concerning the reasonableness of an actual cost move, the agency may obtain estimates from qualified movers to use as the standard in determining the payment.

10.05.12.00 Items Not Eligible for Move

Items identified as realty (including trade fixtures) in the appraisal, even if retained by the owner at salvage value, are not eligible for moving. Machinery and equipment identified in the M&E appraisal is usually acquired by the Department and is also not eligible for moving expense.

© 1994-2025 California Department of Transportation. All rights reserved.

However, items not acquired through the appraisal process are eligible for moving expenses.

Refundable security and utility deposits are ineligible for reimbursement (49 CFR 24.301[h][12]) because of their refundable nature.

Refer to 7.08.00.00.

10.05.12.01 Ineligible Moving and Related Expenses (49 CFR 24.301[h])

A nonresidential displacee is not entitled to payment for (this is a nonexclusive list):

a) The cost of moving any structure or other real property improvement in which the displaced person reserved ownership. However, this rule does not preclude the compensation under "Owner Retention of Dwellings."
b) Interest on a loan to cover moving expenses.
c) Loss of goodwill, loss of profits, or loss of trained employees.
d) Any additional operating expenses of a business or farm operation incurred because of operating in a new location except as provided in 10.05.21.00 (10).
e) Personal injury.
f) Any legal fee or other cost for preparing a claim for a relocation payment or for representing the claimant before the Department.
g) Expenses for searching for a temporary or replacement dwelling which include costs for mileage, meals, lodging, time, and professional real estate broker or attorney's fees.
h) Physical changes to the real property at the temporary or replacement location of a business or farm operation except as provided in 10.05.05.06.
i) Costs for storage of personal property on real property owned or leased by the displacee or person to be moved temporarily.
j) Home business that is not the primary site for the business (e.g., realtor or CPA who works at home but the company has a primary location, someone who makes craft items and sells them at other locations or on consignment, or telephone or Internet services and sales).
k) Cosmetic changes to a replacement or temporary dwelling, which are not required by State or local law, such as painting, draperies, or replacement carpet or flooring.

© 1994-2025 California Department of Transportation. All rights reserved.

NOTE: If a business is legitimately operated out of a residence that will be relocated, then the relocation benefits should be adjusted to ensure there is no duplication of payment.

10.05.13.00 Reestablishment Expenses (49 CFR 24.304)

In addition to the payments available under this section for moving expenses, a small business (see definitions), farm, or nonprofit organization is entitled to receive a payment, not to exceed $33,200, for expenses actually incurred in relocating and reestablishing such small business, farm, or nonprofit organization at a replacement site.

The nonresidential displacee must completely vacate the displacement property and be operating the new operation at the replacement property before this payment can be made. The $33,200 cannot be advanced to the nonresidential displacee, even if the only qualifying payment is the increased costs of operation during the first two years (item 6 below).

There is no requirement that the displaced nonresidential displacee remain in the same or similar type of business when they reestablish.

The test for reestablishment expenses is not a comparative standard. Therefore, it does not match the amenities or characteristics of the replacement site against the displacement site. Instead, the test is one of necessity, i.e., is the expense necessary to reestablish the displaced business.

Reestablishment expenses must be actual, reasonable, and necessary. Eligible expenses include, but are not limited to, the following:

1) Repairs or improvements to the replacement real property as required by Federal, State, or local law, code, or ordinance.
2) Modifications to the replacement property to accommodate the business operation or make replacement structures suitable for conducting the business. (Review ineligible items under 10.05.12.00 and 10.05.12.01.)
3) Construction and installation costs for exterior signing to advertise the business. (See 10.05.13.02.)
4) Redecoration or replacement of soiled or worn surfaces at the replacement site, such as paint, paneling, or carpeting. Can include some costs that were ineligible under items (1) and (2) above. Improvements made for aesthetic purposes are not eligible for reimbursement under any provision.

© 1994-2025 California Department of Transportation. All rights reserved.

5) Advertisement of replacement location (10.05.13.02).
6) Estimated increased costs of operation during the first two years at the replacement site for such items as:
    - Lease or rental charges,
    - Personal or real property taxes, and
    - Insurance premiums.

    In order to meet the 18-month deadline to file a claim, displacees should be advised to submit their claim for these expenses prior to the 24-month period based on projected costs.

    The nonresidential displacee must provide copies of documents (e.g., lease agreement, tax bill, insurance statement, utility costs) and proof of payment before the RAP Agent can determine if any or all of the Reestablishment payment can be made based on this eligible item.
7) Other items that the Region/District may consider as necessary expenses related to the reestablishment of the business (e.g., escrow and title fees to acquire the replacement property, SBA loan fee, and ADA compliance).

When discussing the payment of claims under this provision, the RAP Agent should ensure the claimant fully understands that items claimed must be reasonable and necessary and that substantiating documentation must be attached to the Claim (RW 10-30). For further guidance, refer to "FHWA Guidance on Reestablishment" (10-EX-30).

The RAP Agent must provide the Acquisition Agent with a completed RW 10-38 (internal Caltrans link) whenever a Reestablishment Payment has been made.

Reimbursement of claims under this provision is not made to business owners or tenants that claim an in-lieu payment.

In determining whether two or more displaced legal entities constitute a single business that is entitled to only one fixed payment, all pertinent factors shall be considered, including the extent to which:

1) The same premises and equipment are shared;
2) Substantially identical or interrelated business functions are carried out and business and financial affairs are commingled;
3) The entities are held out to the public, and to those customarily dealing with them, as one business; and

© 1994-2025 California Department of Transportation. All rights reserved.

4) The same person, or closely related persons own, control, or manage the affairs of the entities.

The RAP Agent should consider how the businesses share or separate their operation by looking at the name, purpose, customers, tax records, employees, licenses, permits, phone numbers, and office space.

10.05.13.01 Reestablishment Payments on the Remainder

Reestablishment payments can be paid to a business that must reconfigure or make modifications to the remainder in order to accommodate the displaced portion of the business. The RAP Agent must make sure the payments are based on the list of eligible reestablishment expenses, and are not a duplication of a portion of the acquisition payment that was based on cost to cure or damages.

10.05.13.02 One-Time Advertisement of Replacement Location (Reestablishment)

The RAP Unit must determine the amount is reasonable and necessary for the business to retain current clients and must approve the amount before it is incurred.

An example of an approved claim is a one-time newspaper announcement that a hairdresser has moved from one beauty shop to another. Individual mailing of a one-time announcement to the individual customers may also be necessary. Another example is a lawn mower repair shop that does not regularly advertise in newspapers.

Reimbursement for eligible advertising expenses must be included in the total of reestablishment expenditures, limited to $33,200.

An unacceptable claim is one from a business that typically uses newspaper, radio, and television advertising on a regular basis. In these cases, a minor change in the business' regular ads can mention the new address.

© 1994-2025 California Department of Transportation. All rights reserved.

10.05.13.03 Exterior Signing

Eligibility for this payment exists whether or not the business had a sign at the displacement property. However, some sign expense is more properly assigned as a moving cost. A sign designated as personal property at the displacement site is eligible to be moved and reinstalled as a moving expense. Signs that can be relettered or otherwise modified due to the move can be claimed as a moving expense. Erection of signs not eligible as a moving expense can generally be claimed as a reestablishment expense.

10.05.14.00 Reestablishment Expenses for Nonoccupant Owners

A small business, farm, or nonprofit organization, including a nonoccupant landlord, whose sole activity at the site is providing space at the site to others, is eligible for a Reestablishment Expense Payment up to $33,200. The owner does not have to own or rent personal property that must be moved in connection with the displacement. Typical examples of leased space are:

- Mobile home parks
- Business properties (e.g., warehouses, office space) including bare land used for storage of equipment
- Farms and ranches (or any bare land used for agricultural or livestock grazing)
- Coin-operated laundries or any other vending operation (newspapers)
- Residential units

A nonoccupant owner is not entitled to moving expenses because the requirements are that they have no personal property stored on the site. The sole reason and use for the property is to lease it to someone else. If a person leases a furnished place, they are not eligible for the Nonoccupant Owner payment.

NOTE: A landlord who leases furnished residential or nonresidential properties is not eligible for a Reestablishment Payment as a Nonoccupant Owner.

The RAP Agent should provide the Nonoccupant Owner with a Notice of Eligibility – Nonoccupant Owner Leasing Space to Others (10-EX-50) as soon as its eligibility is determined.

© 1994-2025 California Department of Transportation. All rights reserved.

To be eligible for this payment, the displacee must establish that the renting or leasing of space is a bona fide business activity, and not part of a real estate investment or family situation, as supported by the displacee's income tax records (Schedule C).

To ensure the displacee's operation is in fact a business, the RAP Agent should obtain from displacee records that support the status as a business (e.g., copies of income tax records, business license, lease agreements, or any other reasonable documentation). The income from the property must contribute materially (49 CFR 24.2(a) "Contribute materially") to the owner's overall income. The definition of "contributes materially" is: during the two taxable years prior to the taxable year in which displacement occurs, or during such other period as the Region/District determines to be more equitable, a business or farm operation:

1. Had average annual gross receipts of at least $5,000; or
2. Had average annual net earnings of at least $1,000; or
3. Contributed at least 33 1/3 percent of the owner's/operator's average annual gross income from all sources.
4. If the application of the above criteria creates an inequity or hardship in any given case, the agency may approve the use of other criteria as determined appropriate. (See Appendix A of this part, section 24.305(e), which is discussed in 10.05.16.00.)

To be eligible to receive the payment, the Nonoccupant Owner must:

- Not be part of a commercial establishment with three or more locations (e.g., franchise or chain operation).
- Acquire a replacement property within the 18-month time period.
- Lease the replacement property as evidenced by a copy of the new lease agreement.

Eligible expenses are those listed in Section 10.05.14.00 as Reestablishment.

The Nonoccupant can have more than one Reestablishment Payment if two distinct and separate properties are affected by the same project, as long as they are leased as separate entities (e.g., two buildings on one parcel that is leased to two separate lessees for different uses, and two rental units in a condominium complex that are separate and distinct residential units, leased to two separate families). However, one 32-unit apartment building is limited to one reestablishment payment. To receive more than one Reestablishment Payment, the owner must reestablish each operation.

© 1994-2025 California Department of Transportation. All rights reserved.

FHWA has determined that the following situations or expenses are ineligible for a Nonoccupant Owner Reestablishment Payment:

- The replacement site cannot be a site that was previously owned or leased by the displacee.
- A lessee who subleases space is not eligible for a Reestablishment Payment.
- A request for reimbursement of expenses incurred by the displacee as a result of the Department acquiring the displacement property.
- Recurring fees (insurance, taxes, MIP, interest) and nonrecurring closing costs associated with the replacement property.
- Other items, such as incidental expenses necessary to purchase the replacement property, customarily paid by the buyer.

Note: The Nonoccupant Owner cannot receive an In-Lieu Payment (10.05.16.00) regardless of the determination of eligibility for a Reestablishment Payment under this provision.

10.05.15.00 Ineligible Reestablishment Expenses (49 CFR 24.304[b])

The following is a nonexclusive listing of reestablishment expenditures ineligible for reimbursement:

1) Purchase of capital assets, such as office furniture, filing cabinets, machinery or trade fixtures.
2) Purchase of manufacturing materials, production supplies, product inventory, or other items used in the normal course of the business operation.
3) Interest on money borrowed to make the move or purchase the replacement property.
4) Payment to a part-time business in the home which does not contribute materially (10.05.26.00) to the household income.

Except as specifically stated under 49 CFR 24.304(a)(1)-(3), physical changes to the real property at the replacement property are not eligible for reimbursement. The RAP Agent must be extremely careful in reviewing and approving proposed capital improvements to the replacement property that are not specifically listed above (1), (2), and (3). New construction items, such as roofs, bathrooms, and storage areas, do not qualify as a reimbursable expense because the cost will be recaptured when the improved property is sold. General construction items, such as repairs to the roof, electrical system, and exterior structure, are also not reimbursable unless specifically related to

© 1994-2025 California Department of Transportation. All rights reserved.

the operation of the machinery and equipment. Improvements to leased properties can lead to a misuse of the Reestablishment payment if the $33,200 is spent on improvements the landlord should make in order to lease the site, or because of agreements the displacee may have for a lower lease rate if improvements are made to the property.

The cost of constructing a new business building on the vacant replacement property is considered a capital expense, and as provided in 49 CFR 24.304(b)(1) is generally ineligible for reimbursement as a reestablishment expense. In those rare cases when a business cannot relocate without construction of a replacement structure, HQ can request a waiver (49 CFR 24.7) from FHWA.

10.05.15.01 Waiver for Certain Ineligible Reestablishment Expenses

Appendix A of 49 CFR 24.304(b)(5) allows requesting a waiver for certain ineligible expenses. The cost of constructing, reconstructing, or rehabilitating a replacement structure, is a capital expenditure, normally beyond the scope of §24.304(a)(2) and is generally ineligible for reimbursement as a reestablishment expense. In those rare instances when a business cannot relocate without construction, reconstruction, or rehabilitation of a replacement structure, an agency or recipient may request a waiver of §24.304(b)(5) under the provisions of §24.7. An example of such an instance would be in a rural area where there are no suitable buildings available and the new construction, reconstruction, or rehabilitation of a replacement structure is the only option that will enable the business to remain a viable commercial operation. If a waiver is granted, the cost of new construction, reconstruction, or rehabilitation of a replacement structure will be considered an eligible reestablishment expense subject to the regulatory limit on such payment.

In markets where existing and new buildings are available for rental (and sometimes for purchase), the buildings or the various units available within the buildings often have only the basic amenities, such as heat, light, water, and sewer available. These buildings or units are referred to as shells. The cost of constructing, reconstructing, or rehabilitating a shell is not an eligible reestablishment expense because the shell is considered a capital real estate improvement (a capital asset). However, this determination does not preclude the consideration by an agency of certain modifications to an existing replacement business building as reestablishment costs if the agency applies a waiver under §24.7.

© 1994-2025 California Department of Transportation. All rights reserved.

A certain degree of construction costs are generally expected by the market because shells are designed to be customized by the tenant. An agency using a waiver may determine costs for these types of improvements or modifications are eligible for reimbursement, up to the amount of $33,200. Such costs may include the addition of necessary facilities such as bathrooms, room partitions, built-in display cases, and similar items, if required by Federal, State, or local codes, ordinances, or simply considered reasonable and necessary for the operation of the business. By contrast, a structure or shell which is dilapidated or is in disrepair and which requires construction, reconstruction, or rehabilitation would not be eligible for reimbursement under this part.

10.05.16.00 Small Business In-Lieu Payment (49 CFR 24.305)

A small business displacee may be eligible to choose a fixed payment "in lieu" of the payments for actual moving and related expenses, and actual reasonable reestablishment expenses provided by 49 CFR 24.303 and 24.304.

The In-Lieu Payment for a small business or farm is based on the average annual net earnings and can range between $1,000 and $53,200.

The displaced business is eligible for the payment if:

1. The business owns or rents personal property, which must be moved in connection with such displacement and for which an expense would be incurred in such move; and the business vacates or relocates from its displacement property.
2. The business is not part of a commercial enterprise having more than three other entities which are not being acquired by the Department, and which are under the same ownership and engaged in the same or similar business activities.
3. The business is not operated at a displacement dwelling solely for the purpose of renting the property (improvements and/or land) to others.
4. The business contributed materially (see definitions at start of 10.05) to the income of the displaced person during the two (2) taxable years prior to displacement.

49 CFR 24.305(a)(2) states that a business cannot be relocated without a substantial loss of its existing clientele or net earnings. The Region/District will assume that all displacees automatically meet this criterion if the other four criteria are met. (49 CFR 24 Subpart D.)

© 1994-2025 California Department of Transportation. All rights reserved.

In determining whether two or more displaced legal entities constitute a single business that is entitled to only one fixed payment, all pertinent factors shall be considered, including the extent to which:

1) The same premises and equipment are shared;
2) Substantially identical or interrelated business functions are carried out and business and financial affairs are commingled;
3) The entities are held out to the public, and to those customarily dealing with them, as one business; and
4) The same person, or closely related persons own, control, or manage the affairs of the entities.

The RAP Agent should consider how the businesses share or separate their operation by looking at the name, purpose, customers, tax records, employees, licenses, permits, phone numbers, and office space.

Appendix A of 49 CFR 24.305(a) Business states that if a business elects the fixed payment for moving expenses (in lieu of payment) option, the payment represents its full and final payment for all relocation expenses. Should the business elect to receive this payment, it would not be eligible for any other relocation assistance payments, including actual moving or related expenses, or reestablishment expenses.

10.05.17.00 Farm Operation – In-Lieu (49 CFR 24.305[c])

The In-Lieu Payment for a farm operation is not based on the same criteria, calculations, and limitations as a small business except that they must have personal property that must be relocated from the displacement property to another location (not on the remainder). The other requirements that do not apply are as follows:

1. Farms are not subject to the required loss of substantial patronage (though the Department assumes this occurs for all other nonresidential displacees).
2. Farms are not subject to the multiple location requirement.
3. Fixed payments to farms are limited to the operations at the displacement property.
4. Farms must contribute materially to the operator's support, thereby eliminating home or hobby operations.

© 1994-2025 California Department of Transportation. All rights reserved.

In the case of a partial acquisition of land that was a farm operation before the acquisition, the fixed payment shall be made only if the Department determines that:

1) The acquisition of part of the land caused the operator to be displaced from the farm operation on the remaining land; or
2) The partial acquisition caused a substantial change in the nature of the farm operation in that it is no longer the same operation (e.g., there was a dairy operation at the displacement property, and the nonresidential displacee is operating a petting zoo at the replacement site).

Appendix A of 49 CFR 24.305(c) Farm operation states that if a farm operation elects the fixed payment for moving expenses (in lieu of payment) option, the payment represents its full and final payment for all relocation expenses. Should the farm elect to receive this payment, it would not be eligible for any other relocation assistance payments, including actual moving or related expenses, and reestablishment expenses.

10.05.18.00 Nonprofit Organization – In-Lieu (49 CFR 24.305[d])

The In-Lieu Payment for a nonprofit organization is based on the same criteria, calculations, and limitations as a small business, except that any payment in excess of $1,000 must be supported with financial statements for the two 12-month periods prior to the acquisition. The amount to be used for the payment is the average of two (2) years annual gross revenues less administrative expenses.

Per Appendix A of 49 CFR 24.305(d), gross revenues may include membership fees, class fees, cash donations, tithes, receipts from sales, or other forms of fund collection that enable the nonprofit organization to operate. Administrative expenses are those for administrative support such as rent, utilities, salaries, advertising, and other like items as well as fundraising expenses. Operating expenses for carrying out the purposes of the nonprofit organization are not included in administrative expenses. The monetary receipts and expense amounts may be verified with certified financial statements or financial documents required by public agencies.

The organization must have an exempt status with the State or Federal income tax office and must provide proof of its nonprofit status. It can obtain a certificate or other documentation from either the State of California Franchise Tax Board or the Internal Revenue Service.

© 1994-2025 California Department of Transportation. All rights reserved.

Appendix A of 49 CFR 24.305(d) states that if a nonprofit organization elects the fixed payment for moving expenses (in lieu of payment) option, the payment represents its full and final payment for all relocation expenses. Should the nonprofit organization elect to receive this payment, it would not be eligible for any other relocation assistance payments, including actual moving or related expenses, or reestablishment expenses.

10.05.19.00 Calculating the In-Lieu Payment (49 CFR 24.305[e])

The In-Lieu Payment is based on average annual net earnings for the last two years. If an in-lieu payment is made, no payment may be made for search costs, reestablishment expenses, actual moving costs, or actual direct loss of tangible personal property. If a business, farm, or nonprofit organization elects to take and is reimbursed for moving costs and later qualifies for an in-lieu payment, the amount of moving expenses previously paid must be deducted from the in-lieu entitlement.

The average annual net earnings of a business or farm operation are one-half of its net earnings before Federal, State, and local income taxes during the two (2) taxable years immediately prior to the taxable year in which it was displaced.

If the business or farm was not in operation for the full two (2) taxable years prior to displacement, net earnings shall be based on the actual period of operation at the displacement site during the two (2) taxable years prior to displacement, projected to an annual rate. The displacee shall furnish the RAP Agent with proof of net earnings through income tax returns, certified financial statements, or other reasonable evidence.

Average Annual Net Earnings – include any compensation the business (sole proprietor or partnership) paid to the owner, spouse, or dependents during the past two-year period. For a corporate owner of a business, earnings shall include any compensation paid to the spouse or dependents of the owner with an interest in the corporation. For the purpose of determining ownership, stocks held by a husband or wife and their dependent children shall be treated as one unit.

Compensation paid to the owner is not limited to wages and may include contributions the business makes to pension or profit-sharing plans on the owner's behalf.

© 1994-2025 California Department of Transportation. All rights reserved.

For any year that has a negative net income, including qualifying compensation (income) paid to the owners, the entitlement calculation will be based on zero for the year, rather than the negative amount.

Per Appendix A of 49 CFR 24.305(e), if the average annual net earnings of the displaced business, farm, or nonprofit organization are determined to be less than $1,000, even $0 or a negative amount, the minimum payment of $1,000 shall be provided (49 CFR 24.305[a]).

10.05.19.01 Using Alternate Tax Years to Calculate an In-Lieu Payment

If the net income of a displaced business is very low in one or both years prior to displacement, the payment can be based on a different time period of two consecutive years when the RAP Senior determines it to be more equitable, but not earlier than two years prior to the ION on the project.

Examples when the tax periods preceding displacement are not representative of the average annual net earnings are:

- During the second year, there was a period of negative income due to unseasonably bad weather or a natural disaster.
- The displacee has only been in business for two years and the first year's income is not indicative of current operations, or the business has only been in operation for a short period of time (e.g., six months). In this case, the existing net earnings income data would be extrapolated and used to project what the net earnings could have been if the business had been in business for a full two years. If the business is seasonal, this fact should be taken into account in the computations.
- Capital improvements or investments were made of such magnitude that it distorts the net earnings.
- The proposed project has caused so many residents to leave the area that the business' net income declines.

© 1994-2025 California Department of Transportation. All rights reserved.

10.05.19.02 Documentation from Displacee

The owner must submit a request to have their In-Lieu Payment calculated along with supporting documentation. The RAP Agent should ensure the displacee understands this payment is "in lieu" of all other moving payments.

Certified copies of Tax Returns for the last two years should include the Schedule C (Profit or Loss from Business or Profession) and either Form 1040 (Individual Tax Return for the owner and each corporate officer), Form 1065 (Partnership Tax Return for each partner) or Form 1120 (Corporate Tax Return), as appropriate.

Business owners seeking use of the alternate tax year provision must provide information to support their contentions. They must provide tax returns for the alternate two-year period, the two tax years immediately preceding the year of displacement, and any intervening years that document the decline in net income.

10.05.19.03 Processing the Request

The RAP Agent shall process the displacee's request for an In-Lieu Payment as follows:

1. Reviews the displacee's request for validity, and requests additional documentation to determine eligibility.
2. If displacee is deemed ineligible, rejects the request in writing, stating the reason for rejection and advises displacee of their appeal rights.
3. If the request is adequate, calculates the average annual net earnings for the last two taxable years (10.05.19.00). Completes the claim (RW 10-30) entering the amount of the payment.
4. Personally delivers the completed claim to displacee with a letter showing amount to be paid. Advises displacee that payment will be made after the property has been vacated – and only if no other moving expenses are claimed.
5. Verify the property is vacant.
6. After displacee signs the claim, processes it for payment. Returns income tax returns to displacee.

© 1994-2025 California Department of Transportation. All rights reserved.

10.05.19.04 Computing Average Annual Net Earnings

Examples of how to calculate the "Average Annual Net Earnings" are calculated as shown:

EXAMPLE A:

2010	$15,000	Schedule C
	$11,000	Individual 1040*
	$26,000	
2009	- $11,000	Schedule C
	$10,000	Individual 1040*
	- $ 1,000	
	Adjusted to zero	
2008	$15,000	Schedule C
	$ 3,000	Individual 1040*
	$18,000	

*Salary paid to owner, their spouse, and dependent children added here.

The RAP Senior determines the income from 2009 is not indicative of a normal year and uses 2008 as an alternate year.

The average of 2010 ($26,000) and 2008 ($18,000) is $22,000. The maximum allowable payment is $53,200.

EXAMPLE B:

2010	- $15,000	Schedule C
	$16,000	Individual 1040*
	$ 1,000	
2009	- $11,000	Schedule C
	$10,000	Individual 1040*
	- $ 1,000	
2008	- $10,000	Schedule C
	$18,000	Individual 1040*
	$ 8,000	

The RAP Senior determines the income from 2010 and 2009 is representative of the business' operation, even though the income the owner received in 2010 is greater than the business' loss. The higher amount in 2008 is a result of the owner taking a greater draw and should not be used as an alternative tax year.

The average of 2010 ($1,000) and 2009 (-$1,000 which is converted to zero) is $500. The maximum allowable payment is $1,000.

* Income from business in question.

© 1994-2025 California Department of Transportation. All rights reserved.

49 CFR 24.305(a)(6) requires that the business contribute materially to the income of the displaced person during the 2 taxable years prior to displacement. This does not mean that the business needed to be in existence for a minimum of 2 years prior to displacement to be eligible for this payment.

If a business has been in operation for only a short period of time (i.e., 6 months) prior to displacement, the fixed payment would be based on the net earnings of the business at the displacement site for the actual period of operation projected to an annual rate. If a business was not in operation for a full 2 years, the existing net earnings income data should be used to project what the net earnings could be if the business were in operation for a full 2 years. If the business is seasonal, the business' operating season net income represents the full annual income for the purposes of calculating this benefit.

For Example:
(1) Business in operation for only 6 months earned $ 10,000.
Computation: ($10,000/6) × 12 = $20,000 annual net earnings × 2 years = $40,000 divided by 2 = $20,000; Eligibility = $20,000. (Average annual net earnings.)

(2) Business in operation 18 months earned $20,000.
Computation: $20,000 divided by 18 months = $1,111 per month × 24 months = $26,664 divided by 2 years = $13,332; Eligibility = $13,332 (Average annual net earnings)

(3) Business is seasonal—open summer only for 4 months and earns $5,000.
Computation: $5,000 was the seasonal net earnings 1 year and $6,000 was the seasonal net earnings a second year. $11,000 divided by 2 = $5,500; Eligibility = $5,500. (Average annual net earnings)

© 1994-2025 California Department of Transportation. All rights reserved.

10.05.20.00 No Duplication of Payments (49 CFR 24.3)

Since Appraisal, Acquisition, and RAP are equally responsible for assuring that duplication of payments is avoided and that proper charges are made for Federal participation, a great deal of coordination among the functions is necessary. RAP Agents should be familiar with the Acquisition and Appraisal Chapters, which describe the duties assigned to the respective branches.

The RAP Agent must provide the Acquisition Agent with a completed RW 10-38 (internal Caltrans link) whenever an In-Lieu Payment has been made.

The subject of no duplicate payments may raise extremely complex issues. All explanations to displacees should be handled with care and caution since the potential for misunderstandings is extremely high.

10.05.21.00 Compensation for Loss of Goodwill

Goodwill is defined as the benefits that accrue to a business because of its location; reputation for dependability, skill or quality; and any other circumstances resulting in probable retention of old or acquisition of new patronage. Loss of Goodwill is paid as an acquisition expense, but some of the items considered in calculating a loss of goodwill may also be covered as a relocation expense. Therefore, the District must identify those cost elements of fixed moving costs (in-lieu payments), reestablishment expenses, and Loss of Goodwill payments that are paid, or would be paid, for the same purpose.

© 1994-2025 California Department of Transportation. All rights reserved.

10.05.21.01 Loss of Goodwill Procedures

A business, farm, or nonprofit organization must be informed that relocation payments are offset against any other similar payment made for Loss of Goodwill.

The RAP Agent should be aware that:

- A goodwill appraisal might be made prior to State's first offer or at some later date.
- Displacee may be eligible for payment of moving and related expenses (10.05.05.00) and reestablishment expenses (10.05.13.00) or a fixed payment in lieu of these two payments (10.05.15.00).
- Moving and related expenses may not be offset against Loss of Goodwill payments.
- Although the relocated parties generally must incur reestablishment costs before they are paid, some known costs, such as increased rent, may be paid prior to actual occurrence.
- If the Loss of Goodwill payment exceeds the in-lieu payment, displacee will only be eligible to receive compensation for Loss of Goodwill plus RAP payments for moving and related expenses.
- If a Loss of Goodwill payment has not been made and the payment to be made is less than the in-lieu payment, displacee has the option of receiving either the in-lieu payment or the Loss of Goodwill plus RAP payments for moving and related expenses and for reestablishment costs not included in the Loss of Goodwill payment.

The RAP Agent should carefully analyze proper and reasonable offset of RAP payments against Loss of Goodwill payments when a goodwill appraisal indicates a loss to the displaced business. The District must fully document all offsets in the parcel file.

© 1994-2025 California Department of Transportation. All rights reserved.

10.05.22.00 Notices to Acquisition

A business in-lieu payment may be made prior to payment of a claim for loss of business goodwill. Immediately after approving an in-lieu payment, the RAP Unit notifies Acquisition of the amount of the in-lieu payment, using RW 10-38, "Notice to Acquisition of In-Lieu Payment or Reestablishment Expenses" (internal Caltrans link).

A Business Reestablishment (10.05.13.00) may contain items that could be included in the preparation of an appraisal for Loss of Goodwill, thus the possibility of duplication of payment exists when a Loss of Goodwill payment is made. If reestablishment costs are reimbursed prior to the Loss of Goodwill payment, the RAP Unit notifies Acquisition that a reestablishment payment has been made, using RW 10-38, "Notice to Acquisition of In-Lieu Payment or Reestablishment Expenses" (internal Caltrans link), with RW 10-30 attached. This notice is made immediately after the District approves the reestablishment expense for payment.

Close coordination between RAP and Acquisition during all phases of a nonresidential relocation is essential. The RAP Agent should check with the Acquisition Agent to see if any loss of business goodwill claims have been paid to avoid duplicate payments.

10.05.23.00 Abandoned Personalty

If the nonresidential displacee abandons an item of personal property at the displacement site, the owner is not entitled to moving expenses or losses for the items involved. The displacee is not entitled to reimbursement for moving costs (including adjustments to move under 10.05.09.00) until all personal property has been removed from the displacement site. If property is abandoned, and the displacee will not remove it, then Property Management must be notified of the items and make arrangements for its disposal. The disposal costs cannot be deducted from the displacee's relocation benefits, nor can relocation benefits be denied for eligible expenses just because the displacee did not relocate all the personalty. See Property Management and/or Clearance and Demolition policies and procedures regarding disposal methods and recovering expenses from the owner.

© 1994-2025 California Department of Transportation. All rights reserved.

10.05.24.00 Hazardous Material

The following guidelines may be used to relocate hazardous materials that are considered personal property because of their nature and/or containment:

- The costs of analyzing contents of containers prior to removal from the displacement site are reimbursable moving expenses if required by regulation or under the rules of the disposal facility. The analysis should be a reasonable and necessary prerequisite for the move.
- The cost of insuring the shipment is a reimbursable expense.
- Eligible reimbursable moving expenses include the cost of shipping these materials from the displacement site to the replacement site or to the nearest approved disposal site, at displacee's option. The 50-mile limit may be waived, if necessary, under the authority of 49 CFR 24.301(g)(1).
- Fees charged at the disposal site are not federally participating moving expenses. The generator of the hazardous material has a continuing responsibility with respect to future requirements that may arise in conjunction with its storage or treatment. Since this liability was not caused by the Department's acquisition of real property, costs incurred as a result are not considered reimbursable moving expenses. The payment of fees at the disposal site may be a problem for some displacees, and they may decide to abandon the hazardous material. If this is a possibility, the RAP Unit should contact HQ RW as soon as possible.

10.05.25.00 Grace Period on Business Property

The DDC-RW can authorize grace periods to former owners or tenants of Department-acquired business properties in accordance with the following terms and conditions:

- Grace periods can be granted for an individual parcel, a portion of a project, or an entire project when businesses are undertaken in a market where replacements are difficult to find and orderly relocation creates a need to mitigate business disruption.
- Grace periods are normally a maximum of 60 days and may be shorter if warranted by circumstances.
- Displacees are not required to pay rent during the grace period if they have a commitment to pay rent on a replacement site and they have furnished proof of that obligation to the District.

© 1994-2025 California Department of Transportation. All rights reserved.

- The District shall verify the need for the grace period. The need is often related to refurbishment, move time, or equipment installation. Or the need could be time-oriented; e.g., a business might have a sales season during which relocation is impractical. A grace period that allows the owner to enter into a rental agreement on the replacement site, to be occupied later, may be justified.
- The specific time or dates of the grace period should be described in the Right of Way Contract or in Property Management's Rental Agreement.
- A business move grace period cannot be authorized on residential property even if the property is qualified for business in-lieu RAP payments.
- A grace period cannot be authorized on farms. Reduced rent or no rent policies on farmlands, granted or exchanged for other considerations (such as maintenance), are not affected by this business move policy.
- A grace period may be authorized on the business use portion of mixed-use properties. The displacee must pay reasonable rent on the nonbusiness portion.
- A grace period based on partial reductions may be used when appropriate. Partial reductions are applied if the business operator is moving to a place of business where rents are less than the existing State rental rate. (If State rent was $500 and replacement rent is $400, the State can allow a $400 per month grace on the State property.) Partial reductions could also be used if owner's move plan entails a phase-in period where the new and the old places of business are operated concurrently.
- Grace periods may be granted when a business owner acquires a site rather than leases. Time may be needed to close escrow, make modifications to the property, etc.

The District may determine that no reduction is practical when both the replacement site and the State site are producing significant incomes.

The RAP Unit has primary responsibility for administration of the grace period. RAP verifies the dual rent condition of the business and solicits proof of and amount of rent on the replacement site.

The RAP Agent shall advise Property Management by monthly memoranda on the status of the grace period. The RAP Senior must approve those memos, copies of which are retained in the RAP file. The RAP Agent shall make every effort to ensure the grace period is not erroneously extended beyond the time limits of this policy. The RAP Agent shall also communicate

© 1994-2025 California Department of Transportation. All rights reserved.

with Property Management to the fullest extent about expected grace periods and amounts of rental rates to be covered.

When mixed property grace periods are considered, the RAP Agent consults with Property Management on proper distribution of total rent. Property Management's determination controls the mixed-use property rent proration.

10.06.00.00 – REPLACEMENT HOUSING VALUATIONS

10.06.01.00 General (49 CFR 24.204[a])

No residential displacee shall be required to move unless at least one, preferably three, comparable replacement dwelling has been made available.

49 CFR 24.404(b) guarantees that "No person may be deprived of any rights the person may have under the Uniform Act or this part. The Agency shall not require any displaced person to accept a dwelling provided by the Agency under these procedures in lieu of any acquisition payment or any relocation payment for which the person may otherwise be eligible."

A comparable replacement dwelling will be considered to "have been made available" if the displacee has:

1. been informed, in writing, of its location (address), and the monetary entitlements available to help with the purchase or rental of the property.
2. sufficient time to negotiate and enter into a purchase agreement or lease for the property; and
3. been assured of receiving the relocation assistance and acquisition payment to which the person is entitled in sufficient time to complete the purchase or lease of the property.

The Department's obligation to provide replacement housing is met when comparable housing is made available to the displacee. Additionally, per 49 CFR 24.204(a), information on comparable replacement dwellings that were used in the determination process must be provided to permanently displaced persons. Once those conditions have been met, the Department can then proceed to issue Notices to Vacate.

The displacee is advised of the address of the comparable replacement properties via the Conditional Entitlement Letter (10-EX-45 for 90-day owners and 10-EX-40 for 90-day occupants), the 90-Day Information Notice, the 30-Day Notice, and the 90-Day Notice.

© 1994-2025 California Department of Transportation. All rights reserved.

Any available comparable used to determine a price/rental differential must be available at the listed price during the period displacee is actively seeking replacement housing. This period of active search ends when the earlier of the following dates occurs:

- Displacee enters into a contract to purchase (acceptance of Deposit Receipt), build, or rent a replacement property.
- Displacee vacates displacement property.

10.06.02.00 Criteria for Selecting Comparable Replacement Properties

The Agent assigned to complete a Replacement Housing Valuation (RHV) must have a thorough knowledge of the requirements for selecting a comparable replacement property. The RHV Agent should ensure that the most comparable of the three properties is Decent, Safe, and Sanitary (DS&S), comparable, and functionally equivalent. In order to do this, at a minimum, the most comparable property must be inspected for DS&S conditions (preferably all three). More information on this can be found in Appendix A of 49 CFR 24.403(a)(1).

10.06.03.00 Comparable Replacement Dwelling (49 CFR 24.2[a][6])

The term comparable replacement dwelling means the probable replacement residence is:

1. Decent, safe, and sanitary (10.06.05.00);
2. Functionally equivalent to the displacement dwelling (10.06.04.00);
3. Adequate in size to accommodate the occupants (see Room Division Guidelines);
4. In an area not subject to unreasonable adverse environmental conditions;
5. In a location generally not less desirable than the location of the displacee's dwelling with respect to public utilities and commercial and public facilities, and reasonably accessible to the place of employment;
6. On a site that is typical in size for residential development with normal site improvements, including customary landscaping. The site need not include special improvements such as outbuildings, swimming pools, or greenhouses (10.06.15.00);

© 1994-2025 California Department of Transportation. All rights reserved.

7. Currently available to the displaced person on the private market. However, a comparable replacement dwelling for a person receiving government housing assistance before displacement may reflect similar government housing assistance (10.04.17.00);
8. Within the financial means of the displaced person.

Only in unusual circumstances may a comparable replacement dwelling contain fewer rooms or less living space than the displacement dwelling. Such may be the case when a DS&S replacement dwelling, which by definition is adequate to accommodate the displacee, is functionally similar to a larger but run-down, substandard displacement dwelling. If the owner rents or leases a room(s) in the displacement dwelling to another party, there should be no reduction of rooms when considering a most comparable replacement dwelling for the owner.

10.06.04.00 Functionally Equivalent

49 CFR 24.2(a) "Comparable replacement dwelling"(ii) requires that a comparable replacement dwelling be "functionally equivalent" to the displacement dwelling. The dwelling should perform the same function and provide the same utility as the displacement dwelling. While it need not possess every feature of the displacement dwelling, the principal features must be present.

The physical characteristics of the comparable replacement dwelling may be dissimilar to those of the displacement dwelling, but they may never be inferior.

For example, if the displacement dwelling contains a pantry and a similar dwelling is not available, a replacement dwelling with ample kitchen cupboards may be acceptable. Insulated and heated space in a garage might prove an adequate substitute for basement workshop space. A dining area may substitute for a separate dining room. Under some circumstances, attic space could substitute for basement space for storage purposes, and vice versa.

Only in unusual circumstances may a comparable replacement dwelling contain fewer rooms or, consequentially, less living space than the displacement dwelling. Such may be the case when a DS&S replacement dwelling (which by definition is "adequate to accommodate" the displaced

© 1994-2025 California Department of Transportation. All rights reserved.

person) may be found to be "functionally equivalent" to a larger, but very run-down substandard displacement dwelling.

Comparability and functionally equivalent do not mean that all aspects of the displacee's lifestyle be replaced, e.g., a rental unit that will accept 14 cats or a single-family residence designed for entertaining. However, special consideration should be given to residences that provide the displacees with unusual views (noted in the market, but an allowable deduction as a major exterior attribute – per FHWA) and easy access (level driveways, or a single story).

10.06.05.00 Decent, Safe, and Sanitary Dwelling (49 CFR 24.2[a] "Decent, Safe, and Sanitary [DSS] Dwelling")

The term "decent, safe, and sanitary dwelling" means a dwelling which meets applicable housing and occupancy codes. Displacees shall not be relocated to inadequate, substandard housing as a consequence of public acquisition.

The most restrictive standard (local code or above) applies. Agencies which may have applicable housing and occupancy codes include city/county planning departments, city/county departments in charge of building permits or inspections, or city/county housing authorities. Absent any local requirements, the dwelling shall:

1) Be structurally sound, weather tight, and in good repair.

2) Contain a safe electrical wiring system adequate for lighting and other devices.

3) Contain a heating system capable of sustaining a healthful temperature (approximately 70 degrees) for a displaced person, except in those areas where local climatic conditions do not require such a system.

4) Be adequate in size with respect to the number of rooms and area of living space needed to accommodate the displaced person. (See Room Division Guidelines.)

© 1994-2025 California Department of Transportation. All rights reserved.

5) There shall be a separate, well-lighted and ventilated bathroom that provides privacy to the user and contains a sink, bathtub or shower stall, and a toilet, all in good working order and properly connected to appropriate sources of water and to a sewage drainage system. Though there is no requirement as to the number of people that can share a bathroom, the RHV Agent should reconsider using a residence with only one bathroom for an eight-member household.

6) There shall be a kitchen area that contains a fully usable sink, properly connected to potable hot and cold water and a sewage drainage system, and adequate space and utility service connections for a stove and refrigerator. Some local code standards for occupancy do not require kitchens. However, selection of comparable dwellings that provide a kitchen is recommended. The FHWA believes this is good practice and, in most cases, should be easily achievable. If the displacement dwelling had a kitchen, the comparable dwelling must have a kitchen. If the displacement dwelling did not have a kitchen but local code standards for occupancy require one, the comparable dwelling must contain a kitchen. If the displacement dwelling did not have a kitchen and local code standards for occupancy do not require one, an agency does not have to provide a kitchen in the comparable dwelling. If a kitchen is provided in the comparable dwelling, at a minimum, it must contain a fully usable sink, properly connected to potable hot and cold water and a sewage drainage system, and adequate space and utility service connections for a stove and refrigerator.

7) Contain unobstructed egress to safe, open space at ground level unless local fire and building codes require additional methods of ingress/egress such as access to a common corridor.

8) For a displaced person with a disability, be free of any barriers which would preclude reasonable ingress, egress, or use of the dwelling by such displaced person (see 10.06.06.00).

Replacement housing must be permanent. Relocations shall not be made into dwellings that are presently or soon-to-be owned by the Department or another public agency and are to be removed for a public project.

© 1994-2025 California Department of Transportation. All rights reserved.

Many local housing and occupancy codes require the abatement of deteriorating paint, including lead-based paint and lead-based paint dust, in protecting the public health and safety. Where such standards exist, they must be honored. Even where local law does not mandate adherence to such standards, FHWA strongly recommends that these issues be considered as a matter of public policy. This Department will arrange for the inspection of lead-based paint for all previously occupied replacement dwellings as appropriate.

The following guidelines are used to judge if the replacement dwelling contains an adequate number of rooms for DS&S purposes.

IMPORTANT: The number of bedrooms required for a family is normally based on family size at the time of initiation of negotiations. An increase in family size after that date may require a replacement dwelling with additional bedrooms in order to meet DS&S standards at time of actual displacement. The need for a larger dwelling should only be considered when the family results from natural or adoptive children increase (not considering future births or adoptions) or other new family members in a clear dependency relationship, such as elderly or invalid parents who must live with the displaced family.

When the size of the family falls below the count made at initiation of negotiations, a smaller dwelling may still meet DS&S standards. However, the Department cannot require a displacee to relocate to a dwelling smaller than the one occupied at initiation of negotiations, nor can it consider smaller dwellings as comparable replacements for computing the amounts of differential payments.

If the inspection reveals a possible concern with mold, lead paint, hot water heater strapping, or other local code requirement, the agent should indicate on the report form (RW 10-40) that additional inspections by qualified persons are recommended.

© 1994-2025 California Department of Transportation. All rights reserved.

10.06.05.01 Waiver of Decent, Safe, and Sanitary Standards

The DS&S standard may be waived where unusual conditions exist, and at the request of the displacee. Such waivers require FHWA preapproval, processed through HQ RW RAP.

Whenever waivers are requested (e.g., insufficient bedroom facilities at present, but displacee plans to construct additional living area), complete documentation is required and is retained in the Region/District RAP file. This includes having the displacees sign affidavits acknowledging the waiver request and setting forth remedial plans to assure ultimate compliance of occupancy in DS&S housing.

If a waiver is granted for the displacees to have fewer bedrooms than is required by this section, then the RHV must be revised to consider comparable replacement properties that have fewer bedrooms.

Example: Displacees must have four (4) bedrooms in the replacement property to meet DS&S requirements because there are seven (7) occupants. However, the displacees have requested a waiver of DS&S standards to relocate into a three (3)-bedroom property. If this waiver is granted, the RHV must be revised to consider three (3)-bedroom properties.

Before displacees request waivers for the number of bedrooms, they must be advised that their RHP may be reduced.

ROOM DIVISION GUIDELINES

- A maximum of two persons may occupy a zero-bedroom unit such as a studio apartment.
- For units larger than zero-bedroom units, two persons per bedroom shall be used as a guideline in determining the number of bedrooms required for replacement housing. More than two persons may occupy a bedroom provided the room is adequate in size to accommodate normal bedroom furnishings for the room occupants (e.g., three toddlers in a larger bedroom, an infant in the bedroom with the parents).

© 1994-2025 California Department of Transportation. All rights reserved.

- One person may qualify for a separate bedroom if that person is disabled or incapacitated and requires additional space for medical equipment or maneuverability.
- If applicable housing and occupancy codes for the area of the comparable replacement require a greater number of bedrooms for the household than indicated by the above guidelines, the greater number of bedrooms according to code should be used in the replacement housing valuation. (E.g., children that are wards of the court, or some other jurisdiction, may be required to have a separate bedroom from adults or other children of a different gender.)
- Dwellings with less square footage and/or fewer number of rooms than the displacement dwelling should not be used as comparables. However, if a displacee is relocating to subsidized housing, occupancy standards of the housing authority issuing the subsidy shall be used to determine the number of rooms required.

49 CFR 24.2(a) "Comparable replacement dwelling" (ix) states that Section 8 provisions on the number of bedrooms required for the size and composition of the displacement household prevail when determining a comparable replacement property, even if the number of bedrooms is less than the displacement property. If the displacees choose to move from nonsubsidized housing to subsidized housing, the RHV will be based on the occupancy requirements for subsidized housing.

49 CFR 24.2(a) "Decent, safe, and sanitary (DSS) dwelling" (iv) states that the number of bedrooms for a replacement property may be established by a federal, state or local jurisdiction that has the authority over the displaced residential occupants (requiring children of a certain age be separated from another because of age or gender).

NOTE: At the time of this revision, Federal Housing Administration (FHA), Housing and Urban Development (HUD), and Fair Employment and Housing Act (FEHA), all stated in their guidelines that separation by age and gender was discriminatory, and agencies could not mandate households separate their members by age and/or gender.

© 1994-2025 California Department of Transportation. All rights reserved.

10.06.06.00 Barrier Free Housing (49 CFR 24.2[a] "Decent, Safe, and Sanitary [DSS] Dwelling" [vii])

Regulations provide sufficient flexibility when computing replacement housing payments when accommodations need to be provided for a displaced person with disabilities. (See 10.06.05.00 – Item 7.)

The Department's procedures ensure that needs of a displaced person with disabilities are addressed in the RHV.

The Region/District may base the RHV on (1) a dwelling designed for physically disabled persons, or (2) the additional estimated costs to make needed modifications. Whichever method is used, the displacee must be presented with a home that is suitable to their disability needs, and that the PD is based on a comparable replacement property that is barrier free. Method (2) ensures there are limits in the amount of funds the Department will provide in order to acquire and rehabilitate a property to accommodate the displacee's physical limitations.

Customized features contained in the subject, or required in the replacement (e.g., ramp, widened doorways, bathtub railings, and lowered counters), may be replaced in the replacement property as add-ons.

Arrangements for modifications to the replacement dwelling purchased by the displaced person must be made by the displacee. The Region/District shall reimburse the displacee for the actual reasonable costs paid for those modifications up to the spend-to-get limit.

Rental replacement housing could be provided in the same manner, with the consent of the landlord, or the Rent Differential could be increased to appropriately compensate the landlord for any necessary modifications or accommodations necessary for the replacement property to be considered DS&S.

NOTE: Construction of handicapped access is not a moving cost.

If a financial hardship would be created for the displaced person, the RAP Senior could provide an advance replacement housing payment for the needed modifications.

© 1994-2025 California Department of Transportation. All rights reserved.

49 CFR 24 requires the replacement property accommodate the displacee's needs in terms of unit size, location, access to services and amenities, reasonable ingress and egress, or use of the unit. 49 CFR 24.2(a) "Decent, safe, and sanitary (DSS) dwelling" (vii) also addresses the needs of persons with a physical impairment that substantially limits one or more of the major life activities of such individuals. The needs of nonphysical disabilities are not addressed since replacement property attributes cannot be identified.

Reasonable accommodation should include the following at a minimum: Doors of adequate width, ramps or other assistance devices to traverse stairs and access bathtubs, shower stalls, toilets and sinks; storage cabinets, vanities, sink and mirrors at appropriate heights. Kitchen accommodations will include sinks and storage cabinets built at appropriate heights for access, and other items that may be necessary, such as physical modification to a unit, based on a displaced person's physical needs.

Requirements include but are not limited to the Fair Housing Act (FHA), 42 U.S.C. 3604 (f)(3)(A)-(C), and/or HUD's regulations for newly constructed assisted housing under section 504, 24 CFR 8.22.

© 1994-2025 California Department of Transportation. All rights reserved.

10.06.07.00 Cost of Comparable Replacement Dwelling (49 CFR 24.402[a])

The upper limit of a replacement housing payment (Price Differential or Rent Differential) shall be based on the cost of a comparable replacement dwelling, considering the following:

1. If available, at least three comparable replacement dwellings shall be examined and the payment computed on the basis of the dwelling most nearly representative of, and equal to, or better than, the displacement dwelling.
2. If the site of the comparable replacement dwelling lacks a major exterior attribute of the displacement dwelling site (e.g., the site does not contain a swimming pool), the value of such attribute shall be subtracted from the acquisition cost of the displacement dwelling for purpose of computing the payment.
3. If the acquisition of a portion of a typical residential property causes the displacement of the owner from the dwelling and the remainder is a buildable residential lot, the Department may offer to purchase the entire property. If the owner refuses to sell the remainder to the Department, the fair market value of the remainder may be added to the acquisition cost of the displacement dwelling for purposes of computing the replacement housing payment.
4. To the extent feasible, comparable replacement dwellings shall be selected from the neighborhood in which the displacement dwelling was located or, if that is not possible, in nearby or similar neighborhoods where housing costs are generally the same or higher.

© 1994-2025 California Department of Transportation. All rights reserved.

10.06.08.00 Determining the Cost of Comparable Replacements

Requires knowledge of:

- Characteristics of the displacement dwelling so it can be compared with replacement dwellings for sale or rent in the market.
- Number of eligible occupants occupying the displacement dwelling.
- Multiple occupancy rule (separating into separate households). (10.04.30.00 and related sections)
- Definition of comparable replacement dwelling (10.06.03.00) and DS&S dwelling (10.06.05.00).
- Policy on mixed-use properties (10.04.29.00).
- Definition of "major exterior attribute" (10.06.15.00 and 10.06.15.01) and how this affects the determination of the cost of comparable replacement dwelling.

10.06.09.00 Other Considerations

RAP valuations are always based on the original or primary status of displacees as found (e.g., owner). Calculations of alternate benefits are normally not made unless the following conditions are met:

- Displacee requests a change of status from owner to tenant.
- Dwellings are available in the alternate status.
- Such dwellings can be provided at no greater cost to the Department (i.e., more economically) than maintaining the original or primary status.

Alternative RAP valuations must be accompanied by a concurrent primary valuation to support the "no greater cost" of the alternate.

(See 10-EX-29 – FHWA Guidance on RHVs.)

© 1994-2025 California Department of Transportation. All rights reserved.

10.06.10.00 Partial Acquisitions

The requirements for computing a replacement housing payment of a partial acquisition with a remaining uneconomic remnant differ from a partial acquisition with a remaining buildable lot.

If the remaining property is an uneconomic remnant (7.03.04.01 and 7.03.04.02), FHWA requires the Department to make an offer to acquire it. The value of the remnant cannot be used in the RHP computation unless the owner elects to sell it to the Department.

EXAMPLE: Uneconomic Remnant

Owner Wishes to Sell:

Cost of Comparable	$80,000
Less: Acquisition Cost of Displacement Property	- $50,000
Less: Value of Uneconomic Remnant	- $10,000
Equals: Price Differential	= $20,000

Owner Does Not Wish to Sell:

Cost of Comparable	$80,000
Less: Acquisition Cost of Displacement Property	- $50,000
Equals: Price Differential	= $30,000

Note: The Department can condemn excess property if the appraisal supports the premise that the remainder is uneconomic in the market.

If the Department determines that the remainder has economic value to the owner, 49 CFR 24.403(a)(3) allows the Department the flexibility in determining whether to buy it or not. If the Department offers to acquire it, its value may be included in the RHV computation, regardless of the owner's acceptance or rejection. However, if the Department does not offer to acquire it, the value of the remainder may not be used in the RHV computation. (See Section 07.03.04.03.)

© 1994-2025 California Department of Transportation. All rights reserved.

10.06.10.01 Additional Guidance on Remainders

Appendix A regarding 49 CFR 24.403(a)(3) states:

The economic value to the owner of a remainder may be as an actual buildable lot for sale to an adjoining property owner, or for some other purpose for which the agency attributes an economic value to the owner. When allowed for under applicable law, a single offer that includes the value of the remainder property should be made. The purpose of making an offer to purchase the remainder is to allow for an RHP calculation and benefit determination that includes the value of the remainder as part of the compensation offered to the owner for acquisition, whether the property owner sells the remainder or chooses to retain it. Should a property owner decide to retain a remainder, then he would be responsible for the value of the remainder when he purchases his replacement property. Example B of this section shows the effect that a property owner's decision to retain a remainder or a State's inability to, or election not to, make an offer to purchase the remainder would have on the calculation of benefits.

The price differential portion of the replacement housing payment would be the difference between the comparable replacement dwelling and the agency's highest written acquisition offer. In the following examples, the before value of the typical residential dwelling and lot is $180,000; the remnant is valued at $15,000, the part needed for the project (including the dwelling) is valued at $165,000, and the comparable replacement dwelling is valued at $200,000. The price differential would be calculated as follows in the two scenarios:

© 1994-2025 California Department of Transportation. All rights reserved.

Example A: Agency Offers to Acquire Remainder

Comparable Replacement Dwelling		$200,000
Before value of parcel	$180,000	
Minus: Remainder Value	$15,000	
Acquisition of Part Needed	$165,000	
Agency's highest written offer		$180,000
Price Differential Payment Eligibility		$20,000

Example B: Agency Does Not Offer to Acquire Remainder

Comparable Replacement Dwelling		$200,000
Before value of parcel	$180,000	
Minus: Remainder Value (owner retains)	$15,000	
Acquisition of Part Needed	$165,000	
Agency's highest written offer for part needed		$165,000
Price Differential Payment Eligibility		$35,000

10.06.11.00 Last Resort Housing

The initial or updated RHV often provides the first indication, in terms of money, that a displacee falls under last resort housing procedures.

If the amount of the entire PD or RD exceeds LRH limits, FHWA allows alternate methods in the selection of comparable replacement properties if they are more cost-effective. Example: Instead of using a higher priced six-bedroom dwelling, it may be more cost-effective to consider a five-bedroom property and add the cost to construct a sixth bedroom. This would also apply to rehabilitating a non-DS&S dwelling that is available on the market, rather than selecting a superior property as to size, cost, and condition.

© 1994-2025 California Department of Transportation. All rights reserved.

10.06.12.00 Replacement Housing Valuation Report (RHV)

A Replacement Housing Valuation (RHV) Report is prepared for each residential household that will be displaced by the project. The request is generated by the Request for an RHV prepared by the agent who conducted the First RAP Call and submitted directly to the RHV Senior or through the RAP Senior. The report should not be initiated until the RHV Senior verifies the number of occupants that are eligible for relocation benefits based on tenure and U.S. residency. In some cases, the RHV for an RD is not requested until the displacees have advised the RAP Agent that they are ready to search for a replacement property. Care should be taken to ensure the average monthly rent is based on the last three months, even if the displacees are now tenants of the State's property.

The RHV Senior and RAP Senior should agree on a time frame for the delivery of the report based on the displacee's needs and the project schedule.

The report shall contain:

- Certification of person preparing report and approval by the Senior Reviewer.
- A description page for the displacement dwelling, including photographs and an analysis of adjustments to the acquisition price.
- A description page for each comparable replacement dwelling, including photographs.
- A map showing location of displacement dwelling and comparable replacement dwellings.

The RHV Agent should obtain a copy of the Fair Market Value (FMV) appraisal to obtain data on the displacement property, but care should be taken when counting the number of rooms in the property.

© 1994-2025 California Department of Transportation. All rights reserved.

10.06.12.01 Date of Valuation

An eligible displacee has one year to purchase or rent and occupy a DS&S replacement property (10.08.02.00). The date displacee purchases, contracts to build, or rents and occupies permanent DS&S replacement property, establishes the final date of value for the RHP.

If a 90-day owner-occupant vacates the displacement property within the one-year time period but does not purchase and occupy or otherwise contract for permanent DS&S accommodations, displacee is entitled to an updated replacement valuation any time during the one-year period but only if the displacee cannot purchase or rent a comparable DS&S property for the value of the RHV. When updating the RHV after displacement, do not consider any changes to income or number of occupants that might have occurred since the one-year time began.

90-day occupants and non-tenured occupants have one year from vacating the displacement property to have the RHV updated.

10.06.12.02 Report Revisions

The RHV does not need to be revised unless the displacee and/or the RAP Agent determine that the comparable replacement properties are no longer indicative of market value or are not available to the displacee who is actively looking for a replacement site.

The RAP Agent must note in the file when the RHV is determined to be valid or when a revision is warranted.

Typical examples of when an RHV may need to be revised:

- Acquisition appraisal is revised.
- Number of occupants or eligibility of displacee(s) changes (prior to the start of the one-year time period).
- Initial determination was based on erroneous information.
- Prior to service of a RAP Notice.
- A change in market conditions warrants a revision.
- Displacee has filed a relocation appeal objecting to the amount of the RHP.

© 1994-2025 California Department of Transportation. All rights reserved.

All rental offers are conditional upon displacee's action, usually within 90 days. Upon expiration of this period, the displacee must be given an updated determination if they are actively seeking replacement housing.

10.06.12.03 Preparation of the Replacement Housing Valuation

Replacement Housing Valuations (RHVs) must be prepared by someone other than the FMV appraiser, and usually someone other than the Acquisition or RAP Agent involved in the parcel, unless the RHV will be less than $10,000.

Preparation of the RHV

Initial – within 30 days of:

- The FWO for 90-Day Owner-Occupants.
- The First RAP Call for 90-Day Occupants, unless required documentation to establish base monthly rent (income, utility costs, or rental rates) or number of occupants (occupancy certifications and U.S. residency) has not been received.

Revisions (prepare new report) and updates (ensure comps are still appropriate) are required when:

- 90-Day Occupant (tenant or owner) advises the RAP Agent that they are actively seeking a replacement property, and they have not vacated from the displacement property.
- The real estate market has changed significantly indicating that replacement properties will cost more or less than previously calculated, and the displacee has not vacated.
- Displacee files an appeal on the RHP.
- Prior to issuing a Notice.
- Annually from the FWO if the displacees have not vacated.
- The displacee has vacated, but cannot purchase or rent a replacement property within the one-year time period because of values.
- 90-Day Occupants have been State tenants for over three months and have not actively sought a replacement property.

© 1994-2025 California Department of Transportation. All rights reserved.

Revisions or updates based solely on changes to income, occupancy, or a recent rental increase are not appropriate.

Decreases in the RHP (PD or RD) are not appropriate unless the Region/District can document that the displacee has made little or no effort to acquire a replacement property after a reasonable period of time.

10.06.12.04 Approval of the Replacement Housing Valuation – Dual Roles

The same Senior RW Agent may:

- Review and approve the FMV appraisal and RHV on the same dwelling if that Senior does not also have overall RAP responsibility, in accordance with delegations.
- Review and approve the RHV and be responsible for the RAP function if that Senior does not have responsibility for the FMV appraisal, in accordance with delegations.

10.06.12.05 Approval of the Replacement Housing Valuation – Authority

Replacement Housing Valuations shall be approved in accordance with the RAP statewide delegations. The Senior Agent approving the RHV may need to conduct a field review of the displacement property and all the comparable properties included in the valuation prior to approving the report.

The Agent who prepares the RHV (RHV Agent) and the Senior Agent who approves the RHV (RHV Senior) shall sign RW 10-42 (internal Caltrans link).

© 1994-2025 California Department of Transportation. All rights reserved.

10.06.12.06 Completing the Report

An RHV report is completed on RW 10-42 (internal Caltrans link) which includes the certification by the preparer and the approver. The displacement property information is found on page 2 and the comparable replacement property information is on the remaining pages.

An original photograph of the displacement property and each probable comparable replacement property must be attached to the report, along with a map depicting the location of the properties.

Selection of the most comparable property must be in compliance with this section and 49 CFR 24.204.

Per 49 CFR 24.204(a), information on comparable replacement dwellings that were used in the determination process must be provided to permanently displaced persons.

10.06.13.00 Valuation Method

The RHV Agent determines the probable purchase or rental amount of a comparable replacement property by analyzing at least three comparables that are available for sale or rent. Less than three comparables may be used only when three are not available, in which case an explanation is given on the valuation sheet.

The selected comparables must be those most nearly comparable to and at least equal to or better than the displacement property. Particular attention to living area and functional equivalency is necessary for all comparable dwellings selected (10.06.04.00).

The replacement value shall be the probable sales price or rental rate of an available property most comparable to the displacement property. The reasons for choosing the most comparable property are shown on the valuation sheet.

© 1994-2025 California Department of Transportation. All rights reserved.

Where there are no directly comparable units available, the RAP Agent shall consider the following in selecting a replacement property:

- Rehabilitation of or additions to an existing replacement dwelling.
- Relocation and rehabilitation, if necessary, of an existing dwelling.
- Use of the next highest value residential unit available.
- Use of similar properties in a higher value neighborhood.

Reasonable cost should be a consideration in implementing any alternatives.

10.06.14.00 Selection of Comparables

Under Appendix A, section 24.205(c)(2)(ii)(C), where feasible, comparable replacement housing must be inspected. The comparable replacement dwellings should be inspected by a walk through and physical interior and exterior inspection before being offered to a displaced person. Reliance on an exterior visual inspection or examination of a multiple listing service (MLS) listing, in most cases, does not constitute a complete DSS inspection. If an inspection is not possible, the displaced person must be informed in writing that an inspection was not possible and be provided an explanation of why the inspection was not possible. They also must be informed in writing that if the uninspected comparable is selected as a replacement dwelling, a replacement housing payment may not be made until the replacement dwelling is inspected and determined to be decent, safe, and sanitary. Should the selected comparable later be found to not be DS&S, then the agency's policies and procedures must ensure that the requirements of §24.2(a), definition of decent, safe, and sanitary dwelling, are met. If the agency does not recalculate the eligibility in these instances, FHWA does not believe that the requirement to ensure comparable housing is made available to the displaced person can be met.

This means that the RHV Agent should personally inspect the displacement dwelling unit, both inside and out, to assure the proposed replacement properties are comparable and meet the standard of equal to or better. In addition to a brief description of condition, quality, and effective age of the unit, the Improvement Remarks Section of RW 10-42 (internal Caltrans link) should contain brief descriptive terms necessary for the RHV Senior to understand special or unusual features found in the displacement dwelling unit. A remark may also be appropriate where the displacement dwelling unit has a special feature (e.g., large kitchen, hardwood floors, built-in furniture, or luxury decoration). Conversely, a remark should be made where

© 1994-2025 California Department of Transportation. All rights reserved.

the subject lacks usual items (e.g., an unfinished room, unusually poor condition, or dirt floors).

An analysis of the displacement neighborhood is needed if the proposed comparable properties are not within the same neighborhood. Public and private facilities that are significant amenities to the displacement neighborhood should be identified and considered in selecting the comparable replacement neighborhood. Particular attention should also be paid to displacee's place of employment or other location upon which displacee may depend.

The RHV Agent cannot adjust the asking price of a comparable replacement property when computing the replacement housing payment. This procedure was deleted from the Final Rule issued January 4, 2005, so there is no longer any authority or basis for agencies to make adjustments which would reduce the amount of the homeowner's replacement housing payment.

The comparable unit chosen for the calculation of the RHP should be physically inspected inside and outside. Proposed Comparable Replacement Dwelling data shall be entered on RW 10-42 (internal Caltrans link) in sufficient detail to allow any reviewer to readily compare all descriptions of the comparable replacement dwelling to those of the displacement dwelling. All features lacking in the comparable dwelling as compared to the displacement dwelling and all features found to be in addition to those in the displacement dwelling shall be described. Additional data sheets may be used. The comparable replacement dwelling should usually be chosen from an area of equal or higher value, although a dwelling that is somewhat smaller [50-75 sq ft (15-23 sq m)] but is modern and functionally equivalent may be chosen to replace an old, dilapidated dwelling (10.01.09.03).

To the extent possible, an investigation should be made of the special features of the displacement dwelling, the surrounding neighborhood, and the overall environment.

NOTE: The Region/District is responsible to provide reasonable comparable replacement dwellings to the residential displacee. The Region/District is not obligated to replace multi-use amenities that the displacement property might contain, such as in the case of residential properties that have rental units attached or built on the property (e.g., an apartment over the garage).

© 1994-2025 California Department of Transportation. All rights reserved.

As part of the Advisory Assistance and as a service to the displacee, the District should identify other similar use properties that are available to the displacee. However, from a valuation and replacement standpoint, the pertinent comparables should only reflect a reasonable replacement of displacee's basic dwelling unit. Availability of similar mixed-use or multi-use properties does not constitute an offer of available replacement property under the requirements of the Uniform Act. The displacee's residential portion must be carved out.

There are three types of adjustments that could be made to the displacement property: Major Exterior Attributes (10.06.15.00), Carve-out for Mixed or Multiple Uses (10.06.16.01), and Carve-out for a Dwelling Site (Oversized Lot) (10.06.17.00).

An adjustment to the replacement property may include construction costs to correct minor DS&S deficiencies (including handicapped facilities).

The RHV Agent should exercise good judgment when selecting comparable properties and remember to be prudent and economical when attempting to replace all aspects of the displacement property's amenities. 49 CFR 24 states that a comparable property is in a neighborhood "not less desirable," not necessarily the same neighborhood.

10.06.15.00 Major Exterior Attributes (49 CFR 24.403[a][2])

When the site of the comparable replacement dwelling lacks a "major exterior attribute" of the displacement dwelling site, the contributory value of such attribute should be subtracted from the acquisition cost of the displacement dwelling for purpose of computing the maximum replacement housing payment. Such an action is known as a carve-out.

There are three key issues in this statement. First, the carve-out is initially based on the comparable replacement, e.g., the first priority is to locate an available replacement dwelling comparable to the displacement dwelling, then look at the differences that could necessitate a carve-out.

The second issue is that for an item to be eligible to be a "carve-out," it must be exterior to the residential dwelling. Items that are part of the dwelling but may be difficult to replace are not items that are eligible for a carve-out.

© 1994-2025 California Department of Transportation. All rights reserved.

The final issue is that when subtracting from the acquisition cost for a carve-out item, the monetary figure to be used is the contributory value of the items. The item that is carved out should be of some significant value to warrant a carve-out. Not every exterior item needs to be carved out.

Per Appendix A of 49 CFR 24.403(a)(2), examples of such major exterior attributes may include land in excess of that typical in size for the neighborhood, a swimming pool, shed, or garage. Use of a carve out allows agencies to ensure comparable dwellings are available to the displaced person. The displaced person has received just compensation for the carved out attribute and may decide to use that compensation to replace the attribute. However, it should be noted that some carved out attributes, acreage as one example, cannot always be replaced in the immediate market, and a displaced person may then have to decide whether they want to expand their search area and reconsider their desired replacement home location.

10.06.15.01 Carve-out for Major Exterior Attributes

The comparable replacement dwelling used in computing the RHP must be comparable to the displacement dwelling unit. When the comparable used in computing the PD is similar except it lacks a major exterior attribute (such as a swimming pool or outbuilding) that contributes materially to the value of the displacement unit, the contributory value of the major attribute is subtracted from the total acquisition price of the displacement dwelling to arrive at the value of a comparable dwelling and home site. The RHP is the difference between the adjusted value of the displacement dwelling (displacement value) and home site and the price of a comparable dwelling (replacement value) and home site.

Items of realty identified in the appraisal report contributing less than $500 to the value of the entire property shall not be carved out from the displacement property value.

© 1994-2025 California Department of Transportation. All rights reserved.

10.06.16.00 Computing a Replacement Housing Payment When a Higher and Better Use is Indicated

In computing a replacement housing payment for an owner-occupant whose residential property is appraised at a higher and better use (land as if vacant), use the acquisition cost for the land area that represents a typical lot size plus the contributory value of the owner-occupied dwelling as shown in the FMV appraisal. (49 CFR 24 Non Regulatory Supplement.) Examples of calculations under Appendix A of 49 CFR 24.403(a)(2) are as follows:

Example A – RHP Computation for Carve Out of a Major Exterior Attribute of a Displacement Property's Land in Excess of a Typical Lot:

Value of residential displacement real property on a larger lot than typical site for the neighborhood	$200,000
Minus the value of displacement property's land in excess of a typical site & not in comparable housing	$ 15,000
Adjusted value of the displacement real property less carve out of the excess land	$185,000
List Price of the Selected Comparable Housing	$210,000
Minus the adjusted value of the displacement real property resulting from carve out of the excess land	$185,000
Replacement Housing Payment Price Differential Payment Eligibility	$ 25,000

Example B – RHP Computation for Carve Out of a Major Exterior Attribute of Displacement Property's Inground Swimming Pool:

Value of residential displacement real property with an inground swimming pool	$250,000
Minus the contributory value of displacement property's inground swimming pool not in the comparable	$ 14,000
Adjusted value of the displacement real property less carve out of the inground swimming pool	$236,000
List Price of the Selected Comparable Housing	$245,000
Minus the adjusted value of the displacement real property less the inground swimming pool carve out	$236,000
Replacement Housing Payment Price Differential Payment Eligibility	$ 11,000

© 1994-2025 California Department of Transportation. All rights reserved.

10.06.16.01 Carve-Out for Mixed-Use and Multiple Use Properties

Special procedures are required when the displacement property is not a typical residential unit. A special valuation approach is used to isolate the residential value in a property that possesses more than just a single residential use.

If the displacement dwelling is part of a property that contains another dwelling unit and/or space used for nonresidential purposes, there must be an allocation of the acquisition price of the displacement property to the isolated residential use. This is known as a carve-out. The residential land area is determined by inspection. For example, on a farm, include the footprint of the house and any outside areas dedicated to the residential use.

The way in which the land value is allocated will depend on whether the displacement dwelling is situated on land with a residential highest and best use, or on land with a nonresidential highest and best use. The entitlement or RHP is based on the amount actually paid for the residential portion.

If the Highest and Best Use is residential, determine the land area occupied by the residential use. Then apply the residential land value (site value) from the FMV appraisal to the land area occupied by the residential use. Last, add the contributory value of the residential improvements from the FMV appraisal.

If the Highest and Best Use is nonresidential, determine the land area occupied by the residential use. Apply the nonresidential land value from the FMV appraisal (the amount actually paid) to the land area occupied by the residential use. Where the dwelling is located above or below the other use (vertical configuration), the land value must be prorated between the uses. See 10-EX-19, Example #3. Add the contributory value of the residential improvements from the FMV.

© 1994-2025 California Department of Transportation. All rights reserved.

10.06.17.00 Carve-Out for Dwelling Site (Oversized Lot) (49 CFR 24.2[a][Dwelling Site])

The term "dwelling site" means a land area that is typical in size for similar dwellings located in the same neighborhood or rural area. This definition ensures that the computation of replacement housing payments are accurate and realistic a) when the dwelling is located on a larger than normal site, b) when mixed use properties are acquired, c) when more than one dwelling is located on the acquired property, or d) when the replacement dwelling is retained by the owner and moved to another site.

If the displacement dwelling is located on a site that is significantly larger than typical for the displacement area, a deduction from the acquisition price of the surplus land's contributory value may be required. The RHV Agent should use the information in the appraisal report to obtain the contributory value of the area surplus to the typical lot size, if available. If the information is not contained in the FMV report, the RHV Agent must conduct the necessary research.

Residential land is commonly sold on a site value basis, wherein minor differences in overall area do not have an effect on the total value of the site. In these cases, the surplus land may have little or no contributory value. When choosing the comparable replacement properties, the RHV Agent may use lot sizes that are reasonably similar but slightly smaller than the displacement property lot size if the residential utility and values in the market are also similar.

The adjustment shall be made to reflect the cost of the displacement dwelling on a typical residential site (site value) based on the properties available in the replacement area. The RHV Agent should use the information in the appraisal report to obtain the contributory value of the property in excess of the displacement's typical lot size.

When selecting a comparable replacement property, the RHV Agent should use property sites that are equal to or slightly larger than the displacement property's lot size (including the carved-out portion for "typical" lots). In rare cases, the agent may use lot sizes that are reasonably similar but slightly smaller than the displacement property lot size if the residential utility and values in the market are also similar.

© 1994-2025 California Department of Transportation. All rights reserved.

10.06.18.00 Carve-Out for Replacement Property

The amount of the RHV cannot be paid to the displacee until they meet all the criteria identified in 10.08.00.00. In situations where the displacee purchases or rents a replacement residence for an amount that exceeds the RHV, the maximum RHP can be paid.

If the displacee's actual replacement property contains another dwelling unit and/or space used for nonresidential purposes (mixed use/multiple use), or the property is significantly larger than the comparable replacement dwelling site per the Replacement Housing Valuation (oversized lot), an adjustment to the purchase price of the actual replacement property must be made to isolate the cost of the residential portion of the actual replacement property (dwelling and land) to ensure the displacee has met the "spend-to-get" requirements for a DS&S dwelling. The same methods and cautions used for adjusting the displacement property and comparables apply to the replacement property.

10.06.19.00 Special Valuation – New Construction

In last resort situations, the cost of new construction must be analyzed when the probable selling prices of comparable replacement dwellings approach the cost of constructing new replacement housing. If more economic, this method should be used for preparing the RHV. The value should be based on a sufficiently detailed analysis to support the conclusion, and the basis should be indicated. The amount should enable the owner to construct the replacement housing.

The RHV Agent should secure cost figures from the best sources available and thoroughly review them to ensure applicability and validity. Although the use of specific plans and specifications is preferred, cost figures from internal sources in the District or supported estimates from contractors may be used if necessary. The quality and scope of the cost figures must assure that the replacement dwelling can be built at the figure determined.

New replacement housing should be interpreted broadly to include the normal costs associated with construction of a new home. Inclusion of the cost of site acquisition and contract administration is proper. Normal and adequate landscaping and miscellaneous yard improvements (including residential fencing, driveways, and walks) should be considered in the cost estimates.

© 1994-2025 California Department of Transportation. All rights reserved.

The cost to construct becomes the RAP entitlement to be offered if it is in fact the most practical and economic. The basis for determining costs is explained when the RAP Agent makes the offer to the owner.

The RAP Agent must fully explain the following options to the owner:

- Owner makes arrangements for construction.
- Owner purchases a replacement dwelling.
- If time permits, owner waits for listings to become available.
- State may adjust the offer based on higher listing levels if justified by the circumstances.

The owner should be made aware that the RHV may be adjusted in the future based upon availability of comparable property appearing in the market. If comparables do appear in the market at a lower price than the RHV based on the cost of new construction, the RHP should be withdrawn upon expiration and a new offer made, unless displacee has relied on that information and made binding commitments.

10.06.20.00 Special Valuations Required

The RAP Agent may encounter relocation situations that require special valuation. The examples in Exhibit 10-EX-19 illustrate the application of special valuation procedures for the most commonly encountered situations.

10.06.21.00 Rent Differential (RD) Calculations

When preparing the RHV for an RD, the RHV Agent must compare the average base monthly rent for the last three months, including utility costs.

Utility costs are those expenses for heat, lights, water, sewer, and garbage. The source for these expenses can vary between urban and rural sites (e.g., propane gas, septic system, and private garbage pickup). As utility costs vary depending upon the season, the displacee must provide the average monthly utility costs based on the last year, not the last three months.

The monthly rent for the comparable replacement properties needs to be adjusted to include average estimated utility cost based on the neighborhood and size of the dwelling, which may be obtained from the utility companies.

© 1994-2025 California Department of Transportation. All rights reserved.

The RHV Agent should take special care in calculating utility costs especially when comparing a rural displacement property to comparable properties in an urban area with different types of utility service. Additionally, the average utility costs at the comparable replacement property must consider increased size and rooms as mandated by DS&S standards (e.g., comparing a two-bedroom residence with septic and propane, to a three-bedroom residence with sewer and all electric appliances).

Rent Differentials may be based on other factors than the average monthly rent at the displacement property. Depending on the situation, the RD could be based on economic rent, plus average utilities or it could be based on 30% of the displacees income, without adding average utility costs. The RHV Agent should not take these factors into consideration when selecting the most comparable property.

10.06.22.00 Mobile Home Replacement Housing Valuation Issues

Replacement Housing Valuation requirements for mobile homes, manufactured homes, and recreational vehicles are generally the same as for conventional dwellings, but there are differences in the way the comparable data is gathered and used. In addition, since mobile homes are sometimes bought or rented separately from the replacement site, which may be owned or rented, two computations are needed: one for the mobile home and one for the site.

Appendix A, 49 CFR 24.2(a)(Mobile home) provides examples on the types of mobile homes and manufactured housing that can be found acceptable as comparable replacement dwellings for persons displaced from mobile homes. A recreational vehicle that is capable of providing living accommodations may be considered a replacement dwelling if the following criteria are met:

- The recreational vehicle is purchased and occupied as the "primary" place of residence.
- It is located on a purchased or leased site and connected to or has available all necessary utilities to function as a housing unit on the date the Department conducts the DS&S inspection.
- The dwelling, as sited, meets all local, state and federal requirements for a DS&S dwelling.

© 1994-2025 California Department of Transportation. All rights reserved.

NOTE: Some local jurisdictions will not permit the consideration of these vehicles as DS&S dwellings. In those cases, the RV will not qualify as replacement dwelling.

The term "mobile home" will continue to be used to include those homes that are defined at 24 CFR 3280 as a "manufactured home."

Regulations at 24 CFR 3280.2 defines "manufactured home." The term "mobile home" was changed to "manufactured home" in 24 CFR 3280 in 1979.

10.06.22.01 Mobile Home Probable Selling Price

The comparables must conform to the definition of a comparable replacement dwelling.

There are several places to find market prices of mobile homes:

- Mobile home dealers.
- Local multiple listing services.
- Units for sale by individuals.
- Mobile home parks.

Where available, retail prices from the manufacturer of the displacement mobile home unit may help, taking into consideration any changes in materials and quality.

New mobile homes must often be used as comparable replacement dwellings because the number of comparable used units on the market is inadequate. The use of new mobile home units as comparables may create inequities if some displacees receive payments based on new units and others receive payments based on used units. Consequently, the selection of new or used units as comparables should be carefully made and consistently applied.

Mobile home accessories, such as awnings, skirting, and storage sheds, shall be added to the most probable selling or rental price when:

- The acquired mobile home has the accessory, or
- The accessories are required to get an adequate replacement site.

© 1994-2025 California Department of Transportation. All rights reserved.

If these accessories are included in the analysis of the replacement, the RAP Agent should itemize them on the RAP valuation form to avoid duplicate payments. The final valuation must include all delivery and installation costs necessary for occupancy and exclude incidental costs (e.g., sales or use tax, transfer fee, and permit fee).

10.06.22.02 Replacement Site (Mobile Home)

When the most comparable mobile home used to calculate the PD is located on a rented site, the rent charged at that specific site must be used in determining the RD.

If a new mobile home not yet located on a site is used to compute the PD, then the current rental rate for mobile home sites should be obtained by surveying parks with comparable vacant sites.

10.06.22.03 Rental Sites (Mobile Home)

The current rental value for mobile home sites may be obtained by surveying parks with comparable available vacancies.

10.06.22.04 Purchase Sites (Mobile Home)

The purchase of a mobile home site usually involves isolated single mobile home relocations. The RAP Agent must find comparable replacement sites in the local real estate market, paying particular attention to local zoning regulations to ensure that a mobile home is permitted. If the site is unimproved, the estimated costs to build a mobile home pad and bring in utilities are added to the replacement value of the site.

10.06.22.05 Purchase/Rental of Mobile Home and Site

In cases where the replacement mobile home and site are purchased or rented together, the RAP Agent must seek packaged comparables in the market. If none are available, comparables will have to consist of the replacement mobile home and replacement site done separately.

© 1994-2025 California Department of Transportation. All rights reserved.

10.07.00.00 – MOBILE HOMES

10.07.01.00 Applicability (49 CFR 24.501)

This section describes the requirements for relocation payments to a person displaced from a mobile home and/or mobile home site who meets basic eligibility requirements. Except as modified by this section, such a displaced person is entitled to a moving expense payment of their personalty in accordance with 10.04.02.00. Replacement housing payments should be paid in accordance with the same requirements as persons displaced from conventional dwellings.

10.07.02.00 Moving and Related Expenses (49 CFR 24.301[c])

The owner of a mobile home that is not acquired by the Department is eligible for the actual, reasonable, and necessary expenses to relocate that mobile home to another site.

The owner of the mobile home who occupies the unit is also eligible for an RHP described further in this section. However, if the mobile home is not acquired, but the homeowner-occupant obtains an RHP under one of the circumstances described in 10.07.03.00, the owner is not eligible for payment for moving the mobile home. The owner-occupant may also be eligible for a payment for moving personal property from the mobile home.

The following rules apply to payments for actual moving expenses under 49 CFR 24.301:

1. A displaced mobile home owner, who moves the mobile home to a replacement site, is eligible for the reasonable cost of disassembling, moving, and reassembling any attached appurtenances, such as porches, decks, skirting, and awnings which were not acquired, anchoring of the unit, and utility "hookup" charges.
2. If a mobile home requires repairs and/or modifications so it can be moved and/or made decent, safe, and sanitary, and the Department determines that it would be economically feasible to incur the additional expense, the reasonable cost of such repairs and/or modifications is reimbursable.
3. A nonrefundable mobile home park entrance fee is reimbursable to the extent it does not exceed the fee at a comparable mobile home park,

© 1994-2025 California Department of Transportation. All rights reserved.

if the person is displaced from a mobile home park or the Department determines that payment of the fee is necessary to effect relocation.

Exhibit 10-EX-21 shows moving cost methods that displacees may select. The two basic cases are shown in the following table:

Criteria	Method
Mobile home is purchased and is not relocated.	Displacees may be paid to move their contents based on a commercial move, self-move determined by an actual cost move, fixed residential moving cost schedule, moving cost estimate by qualified staff person, or a commercial mover estimate based on the lower of two bids (10.04.02.00 and related sections).
Mobile home is not purchased by the State, but is relocated.	Payment for the move may be based on actual cost or self-move. If the mobile home and household goods are moved to separate locations, actual cost method must be used for both the mobile home and household goods. Occupants of mobile homes may be paid for moving their personal property in the mobile home by any of the methods described in 10.04.02.00. A payment for moving the mobile home itself is made on an actual cost basis.

10.07.02.01 Actual Cost of Mobile Home Moves

Displacee shall obtain two bids and submit them to the District for approval prior to the move. If necessary, the District may assist displacee in obtaining the required bids. Upon approval of the bids, the District will inform displacee to proceed with the lowest bidder. Prior to approval, the District must carefully review the bids with special attention to:

- Disconnecting and reconnecting utilities and appliances.
- Providing an additional axle and/or brakes, if necessary, to comply with State requirements.
- Alternative of shipping the unit on a lowboy trailer.
- Need to rent wheels and/or tires.
- Temporarily protecting separated doublewide units.
- Resealing the roof, especially for older units.
- Dealing with floor material when units are split.

© 1994-2025 California Department of Transportation. All rights reserved.

- Replacing items such as awnings, skirting, and steps to bring them up to code.
- Setting up on replacement pad, which includes leveling and fitting skirting to the new contour.

10.07.02.02 Moving Expenses for Personalty

The occupant of a mobile home unit is entitled to moving expenses for their personal property contained in and around the mobile home unit. Moving expenses can be paid under the methods described in 10.04.02.00.

If the mobile home unit is moved to a replacement site, some of the personal property may be moved as part of the unit. The RAP Agent should ensure that items moved with the mobile home unit are not included in the calculation of a Fixed Moving Schedule.

The nonoccupant owner of a mobile home unit may also be entitled to moving expenses for personal property. These items might include the appliances in the mobile home or yard fixtures that were not acquired. The basis for the payment can be an actual move, a self-move, a Fixed Moving Schedule, a moving cost estimate by a qualified staff person, or a commercial mover estimate based on the lower of two bids. Again, the RAP Agent should ensure that items moved with the mobile home unit (e.g., appliances) are not included in the calculation of a Fixed Moving Schedule.

10.07.02.03 Additional Actual Costs

Allowances for food and lodging required during move and setup time for mobile home relocation are paid in accordance with the appropriate procedures in 10.04.02.01. The RAP Agent shall predetermine the number of rooms and meals and incidental allowances based on size and composition of the displaced family.

When a mobile home is moved to an individual site, the RAP Agent must predetermine that the mobile home meets code requirements for placement on the site.

© 1994-2025 California Department of Transportation. All rights reserved.

Payment for acceptable miscellaneous mobile home moving costs (such as painting or waxing, skirting, awnings, landscaping, and minor work to hide protuberances) is made only to achieve the move where alternatives are:

- To buy the unit and pay a PD that exceeds the total move cost.
- To indefinitely postpone the move.

These items must be required in available comparable parks. A statement of landscaping requirements should be obtained in advance of the move.

The standard 50-mile limit applies to mobile home moves.

10.07.03.00 Replacement Housing Payment for 90-Day Mobile Home Owner-Occupants (49 CFR 24.502)

A displaced owner-occupant of a mobile home is entitled to an RHP if the person both owned and occupied the mobile home on the displacement site for at least 90 days prior to the FWO, and all the other basic eligibility requirements are met.

To be eligible for benefits, the Department must either:

a) Acquire the mobile home and the mobile home site, or
b) Determine that the mobile home that is not to be acquired cannot be moved because:

    - It is not and cannot economically be made decent, safe, and sanitary; or
    - The unit would incur substantial damage or unreasonable cost; or
    - There is no available comparable replacement site (and is not capable of being moved); or
    - It does not meet mobile home park entrance requirements.

A 90-day owner-occupant who is displaced from a mobile home on a rented site may be eligible for a PD based on a comparable mobile home available for purchase, plus an RD based on a comparable mobile home site available for rent. The 90-day owner-occupant who rents the mobile home site may be eligible for a DP in lieu of the RD if a replacement site is purchased. All basic eligibility requirements must be met.

© 1994-2025 California Department of Transportation. All rights reserved.

10.07.03.01 Price Differential (PD)

A PD is paid when the Department purchases the mobile home.

The District must make a market value appraisal of the mobile home as soon as it qualifies for purchase. The PD is the difference between the amount paid for the unit and the probable cost of the most comparable replacement dwelling, which could be another mobile home setup or a conventional residential property.

Payment may be released when transfer of title is complete. As with other replacement housing entitlements, spend-to-get applies. The cost of awnings, carports, skirting, landscaping, and installation may be added, but incidental expenses should not be included in the PD calculation.

Site purchase differentials apply when the Department acquires a mobile home site from the owner-occupant and displacee purchases and occupies a replacement property.

10.07.03.02 Purchase of Replacement

If a replacement unit is purchased from a dealer, displacee must open an escrow account with an authorized escrow agent. Escrow instructions must prohibit the release of funds prior to satisfactory installation of the mobile home and passage of title. Between private parties, the transaction may be handled by escrow or the funds held in the District until completion of the transaction. For assignments and verification of occupancy, Exhibits 10-EX-23 (internal Caltrans link) and 10-EX-24 may be used. Either way the transaction is handled, other RAP payments due the claimants may be deposited into escrow to reduce the need for purchase financing.

10.07.03.03 Suitable Replacement Sites

The requirements for comparable replacement dwellings apply to the selection of replacement sites. Displacee should be given as many choices of suitable replacement sites as are available at the time of relocation.

Where many units must be relocated and only a small number of sites can be found, it is not required that all vacancies are filled before authorizing purchase. Generally, the vacancy rate should be less than ten percent of need before authority to purchase and pay an RHP is granted.

© 1994-2025 California Department of Transportation. All rights reserved.

The reason for purchasing mobile homes even though there are some vacancies available is so displacees will not have to draw straws to decide who must move into the few available vacant spaces and who can wait for the RHPs offered to those who cannot find a space.

10.07.03.04 Incidental Expenses

There are some variations in the eligible items discussed in 10.04.13.00. The major ones are:

- Sales tax or use tax payments – reimbursement is based on the calculated replacement cost or the actual taxes paid, whichever is less. The sales taxes paid on necessary added improvements are also eligible.
- DMV title transfer fees.
- Permit fees – such as charges for building and transportation permits, if not part of the moving expenses.

10.07.03.05 Mortgage Differential Payment

Mobile home loans typically have shorter terms and higher interest rates. Interest rates may be obtained from local institutions that provide mobile home financing. The displacee must have a loan on the displacement property (conventional dwelling, mobile home unit, mobile home site), to qualify for an MD payment.

The following instructions cover the two basic relocation situations:

- Conventional Dwelling to Mobile Home – The maximum rate to be applied is the current prevailing loan rate in effect for conventional dwellings when displacee obtains the financing commitment.

- Mobile Home to Mobile Home or Conventional Dwelling – The maximum rate to be applied is the current prevailing interest rate applicable to the type of replacement dwelling displacee purchases and occupies.

© 1994-2025 California Department of Transportation. All rights reserved.

10.07.03.06 Converting PD to RD for 90-Day Mobile Home Owner-Occupant

A 90-day mobile home owner-occupant may elect to rent, instead of purchase, a DS&S replacement dwelling. If so, the 90-day owner-occupant should be advised that they can receive an RD in lieu of the entire RHP (PD, MD, and/or IE) for purchasing a replacement dwelling. Inform the displacee a new RHV will be prepared and Conditional Entitlement Letter provided. The new Conditional Entitlement Letter – 90-day Occupant will be accompanied by a cover letter stating that the new comparable rental address and computation are being provided per their request.

The 90-day owner-occupant need not be entitled to a PD as such to qualify for an RD. The maximum RD is calculated in the same manner as with 90-day occupants, except that the space rent at the displacement property is based on economic rent, and the RD cannot exceed the calculated Price Differential.

Any advance monies from an RHP (e.g., credit report and appraisal fees paid into escrow for a potential purchase) that have already been paid should be deducted from the RD to avoid duplicate payments.

The 90-day/30-day Notices required under 49 CFR 24.203(c) that are sent to a 90-day owner-occupant who chooses to rent will provide the addresses of comparable replacement properties that are available for rent, not sale.

EXAMPLE – 90-day Mobile Home owner-occupant who rents:

Comparable Replacement Mobile Home lists for:	$66,000
Fair Market Value of Displacement Mobile Home:	$55,700
Maximum Price Differential for Mobile Home:	$10,300
Comparable Space Rent for Replacement site:	$700/month
Actual Space Rent at Displacement site:	$300/month
Maximum Space Rent Differential	
$700 - $300 = $400 x 42 = $16,800:	$16,800
Maximum Replacement Housing Payment:	$27,100
Price Differential for Mobile Home = $10,300	
Space Rent Differential = $16,800	
New Replacement Housing Valuation for RD	
Actual Fair Market Rental of Replacement Dwelling	$800/month

© 1994-2025 California Department of Transportation. All rights reserved.

Economic Rent at Displacement (Mobile Home + Space)	$650/month
Maximum Rental Differential	
$800 - $650 = $150 x 42 =	$6,300

Owners can receive a $6,300 Rent Differential since it is less than the maximum Replacement Housing Payment ($27,100). They also have one year from the date they occupied the replacement property rental to convert back to an owner and receive the balance of the RHP ($27,100 - $6,300 = $20,800), plus any entitlement they may qualify for as a Mortgage Differential and Incidental Expense. However, they would not be entitled to an additional moving payment for the second move.

10.07.04.00 Replacement Housing Payment for 90-Day Mobile Home Occupants (49 CFR 24.503)

A displaced 90-day occupant of a mobile home is eligible for an RHP if the person:

a) Rented and occupied the mobile home on the displaced mobile home site for at least 90 days prior to the ION.

And:

b) Meets all the other basic eligibility requirements.

10.07.04.01 Rent Differential (RD)

Rent Differential payments for the mobile home tenant may be combined with other benefits to which displacees are entitled (10-EX-21). The Department only has to acquire the site from the tenant in order for the tenant to be eligible for an RD payment.

There may be circumstances when the displacee owns the mobile home and rents the site (and vice versa). The displacee's tenure as a tenant or an owner is determined by their status in the mobile home unit, not the mobile home site.

Example: Owns the mobile home, rents the site. Treat them as an owner (all other eligibility requirements must be met).

Example: Rents the mobile home, owns the site. Treat them as a tenant (all other eligibility requirements must be met).

© 1994-2025 California Department of Transportation. All rights reserved.

10.07.04.02 Down Payment (DP)

An eligible 90-day occupant may convert the RD to a DP of at least $9,570. The full amount of the DP must be applied to the purchase price of the replacement dwelling (e.g., mobile home, mobile home site, conventional dwelling) and related incidental expenses.

Down Payments are done in the same manner as conventional dwellings (see Section 10.04.25.00 for details) except:

- Escrow requirements are the same as mobile home PD.
- The RD can be based on just the mobile home, the mobile home site, or both.
- The Department needs to acquire only the site to qualify displacee for payment.
- 90-day mobile home owner-occupants who formerly rented their site can qualify for a DP on a replacement site up to the amount of the RD.

See Exhibit 10-EX-22, Guidance on Converting a Rent Differential (RD) to a Down Payment (DP) for a Mobile Home, for sample computations.

10.07.05.00 Replacement Housing Payment Based on Dwelling and Site

Both the mobile home and mobile home site must be considered when computing an RHP. For example, a displaced mobile home occupant may have owned the displacement mobile home and rented the site or may have rented the displacement mobile home and owned the site. Also, a person may elect to purchase a replacement mobile home and rent a replacement site, or rent a replacement mobile home and purchase a replacement site. In such cases, the RHP shall consist of a payment for a dwelling and a payment for a site. However, the total RHP shall not exceed the maximum payment (either $41,200 or $9,570) permitted under the section that governs the computation of the dwelling before last resort housing payment provisions must be applied.

© 1994-2025 California Department of Transportation. All rights reserved.

10.07.05.01 Cost of Comparable Replacement Dwelling

If a comparable replacement mobile home and/or mobile home site is not available, the RHP shall be computed on the basis of the reasonable cost of a conventional comparable replacement dwelling.

A mobile home site in a rural area should never be compared to a mobile home site in a mobile home park. If the mobile home unit will be moved, then the RHP for the mobile home site should be based on a comparable replacement site as to size and amenities. If necessary, the cost of site preparations necessary to accommodate a mobile home (e.g., pad, utilities, ground preparation) should be included in the calculation of the RHP.

If the Department determines that it would be practical to relocate the mobile home, but the owner-occupant elects not to do so, the Department may determine that, for purposes of computing the PD, the cost of a comparable replacement dwelling is the sum of:

- The value of the mobile home; and
- The cost of any necessary repairs or modifications; and
- The estimated cost of moving the mobile home to a replacement site.

10.07.06.00 Initiation of Negotiations

If the mobile home is not actually acquired, but the occupant is considered displaced under this part, "initiation of negotiations" is the date the offer is made to acquire the land, or, if the land is not acquired, the written notification that he or she is a "displaced person."

10.07.07.00 Person Moves Mobile Home

If the owner is reimbursed for the cost of moving the mobile home under this part, he or she is not eligible to receive a replacement housing payment to assist in purchasing or renting a replacement mobile home. The person may, however, be eligible for assistance in purchasing or renting a replacement site.

© 1994-2025 California Department of Transportation. All rights reserved.

10.07.08.00 Partial Acquisition of Mobile Home Park

The acquisition of a portion of a mobile home park property may leave a remaining part of the property that is not adequate to continue the operation of the park. If the Department determines that a mobile home located in the remaining part of the property must be moved as a direct result of the project, the owner and any tenant shall be considered a displaced person who is entitled to relocation payments and other assistance.

10.07.09.00 Part Ownership of a Mobile Home

The occupant of a mobile home who owns a partial interest in the unit should be treated as an owner of the mobile home unit. The Department is not required to provide persons owning only a fractional interest in the displacement dwelling with a greater level of assistance to purchase a replacement dwelling than would normally be required if the person was the sole owner of the property.

The partial interest owner may be entitled to receive an RHP based on the difference between the asking price of a comparable mobile home site and the total acquisition price of the displacement site – not their fractional interest or share. If no mobile home sites are available for purchase within the displacee's financial means, then the fractional interest owner may be entitled to an RD.

10.07.10.00 Mobile Home DS&S Inspections

Decent, safe, and sanitary requirements are generally the same as those for conventional dwellings, except a mobile home must have an HCD approval decal. The mobile home must be placed in a fixed location on real property in accordance with local laws and ordinances.

A RAP Agent should inspect a mobile home prior to purchase since it may lack qualifying DS&S features.

© 1994-2025 California Department of Transportation. All rights reserved.

10.07.11.00 Rental of Vacant Spaces

Situations have arisen in the acquisition of mobile home parks where displacees, by reason of occupancy at the time of the offer, relocated before the Department acquired the park. The owner of the mobile home park re-rented the vacant spaces to Non-Tenured occupants. When the Department attempted to vacate the mobile home park, ineligible displacees were unable to relocate their mobile homes since:

- The mobile homes were not acceptable in other mobile home parks in the area because they were of substandard size or condition, or
- No replacement housing of any type was available in the replacement area.

The lack of sufficient spaces to relocate eligible tenants has also caused problems. This has resulted in project delays and the implementation of LRH payments, at a substantial cost to the State, to relocate these persons. Two potential solutions to these problems are available:

- Rental of spaces in the park to be acquired to prevent Non-Tenured occupants from moving into the right of way.
- Rental of spaces in probable replacement mobile home parks to secure future spaces for eligible displacees who could not otherwise relocate.

The Acquisition function may rent vacant mobile home spaces in replacement parks, as noted above, using an appropriate agreement with the owner. This procedure is implemented only if absolutely necessary since its effect on the replacement housing market could be significant and politically sensitive. It should be the last possible use of normal relocation benefits short of proceeding with LRH.

Rental of spaces in other mobile home parks must be discussed and justified in the RID. All other means of providing solutions to relocation problems must be explored before rental of spaces can be recommended. The RID must discuss type and location of replacement parks and their ability to accommodate displacees.

© 1994-2025 California Department of Transportation. All rights reserved.

10.07.12.00 Mobile Home as Replacement for Conventional Dwelling

A mobile home may be used as a replacement for a conventional dwelling provided it satisfies DS&S requirements. Eligibility and benefits under the various occupancy and replacement combinations are covered in 10-EX-21.

Most owner-occupants, whether long-term or short-term, who move from conventional housing to mobile homes will not qualify for RHPs (PD or RD).

Because mobile homes are generally less expensive than conventional dwellings, they will not meet the spend-to-get requirement. This is particularly true where an owner-occupant moves from conventional dwelling and purchases a mobile home and rents the site, or vice versa. The result is that displacee simply purchases a replacement dwelling for less than the price paid for the acquired property or rents a displacement dwelling for less than the economic rent of the acquired dwelling.

Where the RAP Agent knows that owner-occupants of conventional dwellings are considering mobile homes as replacement housing, the RAP Unit must notify the owner-occupants in writing that they may not qualify for any replacement housing payment. The RAP Agent should carefully consider each case on its own merits because the value of the acquired property may be low enough, or the cost of the mobile home high enough, that the owner-occupant could qualify for payment. Claims not meeting spend-to-get requirements shall be denied.

© 1994-2025 California Department of Transportation. All rights reserved.

10.08.00.00 – RELOCATION PAYMENTS

10.08.01.00 Eligibility for Payment

For purposes of determining eligibility for relocation payments, the date of displacement is the date the person moves, or for owners, the date of final payment.

10.08.02.00 Payment of Benefits

To be entitled to their full moving expense payment, the displacees (residential, business, etc.) must completely vacate the displacement property and submit a completed claim form as required in this section.

To be entitled to their full replacement housing payments, the residential displacees must rent or purchase and occupy a DS&S replacement dwelling within one year or the later of the following dates:

- For tenants, the date of displacement or temporary move.
- For non-tenured owners, the date of displacement or the date of final payment, whichever is later.
- For 90-day owners, the date of final payment, or the date the address of a comparable replacement property is provided, whichever is later.

The District may approve time extensions for residential owners and tenant-occupants for good cause.

When displacee enters into a legally binding contract to construct or rehabilitate a replacement dwelling and cannot occupy within the required time limit for reasons beyond their control, date of contract shall be the date of occupancy provided displacee entered into the contract before expiration of the normal one-year period. Payment shall be deferred until actual occupancy. No progress payments may be made during construction or rehabilitation unless the District determines an exceptional condition exists.

The claim may also be completed when displacee relocates before the State acquires the displacement property and an offer has been made for such acquisition (except for non-tenured occupants). However, safeguards must be in place to ensure the displacee will return any price RHP overpayments as a result of an increase in the acquisition price paid for the displacement property.

© 1994-2025 California Department of Transportation. All rights reserved.

10.08.03.00 Time Period to File a Claim (49 CFR 24.207[d])

All claims for a relocation payment shall be submitted to the Region/District within 18 months after:

- For tenants, the date of displacement or temporary move;
- For owners, the date of displacement or the date of the final payment for the acquisition of the real property, whichever is later.

The RAP Agent shall return claims received after cutoff dates to displacee promptly explaining in writing why the claim cannot be paid and advising displacee of the right to appeal. Any late payment resulting from the appeals process must be scheduled separately. See Section 10.01.14.07, Tickler Files, for requirements to track displacee deadlines and send them a Reminder Letter.

This time period shall be waived by the Region/District for good cause.

See 10-EX-28 for the timelines for residential occupants to occupy and file claims.

10.08.04.00 Documentation of Claims (49 CFR 24.207[a])

Any claim for a relocation payment shall be supported by such documentation as may be reasonably required to support expenses incurred, such as bills or statements for work performed, paid invoices, copies of cancelled checks, or other evidence of such expenses. A displaced person must be provided reasonable assistance necessary to complete and submit any required claim for payment.

The RAP Agent must verify qualifying activities, such as moving and occupying replacement housing, by personal inspection with documentation in the diary. In some cases, the RAP Agent may confirm payment of bills by telephoning the accounting office of the moving company or other vendor and annotating the diary.

10.08.05.00 U.S. Residency Certification

A U.S. Residency Certification (RW 10-44) must be in the RAP file before any claims are approved.

© 1994-2025 California Department of Transportation. All rights reserved.

10.08.06.00 Expeditious Payments (49 CFR 24.207[b])

The RAP Senior shall review all claims submitted in an expeditious manner, providing the claimant with a status of the claim (approved, pending, additional information required) within 15 days of receipt. The Claims Package shall be submitted to Accounting within 30 days following receipt of sufficient documentation to support the claim.

The RAP Agent should assist the displacee in completing all claim forms. The first claim form is normally the claim for moving expenses, although some displacees require an advance of their RHPs to secure the rental unit or open an escrow for purchase. See Section 10.08.07.00 for advance payment procedures.

Claims for relocation benefits can be processed as soon as the displacee meets the conditions for their entitlement (10.08.02.00).

The claim may also be completed when displacee relocates before the State acquires the displacement property and an offer has been made for such acquisition.

10.08.07.00 Advance Payments (49 CFR 24.207[c])

If the displacee demonstrates the need for an advance RHP in order to avoid or reduce a hardship, the Region/District may issue an advance of the RHP and assign it an escrow account or a landlord.

Advance payments for replacement housing can only come out of pending RHPs, not moving expenses.

In rare circumstances, an advance of moving expenses can be made directly to a vendor to secure moving equipment (e.g., moving truck, boxes, dolly). The advance should not exceed 50% of the total estimated moving expense. The RAP Senior must document in the RAP file that the advance of moving is necessary to avoid creating a financial hardship for the displacee.

© 1994-2025 California Department of Transportation. All rights reserved.

Region/Districts should establish criteria and procedures to ensure advance payments are subject to such safeguards as are appropriate to ensure that the objective of the payment is accomplished. Determination of acquisition price may be delayed if the Department obtains an OP or RE. Advance RHPs may be made only under the condition the owner-occupants sign an agreement (RW 10-27) that is made a part of claim for payment and states:

- Displacee understands the amount of the advance payment is not necessarily the same as what displacee may be entitled to when acquisition price of dwelling is determined.
- Displacee will refund to the Department the amount of the payment that is greater than displacee would otherwise be paid after acquisition price is determined.

According to 49 CFR 24.207(h), any advance payments should be deducted from the overall relocation payment from which the displacee is entitled. The agency shall not withhold any part of a relocation payment to a person to satisfy any other obligation.

When replacement housing is built or rehabilitated, payments are made only when the unit is completed, DS&S, and occupied by the displacee. The District may make partial payments on an exception basis when such action is deemed necessary for reasonable relocation activity. In doing so, the District must take reasonable safeguards to avoid erroneous payments.

- Advanced Differential Payment – determined in the same way as other purchase differentials, except the maximum offer shall be used in place of the amount the Department paid for the acquired dwelling.

- Interest Differential Payment – computed in the normal manner, except it is based on the number of remaining months after the effective date of an OP.

- Incidental Expense Payment – calculated as described in Section 10.09.08.00.

Restitution may be paid in cash, credited against purchase price in a negotiated settlement, or made as stipulated in a judgment.

If displacee qualifies for a larger housing payment than the amount advanced, the additional amount is paid after Final Order of Condemnation is recorded.

© 1994-2025 California Department of Transportation. All rights reserved.

A claim for advance payments is one that is approved by the Region/District prior to the displacee meeting the entitlement conditions (10.08.02.00). The Region/District can approve advance payments only if funds are required and displacee has:

- Opened escrow for replacement property or entered into a rental agreement for replacement property.
- The replacement property has passed the DS&S inspection.
- Assigned the funds to the escrow company or landlord (10-EX-09).
- Signed a statement agreeing to occupy the replacement dwelling within 30 days of close of escrow, or date certain for rental properties.
- Signed the Agreement for a PD Advance (90-day Owner-Occupant) (RW 10-27).

Advance payments are allowed under certain conditions but the Region/District should take reasonable safeguards to ensure that the displacee will still be able to complete the relocation with the balance remaining of the move/RHP, and that the Department will be able to retrieve advance monies if there is a change in the displacee's planned relocation (e.g., refund from escrow accounts, advances to landlords, deposits for moving equipment). The Region/District should not advance any relocation funds for work that is not associated with the rental or purchase of replacement property, or with the movement of personalty.

One of the obvious risks with any advance money is that negotiations for the replacement property will fall through. Monies advanced to bring a property into compliance with DS&S standards or to acquire a site for construction of a replacement property is a huge risk and should not be considered.

It is strongly recommended that in the situation above, advance monies for a RHP should only occur if the site is already acquired, the approved construction loan is in place, and the loan and advance payment would be sufficient to complete construction to satisfy DS&S criteria.

© 1994-2025 California Department of Transportation. All rights reserved.

10.08.07.01 Assignment of Funds

Displacee may assign part or all of claim to another as long as it is related to the relocation or replacement property. Assignment of Funds are usually an advance of relocation funds for renting or purchasing replacement property. Sometimes a displacee will request an assignment of funds to pay a vendor directly for work already performed, such as:

- Pay moving company expenses.
- Repay loans for securing the replacement property.
- Pay any direct relocation expense, including rehabilitating replacement unit.

Relocation payments are not assignable for obligations, such as general debts and rent owed to former landlord.

All parties (displacee as Assignor, person/company receiving the funds as Assignee) must sign the Assignment of Funds form before the payment can be processed.

When an Assignment is used, claim schedules and checks are made payable to the designated person or company (Assignee) for account of the displacee. The Assignee's mailing address must be shown. The RAP Agent should ensure that the amount of the assignment is credited against the displacee's total replacement RHP, and indicate the balance remaining for possible future payments.

© 1994-2025 California Department of Transportation. All rights reserved.

10.08.08.00 Assignment of Advanced Funds into Escrow

Replacement Housing Payments can be placed in trust or into an escrow (through a bank or escrow office) at displacee's option. Escrow accounts are usually opened for the purchase of a replacement property but an escrow account can be established for the lease or rental of a replacement property. Escrows for a lease or rental may be necessary to distribute periodic RD payments over $10,000, or as a condition by the landlord in order to qualify the displacee for the rental unit (10.04.23.01).

The following procedures must be completed prior to processing an assignment of advance funds into escrow:

1. Perform DS&S inspection of replacement property.
2. Have the displacee and escrow officer sign the Assignment of Funds.
3. Displacee must sign a statement agreeing to occupy the replacement property (RW 10-45).
4. Escrow officer must read and acknowledge the letter of instruction regarding the use of the funds. (Use 10-EX-09 and 10-EX-11 as sample letters.)

10.08.09.00 Check Delivery

Accounting shall mail payment directly to the payee designated on the Payee Data Sheet unless the RAP Agent designates otherwise. Typical situations for the RAP Agent to arrange for delivery of the payment via mail or personal service are:

- Funds deposited into an escrow account and RAP Agent needs to review instructions with escrow officer prior to releasing the check.
- Monies were ordered in advance but cannot be released until the displacee complies with the requirement to actually occupy the replacement property.
- DDC-RW, or designee, authorizes an employee with no prior involvement to make personal delivery to the displacee.

© 1994-2025 California Department of Transportation. All rights reserved.

PROCESS FOR STANDARD CLAIM FORM

Perform DS&S Inspection

- No later than 5 days after learning that replacement property has been selected.

Complete Claim Form

- Verify names of displacees that should appear on claim form against Occupancy Certification Form (RW 10-25). Use full names.
- No one may sign a claim for displacee(s), except where otherwise determined by law.
- Only one eligible displacee must sign to make claim valid, except all eligible displacees must sign claim when warrant will be made payable to only designated displacees. In this case, payment box should reflect only those paid, together with designation "sole claimant(s)."
- If benefits are split, make a note in margin that another claim exists or is pending.

Prepare Claim Package

- Attach all documentation provided by displacee needed to support the claim.
- Review the claim forms (RW 10-02 Residential, RW 10-29 Moving Service Authorization, RW 10-30 Nonresidential) for propriety of payments (e.g., eligibility, amount of payment, and timeliness of fulfilling all qualifying conditions).
- Approve payment on face of original claim form.
- Securely staple all documentation relative to one claim form into a claim package with claim form on top. If applicable, include the completed Assignment of Funds (10-EX-9 or 10-EX-10).
- Prepare the Payee Data Record in accordance with Accounting Guidebook.
- Payee Data Record STD-204 (internal Caltrans link) must be completed and attached to each claim form for any payee other than the displacee (i.e., moving companies and escrow companies). Note: If claims have been paid to this company before, it is not necessary that they complete a new Payee Data Record.

Approval

- Obtain appropriate approval of claim from RAP Senior.
- Process approved claim for payment through P&M office. P&M will review coding for accuracy, ensure STD-204 (internal Caltrans link) is attached, and all necessary signatures have been obtained.

© 1994-2025 California Department of Transportation. All rights reserved.

Submit for Payment

- P&M forwards the payment package (RW 10-05) (internal Caltrans link) to RW Accounting Office to process payments. Should be submitted within 5 working days of Senior RAP Agent's approval.
- RW Accounting will issue/mail revolving check within 5 days of receiving payment package. The Accounting Office will make payment out of the Department's Revolving Fund and will reimburse the Fund in a timely manner.

10.08.10.00 Deductions from Payments (49 CFR 24.403[a][6] and 49 CFR 24.407[h])

The Region/District must deduct the amount of any advance relocation payment from the relocation payment(s) to which a displaced person is otherwise entitled. Relocation payments are separate from other obligations, and, even if the displacee is a tenant of the Department, deductions from a relocation payment to satisfy delinquent rent or any other debt besides advanced relocation payments is not permitted.

10.08.11.00 Notice of Denial (49 CFR 24.207[e])

If the Region/District disapproves all or part of a claim submitted by the displacee, or refuses to consider the claim on its merits because of untimely filing or other grounds, the displacee must be notified in writing within 30 days of receipt of the claim that is being denied. The displacee must also be notified of their right to appeal the Region/District's determination.

10.08.12.00 Receipt of Cash from Displacees

The Department's general policy is that RAP Agents are not to receive cash from displacees. If it is absolutely necessary to receive cash, the Agent must immediately notify the RAP Senior. A written acknowledgment must be given to displacee and must contain the date, amount, purpose, and signatures of both displacee and Agent. In addition, the discussion between RAP Agent and RAP Senior must be noted in the RAP diary and signed by both parties.

© 1994-2025 California Department of Transportation. All rights reserved.

10.08.13.00 Collection of Overpayments

If a RAP overpayment is discovered, the RAP Senior must submit a written request to Accounting to establish an accounts receivable bill. Accounting should be advised of the:

- Name and address of person to be billed.
- Amount of the overpayment that needs to be reimbursed.
- Project identification (Co-Rte-PM-Parcel).
- Explanation of the miscalculation that resulted in the overpayment (e.g., incorrect data used in calculating the mortgage differential). Note: The explanation will probably be provided to the displacee so special care should be used in providing a clear explanation.

Accounting then sets up a proper account and bills the displacee. However, the RAP Agent should notify the displacee in advance that a bill for an overpayment is forthcoming to eliminate any misunderstandings.

If the overpayment is not collected and further efforts are expected to be fruitless, the account balance is discharged in accordance with provisions in the Property Management Chapter.

10.08.14.00 Over Encumbrances

If the RD is paid in installments, the total entitlement is encumbered when the first installment is paid.

The RAP Agent should track the installments to ensure that any portion of the RD that is not fully expended can be disencumbered. Such cases may occur when the displacees:

- Die prior to the end of the 42-month subsidy period.
- Elect to use only a portion of the remaining entitlement for a down payment on a replacement dwelling.
- Fail to submit a claim for the balance of the RD even after repeated attempts by the RAP Agent to locate or encourage the displacee.

Disencumbrance requests are processed through the Region/District P&M office.

© 1994-2025 California Department of Transportation. All rights reserved.

10.08.15.00 Payments Not Considered Income (49 CFR 24.209)

For displaced persons or persons required to move temporarily, relocation payments cannot be:

- Considered as income for Federal tax purposes under the Internal Revenue Code of 1986 (Title 26, U.S.C.).
- Considered as income for State income tax purposes.
- Considered as income or resources to any recipient of public assistance (Government Code Sections 7269 and 7269.1) or Social Security benefits.
- Attached through a court action or by a public agency. (Welfare and Institutions Code Sections 17300, 17401, and 17409.) Note: In bankruptcy situations, the Department must advise Trustees of any possible relocation payments.

10.08.16.00 Duplication of Payments (49 CFR 24.3)

No person can receive any payment under the Uniform Act if that person receives another payment under Federal, State, or local law that is determined to have the same purpose and effect as the relocation payment. FHWA does not require the Region/District conduct an exhaustive search for such payments, only avoid creating a duplication based on the Region/District's knowledge at the time a payment is computed.

The claim forms include a certification that the displacee will not accept reimbursement or compensation from any other public agency for any expense reimbursed by the Department.

Where their employer has advised displacee that their place of employment is being changed, the displacee may be entitled to certain moving and relocation payments from the employer. If the employer is another public agency, the displaced person/employee may not claim duplicate relocation payments from the Department and the employer.

When the potential for duplication relocation payments exists, such as in hardship acquisitions or a payment for goodwill, the RAP Senior will obtain whatever information is needed (e.g., verification from employer, goodwill appraisal) to ensure there is no duplication of payment.

10.09.00.00 – APPEALS

10.09.01.00 General

The Department shall promptly review relocation assistance appeals in accordance with the requirements of this section as mandated by 49 CFR 24.10(a).

10.09.01.01 Right to Appeal

The right to appeal shall be described in all RAP written documents that are distributed at public hearings or to individual displacees. The right to appeal shall also be mentioned whenever verbal presentations on relocation assistance are made at public hearings.

On relocation calls, the RAP Agent shall explain how to make an appeal and give the following information to displacee:

- Displacee has the right to appear personally at all hearings.
- Right to appeal relates only to RAP and not to the market value of the property or to the terms of the Right of Way Contract.
- An appeal decision will be issued in writing within 60 days of reviewing all material necessary to render an opinion.
- Relocation Assistance Appeal Form will be provided to displacee upon request (RW 10-06).
- Displacee has the right to pursue legal action after completing the appeal process.

The appeal form (RW 10-06) shall be made available to the displacee via the RAP Agent, in the RAP package.

10.09.02.00 Appealable Actions (49 CFR 24.10[b])

Any aggrieved person may file a written appeal with the Department in any case in which the person believes that the Department has failed to properly consider the person's application for relocation assistance. Such assistance may include, but is not limited to, the person's eligibility for, or the amount of, a relocation payment required under the Uniform Act.

Additionally, persons determined to be ineligible for relocation benefits because of their U.S. residency status (10.01.10.00), or because the relocation is temporary (10.10.05.00), may file an appeal.

© 1994-2025 California Department of Transportation. All rights reserved.

10.09.03.00 Time Limit (49 CFR 24.10[c])

The displacees must file an appeal within six months of the last day of the deadline for submitting a claim for moving or replacement housing payment (10.08.03.00). When the displacee vacates the acquired property, the RAP Agent should provide a letter to the displacee advising of the time periods to occupy replacement property, file claims for reimbursement, and to file an appeal.

If the person was not required to relocate, or was determined not be eligible for relocation benefits, the appeal must be filed within six months of the Region/District's initial determination of eligibility.

The Region/District can extend the time period for anyone to appeal if there is a good cause.

10.09.04.00 Filing of Appeal

A person who is dissatisfied with any aspect of their relocation assistance may request a Relocation Appeal in writing or by form (RW 10-06) with the RAP Senior. The form (RW 10-06) will be sent to the HQ RW Relocation Appeals Board Secretary, who will log it in and provide a copy to the Region/District.

If the appeal is submitted directly to the Region/District, the RAP Senior will forward it directly to HQ RW Relocation Appeals Board Secretary. If the matter is related to any of the items listed under 10.09.07.00, the matter must be resolved by the Statewide Relocation Appeals Board (Board). All other matters may first be reviewed by the Region/District Review Panel (Panel).

The RAP Senior shall review all requests for an appeal and ensure that the person's issue is related to relocation assistance, eligibility, or entitlement. If the appeal is related to some other aspect of the right of way process (appraised value, acquisition process, or renting from property management), the RAP Senior will refer the matter to the appropriate function, and advise the person in writing that the matter has been referred to another RW Senior.

If the matter is clearly related to relocation, the RAP Senior initiates the process to conduct a Region/District Review Panel. The RAP Senior must immediately send the person (appellant) a letter advising them of the appeal process and time frame (see Table 10.09-A).

© 1994-2025 California Department of Transportation. All rights reserved.

10.09.05.00 Region/District Review Panel

The RAP Senior will immediately notify the Supervising RW Agent that an appeal has been received and that the RAP Senior will conduct an internal review with at least two other agents familiar with RAP, and the Agent assigned to the RAP file.

The agents will review the issues presented in the Request and either concur or not concur with the appellant's issues. If the Panel concurs, the Supervising RW Agent must notify the appellant in writing of the Region/District's decision and actions that will be taken to remedy the matter. A copy of this letter must be sent to the RAP Appeals Board Secretary in HQ RW.

If the Panel does not concur with all issues presented in the Request, then the matter is referred to the Board. The appellant must be notified by the Supervising RW Agent, in writing, of the following:

- The Panel's decision, citing applicable rules and regulations.
- That the matter is being referred to the "Statewide Relocation Appeals Board," and a hearing will be scheduled by HQ RW.
- The right to representation, right to review the file, and right to submit other documentation to be included in the appeals package, or presented at the hearing.

The RAP Senior must submit the complete Appeals Package (see Table 10.09-B) to HQ RW RAP within 15 days of the notification to the displacee.

© 1994-2025 California Department of Transportation. All rights reserved.

10.09.06.00 Right to Representation and Review of Files (49 CFR 24.10[d] [e])

A displacee has the right to be represented by legal counsel or another representative in connection with the relocation appeal, but solely at their own expense. The appellant also has the right to present oral and written evidence to the Statewide Relocation Appeals Board.

The Department must allow the displacee the opportunity to inspect and copy all materials pertinent to the appeal, except materials which have been classified as confidential or subject to the Privacy Act of 1974. The District shall classify the following materials as confidential and shall not allow the appellant to inspect or copy them.

- RAP file diaries.
- Correspondence to and from the Legal Division.
- Additional materials that the Legal Division determines to be confidential and unavailable to the appellant, on a case-by-case basis.

The RAP Senior can impose reasonable conditions on the person's right to inspect (such as time, place, and time period). Prior to the displacee's inspection of the file, the Legal Division must first review the entire RAP file and the appeals package to determine which material is confidential and which is not.

The Region/District may charge reasonable fees for any copied material in accordance with Departmental policy.

10.09.07.00 Statewide Relocation Appeals Board

The Statewide Relocation Appeals Board will hear all relocation matters referred by the Region/District Review Panel, and all appeals on matters related to the following:

- Constructive occupancy (10.01.03.06).
- Consequential displacement (10.01.03.07).
- Loss of eligibility due to sale of excess or rescinded route property or due to suspended routes (10.10.02.00).
- Promissory Estoppel (10.01.04.00).
- Claim for Reestablishment Payment when displacee has also received a payment for Loss of Goodwill.

© 1994-2025 California Department of Transportation. All rights reserved.

10.09.08.00 RAP Appeals Package

The RAP Senior must submit the RAP Appeals Package to HQ RW RAP Appeals Board Secretary before the hearing can be scheduled. The package must be page-numbered and exhibits labeled before it can be copied by HQ RW. The HQ RW RAP Appeals Board Secretary will ensure the package contains only excerpts of the diaries, and may discuss certain documents with the Legal Office before requesting copies. After copies are made, the HQ RW RAP Appeals Board Secretary will send the RAP Senior enough copies for the Senior, the RAP Agent, the Appellant, the Appellant's attorney, and other parties as appropriate. The RAP Senior will then advise the Appellant, in writing, that the hearing has been scheduled, and include a copy of the RAP Package.

© 1994-2025 California Department of Transportation. All rights reserved.

Table 10.09-A
RELOCATION APPEAL PROCESS

Step	Responsible Unit	Process
1	RAP Senior	Immediately reviews the "Request for a Relocation Appeal" within 5 days of receipt, and decides to: 1) refer to another function, 2) hold an internal hearing, or 3) refer immediately to Statewide Appeals Board. Advises Appellant of RAP Senior's determination within 5 days of receipt of appeal request. Copy of appeal request and letter to appellant is sent to HQ RW RAP.
2a		If Panel concurs with the appellant, advises both HQ RW and the appellant of the findings within 10 days of initial receipt.
2b		If Panel does not concur, forwards a complete Appeals Package to the Board for a hearing. Must be received in HQ RW within 10 days of Panel's decision.
3	HQ RW	Reviews the Appeals Package, and immediately determines if the matter should be resolved by a full Board or just a Hearing Officer.
3a		Schedules a hearing within 10 days of receipt of the package. Hearing should be scheduled within 45 days of appellant's Request.
3b	Appeals Board	Conducts the hearing and provides a written decision within 45 days of final submission of all evidence and testimony.

© 1994-2025 California Department of Transportation. All rights reserved.

10.09.09.00 Statewide Level Hearing

"The agency official conducting the review of the appeal shall be either the head of the agency or his or her authorized designee. However, the official shall not have been directly involved in the action appealed."
(49 CFR 24.10[h])

The Director of Transportation designates a Statewide Relocation Appeals Board and/or Hearing Officer to investigate appeals and make written recommendations to the Director or designee.

Upon receipt of the Appeals Package from the Region/District, the Appeals Board Secretary (HQ RW) will meet with the Hearing Officer (an attorney from the Department's Legal staff) to determine if the appeal is complex or non-complex. The most complex appeals will be resolved by a full Board; all others will be resolved by a single Hearing Officer.

A hearing will be scheduled at a time and location that is convenient for the Board, the Region/District, and the appellant, including appellant's attorney and/or witnesses.

10.09.09.01 Scope of Review (49 CFR 24.10[f])

In deciding an appeal, the Board must consider all pertinent justification and other material submitted by the Appellant and the Region/District, and all other available information that is needed to ensure a fair and full review of the appeal (49 CFR 24.10[f]).

The RAP Senior and Agent will be present at the hearing to explain relocation procedures and replacement valuation processes. Since the Appeals Hearing Officer or Board will consider such factors as work consistency and quality at the hearing, the presence of relocation assistance and/or housing valuation personnel to provide knowledgeable and professional testimony will expedite the process.

If the hearing results in the need for additional valuation analysis or other relocation assistance appeal investigations, the parties must respond with due diligence to the Board's request.

© 1994-2025 California Department of Transportation. All rights reserved.

10.09.09.02 Determination and Notification After Appeal (49 CFR 24.10[g])

The decision of the Director, or designee, and the Hearing Officer's or Board's recommendation are provided to the appellant and the Region/District. If the full relief requested by appellant has not been granted, the appellant is informed of the decision and that this is the Department's final decision. The appellant is also informed that they may seek judicial review of the Department's determination. Statements in the letter from the Director, or designee, to appellant such as "a representative of the Department will assist you in preparing and filing your claim" shall be construed by the District as an instruction.

10.09.10.00 Appellant's Travel Expenses

Payment of appellant's travel expenses is in accordance with rules applicable to State employees and the following:

- No expenses are paid if travel distance is 50 miles or less from appellant's current residence to the hearing site (by the most direct route, not airline).

- No expenses are paid to anyone other than the appellant(s) – no lawyers, friends, witnesses, or family. Payment is limited to those persons who have the right to relocation benefits or have appealed to be declared eligible for benefits.

- Per diem expenses of eligible appellants are paid on the basis of current Board of Control rules and regulations.

- A single appellant receives the same per diem expenses as a State employee on an incurred basis.

- For husband and wife appellants, the second person's per diem expenses are limited to the standard reimbursement rate for meals.

- For roommates, business partners, etc., each appellant is entitled to claim full per diem rates with appropriate documentation of separate accommodations.

- Mileage expenses are paid on the basis of the cost of normal round-trip airfare or established Board of Control rate per mile for use of appellant's private car, whichever is less.

© 1994-2025 California Department of Transportation. All rights reserved.

Only expenses incurred to appear before a formal Appeals Board or Hearing Officer are eligible for payment. Informal meetings and such do not qualify an appellant for payment of any expenses.

All appellant expense claims are charged to the project (Phase 2 EA).

10.09.11.00 Resubmission of Appeals

If appellant has not performed those acts necessary to establish eligibility pursuant to prescribed procedures and the appeal has been heard and denied, no additional appeals are permitted until appellant has established such eligibility. After appellant has established eligibility, appellant shall be allowed one additional appeal.

10.09.12.00 Payment of Approved Claims

Copies of the decision and recommendation shall be attached to any claim for payment submitted pursuant to an appeal decision.

© 1994-2025 California Department of Transportation. All rights reserved.

Table 10.09-B
APPEAL PACKAGE

Category	Specifics
Memo from Region/District RAP Senior to HQ RW RAP – Appeals Board Secretary	• Background of events leading up to the appeal. • Region/District's Internal Review Panel – Decision detailing the disposition of the appeal with the reasons for its position.
Appellant's Request for a Relocation Appeal – form or letter	• Include copies of any supporting documents submitted by Appellant.
Basic Identifying Data	• County, Route, Parcel Number(s), Expenditure Authorization, Appraisal Report Number. • Name of property owner if other than appellant and street address of property acquired.
Replacement Property Data	• Street address and photographs. • DS&S Inspection Report (if applicable).
Basic Acquisition Data (up to date of appeal)	• Date of First Written Offer, Date RW Contract signed on behalf of State, Closing Date of Acquisition Escrow. • Effective Date of Right of Entry or Order for Possession. • Final Order of Condemnation.
Dates affecting eligibility not provided elsewhere	• Acquisition/occupancy of acquired property by appellant. • Date appellant vacated property. • Date appellant purchased/occupied replacement property. • Trust deeds. • Trust deed notes, if increased interest payments are involved.

Table 10.09-B
APPEAL PACKAGE (Continued)

Category	Specifics
Data pertinent to payment calculation if the payment is in dispute and copies of Replacement Housing Valuation Reports	• Cost of replacement property. • Price paid or offered on purchase of property. • Replacement rental rates. • Actual rental rates. • Economic rental rates. • Interest rates. • Remaining trust deed balance. • New trust deed amount. • Certified copy of buyer's closing statement.
Copies of Appraisal Form RW 07-09	• Include related pages describing the subject property.
Status of any other relocation payments to appellant	• Information such as dates and amounts claimed but not paid or not yet claimed.
Information on any other potential claimant residing in the unit	
Correspondence	• Copies of letters or other correspondence pertinent to the issue(s) being appealed.
Diary notes	• Typed excerpts from acquisition or relocation diaries pertinent to the issue(s) being appealed marked confidential.
Basis for revised payment if the amount of replacement housing or rental payment is the issue and there is a significant change in the amount of such payment	• Tabulate comparable properties used in the determination by address and show most probable sales price or rental rate. Indicate if comparables are comparable or superior to subject as to location, size, quality, and condition. Provide a narrative review discussing comparability of replacement properties and covering elements of a comparable replacement dwelling.
Reference to Chapter Section(s) or 49 CFR 24 Sections that apply to Appellant's issues

10.10.00.00 – OTHER RELOCATION ISSUES – LAST RESORT HOUSING, CONSTRUCTION, EXCESS AND RESCINDED ROUTES, REHAB AND DEMOLITION, TEMPORARY RELOCATION

10.10.01.00 Last Resort Housing Determination (49 CFR 24.404[a])

Whenever a project cannot proceed on a timely basis because comparable replacement dwellings are not available within the monetary limits for owners or tenants ($41,200 and $9,570 respectively) and payments exceeding the limits are not cost-effective for the Department nor the appropriate solution for the displacee, the Department can consider alternate measures under Last Resort Housing, as justified:

1) On a case-by-case basis, for good cause, which means appropriate consideration has been given to:

    i. The availability of comparable housing in the program or project area; and
    ii. The resources available to provide comparable replacement housing; and
    iii. The individual circumstances of the displaced person; or

2) By a determination that:

    i. There is little, if any, comparable replacement housing available to displaced persons within an entire program or project area; and, therefore, last resort housing assistance is necessary for the area as a whole; and
    ii. A program or project cannot be advanced to completion in a timely manner without last resort housing assistance; and
    iii. The method selected for providing last resort housing assistance is cost effective, considering all elements which contribute to total project or program costs. (e.g.-- will project delay justify waiting for less expensive replacement housing to become available?)

© 1994-2025 California Department of Transportation. All rights reserved.

10.10.01.01 Methods of Providing Comparable Replacement Housing (49 CFR 24.404[c])

Methods of providing comparable replacement housing under LRH include the construction of new replacement dwellings and rehabilitating existing replacement dwellings. RARF 2001-04 (internal Caltrans link) describes how to implement LRH in those rare cases when the Region/District has obtained approval to use other methods to provide comparable replacement housing.

10.10.02.00 Excess, Rescinded Route, Design Change, and Suspended Route Relocation Procedures

Relocation legislation and procedures were written to cover the typical acquisition process where property is acquired and cleared for an impending construction project. It was not foreseen that property previously acquired for construction would be returned to private ownership with improvements and occupants intact. As a result, policies and procedures developed for typical construction projects must be modified for disposal of excess parcels acquired as such or created by design change or rescinded route property. Exceptions to usual rules are necessary to deal equitably with the displacement situation.

See RARF 2001-06 (internal Caltrans link) for further guidance.

10.10.02.01 Land Acquired as Excess

Owner-occupants and inherited tenants of improvements located on land acquired as excess (uneconomic remnants or economic remainders) are not automatically eligible for relocation benefits. The occupants must be displaced by a project as determined by the Region/District. Displacement can be as a result of a consequential displacement determination, a future highway project, requirement for a mitigation parcel, or a rehabilitation/demolition project.

Occupants on the excess should enter into a Rental Agreement through Property Management and may be allowed to remain on the property until sold as excess, subject to their occupancy.

© 1994-2025 California Department of Transportation. All rights reserved.

The exact relocation circumstances of each excess parcel must be determined before the initiation of negotiations. Inappropriate service of notices and delivery of RAP packages may create relocation assistance obligations for which the Department would not otherwise be responsible.

Tenants or owners that are in occupancy prior to the Department's control of the property will be eligible for relocation benefits if the Department requires them to move at any time until title from the State is transferred to another. Determination of benefits will be based on their occupancy status (tenant or owner) at the time the State obtained control of the property, but their benefits will be based on the needs (income, occupants, rental rate) at the time of determination.

Under 49 CFR 24.403(a)(3), an owner who sells the economic remainder to the Department at their request and is later displaced, is entitled to benefits. This is not considered a voluntary transaction under 49 CFR 24.101(b) (1-3).

10.10.02.02 Rescinded Route or Design Change – Excess Land

Government Code Section 54235, et seq., provides specific requirements for disposal of surplus residential properties on or after January 1, 1980. Section 54238.3 provides that the provisions of Section 54235, et seq., shall not apply to properties declared to be surplus on or after January 1, 1984, except for Route 7 (710) in Los Angeles. Section 54238.3 provides certain relocation benefits to occupants who are forced to move because of disposal of rescinded route excess land.

10.10.03.00 Rehabilitation or Demolition Relocation Procedures

All occupants displaced from dwelling units because of rehabilitation or demolition may be eligible for some relocation benefits (see Table 10.10-A). The extent of available benefits depends upon the income levels of the occupants and whether the displacement is temporary or permanent. The Department's obligation under the law is to ensure displaced occupants are provided either temporary or permanent replacement housing that is affordable and adequate for their housing needs.

Displacement costs necessary for temporary moves during rehabilitation of a structure may be paid to occupants of any structure regardless of the status of the project.

© 1994-2025 California Department of Transportation. All rights reserved.

Per 49 CFR 24.202(a)(5), temporary displacements that exceed 12 months are considered to be permanent relocations.

10.10.03.01 Entitlements

Tenants temporarily displaced from properties under the guidelines above are entitled to:

- A written 90-day Notice, except in emergency situations where the notice period is not possible. Notices will include an outline of the benefits available.
- Relocation advisory services.
- The right to reoccupy the vacated unit after rehabilitation.
- An adequate temporary replacement dwelling.
- Actual and reasonable moving expenses, both to the temporary replacement dwelling and back to the rehabilitated dwelling.
- Appropriate rent differential payments, if eligible.

Tenants who are persons or families of low or moderate income are eligible for rent differential payment if:

- Their rental rate is increased by the Region/District to an amount exceeding 30% of their gross monthly income within one year of completion of rehabilitation of their dwelling, provided the average annual income falls within the guidelines of the HUD Low Income Chart (10-EX-44), or,
- They move to a permanent replacement dwelling as a result of a rehabilitation program affecting their dwelling.

Rental Differentials, not to exceed $9,570, shall be based on the difference in cost between an available adequate replacement dwelling (including utilities) and existing rent (including utilities) in the rehabilitated or demolished dwelling or affordable rent (30% of gross monthly income), whichever is higher.

Per 49 CFR 24.202(a)(5), should the relocation become permanent, "the [Department] may not deduct any temporary relocation assistance benefits previously provided when determining permanent relocation benefits eligibility…"

© 1994-2025 California Department of Transportation. All rights reserved.

10.10.03.02 Types of Displacement

Tenant displacements may be permanent or temporary to other State or privately-owned housing or to a motel unit for a few days while their unit is made habitable. Although RAP eligible tenants have the right to return to their former dwelling, they should be encouraged to make their move a permanent one to avoid a double moving expense payment.

10.10.03.03 Charging Procedures

Relocation forms used for processing claims and payments will be clearly identified as "Rehabilitation RAP."

Expenditures under this procedure are normally not eligible for Federal participation.

© 1994-2025 California Department of Transportation. All rights reserved.

Table 10.10-A
PAYMENT FOR DISPLACEMENTS DUE to REHAB or DEMO

Type of Displacement	Payment Eligibility	Methods of Payment
1. Short-term Displacement of Occupants Only (No Furniture Moving)	Occasionally, because of the interruption of services or other inconveniences resulting from rehabilitation, it is expedient to provide tenants with temporary housing in overnight-type accommodations. Payment of reasonable, additional expenses to occupants may be made provided the expenses are necessary and are documented with paid receipts.	• Rental offsets. • Bank draft purchase vouchers through District Accounting Offices. • Normal RAP claim procedures for actual, reasonable moving expenses.
2. Temporary Move to Other Department Housing	The rental rate of the temporary unit is market rate or amount of pre-rehabilitation rent of the unit being rehabilitated, whichever is less. Tenants are eligible for actual moving expenses both ways, including any necessary furniture storage and travel expenses. The normal RAP room count schedule may be used. If temporarily displaced tenants return to the rehabilitated unit, their new rental rate shall not reflect the increase in market value attributable to rehabilitation for a period of one year following date they occupy the unit. Adjustments may be made to the rental rate in effect prior to rehabilitation in accordance with the Rental Rate Policy.	See #1 above. The Fixed Moving Schedule, excluding a dislocation allowance, may also be used.

© 1994-2025 California Department of Transportation. All rights reserved.

Table 10.10-A
PAYMENT FOR DISPLACEMENTS DUE to REHAB or DEMO (Continued)

Type of Displacement	Payment Eligibility	Methods of Payment
3. Temporary Move to Private Housing	Tenants are eligible for actual, reasonable moving expenses both ways, including necessary furniture storage and travel expenses. RDs are paid (up to 90 days) directly to the landlord when the monthly rent exceeds pre-rehabilitation rent. If temporarily displaced tenants return to the rehabilitated unit, their new rental rate shall not reflect the increase in market value attributable to rehabilitation for a period of one year following date they reoccupy the unit. Adjustments may be made to the rental rate in effect prior to rehabilitation in accordance with the Rental Rate Policy.	See #1 above.
4. Permanent Displacement to Other Department Housing	Tenants are eligible for actual, reasonable moving expenses. The rental rate for the Department's replacement unit shall be the lower of: • Market rate and average monthly utility costs. • Rental rate of the unit tenant was displaced from. The replacement rental rate shall remain in effect for one year, except that normal rent increases by application of the Rental Rate Policy may be made.	• Rental offsets. • Bank draft purchase vouchers through the Accounting Office. • Normal RAP claim procedures for actual cost or room count method, including dislocation allowance.

© 1994-2025 California Department of Transportation. All rights reserved.

Table 10.10-A
PAYMENT FOR DISPLACEMENTS DUE to REHAB or DEMO (Continued)

Type of Displacement	Payment Eligibility	Methods of Payment
5. Permanent Displacement to Private Housing	All tenants are eligible for actual, reasonable moving expenses. RDs, not to exceed $9,570, are paid to low and moderate income tenants whose rent, at time of displacement, is increased to more than 30% of their income. The Department is not responsible for additional differential payments in those cases where displacees' rent is increased following occupancy of the replacement property. The calculation is based on available adequate replacement dwellings (30% of gross income).	Moving costs may be paid by the methods shown in #1 above. RDs, not to exceed $9,570, are paid for a maximum of 42 months and are handled by District RAP personnel through normal RAP claim procedures.

10.10.04.00 Suspended Routes

Occasionally, it is necessary to suspend acquisition and relocation activities on proposed routes due to budgetary constraints. When funding is withdrawn on a project, it is often necessary to immediately and formally withdraw any outstanding offers to purchase the properties. Relocation activities may also be affected.

When project activities resume, the person occupying the parcel when the "new" initiation of negotiations occurs becomes the eligible party for relocation benefits.

10.10.05.00 Temporary Relocations

Under 49 CFR 24.2(a) "Displaced person"(ii) Persons required to move temporarily, temporary relocations are defined as "[a] person who is required to move or moves his or her personal property form the real property as a direct result of the project but is not required to relocate permanently. Such determination shall be made by the [Department] in accordance with any requirement, policy, or guidance established by the Federal agency funding the project…" There are circumstances where the acquisition of real property (including access rights and temporary construction easements) takes place without the intent or necessity that an occupant of the property relocate permanently, but must do so temporarily during construction. An example would be that the project will restrict access to adjacent residential homes for a three-month period during construction, but after the 3-months, residents will be able to return to their homes.

Benefits are described under 49 CFR 24.202(a) as:

1. Appropriate notices must be provided in accordance with §24.203 and appropriate advisory services must be provided in accordance with §24.405;
2. For persons occupying a dwelling, at least one comparable dwelling, is made available prior to requiring a person to move, except in the case of an emergency move as described in §24.204(b)(1) or (3);
3. Similarly, if a person's business will be shut down due to a project which either requires the occupant to vacate the property or which denies physical access to the property, it may be temporarily relocated and reimbursed for all reasonable out of pocket expenses or must be determined to be permanently displaced at the [Department's] option;
4. Payment is provided for all out-of-pocket expenses incurred in connection with the temporary relocation as the agency determines to be reasonable and necessary, associated with comparable replacement dwelling, and incidental to selecting a temporary comparable replacement dwelling. Such payments may include the reasonable and necessary costs of temporarily moving personal property from the real property and returning to the real property. Storage of personal property may be allowed when approved by the displacing agency.

© 1994-2025 California Department of Transportation. All rights reserved.

Examples of items that may be reimbursed during a temporary relocation include:

- Storage of personal property that they do not want to leave in the residence or business during their absence.
- Moving expenses to relocate personal property they will need at the temporary location.
- Increased housing costs for a DS&S temporary location. (House payment is $500 per month, but the monthly rent for a furnished apartment for three months is $600 per month. The increased cost is $100 per month.)
- For nonresidential—under 49 CFR 24.301(g)(14), relettering signs, replacing stationery on hand, and other necessary media that are made obsolete as a result of the move. For eligible items, see 10.05.05.12.

NOTE: Acceptable temporary locations may be an unfurnished studio or even a hotel room.

A nonexclusive list of ineligible items can be found at 10.05.12.01.

The Region/District and the displacee should agree on what personal property should be stored, relocated, or left at the site.

Provided the temporary relocation is for less than 12-months, they are not entitled to:

- Replacement Housing Payments (e.g., PD, MD, IE, or RD).
- Comparable replacement properties, including an increased room count because of the number of occupants (e.g., from a 3-bedroom to a 5-bedroom because there are 10 occupants).
- Nonresidential moving expenses (beyond minimal movement of personalty to the temporary location), e.g., Reestablishment or In-Lieu Payments.

Any person who has been temporarily relocated for a period beyond one year is considered permanently displaced and entitled to permanent relocation benefits under 49 CFR 24.202(a)(5).

Per 49 CFR 24.202(a)(6), a person who is not lawfully in the United States is ineligible for benefits unless it would create "an extremely unusual hardship to a designated family member in accordance with §24.208(h)."

© 1994-2025 California Department of Transportation. All rights reserved.

10.10.05.01 Time to File Claims and Documentation

49 CFR 24.207(d) provides that all claims for a relocation payment shall be filed with the agency no later than 18 months after:

- For tenants, the date of displacement or temporary move.
- For owners, the date of displacement or the date of the final payment for the acquisition of the real property, whichever is later.

Additionally, the agency shall waive this time period for good cause.

Per 49 CFR 24.207(d), any claim for a relocation payment shall be supported by such documentation as may be reasonably required to support expenses incurred, such as bills, certified prices, appraisals, or other evidence of such expenses. A displaced person or person required to move temporarily must be provided reasonable assistance necessary to complete and file any required claim for payment.

10.10.05.02 Notification and Inspection (49 CFR 24.301[i])

Per 49 CFR 24.301(i), the agency shall inform the displaced person and persons required to move temporarily, in writing, of the requirements of this section as soon as possible after the initiation of negotiations. This information may be included in the relocation information provided the displaced person as set forth in §24.203. To be eligible for payments under this section, the displaced person must:

1. Provide the Agency reasonable advance notice of the approximate date of the start of the move or disposition of the personal property and an inventory of the items to be moved. However, the Agency may waive this notice requirement after documenting its file accordingly.

2. Permit the Agency to make reasonable and timely inspections of the personal property at both the displacement and replacement sites and to monitor the move.

© 1994-2025 California Department of Transportation. All rights reserved.

10.10.05.03 Transfer of Ownership (49 CFR 24.301[j])

Additionally, under 49 CFR 24.301(j), the transfer of ownership, or abandonment, for nonresidential is necessary when the displacee chooses not to relocate the personalty from the displacement site. Upon request and in accordance with applicable law, the claimant shall transfer to the agency ownership of any personal property that has not been moved, sold, or traded in.

10.10.05.04 Temporary Moves Over 12-Months (49 CFR 24.202[a][5])

Under 49 CFR 24.202(a)(5), a person's temporary move from their dwelling or business for the project may not exceed 12 months. The agency must contact any person who has temporarily moved from their dwelling or business when that temporary move has lasted for a period beyond 12 months because that person is considered permanently displaced and eligible as a displaced person. The agency shall offer such eligible persons all required relocation assistance benefits and services for permanently displaced persons.

An agency may not deduct any temporary relocation assistance benefits previously provided when determining permanent relocation benefits eligibility.

10.10.05.05 Temporary Residential Lodging Due to Nighttime Construction Work

Because of the nature of some construction projects, construction activities may be carried out 24 hours a day. Unusually high nighttime noise or dust levels may affect residents in close proximity to the construction work. When this situation occurs, it may be in the best interest of the Department to arrange for temporary lodging of residential occupants.

All costs are handled as "construction costs" to be managed and funded by the Office of Construction.

The RAP Agent will assist in making arrangements for temporary lodging due to nighttime construction work. The RAP Agent shall charge time to a "Phase 3" Expenditure Authorization and expenses to a "Phase 4" Expenditure Authorization.

10.10.06.00 Temporary, Daily, or Emergency Shelters

Under 49 CFR 24.2(a) "Temporary, daily, or emergency shelter (shelter)" means any facility, the primary purpose of which is to provide a person with a temporary overnight shelter which does not allow prolonged or guaranteed occupancy. A shelter typically requires the occupants to remove their personal property and themselves from the premises on a daily basis, offers no guarantee of reentry in the evening, and in most cases does not meet the definition of dwelling as used in this part.

Per 49 CFR 24.2(a) "Displaced person"(iv)(L), temporary, daily, or emergency shelter occupants are in most cases not considered displaced persons. However, agencies may determine that a person occupying a shelter is a displaced person due to factors which could include reasonable expectation of a prolonged stay, or other extenuating circumstances. At a minimum, agencies shall provide advisory assistance to all occupants at initiation of negotiations. (See Appendix A, 24.2[a], definition of "displaced person.")

Appendix A, 49 CFR 24.2(a) provides more information on factors that may affect whether a person residing in a temporary, daily, or emergency shelter may qualify for relocation benefits. Appendix A provides the following information:

Shelters can serve many purposes, and each will have specific rules and requirements as to who can occupy or use the shelter and whether prolonged and continuous occupancy is allowed. Persons who are occupying a shelter that only allows overnight stays and requires the occupants to remove their personal property and themselves from the premises on a daily basis and that offers no guarantee of reentry in the evening typically would not meet the definition of displaced persons as used in this part, nor would the shelter meet the definition of dwelling as used in this part. Persons who live at the shelter on a continuous, prolonged, or permanent basis may be considered displaced. These determinations are fact-based determinations. Facts that might assist in the determination include whether the person is employed because they work to pay their rent or there may be a residential landlord-tenant relationship. The FHWA expects it would be unusual to displace a shelter occupant who meets the criteria for making a determination that he or she is a displaced person. Agencies should make a reasonable effort to provide information about the proposed vacation date or other plans for the shelter to relocate. Providing advisory assistance to shelter occupants may be a challenge due to the transient nature of shelter occupancy, but such assistance must be provided to the maximum extent practicable.

10.11.00.00 – DELEGATIONS

10.11.01.00 Delegations of Authority

As referenced in Section 2.05.01.00, the delegation matrix for Relocation Assistance is noted below. The delegation matrix reflects the associated policy and RW Manual reference for each delegated item. The matrix also distinguishes whether an item is delegated to the District or Headquarters (HQ) level, along with the lowest level of sub-delegation authorized.

Reference (Statutory, WBS, Director's Policy, Deputy Directive, etc.)	**RW Manual Section**	**Responsibility**	**Delegation**	**Lowest Level of Sub-Delegation**

11.01.00.00 – GENERAL

11.01.01.00 Interim Policy Memorandum Updates

From time to time, Headquarters Right of Way (HQ RW) will issue interim policy memorandums to clarify policies and procedures prior to a new publication of the RW Manual. When an interim policy memorandum is created and approved, there will be an email notification sent to the following groups: Functional Council members, RW Management Board members, Statewide Supervising RW Agents, other potential stakeholders, and subscribers of the RW Manual update list. Additionally, the interim policy memorandum will appear under the *Active Right of Way Manual Directives (Interim Policy Memos)* section at the RW Manual Revisions webpage.

11.01.01.01 Local Agency Use of This Chapter

Local agencies using this chapter to comply with the requirements of the Federal Highway Administration (FHWA) should follow the entire chapter. In certain areas, a note may be made that reflects a caveat pertaining to local entities specific to that section.

11.01.02.00 Responsibility

Region/District/Local Agency Property Management manages all property held for future transportation projects, excess properties, and employee housing. For project and excess properties, this includes maintaining an inventory of state-owned properties, inspecting properties for loss prevention, marketing rentable properties, establishing tenancies, collecting rents, arranging property maintenance, and terminating tenancies. For employee housing, this includes obtaining rental agreements and arranging property maintenance.

11.01.03.00 Delegations

All Property Management approvals have been delegated to the Regions/Districts in accordance with the Statewide Delegation Matrix. (See Chapter 2, Delegation Matrices, Manual Section 2.05.00.00.) Property Management staff have full delegation to operate and approve within the parameters outlined in this chapter and as shown in the delegation matrix at the end of this chapter. Any activities outside the scope of this manual or the delegation matrix shall be subject to HQ RW's approval. Approval may be

© 1994-2025 California Department of Transportation. All rights reserved.

conveyed in writing or electronically. The Region/District shall maintain a copy of the approval in the rental file(s) to which it applies.

Note: Local Agencies are responsible for their own contractors' work product, including approvals.

11.01.04.00 No Re-Rent Residential

As a general rule, no vacated residential units shall be rented on projects with current environmental clearances. Vacated improvements on such projects should be cleared immediately. If an environmentally cleared project is in the STIP or SHOPP and has programmed funds for normal right of way, the no re-rent policy is mandatory.

In addition, the District/Region/Local Agency should consider establishing a residential no re-rent policy on other projects if a shortage of replacement housing exists, or may develop, or for other reasons, such as specified action in the Freeway Agreement or official local agency request. The recommendation should contain complete justification, with advantages and drawbacks, and detailed analysis on social and economic consequences. The analysis must recognize that improvements cannot be removed prior to environmental clearance of the project and must consider the effect of boarded vacant improvements upon the neighborhood.

Approval for establishing a no re-rent policy is as follows:

- Environmentally Cleared Projects – No approval is necessary. If the project is also in the STIP or SHOPP and has programmed funds for RW activities, an exception to establishing a no re-rent policy requires a rental/clearance plan approved by the District Director (DD) or authorized delegate.

- No Re-Rent Recommended in the RW Stage RAP Study – Approval of the RW Stage RAP Study constitutes approval to institute the policy, although separate written approval from the DD is required.

- No Re-Rent Recommendation Submitted Separately from RW Stage RAP Study – Written approval from the DD is required.

© 1994-2025 California Department of Transportation. All rights reserved.

11.01.04.01 No Re-Rent Nonresidential

The District/Region/Local Agency may also implement a no re-rent policy for nonresidential property when conditions warrant. The justification and approval required are the same as outlined above.

11.01.05.00 Property Held for Future Purposes

Where improved property is acquired far in advance of scheduled construction and the DD or authorized delegate has approved an exception to the no re-rent policy, the policy of the Department of Transportation (Department) is:

- Keep the property occupied.
- Maximize rental revenue.
- Minimize adverse effects of right of way clearance on the community.
- Be a good neighbor.
- Demolish the improvements if necessary.

11.01.06.00 Disbursement of Rental Income to Counties

Streets and Highways Code (SHC) Section 104.6 requires that 24% of all rents received from real property acquired for future state highway purposes shall be disbursed to the counties where the rental properties are located. Department policy is to code all properties in the Right of Way Property System (RWPM), Property Screen, TPR510M, with a "Y" in the "24% TO CO" field. The only exception to this policy is when the Department owns a mobile home, but not the land. In this case, an "N" will be entered into the "24% TO CO" field. Accounting is responsible for disbursing the funds to the counties in accordance with SHC Section 104.10. The 24% represents payment of possessory interest taxes due from persons to whom the Department leases property.

Note: Local Agencies must implement their own possessory interest tax reporting program.

© 1994-2025 California Department of Transportation. All rights reserved.

11.01.07.00 Special Assessments by Local Agencies

State-owned property is exempt from property taxation per Article XIII, Section 3, Subdivision (a) of the California Constitution. With the passage of Proposition 218 and the addition of Article XIII D of the California Constitution, State-owned property may be subject to special assessments provided that certain procedural and substantive requirements are met.

Note: Local Agencies should refer to their own legal division regarding payment of special local assessments.

Prior to imposing a special assessment, the local assessing agency must have done the following:

- Identify all the parcels which will have a special benefit conferred upon them and upon which a special assessment will be imposed.
- Prepare a detailed resident engineer's report supporting all assessments. The report must be prepared by a registered professional engineer certified by the State of California. The report must contain the total amount chargeable to the assessment district, the amount chargeable to each parcel within the assessment district, the duration of the payments, the reason for the assessment, and the basis upon which the amount of the proposed assessment was calculated.
- Hold a public meeting on the proposed assessment and receive approval from a majority of the property owners casting a ballot.

If a special assessment bill, which will normally be shown on the secured tax roll, is received, the following actions should be taken:

- The Region/District should determine if the Department owns fee title to the subject parcel being assessed. The Department shall not pay any special assessments on real property in which the Department holds a property right less than fee title.
- The Region/District should determine whether the Department is subject to the assessment by sending a letter to the assessing agency informing it that the Department is exempt from an assessment unless the assessment is expressly allowed by law. The assessing agency should be asked to identify the specific provision in the law that allows for the assessment. If there is no expressed authorization for the assessment, the assessing agency should be asked to discontinue billing the Department.

© 1994-2025 California Department of Transportation. All rights reserved.

- If the assessing agency provides express legal authorization for the assessment, the Region/District must then determine if the State-owned parcel receives a special benefit from the assessment. If the parcel in question is under pavement, it is highly unlikely that there is any special benefit conferred upon that parcel since the Department is already tasked to maintain such parcels. If it is determined that the parcel does receive a special benefit, the assessment should be submitted to the Division of Accounting for payment. If it is determined that the parcel does not receive a special benefit, the assessing agency should be informed of the determination and asked to discontinue billing the Department.
- In instances where the Region/District determines that the special assessment is to be paid, the Region/District must identify the law that allows for the assessment when submitting the payment package to the Division of Accounting.

If a special assessment was levied on the parcel prior to the acquisition of the parcel, that special assessment should have been paid in full including any future installments owed at the time of the acquisition.

For further information regarding special assessments, please refer to the memorandum dated August 27, 2019 (internal Caltrans link, this memorandum is not applicable to Local Agencies).

11.01.08.00 Rental of State-Owned Properties to State Employees

State employees, including employees of the Department, are eligible to rent state-owned properties provided their jobs do not involve managing the property, estimating or setting the rental rate, or performing other property management activities.

Note: Local Agencies must determine their own policy and procedure to renting available properties to local agency employees.

© 1994-2025 California Department of Transportation. All rights reserved.

11.01.09.00 Use of Bilingual Agents

Every effort should be made to use bilingual Agents when working in areas where tenants are non-English speaking. The Agent may also utilize the Caltrans Volunteer/Certified Bilingual Listing or the Department's contracted interpreting services. For more information on the Caltrans Volunteer/Certified Bilingual Listing and the Department's contracted interpreting services, please refer to the Office of Civil Rights Limited English Proficiency intranet page (internal Caltrans link).

11.01.10.00 FHWA Approval of Less Than Fair Market Rent

23 CFR 710.403(e) states that acquiring agencies shall charge current fair market value or rent for the use or disposal of all real property interests, including access control, if those real property interests were obtained with Title 23, United States Code, funding. Exceptions to the requirement for charging fair market value must be submitted to FHWA in writing and may be approved by FHWA in the following situations:

- When it is in the overall public interest based on social, environmental, or economic benefits, or is for a non-proprietary governmental use.
- Use by public utilities in accordance with 23 CFR part 645.
- Use by railroads in accordance with 23 CFR part 646.
- Uses under 23 USC Section 142(f), Public Transportation. For public transportation purposes, whenever the public interest will be served, by publicly owned mass transit authorities where this can be accomplished without impairing automotive safety or future highway improvements.
- Use for other transportation projects eligible for assistance under Title 23 of the United States Code, provided that a concession agreement shall not constitute a transportation project exempt from fair market value requirements.

The Department/Local Agency must evaluate and justify all instances when charging a less than fair market rental rate is in the overall public interest based on social, environmental, or economic benefits, or for a non-proprietary governmental use. Additionally, the Department/Local Agency must ensure that the public will receive the benefit used to justify a less than fair market rental rate.

© 1994-2025 California Department of Transportation. All rights reserved.

When evaluating a less than fair market rental rate, for the above situation, the Department/Local Agency must be able to understand and provide a statement of the public's problem and how the proposed agreement will address or improve said problem. The Department/Local Agency must be able to articulate all the benefits the public will receive by having in place such an agreement at less than fair market rent. It is essential that the proposed use allowed by the agreement complies with all State and Federal laws.

The method for ensuring that the public will receive the benefit of proposed agreement is the use defined within the agreement. The proposed agreement shall be constructed as to only allow for a very narrow and specific use that creates a benefit to the overall public. Additionally, the Department/Local Agency shall commit to inspecting the property in accordance with the frequency described in this Chapter; this will ensure that the property is only being used to provide the benefit to the public in accordance with the agreement.

The District/Region/Local Agency shall submit a written Public Interest Finding (PIF) to HQ RW for submission to FHWA for the approval of the proposed less than fair market rental rate. The PIF must address the evaluation criteria of the less than fair market rate and the methodology for ensuring the public receives the benefit as outlined within this section.

Note: Local Agencies may use the Department's Public Interest Finding template for submittal to FHWA.

11.01.10.01 Federal Participation in Revenue and Expenses

The federal share of net income shall be used for activities eligible for funding under Title 23, in which case the state may retain rental and lease revenues without crediting federal accounts. Since rental and lease revenues are deposited into the State Transportation Fund, which is a Special Revenue Fund used primarily for Title 23 projects, the Department has met the intent of CFR 710.403(f). Furthermore, the Department is not required to track and report the expenditures from these revenues. Revenues should be coded as ineligible for federal reimbursement. (See Exhibit 11-EX-01, Letter to FHWA Dated March 4, 1999.)

Under 23 CFR Part 710 Subpart D, property management costs continue to be eligible for federal participation until final project voucher. The Department has made a policy decision, however, that it will not seek federal

© 1994-2025 California Department of Transportation. All rights reserved.

reimbursement for property management costs (i.e., operating expense and support costs). Therefore, expenditures should be coded as ineligible for federal reimbursement.

Note: Local Agencies must use transportation accounts to fulfill this requirement.

11.01.11.00 Other Applicable Federal Regulations

Policies and procedures for managing real property acquired in connection with a federal-aid transportation project are contained in Title 23 CFR, Sections 710.401 through 710.409. The policies are applicable to all state and political subdivisions that manage real property acquired for transportation projects in which federal funds are used for any phase of the project.

11.01.12.00 Title VI of the Civil Rights Act of 1964 and Related Statutes

Title VI of the Civil Rights Act of 1964 and related statutes forbids discrimination against any person in the United States because of race, color, national origin, sex, disability, age, or income status by any agency receiving federal funds. See Manual Section 2.04.01.00 for additional information.

11.01.13.00 Right of Way Property Management (RWPM) System

Right of Way policy mandates use of the RWPM system. See the RWPM User's Manual for additional information. A copy of the User's Manual is on the Property Management webpage (internal Caltrans link).

Note: Local Agencies must use their own computer system to track and manage properties.

11.01.14.00 Filming on State-Owned Property

Government Code Sections 14998-14998.13 is known as the Motion Picture, Television, and Commercial Industries Act of 1984.

Government Code Sections 14999.50-14999.55 is known as the State Theatrical Arts Resources (STAR) Partnership.

Government Code Sections 15363.60-15363.65 is known as the Film California First Program.

© 1994-2025 California Department of Transportation. All rights reserved.

These various Government Code sections established the regulations and guidelines in association with filming on state-owned property such as: The Director of the Film Office shall be the permitting authority for the use of state-owned property and state employee services for the purpose of making commercial motion pictures; allows production companies and other film industry companies to lease property owned by the State of California at no charge or below market rates; allows state agencies to be reimbursed for the film costs incurred including state employee costs, maintenance costs, electrical costs, etc., and directs state agencies to identify surplus properties that may be available for use.

Current Department policy asserts that the Department will not charge any production company working through the California Film Commission (Commission) a rental/lease charge for utilizing surplus property for filming. However, the Department will charge production companies for employee time including overtime charges and any miscellaneous costs. Production companies shall be responsible for any related costs, such as maintenance or electrical costs, that the state incurs because of filming at the property.

Whenever a production company contacts a Region/District, you will contact either the Commission or your local Film Liaisons in California, Statewide (FLICS) person to coordinate any activities. The Commission is responsible for issuing permits, collecting fees, and making sure insurance coverage is obtained.

The Regions/Districts' initial responsibility is to show the property to interested production company representatives. If the production company decides to use the property, the Agent involved will ensure Department of Transportation, Division of Right of Way, STAR Program Agreement (Agreement), will be prepared. This will serve as the rental/lease agreement between the Department and a production company. Upon execution by both parties, the Agreement will be sent to the Commission for inclusion in their permit. (See 11-EX-49, Department of Transportation, Division of Right of Way, Star Program Agreement.)

If any production company working through the Commission wishes to film on property obtained with Title 23, United States Code funding, FHWA approval will be required prior to the execution of an Agreement and use of the property. This is due to the Department's policy of not charging a production company rent for use of the property, while FHWA approval is required when less than fair market value is charged for the use of a property. A PIF must be submitted to HQ RW for submission to FHWA for approval of the less than fair market rental rate; please see Section 11.01.10.00 for further information.

© 1994-2025 California Department of Transportation. All rights reserved.

Once a production company has been approved to film on state-owned property, it is the responsibility, with the assistance of the Commission if needed, of the Region/District to have an agent(s) on site for monitoring purposes. The agent will be there to answer questions and make sure the production company is adhering to the requirements of the Agreement.

RW must consult with the Division of Environmental Analysis (DEA) when properties are deemed historic in order to capture any specific requirements or restrictions associated with the use of the property especially regarding any requested alterations to the property.

Note: Local Agencies are not regulated through statute as the Department for filming on properties. If a local entity chose to use a property for filming, rent must be at fair market or FHWA approval is required for rent at less than fair market value.

11.01.15.00 Mobilehome Parks

The Region/District/Local Agency is encouraged to explore all options available to avoid the acquisition of mobilehome parks, even up to the selection of an alternate route. In the event that the Department acquires a mobilehome park, and the tenants own their own mobilehome, contact HQ RW immediately. Proper management of mobilehome parks is challenging, as they are governed by the Mobilehome Residency Law. Therefore, it is imperative that the Region/District/Local Agency work with HQ RW and appropriate Legal entity to ensure that the proper laws, regulations, and procedures are being followed.

11.01.16.00 Batch Plants

Batch plants as defined by the North American Industrial Classification System (NAICS) can be established on Caltrans property as described. The Caltrans Stormwater contact approval for such uses as batch plants will also be required. If this is within an active Caltrans construction zone or project, construction policies apply. For specific questions, Right of Way should contact the Division of Construction.

For properties that are not related to Caltrans projects or construction, under no circumstances should a batch plant be allowed in or within close proximity to a Residential neighborhood due to dust and noise concerns. The batch plant also requires the pertinent County, Air Quality, and Water Quality permits. These permits should be obtained by the proposed tenant. A copy of these permits will be kept in the file. If the proposed tenant cannot

© 1994-2025 California Department of Transportation. All rights reserved.

produce these permits, then the use will not be allowed on the property. A written plan should be established prior to use for how material disposal occurs. This written plan should be added to the signed Right of Way Use Agreement as well as the expectation that the property will be returned to its prior condition. Other major considerations include safe access to and from the site. The expectation is that a clause in the rental agreement will be added for the property to be reverted back to its condition prior to its use as a batch plant.

The property should be regularly inspected including pictures taken at each inspection. Pictures will be kept in the Property Management file documenting the property prior to use as a batch plant and at every inspection. The District Stormwater contact should inspect with District Right of Way agent as often as required to protect the National Pollutant Discharge Elimination System Permits (NPDES) Stormwater Permit Caltrans uses for overall Stormwater requirements. This required inspection ensures the tenant is complying with these Stormwater requirements. An initial walk-thru must occur with the District Stormwater contact as well as a final inspection when the agreement is terminated. The District's Property Management will also receive and retain these required inspection reports.

11.02.00.00 – CLOSURE PROCEDURE

Note: any references to Local Agencies is in relation to Local Agency use of the Caltrans Right of Way Manual to comply with FHWA requirements.

11.02.01.00 General

Upon execution of a RW Contract or recordation of a Final Order of Condemnation (FOC), the Acquisition Agent (or Condemnation Agent for an FOC) shall send the acquisition documents (a Memorandum of Settlement [MOS], RW 08-12 [internal Caltrans link]) to Property Management with a copy of the RW Contract or FOC as appropriate. The Property Management Senior should assign the parcel to the Agent responsible for the territory. The Agent shall review and be familiar with the acquisition documents and the appraisal involved.

In the majority of cases where property is acquired under RW Contract, there will be a period of time, usually three to six weeks, between receipt of these documents and close of escrow or recordation. If the property is occupied, the Agent shall contact the occupants prior to close of escrow to discuss the terms of rental occupancy. The Agent should read the RW Contract carefully to determine any special conditions imposed that might affect, for example, the rental rate, term of occupancy, rental commencement date, or special disposition of acquired property.

Where property is acquired through an FOC, the Agent shall take immediate action to contact the occupants since rental commences on the day following recordation of the FOC.

11.02.02.00 Determination of Rentable Properties

Properties shall be considered rentable if re-rental is appropriate and there is a high probability that a tenant can be found. Pertinent factors to consider in determining rentability include topography, zoning, accessibility, lead time, availability of utilities, size and location of parcel, and condition and nature of improvements.

© 1994-2025 California Department of Transportation. All rights reserved.

11.02.03.00 Contact with Grantor and/or Tenant

The Agent shall accomplish the following upon initial contact with the grantor or tenant:

- Determine the existing rental rate, if any.
- Determine the current rental period (e.g., rent paid monthly and due dates).
- Determine if any rent is prepaid, up to and including what date.
- Determine who is responsible for payment of various utilities (water, gas, electricity, sewer, and garbage).
- Complete the Rental Application.
- Advise tenant of policies regarding the security deposit, or transfer of the security deposit from grantor at time of close of escrow, and payment of first month of lease, if applicable.
- Advise tenant of the period the property will be available for rental or lease and determine if the tenant intends to stay.
- Inform the tenant that all monthly rents are due on the first of the month and advise the tenant that prompt payment of rent is mandatory in all cases.
- Advise the tenant about the possessory interest tax, if applicable (see Manual Section 11.07.19.00).

11.02.04.00 Inspection of Property and Determination of Rental Rates

The Agent shall thoroughly inspect all property, including improvements, prior to acquisition or as soon as possible after acquisition. This inspection enables the Agent to become familiar with the property for purposes of reviewing the rental rate set by Appraisals and to note and abate any hazardous conditions that may exist.

© 1994-2025 California Department of Transportation. All rights reserved.

11.02.05.00 Procedures Upon Acquisition

The start tenancy date must be entered in the RWPM Tenancy Screen as soon as the Agent is notified that acquisition is complete.

Note: Local Agencies will use their own computer system.

11.02.06.00 Establishing New Accounts

Written agreements covering rental and lease of all state property are required. The standard forms listed below shall be used but may be modified, with approval of the Deputy District Director of Right of Way (DDD-RW) or delegated representative, to comply with actual conditions or when special situations arise.

TYPES OF AGREEMENTS

- Residential Rental Agreement
- Lease Agreement (Commercial, Industrial)
- Agricultural Lease Agreement
- Advertising Structure Agreement

Please refer to the specific agreement templates on the Property Management webpage (internal Caltrans link).

First, the Agent shall contact the RAP Unit to determine the RAP eligibility of each tenant occupying the property. The Agent shall then make any changes needed in the agreement to protect the tenant's RAP eligibility.

The Agent is responsible for seeing that agreements are processed promptly. The Agent shall have the tenant sign a minimum of two copies of the agreement and submit the agreement to the Property Management Senior for review before submitting it to the person authorized to execute on the state's behalf.

Each prospective tenant must complete a Residential Rental Application, RW 11-05, or a Non-Residential Rental Application, RW 11-06, based on the property type.

The Agent is responsible for collecting the initial rent and security deposits. (See Exhibit 11-EX-02 for departmental cash handling procedures.)

Note: Local Agencies may use their own legally approved agreements.

© 1994-2025 California Department of Transportation. All rights reserved.

11.02.07.00 Rental Filing System

A uniform Rental Filing System is necessary for accurate record keeping and proper control of rented properties. Each rental account file shall be kept by account number. If files become too large for one folder, additional ones shall be started. To provide a complete parcel rental history for each rental unit, all folders for one parcel shall be kept in one place; for example, in an accordion-type folder with the parcel number on it. The rental file shall be in chronological order and shall contain the items shown below.

RENTAL FILE CONTENTS

- Diary
- RW Contract*
- Memorandum of Settlement (MOS)*
- FOC (if applicable)*
- Rental Application
- Credit Report (if applicable)
- Rental Rate Documentation
- Rental Agreement (executed copy)
- Lead-Based Paint Disclosure (if applicable)
- Invoices or paid bills for repairs
- Vacancy Report, 11-EX-65 (internal Caltrans link)(if applicable)
- Map of location
- Inspection Forms with Photographs of Inspection
- Stormwater Inspection Forms

Note: * Local Agency acquisition documents

When property is vacated and then re-rented, the previous tenant's file shall be kept intact in the rental folder, current tenant data at the front. It is suggested that tabs be inserted in the file to indicate where the new tenancy data starts. Alternatively, the previous tenant's file may be kept separately in order by account number. The MOS, RW Contract, and copy of the move-out inspection form should be transferred to that new rental file with any other pertinent information that provides file continuity.

Each rental unit in a multiple unit parcel shall have its own rental unit number and may be filed in its own folder as long as all unit files are kept together under the parcel number.

© 1994-2025 California Department of Transportation. All rights reserved.

11.02.08.00 New Property – Grantor Retains Improvements

Occasionally, the Department enters into a RW Contract that permits the owner to retain improvements if they are relocated by a certain date. If improvements are occupied at close of escrow, an appropriate ground rental rate shall be charged until the improvements have been removed, unless the RW Contract provides for rent-free occupancy, within the grace period as specified in the Right of Way Contract, of the land. The Agent should discuss unique situations or uncertainties with the Property Manager Senior or authorized representative before making a commitment. (See also Manual Section 11.04.06.00.)

11.02.09.00 Rental Period – Hardship Acquisition

On hardship acquisitions, grantors are required to vacate the property within 120 days from the date of close of escrow, provided replacement housing is available. The rental agreement is limited to a term of not more than 120 days, except in extreme cases where hardship would be compounded by requiring relocation within the 120-day period.

© 1994-2025 California Department of Transportation. All rights reserved.

11.03.00.00 – PROPERTY INVENTORY

Note: any references to Local Agencies is in relation to Local Agency use of the Caltrans Right of Way Manual to comply with FHWA requirements.

11.03.01.00 General

Each Region/District/Local Agency shall keep its inventory of rentable and non-rentable properties in RWPM up to date and accurate. The Region/District/Local Agency shall also keep a physical file of each property in its inventory.

Note: Local Agencies will use their own computer system.

Permanent easements, temporary construction easements, utility easements, employee housing, and other similar real property interests acquired or owned by the Department are not to be entered into RWPM.

11.03.02.00 Inventory Disposal Record

The Acquisition Agent prepares the Inventory Disposal Record (IDR), Form RW 12-01 (internal Caltrans link), and assigns a Register Number when the MOS is prepared. (See Manual Section 8.50.03.00 for additional information.) The IDR is used for accountability of improvements and personal property purchased through Right of Way transactions, and to record the discharge of accountability at the time of clearance.

11.03.03.00 Improvement Disposal Authorization

The Improvement Disposal Authorization (IDA), Form RW 12-02 (internal Caltrans link), is a formal request to the DD or authorized delegate for permission to dispose of state-owned improvements or personal property. Approval of the IDA is authority to proceed with disposition of the improvements as specified. No property shall be disposed of in a manner at variance with the approved IDA without prior approval of the DD or authorized delegate.

© 1994-2025 California Department of Transportation. All rights reserved.

11.03.04.00 Improvements and Personal Property

For purposes of this inventory procedure, "improvements and personal property" means those structures, improvements, or personal property (such as furniture) whose disposal requires an IDA, RW 12-02 (internal Caltrans link). Miscellaneous items purchased as part of the real estate, such as TV antennas, air coolers, carpets, gasoline pumps, compressors, and drapes, are listed on the IDA. This applies whether the items are to be marketed, demolished, or transferred to another department or agency. Improvements such as landscaping and driveways that normally are destroyed in right of way cleanup contracts or by the road contractor as part of clearing and grubbing need not be listed.

Items of personal property purchased, such as furnishings, must also be shown. A Bill of Sale may be given an item number and copy attached to the IDR.

Whenever salvaged property is removed from state-owned parcels, it shall be placed in a secured area in District/Region facilities. The Agent will keep the required inventory forms in a file to account for each item. The Agent shall be responsible for the secured area and the keys thereto.

11.03.05.00 Numbering of IDAs and IDRs

IDAs and IDRs carry the Parcel Number, Improvement Register Number, Project Identification Number (Expenditure Authorization Number), Co. Rte. and PM(KP), and Federal-Aid Project Number. District filing is by Parcel Number.

11.03.06.00 Active Inventory of Improvements File

The District/Region/Local Agency shall maintain a file of active IDRs. A copy of the IDA for a parcel is placed in the file when the IDR file is set up. When all improvements have been disposed of in accordance with the IDA and the "Disposal Record" section (back) of the IDR has been completed, these two documents are transferred to the parcel file.

When multiple IDAs are required to dispose of improvement items carried under one Register Number, the disposal information should be transcribed from the multiple reports to the original form. The original is filed in the permanent Region/District records.

© 1994-2025 California Department of Transportation. All rights reserved.

A copy of the Inventory and Disposal Record shall be retained until it is necessary to process the improvements for clearance and an Improvement Disposal Report file is set up.

When it has been certified that all improvements have been disposed of in accordance with the Improvement Disposal Report or Reports, and the "Disposal Record" section (back) of the Inventory Disposal Record is completed, the Improvement Disposal Report shall be transferred to a closed file. The original in the active file may be destroyed.

11.03.07.00 Closed Inventory of Improvements File

The closed inventory record form shall be part of the District's/Region/Local Agency's permanent records. As long as any items originally set up remain uncleared, however, the record must remain in the active file.

11.03.08.00 Water Stock

If appurtenant stock is acquired, such as for agriculture watering, it shall be held until the need for a water supply ceases. If it is not necessary to retain appurtenant water stock, the Region/District shall submit the stock to the company secretary for cancellation.

In those cases involving excess land, the District/Region/Local Agency must arrange for reissuance of the stock to the purchaser at the time of sale.

If non-appurtenant water stock is purchased, it shall be held until the need for a water supply ceases. It shall then be submitted to the water company for cancellation with immediate reimbursement to the state by the water company or reimbursement upon resale of the stock, at the water company's option.

If it is not necessary to purchase water stock, the Region/District/Local Agency shall acquire the land without paying any consideration for the water stock.

Each District/Region/Local Agency shall maintain an inventory and disposal record of water stock. The Region/District/Local Agency shall inventory each acquired share or fractional share of water stock and keep a complete record of all water stock acquired.

© 1994-2025 California Department of Transportation. All rights reserved.

After stock certificates are reissued in the state's name, the District/Region/Local Agency shall forward them to the Division of Accounting for filing.

The state is subject to assessments whenever it holds such shares of mutual water company stock. Prior approval from the DD or authorized delegate is required before any assessment can be paid.

Mutual water company stock that is acquired in connection with acquisition of land for other than right of way purposes shall be processed as set forth in this section.

11.03.09.00 Lost or Stolen Property

Government Code Section 14613.7 requires each state agency be protected by the California Highway Patrol (CHP). The CHP personnel shall document all crimes, miscellaneous law enforcement-related incidents, or services provided on State-owned or State-leased property for statistical record keeping purposes. In addition, Government Code Section 14613.7 requires the CHP to compile all reported information and report to the State Legislature as necessary.

All notifications of an incident and/or crime shall be expeditiously directed to the Department's Statewide Operations Security (SOS) Office (internal Caltrans link) via email or fax no later than the third working day following the discovery of an incident and/or crime. Incidents/crimes involving injury or death of individuals or property losses totaling over $500 shall be reported no later than the first working day following the discovery or notification.

An STD. 99, Report of Crime or Criminally Caused Property Damage on State Property, shall be prepared for all crimes or incidents occurring on State-owned or State-leased property and sent to:

Statewide Operations Security Office
1120 N Street, Mail Station 55
Sacramento, CA 95814

The IDR should be properly annotated concerning lost, stolen, or destroyed property.

Note: Local Agencies should contact their local law enforcement agency in lieu of the CHP.

© 1994-2025 California Department of Transportation. All rights reserved.

11.04.00.00 – RENTAL RATES

Note: any references to Local Agencies is in relation to Local Agency use of the Caltrans Right of Way Manual to comply with FHWA requirements.

11.04.01.00 General

Our policy is to charge fair market rent and to rent only to tenants willing and able to pay fair market rent. For definition of Fair Market Rent, see Manual Section 11.04.02.00. Exceptions are made for:

1. Tenants whose rental rates are established by Right of Way Contract.

2. Residential tenants who qualify for the Affordable Rent Program. (See Exhibit 11-EX-03, Affordable Rent Tenants. See Exhibit 11-EX-38 Gross Income for The Purpose of Calculating Affordable Rent).

3. Instances when it is in the overall public interest based on social, environmental, or economic benefits, or is for a non-proprietary governmental use.

4. Instances in which the Department must charge a less than fair market rate due to legislation.

If the property was acquired for a project in which any Title 23, United States Code, funding participated in any phase of the project, then prior written approval must be obtained from FHWA for any rental rate that is less than fair market (see Manual Section 11.01.10.00).

The District/Region shall set up in RWPM all state-owned properties that are suitable for renting and are proposed for occupancy as rental accounts and shall charge rent as follows:

Note: Local Agencies shall use their own computer system.

- **Property Improved with an Owner-Occupied Residential Unit** – Grantor's rental shall commence on the 16th day after the close of escrow or the day after the Order of Possession becomes effective (see Manual Section 8.09.01.00 for further details).

© 1994-2025 California Department of Transportation. All rights reserved.

- **Property Occupied by a Business** – A rental grace period (maximum of 60 days) may be granted to the tenant (former owner, inherited tenant) if circumstances warrant. The grace period may commence on the day after the close of escrow, or the day after the Order of Possession becomes effective, or at some other time during the lease term, depending on whether or not the business has a commitment to pay rent on a replacement site. See Manual Section 10.05.25.00 for further details.
- **All Other Classes of Property, Including Property Partially Tenant-Occupied** – Rentals shall commence on the day following close of escrow or the day after the Order of Possession becomes effective.
- **Exceptional Cases** – Adherence to rental rates established by executed RW Contracts is required. Lease-purchase sale of excess land to a tenant-buyer will provide for a lease at above market rate. See Excess Land Chapter, Manual Section 16.05.14.00, for further details.

These provisions do not preclude longer free occupancy periods where necessary or desirable with the DDD-RW's approval. The terms of either the RW Contract or the transmittal memorandum must indicate, however, that the state is receiving a consideration for the extended rent-free occupancy.

The initial rental rate for all improved properties and rented unimproved properties is in the appraisal report (see Manual Section 7.03.08.00).

- **Tenant-Occupied Properties** – The actual existing rental rate and the estimated fair market rental rate are shown.
- **Owner-Occupied Properties** – Only the fair market rental rate is shown. The rentals of similar properties shall be the basis for estimating the fair market rental rate.

11.04.01.01 Rental Rate Increase Policy

Department policy is to review rental rates annually and make the appropriate adjustments. Effective January 1, 2020, pursuant to an amendment to Section 827 of the Civil Code, a 90-day written notice is required prior to raising rents for residential tenancies when the increase is greater than 10 percent; prior to January 1, 2020, a 60-day written notice is required prior to raising rents for residential tenancies when the increase is greater than 10 percent. A 30-day written notice is required when the rent increase is 10 percent or less for residential tenancies. For non-residential tenancies, a 30-day courtesy notice is highly recommended.

© 1994-2025 California Department of Transportation. All rights reserved.

Effective March 15, 2019, the Department will be subject to rental rate caps for residential properties that are not alienable separate from the title to any other dwelling unit (i.e. properties that have more than one dwelling unit on a lot in which each dwelling unit cannot be sold separately, such as multi-family residential properties), are multi-family residential properties that are not receiving housing subsidies for affordable housing (e.g. the Affordable Rent Program, Section 8 or a similar program), and are multi-family residential properties that do not have a certificate of occupancy issued within the previous 15 years. In the course of any 12-month period the rental rate increase for these properties cannot exceed 5 percent plus the percentage change in the cost of living, or 10 percent, whichever is lower. The percentage change in the cost of living is defined in Section 1947.12(g) of the Civil Code. Between March 15, 2019, and January 1, 2020, if the rent has been increased by more than the prescribed amount in this paragraph, then the applicable rent on January 1, 2020, shall be the rent as of March 15, 2019, plus the maximum permissible increase and the Department is not liable for any rental overpayments for the rental increase over and above the prescribed amount in this paragraph. This statute, Section 1947.12 of the Civil Code, is in effect until January 1, 2030.

If the property was acquired for a project in which any Title 23, United States Code, funding participated in any phase of the project, then prior written approval must be obtained from FHWA if the rental rate is capped at a rate below fair market value (see Manual Section 11.01.10.00). If FHWA does not provide approval for the less than fair market rate for such properties, than fair market rent must be charged to the tenant irrespective of Section 1947.12 of the Civil Code.

For **residential** properties that are alienable separate from the title to any other dwelling unit(i.e. a property in which each dwelling unit on a lot may be sold separately such as single-family residences, townhomes, and condominiums), any residential properties that have been issued a certificate of occupancy within the previous 15 years, or any residential tenancies subject to an agreement that provides housing subsidies for affordable housing (e.g. the Affordable Rent Program, Section 8 or a similar type of program), the rental rate cap does not apply. Again, this statute, Section 1947.12 of the Civil Code, is in effect until January 1, 2030.

© 1994-2025 California Department of Transportation. All rights reserved.

The following language for residential properties that are exempt from the rental rate cap, due to being alienable separate from the title to any other dwelling unit (i.e. single-family residences, townhouses, and condominiums), must be in the rental agreement for all tenancies that commenced or renewed on or after July 1, 2020:

- "This property is not subject to rent limits imposed by Section 1947.12 of the Civil Code and is not subject to the just cause requirements of Section 1946.2 of the Civil Code. This property meets the requirements of Sections 1947.12 (d)(5) and 1946.2 (e)(8) of the Civil Code and the owner is not any of the following: (1) a real estate investment trust, as defined by Section 856 of the Internal Revenue Code; (2) a corporation; or (3) a limited liability company in which at least one member is a corporation."

The Department's rental rate policy for residential properties that are not subject to the statutory rent caps described in this section, shall be as follows:

- If the current rent is 25% or less below fair market rent, there will be annual 10% rent increases until actual rent equals market rent.
- If the current rent is more than 25% below fair market rent, there will be 10% rent increases every six months until actual rent is 25% or less below fair market rent and then there will be annual 10% rent increases until actual rent equals fair market rent.

11.04.01.02 Price Gouging During a State of Emergency

Upon the proclamation of a state of emergency declared by the President of the United States, the Governor of California, or a city and/or county official, board, or other governing body vested with authority, anti-price gouging statutes go into effect immediately after such proclamation or declaration.

Pursuant to Penal Code Section 396, it is unlawful to increase the rental rate advertised, offered or charged for housing, to an existing or prospective tenant, by more than 10 percent upon such proclamation or declaration of a state of emergency and for a period of 30 days following the proclamation or declaration or any period the proclamation or declaration is extended by the applicable authority. The rental rate may be increased by more than 10 percent during a state of emergency if the increase was contractually agreed to by the tenant prior to the proclamation or declaration.

© 1994-2025 California Department of Transportation. All rights reserved.

Additionally, pursuant to California Penal Code Section 396, upon such proclamation or declaration of a state of emergency and for a period of 30 days following the proclamation or declaration, or any period the proclamation or declaration is extended by the applicable authority, it is unlawful to evict a residential tenant and then rent or offer to rent to another person at a rental rate greater than the evicted tenant could be charged.

California Penal Code Section 396 defines the rental rate as follows:

- For housing rented within one year prior to the proclamation or declaration of emergency, the rental rate is the actual rental rate paid by the tenant.
- For housing not rented at the time of the declaration or proclamation, but rented, or offered for rent, within one year prior to the proclamation or declaration of emergency the rental rate is the most recent rental rate offered prior to the proclamation or declaration of emergency.
- For housing rented at the time of the proclamation or declaration of emergency but which becomes vacant while the proclamation or declaration of emergency remains in effect and which is subject to any ordinance, rule, regulation, or initiative measure adopted by any local governmental entity that establishes a maximum amount that a landlord may charge a tenant for rent, the rental rate is the greater of the actual rental rate paid by the previous tenant or 160 percent of the fair market rent established by the United States Department of Housing and Urban Development.
- For housing not rented and not offered for rent within one year prior to the proclamation or declaration of emergency, the rental rate is 160 percent of the fair market rent established by the United States Department of Housing and Urban Development.

11.04.02.00 Rent Determinations

Property Management is responsible for establishing fair market rent determinations on residential properties with the exceptions of fair market rent determination appraisals for Department-owned employee housing units (see Manual Section 11.18.04.01). Property Management may request assistance from Appraisals, but must provide Appraisals with detailed information about the subject properties. For information and responsibilities for rent determinations on nonresidential properties, see Manual Section 11.05.01.00 for guidance.

© 1994-2025 California Department of Transportation. All rights reserved.

A fair market rent determination is an estimate of the amount of rent, which a parcel would command in the open market, if offered under the terms and conditions typical of the market for similar properties.

The rent determination shall be based on current rents being paid in the area for comparable property. An analysis of the comparable rental and other market data such as size, location, condition of property (exterior and interior), etc., will be completed. The subject and comparable properties shall be viewed in the field and the comparable properties will be inspected if available. Exhibit 11-EX-46, Documentation of Residential Fair Market Rental Rate (internal Caltrans link), will be used for all rent determinations. The rent determination includes a signed statement that the Agent has personally viewed and inspected the parcel. The rent determination shall also be signed by a Property Management Senior and placed in the rental file.

At minimum, a 48-hour notice will be given to the tenants prior to inspecting the property for rent determinations.

11.04.02.01 Changing the Rental Rate Shown in the Appraisal

Although Property Management will normally use the rental rate shown in the appraisal, it has the right to revise the rate if justified by more recent market data. If a change in the rental rate for residential properties is proposed, the Agent shall complete Exhibit 11-EX-46, Documentation of Residential Fair Market Rental Rate (internal Caltrans link), and submit to the Property Management Senior or designee for approval. For nonresidential properties, the Agent shall complete Exhibit 11-EX-53, Nominal Value Nonresidential Rental Appraisal (internal Caltrans link), and submit to the Property Management Senior or designee for approval of an interim rental rate prior to the completion of a reappraisal of the property (see Manual Section 11.05.04.00 for additional information in regard to nonresidential properties.) All documentation shall be filed in the rental folder.

© 1994-2025 California Department of Transportation. All rights reserved.

11.04.03.00 Lease Term

Residential tenancies will be on a month to month basis. At its discretion, the District/Region/Local Agency may set the length of non-residential lease terms up to five years, provided rate adjustments are incorporated and 90-day (or less) cancellation clauses are included. Suggested guidelines are as follows:

- **The Property Is in an Active Market, Subject to Recent or Anticipated Property Value Increases** – Consideration should be given to keeping the term short (e.g., one year). The advantage is that the rent can be reappraised and adjusted with market changes; the disadvantage is that a yearly reappraisal and renewal are required.
- **Properties Are of Relatively Low Value (e.g., Agricultural and Nominal Leases) and the Market Is Stable** – Consideration should be given to a longer-term lease (e.g., 3-5 years). This reduces the need for annual reappraisal and lease renewal where little or no rental change is likely. In such a case, a rental adjustment lease clause may be omitted.
- **Other Leases (e.g., Commercial and Industrial) in a Stable Market** – Consideration should be given to a longer-term lease (e.g., 3-5 years). To keep up with the rental market, the lease should contain a provision for annual rental escalation. Examples include level or graduated rental step raises (based on projected market trends) and raises tied to a Consumer Price Index.

  (Please refer to the Lease Agreement template on the Property Management webpage [internal Caltrans link] for standard rent escalation clauses.)

  Use of a flat rental rate must be justified and documented in the file or preapproved in writing by the DD or authorized delegate.

Where possible, all leases should be written with a short termination time (e.g., 90 days or less) to provide maximum flexibility. Leases with terminations longer than 90 days should be written on an exception basis only and must not conflict with project certification schedules. Similarly, multiyear leases must be written to avoid such conflict.

© 1994-2025 California Department of Transportation. All rights reserved.

11.04.04.00 Escalation Clauses

The assigned Agent shall annually review each lease agreement containing a rental escalation clause. The Agent shall adjust the lease rate in RWPM according to the terms of the agreement and notify the lessee. It is highly recommended that the Agent provide at least a 30-day courtesy notice to the lessee informing them of the rental rate increase. The rental file and RWPM shall be appropriately documented. In order to ensure proper billing, the Agent should go into the "Update Tenancy" screen in RWPM and enter the new rental amount and effective date under the "Pending Amounts" section. Additionally, the Agent should update the "Market Rent" and "Date of Value" on the "Property" screen within RWPM. The Property Management Senior shall be responsible for reviewing the rental files and the RWPM screens to ensure compliance.

Note: Local Agency shall use their own computer system.

11.04.05.00 Local Ordinances

The Department is not mandated to comply with local tenant protection ordinances since the State is a sovereign entity. The State has sovereign power over all things not delegated to the federal government by the United States Constitution. Therefore, cities and counties cannot dictate policies and rules over the State's leasing activities.

Although the Department is not mandated to comply with local tenant protection ordinances, a Region/District may choose to permissively comply with such ordinances. If a Region/District chooses to comply with local tenant protection ordinances, the Region/District must do so while adhering to federal laws. If the property was acquired for a project in which any Title 23, United States Code, funding participated in any phase of the project, then prior written approval must be obtained from FHWA for any rental rate that is less than fair market value (see Manual Section 11.01.10.00).

Note: Local Agency shall adhere to their own local ordinances.

© 1994-2025 California Department of Transportation. All rights reserved.

11.04.06.00 Owners Retain Improvements

If the RW Contract requires the owner to remove retained improvements within a short time period (e.g., 90 days), a rental rate providing a current market return on the acquired property is charged. The rental rate shall not include a return on retained improvements. If the acquired land is of such size and irregular shape (e.g., narrow strips) that the market rental rate cannot be readily determined, the monthly rental rate may be set at one percent (1%) of the payment for the acquired property or the nominal monthly rental rate, whichever is greater.

After the close of escrow, if any structural improvement retained by the grantor remains on the acquired property past the term agreed to, the District/Region/Local Agency shall charge fair market rent for the use of the property purchased from the grantor. The Agent should also check the Right of Way Contract for clauses pertaining to provisions agreed upon if such issue occurred. (For example, the right of the Department to sell or demolish the improvements remaining on State property.)

© 1994-2025 California Department of Transportation. All rights reserved.

11.05.00.00 – NONRESIDENTIAL RENTALS

Note: any references to Local Agencies is in relation to Local Agency use of the Caltrans Right of Way Manual to comply with FHWA requirements.

11.05.01.00 Fair Market Rent Determinations

Appraisals shall independently establish, review, and approve fair market rent for nonresidential properties with the following exceptions:

- Nominal value rentals up to $200 per month or $2,400 per year
- Oil and gas rights set by contract or other binding document
- Field offices and other properties being used by the Department
- Signboard sites
- Porter Bill park leases
- Residential master tenancy leases
- Bid leases
- Bike paths leased to public agencies
- Leases for agricultural, community garden, or recreational purposes under SHC Section 104.7
- Interim rent changes (see Manual Section 11.05.04.00 below)

Property Management shall determine the actual rental rates and shall fully justify and document any adjustments from the fair market rental rate arrived at by Appraisals. Any rates less than fair market value on property acquired with Title 23, United States Code, funding requires approval from FHWA.

© 1994-2025 California Department of Transportation. All rights reserved.

11.05.01.01 Appraisal Service Request Requirements

The Appraisal Branch prepares, reviews, and approves fair market rent determinations for all nonresidential properties except those noted above.

The service is provided upon written request from Property Management. These requests should be scheduled so as to give Appraisals as much lead time as possible, and will include the following information:

- A map of the property.
- Parcel number, county, route, post mile/kilometer post, and property address.
- Improvements that belong to the tenant and should be excluded from consideration.
- Special items on the property, such as machinery or equipment. An inventory should be available if needed.
- Whether construction of improvements on the property will be permitted.
- Term of the proposed lease and estimated length of time the property will be available for rent.

Rent determinations will be updated upon written request from Property Management.

Note: Local Agency may contract out for rent determinations. Local Agency will be responsible for content of the rent determination.

11.05.02.00 Nominal Value Nonresidential Rentals

Many properties cannot be rented for more than nominal rent because of use, size, irregular shape and/or location. Nominal rent for State owned properties for this purpose is defined as $2,400 per year ($200 per month). Local Agencies are to determine their own nominal rental rate amounts.

At the Region/District/Local Agency's option, the Appraisal Branch staff or the Property Management Branch staff may be used for rent determinations on nominal value nonresidential rentals. Note: Local Agencies shall work within their own structure to determine who shall complete appraisals.

© 1994-2025 California Department of Transportation. All rights reserved.

In these cases, Exhibit 11-EX-53, Nominal Value Nonresidential Rental Appraisal (internal Caltrans link), is required. It should identify and describe the parcel, and summarize the data and analysis that led to the appraiser's conclusion of fair market rent. The nominal rental conclusion should be stated as a specific rental amount. A map of the appraised property is required (8½" x 11" size clearly showing property details and location is sufficient); photographs are recommended.

The rent determination should include a signed statement that the Appraiser or Property Agent has personally viewed and inspected the parcel. The determination should also be signed by the function's Senior.

All nominal rents shall be supported by the use of comparables in the area or other available market data, such as the opinions of realtors or other experts. Consideration shall be given to:

- Length of time the property will be available.
- Market demand.
- Any savings in maintenance costs to the state.

Many parcels of vacant land require annual expenditures by the state for weed abatement and trash removal, and these expenditures can be passed on to lessees with nominal rent leases. Any reduction in rent for maintenance costs saved by the Department shall be clearly documented in the file.

11.05.03.00 Rental Grace Period on Business Properties

See Manual Section 10.05.25.00, for information on rental grace periods.

11.05.04.00 Rental Rate Increases Prior to Appraisal

When Appraisals is unable to furnish the fair market rent for nonresidential properties on a timely basis, and where the existing rental rates are thought to be substantially below market, Property Management may establish interim rental rates based on the best available data. The interim rental rate must be documented in the property file, including comparables used and supported adjustments.

© 1994-2025 California Department of Transportation. All rights reserved.

When a rental rate is established without an appraisal determination, the Agent shall inform the lessee that the rental rate is temporary, pending an appraisal determination. A clause similar to the following should be included in the rental agreement or lease:

> *Lessee agrees that the rental rate of $_____ per month/year set forth above is an interim rate for a period of at least six (6) months. The lessor will obtain an appraisal of the fair market rent for the leased property. Lessee agrees that lessor may adjust the rental rate based on the market rent appraisal by giving lessee sixty (60) days' prior written notice.*

11.05.05.00 Rental Rate Review

The Property Management Senior or designee shall review the rental rate on all nonresidential accounts annually and shall maintain an up-to-date sampling of fair market rental rates for similar properties in the vicinity of the state-owned properties. The exceptions are those rental rates that are determined by set increases such as CPI Index and those that are established in the rental agreement or lease for multiple years.

11.05.06.00 Rental Rate Increase Policy

See RW Manual Section 11.04.01.01.

11.05.07.00 Electric Vehicle Charging Stations – Nonresidential Tenancies

Pursuant to Section 1952.7 of the Civil Code, a landlord is required to approve a nonresidential lessee's written request to install an electric vehicle charging station for any lease agreements executed, extended, or renewed on and after January 1, 2015.

Section 1952.7 of the Civil Code does not apply to the following: a commercial property where charging stations exist for use by lessees in a ratio that is equal to or greater than two available parking spaces for every 100 parking spaces at the property; and, a property where there are less than 50 parking spaces.

© 1994-2025 California Department of Transportation. All rights reserved.

The lessee does not have the right to install charging stations in more parking spaces than are allotted to the lessee. If the lessee has no parking spaces allotted to them, the lessee can convert a certain number of existing parking spaces by multiplying the total number of existing parking spaces by a fraction, consisting of a numerator being the total square footage leased and the denominator being the total square footage of the entire property. If the installation of a charging station has the effect of granting the lessee a reserved parking space and a reserved parking space is not allotted to the lessee, the landlord may charge a reasonable monthly rental amount for the parking space.

If the landlord's approval is required for the installation of a charging station, the lessee shall obtain approval from the landlord and must agree in writing to do all of the following: comply with the landlord's reasonable standards for installation of the charging station; engage a licensed contractor to install the charging station; and, within 14 days of approval, provide a certificate of insurance that names the landlord as an additional insured under the lessee's insurance policy in the amount of $1,000,000.

The lessee shall be responsible for the following: costs for damage to the property and the charging station resulting from the installation, maintenance, repair, removal, or replacement of the charging station; costs for the maintenance, repair, and replacement of the charging station; and, the cost of electricity associated with the charging station.

11.05.08.00 Department's Contractor's Use of Property – Construction Staging

The Department's Standard Specifications Section 5-1.32, "Areas for Use," allows the Department's contractor to occupy the highway only for purposes necessary to perform the work. The areas for use available to the Department's construction contractor must be within the project limits and must be within the environmentally approved project footprint.

It is preferable for the construction staging areas to be incorporated into the Construction Bid Package. This may be achieved by the Plans, Specifications, and Estimates (PS&E) package including designated temporary construction easements or the construction contract's standard specifications allowing the use of Airspace's Freeway Lease Areas (FLAs) within the project's limit.

© 1994-2025 California Department of Transportation. All rights reserved.

In the instances in which the Department/Local Agency's construction contractor requires a construction staging area not included within the Construction Bid Package, Property Management properties may be used for construction staging if the following conditions are met:

- If federal funds were used to purchase the property, the property must be leased at fair market value (FMV).
- If the Department/Local Agency believes that it is in its best interest to lease at less than FMV, then the Department/Local Agency must obtain FHWA approval for the less than FMV rate through a Public Interest Finding (PIF). This situation would arise when the Department/Local Agency is required to compensate the construction contractor a certain percentage markup for costs incurred, e.g. force account due to a Director's Order project.
- If the construction contractor is paying less than FMV, rental terms shall only be for the length of time of the construction project (with allowances for short periods before and after the project for site preparation and site clean-up).
- The rental terms and conditions must include environmental protections, e.g., placement of non-permeable barriers, placement of stormwater best management practices, etc.
- The construction contractor is responsible for obtaining all local permitting.
- The property must be returned to the original condition after the construction staging use is completed.

© 1994-2025 California Department of Transportation. All rights reserved.

11.06.00.00 – RESIDENTIAL RENTALS

Note: any references to Local Agencies is in relation to Local Agency use of the Caltrans Right of Way Manual to comply with FHWA requirements.

11.06.01.00 General

The Agent should fully inform tenants of:

- The Department's rental rate policy.
- Their responsibility to maintain the property.
- Title VI policies.
- Any required disclosures (e.g., lead-based paint).

11.06.02.00 Annual Rental Rate Reviews

The Property Management Senior or designee shall annually review the rental rate on all residential accounts and those accounts where the rental rate is not set by agreement or lease and shall maintain an up-to-date sampling of fair market rental rates for similar properties in the vicinity of the state-owned properties.

A request for fair market rent determinations should be submitted to the Appraisal Branch, completing Exhibit 11-EX-45, Request for Rent Determination (internal Caltrans link). Keep in mind the time frame should allow adequate time for Appraisals to complete the determinations and still allow for Property Management to issue a written 90-day notice of rental rate increase to the tenant.

When Appraisals are unable to furnish the fair market rent determinations for residential properties on a timely basis, Property Management may establish the rental rates. Exhibit 11-EX-46, Documentation of Residential Fair Market Rental Rate (internal Caltrans link), or similar form of Region/District/Local Agency's choice will be completed and filed in such a manner and office location that it will be available to the District Property Management Senior and other personnel for possible reference. A copy will be kept in the rental file. The Region/District/Local Agency Property Management Senior or designee must approve Exhibit 11-EX-46, or similar form. When a fair market rent determination appraisal is required for Department-owned employee housing, Property Management may not establish the rental rates and Exhibit 11-EX-46 shall not be used for such a purpose (see Manual Section 11.18.04.01).

© 1994-2025 California Department of Transportation. All rights reserved.

Note: Local Agency may contract out for an appraisal of rental rates. The Local Agency is responsible for the content of the appraisal.

11.06.02.01 Rental Rate Increases

See RW Manual Section 11.04.01.01.

11.06.03.00 RAP Eligibility

The RAP Unit determines the eligibility of existing tenants for relocation assistance and payments and provides this information to the Property Management Senior. Property Management should coordinate with the RAP Unit when RAP-eligible tenants vacate state-owned property.

11.06.04.00 Appeals (RAP-Eligible Tenants Only)

RAP-eligible tenants have the right to appeal the Department's "Property Management Practices," including rental rate increases. All appeals must be in writing and must be filed within 15 days from the date of the notice of rental increase. Tenants shall have the right of personal appearance.

The District/Region/Local Agency shall inform RAP-eligible tenants of their right of appeal and sufficiently explain the appeal procedure so the tenants understand:

- Grounds for appeal.
- How to make the appeal in a timely manner.
- Appeal must be in writing.
- Their right to a personal appearance.

11.06.04.01 Grounds for Appeal and Approval Authority

RAP-eligible tenants may appeal rental rate increases when:

- They believe rental rates have been improperly established.
- They believe the Department/Local Agency's maintenance of the property is inadequate.
- They believe a rental rate increase will cause an extreme financial hardship.

© 1994-2025 California Department of Transportation. All rights reserved.

A basic role of the Department/Local Agency in reviewing appeals is to determine that rental rates have been properly established and tenants have been thoroughly advised of the rental rate policy requiring fair market rent.

Extreme financial hardship appeals may be based on tenants' inability to pay increased rent because of unusual or excessive expenses. Other consumer or voluntary expenses of the appellant will not constitute grounds for reducing the new rental rate.

11.06.04.02 Appeals Hearing

All appeals will be forwarded to the DDD-RW, who may appoint a single Hearing Officer or form a District Appeals Board to hear appeals and make recommendations for the DDD to consider in making a decision.

If a District Appeals Board is appointed, it shall consist of at least three members who will meet to hear appeals in a timely manner. Board members must be thoroughly familiar with the Department's rental rate policy and rental management procedures.

Appeals will be heard within 20 days after the appeal has been received. Bilingual services will be provided if necessary. Any person may be allowed to assist the appellant in making a presentation. This rental appeal procedure is a departmental administrative policy, however, and is not a legal hearing subject to legal procedures or arguments.

Prior to considering any appeal, the DDD-RW, Hearing Officer, or Board shall be briefed on reasons for the appellant's rent increase, including pertinent comparable rentals.

All data furnished by the appellant and District staff shall be carefully reviewed to determine if the rental rate has been properly established. The appellant may be asked to provide additional information and to confirm data presented in the appeal.

Upon completion of the appeal hearing, the Hearing Officer or Board shall recommend to the DDD-RW that the appeal be wholly granted, granted in part, or denied. The recommendation shall be by the Hearing Officer or by a majority vote of Board members, shall be in writing, and shall contain the basis for the recommendation.

© 1994-2025 California Department of Transportation. All rights reserved.

The DDD-RW shall make the final decision. The DDD's decision will be conveyed to the appellant in writing within ten working days after the hearing. Notification of the decision will include the reasons supporting the decision.

Appeals will be processed promptly in accordance with the preceding time frames. The scheduled rental rate increase will be deferred until the tenant has received notification of the results of the appeal. If the appeal is denied, the tenant is responsible for the rental increase from the effective date of the initial notice.

11.06.04.03 Extreme Financial Hardship

The intent of the financial hardship procedure is to provide tenant(s) a relief mechanism for a temporary period in recognition of extreme financial hardship circumstances resulting from a rental rate increase. It is not the Department/Local Agency's intent to assume continuing involvement in, or responsibility for, tenant financial affairs or to otherwise compromise the rental program on a long-term basis.

When the appeals process documents such an extreme financial hardship, the District's/Region/Local Agency's decision may provide for temporarily suspending the rental rate increase. This will enable the tenant to either resolve the hardship circumstance and thereafter continue in tenancy at the new rate, or to secure alternate housing and relocate from the Department/Local Agency's property. The recommended suspension should rarely exceed six months in duration. The policy should be thoroughly discussed with and understood by the tenant when the appeals process is initiated.

In considering appeals for exceptions, the DDD-RW/Local Agency will consider all factors leading to the appeal to determine:

- If a true extreme financial hardship caused by the rental rate increase exists.
- If the extreme financial hardship is of a temporary or permanent nature.
- If relocation of the tenant to accommodations within their economic means is feasible.

The appellant shall be notified of the decision as outlined in the appeals procedure.

© 1994-2025 California Department of Transportation. All rights reserved.

In all cases where an exception is granted, Accounting must be notified in time to make the new rental rate effective at the end of the exception period. Additionally, the Agent shall enter the new rental rate and effective date under the "Pending Amounts" section of the "Update Tenancy" screen in RWPM to ensure proper billing.

11.06.05.00 Inherited Tenants

An inherited tenant is one who was in occupancy at the time of the state's acquisition. Rent charged to inherited tenants whose rent at close of escrow is below fair market will be increased to fair market 90 days after close of escrow.

11.06.06.00 Pet Policy

Department policy is to discourage the occupancy of pets in Department-owned property. In the event a Region or District/Local Agency allows tenants to have pets, the following procedures must be followed:

- A Pet Application (Exhibit 11-EX-51) for each pet must be completed by the tenant(s) and approved by the Department. The pet application(s) with approvals will be kept in the rental file.
- A Pet Addendum (Exhibit 11-EX-52) (internal Caltrans link) for each pet must be executed by the tenant(s) and the Department. The Pet Addendum becomes a rider for the rental agreement or lease and shall be attached to such and kept in the rental file.
- A pet deposit will be collected from the tenant(s). The amount of the deposit should be equal to the risk associated with the pet but in no circumstances less than $200. The deposit is refundable depending on the findings discovered during the move-out inspection. Note that with passage of AB 12 (2023), for tenancies starting or deposits imposed after June 30, 2024, the sum of all security deposits for residential tenancies, including pet deposits, shall not exceed the monthly rental rate.

The Agent and Property Management Senior must determine if the tenant(s) must obtain and carry liability insurance due to the presence of approved pet(s) on the properties. If insurance is required, the tenant(s) must provide proof of insurance covering said pet(s). This can be in the form of a renter's insurance policy or an individual pet liability insurance policy. The Agent must verify that there is coverage for said pet(s) on the specific policy. A call to the insurance agent may be necessary if the policy doesn't clearly state that said

© 1994-2025 California Department of Transportation. All rights reserved.

pet(s) are covered. If insurance for said pet(s) is required, the liability insurance coverage shall be at least $100,000.

It is the responsibility of the tenant(s) to adhere to all requirements of the Pet Addendum including, but not limited to, keeping the property (inside and outside) free from pet waste, not allowing the pet(s) to become a nuisance to neighbors, and preventing the pet(s) from damaging the Department-owned property. (Damage could be digging of holes in the yard, staining of carpet, chewing of fences, etc.)

If at any time during the tenancy, an Agent discovers damage (in any form) caused by a pet(s), the damage will be repaired immediately at the sole expense of the tenant(s). Agent may charge the pet deposit, security deposit or insurance policy of the tenant(s) to cover unpaid repair costs. If the insurance policy, pet deposit and/or security deposit is insufficient to cover the repair costs, the tenant(s) will be charged the difference. All payments must be made immediately or the tenant(s) will be served a three-day notice to pay or quit. If the pet deposit and/or security deposit is expended in full or part during the term of the tenancy to remedy any situation, a new pet deposit and/or security deposit will be assessed to the tenant(s). If this situation occurs, a larger pet deposit may be warranted, subject to the above statutory limits.

When completing a property inspection and pet(s) are present, the Agent must include any pet information on the Residential Property Inspection sheet. A copy of the Residential Property Inspection sheet may be found on the Property Management webpage (internal Caltrans link).

All policies and procedures listed above apply to inherited and existing tenants with pet(s).

Note: RWPM guidelines for collecting and keeping track of a pet deposit are as follows:

- The pet deposit will become part of the security deposit.
- On the "Tenancy" Screen mark the "STD" indicator as "N". This will flag the deposit as being non-standard. In the "Remarks" section, add notes that the security deposit includes a pet deposit and the amount of the pet deposit.
- For existing tenants, an Adjustment Screen will need to be completed and sent to Accounting increasing the amount of the security deposit.

© 1994-2025 California Department of Transportation. All rights reserved.

- For new or inherited tenants, the amount of the security deposit will be the sum of the security deposit and the pet deposit. The security deposit should not be reduced to accommodate the need for a pet deposit. These are two separate deposits, for distinct purposes, however the sum of these deposits is subject to the above statutory limits.
- Department policy in regard to refunding pet deposits is the same as with security deposits. (See Manual Section 11.07.17.00.) A pet deposit may be utilized only for damage caused by a pet, not delinquent rent or damage not caused by a pet.

Note: Local Agency will use their own computer system.

Pursuant to Civil Code Section 54.1, the Department shall not deny the occupancy of guide dogs, signal dogs, and service dogs to tenants that are disabled and require the uses of such animals. Pursuant to Civil Code Section 54.2, an additional pet deposit may not be imposed on tenants that use such animals. Although an additional pet deposit may not be imposed on tenants, the tenants are still liable for any damage done to the premises by their animals.

11.06.07.00 Electric Vehicle Charging Stations – Residential Tenancies

Pursuant to Section 1947.6 of the Civil Code, a landlord is required to approve a tenant's written request to install an electric vehicle charging station at the tenant's parking space for any residential rental agreements executed, extended, or renewed on and after July 1, 2015.

Section 1947.6 of the Civil Code does not apply to the following residential rental properties: electrical vehicle charging stations already exist for 10 percent or more of the designated parking spots; parking is not provided as part of the rental agreement; there are fewer than five parking spaces; the dwelling is subject to a rent control ordinance, except for residential rental agreements that are executed, extended, or renewed on and after January 1, 2019; and the dwelling is subject to both a residential rent control ordinance and an ordinance, adopted on or before January 1, 2018, that requires the landlord to approve a tenant's written request to install an electric vehicle charging station at a parking space allotted to the tenant.

© 1994-2025 California Department of Transportation. All rights reserved.

The tenant must enter into a written agreement which includes, but is not limited to, the following: compliance with the landlord's requirements for installation, use, and maintenance of the charging station and infrastructure and removal of the charging station; an obligation of the tenant to pay for all costs associated with the charging station and its infrastructure; an obligation of the tenant to pay as part of rent for the costs of the electrical usage of the charging station. A landlord is not obligated to provide an additional parking space to a tenant in order to accommodate a charging station, and if the charging station has the effect of providing the tenant with a reserved parking space, the landlord may charge a monthly rental amount for that space.

Effective January 1, 2020, the tenant must obtain personal liability coverage in an amount not to exceed ten (10) times the annual rent charged, covering property damage and personal injury caused by the installation or operation of the charging station. No insurance is required if the charging station has been certified by a Nationally Recognized Testing Laboratory that is approved by the Occupational Safety and Health Administration of the United States Department of Labor and the charging station and any associated alterations to the properties electrical system are performed by a licensed electrician.

© 1994-2025 California Department of Transportation. All rights reserved.

11.07.00.00 – RENTAL PROCEDURES

Note: any references to Local Agencies is in relation to Local Agency use of the Caltrans Right of Way Manual to comply with FHWA requirements.

11.07.01.00 General

The following sections specify procedures for renting vacated property that are in addition to those set forth in Manual Section 11.02.00.00, Closure Procedure.

11.07.02.00 Marketing Plan

Each District/Region/Local Agency should maintain a Marketing Plan that should be updated annually in July. The Plan should list by project the number and types of properties estimated to become available for rent/lease in the coming fiscal year. The Plan should also indicate the manner in which the properties will be marketed along with estimated costs.

11.07.03.00 Finder's Fees/Rental Incentives

Finder's fees and rental incentives may be used when necessary to reduce the vacancy rate. A finder's fee is a rent credit given to an existing tenant as compensation for referring a prospective tenant to the state. A rental incentive is a rent credit given to a new tenant as an enticement to rent our property. A rental incentive should be used only as a last resort and may be spread over several months when used in a month-to-month rental agreement.

The RWPM Adjustment Request Screen is used to notify Accounting of any rent credit.

11.07.04.00 Advertising

The District/Region/Local Agency should use advertising when necessary to attract tenants. Advertising may include posting on third-party websites, newspaper advertisements, and posting signs on the property itself.

Whenever the District/Region/Local Agency uses newspaper advertisements, it shall comply with Public Contract Code Section 10115.13 relating to the use of certain advertising business enterprises. The Agent shall contact the Department's Office of Civil Rights prior to advertising and request a list of any

© 1994-2025 California Department of Transportation. All rights reserved.

certified media firms for the area. The findings and subsequent actions shall be documented.

Note: Local Agencies will follow their government's policies for advertising.

- **Improved Properties** – The Agent should use third party websites or newspaper advertisements when necessary. Posting of improved properties with advertising signs indicating the property is for rent may be desirable in some cases and is at the District's/Region's discretion. Posting is not desirable where, for example, it would invite vandalism or illegal trespassing.
- **Vacant Land** – Rentable vacant land should use third party websites or should be posted with advertising signs indicating the property is for rent. Posting of vacant land with advertising signs should not occur when it would invite dumping, illegal trespassing, vandalism, or conflict with local sign ordinances. In some cases, newspaper advertisements may be desirable for vacant land of high value.

11.07.05.00 Showing Property

Under no circumstances are prospective tenants to be given keys that enable them to inspect state property on their own. If several parcels are available and a prospective tenant is interested in seeing a number of them, the Agent should ask the person to view the properties and improvements from the street/exterior. Thereafter, the prospective tenant may set up an appointment with the Agent to inspect those of primary interest.

11.07.06.00 Use of the Property

The prospective lessee shall get prior approval for their proposed use of the property by the local jurisdiction's planning/zoning department for all properties except for improved residential properties. In many instances, the state's property will not have a zoning designation, in which case the uses allowed by the local jurisdiction will be unknown to the Agent. It is the responsibility of the prospective lessee to get written approval from a representative in the local jurisdiction's planning/zoning department. If the state's property does have a zoning designation, it is the responsibility of the Agent and Property Management Senior to be aware of the zoning designation and to be aware of the permitted uses and conditionally permitted uses allowed per that zoning designation. If the proposed use requires an issuance of an administrative or conditional use permit, the prospective tenant/lessee shall obtain all necessary permits at their sole cost

© 1994-2025 California Department of Transportation. All rights reserved.

and expense. The tenant/lessee shall provide copies of all written approvals and any necessary permits to the Agent for the tenancy file.

If a property does not have a zoning designation and the local jurisdiction refuses to provide guidance on the uses allowed, then the Property Management Senior shall decide if the proposed use is compatible with the property. The Property Management Senior must take into account how the use will affect the adjoining neighbors and neighborhood in general. The Property Management Senior must ensure proper measures are implemented, and explicitly stated in the lease agreement, so not to infringe on the neighbors' right to quiet enjoyment of their properties and to avoid blight in the neighborhood. Items to consider include, but are not limited to, the following: adhering to local noise ordinances, limiting the hours of operations, establishing setbacks of certain uses along common fences, limiting the height of storage of materials, and requiring privacy screens on chain link fencing.

Note: Local Agency to refer to their own planning department for determined use.

If the property is improved with a structure, the Agent must know what use classification the Certificate of Occupancy originally issued by the city or county building department allowed. If the use classification is changing, such as an Industrial use to a Commercial use, then a new Certificate of Occupancy shall be obtained. The tenant/lessee shall provide a copy of the Certificate of Occupancy to the Agent for the tenancy file prior to occupying the property.

Prior to the tenant/lessee occupying a property improved with a structure, with the exception of improved residential properties, the State Fire Marshal and the local fire department must perform an inspection of the property.

Note: Local Agency to refer to their own fire department for jurisdictional oversight.

If a property once had underground storage tanks, such as a former maintenance station, the Agent must verify that the property has been cleared for use. The property should have had a site investigation and remediation actions taken for such clearance. It is recommended that the Agent utilize the State Water Resources Control Board's GeoTracker website to verify the status of the property. The Agent shall also consult with the Hazardous Waste Branch within the Division of Environmental Analysis for what types of uses would be allowed on the property based on the type of clearances for the property. Based on the remediation actions taken, a site

© 1994-2025 California Department of Transportation. All rights reserved.

may have only been cleared for a very specific use, and any other use may require the site to be re-evaluated with additional remediation actions required.

11.07.07.00 Environmental Status

If a Property Management site involves a change in the occupancy classification of a structure, an alteration to an existing structure, or construction of a new structure, then the prospective lessee must provide a National Environmental Policy Act (NEPA)/California Environmental Quality Act (CEQA) document, at their sole cost and expense, which must also include a "6010 Metal Study" report. The prospective lessee may also need to obtain final approval of their plan from the local agency. The Environmental Document and the "6010 Metal Study" report must meet applicable CEQA and NEPA requirement and must be reviewed and approved by the Division of Environmental Analysis for the proposed use. Testing must be done to the depth of excavation. If there are any environmental issues with the site, it is the responsibility of the prospective lessee to remediate the site, at their sole cost and expense, to acceptable use levels; all remediation plans must be approved by the Division of Environmental Analysis.

The Agent should consult the Division of Environmental Analysis regarding any specific questions.

Note: Local Agencies should consult the local environmental division overseeing the project.

11.07.08.00 Rental Application and Credit Report

Before making a commitment to rent, the Agent shall have the prospective tenant complete Form RW 11-05, Residential Rental Application, or RW 11-06, Nonresidential Rental Application, and verify the information. Government Agencies wishing to be tenants are excepted from rental application and credit report requirements.

- **Credit Reporting Agency Used** – A satisfactory credit report must be received. The applicant(s) shall pay the actual costs of the credit report(s).
- **Credit Reporting Agency Not Used** – The Property Manager or authorized representative must make a diligent effort to verify the information on the Rental Application before committing to rent to the applicant.

© 1994-2025 California Department of Transportation. All rights reserved.

Note: Local Agencies can use their own rental application and credit reporting services.

11.07.09.00 Guidelines for Selection of New Tenants

Property Management is responsible for renting to qualified applicants only. The Agent shall review all applications and select the most qualified applicant based on available data. The decision shall be based on ability to pay rent and ability and willingness to maintain the property and improvements.

As a guideline in determining a residential applicant's ability to pay rent, the applicant's gross household income should equal or exceed four times the rental rate. The District/Region/Local Agency may make exceptions to this guideline at its discretion, but it must document all exceptions and retain the documentation in the rental file. Examples of exceptions include good employment history, prior record of consistently paying rents, good credit report, etc. All these factors will determine an applicant's eligibility to rent from the Department.

Federal and state laws prohibit discrimination in housing accommodations against tenants because of race, sex, sexual orientation, gender, gender identity, gender expression, creed, color, religion, national or ethnic origin, ancestry, familial status, source of income, age, marital status, genetic information, military and veteran status, or disability.

For non-residential lessees, the Agent should carefully review the last two years of financial statements such as profit/loss statements, balance sheets, and tax returns. For a new business, the Agent should also examine bank statements to verify that the lessee can cover 6 months of costs. The Agent should speak with the lessee's prior landlord to verify that the lessee paid their rent on time.

The Agent may want to examine a business by evaluating their current ratio. The current ratio is calculated by dividing a business' current assets by their current liabilities. If this yields a number greater than 1, it is an indicator that the business is in a good position to meet its short-term obligations.

If the information is available, the Agent can evaluate a business' quick ratio. The quick ratio is calculated by subtracting inventories from a business' current assets and dividing that by their liabilities. The quick ratio is a better indicator of the ability of a business to meet its short-term obligations based on its liquidity.

11.07.10.00 Use of Cosigners

Cosigners should not be used to qualify an applicant with insufficient income or credit. In the case of a prospective residential tenant who is disabled, a cosigner must be considered in accordance with the Fair Housing Amendments Acts (42 U.S.C. § 3601 et seq.).

11.07.11.00 Declined Applicants

If an applicant is denied housing, the applicant will receive the denial in writing and the reasons for denial stated.

If Property Management's decision to deny tenancy to an applicant is based wholly or in part on information contained in a credit report, California Civil Code Section 1785.20 requires the following:

1. Provide written notice of the adverse action to the applicant.
2. Provide the applicant with the name, address, and telephone number of the consumer credit reporting agency which furnished the report to Property Management.
3. Provide a statement that the Department's denial was based in whole or in part upon information contained in a consumer credit report.
4. Provide the applicant with a written notice of the following rights of the applicant:
   A. The right of the applicant to obtain within 60 days a free copy of the applicant's consumer credit report from the consumer credit reporting agency identified pursuant to paragraph (2) and from any other consumer credit reporting agency which complies and maintains files on consumers on a nationwide basis.
   B. The right of the applicant under Section 1785.16 to dispute the accuracy or completeness of any information in a consumer credit report furnished by the consumer credit reporting agency.

(See RW 11-04, Written Notice of Denial [internal Caltrans link].)

11.07.12.00 Executing the Rental Agreement

All occupants 18 years of age or older must sign the rental agreement. (An exception could be students still living at home or living at home during the summer.) Under no circumstances are new tenants to take occupancy prior to signing the rental agreement and paying all monies due, such as security deposits and prorated rents.

The DDD-RW or authorized representative may execute all residential and nonresidential rental agreements on the state's behalf.

11.07.13.00 Title VI Guidelines

The Agent will inform the state's tenants about the Department's policy and procedures under Title VI of the Civil Rights Act of 1964 and will deliver a "Your Rights Under Title VI and Related Laws" brochure at the time the rental agreement is signed.

11.07.14.00 Lead-Based Paint and/or Hazards

Section 4852d of Title 42 of the United States Code requires disclosure of information concerning lead upon transfer of residential property.

Section 4852d requires that the seller or lessor do the following:

a) Provide the purchaser or lessee with a lead hazard information pamphlet, as prescribed by the Administrator of the Environmental Protection Agency under Section 406 of the Toxic Substances Control Act (15 USC § 2686);

b) Disclose to the purchaser or lessee the presence of any known lead-based paint, or any known lead-based hazards, in such housing and provide to the purchaser or lessee any lead hazard evaluation report available to the seller or lessor; and

c) Permit the purchaser or lessee a 10-day period (unless the parties mutually agreed upon a different period of time) to conduct a risk assessment or inspection for the presence of lead-based paint hazards.

The Department must also do the following:

- Include certain warning language in the rental agreement or lease.
- Provide all tenants with the Environmental Protection Agency's lead hazard information booklet titled *Protect Your Family From Lead in Your Home*.

© 1994-2025 California Department of Transportation. All rights reserved.

- Have a complete and fully executed Disclosure of Information on Lead-Based Paint and/or Lead-Based Paint Hazards form, Exhibit 11-EX-48, on file.
- Retain signed acknowledgments in the file, as proof of compliance. Department guidelines dictate that we will keep signed acknowledgments in the rental file for as long as we keep the file. It is good practice to attach the *Protect Your Family From Lead in Your Home*. booklet and Disclosure of Information on Lead-Based Paint and/or Lead-Based Paint Hazard form as exhibits to the Residential Rental Agreement.

11.07.15.00 Flood Disclosure on Residential Properties

Pursuant to California Government Code Section 8589.45, for every lease or rental agreement for residential property entered into on or after July 1, 2018, the Department/Local Agency shall disclose to the Tenant if the rental property is located in a special flood hazard area or an area of potential flooding, if the Department has actual knowledge of that fact.

Actual knowledge of the property being located in a special flood hazard area or an area of potential flooding includes:

- The owner has received written notice from any public agency stating that the property is located in a special flood hazard area or an area of potential flooding.
- The property is located in an area in which the owner's mortgage holder requires the owner to carry flood insurance.
- The owner currently carries flood insurance.

Since the Department does not have any mortgages on state-owned properties and since the Department is self-insured and does not carry insurance policies on state-owned property, the only instance of the Department having actual knowledge of properties being located in a special flood hazard area or an area of potential flooding would be in the instance of the Department receiving written notice from a public agency.

For all residential agreements, including employee housing, entered into on or after July 1, 2018, the Department shall include the Flood Disclosure Addendum, 11-EX-66 (internal Caltrans link), as a part of the agreement.

© 1994-2025 California Department of Transportation. All rights reserved.

11.07.16.00 Initial Rent Collection

When a new tenancy is created, one month's rent or the prorated amount due for the balance of the month shall be collected prior to the tenant's occupancy. Prorated amounts are based on a 30-day month. (See Exhibit 11-EX-05, Rent Proration Examples.)

11.07.17.00 Security Deposits

A security deposit shall be collected from new tenants, except for state's grantor, before tenancy commences. The security deposit is not a means of establishing a tenant's qualifications, but may be used to remedy any damages or defaults in rent payment.

Generally for residential tenancies commenced prior to July 1, 2024, residential tenants shall make a security deposit as follows:

- **Improved Unfurnished Property** – not to exceed an amount equal to two months' rent.
- **Improved Furnished Property** – not to exceed an amount equal to three months' rent.

For tenancies commencing January 1, 2020, through June 30, 2024, residential tenants who are service members, as defined in Section 400 of the Military and Veterans Code, shall make a security deposit as follows:

- **Improved Unfurnished Property** – not to exceed an amount equal to one months' rent.
- **Improved Furnished Property** – not to exceed an amount equal to two months' rent.

The Department may receive a greater security deposit from service members, up to the amounts specified in Section 1950.5 (c)(1) of the Civil Code (the amounts specified for non-service members), if the following applies:

- The service member has a history of poor credit or of causing damage to the rental property or its furnishing.
- The property is rented to a group of individuals, one or more of whom is not the service member's spouse, parent, domestic partner, or dependent.

© 1994-2025 California Department of Transportation. All rights reserved.

For residential tenancies commenced by the Department after June 30, 2024, AB 12 (2023) limits the sum of all security deposits (including pet or other deposits, see Section 11.06.06.00) to equal to or less than the monthly rental rate.

For non-residential tenancies, there are no restrictions on the amount of a security deposit. The amount collected should reflect what the market will bear and the risk of damage involved with the lessee's use of the premises.

11.07.17.01 Waivers/Reductions

In certain instances, the District/Local Agency may waive the requirement for collection of a security deposit or reduce the amount. Where the requirement is waived, the account file shall be fully documented. Acceptable conditions for a waiver or reduction are:

- In neighborhoods where improvements are in a state of decline and demand for rental units is relatively low, and where extensive efforts to rent have shown that the improvements are not sufficiently desirable to attract a renter who can make a security deposit.
- From a tenant inherited from state's grantor where a security deposit had not formerly been established and where the tenant is acceptable in all other respects.
- From governmental agencies.
- For unimproved properties.

11.07.17.02 Refund

For residential tenancies, the Region/District/Local Agency shall furnish the tenant, by personal delivery or by first class mail, postage prepaid, a copy of an itemized statement indicating the basis for, and the amount of, any security deposit received and the disposition of the security deposit and shall return any remaining portion of the security deposit to the tenant(s) pursuant to California Civil Code, Section 1950.5. The Region/District/Local Agency must deliver any refund and the itemized statement within twenty-one (21) calendar days of the vacancy date.

© 1994-2025 California Department of Transportation. All rights reserved.

In order to meet the twenty-one (21) calendar days deadline, the Agent must submit the information to the Division of Accounting within five working days from the date of vacancy. It is the responsibility of the Agent to ensure the tenant(s) receives the itemized statement within twenty-one (21) calendar days, preferably prior to the tenant(s) receiving a refund from the State Controller.

Note: The Local Agency shall submit the property paperwork to the local agency accounting department for refunds.

For non-residential tenancies, the refunding of any security deposit is governed by California Civil Code 1950.7. Although an itemized statement regarding the disposition of the security deposit is not required per statute, the Agent should provide written notice to the lessee regarding the disposition of the security deposit as good business practice. The Department must return the security deposit within thirty (30) days from the date the Department receives possession of the premises.

An exception to the thirty (30) day time frame above is in the instance when the security deposit exceeds one month's rent plus a deposit amount clearly described as the payment of the last month's rent and the only deduction is for delinquent rent; in this case, the Department must return, within two weeks after taking possession of the premises, the remaining amount of the security deposit, after deducting the delinquent rent, exceeding one month's rent. The remaining security deposit balance must be returned or accounted for within thirty (30) days of the Department taking possession of the premises.

If the property is sold, the District/Region/Local Agency, at its discretion, may return the security deposit to the tenant, less any lawful deductions, or transfer the deposit to the new owner. If transferred to the new owner, the District/Region/Local Agency must notify the tenant in writing either by personal delivery or by certified mail. The tenant must be given an accounting of any deductions made and the new owner's name, address, and telephone number. If notice to the tenant is made by personal delivery, the tenant shall acknowledge receipt of such notice.

© 1994-2025 California Department of Transportation. All rights reserved.

11.07.18.00 Utilities

Utilities generally include gas, water, sewer, telephone, electricity, and garbage service. Multiply these types of services by the number of utility companies involved and the number of properties a Region/District/Local Agency maintains, and it is apparent that initiating, monitoring, and terminating utility services can be a considerable undertaking. The Region/District/Local Agency, therefore, must adhere to the following guidelines, as well as develop additional procedures that address Region/District/Local Agency problems and meet their specific needs.

11.07.18.01 Responsibility for Utility Costs

Tenants shall be solely responsible for all utilities including deposits. On an exception basis, there may be instances when it would be appropriate for the state to pay for electricity and gas, such as in a multiple residential unit where there is only one meter for supplying electrical or gas service for the property. If, however, individual meters are available, tenants should pay for their own utilities.

In those localities where the suppliers of water and sewer require the bill to go directly to the property owner, the Regions/District/Local Agency shall have those bills sent directly to the Department. The Department shall monitor those utility costs and charge the tenant the appropriate amount. This will require a clause in the rental or lease agreement which states the tenant is responsible for the actual cost of those utilities and the Department will notify the tenant of such costs on a regular basis.

Note: Local Agencies shall have bills sent to the Local Agency billing department.

Rental agreements must be specific about:

- Which utilities are assumed by the state/Local Agency and, therefore, are the state/Local Agency's responsibility.
- Which utilities are the tenant's responsibility and are to be paid directly to the utility company by the tenant.
- Which utilities are the tenant's responsibility but are collected from the tenant by the state/Local Agency and conveyed to the utility company.

© 1994-2025 California Department of Transportation. All rights reserved.

It is imperative upon the Region/District to ensure adequate utility costs are being collected from the tenant. The Agent may contact utility companies, housing agencies, or other data sources for estimated utility expenses for a particular area. Utility companies usually have information on average costs for their area based on number of rooms, number of occupants, etc. All utility justifications must be documented in the rental file.

Utility charges will be reviewed at least annually, earlier if needed, and adjustments made in accordance with the Utility Clause in the rental or lease agreement.

11.07.18.02 Notifying Utility Companies at Date of Recordation

Region/District/Local Agency should take special care transferring utility charges when an acquired parcel is recorded in the state/Local Agency's name. Problems encountered will vary from one area to another. Specific requirements, therefore, are brief and set forth general guidelines that shall be used to attain a reasonable degree of uniformity among Regions/Districts.

Prior to the acquisition or as soon thereafter as possible, the Agent shall observe the utility requirements of the property and note the types of service in the rental file. The determination about which utilities the state will pay shall be based on information the Agent gathers while inspecting the property. If the state/Local Agency is responsible for payment of utilities, the Region/District/Local Agency shall notify the appropriate companies in writing, specifying the date the deed was recorded in the state's name and the date the state will assume responsibility for the utility charges.

11.07.18.03 Payment of Utility Bills by the State

Whenever utility service is initiated in the state/Local Agency's name or is transferred back into the state/Local Agency's name (e.g., when a tenant vacates rental property), the Agent shall request that the utility company send the initial bill directly to the Region/District/Local Agency Property Management office. The Agent shall review the bill for accuracy and shall submit the bill along with a completed Utility Account Action Request, Form FA-2134 (internal Caltrans link), to the Division of Accounting, Accounts Payable, Utility Service Payment Section including the source, charge, EA, special designation, and agency object (x002) codes. For residential rental property, the Agent shall also check to make sure the state is being charged a residential rate and not a commercial rate. Once Accounts Payable

© 1994-2025 California Department of Transportation. All rights reserved.

receives the bill, they will send the change of address to the utility company so future bills will be sent to Accounts Payable.

When properties are rented or sold the Agent must contact the utility service provider to close the account. The agent will complete the Utility Account Action Request, Form FA-2134 (internal Caltrans link), to terminate the account.

On a quarterly basis, Accounts Payable will send a Utility Report to the Regions/Districts for verification.

Note: Local Agencies should follow the Local Agency's processes for paying utility bills on behalf of the tenant.

11.07.18.04 Utility Deposits by Tenant

If a tenant is to assume responsibility for utility service, the Agent shall advise the tenant that:

- The utility company may require a deposit.
- If any problems occur as a result of the deposit, the problems are solely between the tenant and the utility company, as the state will not become involved.

11.07.19.00 Possessory Interest Tax

A tenant's interest is subject to possessory interest tax (PIT) imposed by the county. SHC Section 104.13 requires the Department to pay the PIT on behalf of its tenants directly to the city or county where the property is situated. Tenants should be instructed to send any PIT bill they receive to the Region/District office for handling. The exception to these actions is employee housing; tenants of employee housing are responsible for the payment of the PIT for their use of renting state owned facilities.

When the Region/District receives any PIT bills, either from the tenant or directly from a county, they are instructed to send the PIT bill back to the county with a letter to explain SHC requirements concerning PIT. A sample letter may be found at Exhibit 11-EX-09, Sample Possessory Interest Tax Letter. The letter must include reference to SHC Sections 104.6, 104.10, and 104.13.

© 1994-2025 California Department of Transportation. All rights reserved.

SHC Sections 104.6 and 104.10 require the Department to pay 24% of the rents collected to the county in which the property is situated and set forth when the payment must be made. SHC Section 104.13, subdivision (c), states that all funds distributed to a county pursuant to Section 104.10 shall be deemed to be in full or partial payment on the total possessory interest taxes due on the Department's property in the county held for future state highway needs but no longer needed for that purpose. If any amount transferred to a county pursuant to Section 104.10 in any year is less than the total possessory interest due on all the Department's property located in that county, the Department must promptly forward to the county the amount of the balance due.

See Manual Section 11.01.06.00 for further information on the 24% payment to the counties.

Note: There is no statute that mandates a Local Agency from paying a possessory interest tax to the county. It is incumbent upon the Local Agency to notify the county by February 15 of each year.

11.07.20.00 Residential Property Occupancy and Vacancy Inspections

When a new tenant moves into a residential property, or when a newly acquired property has an inherited tenant, the tenant shall accompany the Agent on an inspection of the property. Page 1 of the Residential Property Occupancy and Vacancy Inspections sheet shall be completed. All fields shall be completed noting the condition of the property. Any items that are deemed unsatisfactory shall have a comment as to why the item is unsatisfactory. The form is to be signed by the tenant and the Agent and a copy shall be given to the tenant. The Agent shall photograph the condition of the property including any deficiencies. For deficiencies that make the property unfit for human occupancy, the Agent shall arrange for the remediation of such deficiencies. The Agent shall submit a task order to the contracted vendor and follow up to ensure the repairs are completed. The Agent shall complete a re-inspection after repairs are completed utilizing the Residential Property Inspection sheet. Photographs of the condition of the property after repairs are completed shall be attached to the Residential Property Inspection form. The Agent shall notate the diary to document the initial inspection, the deficiencies found, the actions taken to remediate the deficiencies, and the re-inspection after the repairs have been completed.

© 1994-2025 California Department of Transportation. All rights reserved.

Page 2 of the Residential Property Occupancy and Vacancy Inspections sheet shall be completed when the tenant moves out. If possible, the tenant should accompany the Agent during the inspection and sign the move-out form, which is the basis for deposit refunds or withholdings. The Agent shall photograph the condition of the property, paying special attention to any damages caused by the tenant requiring a deduction of the security deposit. After the inspection, the Agent shall submit a task order to the contracted vendor to repair any damages caused by the tenant. The Agent shall notate the diary to document the move-out inspection and any actions taken to repair the property after the tenant has vacated.

Residential tenants do have the right to an initial inspection prior to moving out. This initial inspection affords tenants the opportunity to avoid deductions in the security deposit by allowing them to perform identified cleaning or repairs (see Manual Section 11.07.29.00 for more information).

The Agent shall reconcile the Tenancy Account by completing 11-EX-65, Vacancy Report (internal Caltrans link) (for internal Caltrans use). The Agent shall determine if there are any damages, account under-billings, and account over-billings. The agent shall submit Adjustment Screens in RWPM to reconcile the account. After the reconciliation has been completed, the Agent can then determine the disposition of the security deposit and determine if the tenant is entitled to any refunds or owes a balance to the Department.

Note: Local Agency will use its own computer system.

A copy of the Residential Property Occupancy and Vacancy Inspections sheet may be found on the Property Management webpage (internal Caltrans link).

© 1994-2025 California Department of Transportation. All rights reserved.

11.07.20.01 Non-Residential Property Occupancy and Vacancy Inspections

When a new lessee moves into a non-residential property, or when a newly acquired property has an inherited non-residential lessee, the lessee shall accompany the Agent on an inspection of the property. Page 1 of Exhibit 11-EX-58, Property Occupancy and Vacancy Inspections (internal Caltrans link) (for internal Caltrans use), shall be completed. All fields shall be completed noting the condition of the property. Any items that are deemed unsatisfactory shall have a comment as to why the item is unsatisfactory. The form is to be signed by the lessee and the Agent and a copy shall be given to the lessee. The Agent shall photograph the condition of the property including any deficiencies. The Department will only remediate certain deficiencies the Department is responsible for per the lease agreement. The Agent shall submit a task order to the contracted vendor and follow up to ensure the repairs are completed. The Agent shall complete a re-inspection after repairs are completed utilizing the Non-Residential Property Inspection form, Exhibit 11-EX-55 (internal Caltrans link) (for internal Caltrans use). Photographs of the condition of the property after repairs are completed shall be attached to the Non-Residential Property Inspection form. The Agent shall notate the diary to document the initial inspection, the deficiencies found, the actions taken to remediate the deficiencies, and the re-inspection after the repairs have been completed.

Page 2 of the Property Occupancy and Vacancy Inspections sheet shall be completed when the lessee vacates the property. If possible, the lessee should accompany the Agent during the inspection and sign the move-out form, which is the basis for deposit refunds or withholdings. The Agent shall photograph the condition of the property, paying special attention to any damages caused by the lessee requiring a deduction of the security deposit. After the inspection, the Agent shall submit a task order to the contracted vendor to repair any damages caused by the lessee. The Agent shall notate the diary to document the move-out inspection and any actions taken to repair the property after the lessee has vacated.

The Agent shall reconcile the Tenancy Account by completing 11-EX-65, Vacancy Report (internal Caltrans link) (for internal Caltrans use). The Agent shall determine if there are any damages, account under-billings, and account over-billings. The agent shall submit Adjustment Screens in RWPM to reconcile the account. After the reconciliation has been completed, the Agent can then determine the disposition of the security deposit and determine if the lessee is entitled to any refunds or owes a balance to the Department.

© 1994-2025 California Department of Transportation. All rights reserved.

Note: Local Agency will use its own computer system.

11.07.21.00 Uses of Rental Agreement

The Residential Rental Agreement is to be used for month-to-month tenancies only for the following types of rentals:

- Single-family residential property.
- Multiple-family residential property.

11.07.22.00 Courtesy Notice of Termination

The Department's policy is to provide all inherited occupants who are eligible and not eligible for relocation benefits a 90-Day Information Notice. This courtesy notice is not a notice to vacate and is served by the RAP Agent. This notice is served to inherited occupants who are required to vacate due to proposed construction or other state use. This requirement does not alter the state's authority to terminate on a 30-day or 60-day notice as provided in the standard rental agreement when such notice is absolutely necessary. For more information regarding the 90-Day Information Notice, please refer to Manual Section 10.03.10.03.

If the notice of termination is for a tenant that resides in a property that is subject to just cause termination, additional provisions regarding the notice of termination may apply (such as providing just cause, providing the tenant a relocation payment, and providing the tenant an opportunity to cure a curable breach prior to issuing a notice to terminate). Please refer to Manual Section 11.07.24.00 for additional information.

11.07.23.00 Rental Refunds

The Region/District/Local Agency shall return any unearned rents to tenants who give proper notice and vacate the property in good condition. The rents owed for a partial month shall be prorated on a 30-day month basis in accordance with Exhibit 11-EX-05, Rent Proration Examples. Prorated rent cannot exceed the monthly rent. Tenant is responsible for rent covering the period of time up to, and including, the date of vacation. If the property is vacated on the last day of the month, the tenant is responsible for the entire month, and rent is not prorated regardless of the number of days in the month. Any remaining security deposit, after any lawful deductions, must be returned within 21 calendar days for any residential tenancies.

© 1994-2025 California Department of Transportation. All rights reserved.

- **Tenant Has Paid Rent in Advance and Vacates the Premises on Their Own Volition Before the Rental Term Expires** – The District/Region/Local Agency will make a refund for the difference between the amount paid in advance and the amount owed for the partial month, provided there is no delinquent rent, and the tenant has provided proper notice and is leaving the premises in good condition.
- **Tenant Has Paid Rent in Advance and Vacates the Premises at the State's Request Before the Rental Term Expires** – A refund will be made for the difference between the amount paid in advance and the amount owed for the partial month.
- **Tenant Has Not Paid Rent in Advance and Vacates the Premises Before the Rental Term Expires** – The tenant will be responsible for the period of time up to, and including, the date that vacation of the premises was discovered or enforced. Every effort must be made to collect the amount due. If the amount due is not collected, the amount due will be deducted from the tenant's security deposit.

All requests to Accounting or adjustments to the account will be made utilizing the RWPM Adjustment Request Screen.

Note: Local Agency will use its own computer system.

The Region/District/Local Agency may waive the requirement that a tenant provide a termination notice when vacating property under a rental agreement.

11.07.23.01 Leases

Refunds will be made of rent collected for the period subsequent to the termination date of the lease. The termination date is determined pursuant to the notification of termination by the state or lessee as required by the lease.

11.07.24.00 Notices

The Department may use the following notices:

- 3-Day Notice to Pay Rent or Quit, Form RW 11-11
- 3-Day Notice to Correct Breach of Covenant or Quit (Curable Breach), Form RW 11-12
- 3-Day Notice to Quit for Breach of Covenant (Incurable Breach), Form RW 11-13
- 60-Day Notice to Terminate Tenancy, Form RW 11-10
- Notice to Terminate Non-Residential Tenancy, Exhibit 11-EX-67 (internal Caltrans link)

© 1994-2025 California Department of Transportation. All rights reserved.

- 3-Day Notice to Correct Breach of Covenant (Curable Breach for residential properties subject to just cause termination requirements), Exhibit 11-EX-68 (internal Caltrans link)
- 60-Day Notice to Terminate Residential Tenancy – Just Cause, Exhibit 11-EX-69 (internal Caltrans link)

Effective September 1, 2019, Saturdays, Sundays, and judicial holidays must be excluded when calculating the notice period for any 3-Day Notices. When calculating the notice period for any 3-Day Notice, the first day should be counted the day after service. For example, if a 3-Day Notice is served on a Thursday, the first day of the calculation is Friday, the second day of the calculation is Monday, and the third and final day of the calculation is Tuesday assuming there are no judicial holidays on any of those days.

Form RW 11-10, 60-Day Notice to Terminate Tenancy, should only be used to terminate Residential Tenancies. Exhibit 11-EX-69, 60-Day Notice to Terminate Tenancy – Just Cause (internal Caltrans link), shall only be used when terminating Residential Tenancies that are subject to the just cause termination requirements set forth in Section 1946.2 of the California Civil Code; the just cause must be stated in the notice to be valid. California Civil Code Section 1946.1(b) requires owners of **residential dwellings** giving notice to give notice at least 60 days prior to the proposed date of termination. Although California Civil Code Sections 1946.1(c) and 1946.1 (d) allows for termination based upon on a 30-day notice, it is the Department's policy to provide 60-days' notice for all Residential Tenancies.

Special attention must be made for residential tenants whose rents are subsidized by any federal, state, or local governments; these tenancies require a 90-Day Notice to Terminate and require just cause for termination of the tenancy. The Region/District/Local Agency must consult with Legal if there is a need to serve a Notice to Terminate Tenancy on a tenant participating in a government subsidized housing program to ensure all essential requirements of the notice are met.

Section 1946.1(c) allows an owner of a residential dwelling to give notice at least 30 days prior to the proposed date of termination if the tenant has resided in the dwelling for less than one year.

© 1994-2025 California Department of Transportation. All rights reserved.

Section 1946.1(d) allows for the owner of a residential dwelling to give notice at least 30 days prior to the proposed date of termination if all of the following are true:

1. The dwelling or unit is alienable separate from the title to any other dwelling unit.
2. The owner has contracted to sell the dwelling or unit to a bona fide purchaser for value, and has established an escrow with a title insurer or an underwritten title company, as defined in Sections 12340.4 and 12340.5 of the Insurance Code, respectively, a licensed escrow agent, as defined in Sections 17004 and 17200 of the Financial Code, or a licensed real estate broker, as defined in Section 10131 of the Business and Professions Code.
3. The purchaser is a natural person or persons.
4. The notice is given no more than 120 days after the escrow has been established.
5. Notice was not previously given to the tenant pursuant to this section.
6. The purchaser in good faith intends to reside in the property for at last one full year after the termination of the tenancy.

Effective January 1, 2020, pursuant to Section 1946.2 of the Civil Code, the Department/Local Agency shall not terminate the tenancy of any residential tenant, who resides in real property that is not alienable separate from the title to any other dwelling unit (i.e. a property that has multiple dwelling units on one lot in which each dwelling unit cannot be sold separately, such as a multi-family residential property), a multi-family residential property that has not been issued a certificate of occupancy within the previous 15 years, and a multi-family residential property that is not receiving a housing subsidy for affordable housing (such as the Affordable Rent Program, Section 8 or similar program, without just cause pursuant to Section 1946.2 (b) of the Civil Code if the following applies:

- The tenant has continuously and lawfully occupied the residential real property for 12 months.
- If any adult tenants are added to the agreement before an existing tenant has continuously and lawfully occupied the residential real property for 24 months and either of the following apply:
    - All of the tenants have continuously and lawfully occupied the residential real property for 12 months or more.
    - One or more tenants have continuously and lawfully occupied the residential real property for 24 months or more.

© 1994-2025 California Department of Transportation. All rights reserved.

Any notice of termination for a no-fault just cause, as defined per Section 1946.2 (b)(2) of the Civil Code, entitles tenants residing in real property subject to just cause terminations, to be provided a relocation payment of either a direct payment of one month's rent or having their payment of the final month of tenancy waived, in writing, prior to the rent becoming due. The Department shall waive the rent of for the final month of the tenancy, the notice of termination shall state the amount of rent waived and that no rent is due for the final month of tenancy. The Agent must create an Adjustment Screen, which must be approved by the Property Management Senior, in RWPM to have Accounting reverse the final month of billing in RWPM. Any relocation assistance shall be provided within 15 calendar days of service of the notice of termination. The Agent shall use Exhibit 11-EX-69 (internal Caltrans link) when providing a notice of termination. Section 1946.2 of the Civil Code remains in effect until January 1, 2030, and is repealed as of that date.

Note: Local Agency will use its own computer system.

Please note that the intent to demolish is considered a form of no-fault just cause per Section 1946.2 of the Civil Code. When a construction project is scheduled to commence, the Department/Local Agency may need to provide relocation payments to tenants if those tenants qualify for such relocation payments under Section 1946.2 of the Civil Code.

Additionally, effective January 1, 2020, pursuant to Section 1946.2 (c) of the Civil Code, before the Department/Local Agency issues a notice to terminate a tenancy for just cause, pertaining to a curable lease violation, to tenants who reside in real property that is subject to just cause terminations, must provide the tenant with an opportunity to cure the violation pursuant to paragraph (3) of Section 1161 of the Code of Civil Procedure. If the violation is not cured within the time period set forth in the notice, a 3-Day Notice to Quit for Breach of Covenant may thereafter be served to terminate the tenancy. The Agent shall use Exhibit 11-EX-68 (internal Caltrans link) to provide the initial notice prior for a curable violation prior to serving a notice of termination or a 3-Day Notice to Quit for Breach of Covenant. Section 1946.2 of the Civil Code remains in effect until January 1, 2030, and is repealed as of that date.

© 1994-2025 California Department of Transportation. All rights reserved.

For residential real properties that are subject to just cause terminations, the Department/Local Agency must provide the following notice to the tenant:

- "California law limits the amount your rent can be increased. See Section 1947.12 of the Civil Code for more information. California law also provides that after all of the tenants have continuously and lawfully occupied the property for 12 months or more at least one of the tenants has continuously and lawfully occupied the property for 24 months or more, a landlord must provide a statement of cause in any notice to terminate a tenancy. See Section 1946.2 of the Civil Code for more information."
- The notice above must be in no less than 12-point type.
- For any tenancy that commenced or renewed on or after July 1, 2020, the notice shall be an addendum to the rental agreement, or as a written notice signed by the tenant, with a copy provided to the tenant.

Just cause terminations are not applicable if the property is a residential property that is alienable separate from the title to any other dwelling unit (i.e., single-family residences, townhomes, and condominiums) and the tenant has been provided the following notice in writing or in their rental agreement:

- "This property is not subject to rent limits imposed by Section 1947.12 of the Civil Code and is not subject to the just cause requirements of Section 1946.2 of the Civil Code. This property meets the requirements of Sections 1947.12 (d)(5) and 1946.2 (e)(8) of the Civil Code and the owner is not any of the following: (1) a real estate investment trust, as defined by Section 856 of the Internal Revenue Code; (2) a corporation; or (3) a limited liability company in which at least one member is a corporation."

Just cause terminations are not applicable if the residential real property has been issued a certificate of occupancy within the previous 15 years.

Just cause terminations are not applicable if the tenant receives a housing subsidy for affordable housing (such as the Affordable Rent Program, Section 8, or similar program).

Please refer to Section 1946.2(e) of the Civil Code for an inclusive list of all the residential real properties or residential circumstances that are excluded from requiring just cause in the notice of termination, a relocation payment, and an opportunity to cure a curable lease violation prior to issuing a notice to terminate.

© 1994-2025 California Department of Transportation. All rights reserved.

Most non-residential tenancies will receive a 30-day notice prior to termination. Yet, special attention must be made to the notice period specified in the actual termination clause in the lease. The termination clause will dictate the notice period required for Non-Residential Tenancies.

11.07.25.00 Cancellation – Failure to Pay Rent

RW 11-11, 3-Day Notice to Pay Rent or Quit, shall be used to cancel a rental agreement or lease where the tenant is delinquent in rental payments. Notice shall be served upon the tenant as specified in Manual Section 11.08.04.00.

If the tenant is eligible for relocation benefits, Property Management must notify the RAP Unit of the delinquency.

If the tenancy is subject to just cause termination, then a 3-Day Notice to Correct Breach of Covenant must be served instead of a 3-Day Notice to Pay Rent or Quit. If the rent is not paid by the expiration the 3-Day Notice to Correct Breach of Covenant, then a 3-Day Notice to Quit for Breach of Covenant shall be served to the tenant.

During the three-day period after service of the 3-Day Notice, the state/Local Agency must accept full payment of rent due when offered by the tenant/lessee. Acceptance of full rent due nullifies the 3-day notice. After the end of the three-day period, the state/Local Agency may refuse payment and continue with the eviction process. If payment is accepted after the three-day period, however, the notice is nullified. Entering the date of service of 3-day notice in the 3-Day Notice field of the RWPM Delinquent Tenancy Screen will electronically notify Accounting not to accept rent payments after the three-day period.

Note: Local Agencies will use its own computer system.

When a 3-Day Notice to Pay Rent or Quit is served, the Property Manager must pay special attention to the amount of rent payment the tenant is attempting to make during the notice period. For residential tenancies, an acceptance of a partial payment of rent invalidates the 3-Day Notice to Pay Rent or Quit because of the difference in the amount of rent demanded on the notice and the amount of rent actually owed. If partial rent is accepted from a Residential Tenant, a new 3-Day Notice to Pay Rent or Quit must be served with the new amount due. The Property Manager should provide Accounting the amount due per the 3-Day Notice to Pay Rent or Quit in order to avoid the situation of accepting partial rent. Additionally, the Agent

© 1994-2025 California Department of Transportation. All rights reserved.

should flag the "RCI" field with a "Y" under the "Tenancy" screen in RWPM to avoid a partial payment from being accidentally accepted by Accounting.

For Non-Residential Tenancies, per California Code of Civil Procedure Section 1161.1(b), an acceptance of partial rent after the service of the 3-Day Notice to Pay Rent or Quit does not invalidate the 3-Day Notice to Pay Rent or Quit. The Department/Local Agency may proceed with the unlawful detainer action if partial rent is accepted only if this is specified on the 3 Day Notice to Pay Rent or Quit. Consult with Legal regarding correct wording of the 3-Day Notice to Pay Rent or Quit for this circumstance.

The amount owed specified on the 3-Day Notice to Pay Rent or Quit must only account for past due rent. The notice must not include other monies the tenant owes, like late fees, utilities, or damages. The amount owed on the notice cannot be for any rent past one (1) year due.

11.07.26.00 Cancellation – Notice to Vacate for Reasons Other Than Failure to Pay Rent

Where a residential tenant is not delinquent in their rent and the Department/Local Agency wishes to terminate a rental agreement that contains a termination clause, a 60-Day Notice to Terminate Tenancy shall be used only if the tenancy is not subject to just cause termination. If the tenancy is subject to just cause termination, then the Department/Local Agency shall not terminate the tenancy without just cause as enumerated in Section 1946.2(b) of the Civil Code. If the tenant is participating in a government subsidized housing program, the Agent shall submit a 90-Day Notice to Terminate Tenancy which must include just cause; please see Manual Section 11.07.24.00 for further information.

When a non-residential lessee is not delinquent in their rent and the Department wishes to terminate a lease agreement that contains a termination clause, a Notice to Terminate Non-Residential Tenancy, shall be used. This notice may be modified to provide for various lease termination requirements such as varying time frames.

Whenever a Notice to Terminate is served, the agent shall flag the "RCI" field with a "Y" in the "Tenancy" screen in RWPM to avoid Accounting from accepting a rental payment after the vacate date specified in the Notice to Terminate. If a payment is accepted for rent after the date specified on the Notice to Terminate, the notice may be deemed as waived and a new Notice to Terminate may have to be served.

© 1994-2025 California Department of Transportation. All rights reserved.

The notice shall be served in the manner described in Manual Section 11.08.04.00.

11.07.27.00 Cancellation – Breach of Covenant

When it is necessary to cancel a lease or rental agreement where the tenant has breached a covenant of the agreement with the state, RW 11-12, 3-Day Notice to Correct Breach of Covenant or Quit (Curable Breach), or RW 11-13, 3-Day Notice to Quit for Breach of Covenant (Incurable Breach), may be used.

If the tenancy is subject to just cause termination and the breach is curable, then a 3-Day Notice to Correct Breach of Covenant must be served instead of a 3-Day Notice to Correct Breach of Covenant or Quit. If the breach is not cured by the expiration the 3-Day Notice to Correct Breach of Covenant, then a 3-Day Notice to Quit for Breach of Covenant shall be served to the tenant.

Notice shall be served upon the tenant as specified in Manual Section 11.08.04.00.

If the tenant is eligible for relocation benefits, Property Management must notify the RAP Unit of the breach.

Curable breaches include anything that can be cured or corrected by payment of money (e.g., deposits, insurance, and bonds) and may also include, for example, unapproved pets, excessive garbage or debris, and unauthorized use. When the 3-Day Notice to Correct Breach of Covenant or Quit is served, the tenant/lessee must cure the breach or vacate the property within the notice period. If the tenant/lessee fails to comply with the notice, the Department will proceed with an unlawful detainer action.

Incurable breaches cannot be cured once committed and include, for example, nuisance, committing waste, seriously damaging the property, using the property for an illegal purpose, and subleasing or assigning without prior state approval. When the 3-Day Notice to Quit for Breach of Covenant is served, the tenant/lessee must vacate the property within the notice period. If the tenant/lessee fails to comply with the notice, the Department will proceed with an unlawful detainer action.

11.07.28.00 Departmental Use of State-Owned Property

Properties managed by Property Management may be used temporarily by other District/Region functions if such use is within local government requirements. Although no rent will be charged, the user will be responsible for all maintenance costs, remodeling costs, and any costs necessary to return the property to its original condition. There should be a memorandum of understanding between RW and the other functional Division outlining the terms and conditions of use.

11.07.29.00 Termination Requirements

California Civil Code Section 1950.5 requires the following process for residential tenancy, which began after January 1, 2003:

- Within a reasonable time after either party gave notice of termination, the landlord shall notify the tenant **in writing** of the tenant's option to request an initial inspection and to be present at that inspection. When the Department provides notice, the 60-Day Notice to Terminate Tenancy has language satisfying the written notification requirement. When the tenant provides notice, Form RW 11-08, Notice of Right to Inspection (internal Caltrans link), shall be sent to the tenant in order to provide the required written notification. If a tenant is served any type of 3-Day Notice, the Department does not need to provide the tenant an option of an initial inspection.

- At a reasonable time, but no earlier than two weeks before the termination or the end of the rental agreement, the landlord shall, upon the request of the tenant, make an initial inspection of the premises prior to any final inspection the landlord makes after the tenant has vacated the premises. (Exhibit 11-EX-6D, Initial Vacancy Inspection and Statement of Proposed Security Deductions [internal Caltrans link]) (for internal Caltrans use). This will allow the tenant an opportunity to remedy identified deficiencies in order to avoid deductions from the security deposit. The tenant's request does not have to be in writing; thus, it is mandatory to make a diary entry in reference to the tenant's desires.

© 1994-2025 California Department of Transportation. All rights reserved.

- If the tenant requests an inspection, the parties shall attempt to schedule the inspection at a mutually acceptable date and time. The landlord shall give at least 48 hours' prior **written** notice of the date and time of the inspection. (Exhibit 11-EX-6C, Waiver of 48-Hour Notice of Initial Inspection [internal Caltrans link].) This applies even if both parties have agreed to an acceptable date and time. The 48-hour prior written notice can be waived if both parties sign a written waiver.

- The landlord shall proceed with the inspection whether the tenant is present or not, unless the tenant previously withdrew his or her request for the inspection.

- Based on the findings of the inspection, the landlord shall give the tenant an itemized statement specifying repairs or cleaning that are proposed to be the basis of any deductions from the security deposit. (Exhibit 11-EX-6D, Initial Vacancy Inspection and Statement of Proposed Security Deductions [internal Caltrans link]) (for internal Caltrans use). This statement shall be given to the tenant, if the tenant is present for the inspection, or shall be left inside the premises if the tenant is not present for the inspection. (This statement is not to be confused with nor does it replace the requirement to furnish the tenant within three weeks an itemized statement indicating the basis for, and the amount of, any security deposit withheld.)

- The landlord may use the security deposit to remedy any situation that occurs after the initial inspection, or was not identified during the initial inspection, due to the presence of the tenant's possessions. A final move out inspection shall take place on the date the tenant vacates the premises.

- If a tenant chooses not to request an initial inspection, the duties of the landlord are discharged. It is mandatory to make a diary entry indicating the tenant has not opted for an inspection.

The requirements above only pertain to residential tenancies. Security deposits for non-residential tenancies are governed by California Civil Code 1950.7, and there is no right of an initial inspection for non-residential tenancies.

© 1994-2025 California Department of Transportation. All rights reserved.

11.07.30.00 Abandonment of Premises

Pursuant to California Civil Code 1951.2, if a tenant/lessee breaches the agreement and abandons the premises before the end of the term, the agreement is terminated. If the tenant/lessee has failed to pay rent and appears to have vacated the premises, there may be an alternative for regaining possession of the premises without going through the unlawful detainer process. The mere act of the appearance of the tenant/lessee vacating the premises and failing to pay rent does not automatically terminate the tenant's/lessee's right of possession of the premises. The Property Manager shall take action to confirm the tenant's/lessee's intention of abandoning the premises prior to terminating any rights that the tenant/lessee has to possess the premises. In order to confirm the tenant's/lessee intention of abandonment, the Property Manager shall serve a Notice of Belief of Abandonment.

For Residential Tenancies, the Notice of Belief of Abandonment requirements are contained in California Civil Code 1951.3. If the rent on the premises has been due and unpaid for fourteen (14) consecutive days and the Property Manager has reasonable belief that the tenant has abandoned the premises, the Property Manager should serve the tenant Exhibit 11-EX-60, Notice of Belief of Abandonment – Residential (internal Caltrans link). Pursuant to Civil Code 1954, the Property Manager may enter the premises if the tenant has abandoned or surrendered the premises. Prior to serving the Notice of Belief of Abandonment, the Property Manager should enter the premises to confirm the suspicion that the tenant has abandoned the premises. Signs of abandonment may include spoiled food in the refrigerator, utility services being shut-off, and a significant amount of personal property being removed from the premises. The date of the termination of the agreement shall be specified in the Notice of Belief of Abandonment and depends on how the notice is served. If the notice is served personally, the date of termination shall not be less than fifteen (15) days after the notice is served. If the notice is mailed, the date of termination shall not be less than eighteen (18) days after the notice is deposited in the mail.

For Non-Residential Tenancies, the Notice of Belief of Abandonment requirements are contained in California Civil Code 1951.35. If the rent on the premises has been due and unpaid for at least the number of days required to declare a rent default, but in no case less than three days, and the Property Manager has reasonable belief that the lessee has abandoned the premises, the Property Manager should serve the lessee Exhibit 11-EX-61, Notice of Belief of Abandonment – Non-Residential (internal Caltrans link). Per the Non-Residential Lease Agreement, the Department reserves its right,

© 1994-2025 California Department of Transportation. All rights reserved.

without notice, to enter the premises in case of an emergency; if the lessee is unresponsive, has not paid rent, and is not at the premises during normal business hours, this can be considered an emergency. Prior to serving the Notice of Belief of Abandonment, the Property Manager should enter the premises to confirm the suspicion that the lessee has vacated the premises. Signs of abandonment may include an accumulation of mail or periodicals, utility services being shut-off, out of business signs posted on the premises, trade fixtures being removed, and a significant amount of personal property being removed from the premises. The date of termination of the agreement shall be specified in the Notice of Belief of Abandonment and shall not be less than fifteen (15) days after the notice is served. The notice may be served personally, sent to the lessee by an overnight courier services, or deposited in the mail. Unlike the Notice of Belief of Abandonment for Residential Tenancies, the method of service does not affect the date of termination.

For both Residential and Non-Residential Tenancies, the premises shall not be deemed to be abandoned if, prior to the termination date specified on the notice, the tenant/lessee provides written notice stating that the tenant/lessee does not intend to abandon the real property and shall provide an address at which the tenant/lessee may be served by certified mail in an action for unlawful detainer of the real property. Also, the premises shall not be deemed abandoned if the tenant/lessee paid all or a portion of rent due prior to the termination date specified on the notice.

When the Property Manager serves the Notice of Abandonment to the tenant/lessee, the Property Manager should also serve Form RW 11-11, 3-Day Notice to Pay or Quit, concurrently. Both notices terminate the agreement upon their expiration date. So, in the instance that a tenant/lessee provides written notice of an intent to occupy the premises, yet has not submitted payment of rent, the Property Manager may quickly pursue the unlawful detainer action based upon the expiration of the 3-Day Notice to Pay or Quit. Keep in mind that if both notices are served concurrently, the Property Manager shall have a separate Form RW 11-14, Proof of Service Notice (internal Caltrans link), for each notice served. If both notices are construed to be combined, it may be confused as a single notice and may invalidate any unlawful detainer action based on the expiration of the 3-Day Notice to Pay or Quit. If the Agent has any questions regarding the manner of service, Region/District Legal should be consulted.

© 1994-2025 California Department of Transportation. All rights reserved.

11.07.30.01 Abandonment of Personal Property

Whether the tenant/lessee abandons or vacates the premises, there is the likelihood that personal property will be left on the premises. The Property Manager shall take the proper steps of providing notice to the owner of the abandoned personal property, storing the personal property during the notice period, and disposing of the personal property if it is not reclaimed.

For Residential Tenancies, after the District/Region/Local Agency regains possession of the premises and personal property remains, the Property Manager shall, pursuant to California Civil Code 1983, provide written notice to the former tenant and any other person that the Property Manager reasonably believes to be the owner of such property. The notice requirements for the former tenant are contained in California Civil Code 1984, and the Property Manager should serve Exhibit 11-EX-40, Statutory Notice to Former Tenant of Right to Reclaim Abandoned Property (internal Caltrans link). The notice requirements for persons other than the former tenant are contained in California Civil Code 1985, and the Property Manager should serve Exhibit 11-EX-41, Statutory Notice to Person Other Than Former Tenant of Right to Reclaim Abandoned Property (internal Caltrans link). Prior to sending such written notices, the Property Manager shall determine the value of the remaining personal property. If the value of the personal property is worth $700.00 or more, the Property Manager shall sell the personal property via public sale. If the value of the property is worth less than $700.00, the Property Manager may dispose of the personal property in any manner. The Statutory Notice to Former Tenant of Right to Reclaim Abandoned Property shall contain a statement regarding how the personal property will be disposed of based upon the value in accordance with California Civil Code 1988. Prior to disposing the property, the Property Manager shall store the personal property for not less than fifteen (15) days if the notice was personally delivered or not less than eighteen (18) days if the notice was deposited in the mail. The reasonable cost of storage may be charged before the personal property is returned, unless the personal property remained in the dwelling and is reclaimed within two days of vacating the dwelling; in which case there shall be no charge for storage. When the Property Manager stores the personal property on the premises, the reasonable cost of storage would be the daily rental rate of the premises.

© 1994-2025 California Department of Transportation. All rights reserved.

For Non-Residential Tenancies, after the District/Region/Local Agency regains possession of the premises and personal property remains, the Property Manager shall, pursuant to California Civil Code 1993.03, provide written notice to the former lessee and any other person that the Property Manager reasonably believes to be the owner of such property. The notice requirements for the former lessee are contained in California Civil Code 1993.04, the Property Manager should serve Exhibit 11-EX-62, Statutory Notice to Former Tenant of Right to Reclaim Abandoned Property – Non-Residential (internal Caltrans link). The notice requirements for persons other than the former tenant are contained in California Civil Code 1993.05; the Property Manager should serve Exhibit 11-EX-63, Statutory Notice to Person Other Than Former Tenant of Right to Reclaim Abandoned Property – Non-Residential (internal Caltrans link). Prior to sending such written notices, the Property Manager shall determine the value of the remaining personal property. If the value of the personal property is worth less than either $2,500.00 or an amount equal to one month's rent for the premises, whichever amount is greater, the Property Manager may dispose of the personal property in any manner. For instance, if the monthly rent is $5,000.00 and the value of the personal property is reasonably believed to be worth $4,000.00, then the Property Manager may dispose of the personal property in any manner. If the value of the personal property is worth at least $2,500.00 or one month's rent for the premises, whichever is greater, then the Property Manager shall sell the personal property via a public sale. For instance, if the monthly rent is $1,000.00 and the personal property is reasonably believed to be worth $3,000.00, then the Property Manager shall dispose of the personal property via a public sale. The Statutory Notice to Former Tenant of Right to Reclaim Abandoned Property shall contain a statement regarding how the personal property will be disposed of based upon the value in accordance with California Civil Code 1993.07. Prior to disposing the property, the Property Manager shall store the personal property for not less than fifteen (15) days if the notice was personally delivered or not less than eighteen (18) days if the notice was deposited in the mail. The reasonable cost of storage may be charged before the personal property is returned. The personal property shall either be left on the vacated premises or stored by the Property Manager in a place of safekeeping; the Property Manager shall exercise reasonable care in storing the property. When the Property Manager stores the personal property on the premises, the reasonable cost of storage would be the daily rental rate of the premises.

© 1994-2025 California Department of Transportation. All rights reserved.

If the personal property, for both residential and non-residential tenancies, is to be sold via public sale, the Property Manager shall provide the following: notice of the time and place of the sale in a newspaper of general circulation published in the county where the sale is to be sold, the manner of publication shall comply with California Government Code 6066; the last publication shall not be less than five (5) days before the sale is to be held; the notice of the sale shall not be published before the last of the dates specified for taking possession of the personal property in any notice given; and the notice of the sale shall describe the property to be sold in the same manner as described in the notice. Any proceeds from the sale can pay the reasonable costs of storage, advertising, and the public sale. The remaining balance of proceeds shall be paid to the treasury of the county in which the sale took place not later than thirty (30) days after the date of sale. The Property Manager cannot retain the remaining proceeds, after paying for the cost of storage and costs associated with the public sale, for unpaid rent unless there is a court judgment for unpaid rent. If the Region/District/Local Agency does have a judgment for unpaid rent, the Property Manager shall provide the judgment and a Writ of Execution, which may be obtained from the court clerk, to the sheriff with written instructions to levy the remaining proceeds in the county's possession.

Motor vehicles left on the premises are treated differently than other types of personal property. If a vehicle is left on the premises, the Property Manager needs to post a notice on the vehicle advising that the vehicle is parked illegally on State property and must be removed immediately. If the vehicle remains on the premises after 72 hours, the Property Manager should contact the California Highway Patrol to arrange for the vehicle to be towed in accordance with California Vehicle Code 21113 and California Vehicle Code 22651.

11.08.00.00 – DELINQUENT ACCOUNTS

Note: any references to Local Agencies is in relation to Local Agency use of the Caltrans Right of Way Manual to comply with FHWA requirements.

11.08.01.00 General

All rents shall be collected in accordance with the terms and conditions of the lease or rental agreement. Our standard monthly rental and lease agreements provide that rent is due in advance on the 1st of the month. Rent not received by the 1st of the month is delinquent.

The agreement further provides that a late charge may be charged if the rent is not received by the 10th of the month, per the terms outlined in the rental/lease agreement. Since the Department directs tenants/lessees to make payments by mail, a postmark of the 10th or sooner does constitute receipt of payment as of the date of the postmark per California Civil Code 1476.

11.08.02.00 Suggested Methods of Collection

The Agent should notify the tenant/lessee personally by telephone or letter that rent is delinquent and must be paid. In many cases, the tenant/lessee will pay the rent after this contact and will be prompt in paying thereafter. If the tenant/lessee is delinquent again the following month, however, the Agent shall send a strongly worded letter. Any contact with the tenant/lessee shall be documented in the diary. If the Agent elects to enter into a payment plan agreement, the agreement shall be in writing and approved by the Branch Chief (Senior level or above). Payment plans shall not extend delinquent rents beyond one year since the Department may not include delinquent rent over a year on the 3-Day Notice to Pay Rent or Quit. If the tenant/lessee fails to make a payment plan payment, the Agent shall immediately serve a 3-Day Notice to Pay Rent or Quit for the total amount of rent due or serve a 3-Day Notice to Correct Breach of Covenant if the tenancy is subject to just cause terminations. No further payment plans or compromises will be offered if a tenant/lessee fails to adhere to their payment plan. Payment plans are not to be used as a regular way of doing business, but for those exceptional cases where payment plans are warranted.

© 1994-2025 California Department of Transportation. All rights reserved.

If a tenant/lessee has been delinquent for three consecutive months, terminating the tenancy may be in order even though the rent is eventually paid each month. If the situation warrants, termination of the tenancy may be requested prior to this time. The Property Management Senior shall have the discretion to make this decision. If the tenancy is subject to just cause terminations, the tenancy may only be terminated for the reasons enumerated in Section 1946.2(b) of the Civil Code.

11.08.03.00 3-Day Notice to Pay Rent or Quit

If rent is not paid immediately after the contacts and letter, the Agent shall serve a 3-Day Notice to Pay Rent or Quit demanding that the tenant/lessee pay the total rent delinquency within three days or vacate the property. The 3-Day Notice to Pay Rent or Quit shall cover the current month's rent, plus any previous period of rental delinquency that may still be unpaid. As discussed in Section 11.07.25.00, the amount owed specified on the 3-Day Notice to Pay Rent or Quit shall only account for past due rent not exceeding one year; do not include any late fees, utilities, or damages on this notice. The Agent must enter the date the 3-Day Notice to Pay Rent or Quit was served in RWPM on the "Delinquent Tenancy" screen in order to notify Accounting of the notice being served. The Agent shall also contact Accounting in order to provide the amount specified on the 3-Day Notice to Pay Rent or Quit in order to avoid an acceptance of a partial payment. The Agent shall immediately start eviction proceedings upon expiration of the three days (see Form RW 11-11, 3-Day Notice to Pay Rent or Quit). The Agent shall send copies of eviction notices and other related documents to Headquarters Cashiering to stop acceptance of payment. Partial or total acceptance of payment will forfeit the legal effect of the 3-Day Notice to Pay Rent or Quit. It is imperative that the Agent enter the date that the 3-Day Notice to Pay Rent or Quit was served in RWPM so Accounting will not accept any payments after the notice period.

A 3-Day Notice for Breach of Covenant shall be served for tenancies subject to just cause terminations for unpaid rent. If the rent is not fully paid within that notice period, a 3-Day Notice to Quit for Breach of Covenant shall be served.

Note: Local Agency will use its own computer system.

© 1994-2025 California Department of Transportation. All rights reserved.

If a residential tenant is chronically delinquent but not currently delinquent, a 60-day notice terminating the tenancy may be in order (see RW 11-10, 60-Day Notice to Terminate Tenancy), unless a residential tenancy is subject to just cause terminations. If a non-residential lessee is chronically delinquent, a Notice to Terminate Non-Residential Tenancy, Exhibit 11-EX-67 (internal Caltrans link), may be in order; the length of time provided in the Notice to Terminate Non-Residential Tenancy is dictated by the Termination Clause in the Lease Agreement. If a notice to terminate a tenancy is served after a 3-day notice has been served, the legal effect of the 3-day notice is lost.

A 3-Day Notice to Pay Rent or Quit and a Notice of Termination of Tenancy and Notice to Quit may be served concurrently. This process may be used when you want to collect some money from the tenant but still wish to proceed with an eviction. Even though money is accepted, thus forfeiting the legal effect of the 3-Day Notice to Pay Rent or Quit, it does not cancel the Notice of Termination of Tenancy and Notice to Quit.

See Section 11.07.24.00, Notices, for additional information and requirements in regard to serving notices to vacate or to terminate the tenancy.

11.08.04.00 Method of Service of Notices

The landlord's right to serve a 3-Day Notice to Pay Rent or Quit is provided for in Code of Civil Procedure (CCP) Section 1161. The 3-Day Notice to Pay Rent or Quit is served to the delinquent tenant for the total amount of unpaid rent only, within one year, as of the day of service.

Service of a 3-Day Notice or a Notice to Terminate the Tenancy is governed by CCP Section 1162.

Service for Residential Tenancies shall be made as follows:

- By delivering a copy to the tenant personally.

- If he or she is absent from his or her place of residence, and from his or her usual place of business, by leaving a copy with some person of suitable age and discretion at either place, and sending a copy through the mail addressed to the tenant at his or her place of residence.

- If such place of residence and business cannot be ascertained, or a person of suitable age or discretion there cannot be found, then by affixing a copy in a conspicuous place on the property, and also delivering a copy to a person there residing, if such person can be

© 1994-2025 California Department of Transportation. All rights reserved.

found; and also sending a copy through the mail addressed to the tenant at the place where the property is situated. Service upon a subtenant may be made in the same manner. The effective start date of the 3-Day Notice is one day following the postmark date.

Service for Non-Residential Tenancies shall be made as follows:

- By delivering a copy to the tenant personally.

- If he or she is absent from the commercial rental property, by leaving a copy with some person of suitable age and discretion at the property and sending a copy through the mail addressed to the tenant at the address where the property is situated.

- If, at the time of attempted service, a person of suitable age or discretion is not found at the rental property through the exercise of reasonable diligence, then by affixing a copy on a conspicuous place on the property, and also sending a copy through the mail addressed to the tenant at the address where the property is situated. Service upon a subtenant may be made in the same manner.

- Service of a notice on a corporation differs slightly in that the notice must be served on a corporate officer or an authorized agent of the corporation who will accept on behalf of the corporation. Do a business search on the California Secretary of State's website to locate the name and address of the authorized agent.

For practical purposes, "a person of suitable age and discretion" should be over 18 years of age.

When the Agent cannot personally serve a notice and must mail a copy of the notice, it is prudent for the Agent to mail one copy first-class postage prepaid and one copy certified mail return receipt requested. The certified mail receipt shall be placed in the rental file. To substantiate service, the server shall execute a proof of service by posting and shall place a copy in the rental file. No matter the method of service, the Agent should take photographs to document the service in case the tenant/lessee challenges the receipt of the notice and all actions taken shall be notated in the diary.

The Agent shall make a diligent effort to effect personal service since that is the most effective and uncomplicated method of service.

NOTE: If the tenant is eligible for relocation benefits, Property Management must coordinate service with the RAP Unit to ensure the tenant is advised of

© 1994-2025 California Department of Transportation. All rights reserved.

their continuing rights in regard to relocation assistance. See Manual Section 10.03.12.00.

The Agent shall send copies of a 3-day notice, eviction notice, or any other related documents to Headquarters Cashiering to stop acceptance of payment. Partial or total acceptance of payment will forfeit the legal effect of the notice.

Note: Local Agency shall coordinate with their own accounting department to fulfil this section.

11.08.05.00 Legal Remedies for Collection and Procedures

Various legal procedures are available to Agents for specific purposes. Agents should bear in mind, however, that they are not attorneys and shall obtain all legal advice and interpretations from Legal.

The state shall resort to legal proceedings to effect rent collection and/or eviction of delinquent tenants because of nonperformance of contractual obligations, usually nonpayment of rent. In addition, unlawful detainers are sometimes necessary for property clearance to meet certification dates. General procedures are outlined in Exhibit 11-EX-07, District Right of Way Procedure: Vacating Premises, Unlawful Detainer Actions. Since procedures may vary from one judicial district to the next, it is incumbent upon Agents to discover the general requirements for their areas of responsibility. Reference Form RW 11-14 (internal Caltrans link) for the standard Proof of Service Notice. Reference Form RW 11-15 (internal Caltrans link) for an example of a memo to legal.

11.08.06.00 Dishonored Checks

If a tenant/lessee has a dishonored check returned to the Department for any reason, payment is considered not received. There will be a $25 fee automatically charged to the account for the first dishonored check and a $35 fee charged for the second dishonored check in a 12-month period. If tenant/lessee fails to submit an acceptable replacement payment by the 10th of the month, the account will be considered delinquent and a late fee may be assessed.

If tenant/lessee has two dishonored checks within any 12-month period, the Department will no longer accept personal checks on that tenancy.

© 1994-2025 California Department of Transportation. All rights reserved.

Note: Local Agencies shall determine their own fees.

11.08.07.00 Late Charges

A late charge may be assessed if the full amount of rent is not received on or before the 10th of each month. Payment is considered received if the payment is postmarked on or before the 10th of each month. The late charge covers liquidated damages resulting from breach of the lease or rental agreement. The amount is determined by using 6% of the monthly rent as a guideline. The amount is entered in the late payment clause in the rental/lease agreement. Late charges are not mandatory and the use of late charges are at the discretion of the Region/District/Local Agency. Late charges should be waived for government agencies since most government agencies do not pay for rent in advance and usually pay in arrears.

NOTE: The 6% figure is based on the figure relating to mortgages or deeds of trust in the California Civil Code and is generally used by the property management industry.

11.08.08.00 Vacated Delinquencies

When a delinquent tenant vacates and does not leave a forwarding address, the Region/District has 15 calendar days to conduct an investigation to locate the former tenant before further collection efforts proceed. The Region/District/Local Agency does not, however, have to wait until the end of the 15 days to submit the account to the Division of Accounting, RW Accounts Receivable (or appropriate local agency accounting division).

The following are sources of information that may lead to the former tenant's whereabouts:

- Certified mail with return receipt requested sent to the tenant's last address.
- Utility companies that show transfer of service.
- Banks, places of employment, or other references that may be listed on the tenant's rental application.
- Labor union affiliations, depending upon the tenant's profession.
- Department of Motor Vehicles, using driver's license number, California ID number, or car license number from the application.

© 1994-2025 California Department of Transportation. All rights reserved.

As soon as a delinquent tenant vacates, the Region/District should process the vacated tenancy through the RWPM Adjustment Screen. Within 15 days, the district should refer the account to Accounting for write-off or for referral to the collection agency for further collection efforts.

Note: Local Agencies will use its own computer system.

11.08.08.01 Amounts $250 or Less

If the delinquent amount is $250 or less, the Region/District forwards a completed Form RW 11-25, Authorization to Write Off or Adjust Accounts Receivable Bill (internal Caltrans link), to Accounting and requests write-off of the account through the RWPM Adjustment Screen. The write-off request should include a brief justification (e.g., collection efforts are not cost effective based on Board of Control guidelines).

Accounting will immediately write off the account. If the delinquent amount is over $100 and the delinquent tenant's Social Security Number is known, Accounting will submit the account to the Franchise Tax Board (FTB) for two successive years only. However, the Intercept Program is for intercepting refunds of Personal Income Tax accounts only and cannot be used for corporations or partnerships.

If all or a portion of the delinquent amount is collected, either through the FTB Intercept Program or from the vacated tenant, Accounting will reestablish the receivable account.

Note: Local Agencies must determine the amount threshold that the Local Agency will use for accounting write offs.

© 1994-2025 California Department of Transportation. All rights reserved.

11.08.08.02 Amounts Greater Than $250

If the delinquent amount is greater than $250, the Region/District prepares an Exhibit 11-EX-39, Collection Agency Transmittal (internal Caltrans link), and forwards it to Accounting with the required documentation listed below. The vacancy date and amount due will be of critical importance if the collection agency pursues legal action against the debtor, and the Region/District is responsible for ensuring the accuracy of this information. In addition, the Region/District must enter the date the collection package is forwarded to Accounting on the Delinquent Tenancy Screen (TPR521M) in RWPM.

- Copy of first and last pages of rental agreement
- Copy of rental application
- New address documentation
- Copies of diary notes regarding efforts to collect
- Copy of judgment
- Copy of driver's license or California identification card

Accounting will verify the amount owed and forward the collection package to the collection agency under contract to the Department. In addition, Accounting will submit accounts with Social Security Numbers to FTB under terms of its Intercept Program.

The collection agency receives 3.5% commission on whatever they collect. If the collection agency collects 100% of the debt, the Department receives 96.5%. It is in the contract that the collection agency can settle the debt with the debtor at 80%. Any percentage lower than that needs to be approved by the Department's Accounts Receivable/Management. The collection agency will still receive 3.5% of the amount collected based upon the settlement.

Once an account is referred to the collection agency, Accounting takes on all responsibility for the account and makes all further contact with the collection agency. Any calls or letters from the delinquent tenant should be referred to the collection agency for response. **Under no circumstances should the Region/District enter into a repayment plan with the delinquent tenant once the account has been referred to the collection agency.**

In accordance with terms of the contract, the collection agency will submit a monthly report to Accounting showing the status of all accounts referred to them for collection. Accounting will forward a copy of the report to HQ RW to be shared with the Regions/Districts.

© 1994-2025 California Department of Transportation. All rights reserved.

Under terms agreed to among the collection agency, Accounting and HQ RW, Accounting will write off accounts that are deemed to be uncollectable. If all or a portion of the delinquent amount is subsequently collected, Accounting will reestablish the receivable account.

A collection packet should be submitted within 15 days of vacancy. **Do not delay in submitting your collections packet to accounting**. The State only has four years to collect payments.

On rare occasions, a Region/District may engage in a payment plan with a vacating tenant that will prevent a file from going to collections. As long as the tenant is paying according to the plan, this is permissible. However, if the tenant begins to miss payments, immediately send to collections. **Do not keep renegotiating the terms of a payment plan.** Always keep in mind of the statute of limitations to collect funds is 4 years after vacate date.

Note: Local Agencies shall determine the amount threshold that an account is sent to collections. Local Agencies shall use its own computer system processes to track collection actions.

11.09.00.00 – RENTAL INTERNAL CONTROLS

Note: any references to Local Agencies is in relation to Local Agency use of the Caltrans Right of Way Manual to comply with FHWA requirements.

11.09.01.00 Policy

To protect the integrity of the Department's rental assets and to protect employees handling those assets from accusations of fraud, the following control activities shall be performed for each acquired property. These activities shall be fully documented in the rental file's diary notes to facilitate audit and management review.

- Information on newly acquired property shall be entered in RWPM as soon as the information is available. Local Agencies will use its own computer system.
- Improved non-rentable properties shall be inspected at least once a month.
- The rental file shall contain justification for classifying any property as non-rentable.
- Unimproved non-rentable and occupied rentable properties shall be inspected at least once in the twelve months immediately following the prior inspection date.
- Vacated rentable properties shall be inspected within 15 days of any vacancy and at least once a month thereafter. Vacated rentable properties are those having more than a remote chance of being rented for a reasonable time prior to construction.
- Rentable occupied properties shall be subject to a confirming process of tenant interviews and tenant letters.

The sections below contain descriptions of major steps in the internal control process. The Property Management Senior or designee shall perform many of the specified control activities (such as inspections and reviews). The designee must be a RW Agent at the associate level or above but must not, however, be the Agent assigned rental management duties for the specific property/rental account.

© 1994-2025 California Department of Transportation. All rights reserved.

11.09.02.00 Newly Acquired Property Closure Procedure

11.09.02.01 Office Review

Upon execution of a RW Contract or recordation of an FOC, the Acquisition Agent (or Condemnation Agent for an FOC) shall send the acquisition paperwork (an MOS, RW 8-12 [internal Caltrans link]) to Property Management with a copy of the RW Contract or FOC as appropriate. The parcel should be assigned to the Agent responsible for the territory. The Agent shall review and be familiar with the documents and the appraisal involved.

11.09.02.02 Field Review

In the majority of cases where a property is acquired under a RW Contract, there will be a period of time, usually 3 to 6 weeks, between receipt of these documents and close of escrow or recordation. Whenever possible, the Agent should contact the occupants prior to close of escrow to discuss the terms of rental occupancy. The Agent should read the RW Contract carefully to determine any special conditions imposed that might affect, for example, the rental rate, term of occupancy, rental commencement date, or special disposition of acquired property. The Agent should notify the occupants of obligations to comply with all federal, state and local laws and ordinances, including those for storm water, and of the availability of storm water education and outreach guidance materials.

Where property is acquired through an FOC, the Agent shall take immediate action to contact the occupants since rental commences on the day following recordation of the FOC.

11.09.02.03 Diaries

Each file must have a diary, kept in chronological order, documenting the actions taken throughout the life of a property from acquisition to either construction or disposal. Diary entries are mandatory for every inspection, phone call, letter received and sent, accounting actions, and any other communication or activity. Diaries must be able to explain why an agent took a particular action, not just the action itself. Diaries may be used as evidence in court, and therefore must remain property specific, to the point, and absent of any agent commentary. For each inspection, the Agent shall take dated photographs of the condition of property; paying special attention to deficiencies and the remediation of said deficiencies. Diaries

© 1994-2025 California Department of Transportation. All rights reserved.

may be kept on the computer instead of handwritten, however, each page must be printed when full and kept in the physical file. The Diary in the file must reference an electronic version. All diaries must be printed when there is a QEJR or Audit. All Diary entries must be signed.

11.09.03.00 Vacated Rentable Property

The Property Management Senior or designee shall inspect all vacated rentable properties within 15 days after vacancies occur or are discovered and not less than once a month thereafter. The inspections shall be documented on the rental file's diary notes. At least once in the twelve months immediately following the prior inspection date, one of the inspections shall be done concurrently with a maintenance inspection and documented as required under Manual Section 11.10.06.00. All property inspections shall include dated photographs.

11.09.03.01 Agent Activities

When a tenant vacates, the Agent shall thoroughly inspect and secure the property the day of vacation or the next business day. Prior arrangements shall be made to obtain the keys from the vacating tenant. Upon receipt of the keys, the Agent shall accomplish the following:

- Inspect the property and, when necessary, prepare a request to have trash removed, improvements boarded up, hazardous conditions abated, or necessary maintenance performed.
- Perform an inventory of all items purchased by the state/Local Agency and place appropriate documentation in the rental file.
- Determine whether the property should be boarded up to provide protection against vandalism and theft.
- Report any lost or stolen property in accordance with procedures in Section 11.03.09.00.
- Note all activities in the rental file's diary notes and include dated photographs of the condition of the property.
- Prepare the necessary accounting documents to close the tenant's file.

© 1994-2025 California Department of Transportation. All rights reserved.

11.09.03.02 Property Management Senior Activities

The Property Management Senior or designee shall complete the first verification of vacancy status within 15 days after vacancy occurs and shall discuss each vacated rentable property not less than once a month with the Agent. Monthly field reviews shall be made to assure that the properties are still vacant. Every effort should be made to rent those properties. Documentation of office and field reviews shall be kept in District rental file's diary notes for auditing purposes.

11.09.04.00 Occupied Rentable Property

Field inspections of occupied properties shall be made at least once in the twelve months immediately following the prior inspection date to ensure the properties are maintained as well as or better than other properties in the neighborhood. Section 1954 of the California Civil Code allows a landlord to enter the residential dwelling unit in the following cases:

- In case of emergency.
- To make necessary or agreed repairs, decorations, alterations, or improvements, supply necessary or agreed services, or exhibit the dwelling unit to prospective or actual purchasers, mortgagees, tenants, workers, or contractors or to make an inspection pursuant to subdivision (f) of Section 1950.5 of the California Civil Code.
- When the tenant has abandoned or surrendered the premises.
- Pursuant to court order.
- For the purposes set forth in Chapter 2.5 (commencing with Section 1954.201) of Title 5 of Part 4 of Division 3 of the California Civil Code.
- To comply with the provisions of Article 2.2 (commencing with Section 17973) of Chapter 5 of Part 1.5 of Division 13 of the California Health and Safety Code.

© 1994-2025 California Department of Transportation. All rights reserved.

Except in cases of emergency or when the tenant has abandoned or surrendered the premises, entry may not be made during other than normal business hours unless the tenant consents to an entry during other than normal business hours at the time of entry. The landlord shall give the tenant "reasonable" notice in writing of his or her intent to enter and enter only during normal business hours. The notice shall include the date, approximate time, and purpose of the entry. The notice may be personally delivered to the tenant, left with someone of a suitable age and discretion at the premises, or, left on, near, or under the usual entry door of the premises in a manner in which a reasonable person would discover the notice. Twenty-four (24) hours shall be presumed to be reasonable notice in absence of evidence to the contrary. The notice may be mailed to the tenant. Mailing of the notice at least six days prior to an intended entry is presumed reasonable notice in the absence of evidence to the contrary. See Section 1954 of the California Civil Code for further requirements.

The Department can only enter a residential dwelling for the reasons enumerated in the California Civil Code Section 1954. An Agent cannot force a residential tenant to allow access for a routine inspection. If a residential tenant denies access for a routine inspection, the Agent shall notate the rental file's diary notes of the attempt to gain access to the dwelling and the tenant's denial of such access. The Agent shall make notes in RWPM, either on the Property Screen or Tenancy Screen, notating the residential tenant's refusal for the routine inspection.

Note: Local Agency will use its own computer system.

For non-residential tenancies, the right of entry is governed by the lease agreement. The Department's standard Right of Entry Clause in the lease agreement allows for the right to enter for a routine inspection during normal business hours subject to a twenty-four-hour notice. Furthermore, the Department's standard Use Clause in the lease agreement states that the lessee shall comply with all Federal, State, and local laws and ordinances concerning the use of the property; the Agent has the right to enter the property to determine if the property is being used lawfully. If the lessee fails to provide access to the property for the purposes of conducting a routine inspection and determining if the property is being used lawfully, the Agent must serve a Three-Day Notice to Correct Breach of Covenant or Quit.

© 1994-2025 California Department of Transportation. All rights reserved.

In addition, Right of Way Property Management manages its properties consistent with cities/counties that have municipal separate storm sewer systems (also known as MS4s) and the objectives of the Department's Storm Water Management Plan (SWMP). Properties are inspected to ensure tenants/lessees are maintaining properties in a neat and orderly manner, with no illicit discharges, and with proper storage of materials. Agents should be mindful of potential stormwater issues while conducting stormwater inspections. A few examples of what to look out for include, but are not limited to, the following:

- The tracking of dirt/mud at the points of ingress/egress.
- Containers not having tight fitting lids, that are not enclosed or covered at the storage site, are not raised off the ground by pallets, and do not have a containment system in case of a leak.
- Vehicle wash areas that are not designated nor paved and are not covered or bermed to collect the wash water.
- Stockpiles of material that are not covered or do not have fiber rolls around the perimeter of the stockpile.
- Vehicles leaking fluids that do not have drip pans underneath.
- The lack of fiber-rolls around the perimeter of a property in which the property slopes towards a storm drain or waterway.

Leases with certain types of industrial activity must have coverage under the State Water Resources Control Board's (SWRCB) Industrial General Permit, and the tenant is required to provide documentation of such coverage. Observing lease activities during inspection, along with the tenant's Standard Industrial Classification (SIC) Code, will help determine whether such coverage is needed. Any activities conducted on the premises that are listed in Attachment A of the Industrial Permit Order 2014-0057 DWQ are required to obtain permit coverage per federal regulations. If a lessee's activity is subject to the Industrial General Permit (IGP) and the lessee discharges into a Water of the United States or tributary, the lessee must prepare a Storm Water Pollution Prevention Plan (SWPPP), implement Best Management Practices (BMPs) described in the SWPPP to prevent pollutants from being discharged, and file a Notice of Intent (NOI) with the SWRCB. If a lessee's industrial activity is protected from rain or runoff exposure to a storm drain, the lessee can apply for a No Exposure Certification (NEC) certifying that no industrial pollutants are exposed to storm water. A Waste Discharger Identification (WDID) number will be assigned to the lessee after the SWRCB receives a complete application package. The lessee must provide the NOI or NEC filed with the SWRCB along with Receipt Letter from the SWRCB showing the WDID.

© 1994-2025 California Department of Transportation. All rights reserved.

The Agent can verify the status of the lessee's application with the SWRCB by checking the Stormwater Multiple Application and Report Tracking System (SMARTS).

The storm water inspection should be conducted at the same time as the regular property inspection. The Agent shall use the property inspection forms and the stormwater inspections forms to document the condition of the property. The Agent shall take photographs of the condition of the property and photograph all deficiencies and stormwater issues found during the inspections. Any property deficiencies that are the tenant/lessee's responsibilities and stormwater issues discovered during the inspection must be discussed with the tenant/lessee during the inspection. The Agent shall advise the tenant/lessee on the required remediation actions and perform a follow up inspection to verify that all deficiencies were addressed. If the property deficiencies are the responsibility of the Department/Local Agency to remediate, the Agent shall submit a task order to the contracted vendor. The Agent shall reinspect the property once the contracted vendor has completed all remediation activities. During the reinspection, the Agent shall take photographs of the condition of the property and the remediated deficiencies and complete the property inspection and stormwater forms. The Agent must document all inspection and remediation activities in the rental file's diary notes.

Upon completion of the field inspection, a copy of the completed inspection form will be offered to the tenant/lessee.

The inspection forms for residential and nonresidential leases are as follows:

- Residential Property Inspection sheet and Residential Storm Water Inspection sheet, or
- Non-Residential Property Inspection sheet and Non-Residential Storm Water Inspection sheet.
- Copies of all property inspection sheets may be found on the Property Management webpage (internal Caltrans link).

© 1994-2025 California Department of Transportation. All rights reserved.

11.09.04.01 Tenant Verification

Occupied rentable property shall be subject to a confirming process consisting of tenant interviews and letters to tenants to verify occupancy dates, rental rates, and deposits. The Division of Accounting and District Right of Way shall conduct this process on a sample basis shortly after tenancy commences.

Accounting shall send confirmation letters to newly inherited and re-rental tenants by using the sampling formula below:

- 100% for the first 10 new tenants each month.
- 20% of all new tenants over 10 each month.

Accounting will compare responses against rental records to confirm data and shall retain responses for audit purposes. Accounting will refer any unreconciled accounts and nonresponses to the Property Manager for personal verification.

The Property Management Senior or designee will personally verify the data with each tenant when there is an unreconciled item or nonresponse and shall document verification in the rental file.

Note: Local Agency should expect Caltrans RW Local Programs to confirm this information during the review process.

11.09.04.02 Confirming Process

Occupied rentable property shall be subject to a confirming process consisting of tenant interviews and letters to tenants to verify occupancy dates, rental rate, and deposits. The Division of Accounting will conduct this process on a sample basis shortly after a tenancy commences or when any changes are made to an existing tenancy.

Accounting will compare responses against rental records to confirm data and shall retain responses for audit purposes. Accounting will refer any unreconciled accounts and nonresponses to the Senior Right of Way Agent in Property Management (Senior) for personal verification.

The Property Management Senior will personally verify the data with each tenant when there is an unreconciled item or nonresponse and shall document verification in the rental file.

© 1994-2025 California Department of Transportation. All rights reserved.

Note: Local Agency should expect Caltrans RW Local Programs to confirm this information during the review process.

11.09.05.00 Non-Rentable Property

All non-rentable properties must be continuously accounted for and periodically inspected in the field to assure continued vacancy. New agents shall be advised of all non-rentable properties within their areas of responsibility.

Regions/Districts/Local Agency shall conduct field inspections of non-rentable properties to determine their condition and reevaluate their status and shall retain documentation of these inspections in the Region/District/Local Agency files. Unimproved properties shall be inspected at least once every twelve months from the prior inspection date, and improved properties shall be inspected at least once a month from the prior inspection date. These inspections may be combined with required maintenance inspections, the Agent shall utilize 11-EX-59, Unimproved Property Inspection (internal Caltrans link) (for internal Caltrans use), which combines the property maintenance and stormwater inspections. The Agent shall document the condition of the property and attach photographs of the property to the Unimproved Property Inspection. If the property requires any remediation, such as weed abatement or debris hauling, the Agent shall submit a task order to the contracted vendor and reinspect the property after the remediation work is completed; the Agent shall complete another Unimproved Property Inspection and attach photographs of the property in its condition after remediation of deficiencies. All field inspections, remediation actions, and follow-up field inspections should be documented in the rental file's diary. All field inspections shall be documented as required under Manual Section 11.10.06.00.

11.09.06.00 Rental Accounting and Cash Handling

11.09.06.01 New Accounts

At the time a new tenancy is created, one month's rent or the prorated amount due for the balance of the month shall be collected. A security deposit shall also be collected prior to commencement of tenancy in accordance with Section 11.07.16.00.

© 1994-2025 California Department of Transportation. All rights reserved.

11.09.06.02 Rental Payments

As standard procedure, tenants shall submit rental payments directly to Accounting. Only in unforeseen and emergency situations (e.g., tenant being served a 3-day notice to pay or quit, or having a medical or financial condition that prevents the tenant from paying the rent according to the terms and conditions of the rental agreement) may an Agent accept payment from a tenant in accordance with the following procedures:

- **Check/Money Order** – Endorse and deliver to the District Cashier or mail (by overnight courier if possible) to Accounting at the following address:

  Department of Transportation
  Attention Cashiering Deposits, MS #58
  P. O. Box 168019
  Sacramento, CA 95816-8019

- **Cash** – Convert the currency and coins to a money order or cashier's check. Endorse the money order or cashier's check and immediately deliver to the District Cashier or forward to Accounting at the above address.

All checks/money orders received by the offices via incoming mail, dropped off at the counter by customer, or received by an Agent must be endorsed immediately upon receipt. The endorsement is stamped on the back of the check/money order as close to the top as possible, above the endorsement signature line.

Another option for the tenants/lessees to make rental payments is through debit card and credit card through the Official Payments website. There is a service fee charged for all payments made through the Official Payments website.

Electronic transfers are not an acceptable form of payment. Accounting will not accept attempts to pay by this method.

If the tenancy account is not set up in RWPM, the check, money order, or cash must be deposited in Account 84 (Suspense Account). The tenancy account shall be created as soon as the information is available. Upon creating the tenancy account, any monies deposited in Account 84 must be transferred to the tenancy account immediately by completing an Adjustment Screen.

© 1994-2025 California Department of Transportation. All rights reserved.

Note: Local Agencies must determine the method of payment and denote this within the lease agreement clearly.

11.09.06.03 Receipts

As a good business practice, Cash Report (Form FA0185) (internal Caltrans link) or equivalent shall be issued to record receipt of (1) cash or currency or (2) check or money order in all instances. District RW employees must request cash receipt books from the District Cashier.

Refer to "Cash Handling Policy" memorandum dated January 2, 2015 (Exhibit 11-EX-2) and "Cash Receipt Book Procedures" dated December 1998 (Exhibit 11-EX-2A) for additional information on completing Cash Receipts, Form FA 285.

In general, the tenant's cancelled check is receipt of the payment.

Note: Local Agencies shall issue receipts for payments. Local Agencies shall develop a cash handling policy with their accounting department.

11.09.07.00 Termination of Rental Accounts

The District/Region shall use the RWPM Adjustment Request Screen to terminate accounts, to authorize refunds of rent or security deposits, and to notify Accounting of amounts to be charged for damages.

Note: Local Agencies shall use its own computer system.

11.09.08.00 Rental Offsets

Rental offsets are allowed for work done by tenants with prior written approval from the Property Manager Senior or Supervisor, depending on the offset amount. Work done under rental offset must be inspected by the Department to assure it has been completed in a satisfactory manner. A Rental Offset Agreement, 11-EX-F (internal Caltrans link), must be completed and the receipt must be attached to the Rental Offset Agreement. See Section 11.10.17.00 for detailed information.

© 1994-2025 California Department of Transportation. All rights reserved.

11.09.09.00 Contracted Maintenance

Contracted vendors are hired by the Department to perform maintenance on properties. Task orders are submitted to the contracted vendors to remediate deficiencies on State properties in which the Department is responsible for remediating. After a vendor completes the requested maintenance on the property, the Agent must inspect the property to verify that the maintenance was completed. When the District/Region receives the contracted vendor's invoice, the invoice must be forwarded to the Contract Manager. When the Contract Manager receives the contracted vendor's invoice, the Contract Manager enters the invoice information into the Maintenance Request Screen in RWPM and prepares a Receiver Form, FA-1226A or FA-1226B (internal Caltrans link) depending on the number of invoices. The Contract Manager forwards a copy of the RWPM Maintenance Request Screen, the Receiver Form, and a copy of the invoice to the Property Management Senior; the Property Management Senior must approve the Maintenance Request in RWPM and the Receiver Form for the invoice and have the package forwarded to Accounting for processing.

Note: Local Agencies must complete the proper process, as determined by the local agency, for contracting for maintenance of a property.

© 1994-2025 California Department of Transportation. All rights reserved.

11.10.00.00 – PROPERTY MAINTENANCE AND REHABILITATION

Note: any references to Local Agencies is in relation to Local Agency use of the Caltrans Right of Way Manual to comply with FHWA requirements.

11.10.01.00 General

All property shall be maintained in a safe and hazard-free condition. Nonresidential property repairs shall be limited to major items such as roofs, structural weaknesses, main sewer lines, electrical deficiencies, and water service pipes to fixtures as delineated in the Lease Agreement. Residential rental properties will be maintained in a manner that reflects credit on the state and enhances local community values. Certain repairs must be performed on residential property to derive appropriate rental income, improve community relations, and conform to existing laws and ordinances.

As a general rule, the tenant shall be required to provide normal yard care (watering, mowing, weeding, and trash and junk removal). Tenant's failure to provide such care is a justifiable reason for terminating tenancy.

Pursuant to the Health and Safety Code, the State/Local Agency has a specific legal obligation to keep the premises in a condition fit for human occupancy.

Pursuant to Health and Safety Code Section 17980.6, if a building is in such a nature that the health and safety of residents or the public is substantially endangered, an enforcement agency may issue a notice to repair or abate the code violations of the substandard building to the State.

Pursuant to Health and Safety Code Section 17980.7, the enforcement agency may sue the State/Local Agency for failure to repair violations in a timely manner. If a court rules that a building is in a condition which substantially endangers the health and safety of residents, the court has the authority to:

- Order the State/Local Agency to pay all reasonable and actual costs of the enforcement agency including, but not limited to, inspection costs, investigation costs, enforcement costs, attorney fees or costs, and all costs of prosecution.

© 1994-2025 California Department of Transportation. All rights reserved.

- If necessary repairs require the tenant to relocate, order the State/Local Agency to provide or pay relocation benefits to each lawful tenant. These benefits shall consist of actual reasonable moving and storage costs and relocation compensation. See RW Manual Section 10.10.03.00 and contact District RAP Unit for assistance.
- Order the State/Local Agency to offer the first right of occupancy to each tenant who received relocation benefits after the rehabilitation.

Pursuant to Health and Safety Code Section 17980.8, the State/Local Agency is also responsible for the enforcement agency's cost to abate the nuisance if the State/Local Agency does not do so in compliance with the citation and applicable code sections.

11.10.01.01 Storm Water Management

Properties shall be managed to prevent the discharge of pollutants into storm water drainage systems. Property Management will use standardized language in the rental/lease agreements that addresses storm water pollution prevention by the tenant/lessee in new and renewed leases. The standardized language requires the implementation of storm water best management practices (BMPs) that are activity specific and elimination of illicit connections and illegal discharges to the storm drain system. Storm water education and outreach materials that include storm water pollution prevention fact sheets will be provided to the lessee/tenant. The fact sheets contain the BMPs that are applicable to the lessee's activities. Fact sheets should be referenced in the rental/lease agreement and attached to the rental/lease agreement as an exhibit.

BMP Fact sheets can be found on the Right of Way Storm Water webpage (internal Caltrans link).

Lessees are required to comply with all federal, state and local storm water laws and ordinances. This would include operators of certain industrial activities to obtain coverage under the Industrial General Permit for storm water discharges associated with industrial activity issued by the State Water Resources Control Board (SWRCB). The District will maintain a list of leases with industrial activities that require coverage under the Industrial General Permit. Lessees with coverage under the Industrial General Permit should provide the District with a copy of the following: Notice of Intent or No Exposure Certification filed with the SWRCB; Receipt Letter with Waste Discharge Identification (WDID) number; SWPPP prepared for the Notice of Intent in compliance with the Industrial General Permit.

© 1994-2025 California Department of Transportation. All rights reserved.

The Department's Statewide Storm Water Permit and Storm Water Management Plan (SWMP) covers transportation corridors, facilities, and activities (including employee housing at maintenance stations) within the Department's municipal separate storm sewer system (MS4). Except for employee housing, Property Management leases are on lands held for future construction or excess lands. Therefore, rather than the Department's MS4, these properties generally discharge to local agency municipal separate storm sewer systems (local MS4) and are subject to their storm water requirements. However, Property Management manages its properties consistent with local MS4s by inspecting properties to ensure tenants/lessees comply with the terms of their rental agreements and lease agreements, maintain the property, and use storm water best management practices.

Refer to the Right of Way Property Management and Airspace Storm Water Guidance Manual for storm water pollution prevention BMP fact sheets, guidance materials and compliance procedures.

The Right of Way Stormwater Manual can be located on the Right of Way Storm Water webpage (internal Caltrans link).

11.10.02.00 Asbestos and Lead Paint

Removal, disposal, or disturbance of asbestos and lead-based paint in conjunction with maintenance of property shall be in compliance with all state and federal requirements and shall be performed by a State certified contractor for lead and asbestos. If Property Management suspects the presence of such materials, it shall obtain surveys prior to starting any maintenance that would disturb the materials. Regarding lead-based paint, special attention should be given to residential properties constructed prior to 1978 since lead-based paint was widely used prior to that time. Standard property maintenance contract clauses specify how the contractor should deal with these materials.

11.10.02.01 Staff Training

Property management staff should have an initial 6-hour professional training on lead-based paint training awareness, as facilitated by HQ. Further, property management staff should have annual review training as facilitated by HQ. Copies of certificates of completion should be kept in the supervisor's employee file to document the completion of such training.

© 1994-2025 California Department of Transportation. All rights reserved.

11.10.02.02 Rental Agreement

The federal government banned lead-based paint for use in housing in 1978. For dwellings constructed prior to 1978, there is a likelihood the dwelling contains some amount of lead. Congress passed the Residential Lead-Based Paint Hazard Reduction Act of 1992, also known as Title X, to educate the public concerning the hazards and sources of lead-based paint poisoning and steps to eliminate and reduce such hazards.

Section 1018 of Title X mandates certain disclosures of information concerning lead upon renting a dwelling constructed prior to 1978. The Department must provide the tenant with a lead hazard information pamphlet; the tenant shall receive the EPA pamphlet entitled, *Protect Your Family From Lead in Your Home*. Additionally, the Department must disclose to the tenant the presence of any known lead-based paint, or any known lead-based paint hazards, and provide the tenant with any lead hazard evaluation reports available to the Department/Local Agency; the Agent shall utilize 11-EX-48, Disclosure of Information on Lead-Based Paint and/or Lead-Based Paint Hazards, to acknowledge that the tenant has been informed of the presence of lead-based paint and/or lead-based paint hazards and the tenant has received all available records and reports pertaining to lead-based paint and/or lead-based paint hazards. The Agent must have the tenant initial the acknowledgment section of 11-EX-48 regarding the receipt of all reports and records pertaining to lead-based paint and/or lead-based paint hazards and the receipt of the EPA pamphlet. The Agent and tenant shall sign the Certification of Accuracy section of 11-EX-48.

For dwellings constructed prior to 1978, the Agent must include the Lead-Based Paint Clause and have the tenant initial the acknowledgment that they received the EPA pamphlet. The EPA pamphlet and 11-EX-48 shall be made as exhibits and attached to the rental agreement.

11.10.03.00 Maintenance Expenditure Guidelines

11.10.03.01 Vacant and Non-Rentable Property

All vacant and non-rentable properties shall be maintained in a manner that will reflect credit on the state and preserve local community values. In essence, this means that all state-owned properties shall be maintained as well as or better than other properties in the neighborhood.

All vacant and non-rentable properties shall be kept free of safety or health risks. This may include fencing of the property, boarding up doors and

© 1994-2025 California Department of Transportation. All rights reserved.

windows, installing outdoor lighting such as sensor lighting, etc. Where appropriate, the hiring of private security services may be warranted.

11.10.03.02 Rented State-Owned Property

Maintenance expenditures by the state shall be governed as follows:

- **Commercial or Industrial Lease** – Major repairs only shall be made to the exterior walls, roof, main sewer lines, and water lines to building. Lessees shall do all interior work at their own expense. Deviation from this policy will be allowed only when it would be in the state's best interest with the DD's or authorized delegate's approval prior to start of work.
- **Master Tenancy Agreement** – For "Master Tenant Controlled Units," the state shall make no improvements or repairs of any nature whatsoever. Deviation from this policy will be allowed only when it would be in the state's best interest with the DD's or authorized delegate's approval prior to start of work.
- **Agricultural Lease** – The state shall make no improvements or repairs of any nature whatsoever. Deviation from this policy will be allowed only when it would be in the state's best interest with the DD's or authorized delegate's approval prior to start of work.
- **Advertising Structure Agreement** – The state will make no repairs and perform no maintenance whatsoever on the advertising structure.
- **Rental Agreement, Month-to-Month Tenancy** – Maintenance expenditures will be governed by exercising judgment at the Region/District level that is commensurate with good business practices and within the limits set forth in this chapter of the RW Manual. Some of the more common maintenance and repair services the state should provide include, but should not be limited to, exterior and interior painting, yard maintenance, and repair or replacement of plumbing, electrical facilities, roofs, windows, heaters, and built-in appliances. The state shall make improvements and repairs to residential dwellings to ensure they are fit for human occupancy in accordance with Civil Code Sections 1941.1 and 1941.3, and Health and Safety Code Sections 17920.3 and 17920. 10.

Please refer to the specific agreement templates on the Property Management webpage (internal Caltrans link).

Note: The Local Agency must determine what maintenance expenditures the local agency will be governed by.

© 1994-2025 California Department of Transportation. All rights reserved.

11.10.04.00 Health and Safety Requirements

Exterior Areas:

State property shall be maintained in a clean and orderly condition so as not to detract from the general appearance of the neighborhood. If this condition is not met, the Agent shall investigate further and implement one or more of the following corrective measures to improve the property's appearance:

- Perform weed abatement.
- Remove dead and diseased trees. It is recommended to consult with the Division of Environmental Analysis to confirm that there are no special permits involved with the removal of trees.
- Remove litter and post proper signs.
- Eliminate or reduce safety hazards, e.g., by filling or capping wells, filling holes, caves, and ponds; and erecting fences and barricades where necessary.
- Remove attractive nuisances such as abandoned cars, refrigerators, and freezers.
- Post proper signs to reduce trespassing such as illegal parking, dumping, or storage.

If the property is occupied and its appearance does not meet neighborhood standards, the Agent shall immediately notify the tenant verbally and in writing that the unsuitable conditions must be corrected (see Exhibit 11-EX-08, Correction Notice – Unsuitable Conditions).

When it is necessary to clear weeds or diseased trees or to correct an unsafe or unsanitary condition, Property Management may enter into a service contract with a local municipality, another State Agency, or private contractor for performance of the necessary work. Please refer to the Division of Procurement and Contract's *Contract Manager's Handbook* (internal Caltrans link) for additional information on service contracts.

Note: The Local Agency will refer to their own contracting handbook.

© 1994-2025 California Department of Transportation. All rights reserved.

Interior Areas

Any property condition that may affect health and safety of occupants should be investigated immediately. If a tenant notifies Right of Way (RW) of an adverse condition affecting health and safety, RW/Local Agency will inspect the property no later than the next business day. Certain situations, such as those involving hazardous materials, structural problems, mold, etc., will require hiring a State certified specialist to inspect and report on the nature and extent of the problem, and provide recommendations to remedy the situation.

If a tenant notifies RW of a health and safety issue, the Region/District/Local Agency should send the tenant a letter confirming the outcome of the Agent's and, if applicable, the professional's inspection and how the problem, if any, will be resolved. If the inspection did not reveal a problem, the Region/District/Local Agency should still send a written response to the tenant confirming the outcome of the inspection. All such investigations, resolutions, if any, and communications with the tenant must be documented in the property file.

11.10.05.00 Exterior and Interior Appearance of Improved Properties

Agents must thoroughly inspect all vacant or occupied properties to ensure the properties are being maintained properly to preserve the neighborhood's appearance. In particular, Agents shall observe conditions outlined in the table entitled "Inspection of Improved Properties." Whenever adverse conditions are found, the Agent shall investigate and take appropriate corrective action.

© 1994-2025 California Department of Transportation. All rights reserved.

INSPECTION OF IMPROVED PROPERTIES

Tenant-Occupied Property – Exterior

Areas of Concern:

- Yard areas should be properly watered, mowed, and weeded and should generally reflect a clean and orderly condition.
- There should be no broken windowpanes or boarded-up windows.
- Painted surfaces shall not be peeling or greatly discolored, and the stucco, wood, or concrete block should not be deteriorating.
- The roof should not be segregating, sagging, or leaking.
- There should be no structural deficiencies such as broken stairs, ceilings, garage doors, or fences.
- Swimming pools should be properly maintained.
- Window and door screens should look presentable.
  TV antennas should be erect and securely fastened.

Tenant-Occupied Property – Interior

Areas of Concern:

- All interior areas shall be maintained in a clean and orderly fashion so that full compliance with health and safety codes is evident.
- There should be no broken electrical or plumbing fixtures or damaged appliances.
- Interior areas should not show signs of water damage, water leaks, excessive moisture or mildew or other similar problems.
- There should be no indications of rodents, pests or other similar problems.
- The walls and ceilings should not be damaged, and the paint, wallpaper, or paneling should not be noticeably deteriorating.
  Floors, floor coverings, doors, cabinets, custom drapes, Venetian blinds, heaters, and air conditioners should not be damaged or allowed to noticeably deteriorate.

© 1994-2025 California Department of Transportation. All rights reserved.

Unoccupied Property That Will Be Re-Rented

Areas of Concern:
All the physical conditions outlined above under "Tenant-Occupied Property – Exterior" and "Tenant-Occupied Property – Interior."

Unoccupied Property That Will Not Be Re-Rented

Areas of Concern:
All the physical conditions outlined above under "Tenant-Occupied Property – Exterior" that are pertinent to preserving neighborhood appearance and values.

The Agent should continue to inspect and supervise maintenance of the property until the Clearance and Demolition Unit assumes responsibility for clearance of improvements. Following clearance, Property Management is still responsible for inspection and maintenance of the unimproved property until it is turned over to Construction or sold as excess.

If there is a known vandalism problem in the neighborhood, it may be advisable to board up the improvements if such action does not demote the general neighborhood appearance, does not create unfavorable public opinion, and has proven to deter vandalism.

11.10.06.00 Field Inspections

Since nearly all state-owned property purchased for future highway use or related purposes is acquired considerably in advance of scheduled clearance requirements, sound management practices dictate that the state perform some replacement, rehabilitation, and maintenance to meet acceptable neighborhood standards. Additionally, the properties are to be managed in a manner that prevents the discharge of pollutants to storm water drainage systems and waterways. Consequently, field inspections by state personnel provide the method to achieve and maintain a desirable community relationship and identify needs for property maintenance. Inspections also identify lessee activities that have potential to discharge pollutants into storm drainage systems. All Property Management Agents shall be responsible for inspecting and documenting every rental account under their control. If a property is occupied, it shall be inspected at least once every twelve months. If a property is unoccupied and unimproved, the property shall be inspected at least once every twelve months. If a property

© 1994-2025 California Department of Transportation. All rights reserved.

is improved and unoccupied, the property shall be inspected at least once a month. The Agent may inspect more frequently if the situation calls for such; yet, the Agent must inspect the property per the minimum frequencies described within this section. Documentation must occur on corresponding inspection forms as noted in the below table, with dated photographs documenting the condition of the property in the before condition.

If any deficiencies are noted in the inspection report, the deficiencies must be remediated. The Agent shall make a diary entry notating the remediation action necessary, the party responsible for remediating the deficiencies, and a date when the Agent will follow up to verify that the deficiencies have been remediated. If the responsible party is the State/Local Agency, the Agent shall have a task order submitted to the contracted vendor for remediation. If the responsible party is the tenant/lessee, the Agent shall provide a deadline for the tenant/lessee to remediate the deficiencies; if the tenant/lessee fails to remediate the deficiencies, the Agent shall serve a 3-Day Notice to Correct Breach of Covenant or Quit, unless the tenancy is subject to Section 1946.2 of the Civil Code in which case a notice with an opportunity to cure must be provided prior to serving a 3-Day Notice to Quit for Breach of Covenant (please refer to Section 1946.2[c] of the Civil Code and Manual Section 11.07.24.00). If the tenant/lessee is responsible to remediate deficiencies that pose an immediate threat to any person or the environment, the Agent shall immediately serve a 3-Day Notice to Correct Breach of Covenant or Quit or potentially a 3-Day Notice to Quit for Breach of Covenant, please contact Legal for tenancies subject to Civil Code Section 1946.2 regarding noticing requirements. Each time the Agent re-inspects the property to verify the progress of the remediation the Agent shall complete an inspection form, take photographs of the property, and document the diary as to the condition of the property.

© 1994-2025 California Department of Transportation. All rights reserved.

DOCUMENTING INSPECTIONS

Residential Properties

Form:
Residential Property Inspection sheet and Residential Storm Water Inspection sheet

Explanation:
If the property is occupied, an inspection shall take place at least once every twelve months. If the property is unoccupied, an inspection shall take place at least once a month. A checklist for interior and exterior inspections that is used for viewing the property, recording observations about its condition, and documenting any storm water concerns. All blanks are to be filled in and comments are to be made when deficiencies are noted. Tenants' comments and concerns are to be solicited and noted on the back of the form. Date of inspection must be entered into RWPM. Copies of the inspection forms are to be signed by the supervisor and maintained in the file. The supervisor shall provide direction on necessary actions to remediate any deficiencies noted on the inspection forms. The Agent shall notate the diary with the inspection date, the condition of the property, and any actions required to remediate any deficiencies. The Agent must attach dated photographs to the inspection report.

Note: Local Agency will use its own computer system.

© 1994-2025 California Department of Transportation. All rights reserved.

DOCUMENTING INSPECTIONS (Continued)

Improved Nonresidential Properties

Form:
Non-Residential Property Inspection sheet and Non-Residential Storm Water Inspection sheet

Explanation:
If the property is occupied, an inspection shall take place at least once every twelve months. If the property is unoccupied, an inspection shall take place at least once a month. Used to document inspections of rental properties on a periodic basis as part of the state's maintenance control program, record pertinent observations about the exterior and interior appearances of the properties, and document any storm water concerns. In addition to observations, the Agent shall record the rental account number, address of the property inspected, date of inspection, possible recommended maintenance, and date work completed. Date of inspection must be entered into RWPM. Copies of the inspection forms are to be signed by the supervisor and maintained in the file. The supervisor shall provide direction on necessary actions to remediate any deficiencies noted on the inspection forms. The Agent shall notate the diary with the inspection date, the condition of the property, and any actions required to remediate any deficiencies. The Agent must attach dated photographs to the inspection report.

Note: Local Agency will use its own computer system.

© 1994-2025 California Department of Transportation. All rights reserved.

Unimproved Properties

Form:
Unimproved Property Inspection sheet

Explanation:
Inspections shall be conducted at least once every twelve months. This inspection form will document the condition of vacant land properties, including issues pertaining to debris dumping, weed abatement, fencing, homeless activity, encroachments, and illegal parking. This form also documents stormwater concerns for vacant properties. The Agent shall document any deficiencies noted during the inspection. Date of inspection must be entered into RWPM. Copies of the inspection forms are to be signed by the supervisor and maintained in the file. The Agent's supervisor shall review the form. The Agent shall notate the diary with the inspection date, the condition of the property, and any actions required to remediate any deficiencies. The Agent must attach dated photographs to the inspection report.

Note: If a tenant notifies RW of a health and safety issue, the District/Region/Local Agency must send the tenant a letter confirming the outcome of the inspection and how the problem, if any, will be resolved. If the inspection did not reveal a problem, the District/Region/Local Agency must still send a written response to the tenant confirming the outcome of the inspection. Copies of all correspondences must be placed in the file. All such investigations, resolution, if any, and communications with the tenant must be documented, and noted as diary entries, in the property file.

11.10.07.00 Rodent and Pest Control

Property maintenance inspections shall include a determination on whether rodent and pest control is necessary and shall be documented on:

- Residential Property Inspection sheet.
- Non-Residential Property Inspection sheet.
- Residential Property Occupancy and Vacancy Inspections.
- Property Occupancy and Vacancy Inspections sheet (used for all non-residential move-in and move-out inspections).

© 1994-2025 California Department of Transportation. All rights reserved.

Copies of all property inspection sheets may be found on the Property Management webpage (internal Caltrans link).

Local health authorities or other qualified persons may make the inspections. Rodent and pest control measures shall be documented in the file.

If it is determined that extermination services are needed, assistance may be obtained from local health authorities or from licensed exterminators.

Contracts for exterminator services are subject to approval by Headquarters Maintenance to assure that no unauthorized chemicals are used on state property. See the Division of Procurement and Contracts' *Contract Manager's Handbook* (internal Caltrans link) for further details.

Note: Local Agencies must confirm with their environmental department for chemical use on the property. Local Agencies must process payment according to their accounts payable policies.

Property Management will prepare a Receiving Record when bills/invoices are received from the contractor and forward to Accounting for payment.

11.10.07.01 Bed Bugs

Section 1954.603 of the Civil Code requires all residential tenants to be given written notice regarding the general information about bed bug identification, behavior and biology, the importance of cooperation for prevention and treatment, the importance of and for prompt written reporting of suspected infestations to landlords, and the procedure to report suspected infestations to the landlord.

Pursuant to Section 1954.604 of the Civil Code, tenants must cooperate with pest control operators with the inspection to facilitate the detection and treatment of bed bugs, including providing requested information to the operator that is necessary to facilitate the detection and treatment of bed bugs. Entry to inspect dwellings must still comply with Section 1954 of the Civil Code, yet Section 1954 of the Civil Code acknowledges that entry to inspect by a pest control operator for the purposes of eliminating bed bugs is a necessary service for the purpose of Section 1954 of the Civil Code.

© 1994-2025 California Department of Transportation. All rights reserved.

Pursuant to Section 1954.605 of the Civil Code, the Department/Local Agency shall notify tenants whose units were inspected of the findings of the pest control operator. The notification shall be in writing and shall be made within two business days of the pest control operator's findings. For confirmed infestations in common areas, all tenants shall be provided notice of the pest control operator's findings.

For all residential tenancies, the Agent shall provide the 11-EX-64, Bed Bug Information Sheet, to all residential tenants. The Bed Bug Information Sheet shall be made as an exhibit and attached to the rental agreement. The Agent shall also have the tenant initial the Bed Bug Information Sheet Clause in the rental agreement acknowledging the receipt of the Bed Bug Information Sheet.

11.10.08.00 Smoke Alarm Devices

Smoke alarms are required to be installed, maintained, and tested in every residential rental unit in accordance with Section 13113.7 of the Health and Safety Code. Additionally, all smoke alarms must be approved and listed by the State Fire Marshal pursuant to Section 13114 of the Health and Safety Code.

11.10.08.01 Installation and Type of Smoke Alarm

All smoke alarms in residential dwellings shall:

- Be operable. The Agent shall test all smoke alarms during any inspections. When the tenancy is created, the Department/Local Agency shall ensure that the smoke alarm is operable. The tenant shall be responsible for notifying the Department/Local Agency if the tenant is aware that a smoke alarm is inoperable. It is the responsibility of the Department/Local Agency to remedy any deficiency associated with a smoke alarm. The Agent shall submit a task order to a qualified contracted vendor to remedy any deficiencies.
- Receive their primary power from the building wiring provided that such wiring is served from a commercial source and shall be equipped with a battery backup. Wiring shall be permanent and without a disconnecting switch other than as required for overcurrent protection.
- Display the date of manufacture on the device, provide a place on the device where the date of installation can be written, and incorporate a hush feature.

© 1994-2025 California Department of Transportation. All rights reserved.

- Be interconnected where one or more smoke alarm is required to be installed within an individual dwelling or sleeping unit, the smoke alarm shall be interconnected in such a manner that the activation of one alarm will activate all of the alarms in the individual unit. Exceptions to this include the following: Interconnection is not required in buildings that are not undergoing alterations, repairs, or construction of any kind; Smoke alarms in existing areas are not required to be interconnected where alterations or repairs do not result in the removal of interior wall or ceiling finishes exposing the structure, unless there is an attic, crawl space or basement available which could provide access for interconnection without the removal of interior finishes; Smoke alarms are not required to be interconnected where repairs or alterations are limited to the exterior surfaces of dwellings, such as the replacement of roofing or siding, or the addition or replacement of windows or doors, or the addition of a porch or deck; and, Smoke alarms are not required to be interconnected when work is limited to the installation, alteration or repairs of plumbing or mechanical systems or the installation, alteration or repair of electrical systems which do not result in the removal of interior wall or ceiling finishes exposing the structure.
- Be installed in accordance with manufacturer's instructions, State Fire Marshal regulations, and applicable local codes and ordinances.
- Be installed by a properly licensed person or company. The installer must obtain the required permits and have the work inspected by the proper local authority.
- Be installed in the following locations: Each sleeping room; Outside each separate sleeping area in the immediate vicinity of the bedrooms; On each additional story of the dwelling, including basements and habitable attics and not including crawl spaces and uninhabitable attics. In dwellings or dwelling units with split levels and without an intervening door between the adjacent levels, a smoke alarm installed on the upper level shall suffice for the adjacent lower level provided that the lower level is less than one full story below the upper level.
- Be inspected by the Agent or a qualified contractor at least once every twelve months to ensure proper operation.

To ensure access to the rental unit, written notice will be given to the tenant at least 24 hours prior to installation and inspection.

All present rental agreements will contain or be amended to contain the Smoke Detection Clause when installation is completed.

© 1994-2025 California Department of Transportation. All rights reserved.

11.10.08.02 Battery-Operated Smoke Alarms

A battery-operated smoke alarm may be substituted for a hard-wired alarm in residential dwellings where:

- In existing buildings where no construction is taking place.
- On buildings that are not served from a commercial power source.
- In existing areas of buildings undergoing alterations or repairs that do not result in the removal of interior walls or ceiling finishes exposing the structure, unless there is an attic, crawl space or basement available which could provide access for building wiring without the removal of interior finishes.
- Repairs or alterations are limited to the exterior surfaces of dwellings, such as the replacement of roofing or siding, or the addition or replacement of windows or doors, or the addition of a porch or deck.
- Work is limited to the installation, alteration or repairs of plumbing or mechanical systems or the installation, alteration or repair of electrical systems which do not result in the removal of interior wall or ceiling finishes exposing the structure.

Commencing July 1, 2014, in order for a smoke alarm to be approved and listed by the State Fire Marshal, a smoke alarm that is only operated by a battery shall contain a nonreplaceable, nonremovable battery that is capable of powering the smoke alarm for at least 10 years. If any existing battery-operated smoke alarm, which does not meet these requirements, becomes inoperable or, if a dwelling unit intended for human occupancy has a building permit issued for alterations, repairs, or additions exceeding one thousand dollars ($1,000), then the Department/Local Agency must replace the smoke alarm with a nonreplaceable, nonremovable battery operated smoke alarm.

For smoke alarms with any other type of battery, batteries shall be changed at least once every twelve months at the time of the annual field inspection. The Agent should note the date the battery was changed on the Residential Property Inspection sheet.

© 1994-2025 California Department of Transportation. All rights reserved.

11.10.09.00 Carbon Monoxide Alarm

All residential units with a fossil fuel burning heater or appliance, fireplace, or an attached garage is required to install, test, and maintain a carbon monoxide device in accordance with Health and Safety Code Sections 17926 and 17926.1. Additionally, all carbon monoxide alarms must be approved and listed by the State Fire Marshal pursuant to Section 13263 of the Health and Safety Code. Combination carbon monoxide and smoke alarms are permitted in lieu of carbon monoxide alarms.

11.10.09.01 Installation and Type of Alarm

All carbon monoxide detectors in residential dwellings shall:

- Be operable. The Agent shall test all carbon monoxide alarms during any inspections. When the tenancy is created the Department shall ensure that the carbon monoxide alarm is operable. The tenant shall be responsible for notifying the Department/Local Agency if the tenant is aware that a carbon monoxide alarm is inoperable. It is the responsibility of the Department to remedy any deficiency associated with a carbon monoxide alarm. The Agent shall submit a task order to a qualified contracted vendor to remedy any deficiencies.
- Receive their primary power source from the building's wiring provided that such wiring is served from a commercial source, and where primary power is interrupted, shall receive power from a battery. Wiring shall be permanent and without a disconnecting switch other than those required for overcurrent protection.
- Be interconnected where more than one carbon monoxide alarm is required to be installed within a dwelling unit or within a sleeping unit, the carbon monoxide alarm shall be interconnected in a manner that activation of one alarm shall activate all of the alarms in the individual unit. Interconnection of carbon monoxide alarms are not required in existing buildings built prior to January 1, 2011, under any of the following conditions: Physical interconnection is not required where listed wireless alarms are installed and all alarms sound upon activation of one alarm; No construction is taking place; Repairs or alterations do not result in the removal of interior wall or ceiling finishes exposing the structure in areas/spaces where carbon monoxide alarms are required; Repairs or alterations are limited to the exterior surfaces of dwelling, such as the replacement of roofing or siding, or the addition or replacement of windows or doors, or the addition of a porch or deck; and, Work is limited to the installation, alteration or repair of plumbing, mechanical, or electrical systems, which do not result in the removal of

© 1994-2025 California Department of Transportation. All rights reserved.

interior wall or ceiling finishes exposing the structure in areas/spaces where carbon monoxide alarms are required.

- Be installed in the following locations: Outside of each separate sleeping area in the immediate vicinity of the bedrooms; on every occupiable level of a dwelling unit, including basements; and, where a fuel-burning appliance is located within a bedroom or its attached bathroom, a carbon monoxide alarm shall be installed within the bedroom.

11.10.09.02 Carbon Monoxide Alarms with Alternative Power Sources

A carbon monoxide alarm may receive power from another power source, other than the building's wiring, in residential dwellings where:

- Installed in buildings without commercial power, a battery-operated carbon monoxide alarm shall be permitted.
- An addition is made to an existing dwelling, or a fuel-burning heater, appliance, or fireplace is added to an existing dwelling, not previously required to be provided with carbon monoxide alarms, a battery-operated carbon monoxide alarm shall be permitted.
- In Residential occupancies, a carbon monoxide alarm shall be permitted to receive their primary power from other power sources recognized for use by the National Fire Protection Association (NFPA) Standard 72 or equivalent.
- In Residential occupancies, a carbon monoxide alarm shall be permitted to be battery-powered or plug-in with a battery backup in existing buildings built prior to January 1, 2011, under any of the following conditions: No construction is taking place; Repairs or alteration do not result in the removal of interior wall and ceiling finishes exposing the structure in areas/spaces where carbon monoxide alarms are required; Repairs or alterations are limited to the exterior surfaces of dwellings, such as the replacement of roofing or siding, or the addition or replacement of windows or doors, or the addition of a porch or deck; and, Work is limited to the installation, alteration or repair of plumbing, mechanical or electrical systems, which do not result in the removal of interior wall or ceiling finishes exposing the structure in areas/spaces where carbon monoxide alarms are required.

© 1994-2025 California Department of Transportation. All rights reserved.

11.10.10.00 Rehabilitation of Residential Property

The Department's policy is to upgrade and maintain housing at standards that meet the most recent edition of the California Building Standards Code (Title 24 of the California Code of Regulations). Rehabilitation standards shall include safety and energy saving devices such as smoke alarms, carbon monoxide alarms, ceiling insulation, and weather stripping. This rehabilitation policy shall apply to residential rental property on routes where construction is not imminent.

11.10.10.01 Inspections

The first step in the rehabilitation process is a code inspection to determine whether housing units are in compliance with the California Building Standards Code. The Agent must contact their local State Fire Marshal representative to schedule an inspection. Agents may ask the local city or county building services department for a building inspection, yet the city or county may refuse to inspect since State-owned property is not within their jurisdiction. The Agent shall attend the building inspection to document the deficiencies discovered by the pertinent inspector. Each inspection will be documented in writing with a clear description of the property's condition and recommendations for work required to bring the property up to code.

The State Fire Marshal inspector or local building inspector should also be used to monitor the contractor's work while it is being done and upon completion.

Note: Local Agency must use the local code enforcement division in lieu of the State Fire Marshal.

11.10.10.02 Specifications and Estimates

Qualified District/Region/Local Agency personnel or licensed contractors shall prepare a description of work with specifications and cost estimates. Certain restrictions may prohibit a contractor who is hired as a consultant from bidding on a subsequent contract that the contractor recommended, suggested, required, etc., in the consulting contract. When requesting a consulting service contract, inform the Division of Procurement and Contracts (DPAC) of any follow-up contract that will be based on the recommendations or other end product of the consulting contract. (Note that general information gathering on commonly accepted industry practices is allowed. See Manual Section 11.10.13.00.)

© 1994-2025 California Department of Transportation. All rights reserved.

11.10.10.03 Public Works Contracts

Depending on scope of work, a project may require a public works contract. Per Section 1101 of the Public Contract Code, a public works contract is an agreement for the erection, construction, alteration, repair, or improvement of any public structure, building, road, or other public improvement of any kind. Any vendor performing a public works job of $500.00 or more is required to have a current California Contractors State License Board license to legally provide this service. Vendors must carry or obtain various types of insurance, licenses, permits, and performance or payment bonds, depending on the amount of the contract. These contracts are processed as a Service Contract through the Division of Procurement and Contracts (DPAC). Whole roof replacements, initial (first time) painting, replacement of heating/air conditioning systems, parking lot resurfacing, sidewalk repair, etc., are covered by public works contracts. Contact an analyst in DPAC for more information if you are not sure if your project qualifies as a public works contract. (Also, see Section 11.10.12.00 for a description of service contracts.) Any work which would require a city/county permit will require a permit from the State Fire Marshal.

Note: Local Agency shall use the appropriate contracting system for securing and paying a contractor.

Prior to requesting a public works contract, the Contract Manager shall prepare a package for approval by the DDD/Local Agency Management or their authorized designee. The package should include the following information:

- Description of work.
- Plans and specifications.
- Written estimate of cost.
- Economic justification. At a minimum, the economic justification should contain estimates of the property's value in its present condition and its value after rehabilitation.
- Reasons why the work is necessary.
- Verification that funds are available.
- Status of the project for which the property was acquired, e.g., being held for construction or being considered for rescission with dates.

© 1994-2025 California Department of Transportation. All rights reserved.

11.10.10.04 Public Works Contracts Under State Contract Act

Public Works projects that exceed a certain total cost as determined by the Department of Finance are subject to the State Contract Act (Public Contract Code Section 10100, et seq.) and will be handled as major contracts. The Department of Finance adjusts this cost limit every two years. Contact DPAC to find out whether your project will fall under the State Contract Act. Requests for contracts subject to the State Contract Act should be submitted to DPAC, who will determine if they or another office should process the request. Occasionally, the Department of General Services might be involved, but DPAC will determine when this is necessary.

The package described in Manual Section 11.10.10.03 and specifically the plans, specifications, and written estimate of cost must be approved by the DD or authorized delegate prior to requesting a contract that is covered under the State Contract Act.

Note: The State Contract Act does not apply to Local Agencies.

11.10.10.05 Occupied Housing

Rehabilitation of occupied housing should be done only under the following circumstances:

- For minor interior work.
- With the tenant's prior consent.
- After an asbestos and lead survey indicates there are no health and safety concerns due to the presence of asbestos or lead.
- There are no other health and safety concerns that may arise while the rehabilitation work is being done.

© 1994-2025 California Department of Transportation. All rights reserved.

If health and safety factors are involved or if extensive interior rehabilitation is needed, temporary or permanent relocation of tenants to other accommodations, preferably to other state rental property, should be considered. Pursuant to Government Code Section 7265.3, a public entity may make payments in the amounts it deems appropriate, and may provide advisory assistance under this chapter, to a person who moves from a dwelling, or who moves or discontinues his business, as a result of impending rehabilitation or demolition of a residential or commercial structure, or enforcement of building, housing, or health codes by a public entity, or because of systematic enforcement pursuant to Section 37924.5 of the Health and Safety Code, or who moves from a dwelling or who moves or discontinues a business as a result of a rehabilitation or demolition program or enforcement of building codes by the public entity, or because of increased rents to result from such rehabilitation or code enforcement. Property Management should contact the District RAP Unit for assistance.

- If the repair requires a short-term displacement, the Department should offer a rental offset for the cost of a hotel. The Department must provide a maximum cap to the daily rate of the hotel accommodations. All agreed to expenses must be memorialized in writing. The amount of the rental offset will be the actual cost of the hotel accommodations. The tenant must provide the receipt, and the Agent must complete a Rental Offset Agreement. The Agent must process an Adjustment Screen in RWPM for the rental offset.
  Note: Local Agency will use its own computer system.
- If the repair requires a long-term displacement, the Department/Local Agency should move the tenant into another Department housing unit. There should be a rental offset for moving costs into the other Department/Local Agency housing unit and there should be a rental offset for the moving cost back into the rehabilitated unit. The District/Region/Local Agency must agree to the amount of the rental offset for moving costs and memorialize the agreement in writing. The Agent must complete a Rental Offset Agreement and process an Adjustment Screen in RWPM for the offset.
  Note: Local Agency will use its own computer system.
- If the building becomes uninhabitable and it is not cost effective for the District/Region to rehabilitate the housing unit, the Department should move the tenant into another Department/Local Agency owned housing unit. The Agent should try to find another unit that is the same market rental rate of the previous unit. If this is not feasible, the rental rate should be the same rate as the previous unit for a term of 90 days. At the same time as moving the tenant into the alternate Department owned housing unit the tenant should be offered a new month-to-month rental agreement at the increased market rental rate, which will

© 1994-2025 California Department of Transportation. All rights reserved.

be effective at the end of the 90-day grace period. If the tenant refuses to accept the increased rental rate, the Agent should serve a Notice to Terminate the Tenancy that expires at the end of the grace period. Regardless of the acceptance of the new rental rate, there should be a rental offset for the cost of moving. The District/Region/Local Agency must agree to the amount of the rental offset for moving costs and memorialize the agreement in writing. The Agent must complete a Rental Offset Agreement and process an Adjustment Screen in RWPM for the offset.
Note: Local Agency will use its own computer system.

- If the building becomes uninhabitable and it is not cost effective for the District/Region/Local Agency to rehabilitate the housing unit and the Department doesn't have another unit, the Department/Local Agency may, at its option, serve a 60-Day Notice to Terminate the Tenancy and relocate the tenant to a temporary lodging. The Department/Local Agency should offset the rent and provide a maximum cap to the daily/weekly/monthly rate not to exceed the per diem allowances afforded to Department/Local Agency employees. All agreed to expenses must be memorialized in writing. The amount of the rental offset will be the actual cost of the temporary lodging. The tenant must provide the receipt, and the Agent must complete a Rental Offset Agreement. The Agent must process an Adjustment Screen in RWPM for the rental offset.
  Note: Local Agency will use its own computer system.

11.10.11.00 Rehabilitation and Maintenance on Historic Structures

Public Resources Code (PRC) Section 5024 requires all state agencies to inventory all agency-owned structures listed in or potentially eligible for inclusion in the National Register of Historic Places or registered or eligible for registration as a state historical landmark. Typically, this would include structures that are 50 years of age or older; however, some structures may have achieved historical significance within the past 50 years if the structures meet the criteria for exceptional significance. Property Management is responsible to ensure that all structures subject to provisions of PRC Section 5024 are adequately and appropriately maintained.

Note: PRC Section 5024 does not apply to Local Agencies.

© 1994-2025 California Department of Transportation. All rights reserved.

All maintenance and rehabilitation work on Department-owned historic structures shall be performed in a manner to protect and preserve the characteristics that qualified the structures for listing. Plans and specifications for maintenance and rehabilitation activities shall be submitted to the District's Division of Environmental Analysis for processing to the State Historic Preservation Officer (SHPO) for review and approval prior to undertaking any such work. The District's Division of Environmental Analysis shall submit these plans and specifications to the Chief, Architectural and Historic Studies Section, Headquarters Environmental Analysis, for processing to SHPO.

For all structures that are 50 years of age or older, the Agent shall confirm with the Division of Environmental Analysis to verify that the structure isn't considered historic.

11.10.12.00 Reasonable Accommodations and Reasonable Modifications

Multiple federal and state laws protect people with disabilities from discrimination from landlords. Federal laws include the Fair Housing Amendments Act (42 U.S.C. Sections 3601-3631), Section 504 of the Rehabilitation Act of 1973 (29 U.S.C. Section 794), and Title II of the Americans with Disabilities Act (42 U.S.C. Sections 12131-12165). California laws include the Fair Employment and Housing Act (Government Code Sections 12900-12999), the Unruh Civil Rights Act (Civil Code Section 51), the Disabled Persons Act (Civil Code Sections 54.1 and 54.2), and Government Code Section 11135. Refusing or failing to provide reasonable accommodations and reasonable modifications for individuals with disabilities is considered a form of discrimination.

A reasonable accommodation is a change, exception, or adjustment to a rule, policy, practice, or service that may be necessary for a person with a disability to have an equal opportunity to use and enjoy a dwelling, including public and common use spaces. It is considered discriminatory for the Department to refuse to make reasonable accommodations to rules, policies, practices, or services when such accommodations may be necessary to afford a person with an equal opportunity to use and enjoy a dwelling.

A reasonable modification is a structural change made to the existing premises, occupied or to be occupied by a person with a disability, in order to afford such person full enjoyment of the premises. It is unlawful for the Department/Local Agency to refuse to permit a reasonable modification of existing premises if such modifications may be necessary to afford such person full enjoyment of the premises.

© 1994-2025 California Department of Transportation. All rights reserved.

Since the Department is a State Agency/ or Local Agency that receives federal funding, pursuant to Section 504 of the Rehabilitation Act of 1973, all costs associated with a reasonable accommodation and/or modification are borne by the Department/Local Agency. The Department/Local Agency may not require persons with disabilities to pay extra fees or deposits or place any other special conditions or requirements as a condition of receiving a reasonable accommodation and/or modification.

To prove that a requested accommodation and/or modification may be necessary, there must be an identifiable relationship between the requested accommodation and/or modification and the individual's disability. The Department/Local Agency may not inquire as to the nature and severity of an individual's disability. However, the Department/Local Agency may request reliable disability-related information that is necessary to verify that the requester meets the definition of disability, describes the needed accommodation and/or modification, and shows the relationship between the requester's disability and the need for the requested accommodation and/or modification.

The Department/Local Agency can deny a request for reasonable accommodation and/or modification if the request was not made by or on behalf of a person with a disability or if there is no disability-related need for the accommodation and/or modification. A request for a reasonable accommodation and/or modification may be denied if the providing the accommodation and/or modification is unreasonable. An unreasonable request is a request that would impose an undue financial and administrative burden on the Department/Local Agency or it would fundamentally alter the nature of the Department/Local Agency's operations. Factors to consider include the cost of the requested accommodation and/or modification, the benefits that the accommodation and/or modification would provide to the requester, and the availability of the alternative accommodations and/or modifications that would adequately meet the requester's needs. If the request is cost prohibitive or fundamentally alters the Department's operations, the Department and the requester should engage in an interactive process to reach an acceptable compromise.

If the Department/Local Agency receives a reasonable accommodation and/or modification request, the Property Management Senior should consult with Region's/District/Local Agency's Legal to discuss the situation on a case by case basis.

11.10.13.00 Maintenance Performed by Service Contract

It is important to distinguish between work that can be done under a service contract and work that requires a public works contract (Manual Section 11.10.10.03). Minor on-call repair and maintenance services (required on an as-needed basis to provide a practical means of maintaining state-owned rental housing or state facilities in a safe and habitable condition) are not defined as public works and may be obtained using service contracts. Such services include electrical, plumbing, minor carpentry to replace broken stairs or windows, repainting, heating and air conditioning repairs, roof repair, etc. The specific repairs do not lend themselves to the preparation of plans and specifications, nor is it known at the time the contract is advertised and awarded when the services will be performed. Contact an analyst in the Division of Procurement and Contracts (DPAC) for more information if you are not sure what type of contract would be appropriate for your needs.

Note: Local Agency should consult with their legal for more information on what type of contract would be most appropriate.

DPAC prepares and processes all service contracts upon receipt of a completed Service Contract Request (Form ADM-0360) (internal Caltrans link) from RW. Except for emergency work, all maintenance contracts are subject to competitive bidding. Since considerable time is required to prepare, advertise and award the contract, it is recommended that the completed ADM-0360 be sent well in advance of the date the services will be needed. Contact DPAC for more information on the length of time required to process a service contract.

Note: Local Agencies should follow their procurement procedures.

General information gathering from companies regarding common industry practices, rate structures, general costs, billing methods, etc., in order to create a scope of work is acceptable. However, care should be given to not influence a company representative's opinion for the preparation of a scope of work, or to give a representative privileged information (and not make it available to all potential bidders) which could then be used by that company when it tenders a bid on the contract. It is neither legal nor ethical to tailor a scope of work or contract to a specific party. Any contact with a company representative requesting information on cost estimates, billing methods, etc., offers the possibility that the company or other bidder may at some point in the future protest a decision not in their favor.

© 1994-2025 California Department of Transportation. All rights reserved.

It is recommended that if a company representative is contacted for the purpose of learning what the commonly accepted standards or practices in that industry are, the representative is advised that: 1) the Department/Local Agency is soliciting publicly available (i.e., not proprietary) information to prepare a statement of work on a potential contract, and 2) the representative, by providing such information, will not preclude the company from bidding on future contracts. It is also recommended that more than one company be contacted for this information. (Note that certain restrictions may apply if a contractor is hired under a consulting service contract. See Manual Section 11.10.10.02.)

Property maintenance contractors can be obtained using the types of contracts and methods described elsewhere in this section.

11.10.13.01 Inspection of Repairs

Type of Inspections:

- Small repairs with an estimated cost of less than $500.00:
  An Agent shall inspect all maintenance issues before submitting a task order with the contracted vendor. After the work has been completed, Agent shall inspect the completed repair. If the repair is to remedy a health and safety issue, an Agent must inspect the completed repair. The Agent shall document all findings of the deficiency and repair in the rental file. Meeting with the contracted vendor prior to the start of any work is highly recommended. This will allow the Agent to ask any questions and communicate Department policy. Payment to the contracted vendor cannot be made until the work has been completed satisfactorily and has either been inspected or confirmed to be completed.

- Medium repairs with an estimated cost of less than $1,000.00:
  An Agent shall inspect all maintenance issues before submitting a task order with the contracted vendor. The Agent shall inspect the repair during and after the work has been completed and document all findings in the rental file. Meeting with the contracted vendor prior to the start of any work is highly recommended. This will allow the Agent to ask any questions and communicate Department/Local Agency policy. Payment to the contracted vendor cannot be made until the work has been inspected and completed satisfactorily.

© 1994-2025 California Department of Transportation. All rights reserved.

- Large repairs with an estimated cost over $1,000.00
  An Agent other than the assigned Agent, preferably the Contract Manager, shall inspect all maintenance issues prior to the submission of a task order to the contracted vendor. The inspecting Agent shall inspect the repair during and after the work has been completed and document all findings in the rental file. Meeting with the contracted vendor prior to the start of any work is highly recommended. This will allow the inspecting Agent to ask any questions and communicate Department policy. If the repairs must be completed in stages and the service contract specifies approval of each stage, the Agent inspecting the repair shall approve each stage of the repair prior to the contracted vendor proceeding to the next stage. Payment to the contractor cannot be made until the work has been inspected and completed satisfactorily.

Inspections for work requested and work in progress or completed should be accomplished in accordance with the guidelines in the following guide entitled "Inspection Guidelines for Service Contracts."

© 1994-2025 California Department of Transportation. All rights reserved.

INSPECTION GUIDELINES FOR SERVICE CONTRACTS

(These guidelines also apply to services obtained by other methods discussed elsewhere in this section [e.g., CAL-Card, etc.]. However, rental offsets will require on-site inspection of all jobs regardless of size.)

Small Repairs – Estimated Cost Less Than $500

Examples:

- Change a faucet
- Mow a lawn
- Fix a window

Type of Inspection:
Agent shall inspect all maintenance repairs. Managers should order random inspections to ensure small repairs are done satisfactorily. However, any repair to remedy a health and safety issue must be inspected by an Agent regardless of cost.

Medium Repairs – Estimated Cost Less than $1,000

Examples:

- Paint partially
- Install flooring
- Repair cabinet
- Repair roof

Type of Inspection:
An Agent shall inspect the work before and after the job is done.

© 1994-2025 California Department of Transportation. All rights reserved.

Large Repairs – Estimated Cost Over $1,000

Examples:

- Repaint entire interior or exterior of house
- Install new flooring and carpeting
- Repair roof

Type of Inspection:
An Agent other than the Agent assigned shall inspect work before, during, and after the job is done. It may not be possible to detect bad workmanship after the job has been completed when much of the work is no longer visible. Where certain stages of work require inspection before the next stage commences, the contract must state this condition of approval and payment upon full inspection. Payment to the contractor cannot be made until the work has been inspected and completed satisfactorily.

11.10.13.02 Requesting Work

When the Agent is made aware of a deficiency on the property, which requires a remediation by the contracted vendor, the Agent should discuss the deficiency with their supervisor for direction on how to proceed. Once a plan for remediation is developed, the Agent must arrange for the submission of a task order to the contracted vendor.

The Agent must contact the Contract Manager for the specific contract that will be utilized for the remediation. The Agent and the Contract Manager shall develop an estimate of the cost of remediation. The Contract Manager shall verify that the estimated cost of remediation is within the remaining contract budget. The Contract Manager shall submit a task order which will include the following:

- The task order number, the contract agreement number, the parcel number, and date issued.
- The contractor's information.
- The date that the repair work will begin and the date that the repair work should be completed.
- The location of the repair work.
- The scope of services (Task Order scope of work, expected results, and deliverables).

© 1994-2025 California Department of Transportation. All rights reserved.

- A dollar cap amount of the repair work. The task order shall state that if the cost of remediation, once the work begins, will be above the cap amount specified in the task order, then the contractor shall contact the Contract Manager for approval to proceed with the remediation.

11.10.13.03 Multi-Provider and Single Provider Service Contracts

Contracts can be written for on-call services as needed over the duration of the contract or for a single, specific job. An on-call service contract can have multi-providers (if approved by DPAC) or a single provider. A contract for a single, specific job will only have a single provider. Right of Way Contract Managers are urged to use single providers rather than multi-providers. If a multi-provider contract is absolutely needed, check with DPAC to see if multi-providers will be allowed before submitting a contract request (Form ADM-360 [internal Caltrans link]). When a contractor's bill is received on a multi-provider or single provider contract, the Contract Manager shall update the Maintenance Request Screen in RWPM itemizing the work done and indicating the appropriate charges. The Contract Manager shall complete a Receiver (FA-1226A or1226B [internal Caltrans link], depending on the number of invoices) and forward the updated Maintenance Request Screen, the Receiver, and the invoice to the supervisor for approval. The supervisor shall review the invoice and ensure that the Receiver and the Maintenance Request Screen are accurately completed, sign the Receiver, and enter the date approved on the Maintenance Request Screen in RWPM. Where services are provided on an hourly rate basis, the contractor shall submit a copy of the Contractor's Time Reporting Sheet (RW 11-23) with the employee's information, classification, and hours reported. This form will be attached to the final invoice to process payment. It is vital to keep a copy of the invoice and RW 11-23 in the Contract Manager's contract file for purposes of verifying compliance with prevailing wages (for more information on prevailing wages, please refer to Manual Section 12.04.04.00). The payment package will consist of the approved Maintenance Request Screen, the signed Receiver, and the invoice. Two copies of the payment package must be submitted to Accounting for payment in accordance with Manual Section 11.10.12.06.

Note: Local Agency will follow agency's contracting handbook for public works contracts. Local Agency will use its own computer system of tracking contracts.

© 1994-2025 California Department of Transportation. All rights reserved.

11.10.13.04 CAL-Card Small Purchase Program

Through the DGS CAL-Card Small Purchase Program, Department authorizes cardholders to make approved small purchases of goods and services with VISA bankcards within certain limits. Cardholders must comply with all existing procurement and contract statutes, laws, rules, accounting guidelines, regulations, policies, and procedures. See the Department CAL-Card Handbook (internal Caltrans link) for limitations and detailed instructions, available on the DPAC Intranet. Information on general liability insurance requirements, Worker's Compensation, and verification of Trades Contractor License is also explained in the CAL-Card Handbook.

Property Management uses the CAL-Card primarily for procurement of services, and such usage must be in compliance with the Public Contract Code. The CAL-Card limits for services or like services are $9,999.99 in a 12-month period for the same type of service with the same vendor. Pursuant to Public Contract Code Section 10329, a series of related services that would normally be combined and bid as one job cannot be split into separate tasks, steps, phases, locations, or delivery times to circumvent to avoid the need to advertise or obtain competitive bids. The duration of the service cannot exceed two (2) years. The Contract Manager shall utilize the CAL-Card Service Agreement Under $10,000 (ADM-4028) (internal Caltrans link) when utilizing CAL-Card as the method of payment for services. Although bids are not required, it is recommended that more than one contractor be contacted in order to find the best value. If multiple quotes are not obtained, then the CAL-Card cardholder must provide documentation of fair and reasonable pricing as specified in Section 8.2 of DPAC's *Acquisitions Manual for Non-Information Technology and Information Technology Goods and Services*.

When using the CAL-Card for property maintenance, it is very important to distinguish between procurement of merchandise and procurement of services, particularly if the procurement is a combination of parts and labor. If labor exceeds 50% of the total cost, the procurement is considered a service. If, on the other hand, parts are 50% or more of the total cost, the procurement is considered merchandise.

© 1994-2025 California Department of Transportation. All rights reserved.

Prior to procuring maintenance services using CAL-Card, the Agent shall complete a Purchasing Authority Purchase Order (STD. 65) (internal Caltrans link) and submit it for budgetary control and approval to the Senior in charge of RW Property Management. The completed Purchase Request is submitted to the CAL-Card cardholder so charges can be made and services obtained. The cardholder retains a copy of the Purchasing Authority Purchase Order, credit card receipts, and any other backup documentation for verification and post audit by Department or DGS. To process payment under CAL-Card, a complete package must be received in Accounting by the 10th of each month. The package consists of:

- Purchasing Authority Purchase Order (STD. 65) (internal Caltrans link)
- Original Charge Slips and/or Sales Invoices
- Original Cardholder Statement of Account (SOA) signed on the back by the Cardholder and approving official.
- Original STD. 204, Payee Data Record (internal Caltrans link) (unless already on file)
- Drug-Free Workplace Certification, STD. 21 form (internal Caltrans link) (unless already on file)
- Two copies of the Maintenance Request Screen. (Accounting will return one copy with schedule information.)

Note: Local Agencies do not have access to Cal Cards. However, if a local agency has access to a credit card for use, it is expected that the agent follow the local agency's internal controls and public contracting requirements for the use of the card.

11.10.13.05 Non-Credit Card Process (Under $10,000)

The non-credit card process (Form ADM-3015, Service Agreement Under $10,000) may be used for maintenance services where the CAL-Card is not accepted or where employees do not have access to a credit card. The aggregate amount of the Service Agreement cannot exceed $9,999.99, and the term over which services are to be provided cannot extend beyond three years in length. See instructions on Form ADM-3015. The Contract Manager shall obtain a minimum of two quotes. If the Contract Manager only obtains one quote, the Contract Manager shall provide justification that the quote is fair and reasonable.

© 1994-2025 California Department of Transportation. All rights reserved.

The following package must be submitted to Accounting to pay the contractor's invoice:

- Original Invoice
- Original Receiving Record (FA-1226A) (internal Caltrans link) or two copies of the Maintenance Request Screen
- Original STD. 204, Payee Data Record (internal Caltrans link) (unless already on file)
- Drug-Free Workplace Certification, STD. 21 form (internal Caltrans link) (unless already on file)

Note: The ADM-3015 is a Caltrans specific document and is not applicable to Local Agencies. Local Agencies are expected to follow the local agency's contracting requirements.

11.10.13.06 Submitting for Payment

Maintenance Requests, Contracts, Travel Expense Claims, Draft Purchase Orders, Statements of Account, Purchase Requests, and other coded documents must be properly coded (Object 058) so Accounting can accurately charge the property maintenance expenditures to the appropriate project identification number/EA. Upon completion of any of these documents, Property Management will sign, date, and forward the document to Accounting for processing.

On rare occasions, the Division of Maintenance will perform work on a rental account and will complete the appropriate document, in which case Maintenance shall contact Property Management for proper coding information. Maintenance shall forward the document to Property Management for review to ensure proper coding.

To keep track of Maintenance Requests and other documents sent to Accounting for processing, an Agent or inspector shall enter the maintenance data into RWPM in a timely manner and file a copy of the document in the appropriate contract agreement file. If for any reason Accounting fails to return a copy of the Maintenance Request or other document to Property Management within two weeks, the Property Manager must follow up with Accounting to determine the cause of the delay.

After Accounting processes the Maintenance Request or other coded document, the reviewer shall use a copy of the Maintenance Request, Receiver, TRAMS Multipurpose Posting Tag, or other document showing the coding information to ensure the coding provided to Accounting was not

© 1994-2025 California Department of Transportation. All rights reserved.

changed during processing. The Accounting information should be entered on the Maintenance Request Screen and then filed.

Note: Local Agencies will follow the local agency's contracting requirements. Local Agency will use its own computer system to track contracts.

Government Code Section 927-927.13 is known as the Prompt Payment Act (Act). The intent of the Act is to have state agencies pay properly submitted, undisputed invoices within 45 days of receipt, or automatically calculate and pay the appropriate late payment penalties as specified in the Act. To avoid late payment penalties, the state agency has 30 calendar days to submit a correct claim schedule to the Controller, and not more than 15 calendar days for the Controller to issue the warrant. If the state agency does not submit the claim schedule to the Controller within 30 days, the state agency will be responsible for the late payment penalties. If the state agency submits the claim schedule to the Controller within 30 days and the Controller does not issue a warrant within 15 days, the Controller is responsible for the late payment penalties.

In order to meet the timelines described above, the Region/District shall submit the payment package to Accounting within 15 days of receiving the invoice.

Note: Government Code Section 927-927.13 does not apply to Local Agencies. Local Agencies should follow policies and procedures for prompt payments to contractors.

11.10.13.07 Summary of Various Contract Processes

A brief summary of the various contract processes discussed above is included in Exhibit 11-EX-10, Summary of Contract Processes.

11.10.14.00 Draft Purchase Order (DPO)

A Draft Purchase Order (DPO) (Form ADM-1024) (internal Caltrans link) is a method of procurement and payment which cannot be met by the standard purchase order or CAL-Card. A DPO may be used for minor purchases of supplies and materials needed for maintenance of state-owned properties. Generally, the state's tenant or state personnel will use or install the items purchased.

© 1994-2025 California Department of Transportation. All rights reserved.

A DPO may be used subject to the following limitations:

- To pay for goods or services of $10.00 to $500.00 (including tax and freight). Consult with Accounting for further details.
- Transaction must be "face-to-face" (do not mail).

A DPO shall **NOT** be used when any of the following conditions apply:

- In other than "face-to-face" transactions.
- To purchase items available in either Department warehouses or DGS warehouses.
- To purchase items covered by existing contracts.
- To purchase items costing less than $10.00, except in rare emergency situations.
- To pay for hazardous services, such as pest or weed control involving chemicals.
- To pay for future services, such as advance rent.
- To circumvent proper service contract procedures, such as splitting purchases of service.
- To pay for items in violation of current departmental directives, such as eye examinations when safety glasses are required.

  Note: DPOs do not apply to Local Agencies.

Maintenance personnel may use a DPO, subject to the above limitations, to purchase materials needed to repair employee housing. The Maintenance Superintendent for each territory should have access to the draft forms. If RW is performing maintenance activities on behalf of maintenance, upon completion of repairs, Maintenance will contact Property Management for proper coding information and send the DPO to Property Management to review coding. Maintenance for employee houses are not 058 funds, but rather a fund that Maintenance provides. If RW is performing maintenance activities on behalf of maintenance, Property Management will place a copy of the DPO in the proper account file and forward the document to Accounting for processing.

To track DPOs sent to Accounting for processing, the Property Manager shall maintain either a log of such documents in process or a copy of the document in a separate file or binder. If Accounting fails to return the DPO or other document to Property Management within two weeks, the Property

© 1994-2025 California Department of Transportation. All rights reserved.

Manager must follow up with Accounting to determine the cause of the delay.

11.10.15.00 Travel Expense Claim (TEC)

The TEC, Form FA0302, may be used for "after-the-fact" reimbursement for purchase of supplies or materials needed to maintain state-owned properties. Property Management personnel should use the TEC when they are in the field and discover a maintenance problem that requires immediate attention. Under no circumstances should the TEC reimbursement process be used instead of purchasing goods and services through methods described by DPAC.

Material needed for repairs can be purchased with employees' own funds for which they will be reimbursed by check by presenting a TEC to Accounting. All expenses must be explained on the TEC, and expenses over $25.00 require approval by the Office Chief or Deputy. The TEC should be filled out and given to Accounting along with applicable receipts.

Note: TECs do not apply to Local Agencies. Local Agencies shall use whatever similar process is in place for an "after-the-fact" reimbursement of purchases.

11.10.16.00 Emergency Repairs

When the Agent determines that an emergency condition exists, the pre-inspection may be dispensed with in the interest of expediting emergency repairs. The Agent shall take whatever steps necessary to have the corrective work performed as soon as possible.

It is the Agent's responsibility to determine if the extent of a maintenance deficiency classifies as an emergency situation. This will be accomplished by physically inspecting the property, during normal business hours, and evaluating the conditions for health and safety concerns. If an emergency happens after normal business hours, the Region/District/Local Agency shall have a process in place for tenants to contact the Department/Local Agency to either have an on call contracted vendor address the situation or to authorize the tenant to arrange for immediate repair. When the Agent determines that an emergency condition exists, corrective measures will be scheduled as soon as possible and not to exceed 24 hours.

© 1994-2025 California Department of Transportation. All rights reserved.

If the emergency condition is an immediate threat to the health or safety of any tenant, the Region/District/Local Agency may move the tenant to alternative housing. Alternate housing includes other Department/Local Agency owned housing or commercial lodging. If commercial lodging is used, the tenant must submit receipts for reimbursement. The maximum amount of reimbursement to the tenant will be restricted to the State/Local Agency per diem guidelines for lodging. If Department/Local Agency owned housing is used as a temporary residence for any tenant, under no circumstances will the tenant be allowed to remain in the replacement residence without going through the qualification process.

11.10.17.00 Rental Offsets

Occasionally, rental offsets may be appropriate for certain repairs or maintenance. However, such offsets should only be used as an exception and not routinely. There are other alternatives to using a rental offset that are discussed elsewhere in this section (e.g., service contracts, CAL-Card and non-credit card [Form ADM-3015] processes, etc.) and those should be considered first. Work done by rental offset should not be in conflict with existing maintenance contracts.

Rental offsets should be limited to minor repairs and maintenance, or emergency repairs for health and safety reasons. Examples of situations where offsets are not appropriate include remodeling a kitchen/bathroom, re-roofing, installing new flooring and carpeting, painting the entire house, and other major repairs or rehabilitation. Also inappropriate for rental offsets would be any work that may involve contact with hazardous materials.

When the tenant is performing a repair, the Department does not pay the tenant for their labor or for purchase of tools. The tenant will only be reimbursed for the actual cost of the materials.

Generally, a tenant cannot hire a contractor to do the work and receive an offset. This violates our contracting policy. However, on occasion, a tenant may need to hire a licensed contractor for emergency repair. Any contractor performing a job in which the total cost of the project, including labor and materials, is $500.00 or more, must be licensed by the Contractors State License Board in the specialty for which he or she is contracting. Even if work is less than $500.00, a licensed contractor should be used for any electrical, gas, plumbing, or other work that must be done according to code.

© 1994-2025 California Department of Transportation. All rights reserved.

Rental offsets of $1,000.00 or less may be approved by the Property Management Senior. Rental offsets more than $1,000.00 must be approved by the Property Management Supervising RW Agent or above. The reason for using a rental offset must be documented in the file. Rental offsets are subtracted from the Region/District's 058 Account for property maintenance, so sufficient funding should be available before using a rental offset.

The general procedures below apply when a rental offset is used to provide maintenance for new or existing residential tenants.

When a need for minor maintenance work is indicated, the Agent shall inspect the property and complete a cost estimate. The Agent will determine the amount of the rental offset based on prevailing prices in the area and local rental management practices. The Agent shall prepare the appropriate document as follows:

- **New Tenants** – Insert completed clause into rental agreement and obtain prospective tenant's signature(s).
- **Existing Tenants** – Prepare letter of understanding and obtain tenant's signature(s).

The Agent shall submit the signed document, along with the maintenance cost estimate and the reason a rental offset is being used, to the person authorized to approve such expenditures. Before any work commences, the Property Manager Senior or Supervising RW Agent, depending on amount of the offset, shall approve the amount of the allowance. Upon approval, the Agent shall file the document in the rental folder, log the proposed work, and inform the tenant to proceed with the work.

When the tenant has completed the work, a Property Management Agent shall inspect the property to verify and document satisfactory completion of the work. The Agent shall complete the proper inspection forms, take photographs of the repair, and enter diary notes concerning the repair. The tenant must provide the Agent with the receipts for the materials before the tenant's account is finally credited with the amount of the rental offset. Inspection standards for maintenance work accomplished through the contract process shall also apply to work performed with offsets, except that all offset work must be inspected by the Department, no matter how small.

Regardless if the repair was completed by a vendor or the tenant, after inspection and acceptance of the work, the Agent shall procure from the tenant all receipts or vendor's itemized statements. The Agent shall complete an RWPM Adjustment Request Screen, which results in a credit to the tenant's account and posts the amount against the 058 Property Maintenance

© 1994-2025 California Department of Transportation. All rights reserved.

Account. Total amount spent on offsets is shown on the RWPM Contract Screen for contract number "Offsets." A copy of the rental offset paperwork, along with the receipts for materials or vendor's itemized statements, needs to be sent to Accounting before Accounting will make the Adjustment.

An offset shall be credited only to a tenant in occupancy of the property on which the maintenance work is performed. In other words, tenant "A" living in property "A" **cannot** receive an offset for work performed on property "B."

Note: Local Agencies will use their own computer system. Local Agency will determine which account maintenance funds will be deducted from.

11.10.17.01 New Residential Tenants

Where a property has become run-down and certain minor repairs are required to secure a new tenant, it may be appropriate to grant a rental offset by inserting a clause in the rental agreement for materials necessary to accomplish specified work.

The clause inserted in the initial rental agreement shall be written as follows:

> *It is understood and agreed that in consideration of a rental offset of an amount not to exceed $_____, Tenant agrees to: (Describe Work to Be Done).*
>
> *Tenant shall secure paid itemized bills covering materials used for the authorized work and forward them to the Department of Transportation at _____ _____. Credit will only be allowed for the actual amount of the paid bills not to exceed the amount above. Tenant will be paid for materials only and will not be paid for his/her labor or for the purchase of tools. Tenant may not hire a third party contractor to perform the authorized work unless prior written permission from the Department is obtained.*
>
> *It is further agreed that said work will be completed and paid bills received by the Department of Transportation prior to _____, and that the rental credit will only be granted after inspection, by the State, of the completed work.*

© 1994-2025 California Department of Transportation. All rights reserved.

11.10.17.02 Existing Residential Tenants

In some instances, sound management practices dictate granting a rental offset to the tenant to achieve a degree of efficiency and economy, as well as to expedite performance of certain emergency repairs and repairs of a minor nature. The tenant and the state shall sign a letter of understanding before the tenant performs any repair work. The letter of understanding should specify that the tenant will be paid for materials only (based on paid itemized bills) and will not be paid for his/her labor or the purchase of tools. The letter shall also state that the tenant may not hire a third-party contractor to perform the authorized work unless prior written permission from the Department is obtained.

© 1994-2025 California Department of Transportation. All rights reserved.

11.11.00.00 – INSURANCE REQUIREMENTS FOR TENANTS

Note: any references to Local Agencies is in relation to Local Agency use of the Caltrans Right of Way Manual to comply with FHWA requirements.

11.11.01.00 Policy

Tenants and lessees shall be required to obtain Commercial General Liability insurance in most leases and rental agreements where extraordinary liability features are present. Insurance shall be in an amount of at least $1,000,000 per occurrence for Bodily Injury and Property Damage Liability combined. Personal liability coverage for single-family residential properties with swimming pools may be limited to combined coverage of $500,000. These amounts may be increased for high-risk uses.

11.11.02.00 When Insurance Is Required

Refer to the table entitled "Guidelines for Personal Injury, Liability, and Property Damage Insurance" Exhibit 11-EX-11 to determine the need for insurance.

Although not required by the guidelines, insurance should also be required for specific situations with high-risk uses. For example:

- Large agricultural operations involving heavy equipment.
- Properties fronting on rivers or lakes.

In such cases, the Region/District determines the necessity for insurance. Insurance is generally required when the property is used for purposes that involve employees, visitors, or customers who could be subject to accidents and injuries.

11.11.03.00 Family Day Care Facilities

Use of a publicly-owned residential unit as a family day care home, as opposed to a school, does not fall under the commercial/business lease category requiring high insurance coverage. Under Section 1597.41 of the Health and Safety Code, any provision in a rental agreement forbidding or restricting the use or occupancy of the property as a family day care is void. The Department/Local Agency may not stop the tenant from using the

© 1994-2025 California Department of Transportation. All rights reserved.

property as a family day care home. The tenant must provide 30 days' written notice of their intention to use the property as a family day care home prior to commencing such use. Less than 30 days' notice may be provided when an existing licensed family day care home program is relocated to a rental property and the Department of Social Services approves the operation of the new location or the new location is licensed.

A family day care home can either be considered a small family day care home or a large family day care home. For a small family day care home, the maximum number of children allowed are eight (8) children; the tenant must get the Department/Local Agency's approval when the number of children exceeds six (6) children. For a large family day care home, the maximum number of children allowed are fourteen (14) children; the tenant must get the Department/Local Agency's approval when the number of children exceeds twelve (12) children.

Section 1597.531 of the Health and Safety Code, however, does set minimum levels of mandatory liability insurance for injuries or bond coverage for family day care homes. The minimum amount of liability insurance is $100,000 per occurrence and $300,000 aggregate or a bond in the aggregate amount of $300,000. In lieu of liability insurance or bond, a day care provider may maintain a file of signed affidavits informing parents the day care home does not carry the liability insurance or bond. If the day care provider does carry liability insurance or a bond, the Agent should request that the Department/Local Agency is named as an additional insured as long as it does not result in the cancellation, non-renewal, or increase in the premium of the insurance or bond; the request to be named as an additional insured must be made in writing.

In addition, the affidavits shall state that parents have been informed the property owner's liability insurance, if any, may not provide coverage for losses arising out of, or in connection with, the day care operation. In these instances, the Region/District/Local Agency should request the tenant to provide copies of the affidavits.

GUIDELINES FOR PERSONAL INJURY, LIABILITY, AND PROPERTY DAMAGE INSURANCE

PUBLIC AGENCIES:

- Self-insured – Not Required (with self-insurance clause in lease)
- Not Self-insured – Required

PUBLIC UTILITIES:

- Self-insured – Not Required (with self-insurance clause in lease)
- Not Self-insured – Required

RESIDENTIAL:

- SFR – Not required
- SFR with Pool – Required
- Multi-residential – Not Required
- Multi-residential with Pool – Required
- Master Tenancy Residential Apartments and Mobile Home Park – Required

COMMERCIAL/INDUSTRIAL:

- Large Corporations with Self-insurance (Ralston Purina, etc.) – Not Required (with self-insurance clause in lease)
- Parking – Private (For Lessee's employees) – Required
- Parking – Public – Required
- Sales (Retail, Wholesale) – Required
- Restaurants, Bars – Required
- Offices – All Types – Required
- Warehouses/Storage-Inside – Required
- Storage-Outside – Equipment, RVs, Boats, etc. – Required
- Service Stations – Required
- Manufacturing – Required
- Oil and Gas Subsurface Rights – Not Required
- Oil Well with Surface Rights – Required
- Drainage Ponds – Required
- Access Rights for Cafes, etc. – Not Required
- Motels – Master Tenancy – Required
- Services (Barbershops, Beauty Parlors, Cleaners, etc.) – Required
- Repairs – Auto, Appliances, etc. – Required

AGRICULTURAL:

- Grazing – Cows, Horses, Sheep, Llamas, Goats – Not Required
- Crops – Row Crops, Orchards, Vineyards, Dry Farming – Not Required
- Sales – Fruits, Vegetables, Christmas Trees, etc. – Required
- Community Gardens – Not Required

GUIDELINES FOR PERSONAL INJURY, LIABILITY, AND PROPERTY DAMAGE INSURANCE (Continued)

SIGNBOARDS:

- On Premise – Not Required
- Off Premise – Not Required

OTHER:

- Recreational (Golf Driving Range, Tennis Clubs, Skateboard Parks, Bike Paths) – Required
- Road Approach – Not Required
- Landscaping – Not Required
- Parks – Required
- Park and Ride Lots – Required
- Porter Bill Parks – Required
- Churches – Required

© 1994-2025 California Department of Transportation. All rights reserved.

11.11.04.00 How the State/Local Agency Is Protected

When the Region/District/Local Agency determines that commercial general liability insurance protection is required for the state's/Local Agency's benefit, the liability and property damage insurance clause (found in the Lease Agreement template, Liability and Property Damage Insurance Clause) shall be inserted in the rental or lease agreement making it mandatory for the tenant or lessee to provide the state/Local Agency with the specified amounts of commercial general liability insurance and naming the state/Local Agency as an additional insured. When the rental or lease agreement is signed, the Region/District/Local Agency shall give the tenant RW 11-18, Certificate of Insurance with Endorsement for Lease of State-Owned Property, for documentation of required insurance coverage. The tenant's or lessee's insurance carrier shall complete this form and return it to the state as soon as possible. It need not be returned prior to or accompany the signed rental or lease agreement, but the insurance policy **shall be in force before occupancy**. In lieu of RW 11-18, the tenant/lessee may provide the actual certificate of insurance. The Agent shall verify that the proper coverages are obtained and that the Department/Local Agency is named as an additional insured.

The Certificate of Liability Insurance form (naming the State of California as an additional insured) from the tenant's or lessee's insurance carrier shall be kept in the rental file with the rental agreement or lease. The Agent must keep the current policy in the file and ensure that it is renewed yearly.

11.11.05.00 Fire Insurance on State-Owned Properties

Although the Department/Local Agency does not normally secure fire insurance on properties acquired for future freeway use, fire insurance may be appropriate for high value, high-risk properties purchased far in advance of highway construction. Examples of high-risk properties include bars, motels, hotels, and restaurants. The amount of fire insurance placed on a property should take into account the value of the improvements only and should not be based on the appraised value of the entire property.

In addition, Government Code (GOV) Section 11007.1 subdivision (a) permits the Department to authorize insurance against damage or destruction by fire when it has acquired title to the realty and leases the property to the former owner. The Government Code Section, which is quoted below, requires the former owner to request this coverage, to lease back the property for more than a six-month period, and to pay the premium.

© 1994-2025 California Department of Transportation. All rights reserved.

"The Department of Transportation, when it has acquired title to any real property for highway purposes and leases that property for commercial or business uses to the former owner for a term exceeding six months, may secure insurance against the risk of damage or destruction by fire where the former owner requests this coverage and the premium therefor is included in the rental agreed to be paid."

Note: GOV 11007.1 does not apply to Local Agencies.

The loss payee of the fire insurance policy shall be the State of California/Local Agency. The lessee shall be responsible for furnishing the state with a certified copy of each and every policy within not more than ten days after the effective date of the policy. Exhibit 11-EX-12, Liability, Property Damage and Fire Insurance (internal Caltrans link) (for internal Caltrans use), shows approved clauses requiring the lessee to provide the state with fire insurance on the property.

11.11.06.00 Self-Insurance by Tenant or Lessee

Some large corporations and public entities regularly self-insure. If the lessee decides to provide the required insurance by self-insuring, the Property Manager should request documentation from the lessee showing that the lessee regularly self-insures and has adequate assets. In addition, the clause below must be included in the lease in place of the standard liability insurance clause in the Lease Agreement template (Liability and Property Damage Insurance Clause) and in the Agricultural Lease Agreement template (Liability and Property Damage Clause).

LIABILITY AND PROPERTY DAMAGE INSURANCE:

Lessee will self-insure during the entire term of the within tenancy and will defend, indemnify and hold harmless the Lessor, its officers, agents, and employees from all claims, suits or actions of every name, kind and description, brought forth, or on account of, injuries to or death of any person or damage to property, including any claims, suits or actions for damage to vehicles on the property which is the subject of this lease, occurring in, or about, said property.

With respect to third-party claims against the Lessee, the Lessee waives any and all rights to any type of expressed or implied indemnity against the Lessor, its officers or employees.

It is the intent of the parties that the Lessee will defend, indemnify and hold harmless the Lessor, its officers and employees from any and all claims, suits or

© 1994-2025 California Department of Transportation. All rights reserved.

actions as set forth above regardless of the existence or degree of fault or negligence on the part of the Lessor, the Lessee, the officers or employees of either of these, other than its officers and employees.

Nothing in this lease is intended to make the public or any member thereof a third-party beneficiary hereunder, nor is any term or condition or other provision of the lease intended to establish a standard of care owed to the public or any member thereof.

11.11.07.00 Certificate of Insurance

The State's Standard Certificate of Insurance, RW 11-18, Certificate of Insurance with Endorsement for Lease of State-Owned Property, may be used in lieu of a certified copy of the original policy; no other form of Certificate of Insurance is acceptable.

11.11.08.00 Fire and Explosion in State-Owned Buildings

Section 13107 of the Health and Safety Code requires that all fires or explosions in or on all State-owned properties be investigated by the State Fire Marshal. All fires and explosions must be reported to the State Fire Marshal immediately following the knowledge of a fire. The number to contact the State Fire Marshal Duty Officer is (916) 323-7390. The Duty Officer will answer this number on a 24/7 basis. You need to have the following information:

1. Type of incident (fire or explosion, etc.)
2. Location of incident
3. Time of incident
4. Was Fire/Police Department dispatched
5. Information on any injury or fatality
6. Name and phone number for a call back.

Rebuilding or repairing damage caused by the fire may begin without delay whether or not an investigation is made.

Note: Local Agencies do not report to the State Fire Marshal. Local Agencies report to their local fire jurisdiction for investigation.

© 1994-2025 California Department of Transportation. All rights reserved.

11.12.00.00 – LEASING PUBLICLY-OWNED PROPERTY

Note: any references to Local Agencies is in relation to Local Agency use of the Caltrans Right of Way Manual to comply with FHWA requirements.

11.12.01.00 General

The following types of properties shall normally be leased:

- Commercial
- Industrial
- Agricultural
- Income-generating residential where the state is seeking a master tenant

11.12.02.00 State Lease Forms

The state's standard lease should be used for leasing all commercial and industrial properties. For income generating residential properties where the state is seeking a master tenant, a Master Tenancy Lease Agreement should be used. For agricultural property use an Agricultural Lease Agreement. Please refer to the specific agreement templates on the Property Management webpage (internal Caltrans link).

11.12.03.00 Lease Rates

With few exceptions, lease rates shall be at Fair Market Value.

For any lease rate less than Fair Market Value, the rental file shall be fully documented as to why it is in the Department/Local Agency's best interest to charge a rate below Fair Market Value. For properties obtained with Title 23, United States Code, funding, the Public Interest Finding (PIF) and written approval from FHWA shall be in the file, please refer to Manual Section 11.01.10.00. For all other properties, the justification and approval from the Property Management Office Chief or above shall be in the file.

© 1994-2025 California Department of Transportation. All rights reserved.

11.12.04.00 Lease Preparation

The Region/District/Local Agency shall prepare at least two copies of the lease. The Agent shall forward or deliver to the lessee two originals for signature. The lessee must return both originals to the Department/Local Agency for execution. Once the Department/Local Agency has executed both originals, one fully executed original will be forwarded or delivered to lessee and one will remain in the rental file.

11.12.05.00 Lease Approval by Lessee

The lease shall be approved by the appropriate entity. The Agent must be mindful of who the lessee is and ensure that the lessee's signature block reflects the appropriate entity who may execute documents.

If the lessee is composed of individuals or sole proprietors, each individual or sole proprietor shall be on the signature block and execute the agreement.

If the lessee is a partnership, the Agent should obtain the partnership's partnership agreement to verify who is authorized to sign the agreement. In the absence of a partnership agreement, a general partner shall be on the signature block and execute the agreement; a limited partner shall not be the signatory to the agreement. The signature block must include the name of the person authorized to execute the agreement, the name of the partnership, and the title of the authorized signatory.

If the lessee is a corporation, the Agent should obtain the corporation's bylaws to verify who is authorized to sign the agreement. In the absence of a corporation's bylaws, there must be two signature blocks on behalf of the corporation consisting of a signature block for an operational officer and a signature block for a financial officer. Operational officers may be the chairperson of the board, the president, or any vice president. Financial officers may be the secretary, any assistant secretary, the chief financial officer, or any assistant treasurer. The signature blocks must include the name of the person authorized to execute the agreement, the name of the corporation, and the title of the authorized signatory. If the lessee is a corporation that has a seal, the seal may be affixed to the lease near the signature(s) of the corporate officer(s) approving the lease.

© 1994-2025 California Department of Transportation. All rights reserved.

If the lessee is a limited liability company, the Agent should obtain the operating agreement to verify who is authorized to sign the agreement. In the absence of an operating agreement, a member or manager shall be on the signature block. The signature block must include the name of the person authorized to execute the agreement, the limited liability company's name, and the title of the authorized signatory. The Agent should check the Secretary of State's Business Search to verify general partners, corporate officers, members, and managers to ensure the correct persons are signatories to the agreement.

11.12.06.00 Lease Approval by State

The DD or authorized delegate is authorized to execute all residential rental agreements and nonresidential lease agreements. Legal must approve rental agreements and leases on nonstandard forms prior to execution on the Department's behalf. Note: Local Agency legal approval is required for non-standard language on local agency lease agreements.

11.12.07.00 Title VI Guidelines

The Agent will inform the State's tenants about the Department/Local Agency's policy and procedures under Title VI of the 1964 Civil Rights Act and will deliver a "Your Rights Under Title VI and Related Statutes" brochure at the time the lease is executed.

11.12.08.00 Lease Renewals

The Agent shall maintain a Region/District/Local Agency wide system of knowing when leases are due to expire. The Agent shall:

- Inspect the property.
- Request a new Fair Market Value to determine the new lease rate. If the Appraisals Branch is unable to return the request in a timely fashion and the market has been stable since the execution of the prior lease, the Agent may use a Consumer Price Index increase to determine the new lease rate.
- Verify if the present lessee is interested in renewing the lease at current Fair Market Value.
- Update the last inspection date, market rent, and date of value on the Property Screen in RWPM. Note: Local Agency will use its own computer system.

© 1994-2025 California Department of Transportation. All rights reserved.

If the lessee does not want to renew the lease, the lead time will give Property Management an opportunity to re-rent the property with minimal loss of rental income.

If the lessee wants to continue leasing, the lease may be renewed or modified using a Lease Renewal form. Confirm that the most current standard lease language has been incorporated into the lease renewal agreement, including storm water and other provisions. If there have been substantial changes to the standard lease language, it would be a best practice to execute a new lease using the most current standard lease template. Lessee's signature on the renewal shall be identical to the signature format on the original lease, and the state shall execute in the same manner as a new lease. If the original lease is older than 7 years, a new lease agreement shall be drafted to ensure that all the updated standard clauses are incorporated into the lease.

A template of the form may be found on the Property Management webpage (internal Caltrans link).

11.12.09.00 Assignment of Lease

Circumstances may occur when a lessee wishes to sell their business and the state finds it beneficial to permit the assignment of the lease. The state has the option to refuse or accept (but cannot unreasonably withhold approval) of the proposed assignee as a responsible party who is able to fulfill the lease obligations for the balance of the lease period. The Region/District/Local Agency shall require the proposed assignee to complete a rental application and shall investigate thoroughly to determine if the proposed assignee is acceptable.

If the proposed assignee is acceptable, the lessee and assignor shall sign the "Assignment of Lease" section of the Assignment of Lease, as Lessee and Assignor. The assignee shall sign the "Assumption of Lease" section of the form as Assignee of Lease. The state shall execute "Consent to Assignment of Lease" section of the form in the same manner as the original lease and shall process the "Assignment of Lease" in the same manner as the original lease. (See Form RW 11-02, Assignment of Lease [Where State is Lessor]).

The Agent should obtain a copy of the sublease for the tenancy file.

© 1994-2025 California Department of Transportation. All rights reserved.

11.12.10.00 Public Notice to Bidders

It may be advantageous for the Region/District/Local Agency to use the public bidding process to accomplish leasing of certain types of property. The suggested format presented in the Sample Notice to Bidders template may be modified to fit any type of property being offered for lease. The property must be advertised publicly utilizing either newspaper advertisements or internet websites (such as Craigslist and LoopNet). The Agent should inform all interested parties of the advertisement.

The Sample Notice to Bidders template may be found on the Property Management webpage (internal Caltrans link).

Note: For local agencies wanting this template, contact Real Property Services in HQ RW.

11.12.11.00 Construction of Improvements to Realty by Lessee

The Region/District/Local Agency may consider leasing future right of way for development of improvements to the realty where such development will not result in a relocation assistance situation or obligation to the state/local agency, but will result in a net profit to the state/local agency or other public benefit.

Such leases shall include many of the clauses contained in a standard airspace development lease. (Refer to Airspace Chapter 15.) In particular, clauses for condemnation, insurance requirements, design and location controls, ownership of improvements and personal property, and rental rate adjustments based on the Consumer Price Index should be considered for inclusion in development leases. Such leases shall also include a termination clause, a performance bond and/or other provisions to ensure timely removal of improvements at no expense to the state/local agency and FHWA. The security deposit shall be an amount that incorporates the potential removal cost of the improvement that may be incurred by the Department/Local Agency.

© 1994-2025 California Department of Transportation. All rights reserved.

The lessee shall be responsible for developing complete plans and specifications and submitting all plans and specifications to the Department/Local Agency for conceptual approval of any proposed improvements. Additionally, the lessee shall be responsible for obtaining all required building permits from the State Fire Marshal. Furthermore, if the improvement is a building, the lessee shall obtain a certificate of occupancy from the State Fire Marshal. Prior to the Department allowing the use of a building, the lessee shall provide the Agent with a copy of the certificate of occupancy or a copy of the temporary certificate of occupancy. If a temporary certificate of occupancy is issued, the lessee must obtain the certificate of occupancy prior to the expiration of the temporary certificate of occupancy in order to continue using the building.

Note: Local Agency approval shall be through the local fire department approval process and not the State Fire Marshal.

Prior to beginning construction, the lessee shall provide evidence of coverage to the Department/Local Agency that sufficient monies will be available to complete the proposed construction. The amount of coverage shall be at least equal to the total estimated construction cost. Such coverage can be in the following forms:

- A completion bond issued to the Department/Local Agency as the obligee.
- A performance bond and labor and material bond or performance bond containing the provisions of the labor and material bond supplied by the lessee's contractor, provided said bonds are issued jointly to the lessee and the Department/Local Agency as obligees.
- Any combination of the above.

All bonds shall be issued by a company qualified to do business in the State of California and acceptable to the Department/Local Agency. All bonds shall be in a form acceptable to the Department. All work shall be completed by a contractor who is appropriately licensed and bonded.

Property Management shall submit all such leases involving construction of aboveground structures to the DD or authorized delegate for **prior** approval.

© 1994-2025 California Department of Transportation. All rights reserved.

11.12.12.00 Construction of Tenant Improvements and Fixtures by Lessee

Health and Safety Code (HSC) Section 13108 specifies that the State Fire Marshal shall prepare and adopt building standards, not inconsistent with existing laws or ordinances, relating to fire protection in the design and construction of the means of egress and the adequacy of exits from, and the installation and maintenance of fire alarm and fire extinguishment equipment or systems in any state-owned building and submit those building standards to the State Building Standards Commission for approval. Additionally, the State Fire Marshal shall prepare and adopt regulations other than building standards for installation and maintenance of equipment and furnishings that present unusual fire hazards in any state-owned building. Furthermore, the State Fire Marshal shall enforce the adopted regulations and building standards relating to fire and panic safety published in the California Building Standards Codes in all state-owned buildings.

Note: HSC Section 13108 does not apply to Local Agency. Local Agencies are referred to local code enforcement agency for building standards implementation.

When a lessee proposes to construct tenant improvements and fixtures within an existing building, the lessee must obtain written approval from the Department/Local Agency. The lessee shall provide the plans and specification to the Department for conceptual approval. The minimum requirements of the plans and specifications can be found in RW 11-27 (internal Caltrans link). If the proposed tenant improvements and fixtures are acceptable to the Department/Local Agency, the plans and specifications shall be submitted to the State Fire Marshal for review and approval. If the proposed tenant improvements and fixtures requires a revised Certificate of Occupancy, the lessee shall obtain the Certificate of Occupancy at their sole cost and expense. Once written approval is obtained by the State Fire Marshal, then the Department/Local Agency can provide written approval for the installation of the tenant improvements. The lessee shall provide copies of the written approval from the State Fire Marshal and the revised Certificate of Occupancy, if required, to the Agent for the tenancy file.

Note: For local agencies, plans should be submitted to the local code enforcement agency for building standards in lieu of the State Fire Marshal.

© 1994-2025 California Department of Transportation. All rights reserved.

The lease shall include, or be amended to include, clauses specifying the ownership of the tenant improvements and fixtures at the expiration, or any sooner termination, of the lease agreement. Also, the security deposit shall be an amount that incorporates the potential removal cost of the tenant improvements and fixtures that may be incurred by the Department/Local Agency.

11.12.13.00 Leasing Excess Land

Property Management shall obtain approval from the Excess Land Section before any excess land is committed to a lease. This is important because a lease affecting excess land may or may not be complimentary to the sale of the parcel. When excess land is leased, Property Management should forward a copy of the lease to the Excess Land Section for its files.

11.12.14.00 Leasing to Highway Contractor

Where excess vacant or improved parcels are available in the vicinity of a transportation project, the Region/District/local agency may enter into a lease with the transportation project's contractor during the period of the project. The lease should be on the standard Lease Agreement which usually covers uses such as construction yards and haul roads. The lease rate will be the fair market rent as in other lease agreements. Absolutely no advance commitment shall be made to any bidding transportation project's contractor, as this would tend to give that contractor an advantage over other contractors competing for the project.

To avoid violations of any necessary access control lines and to ensure safe access to and from leased property, the lease must contain provisions specifying exactly where the contractor may gain access to and from the leased property and where the contractor may **NOT** gain access to and from the leased property. Before finalizing the lease, Region/District/Local Agency Right of Way will obtain written approval from the Region's/District/Local Agency's Encroachment Permits Department. The written approval shall be placed in the rental file and should be incorporated as an exhibit in the lease agreement.

© 1994-2025 California Department of Transportation. All rights reserved.

11.12.15.00 Leasing to a City, County, or Special District Under SHC 104.7

SHC Section 104.7 requires the Department, when requested by a city, county, or special district, to provide information regarding, and shall lease the property, if the following conditions exist. The property must be:

- Unoccupied and unimproved.
- Held for future highway purposes (does not include rescinded routes or excess land held for study).
- Located within the boundaries of the city, county, or special district.

Property determined by the Department to have commercial, industrial, or residential use, as the most feasible or best use is not eligible for lease under SHC Section 104.7.

The city, county, or special district may use the leased property first for agricultural and community garden purposes, and second for recreational purposes, on terms and conditions not unreasonably inhibiting the use of the property, including, but not limited to, assumption of liability and installation and removal of improvements.

The lease shall be for one dollar ($1) per year for not less than one year and shall be renewable. Written approval for the less than fair market lease rate shall be obtained from FHWA if the real property interest was obtained for a project in which Title 23, United States Code, funding participated in any phase of the project (see Manual Section 11.01.10.00).

The city, county, or special district may sublease the property for agricultural or recreational purposes subject to the following constraints:

- Upon prior written notification to the Department.
- May proceed with the sublease unless disapproved by the Department within ten (10) working days after the notice is sent to the Department.
- First priority for a sublease shall be given to the owner of property contiguous to the leased land.
- The city, county, or special district may charge rental fees at least sufficient to pay its administrative costs.

© 1994-2025 California Department of Transportation. All rights reserved.

- All money received under a sublease, less administrative costs, shall be transmitted to the Department for deposit in the State Highway Account.

The City, County, or Special District Lease template shall be used for all these types of transactions. The template may be found on the Property Management webpage (internal Caltrans link).

11.12.16.00 Lease Recordation

Under most circumstances, leases where the state/Local Agency is lessor shall not be recorded. Recordation would serve to cloud title of the property and could require a quitclaim deed to clear title at a later date.

11.12.17.00 Lease Cancellation

All leases shall contain provisions that the Department/Local Agency shall have the right to cancel the lease upon giving specific notice without other qualifications or reasons. The standard language in the lease agreements allow either party to terminate the lease provided a certain number of days' notice, specified in the lease agreement, is provided to the other party.

11.12.17.01 Mutual Consent

Occasions may arise when it is to the mutual benefit of the Department/Local Agency and lessee to cancel a lease that is in force without requiring either party to provide the specified number of days' notice to the other party or if the standard termination clause has been altered to only allow the Department/Local Agency to terminate the lease agreement. This shall be accomplished by using Cancellation of Lease template (RW 11-03, Cancellation of Lease Agreement). The lease cancellation shall be signed by both parties and shall be processed in the same manner as the lease.

11.12.17.02 Lessee's Failure to Pay Rent

When the lessee is delinquent in rental payments, RW 11-11, 3-Day Notice to Pay Rent or Quit, shall be used by the Department/Local Agency. Such notice shall be served upon the lessee in the manner specified in Section 11.08.04.00.

© 1994-2025 California Department of Transportation. All rights reserved.

Procedures set forth in Chapter 10, Relocation Assistance, Manual Section 10.03.12.00 apply when canceling tenancy of a lessee who is eligible for relocation payments.

Money that the lessee has on deposit with the Department/Local Agency may be retained and applied toward the delinquency that exists. The deposit shall not be credited toward the delinquency, however, until after the lessee has vacated the property, leaving it in a satisfactory condition acceptable to the Department/Local Agency.

11.12.17.03 Based on Right of Termination

The standard lease provides for cancellation and termination of the lease by either party. When the lessee is not delinquent in rent and the Department/Local Agency wishes to cancel the lease, 11-EX-67, Notice to Terminate Non-Residential Tenancy (internal Caltrans link), shall be used.

11.12.18.00 Materials Agreement for Removal of Materials

Occasionally, the Department/Local Agency may find it desirable to have materials removed from state/public property for use as fill on a state highway project. When materials can be removed without decreasing the property value more than the estimated value of the material to be obtained, the Region/District/Local Agency may enter into a Materials Agreement with a contractor.

The material removed shall not create a hazard or an eyesore in the area. The finished elevations after removal of material shall blend with the remainder of the state/public property. To ensure desirable results are achieved, the Region's/District/Local Agency's Division of Environmental Analysis shall be contacted for advice and recommendation regarding the potential presence of any hazardous waste in the material prior to negotiating a Materials Agreement. Additionally, the Region's/District/Local Agency's Division of Engineering Services Geotechnical Services shall be contacted for advice and recommendation on how to stabilize the property in the after condition.

No Materials Agreement shall be made or proposed with any contractor until after award of the highway construction contract. An alternative would be to indicate in the contract specifications that a specified amount of material is available at a certain location so all prospective bidders have knowledge of it.

© 1994-2025 California Department of Transportation. All rights reserved.

Please refer to the two sample formats of the Materials Agreement which may be found on the Property Management webpage (internal Caltrans link).

11.12.19.00 Available Office Space

Right of Way should notify the District Facilities Manager when office space is available for lease. The District Facilities Manager will notify DGS, through the Departmental Facilities Manager in the Administrative Service Center, that office space is available. If DGS has other state tenants who might be interested in the space, they will notify the Department. It is not necessary to hold the property off the market for DGS during the notification period.

Note: this section does not apply to Local Agencies.

© 1994-2025 California Department of Transportation. All rights reserved.

11.13.00.00 – MASTER TENANCIES

Note: any references to Local Agencies is in relation to Local Agency use of the Caltrans Right of Way Manual to comply with FHWA requirements.

11.13.01.00 General

Right of Way staff shall manage all rental properties that do not require special consideration. Use of a master tenancy lease is appropriate for managing properties under the conditions listed below:

- Motels, hotels, and rooming houses where a high level of service to tenants is required. California Code of Regulations, Section 42 of Title 25, states a manager, janitor, housekeeper, or other responsible person shall reside on the premises when there are 12 or more guest rooms.

- Certain residential, commercial, or industrial properties located in areas where management by local residents is the only effective way to obtain cooperation of individual tenants in upkeep of the property.

- Residential apartment properties (containing 16 or more apartments). California Code of Regulations, Section 42 of Title 25, states a manager, janitor, housekeeper, or other responsible person shall reside on the premises when there are 16 or more apartments.

11.13.02.00 Lease Form

The Master Tenancy Lease Agreement template will be utilized for all master tenancy leases. Please refer to the specific template on the Property Management webpage (internal Caltrans link). This is a standard lease template and not all clauses will apply to all situations. The Agent shall formulate a lease that will be in the best interest of the Department/Local Agency using all of, some of, or any additional clauses. Keep in mind any additions, deletions, revisions, and/or changes should be approved by Legal prior to use.

© 1994-2025 California Department of Transportation. All rights reserved.

11.13.03.00 The Master Tenant

A master tenant is the Department's/Local Agency's lessee of income producing residential, commercial, or industrial property capable of being sublet into two or more rental units. Master tenants are obtained through direct negotiations or by successful bids on an advertised lease for a particular property. As the lessee, the master tenant assumes complete responsibility for management, control, and maintenance of the leased property, subject to all the terms and conditions of the lease.

11.13.04.00 Factors to Consider

The major benefit derived from a master tenancy is that the master tenant assumes all responsibilities associated with the rental property while providing the Department/Local Agency with appropriate rental income from the leased property.

The determination on whether a parcel will be leased to a master tenant should be based on several factors including, but not limited to:

- The legal requirements to have a responsible person residing on the premises (see Manual Section 11.13.01.00).

- Difficulty in managing a large furnished apartment complex, motel, hotel, or rooming house where the Department/Local Agency does not purchase the furniture and various utilities are supplied to the units from a single meter.

- The distance between the Region/District/Local Agency office and the property.

- Potential loss of income to the Department/Local Agency due to high vacancy rates.

- Management problems such as handling of trash service, lighting, and swimming pools.

© 1994-2025 California Department of Transportation. All rights reserved.

11.13.05.00 Approval

The DD or authorized delegate is authorized to approve all master tenancy leases.

11.13.06.00 Documentation

The Agent preparing the proposed master tenancy agreement shall provide the following documentation to the DD or authorized delegate approving the lease:

- Brief description of the property, condition, and number of units.
- Reasons why a master tenancy is the best form of property management.
- A statement specifying that an interior and exterior inspection of the property has been performed, what conditions require correction, and who will perform the work.
- A statement that notices signed by individual tenants will be obtained to confirm the non-RAP eligibility of the tenancy and a statement that the building will be posted with such a notice. A system for monthly review of any changes in tenancy and receipt of signed non-RAP eligibility statements for all new tenants must be established.
- A statement that Region/District/Local Agency staff will perform interior and exterior inspections once every 6 months and that the master tenant will correct all conditions of disrepair or the master tenancy will be terminated.

Master tenancy agreements may be written for varying lengths of time at the Region's/District's/Local Agency's discretion. The agreements should be written for time periods that are commensurate with Region's/District's/Local Agency's clearance schedules, which are generally controlled by the Right of Way Certification dates. Property Management should consult with Right of Way Project Coordination to determine the clearance schedule dictated by the project. On occasion, the normal length of a lease (one-year) may be extended to encourage a master tenant to take over certain properties. For example, an extension is appropriate when the master tenant needs a longer time to recover anticipated costly expenses incurred in rehabilitating property at the lease's onset and to still realize an appropriate profit.

© 1994-2025 California Department of Transportation. All rights reserved.

11.13.07.00 Minimum Acceptable Lease Rate

The Region/District/Local Agency must establish a minimum acceptable lease rate prior to advertising for bids for a master tenancy or prior to negotiating a master tenancy directly with a prospective master tenant. In determining the lease rate, consideration should be given to the following:

- Physical condition of the property.
- Location within the community.
- Duration of occupancies on site (long-term occupants in an apartment complex as compared to short-term occupants in a motel or hotel).
- Present or future market demands within the area for the type of rental property.

11.13.08.00 Advertising Availability of Master Tenancy

The Region/District/Local Agency should maintain a list of prospective master tenants, including referrals, interested persons who have made any inquiries, and past master tenants who have performed satisfactorily.

The availability of a specific master tenancy agreement should be advertised on the internet and in metropolitan newspapers, as well as local newspapers, serving the area where the property is located. The advertisement should announce:

- Availability of the lease.
- Type and number of units.
- Expected length of tenancy.
- Date the property will be available for inspection.

The advertisement should request interested parties to phone or write the Region/District/Local Agency for a brochure or flyer with the particulars as well as bidding requirements and procedures, if the lease will be put up for bid.

© 1994-2025 California Department of Transportation. All rights reserved.

11.13.09.00 Bid Proposal Package

Bid proposal packages that are mailed to interested parties or advertised shall contain items that are compatible with the proposed lease. See the table entitled "Items Included in Bid Proposal Package" on the following page and Exhibits 11-EX-18 through 11-EX-22, along with sample template located on the intranet (internal Caltrans link), for a complete bid proposal package.

11.13.10.00 Bid Opening and Award

Bid proposals shall be opened and read publicly at the time and date specified in Exhibit 11-EX-18, Notice to Bidders and Interested Parties.

Although the lease will normally be awarded to the highest responsible bidder, the Department/Local Agency reserves the right to refuse any and all bids. The Region/District/Local Agency shall retain the bids and deposits of the highest responsible bidder and the second highest responsible bidder until the successful high bidder has complied with all the terms and conditions contained in Exhibit 11-EX-19, Terms of Auction. When these terms and conditions have been met to the Region's/District/Local Agency's satisfaction, the Region/District/Local Agency shall return the second highest bidder's deposit along with the Bid Results – Unsuccessful Bidders letter (11-EX-26 [internal Caltrans link]), reporting the bid results to all unsuccessful bidders.

11.13.11.00 Commencement of Standard Lease Procedures

Processing and handling of the master tenancy agreement is identical to the standard leasing procedures for other state-owned property. Refer to Section 11.12.00.00 for details.

11.13.12.00 Posting of Public Notice

After final approval of the lease, the Region/District/Local Agency shall post Exhibit 11-EX-27, Public Notice (Sign for Master Tenancy) (internal Caltrans link) on all residential properties under a master tenancy agreement. The sign shall be readily visible to prospective tenants and shall advise that all persons commencing tenancy on the premises after the date indicated shall not be eligible for relocation assistance payments as provided in Government Code Sections 7260 through 7277. The date to be inserted on the sign shall be the date the state obtains legal possession of the premises. Posting of this public

© 1994-2025 California Department of Transportation. All rights reserved.

notice sign is mandatory and is in addition to the requirement that the lessee furnish each new tenant with a written notice with the same information.

ITEMS INCLUDED IN BID PROPOSAL PACKAGE

- **Notice to Bidders and Interested Parties (Exhibit 11-EX-18)**
  This notice sets forth the address of the property for which the lease is being auctioned, the address of the lessor in which to send the sealed bid; the date, time, and location that all sealed bids shall be opened and read publicly; the deadline to submit a sealed bid, and makes specific remarks about allowing only one bid from any one person, corporation, or firm.

- **Terms of Auction (Exhibit 11-EX-19)**
  This details the required deposit to be submitted with the bid, the manner in which payment is to be made, where payments are to be received, the disposition of the deposit in the event that the high bidder fails to pay the balance due, the disposition of the deposit in the event the Department cancels the lease, the maintenance that is required on the property, and the amount of security deposit required as a guarantee that the required maintenance shall be performed. It also sets forth the maintenance requirements that shall be met by the successful bidder and the time limit allowed for work to be accomplished.

- **List of Tenants in Possession (Exhibit 11-EX-20)**
  This sheet lists, by address, the tenants in possession with their corresponding rental rates and bedroom count. This sheet also specifies when rents are due and the utilities for which the Master Tenant is responsible. The list of tenants in possession is actually incorporated into the lease as an Exhibit.

- **Inventory (Exhibit 11-EX-21)**
  This inventory shows by apartment or rental unit certain features or improvements for which the master tenant shall be held accountable. Such items as drapes, garbage disposals, wall-to-wall carpeting and built-in range and oven are included. The inventory should be incorporated into the lease as an Exhibit.

© 1994-2025 California Department of Transportation. All rights reserved.

ITEMS INCLUDED IN BID PROPOSAL PACKAGE (Continued)

- **Bid Proposal (Exhibit 11-EX-22)**
  The proposal form shall be fully executed by the bidder, who is responsible for completing the following:
  - Use and address of the property.
  - Monthly lease rate willing to pay.
  - Signature with printed name and date. The "Important Notice" portion sets forth how the bid is to be signed in the event the bidder is a corporation, partnership, or firm.
  - Bidder's telephone number, business address, or home address for refunding deposit to unsuccessful bidders.
  - The bid proposal shall be accompanied by the required bid deposit amount and it shall be paid in the manner set forth in Exhibit 11-EX-19, Terms of Auction. Failure to do so in the manner described is a basis for rejection of the bid.

  For a bid proposal package to be considered, the bid proposal, in proper order, shall be received at the District Office by the time specified in Exhibit 11-EX-18, Notice to Bidders and Interested Parties.

- **Rental Application (Form RW 11-05)**
  The completed rental application shall be submitted at the time the bid proposal package is submitted. The rental application is used by Property Management to determine the bidder's financial responsibility.

- **Sample Lease Agreement (internal Caltrans link)**
  This is a sample master tenancy agreement that may be modified as needed and approved by Legal.

- **Bid Proposal Mailing Envelope (internal Caltrans link)**
  This envelope shall be marked for return to Property Management and identified as a sealed bid for a particular property. The date and time of the bid opening shall also be clearly marked.

© 1994-2025 California Department of Transportation. All rights reserved.

11.14.00.00 – OUTDOOR ADVERTISING SIGNS

Note: any references to Local Agencies is in relation to Local Agency use of the Caltrans Right of Way Manual to comply with FHWA requirements.

11.14.01.00 General

The California Outdoor Advertising Act sets forth how the State governs and regulates outdoor advertising. The statutes are contained in the California Business and Professions Code, Division 3, Chapter 2, Section 5403 prohibits outdoor advertising signs within the right of way of any highway. Existing advertising structures may remain on the properties managed by Property Management since those properties do not constitute a portion of the right of way. Rental of existing outdoor advertising signs shall be handled like any other new rental account. Property Management shall receive the acquisition documents (MOS and the RW Contract) for the sign interest on the acquired parcel.

11.14.02.00 Prohibition Against New Signs

New outdoor advertising signs shall not be permitted on state-owned properties under any circumstances, regardless of whether the properties are considered excess or are being held for future highway use.

11.14.03.00 Sign Site Rental Procedures and Rates

The RW Contract will state whether the State is assuming the grantor's existing lease or if a new lease will be entered into. The Agent shall ensure the sign is compliant and permitted by Caltrans Traffic Operations – Outdoor Advertising. All sign site rentals shall be prorated as of the day following the date the deed to the state is recorded or the day following the date the state secures legal possession, whichever occurs first. The RW Contract shall also provide that the sign company prorates rental payments to both the state and to the state's grantor, if State is assuming grantor's existing lease. Should the sign be located partially within the right of way and partially on the remainder, and being allowed to remain until a notice to remove or relocate is given, the state's rental agreement shall reflect the portion of prorated rent payable to the state.

© 1994-2025 California Department of Transportation. All rights reserved.

The billboard site rental shall be based off of the annual net revenue generated by the advertising signs for advertising and any other use of the advertising sign structure. The rent shall be paid annually, in arrears, and shall be accompanied by a financial statement certified by the billboard operator's accountant.

The annual rental rate charged shall be a rate thirty percent (30%) of the annual net income generated by the advertising sign, which is consistent with industry standards for ground leases for billboard sites. The annual net revenue shall be the difference between the gross revenue that the tenant actually receives in a lease year and any commissions or fees that the tenant actually pays to a bona fide independent advertising agency. The amount of such a commission or fee shall not exceed sixteen and two-thirds percent (16 2/3%) of the revenue to which it relates.

In order to bill the correct amount, the Agent shall make the base rental rate in RWPM at $0.00. The Agent shall make a note that the tenancy is being billed annually in arrears. When the Agent receives the certified financial statement, the Agent shall bill the tenancy for the percentage of gross income specified in the Advertising Structure Agreement by submitting an Adjustment screen in RWPM.

11.14.04.00 Advertising Structure Agreement

The sign owner shall be required to sign an Advertising Structure Agreement, in duplicate. The agreement shall be executed on the state's behalf in accordance with Section 11.12.06.00. Please refer to the specific agreement template on the Property Management webpage (internal Caltrans link).

New advertising structure agreements shall not extend for more than five-year periods without prior DD or authorized delegate approval.

11.14.05.00 Sign Rent Delinquencies

Delinquencies that occur on sign rentals shall be treated the same as any other type of rental delinquency.

© 1994-2025 California Department of Transportation. All rights reserved.

11.15.00.00 – STATE AS LESSEE LEASES

Note: This section of the Property Management chapter does not apply to Local Agencies.

11.15.01.00 General

Property Management (PM) may receive requests to rent or lease properties or facilities for state highway purposes. This can include other state agencies or privately owned properties or facilities. PM may lease, but is not limited to, real property, trailers, or portable buildings.

Streets and Highways Code Section 104, Subdivision (d), allows the Department to acquire, either in fee or in any lesser estate or interest, any real property including offices, shops, or storage yards, which it considers necessary for state highway purposes.

Streets and Highway Code Section 141(c) allows the Department to determine the best methods of highway construction, improvement, and maintenance which includes the best and most practical methods for providing field facilities for highway purposes and construction.

Generally, the Department of General Services (DGS) is the State agency authorized to enter into lease agreement on behalf of various State agencies. However, Caltrans is exempt from DGS' leasing authority on leases required for highway purposes, except for leases involving only office space pursuant to Government Code Section 11005(b). The interpretation of office space, as it pertains to Government Code Section 11005, is the hiring of real property for general administrative purposes (such as Headquarters, District, or Division Offices).

Right of Way engages with the Division of Business Operations (DBO) (internal Caltrans link) when seeking office space for general administrative purposes. DBO acts as the liaison with DGS to fulfill Caltrans requirements.

Caltrans, through Right of Way, directly leases office space in any building, including an office building, if the premises will be used by Caltrans immediate staff necessary to properly administer construction contracts and projects during the time reasonably required to complete and close all phases of the project/contract.

© 1994-2025 California Department of Transportation. All rights reserved.

The majority of requests for these types of facilities will come from Construction to be utilized by resident engineers and their staffs for field facilities.

11.15.02.00 Procedures Upon Receiving Request

All requests for "state highway purpose" facilities shall be in writing and shall be signed by the Deputy District Director (DDD) of the office requesting the facility. All requests shall be sent to the DDD-RW at least 120 days prior to the required occupancy date.

Property Management's first responsibility, upon receipt of a written request for field facilities, is to verify that there are no State-owned properties that can be utilized for said purpose. State-owned property may include vacant land and/or properties with improvements. State-owned property includes all properties owned by the Department and any other State agency.

The final decision whether or not the requestor occupies state-owned facilities will be made by Property Management. If utilizing State-owned property is deemed appropriate, a Memorandum of Understanding, 11-EX-57 (internal Caltrans link), will need to be signed and acknowledged by the District Division utilizing the property. The District Division utilizing the property should notify Right of Way immediately when they no longer need to utilize the property. However, it is also Right of Way's responsibility to follow up with the Division annually to make sure they are still utilizing the property. The project Expenditure Authorization (under which the property is being utilized) should not be closed out until the property has been returned to Right of Way. Region/District Property Management is still responsible to inspect the property annually.

If no suitable state-owned property is available, Property Management will canvass privately owned properties and/or facilities for acceptable accommodations. When rental market data on available space in the desired area has been gathered and the requesting District Division accepts Property Management's recommendation, the Agent shall begin the negotiations for lease or rental of the selected property.

© 1994-2025 California Department of Transportation. All rights reserved.

11.15.03.00 Procedural Guidelines

Only Right of Way Staff shall negotiate with the owners for the lease of field facilities, provided they are for state highway purposes.

Only field employees, e.g., Construction and Surveys, assigned to the specific project shall occupy the space.

When the District enters into a rental agreement or lease for field facilities, the following guidelines must be adhered to:

- Americans with Disabilities Act
- State Fire Marshal Approval of Plans and Inspections
- Seismic Performance Requirements
- State Administrative Manual Standards for State-Occupied Space
- Facility Plans and/or Drawings
- Energy Conservation
- Hazardous Materials Certification

Additionally, the Agent shall do the following prior to entering into a rental agreement or lease for a field office situated in an office building to administer a particular highway project:

- Verify that the building has the proper certificate of occupancy for office use.
- Do its due diligence to confirm that the premises are safe for use as a field office.
- Enter into a term that is required to fully administer the construction contract and highway project to final acceptance and completion. If there are multiple highway projects utilizing the same field office, the term shall be the length of time required to fully administer the last highway project to final acceptance and completion.
- Ensure that the specific highway project's construction capital (Phase 4) is the funding source for all rental payments.

11.15.03.01 Americans with Disabilities

The Americans with Disabilities Act (ADA) guarantees equal opportunity for individuals with disabilities in public and private sector services and employment. Title II of ADA specifies that a public agency may not, directly or through contractual arrangements, make selections, in determining the location of facilities, that have the effect of excluding or discriminating against persons with disabilities.

© 1994-2025 California Department of Transportation. All rights reserved.

Department policy is that all facilities that are occupied by State employees, whether the facility is owned, rented or leased by the State, shall be in compliance with all ADA requirements. This includes full access for disabled employees, consultants, contractor employees and the public. Field facilities shall be such, as no one will be denied the opportunity to perform work or do business at the facility. **There are no exemptions or exceptions to this policy.**

ADA standards generally include requirements pertaining to functioning of wheelchairs in relation to site grading, parking lots, walks, ramps, entrances width of doors, floors, toilet facilities, signs, and other miscellaneous requirements.

The Department has adopted the *DGS' Accessibility Checklist for State-Leased Buildings and Facilities*, as the document for determining compliance with ADA. Agents are to utilize this Guide when determining if a facility is in compliance with ADA requirements.

Current regulations are found in the California Code of Regulations, Title 24, California Building Code, Volume 1 of Part 2, Chapter 11B.

11.15.03.02 State Fire Marshal Approval of Plans and Inspections

Section 13108 of the Health and Safety Code specifies that the State Fire Marshal (SFM) shall prepare and adopt building standards, not inconsistent with existing laws or ordinances, relating to fire protection in the design and construction of the means of egress and the adequacy of exits from, and the installation and maintenance of fire alarm and fire extinguishment equipment or systems in, any state institution or other state-owned building or in any specified state-occupied building and submit those building standards to the State Building Standards Commission for approval pursuant to the provisions of Chapter 4 (commencing with Section 18935) of Part 2.5 of Division 13 of the Health and Safety Code.

Additionally, Section 13108 of the Health and Safety Code also specifies that the SFM shall enforce the regulations adopted by the State Fire Marshal and building standards relating to fire and panic safety published in the California Building Standards Code in all state-owned buildings, specified state-occupied buildings and state institutions throughout the state.

© 1994-2025 California Department of Transportation. All rights reserved.

Senate Bill 85 (SB 85) in the 2019-2020 Legislative Session amended Health and Safety Code Section 13108 mandating the SFM to prepare, adopt, and enforce building standards to specified state-occupied buildings. A specified state-occupied building is a building that is leased or rented by the state and is any of the following: (1) a building where the state has entered into a build-to-suit lease; (2) a trial court facility with a detention area; (3) a building used by the Department of Corrections and Rehabilitation as a reentry facility; and (4) any other building specified by the SFM through adopted regulations.

Right of Way's policy is that the SFM is required to review and approve plans, prior to the execution of any lease, when the Department of Transportation (the Department) is locating into an existing building and there **will be tenant improvements** prior to occupation. District Property Managers are responsible for ensuring that appropriate SFM review of plans and/or inspections are accomplished prior to execution of all leases and that such information is contained in Form RW 11-27, State Fire Marshal Checklist (internal Caltrans link). All plan applications must be submitted through the GovMotus website for the SFM to review. Hardcopy plans must be submitted to the SFM at the following address: CAL FIRE, Office of the State Fire Marshal, Fire & Life Safety Division, 2251 Harvard Street, Suite 130, Sacramento, CA 95815. The plan review may take up to eight (8) weeks to be completed, so it is essential to get the plans uploaded into GovMotus as soon as possible. See Exhibit 11-EX-31, Memorandum from California State Fire Marshal to the Department, dated August 10, 2001, outlining the requirements for the submittal of plans to the SFM.

If tenant improvements or any type of construction are not necessary, SFM plan review is not required. However, when a plan review is not required, a field inspection will be performed by the SFM to review, among other items, the exiting systems and possible hazardous conditions.

If the project schedule necessitates an expedited plan review and inspection, the governing body of a local fire department may, pursuant to SB 85, perform these services for a state-leased facility as long as it is not a build-to-suit leased facility.

Trailers or portable buildings, that are attached with wheels and will be used for less than 180 days, do not require the submittal of plans or an inspection. The Region/District must determine that applicable exiting requirements are met (for example, no padlocks or hasp-type fasteners are used on exit doors). Storage buildings or covered parking structures do not require a review or inspection by the SFM.

© 1994-2025 California Department of Transportation. All rights reserved.

Trailers or portable buildings that will be used for 180 days or more or do not have wheels attached are considered B Occupancies. These trailers and portable buildings will require a plan review and a field inspection similar to other facilities.

11.15.03.03 Seismic Performance Requirements

Right of Way's policy is that all facilities considered for state lease must be evaluated for the ability to meet a reasonable level of seismic performance, prior to the execution of any lease.

In order to determine if a building has met a reasonable level of seismic performance, the Agent must complete Form RW 11-29, Seismic Screening Checklist (internal Caltrans link). If the Seismic Screening Checklist results in a score of 20 or above, a Certification of Structural Evaluation, Form RW 11-30, must be completed. An independent licensed structural engineer must complete the Certification. The prospective lessor will be responsible for hiring the independent licensed structural engineer, having the Certification of Structural Evaluation form completed, and paying for the structural evaluation at their sole cost and expense. (See Form RW 11-31, Structural Evaluation Request [internal Caltrans link].)

11.15.03.04 Standards for State Space

Prior to initiating negotiations for field facilities, Right of Way must verify the number of State employees who are going to occupy the facility and their respective job categories. Once the number of occupants is verified, the standards for state space set forth in State Administrative Manual (SAM), Section 1313.21, must be adhered to.

Examples of space allocations are:

- Supervisors 96-125 sq ft
- Engineers 80-100 sq ft
- Clerical 40-75 sq ft

The allowances indicate net square feet and do not include space for circulation and special requirements outside the office/workstation space. These standards delineate the maximum space allowances and space types for each job category. These standards are general guidelines that can be modified as necessary to meet specific job requirements. Detailed documentation is required when allowance modifications are made.

© 1994-2025 California Department of Transportation. All rights reserved.

Right of Way should always avoid leasing more space than is necessary, but it should lease sufficient space to accommodate field staff, equipment, laboratory facilities, and meeting/conference rooms.

11.15.03.05 Facility Plans and/or Drawings

Facility site plans are required for all State as Lessee (SAL) leases. See Memorandum from California State Fire Marshal to the Department, dated August 10, 2001, 11-EX-31, for the specific requirements. The site plans must be attached to the lease and kept in the file.

11.15.03.06 Energy Conservation

Executive Order D-16-00 established a state sustainable building goal for all state buildings, including all leased property. The goal is "to site, design, deconstruct, construct, renovate, operate, and maintain state buildings that are models of energy, water, and materials efficiency; while providing healthy, productive and comfortable indoor environments and long-term benefits to Californians."

For specific guidelines, recommendations, and information, refer to Green Building Basics.

11.15.03.07 Hazardous Materials Certification

Asbestos material in buildings can either be friable or non-friable. Friable asbestos is defined as any material containing greater than 1% asbestos by weight that, when dry, can be crushed, pulverized or reduced to powder by hand pressure. Friable asbestos is typically found in pipe wrapping, insulation, or fireproofing.

Non-friable asbestos is defined as any material containing greater than 1% asbestos by weight that, when dry, cannot be crushed, pulverized, or reduced to powder by hand pressure. Non-friable asbestos is divided into two categories. Category 1 includes asbestos gaskets, gaskets, resilient flooring products (such as vinyl asbestos tiles) and asphalt roofing products. Category 2 are any materials that cannot be crushed with hand-strength that are not covered under Category 1.

© 1994-2025 California Department of Transportation. All rights reserved.

Current state policy dictates that all buildings built before 1979 must be certified in writing to be free from hazards from Asbestos Containing Material (ACM). The certification must be provided by an Industrial Hygienist certified by the Board for Global EHS Credentialing or an Environmental Protection Agency (EPA) Asbestos Hazard Emergency Response Act (AHERA) Certified Inspector.

When referring to leased space in regard to asbestos, leased space includes common public areas, building maintenance and equipment areas, and plenums in the same heating, ventilating, and air conditioning zone and telephone closets.

Leased space with asbestos present may be considered. The lessor, however, must comply with the requirements stated above. The lease agreement must hold the lessor responsible for control of nonfriable ACM and ACM that has been enclosed or encapsulated, including an appropriate operations and maintenance program.

Current state policy dictates that all buildings built before 1979 must be certified as free of hazard from Lead Containing Materials (LCM). Paint chip samples, and samples of other suspect LCMs, must be collected by a California Department of Health Services (DHS) Lead Certified Project Designer for laboratory analysis to determine lead content. Please visit the Environmental Protection Agency for additional information.

If the building was constructed subsequent to 1979, a photocopy of the Occupancy Certificate issued by the city or county building department is all that is required prior to the execution of the lease.

These requirements are to be completed by the lessor prior to the lease execution by the State.

11.15.04.00 Lease Form

The renting or leasing of field facilities for the Department's use shall be accomplished as follows:

Permanent Buildings and Trailer Pads – The State as Lessee Lease Agreement template, shall be used. Please refer to the specific agreement template on the Property Management webpage (internal Caltrans link). Significant modifications shall be approved by Legal prior to the execution of said lease.

© 1994-2025 California Department of Transportation. All rights reserved.

Relocatable Buildings or Trailers – The standard lease or rental agreement used by the relocatable building or trailer company may be used with additional clauses from the State as Lessee Lease Agreement template, when appropriate. The lease/rental agreement shall include provisions for initial setup, maintenance during the lease term, and removal at the end of the lease. If utilized, the company's lease should be reviewed by Legal prior to the execution of said lease. Additionally, the Modular Lease Agreement template can be utilized for these types of leases. (See 11-EX-50, Modular Lease Agreement [internal Caltrans link].)

A clear and complete description of the property should be included on the lease form under Description, including physical address, square footage, and type of facility (e.g., light industrial, strip mall, residential, etc.).

11.15.04.01 Lease Execution

The DD or authorized delegate is authorized to execute all SAL agreements. There will be two original copies of the lease executed by all parties. The recommendation for approval of the DDD of the requesting function shall be shown on the lease.

11.15.04.02 Lease Extension

If a lease extension is required to fully administer the construction contract and highway project to final acceptance and completion, the term of the lease shall not go past the anticipated date to fully administer the construction contract and highway project to final acceptance and completion. The Agent shall ensure that the lease extension provides the Department the option of early termination.

11.15.04.03 Triple Net Leases

Triple net leases that require the State to pay for the lessor's expenses, in addition to base rent, for the leased property, such as taxes, insurance, utilities, maintenance, and debt service, shall be avoided. Prospective lessors should be advised to include such items in their proposed flat rental rate.

© 1994-2025 California Department of Transportation. All rights reserved.

11.15.05.00 Insurance

In obtaining a lease for field facilities, the Region/District may be faced with the lessor's demand that the State provide insurance coverage, either by paying a monthly fee to the lessor's insurance carrier or by purchasing its own policy. There are two types of insurance to be considered: (1) fire and hazard, and (2) liability.

The State is self-insured for all liability (including bodily injury and property damage) as well as any tort (such as fire and physical damage caused by one of our employees) affecting private property. The state's ability to insure itself is provided in Government Code, Section 11007.4. If the owner would like written confirmation, the Agent shall contact Department of General Services (DGS), Office of Risk and Insurance Management, and request a letter of "Public Liability and Workers Compensation Insurance" on their letterhead. You can send an email request to the following email address, RiskManagement@dgs.ca.gov.

Although there is no need to furnish insurance policy coverage on SAL leases, there may be instances when a lessor will not accept our self-insurance status and will insist on coverage provided by an insurance policy. In those cases, the Department has the flexibility to obtain such policy coverage if it is the only way to secure the field facility. If purchase of an insurance policy is required, it may be prudent to renegotiate rental terms to account for the additional costs that will be borne by the Department.

DGS can obtain quotes for required fire and hazard coverage and secure a policy if requested. The cost of securing a policy is usually much less than paying the lessor's insurance carrier for the required coverage and may be available through a single policy. DGS' Office of Risk and Insurance Management has provided a form, Exhibit 11-EX-32, to assist in obtaining fire and hazard coverage. The form should be completed and sent to DGS for cost quotations and purchase of appropriate policy coverage.

11.15.06.00 Park and Ride Facility Leases

SHC Section 147, authorizes the Department, more specifically, District 7, to enter into agreements and leases with private owners for use of existing parking facilities or to develop parking facilities for the Park and Ride program. Typical examples are shopping centers and church parking lots.

© 1994-2025 California Department of Transportation. All rights reserved.

The District's Park and Ride Coordinator is responsible for the Program. Since *no rent is paid* for use of the facilities, the coordinator usually handles the entire transaction with a standard use agreement with no Right of Way involvement.

Legal recommends that the Department use a lease rather than an agreement if the State agrees to provide improvements such as paving, fencing, and lighting. In this case, the coordinator will request Property Management to prepare a lease. (See Lease Agreement – Park and Ride Lot on the Property Management webpage [internal Caltrans link].) Since the State is the lessee, the lessor may require changes in the typical lease. Region's/District's Legal must approve any changes to the standard lease agreement template.

Since there is no rent, the lease is executed at the Region/District level. Note that the Region/District Ridesharing Coordinator's approval is required on the Archive copy. The procedures in the following table should be followed when acquiring Park and Ride leases for System Operations.

PARK & RIDE PROCEDURES

Acquisition Function

- Receive an appraisal of the fair market rent.
- Prepare a Lease Agreement. Property Management should review and approve the lease, and Region's/District's Legal must approve any changes in the standard lease agreement template.
- Pay the fair market rent for the entire lease term in advance in a lump sum by RW Contract.
- Send a short-form MOS and Claim Schedule to HQ RW, Acquisition Branch.
- Enter parcels in ROWMIS.

Property Management Function

- Review the lease prepared by Acquisition prior to presenting it to the lessor.
- Forward a copy of the executed lease to HQ RW, Property Management Branch.

© 1994-2025 California Department of Transportation. All rights reserved.

11.15.07.00 Documentation for File

Right of Way's file should contain the following documentation:

- A copy of the written request for field facilities.
- Right of Way's determination on the suitability of the facilities for proposed use.
- For permanent buildings or trailer pads, include comparability of the rental rate to rates for similar facilities in the immediate area. List comparable(s), briefly discuss the investigation, and compare major characteristics to the subject property.
- For relocatable buildings or trailers, document informal bids and the reasons the successful bidder was chosen. Documentation shall consist of such items as rental rate, company name and location, and setup, maintenance, and removal costs. The successful bidder should be chosen based on a combination of factors such as low bid, past performance, services provided, and location of the company in relation to the site.
- Parking, services, and utilities available, if any.
- Statement that no suitable state-owned facilities are available.

The procedures in this section also apply to lease amendments and renewals.

11.15.08.00 Employee Time Charging

Time spent by Right of Way sourced personnel to provide services to other district functions must be properly coded to ensure the charges are billed correctly. Specifically, when Right of Way personnel are requested to secure leases for field facilities for interdivisional use, the appropriate division must supply appropriate charging information.

© 1994-2025 California Department of Transportation. All rights reserved.

11.16.00.00 – TRANSFERRING PROPERTIES TO CLEARANCE STATUS

Note: any references to Local Agencies is in relation to Local Agency use of the Caltrans Right of Way Manual to comply with FHWA requirements.

11.16.01.00 Scheduling Rental Termination

After determining a practical and orderly clearance schedule, Property Management shall coordinate the following activities with the RAP Unit:

- Inform the RAP Branch Senior in writing within twenty-four hours of the first knowledge of a RAP eligible tenant vacating state-owned property.
- Provide a courtesy 90-Day Information Notice for inherited occupants who are eligible and noneligible RAP tenants, in accordance with provisions of Section 11.07.22.00 and Section 10.03.10.03. Coordinate requests for a 30-Day or 60-Day notice to vacate and 3-Day notices to ensure orderly relocation of eligible occupants.
- Ensure that all noneligible RAP tenants occupying premises leased under a master tenancy are informed they are not eligible for relocation assistance payments.
- Coordinate sale of excess land or building improvements with the RAP Branch Senior to ensure that occupants are provided with required RAP notices and receive any relocation payments due.

Property Management shall request the following services from the RAP Unit as necessary:

- Service of a Letter of Intent to Vacate on each tenant eligible for relocation assistance payments. Property Management will supply the names, addresses, and other information for the affected tenants and type of notice to be served (see Exhibit 11-EX-34, Service of Notice to Vacate [internal Caltrans link]). This notice will be served in accordance with RAP instructions and the status of the tenant's RAP eligibility (see Form RW 11-35, Letter of Intent to Vacate-90 [internal Caltrans link]). A copy of the Letter of Intent to Vacate that was served shall be returned to Property Management to confirm the effective date of the notice.

© 1994-2025 California Department of Transportation. All rights reserved.

- Service of a Notice to Vacate on the above tenants. A copy of the notice showing the date service was made shall be returned to Property Management as verification of service and notification of the effective date of termination (see Exhibit 11-EX-44, Notice of Termination of Tenancy and Notice to Quit [internal Caltrans link]).

Depending on Region/District/Local Agency policy, either Property Management personnel or RAP personnel may serve the Letter of Intent to Vacate and the Notice to Vacate when tenants ineligible for relocation assistance payments are involved.

In most cases where public-owned property is voluntarily vacated and the length of time remaining before regular scheduled clearance is too short to provide a reasonable period for re-renting, the parcel shall be immediately transferred to clearance status for disposal.

11.16.02.00 Transferring Properties to Clearance Status

The Agent is responsible for thoroughly inspecting and securing the State/Local Agency's property as soon as it becomes vacant and shall make prior arrangements to obtain keys from the vacating tenant. If the vacant property shall not be re-rented, the Agent shall follow the procedures below after receiving the keys:

- Inspect the property, noting possible hazards, vandalism, trash, or personal property left on the premises.
- If personal property is found on the property, the Agent is directed to follow the statutory procedures that are set forth in California Code of Civil Procedure Section 1174 and Civil Code Sections 1980-1991. See Section 11.07.30.01 for further information on handling abandoned personal property. Should the Agent need further assistance in interpreting these provisions of California law, the Agent may consult with Region's/District/Local Agency's Legal for additional advice.
- Inventory all items purchased by the State/Local Agency and document the rental file.
- Determine whether or not the property should be boarded up to protect against vandalism and theft. If other properties in the area have had issues with vandalism, theft, and unlawful occupancy, the Agent should board up the property. Additionally, the Agent should post a no trespassing notice on the property and provide the local law enforcement with a trespass letter of consent providing permission to law enforcement to access the property to enforce trespassing laws.

© 1994-2025 California Department of Transportation. All rights reserved.

- When necessary, submit a task order to the contracted vendor to have trash removed, improvements boarded up, or hazardous conditions abated.
- Arrange for termination or transfer of utility services into State/Local Agency's name. Notify Division of Accounting, Accounts Payable, Utility Section, of changes in utility billing as necessary.

11.16.03.00 Property Management Senior Review

The Property Management shall review all improved rental properties that are transferred to clearance status and shall perform the following functions:

- Verify that entries made in RWPM are correct and complete. Note: Local Agency will use its own computer system.
- Check the parcel rental folder for accuracy of dates and type of activity from close of escrow to date of transfer to clearance status.
- Verify that improvement inventory documentation has been properly maintained and all public-owned items are accounted for.
- When fully satisfied that the improvements should be transferred to clearance status for disposition, affix initials or signature to the vacancy report to approve the transfer.
- Route the parcel rental folder to clerical staff to prepare the utility removal letter for the Agent's signature (see Exhibit 11-EX-36, Utility Removal Letter), ensuring that a copy is sent to Division of Accounting, Accounts Payable, Utility Section. After the utility removal letter has been prepared and mailed, place the parcel rental folder in a "Hold for Clearance" file. Note: Local Agency will process utility removal letters through their accounting division per local agency policy.
- Route a copy of the vacancy report found in the parcel rental folder to Clearance staff to serve notice that certain improvements are now available for immediate clearance.

© 1994-2025 California Department of Transportation. All rights reserved.

11.16.04.00 Advanced Transfers to Clearance Status

Occasionally, it is necessary to remove improvements prior to normal clearance scheduling because one or more of the following conditions exist:

- Retention of substandard improvements that cannot be economically rehabilitated would constitute a health or safety hazard.
- Improvements have been damaged to the point that it is no longer economically feasible to restore them to rentable standards.
- A local government agency has condemned the improvements.

In most cases, the above criteria are equally applicable to removal of improvements from rescinded routes or excess land.

A financial analysis prepared by a qualified person and approved by the DDD-RW/Local Agency administrator shall be attached to the improvement disposal report for disposal of any residential improvements. Comments and recommendations must indicate that the project is environmentally cleared or contain a documented statement about the emergency nature of the removal.

11.16.05.00 Direct Sale Pursuant to SCH Section 118.1

In accordance with SHC Section 118.1, under certain conditions commercial property made excess because it is on a rescinded route or downscoped project must be offered for sale first to the State's tenant at fair market value. The tenant must be leasing or renting the real property from the Department, the tenant must have used and occupied the real property, and the tenant must have made improvements of a value in excess of $5,000.00 on the real property during that time at the tenant's own expense consistent with the terms of the rental or lease agreement with the Department. Upon Excess Land's request, Property Management will identify all eligible properties. For further details, see Excess Land Chapter 16.

Note: SHC Section 118.1 pertains to only Department of Transportation properties and not Local Agency properties.

© 1994-2025 California Department of Transportation. All rights reserved.

11.17.00.00 – HAZARDOUS WASTE AND HAZARDOUS MATERIALS

Note: any references to Local Agencies is in relation to Local Agency use of the Caltrans Right of Way Manual to comply with FHWA requirements.

11.17.01.00 Policy

The Department's policy is to consider fully all aspects of potential hazardous waste sites ensuring that adequate protection is afforded to employees, workers, and the community prior to, during, and after construction. Property Management must be aware of all potential and confirmed sites and any use of hazardous materials on future rights of way. The Region/District must monitor these sites, terminate leases where required, and consider potential clearance of wastes when planning for right of way certification dates.

Note: it is incumbent upon each Local Agency to determine its hazardous waste policy. The following section is a guide to local agencies on how they may address hazardous waste.

11.17.02.00 Definition

A material is hazardous if it poses a threat to human health or the environment. Hazardous materials may be any of a large group of the products listed below. (A partial list is contained in the California Code of Regulations, Title 22, Division 4.5, Chapter 11, Appendix X.)

- Ignitable
- Reactive (subject to spontaneous explosion or flammability)
- Corrosive
- Toxic
- Radioactive

The term "hazardous waste" applies to the storage, deposit, contamination, etc., of a hazardous material that has escaped or been discarded or abandoned and that may be defined in general terms as being any of the above.

© 1994-2025 California Department of Transportation. All rights reserved.

11.17.03.00 General

The Department strives to identify, investigate, and cleanup sites at the earliest opportunity during the project development process. Occasionally, these activities may not be accomplished prior to Property Management involvement. Under a *normal* project development sequence, the entire process is completed in accordance with governmental hazardous waste requirements. The Division of Environmental Analysis (DEA) in coordination with Project Management is the lead unit for the identification, investigation, and cleanup process. Right of Way assists by obtaining necessary rights to enter for testing purposes and by negotiating cleanup agreements prior to acquisition.

On projects where the normal sequence cannot be followed, Right of Way requests DEA to review and identify potential hazardous waste sites and initiates the cleanup process for all **MINOR** hazardous waste problems not requiring a Hazardous Waste Management Plan, such as underground tanks or hazardous material businesses.

All investigative work performed by the Agent should be done in consultation with the District's Hazardous Waste Coordinator (HWC) of the Department's Hazardous Waste Management Branch of DEA. If at any time a formal Hazardous Waste Management Plan is required, the District Hazardous Waste Management Branch of DEA shall assume the lead role.

11.17.04.00 Inventory

Property Management must inventory all properties under its control that have been identified as potential hazardous waste sites, including those with underground tanks. The District HWC should maintain a tracking system for all District sites. Until the properties are cleared and the projects are certified for construction, Property Management must monitor all acquired properties, specifically any that have a potential for becoming hazardous waste sites.

© 1994-2025 California Department of Transportation. All rights reserved.

11.17.05.00 Underground Storage Tanks

An underground storage tank is any one or combination of tanks, including pipes connected thereto, that is used for the storage of hazardous substances and that is substantially or totally beneath the surface of the ground. A tank is considered underground if at least ten percent of the volume of the tank is below the ground surface.

The State Underground Storage Tank Law is contained in Health and Safety Code Section 25280-25299.8, with regulations at California Code of Regulations Title 23, Division 3, Chapter 16 (Sections 2610-2729.1). These sections include Health and Safety Code Sections 25286, 25294, 25295, 25298, and 25299.

All underground storage tanks must be covered by permits issued by the local regulatory agency, and the owner of the property is responsible for obtaining the permit. Examples of such permits are "permit to store a hazardous material" and "permit to operate a hazardous material storage tank." The status of underground storage tanks is also tracked at the State level. Underground Storage Tanks are registered in a State Water Resources Control Board managed database known as GeoTracker. GeoTracker monitors operational underground storage tanks and provides information related to leaking and removed underground storage tanks.

Underground storage tanks on State property should be removed as soon as possible. All inactive tanks shall be removed immediately. Active tanks shall be removed as soon as the property can be vacated. An alternative, in some cases, is to obtain a right to enter and remove the tanks and then consider continuance of the lease.

The DD or authorized delegate must approve any exceptions to the above as current regulations for monitoring underground storage tanks require a substantial expenditure by the Department to comply with installation and operation of leak detection equipment. Only new tanks, or those constructed since January 1984 and that meet all current requirements and regulations, will be considered for possible retention or installation. The lessee is responsible for permits and all costs for monitoring the system. If a new tank is allowed, a provision for removal and cleanup by lessee at expiration of lease must be included.

© 1994-2025 California Department of Transportation. All rights reserved.

11.17.06.00 Tank Removal Procedures

The HWC will obtain the name of the local agency official responsible for underground storage tanks. Since the contractor must obtain the required permits for operating or closure of all existing tanks from the local permitting agency, this information must be included in the removal contract. Also, any contract for tank removal **MUST** include provisions for barricades and cleanup.

Prior to any tank removal, Right of Way must initiate an agreement with the tenant in occupancy and the owner of the property. While Project Development and the project manager have basic responsibility for removal of all tanks, those which have no or only minor leakage can be removed under contracts initiated by Right of Way. These contracts must be approved by the HWC and must contain all the clauses approved by the Division of Procurement and Contracts. Nonleaking tanks may have a minor deposit of product under the tank that can be cleaned up during a tank removal contract. If the leak is major, a Hazardous Waste Management Plan may be required and will be prepared under the direction of Project Development.

11.17.07.00 Potential Surface Contamination

Many properties have the potential for hazardous waste contamination. Examples include service stations and bulk plants, paint companies, machine shops, plating companies, light and heavy industrial manufacturing, dry cleaning establishments, fertilizer companies, junkyards, auto wrecking yards, and muffler shops. Right of Way must notify the HWC in writing when a property may contain either hazardous waste or asbestos containing materials (ACM). Right of Way should request from the HWC:

- An opinion on whether or not hazardous materials are being used or are present on the site.
- An assessment of the risk involved if hazardous materials are present or are being used by the tenant, given the tenant's activities, equipment, handling and storage methods.
- A recommendation as to what storm water best management practices (BMPs) should be implemented to eliminate potential pollutants in storm water discharges from the property.
- A recommendation regarding what periodic inspections, if any, are necessary to ensure that use of any hazardous material does not result in a future hazardous waste problem.

© 1994-2025 California Department of Transportation. All rights reserved.

The HWC will inspect each site and determine that:

- No testing is necessary and will make a statement that no hazardous waste is present; or
- Further investigation is necessary and proceed to hire a consultant to determine if hazardous waste actually exists; or
- There is no hazardous waste present, but hazardous materials are present and being used. The HWC will include recommendation on what future inspections, BMPs, and/or other controls, if any, may be required.

If no hazardous waste or material exists, the Region/District should continue tenancy with an amendment of the lease to include the hazardous waste clause.

If hazardous waste exists and the lessee's operation is causing the waste, the Region/District should notify the lessee to cease such action and terminate the lease. The Region/District should initiate further steps to determine who is responsible for cleanup and when cleanup will take place. Cooperation with the HWC, Legal, and Project Development may be required. The DD or authorized delegate must approve any new lease or lease renewal for a parcel confirmed to contain any hazardous waste.

If no hazardous waste exists but hazardous materials are being used, the risk of allowing the operation to continue with possible cleanup costs and project delays must be weighed against net rent, community impact, and any positive factors. Justification for continuing the lease must be documented and retained in the file.

Where there is a potential for hazardous waste and project certification date is within a three-year period, Right of Way must request the HWC to give a priority review so that any site confirmed to have a hazardous waste will not cause a delay in clearance and subsequent RW Certification.

Removal of improvements that contain asbestos containing material (e.g., siding and insulation) and lead based paint should be coordinated with the HWC. See RW Manual Section 12.03.03.00 for additional information.

© 1994-2025 California Department of Transportation. All rights reserved.

11.17.08.00 Lease Clause for Nonresidential Properties and Information for Tenants

The standard Lease Agreement template contains a clause covering hazardous materials. This clause shall be included in all existing and future nonresidential leases and rental agreements except signboard sites and oil and gas leases, and where in the Region's/District's judgment of hazardous waste problems are extremely unlikely. This exception may include vacant land uses, agricultural uses where chemicals such as fertilizers, herbicides, and insecticides are used but not stored or mixed on the property, grazing uses, recreational uses such as parks and ball fields, and some commercial uses. The Regions/Districts should take a conservative approach to these exceptions and should watch for any changes in use that could involve hazardous materials.

The hazardous waste clause should be included, as an amendment, for all nonresidential leases, without waiting for renewal, for any tenancies that are not excluded; i.e., properties where hazardous waste problems are extremely unlikely.

A list of hazardous materials from the California Code of Regulations, Title 22, Division 4.5, Chapter 11, Appendix X, is extensive and useful, but it should not be considered all inclusive. Agents may obtain a copy of this list and should refer all questions relating to classification of substances to the District HWC.

Additional information contained in California Health and Safety Code Sections 25286, 25294, 25295, 25298, and 25299 may also be obtained from the HWC. Lessees of properties with underground storage tanks shall be provided with a copy of these sections.

Use of the hazardous waste clause and the lessee's listing of hazardous materials asked to be permitted should give the Property Manager notice of potential problems. Before any lease is entered into with a new lessee, however, the Property Manager must inquire into the specific type of use proposed and consider the risk, with advice as needed.

11.18.00.00 – DEPARTMENT-OWNED EMPLOYEE HOUSING

Note: This section of the property management manual does not pertain to Local Agencies.

11.18.01.00 Definition

California Code of Regulations (CCR), Title 2, Division 1, Chapter 3, Subchapter 1, Article 3, Section 599.644 describes state-owned housing as houses, apartments, dormitories, mobile homes, trailers, mobile home pads and trailer spaces. *Employee housing* refers to those facilities that are located at maintenance stations and are owned and maintained by the California Department of Transportation (Department).

11.18.02.00 Policy

Employee housing is considered at maintenance stations only when it is necessary for the direct support of the station. Occupancy of employee housing is limited to permanent employees, assigned to the station where the housing is located, and their immediate family.

See Deputy Directive DD-18-R1, Employee-Occupied Caltrans-Owned Housing for complete policy and procedures.

11.18.03.00 Responsibilities

DDs and Program Managers for HQ RW and Maintenance share responsibility for employee housing in accordance with DD-18-R1.

11.18.04.00 Rental Rates

It is the policy to set rental rates and increase annual rental rates of Department-owned employee housing units to Fair Market Value (FMV) consistent with the Memorandum of Understanding between the State and its employee unions. This is consistent with Section 2301 of the California Department of Human Resources' (CalHR) Human Resources Manual. The Department's employee housing units are occupied by the maintenance workers who work at remotely located maintenance stations. The Memorandum of Understanding that should be referred to for policies related to employee housing is Bargaining Unit 12.

© 1994-2025 California Department of Transportation. All rights reserved.

Any newly created tenancy shall be charged a FMV rental rate. Any employee-tenant who is currently paying less than FMV rent will have the difference between the FMV rent and their actual rent included in their gross income. This difference in rent is reportable taxable income, which is reported to the Internal Revenue Service (IRS), as a taxable fringe benefit. This reporting is completed by HQ on a monthly basis.

11.18.04.01 Rental Rate Determinations

Rental rates must be based on a FMV rent determination appraisal, as performed by the Appraisal Department. All employee housing FMV rent determinations must be submitted to Headquarters. Employee housing FMV rent determinations may be subject to a quality assurance review by Headquarters prior to submission to CalHR. A full rent determination appraisal must be completed once every 5 years. Additionally, the appraisal must be reviewed bi-annually to insure its validity. Furthermore, the Department is required to submit either an annual appraisal or desk review update.

The definition of FMV, for the sole purpose of employee housing, is defined by IRS Regulations Section 1.61-21(b). In general, fair market value is determined on the basis of all the facts and circumstances. Fair market value is the amount an individual would have to pay in an arm's-length transaction. The effect of any special relationship between the employee and employer must be disregarded.

For a complete explanation of rental rate determinations, please refer to Section 2301 of the CalHR Human Resources Manual.

11.18.04.02 Rental Rate Increases

Prior to increasing the rent on an employee housing unit, certain conditions must be met. The conditions include the following:

- A FMV rent determination appraisal must be completed.
- The FMV rent determination appraisal must be submitted to the California Department of Human Resources (CalHR).
- The employee housing unit must be deemed habitable meeting the general requirements specified in California Civil Code Section 1941-1941.1. The Agent shall inspect the employee housing unit and complete CalHR Form 165, State-Owned Housing Habitability Inspector Review. CalHR Form 165 must be returned to HQ in order to forward the form to CalHR for their approval.
- CalHR must approve the proposed rental rate increase.

© 1994-2025 California Department of Transportation. All rights reserved.

For any employee-tenant paying less than FMV, the Department shall increase the rent up to 25% each year up to FMV in accordance with Section 2301 of the CalHR Human Resources Manual and Article 20.7 of the Memorandum of Understanding with Bargaining Unit 12.

Once CalHR approves the rental rate increase, the Agent must provide the employee-tenant with written notice of the increase, either by delivering a copy to the employee-tenant personally or by serving a copy by mail. If the rental increase is 10% or less, the employee-tenant must be provided a 30-day notice. If the rent increase is over 10%, the employee-tenant must be provided a 90-day notice in accordance with Section 827 of the Civil Code.

The Agent must then notify Maintenance of the new rental rate and the effective date of the increase for completion and submission of Form STD 650 to the State Controller's Office in accordance with Manual Section 11.18.08.00.

11.18.05.00 Utilities

It is the Department's policy ***not to*** furnish utilities for employee housing. Exceptions to this policy may be considered on an individual basis and require approval of the Maintenance Program Manager.

All employee housing units should be equipped with separate tanks and/or meters for fuel and electricity. If the units are not equipped with separate tanks and/or meters, the Agent should make a recommendation to Maintenance to arrange for separate tanking/metering for each employee housing unit.

At locations where the Department is supplying utilities and the Department can substantiate the costs attributable to the specific employee housing unit, such as the costs to fill a propane tank for an individual unit, the Department shall impose such charges consistent with its costs. If separate meters have been installed, the Maintenance Supervisor will read the meters monthly and Accounting will bill the employee-tenants.

© 1994-2025 California Department of Transportation. All rights reserved.

If an employee housing unit is on a common utility system, a flat monthly rate shall be charged to the employee in accordance with the California Code of Regulations, Title 2, Division 1, Chapter 3, Subchapter 1, Article 3, Section 599.642 as shown below:

Location		Water	Fuel	Electricity
Class 1	Housekeeping	$3.50	$9.00	$9.00
Class 1	Non-Housekeeping	$1.75	$4.50	$4.50
Class 2	Housekeeping	$5.50	$15.00	$15.00
Class 2	Non-Housekeeping	$2.75	$7.50	$7.50

Housekeeping *– units of 501 square feet or more that contain regular cooking facilities.*

Non-Housekeeping *– units that do not contain regular cooking facilities and all units of 500 square feet or less.*

Class 1 *– within 25 miles of and not more than 40 minutes travel time, one way, from a community with a year-round population of 2,500 or more.*

Class 2 *– all other areas.*

The rental agreement for each unit shall specify utilities to be paid directly by the employee-tenant to commercial suppliers. If the maintenance station supplies utilities, the rental agreement shall specify the method of reimbursement by the employee-tenant.

11.18.05.01 Utility Expenses Increase

The District cannot raise utility expenses on a tenant until after:

1) The FMV has been determined for utility expenses.
2) The appraisal has been submitted to CalHR.
3) A habitability checkoff list has been completed after all habitability repairs have been made and inspected and submitted to CalHR.
4) CalHR has approved the FMV for utility expenses.

© 1994-2025 California Department of Transportation. All rights reserved.

Per Article 20.7 of the Memorandum of Understanding with Bargaining Unit 12, utility charges for State-owned employee housing may be increased by the State as follows:

- Where employees are currently paying utility rates to the State, the State may raise such rates up to 8 percent of the rates effective as of July 1, 1999. CalHR has clarified this statement and has advised that the utilities may be raised up to 8 percent annually.
- Where no utilities are being charged, the State may impose such charges consistent with its costs.
- Where utilities are individually metered to State-owned housing units, the employee shall assume all responsibility for payment of such utility rates, and any increases imposed by the utility company.

Prior to increasing the utility rate on an employee housing unit, certain conditions must be met. The conditions include the following:

- The employee housing unit must be deemed habitable meeting the general requirements specified in California Civil Code Section 1941-1941.1. The Agent shall inspect the employee housing unit and complete CalHR Form 165, State-Owned Housing Habitability Inspector Review. CalHR Form 165 must be returned to HQ in order to forward the form to CalHR for their approval.
- CalHR must approve the proposed rental rate increase.

Once CalHR approves the utility rate increase, the Agent must provide the employee-tenant with a 30-day written notice of the increase, either by delivering a copy to the employee-tenant personally or by serving a copy by mail.

The Agent must then notify Maintenance of the new utility rate for completion and submission of Form 650 to the State Controller's Office in accordance with Manual Section 11.18.08.00.

Note: Rental increase and utility increases can be appraised together in the same document. The unified document then can be reviewed, approved, and adjusted accordingly together.

© 1994-2025 California Department of Transportation. All rights reserved.

11.18.06.00 Employee Housing Rental Agreement

Use of the Employee Housing Rental Agreement template is mandatory for occupancy of employee housing units. Rental agreements are not required for dormitory occupants. Please refer to the specific agreement template on the Property Management webpage (internal Caltrans link).

11.18.07.00 Dormitory Accommodations

California Code of Regulations, Title 2, Division 1 Chapter 3, Subchapter 1, Article 3, Section 599.643 governs dormitory accommodations for employees.

A dormitory is a housing unit which meets one of the following:

- Occupied by two or more unrelated employees.
- Which must be vacated monthly to accommodate a relief employee.
- Unsuitable for housing dependents of employees.
- Which provides sleeping accommodations for more than one employee in a single room.

The monthly rate for each available accommodation shall be:

- $18.00 per month in a Class 1 location.
- $12.00 per month in a Class 2 location.

If an employee occupies a dormitory accommodation for less than a complete pay period, then the employee shall pay $0.75 per day up to a maximum of $18.00 per month in a Class 1 location or $0.50 per day up to a maximum of $12.00 per month in a Class 2 location.

If an employee occupies a dormitory accommodation for any day, or any portion thereof, because the occupancy is a requirement of the job, then the employee shall not be required to pay any rent for that day. These circumstances will occur when it is necessary for the employee to be available and/or to reduce response time to maintain public safety.

© 1994-2025 California Department of Transportation. All rights reserved.

11.18.08.00 Payment of Rent

Rent is payable monthly in arrears by payroll deduction in accordance with California Department of Transportation (CalHR) rules. District Maintenance initiates Miscellaneous Deduction Change Report (Controller's Form 650) to establish a payroll deduction for a new account or to change a rental. The original is sent to the State Controller's Office with copies to Accounting, Personnel, and Right of Way. Deduction Code 011 is used for rent, and a monthly report for Deduction Code 011 is available by District from the State Controller's Office. Accounting and District Right of Way should use this report to monitor rental rates and income for employee housing.

Accounting is responsible for maintaining a list with employee's name, amount deducted for rent, and amount for utilities for each employee housing unit.

District Maintenance is responsible for notifying Accounting, Personnel, and Right of Way if there is a new occupant or an employee is leaving.

11.18.09.00 Possessory Interest Tax

Since there is a private, beneficial use of publicly-owned, non-taxable real property to the employee-tenant, a taxable possessory interest exists. The employee-tenant is responsible for any possessory interest tax that the County may impose and is responsible to the County Tax Assessor. The lien holder for the possessory interest is the employee-tenant renting the employee housing unit on January1. If the employee-tenant vacates the employee-housing unit after January 1, the employee-tenant is still responsible for the preceding 12 months.

Per the California Code of Regulations, Title 2, Division 1, Chapter 3, Subchapter 1, Article 3. Section 599.648, since employees occupying state-owned housing are not reimbursed for possessory interest taxes paid by them, the Department should consider the effect of such taxes in its periodic reviews and adjustments of rental rates with the objective of maintaining equality between state employees renting state-owned housing and individuals renting privately-owned housing. The rental rates are determined by a fair market rental rate from private rentals; private landlords customarily incorporate taxes as a component of the market rate; if the possessory interest taxes are not accounted for in the rental determinations, the employees are essentially being overcharged for rent since they pay the possessory interest taxes themselves.

© 1994-2025 California Department of Transportation. All rights reserved.

11.18.10.00 Maintenance and Repairs

Employee housing units shall be maintained in a safe and habitable condition. The maintenance standards for Department's rental properties contained in this chapter shall apply to employee housing and procedures for inspections and maintenance contracting shall be followed. The Agent is responsible for conducting all necessary inspections (move-in, move-out, and an inspection once every 12 months) and advising Maintenance of the deficiencies that must be remediated.

Because of the distance of some employee housing units from urban areas, it may be difficult to have repairs done by contractors. In these cases, maintenance station personnel may be able to purchase materials and perform the repair work. Rental offsets shall not be used for employee housing. Costs of work done in this manner shall be documented in the rental file.

It is the responsibility of the Division of Maintenance to obtain, authorize, and allocate funds necessary for the maintenance and repair of employee housing facilities. Maintenance is also responsible for remediating the deficiencies of employee housing units by purchasing materials and performing the repair work or hiring contractors to perform the repair work by the means of a service contract or use of a Cal-Card. It is at the District's discretion to allow the Agent to assist Maintenance in requesting and managing service contracts for repair work. The funds expended for such repair work shall not come out of Right of Way Property Management's 058 funds. Additionally, all hours spent by the Agent for all work involved to inspect and assist in repairs of employee housing shall be charged to a Maintenance project identification number. Right of Way shall contact Maintenance to obtain the correct project identification number and arrange for the Agent to be added to the Project Resource and Schedule Management (PRSM) database (internal Caltrans link) to allow for charging.

11.18.11.00 Carpeting for Employee Housing

The purchase of rugs or carpeting for employee housing shall be in accordance with DGS' Environmentally Preferable Purchasing Best Practices Manual. All carpet is required to be independently certified to meet the criteria of the California Gold Sustainable Carpet Standard. This applies to all carpet purchased unless it is for patching and repair of carpet within an existing field of carpet. In addition, purchase must be in compliance with existing procurement statutes, regulations, policies, and procedures.

© 1994-2025 California Department of Transportation. All rights reserved.

11.18.12.00 Surplus Property

When employee housing is no longer required for maintenance station staff due to a change in the station's mission or availability of private housing, the housing shall be eliminated by transferring the property to District Right of Way for disposal. These houses should be vacant when they are transferred to Right of Way. If occupied, however, Maintenance shall request Right of Way to terminate tenancies. Additionally, if a housing unit is vacant for more than one year, it will be presumed that it is not needed and will be subject to disposal, unless an exception is requested and granted.

11.18.13.00 Reporting Requirements

California Code of Regulations, Title 2, Division 1, Chapter 3, Subchapter 1, Article 3, Sections 599.640-648 requires Departments with state-owned properties to 1) establish processes and procedures to annually assess the FMV of their properties and 2) report the employees' taxable income associated with employer-provided housing to the State Controller's Office.

California Code of Regulations, Title 2, Division 1, Chapter 3, Subchapter 1, Article 3, Section 599.644(c) states, "At the direction of the Department, and pursuant to its delegation of such statutory authority, the appointing powers shall review the monthly rental and utility rates every year and report the rates to the Department." The Department referenced to in the California Code of Regulations is CalHR. The Department of Transportation has the responsibility to submit the following information to CalHR annually:

- County Code
- Street Address
- Current Rents Name
- Occupancy Date
- Fair Market Value
- Percent of Increase from Last Survey
- If Utilities Are Included in Rent
- Property Name
- Residence Type and Residence Number
- Renters Classification
- Monthly Rent
- Date of Fair Market Value Appraisal
- Monthly Utility Rate

HQ RWLS shall maintain a current list of all information and report to CalHR on an ongoing basis.

© 1994-2025 California Department of Transportation. All rights reserved.

11.18.14.00 Storm Water Requirements

Because employee housing is located at maintenance stations, it is covered by the Department's Statewide Storm Water Permit and Storm Water Management Plan (SWMP). Storm water guidance discussed elsewhere in this chapter is applicable to employee housing.

© 1994-2025 California Department of Transportation. All rights reserved.

11.19.00.00 – STATUTE AUTHORIZED USE – HOMELESS SUPPORT

Note: This section of the property management manual does not pertain to Local Agencies.

11.19.01.00 State Statutes

Occasionally the State Legislature will pass legislation authorizing certain uses, either at or below fair market rent, for Department-owned property. The State Legislature, in response to the housing crisis in California, has passed numerous pieces of legislation authorizing the use of Department-owned property for the purpose of conducting a temporary emergency shelter or feeding program. Although the use is authorized, the Department is not mandated to allow such uses on Department-owned property. Regions/Districts must become familiar with the different statutes since some statutes specifically exclude the use of properties deemed as excess. Currently, the various statutes authorizing the use of Department-owned property for conducting a temporary emergency shelter or feeding program includes the following:

- Streets and Highways Code 104.16: San Francisco
- Streets and Highways Code 104.17: Stockton and Santa Barbara
- Streets and Highways Code 104.18: San Diego
- Streets and Highways Code 104.21: Stockton
- Streets and Highways Code 104.24: Oakland
- Streets and Highways Code 104.25: San Diego
- Streets and Highways Code 104.26: Los Angeles and San Jose
- Streets and Highways Code 104.30: Statewide

Streets and Highways Code 104.30 (SHC 104.30) was added by the passage of Senate Bill 211 in the 2019-2020 Legislative Session. SHC 104.30 makes available the Department's airspace or real property for the purpose of conducting a temporary emergency shelter or feeding program. This statute essentially makes available any real property owned by the Department to a local or state agency as a potential temporary emergency shelter or feeding program site. Please note that SHC 104.30 remains in effect until January 1, 2029, and is repealed as of that date.

If any Local Public Agency, who implements their own transportation projects, is subject to similar legislation authorizing similar uses on property owned by the Local Public Agency, the Local Public Agency should follow guidelines outlined in this section of the Manual.

© 1994-2025 California Department of Transportation. All rights reserved.

11.19.02.00 Site Identification

Due to the complexities and potential environmental impacts of developing a temporary emergency shelter or feeding program, site suitability and allowable uses of the site shall be determined through a Region/District "Round Robin" review process, which shall include, at a minimum, the Region's/District's Legislative Affairs Division and Division of Environmental Analysis. On sites that are being held for future right of way, the Division of Transportation Planning and the Division of Construction must be included in the "Round Robin" review process. The Region/District should consult all necessary Divisions to determine if a site is suitable.

Any improvements constructed or modified on the site pursuant to SHC 104.30 do not require approval from the State Fire Marshal since the local authority in which the property is located has jurisdiction over the enforcement of building code standards. Additionally, subdivision (d) of SHC 104.30 authorizes the local authority that has jurisdiction over the enforcement of building code standards to enforce the building codes for temporary emergency shelters or feeding programs for any lease executed for the purpose of a temporary emergency shelter or feeding program by any section of the Streets and Highways Code. Subdivision (d) of SHC 104.30 essentially removes the State Fire Marshal from enforcing building standards, issuing building permits, and issuing certificates of occupancy from January 1, 2020, until January 1, 2029, for any emergency shelter or feeding program developed pursuant to any section of the Streets and Highways Code.

Considerations of a suitable site must include access, geography, seismic activity, traffic patterns, etc. Local agencies must be encouraged to engage the community for possible solutions, needs, and wants.

When developing a site, the Department shall approve any improvements or construction on the site; said improvements or construction shall be erected or modified in compliance with the minimum standards adopted, or enacted municipally, pursuant to Chapter 7.8 (commencing with Section 8698) of Division 1 of Title 2 of the Government Code or the minimum standards provided in the 2019 California Building Code Appendix O, the 2019 California Residential Code Appendix X, and any future standards adopted by the Department of Housing and Community Development related to emergency housing or emergency housing facilities.

© 1994-2025 California Department of Transportation. All rights reserved.

Pursuant to Chapter 7.8 (commencing with Section 8698) of Division 1 of Title 2 of the Government Code, some political subdivisions have the authority to adopt by ordinance reasonable local standards and procedures for the design, site development, and operation of shelters and the structures and facilities therein in lieu of compliance with local building approval procedures or state housing, health, habitability, planning and zoning, or safety standards, procedures, and law. In order to do so, there must be a declaration of a shelter crisis by the political subdivision and the political subdivision's draft ordinance must be approved by the Department of Housing and Community Development to ensure it addresses minimum health and safety standards.

Additionally, pursuant to Chapter 7.8 (commencing with Section 8698) of Division 1 of Title 2 of the Government Code, the provisions of any state of local regulatory statute, regulation, or ordinance shall be suspended, upon the declaration of a shelter crisis, if compliance would in any way prevent, hinder, or delay the mitigation of the effects of the shelter crisis. Political subdivisions may enact municipal health and safety standards, in lieu of prescribed standards, to be operative during the shelter crisis consistent with ensuring minimal public health and safety.

11.19.03.00 Rental Rates

The rental rates for the use of Department-owned property is specified in the various statutes. At this time, all of the aforementioned Streets and Highways Codes called out in Section 11.19.01.00 have a specified rental rate of $1.00 per month.

In addition to the rental rates, the various statutes also specify the administrative fees that the Department may charge local agencies to cover the support costs expended by the Department in developing and administering the lease.

The administrative fee specified in the various statutes range from $500.00 per year to $5,000.00 per year, unless the Department determines that a higher administrative fee is necessary to cover the Department's costs. Of all the Streets and Highways Codes called out in Section 11.19.01.00, only SHC 104.30 caps the annual administrative fee, irrespective of the Department's determination of the administrative fee necessary to cover the Department's costs, not to exceed $15,000.00. At this time, the Department's policy is to charge the local agency $500.00 for administrative fees, unless the lease is allowed pursuant to SHC 104.30 in which case the administrative fee will be $5,000.00, while tracking time with a special designation in order to more accurately estimate what the actual support costs are for these leases. This

© 1994-2025 California Department of Transportation. All rights reserved.

information may be considered for future administrative fees charged for lease developments.

In order to closely monitor and track the Department's actual expenses associated with developing and maintaining these types of leases, all work associated with these leases must be charged to a specific "Special Designation" as instructed below.

Requesting a Special Designation: Complete form FA-1036 (REV 06/2018) (internal Caltrans link) and email the completed form. Reporting Codes must be assigned for **each** separate homeless lease account. For the following three sections, please complete the form in the following manner:

- **Reporting (10 characters maximum):** The reporting code should be constructed as "HOMEL", followed by the two-digit District number, followed by a unique 3-digit number the District assigns (it is imperative that this number does not conflict with any Airspace tenancy numbers). For example – "HOMEL04001" would be a potential reporting code for a District 4 homeless lease.
- **Short name (15 characters maximum):** Short name should be the complete tenancy number.
- **Reporting Code Name (60 characters maximum):** This name should be "Homeless Lease", including the space between the two words, and the full tenancy number including the pertinent dashes. For example – "HOMELESS LEASE 04-123456-0001-01" would be a potential reporting code for a District 4 homeless lease.

11.19.04.00 FHWA Approval

If the site identified was acquired with Title 23, United States Code, funding, FHWA approval must be obtained for leasing the site at less than fair market value. As discussed in Manual Section 11.01.10.00, the Region/District shall submit a written Public Interest Finding (PIF) to HQ RW for submission to FHWA for the approval of the statutory less than fair market rental rate.

© 1994-2025 California Department of Transportation. All rights reserved.

11.19.05.00 Rental Agreement

Please refer to the specific lease template on the Property Management webpage (internal Caltrans link). If any Local Public Agency, who implements their own transportation projects and may be subject to be a lessor for any such homeless support use, requires access to the lease template on the Property Management intranet webpage (internal Caltrans link) may contact a HQ RW liaison for further assistance. The HQ RW liaison contact information may be found on the Property Management webpage (internal Caltrans link). The lease template will, for consistency, closely mirror the Airspace Right of Way Use Agreement templates specifically designed for homeless uses. Any changes to the templates, excluding information pertaining to site specific developments, must be approved by HQ and the District's legal office. Please send all proposed changes to your HQ liaison.

The DD or authorized delegate is authorized to approve all temporary emergency shelter or feeding program leases.

11.19.06.00 Term

Temporary homeless support leases shall be for a maximum of three years, unless the lease is pursuant to a statute that specifically dictates the term of the lease agreement. Additionally, the Region/District shall not execute any leases after the sunset date specified in the specific statute. Furthermore, the Region/District shall not allow the term of any lease to extend beyond the sunset date specified in the specific statute. The intent of such statutes authorizing the use of Department-owned properties for homeless support sites is not to permanently shelter people, but to erect these facilities as an emergency measure. Should a local or state agency wish to extend a lease term beyond three years, or renew the lease after three years, the Region/District shall obtain approval by HQ RW. Please send all requests for extended terms or renewals to your HQ RW liaison.

11.20.00.00 – DELEGATIONS

11.20.01.00 Delegations of Authority

As referenced in Section 2.05.01.00, the delegation matrix for Property Management is noted below. The delegation matrix reflects the associated policy and RW Manual reference for each delegated item. The matrix also distinguishes whether an item is delegated to the District or Headquarters (HQ) level, along with the lowest level of sub-delegation authorized.

Note: This section of the property management manual does not pertain to Local Agencies.

12.01.00.00 – CLEARANCE AND DEMOLITION – GENERAL

12.01.01.00 Purpose

The District Clearance function is responsible for the orderly clearance of property with minimum detrimental effect on the community. Clearance & Demolition as a function refers to the act of demolishing, selling or transferring State-owned improvements or personal property, which includes discarding of improvements or personal property of negligible value or unsellable. All improvements and personal property are carefully inspected to determine whether the improvements should be demolished or sold. Major factors governing the demolition or sale decision are:

- Structural condition and functional utility of the improvements.
- Area in which items/structures are located.
- Local ordinances affecting movement and rehabilitation of improvements.
- Presence of hazardous materials such as lead or asbestos on or within improvements.

The District should remove improvements through the demolition process unless prescribed elsewhere in this chapter. If, for example, an improvement is determined to be historically significant and demolition of the improvement is not an approved clearance option; then the removal of that improvement may occur through sale or transfer.

The District's Right of Way staff member who performs Clearance and Demolition activities is referred to as the Clearance Agent. This could be a dedicated role, or one of multiple duties of a Right of Way Agent. The Right of Way Agent undertaking the role of Clearance Agent will also likely assume the role of Caltrans Contract Manager (CCM) for all Clearance and Demolition contracts.

12.01.02.00 Approval Authority

Approval is in accordance with the delegations discussed in Chapter 2, Policy, and shown on the delegation matrix located at the end of this chapter. Any approvals not specifically delegated are retained by HQ, within the Division of Right of Way and Land Surveys.

© 1994-2025 California Department of Transportation. All rights reserved.

12.01.03.00 Federal Participation in Revenue and Expenses

Federal funds may be used to cover costs for the clearance of improvements and disposal, maintenance, and protection of real property, per 23 CFR Section 710.203(b)(4). Right of Way must provide Accounting with information to identify and charge Federal participating revenue and expenses accurately. Instructions for completing accounting documents are included on the documents. District Planning and Management (P&M) staff can provide additional information.

12.01.04.00 Other Applicable Federal Regulations

Policies and procedures for the management of real property acquired in connection with a Federal-aid transportation project are contained in 23 CFR Subpart D – Real Property Management 710.401 through 710.409. The policies are applicable to all State and political subdivisions that manage real property acquired for transportation projects in which Federal funds are used for any right of way costs.

12.01.05.00 File Content

As part of the District's permanent parcel file, the District Clearance Agent maintains a list with the following information for each improved property:

- **Inventory** of all improvements and personal property acquired as a part of the right of way. (See 12.01.11.00)
- **Accounting** of any sale or transfer of such improvements and personal property and the recovery payments received.
- **Methods** used to clear acquired right of way improvements and personal property through sale, salvage, owner retention, demolition, or other means.

Where multiple improved properties (e.g. multiple separate occupying businesses) exist within a single State parcel, a separate list for each improved property is required.

In addition to the District's permanent parcel file, the District Clearance Agent shall create and maintain a separate Clearance file on each parcel requiring clearance or demolition. A complete copy of the Clearance file shall be retained by the District for 5 years from the date of last payment on any contract for demolition on that parcel; the file retention period shall be

© 1994-2025 California Department of Transportation. All rights reserved.

extended to 7 years if the demolition contract was audited by another agency or entity, was subject to a California Public Records Act (CPRA) request or part of a lawsuit during those first 5 years. For parcels without demolition contracts administered by the District Clearance Agent or other Right of Way Agent, the initial Clearance file retention period is 5 years from the date of acquisition of the parcel. The file shall contain all Clearance related information regarding the acquired State parcel including, but not limited to:

- Copy of Lead / Asbestos surveys.
- Inventory Disposal Record (IDR) and related Inventory Disposal Authorization (IDA).
- Stormwater plan (WPCP/SWPPP), related inspections, and photos of installed BMPs.
- Any relevant communication between the Clearance agent and other departments within Caltrans, consultants or other agencies/governmental entities.
- All-clear reports/ recycling reports, and debris and hazmat disposal manifests.
- A copy of any permits obtained from the contractor.
- A copy of the "Letter of Disconnect" for electrical and gas service removal.
- Aerial maps and any documents that identify the parcel/project site.
- Invoices.

The Clearance Agent shall keep secure all vendor certified payroll records for any managed contract involving work on the parcel for 5 years after the date of the last payment under the contract; that retention period shall be extended to 7 years for contracts audited by another agency or entity, subject to a California Public Records Act (CPRA) request or part of a lawsuit during those first 5 years. For contracts managed by another District Right of Way Agent, payroll records involving Clearance work may be secured with the District's other contracts, subject to the above retention rules.

On a regular basis, the Clearance Agent shall furnish the Right of Way Property Manager with a copy of pertinent documents contained with the parcel Clearance file to ensure the parcel's data is retained within the District's permanent parcel file.

© 1994-2025 California Department of Transportation. All rights reserved.

12.01.06.00 Right of Way vs. Construction Item

Clearing acquired improvements is considered a right of way item when performed separately from the construction contract per 23 CFR 710.307(a). Clearing is a construction item when performed as part of the project construction contract.

12.01.07.00 Inventory Disposal Record

The Acquisition Agent provides all the information required by the Inventory Disposal Record (IDR), Form RW 12-01 (internal Caltrans link), as part of the Memorandum of Settlement (MOS) on properties that include the purchase of improvements or personal property. The IDR is used for accountability of improvements and personal property purchased through Right of Way transactions, and to record the discharge of such accountability at the time of clearance. The IDR is prepared by the Acquisition Agent and a Register Number is assigned when the MOS is prepared. (See Acquisition Manual Section 8.50.03.00 and Property Management Manual Section 11.03.02.00.) Once acquisition is complete, maintenance of the IDR becomes the responsibility of the Clearance Agent until clearance is complete, then this responsibility passes on to the District Property Manager until the property is sold or turned over to Construction.

12.01.08.00 Improvement Disposal Authorization

The Improvement Disposal Authorization (IDA), Form RW 12-02 (internal Caltrans link), is a formal document used to convey the authority to dispose of State-owned improvements or State-owned personal property. Approval of the IDA is authority to proceed with disposition of the improvements as specified. No improvements or personal property shall be disposed of in a manner at variance with the approved IDA without prior approval of a Senior Right of Way Agent with the responsibility for managing the Property Management or Clearance and Demolition unit.

© 1994-2025 California Department of Transportation. All rights reserved.

12.01.09.00 Preparing the IDA

As a Best Business Practice, it is recommended that the IDA document be prepared by either the Clearance staff or Property Management staff. The author who drafts the IDA includes an explanation and reason for sale or demolition. Typical examples are:

A. To clear for construction (specifying proposed project certification date).

B. Not rentable due to poor condition and not warranting repair.

C. To prevent theft and acts of vandalism or to uphold public health & safety.

D. Moving is not feasible or legally permissible.

For requested demolition of State-owned property under example B, *not rentable due to poor condition and not warranting repair*; a financial analysis, prepared by a qualified person and approved by a Senior Right of Way Agent, must be attached to the IDA for any disposal of improvements. Under example B, the financial analysis could contain a bid for rehabilitation and a bid for demolition, along with supportive rationale; this could be illustrated with equations or drafting commentary as to why demolition was the chosen alternative over rehabilitation. Under examples C & D, documentation must be included with the IDA as to why demolition or moving was the chosen alternative. Appropriate documentation to attach to an IDA would include, but not be limited to, police reports, diaries documenting theft/vandalism/degradation of improvements, contractor proposals, photos and any public complaints received by the Department. Comments and recommendations must indicate whether the project has been environmentally cleared.

Recommended minimum acceptable bid must be included in IDAs requesting disposal of items such as buildings, furniture, and equipment by public sale. The minimum bid amount is also set out as a designated percentage of the estimated market value of the improvements or personal property listed in the IDA. Estimated market value of improvements and listed personal property may be developed and provided by Appraisal or Acquisition Agents as part of the parcel Acquisition process. Any large difference between the estimated market value and the recommended minimum bid amount must be explained in writing attached to the IDA when the value of the minimum bid is set any lower than 25% of the estimated market value.

A Senior Right of Way Agent responsible for managing the Property Management or Clearance and Demolition unit approves the IDA.

12.01.10.00 Improvement and Personal Property Definition

For purposes of this inventory procedure, "improvements and personal property" means those structures, improvements, or personal property (such as fixtures and furniture) whose disposal requires an IDA. Miscellaneous items purchased as part of the real estate, such as air coolers, carpets, gasoline pumps, compressors, weigh scales, and underground tanks, are listed on the IDA. This applies whether the items are to be sold, demolished, or transferred to another department or agency. Improvements such as landscaping and driveways that normally are cleared with Right of Way contracts or by the road contractor as part of clearing and grubbing need not be listed.

12.01.11.00 Improvement and Personal Property Inventory

The Clearance Agent specifies the reason and recommended manner of disposal on the IDA.

The IDR, Form 12-01, and the Register, Form 12-03 (internal Caltrans link), collectively record the disposition of improvements and personal property and provide accountability during State's ownership. The demolition, sale, or loss of State-owned improvements or personal property should be documented by updating the IDR in both the Clearance and the District permanent parcel file as those events occur.

12.01.12.00 Numbering of IDAs and IDRs

IDAs and IDRs carry the Parcel Number, Improvement Register Number (generated by the District's Acquisitions Unit), Project ID number, Co. Rte. and KP/PM, and Federal-aid Project Number. District filing is by Parcel Number.

12.01.13.00 Active Inventory of Improvements File

The District shall maintain a file of active IDRs. A copy of the newly approved IDA for a parcel is placed in this file along with the IDR document. When all improvements have been cleared in accordance with the IDA and the "Disposal Record" section (back) of the IDR has been completed, these two documents are transferred to the District's permanent parcel file.

When multiple IDAs are required to dispose of improvement items carried under one Register Number, the disposal information may be transcribed from

© 1994-2025 California Department of Transportation. All rights reserved.

the multiple reports to the original IDR form. The original IDAs are filed in the permanent District parcel file.

12.01.14.00 Security Incident Reporting Procedures for Lost or Stolen Property

Government Code (GOV) Section 14613.7 requires each State agency to be protected by the California Highway Patrol (CHP). The CHP personnel shall document all crimes, miscellaneous law enforcement-related incidents, or services provided on State-owned or State-leased property for statistical record keeping purposes. All notifications of an incident and/or crime shall be expeditiously directed to the Department's Statewide Operations Security (SOS) Office via email or fax no later than the third working day following the discovery of an incident and/or crime; this same notification shall also be delivered to the District Security Coordinator.

Incidents/crimes involving injury or death of individuals or property losses totaling over $500 shall be reported no later than the first working day following the discovery or notification.

A STD. 99 form, which is used to "Report Crime or Criminally Caused Property Damage on State Property," shall be prepared for all crimes or incidents occurring on state-owned or state-leased property and sent to:

Caltrans – Statewide Operations Security Office
1120 N Street, Mail Station 55
Sacramento, CA 95814

For additional information on the security protocol, see the Statewide Operations Security Manual (internal Caltrans link).

12.01.15.00 California Highway Patrol – STD. 99 Reporting Form

Whenever CHP personnel respond, the STD. 99 form shall be requested by the Right of Way agent to be prepared by the CHP officer responding to the crime/incident. The STD. 99 shall be forwarded by the SOS or District Security Coordinator (SC) to the CHP area office having jurisdiction of where the incident occurred, so it can be entered into the State Crimes Automated Reporting System (SCARS) within ten (10) days of the date of incident. The District SC will provide a copy to SOS. The SOS will forward a copy to the State Auditor and the California Department of Finance.

© 1994-2025 California Department of Transportation. All rights reserved.

For incidents on State-owned or State-leased property resulting in no law enforcement contact, or if a law enforcement agency other than the CHP responds, the STD. 99 must still be completed and submitted by the person reporting the crime/incident and forwarded by the District SC to the local CHP area office having jurisdiction where the incident occurred. The Form should be forwarded within ten (10) business days of the date of the incident. The District SC will forward a copy to the State Auditor and the California Department of Finance.

The STD. 99 is NOT required for lost, stolen or damaged property that was lost, stolen or damaged at a location not owned or leased by the State.

The Clearance Agent shall update the IDR to reflect lost or stolen property; a copy of the STD. 99 should be placed in both the Clearance and permanent District parcel file.

For additional information regarding the California Highway Patrol and the STD. 99 reporting form, please visit the Crime Incident Reporting System.

© 1994-2025 California Department of Transportation. All rights reserved.

12.02.00.00 – PRE-CLEARANCE CONSIDERATIONS

12.02.01.00 General

All property held for future projects shall be rented and cleared of improvements in such a manner that the State receives maximum economic return. The retention of improvements is generally controlled by the date the property is needed; or other considerations outlined in section 12.01.09. Disruption of a community shall be minimized by scheduling clearance in an orderly manner. The Clearance Agent shall be present daily on active clearance sites to ensure order during the work. The Clearance Agent shall ensure that improvements are tested for Lead, Asbestos and other miscellaneous toxic materials covered in Section 12.05.00.00 of this chapter, prior to clearance work.

12.02.02.00 Advanced Transfers to Clearance Status

Occasionally it is necessary to remove improvements prior to normal clearance scheduling when the improvements are:

- Run-down or dilapidated.
- On rescinded routes.
- On excess land.

Advanced clearance of improvements shall be approved by a Senior R/W Agent signing a completed IDA form, as outlined in section 12.01.09.00, with the appropriate level of documentation attached to the completed IDA.

The underlying Department project must be environmentally cleared by the Division of Environmental Analysis (DEA) prior to commencement of the clearance work; see the following section (12.02.03.00) for further information relating to the DEA.

12.02.03.00 Division of Environmental Analysis

The Division of Environmental Analysis (DEA) is responsible for the implementation of Caltrans policies, programs, and procedures concerning environmental considerations, analysis, and compliance with environmental

© 1994-2025 California Department of Transportation. All rights reserved.

laws and regulations under California Environmental Quality Act (CEQA) and National Environmental Policy Act (NEPA) as well as other state and federal regulations.

The Clearance Agent shall work closely with staff from DEA throughout the clearance process; DEA provides evaluations, guidance and formal recommendations in regard to cultural, biological, historical and hazardous materials on Right of Way Clearance and Demolition projects. See the Division of Environmental Analysis for more information.

12.02.04.00 50+ Year Old Structures

All Department-owned historic structures are subject to the provisions of Public Resources Code 5024; structures 50 years and older require an environmental evaluation to ensure they are not historically significant; such structures deemed historically significant may not be demolished. DEA is the responsible party for completing that evaluation and will provide acceptable alternatives to demolition when demolition is not permissible. No demolition, sale or transfer of a 50+ year old structure shall occur until a formal evaluation is completed and such action is approved by DEA. If the Department purchased a property with improvements that were built less than 50 years prior to the acquisition, but the improvement(s) have aged to 50 years or older during the Department's ownership period; that improvement shall be re-evaluated by DEA. The District Clearance Agent should ensure project parcels have already been cleared by DEA prior to requesting a formal evaluation.

Prior to right of way clearance of a 50+ year old structure, the Clearance Agent annotates the Clearance file with the appropriate language and supporting documentation as follows:

- The historic structure was evaluated for compliance with Federal and State regulations relative to its sale, transfer, or demolition; and if necessary, all required mitigation work has been completed. A copy of the evaluation document and record of the completed mitigation work shall be included in the Clearance file.
- The sale or transfer is pursuant to the terms of a historic preservation compliance agreement. A copy of or reference to such agreement shall be included in the Clearance file.
- The historic structure was not previously cleared on a project basis; the concurrence of the State Historic Preservation Officer shall be sought prior

© 1994-2025 California Department of Transportation. All rights reserved.

to clearance. A copy of the memorandum of concurrence from the State Historic Preservation Officer shall be included in the Clearance file.

12.02.05.00 Rodent Control

To prepare the structure for clearance, the Clearance Agent shall note and document any evidence of rodent infestation on the applicable Property Management Inspection form. Eradication of rodent infestation shall be performed prior to clearance work if there is a risk of the rodent population spreading to adjacent properties.

12.02.06.00 Utility Service Disconnect

Prior to the delivery of a parcel to the demolition contractor or release of a parcel to the winning bidder for the sale of an improvement, it is the responsibility of the Clearance Agent to ensure the disconnection of all utility services. As a prudent measure, electrical and gas services should be removed to the property line, ensuring the improvements can be demolished or moved off-site safely. Water and other supply services should also be terminated, and facilities removed to provide safe access during removal of hazardous materials and demolition. Destruction of wells, storage tanks, and supply and drain lines should be in compliance with the clearance specifications.

The Clearance Agent shall obtain a "Letter of Disconnect" or similarly named document from the utility provider or the contractor (if the contract scope of work requires the contractor to coordinate utility disconnection). This letter formally documents that utilities were terminated and facilities removed.

12.02.07.00 California DOT Stormwater Management Program (SWMP)

The California Department of Transportation Stormwater Management Program (SWMP) administered by DEA ensures compliance with National Pollutant Discharge Elimination System (NPDES) Statewide Storm Water Permit Waste Discharge Requirements Order Number 2012-0011-DWQ, (As amended by Orders WQ 2014-0006-EXEC, WQ 2014-0077-DWQ, WQ 2015-0036-EXEC, and WQ 2017-0026-EXEC), NPDES Number CAS000003. The DEA provides statewide policy direction, technical and regulatory information, guidance documents, specifications, and funding to integrate appropriate stormwater control activities. The DEA also provides water quality monitoring, Best

© 1994-2025 California Department of Transportation. All rights reserved.

Management Practices (BMPs) along with implementing compliance guidance and tools.

The Caltrans Permit, which is described later in section 12.02.07.02, directs Caltrans to implement and maintain an effective SWMP. The SWMP is the document that describes how Caltrans plans to implement the Permit requirements. The SWMP describes Caltrans' program and addresses stormwater pollution control related to various activities, including planning, design, construction, maintenance, and operation of roadways and facilities, and presents key implementation responsibilities and schedules. The SWMP was updated in July 2016.

The Clearance Agent is ultimately responsible for project compliance with the Caltrans Stormwater Management Program. The Clearance Agent shall consider the impacts of a proposed clearance project regarding the Department's Statewide Stormwater Permit. Good planning and communication with the District NPDES unit within the DEA is required for an efficient and compliant project.

Additional resources are available at the Storm Water website.

12.02.07.01 Federal Stormwater Regulations

Federal regulations for controlling discharges of pollutants from Municipal Separate Storm Sewer Systems (MS4s), construction sites, and industrial activities were incorporated into the National Pollutant Discharge Elimination System (NPDES) permit process by the 1987 amendments to the Clean Water Act (CWA) and by the subsequent 1990 promulgation of federal stormwater regulations issued by the U.S. Environmental Protection Agency (EPA). The EPA regulations require municipal, construction and industrial stormwater discharges to comply with an NPDES permit. In California, the EPA delegated its authority to issue NPDES permits to the State Water Resources Control Board (SWRCB).

12.02.07.02 Caltrans NPDES Statewide Stormwater Permit

The SWRCB issued an NPDES Statewide Stormwater Permit (known as the "Caltrans Permit") to the Department to regulate stormwater and non-stormwater discharges from State-owned properties and facilities, and discharges associated with operation and maintenance of the State highway system.

© 1994-2025 California Department of Transportation. All rights reserved.

The Caltrans Permit contains three basic requirements:

1. The Department must comply with the requirements of the Construction General Permit (CGP);

2. The Department must implement a year-round program in all parts of the State to effectively control stormwater and non-stormwater discharges; and

3. The Department's stormwater discharges must meet water quality standards through implementation of permanent and temporary Best Management Practices (BMPs) and other measures.

The Caltrans Permit regulates stormwater discharges from the Department's Right of Way during and after construction, as well as from all other State-owned property under the control of the Department. The Caltrans Permit gives the SWRCB the option to specify additional requirements it may consider necessary to meet water quality standards. Copies of the Caltrans Permit can be downloaded from the SWRCB website.

Discharges from the Department's properties that are not composed entirely of stormwater are prohibited unless the non-stormwater discharges are from a source authorized under the SWMP. Therefore, appropriate BMPs must be installed to remove pollutants to the Maximum Extent Practicable (MEP). The permit states: "Discharge of material other than storm water, or discharge that is not composed entirely of storm water, to waters of the United States or another permitted MS4 is prohibited, except as conditionally exempted under... [the Caltrans Permit] or authorized by a separate NPDES permit."

12.02.07.03 Construction General Permit (CGP)

The SWRCB elected to adopt a single statewide general permit for construction activities that applies to all stormwater discharges from land when clearing, grading, and excavation result in soil disturbance of at least one (1) acre or more. Construction activity that results in soil disturbance of less than one (1) acre is subject to this CGP if there is the potential for significant water quality impairment resulting from the activity as determined by the SWRCB; permit criteria dictates that the owner of the land where such impacts occur must develop and implement a Stormwater Pollution Prevention Plan (SWPPP). Additional information is available at the Construction Stormwater Program website.

© 1994-2025 California Department of Transportation. All rights reserved.

Other CGPs that may apply, but are less common, include the EPA CGP that applies to tribal and federal lands, and the Tahoe CGP that applies to the Lake Tahoe Hydrologic Unit (i.e., watershed).

12.02.07.04 Stormwater Pollution Prevention Plan (SWPPP)

The CGP outlines the required contents of a SWPPP. A SWPPP is a document that addresses water pollution controls for a specific project during construction and demolition work. The CGP requires that all stormwater discharges associated with construction activities that result in soil disturbance of at least one (1) acre of total land area must comply with the provisions specified in the CGP, including development and implementation of an effective SWPPP.

The SWPPP is prepared by a Qualified SWPPP Developer (QSD), who is typically hired or employed by the demolition contractor. The Clearance Agent shall have the plan reviewed and approved by the Districts NPDES unit within DEA prior to commencement of soil-disturbing activities. Prior to the start of construction, authorized District stormwater staff will enter a Notice of Intent (NOI) and supporting documents to the State Water Resource Control Board's *Stormwater Multiple Application and Report Tracking System (SMARTS)*. The Clearance Agent will work with their district Environmental NPDES Staff to ensure all required documents are uploaded into SMARTS throughout the project. When construction is complete, and the construction site is stabilized, the authorized District staff responsible for SMARTS submissions will submit a Notice of Termination (NOT). The Clearance Agent is required to include pertinent SWPPP related information in both the Clearance and the District permanent parcel file.

SWPPPs shall be prepared by a qualified vendor using the most recent SWPPP template found on the Caltrans Construction Stormwater webpage.

12.02.07.05 Water Pollution Control Program (WPCP)

Generally, construction projects with a disturbed soil area of less than one (1) acre are not covered under the CGP and do not require a SWPPP. For all projects that do not require preparation of a SWPPP, the Department requires that a Water Pollution Control Program (WPCP) be prepared. The WPCP is typically prepared by a consultant hired by or an employee of the demolition contractor. The Clearance Agent shall have the plan reviewed and approved by the Districts NPDES unit within the DEA prior to commencement of soil-disturbing activities.

© 1994-2025 California Department of Transportation. All rights reserved.

Details on the preparation of the SWPPP or WPCP are found in the supplementary Stormwater Quality Handbook, Stormwater Pollution Prevention Plan (SWPPP) and Water Pollution Control Program (WPCP) Preparation Manual.

WPCPs shall be prepared by a qualified vendor using the most recent WPCP template found on the Caltrans Construction Stormwater webpage.

© 1994-2025 California Department of Transportation. All rights reserved.

12.03.00.00 – CLEARANCE PROCEDURE

12.03.01.00 Initial Clearance Procedures

Prior to environmental clearance, improvements must not be removed except due to:

"a sudden, unexpected occurrence that poses a clear and imminent danger requiring immediate action to prevent or mitigate the loss or impairment of life, health, property, or essential public services" as defined within the Public Contract Code Section 1102.

After environmental clearance, a no re-rent policy is established on vacant units when the project's funds for normal right of way activities have been programmed; vacated improvements on such projects are immediately cleared. Refer to section 12.01.09.00 for guidance on when clearing of improvements should occur earlier than the project schedule calls for.

The Department's "no re-rent" policy and its exceptions are discussed in Property Management Sections 11.01.04.00 to 11.01.04.01.

Factors the District should analyze in determining clearance schedules are:

- **Loss of Revenue** – to local governmental agencies if rental income to the Department of Transportation (Department) ceases and the local 24% share of such income ceases.
- **Increased Costs** – for debris pickup and weed abatement as improvements are removed.
- **Attractive Nuisance** – increased exposure to personal injury liability as neighborhood children, the homeless, and other individuals are attracted to cleared right of way. (Consider fencing the site, hiring security or boarding up the structure.)
- **Temporary Use Requests** – increased requests by local agencies and others to use cleared right of way temporarily for gardens, parks, and other quasi-public purposes that might result in complications when the Department prepares to construct the project.
- **Rental Income Balanced Against the Cost of Upkeep of the Rental Units** – such items as roof, sewer, plumbing, and heater repairs and management costs such as rent collections and delinquencies are to be considered.

© 1994-2025 California Department of Transportation. All rights reserved.

In addition, the District shall issue Notices to Relocate to residential tenants in an orderly manner so the private housing market is not overwhelmed by a large number of households seeking replacement housing at the same time. An orderly relocation of households is imperative to avoid court-mandated replacement or replenishment housing programs.

When a parcel is transferred to clearance status for removal of acquired improvements and/or personal property, the Clearance Agent shall immediately schedule and process the items for clearance by preparing an IDA.

12.03.02.00 50+ Year Old Structures

Prior to demolition, sale or transfer, the Clearance Agent shall ensure that any structure more than 50 years was formally evaluated and approved for such clearance action by the Division of Environmental Analysis (DEA), as outlined in section 12.02.04.00 of this manual.

12.03.03.00 Lead and Asbestos

All improvements shall be inspected for the presence of Asbestos Containing Materials (ACM) and Lead Based Paint (LBP); a copy of the lead and asbestos survey shall be placed in both the Clearance file and the District's permanent parcel file. District Clearance staff coordinates lead and asbestos inspections and removal activities with the District's Hazardous Waste Coordinator (HWC) within DEA. All activities must comply with the Environmental Protection Agency regulations and all State and local government laws, rules, statutes, and regulation (see 40 CFR Section 61.145).

If improvements were not inspected at the appraisal or acquisition stage, the Clearance Agent must ensure that a licensed person completes an inspection prior to sale or demolition of a parcel. Sale for relocation is considered the same as demolition and also requires prior testing.

The Clearance Agent ensures that any improvements containing lead or asbestos are abated prior to demolition, sale or transfer in accordance with applicable laws, regulations, and ordinances and the recommendations of the hazardous materials inspector; refer to section 12.05.00.00 for guidance on Clearance work regarding Hazardous Waste and Hazardous Materials. Section 12.05.09.00 specifically addresses Asbestos, while section 12.05.10.00 addresses Lead.

© 1994-2025 California Department of Transportation. All rights reserved.

12.03.04.00 Rodent Control

As noted previously in section 12.02.05.00, to prepare for clearance, eradication of rodents shall be performed prior to clearance work if there is a risk of the rodent population spreading to adjacent properties.

12.03.05.00 Authorization to Dispose of Improvements

The Clearance Agent shall ensure clearance work is supported by an IDA approved by a Senior Right of Way Agent; refer to section 12.01.09.00 on proper procedures regarding the IDA.

12.03.06.00 Sale of Tools and Machinery to the Office of Equipment

Right of Way should advise the Office of Equipment of the proposed sale of any usable tools and shop equipment that is reasonably new or is repairable. Of particular interest are lathes, drill presses, milling machines, metal brakes, metal shears, and automotive tools such as wheel balancers, brake drum lathes, tire truers, and lubrication equipment.

Such items are to be listed by a special IDR and IDA. The Clearance Agent limits the IDR to items of possible interest and includes a statement that the items qualify for transfer to the Office of Equipment. A duplicate copy of the IDR is sent to the Office of Equipment with a statement that the IDA will be approved and the items disposed of by usual procedures unless a response requesting reservation of an item is received within two weeks.

It is not necessary for the District to consult the various shop superintendents. The decision to accept or reject tools and equipment lies exclusively with the Office of Equipment. Should it wish to acquire any items, the Office of Equipment will notify the District.

Transfers are documented as shown on the table entitled "Documentation of Transfer." If coding is required, the Clearance Agent should check with P&M for correct coding.

© 1994-2025 California Department of Transportation. All rights reserved.

DOCUMENTATION OF TRANSFER

Funding	Documents	Value	Process
Federal Participation	• A memo to Accounting detailing the transaction • A Shipping Record prepared by R/W • A Receiving Record (Form FA1226A) (internal Caltrans link) prepared by Office of Equipment	Dollar amount is established by the minimum acceptable bid amount.	Accounting performs the transaction and returns copies along with the TRAMS posting tag to be placed in the Inventory Disposal File in R/W for audit purposes.
State Only Funds	• A memo to Accounting detailing the transaction if a fund transfer is made • A Shipping Record prepared by R/W • A Receiving Record prepared by Office of Equipment • These records need not be coded for Accounting if no fund transfer takes place.	It is at District R/W's discretion whether to charge for transfer of equipment. Consideration can be given to current market value of equipment versus salvage value and to clearance schedule. (For salvage value definition, see 7.08.05.00.) Whether or not fund transfer occurs, the transaction must be detailed in the Inventory Disposal File for audit purposes.	Accounting performs the transaction and returns copies along with the TRAMS posting tag to be placed in the Inventory Disposal File in R/W for audit purposes.

© 1994-2025 California Department of Transportation. All rights reserved.

12.03.07.00 Sale of Personal Property

State-owned personal property may be disposed of separately or in conjunction with real estate improvements. If a stripping sale of fixtures is held on a major improvement that must be demolished, the Clearance Agent should take care to assign each fixture, or group of fixtures, an item number on the IDR. A separate list may be prepared, attached, and referenced on Form RW 12-01 (internal Caltrans link).

The Clearance Agent should consider the potential cost of auctioning State-owned personal property against the potential income produced from that sale. Sections 7.08.05.00 of the Right of Way Manual addresses the concept of salvage value. The Clearance Agent should consult the District's appraisal unit, or another qualified person to explore the salvage value of State-owned personal property prior to expending time or monies scheduling the sale.

12.03.08.00 Public Notification of Proposed Sale

The Agent prepares a Notice of Sale describing the state-owned property to be sold; either real estate improvements or personal property. The Notice of Sale shall contain the time, place, and manner of sale. Copies are sent to anyone expressing interest in the sale. An electronic copy of this notice should be placed online and be emailed to potential buyers. Copies should also be mailed to local agencies with a request that they be posted in places commonly used for posting legal notices. Posting of the Notice of Sale on each improvement to be sold should also be considered. Take note that the sale of state-owned real estate improvements is rare and generally the result of the inability to demolish a structure due to historical significance.

12.03.09.00 Content of the Notice of Sale

The Notice of Sale is prepared as shown on Forms RW 12-04, RW 12-05, and RW 12-06 (internal Caltrans link). Proposal Form RW 12-07 is attached to the Notice for sealed bids. P&M must approve the Proposal Form prior to distribution to verify it has been coded properly. (See Exhibit 12-EX-02 for coding instructions.)

In the event a District is required to sell or transfer a real estate improvement; a surety bond equal to the value of clearing the structure via Right of Way clearance contract shall be required of the buyer to ensure the successful removal of that improvement from the Right of Way. The Notice of Sale must provide that a surety bond is required and state the amount and duration thereof.

© 1994-2025 California Department of Transportation. All rights reserved.

12.03.10.00 Advertising the Sale

Sales are advertised as appropriate. The amount spent for advertising should reflect sound business judgment and be in relation to the value of the property. Use of internet marketing should also be considered to more efficiently reach potential buyers.

12.03.11.00 Upholstered Furniture and Bedding

Upholstered furniture and bedding should not be resold; instead, it should be removed from the site by the demolition or other contractor. The scope of work for such a clearance contract shall account for the disposal of upholstered furniture and bedding from the improvements.

12.03.12.00 Post-Sale Field Inspections

Clearance staff must inspect all properties sold to verify the buyer has removed the purchased improvements and conformed with all contractual obligations in the Notice of Sale and the executed proposal or bid form. The Clearance Agent shall inform purchasers in writing that they must immediately correct any unfulfilled contractual obligations. This will ensure that no difficulties arise in clearing the right of way and no dangerous conditions exist that could result in accidents. Special care should be exercised to avoid creating any hazardous conditions to neighborhood children, other individuals, or pets and other animals.

12.03.13.00 Annual Purge of Mailing Lists

The District must perform an annual review of mailing lists per Government Code Section 14911 to determine if current recipients wish to continue receiving notices. A return-addressed verification card should be attached to the material mailed. The card should provide a space on which the recipient can affix postage when returning the card to indicate a desire to remain on the mailing list.

The card should contain a statement similar to the following that states the mailing list is reviewed annually in accordance with State law:

> "Your name is on our mailing list to receive notices for public sales of property. If you wish to continue receiving these notices, please sign and return this card. If this card is not returned by (specify date), your name will be removed from our list. This notice is required annually by

© 1994-2025 California Department of Transportation. All rights reserved.

Section 14911, Government Code. Please correct the address shown, if necessary; be sure to include zip code."

The District should perform an annual review of email lists to determine if current recipients wish to continue receiving electronics correspondence. An email should be send out to all contacts on the District's email list annually; those who fail to respond within 30 days or who indicate they no longer wish to receive electronic correspondence should be purged from the District's list.

12.03.14.00 Conduct of Sale – Sale by Sealed Bid

Representatives of Accounting and Right of Way open the bids at the District Office at the time prescribed in the Notice in the presence of the bidders. The Right of Way representative shall tabulate all bids and shall immediately turn over bidder's deposits to the Accounting representative.

The Accounting representative must have accurate information (Parcel No., Project ID, Federal Aid Project No., and Object Code) to ensure proper coding of all documents. P&M must verify all coding information before it is given to Accounting.

If the highest bidder defaults in a sealed bid sale, the District may sell to the second highest bidder at the second highest bidder's bid amount.

12.03.15.00 Conduct of Sale – Sale by Public Auction

A public auction to dispose of property is conducted on the premises whenever possible. Representatives of Accounting and Right of Way, or a minimum of two representatives of Right of Way, shall attend the auction. A Right of Way representative is the lead for coordination of the auction.

Improvements to be sold should be opened for general public inspection immediately prior to the auction. The person conducting the auction should have enough copies of the Notice of Sale for people attending the auction. The auctioneer reads all the terms and conduct of the sale, including the minimum bid acceptable, preceding each sale. Adequate time is allowed for bidding before closing the sale.

The Right of Way representative must secure all necessary signatures on Proposal Form RW 12-07. The successful bidder signs the original proposal sheet and fills in their address and telephone number fields. The Accounting representative accepts the deposit in cash, cashier's check, money order, or certified check and delivers a receipt and a duplicate proposal sheet to the

© 1994-2025 California Department of Transportation. All rights reserved.

buyer. Accounting retains a copy of the proposal sheet to ensure the Department accounts for the revenue properly. Funds are placed in the special deposit account. In the absence of an Accounting representative, a Right of Way representative shall accept the deposit and deliver a receipt and a duplicate proposal sheet to the buyer; the Right of Way representative shall tender the deposit to Accounting on the same day with a covering field collection sheet.

If the highest bidder is not prepared at the auction to furnish the required deposit in the manner prescribed by the Notice, the bidding may immediately be reopened and the property sold to the subsequent highest bidder. Alternatively, the sale may be rescheduled at the discretion of the Right of Way representative.

12.03.16.00 Deposits

The following deposits are required for sealed bid or auction sales. The deposits shall be based on an estimate of the market value of the items offered for sale, developed by a qualified agent, not on the minimum bid recommended in the IDR.

- **Under $1,200.00 Market Value** – $300.00 or full amount of the bid if less than $300.00

- **Over $1,200.00 Market Value** – 25% of stated market value

12.03.17.00 Deposit Return – Unsuccessful Bidders – Sealed Bid

Immediately after the bid opening and upon written request of Right of Way, Accounting returns unsuccessful bidders' deposits by certified mail, return receipt requested. Except, the deposit furnished by the second highest bidder shall not be returned until the highest bidder has paid the total amount due the State; in case the second bidder elects to purchase in the event of high-bidder defaults. If an unsuccessful bidder is present when the deposits are released, the check may be delivered to the bidder and a receipt obtained.

© 1994-2025 California Department of Transportation. All rights reserved.

12.03.18.00 Bill of Sale

The Bill of Sale must reflect the item number and description shown on the IDR. A Senior Right of Way Agent shall execute the Bill of Sale (Exhibit 12-EX-03) (internal Caltrans link) after the purchaser has paid the total amount due.

The purchaser SHALL NOT REMOVE ANY SALE ITEMS until the District has received full payment.

12.03.19.00 Breach of Contract

The Notice of Sale and Terms of Sale contain provisions whereby the State shall retain all money paid to it up to the time the purchaser breaches the contract to offset actual damages sustained by the State as a direct result of the breach. Ordinarily, actual damages are determined by resale of the property that is subject to default. Sections 12.03.20.00 through 12.03.24.00 are based on the premise that, in the absence of proof to the contrary, the original sale price represented market value at the time of the breach of contract. The actual damages sustained are, therefore, the difference between the first and second sale prices, plus expenses.

The procedures detailed below are not applied to those cases where the bidder, after completing payment and furnishing surety bond, does not complete improvement removal in accordance with the agreed-upon obligations stated in Paragraph (1) of Forms RW 12-04, 12-05, or 12-06 (internal Caltrans link) or in the performance of any other agreed-upon obligation. In these cases, the State completes the work and bills the bonding company for the additional cost of completing the bidder's work. No refunds are made to the bidder.

12.03.20.00 Defaults Not Fault of Bidder

If the successful bidder defaults because of State's inability to convey title or any other cause not the fault of the bidder, the bidder's money shall be refunded pursuant to Division of Accounting instructions.

12.03.21.00 Refunds

The Senior Right of Way Agent who oversees the responsibilities of Property Management or Clearance and Demolition notifies the Accounting Office by memorandum to prepare refund documents, fully itemizing the transaction per Section 12.03.23.00.

© 1994-2025 California Department of Transportation. All rights reserved.

12.03.22.00 Notification to Defaulted Bidder

If there is a breach of contract, the Clearance function must immediately notify the defaulted bidder in writing, including the following information:

- **Nature of Breach of Contract** – e.g., failure to pay the balance due or provide the required bond.

- **Determination of Damages** – the bidder's money is retained pending determination of actual damages sustained by the State as a result of the breach.

- **Refundable Balance** – any refundable balance after deduction of actual damages sustained is remitted with an accounting of said money.

No money is to be returned to the defaulted bidder, whether the money is the required deposit only or the entire purchase price, except as provided in Section 12.03.24.00.

12.03.23.00 Resales to Determine Damages Sustained

The Clearance function schedules a resale of the personal property or real estate improvements as promptly as practicable after the breach of contract. Timeliness is necessary to demonstrate good faith and to avoid any undue hardship a delay might cause a bidder whose money cannot yet be released. Actual damages are determined as follows:

© 1994-2025 California Department of Transportation. All rights reserved.

ACTUAL DAMAGES

Condition	Amount
Property sells for less than the original sales price	Difference between the two sales prices, plus all expenses for resale (actual receipts/invoices required)
Property sells for an amount equal to or more than original sales price plus expenses	Zero
Building cannot be resold, due to lack of interested bidders or impending project certification date	The demolition cost or the actual expenses for initial sale; whichever is less
Highest bidder defaults on sale by sealed bid and the District sells to the second highest bidder	Difference between the two bids
Demolition to be done by the State's highway contractor at a later date	An estimate of cost may be used to determine actual damages sustained by the State. If demolition is in the near future, Right of Way asks the resident engineer to document the actual cost.

12.03.24.00 Statement of Damages Sustained

After determining actual damages, the District provides the defaulted bidder with an accounting statement showing:

- Total amount paid to State on purchase of the property.
- Deduction for actual damages, if any.
- Refundable balance, if any.

If the actual damages sustained exceed the money on deposit, the District retains the entire amount and furnishes an accounting statement to the defaulted bidder.

The defaulted bidder is not billed for losses exceeding moneys paid up to the time of breach unless State has performed, or caused to be performed, work under Section 12.03.19.00. Then, all costs are to be recovered.

© 1994-2025 California Department of Transportation. All rights reserved.

The Accounting Office schedules payment to the defaulted bidder when a refund is due.

© 1994-2025 California Department of Transportation. All rights reserved.

12.04.00.00 – CLEARANCE CONTRACTS

12.04.01.00 General

Where the State is obligated under Right of Way Contract to move, relocate, reconstruct, or remove improvements (including Asbestos Containing Materials) to clear proposed right of way, the work may be done by right of way clearance contract. The authority for Caltrans to enter into contracts comes from two primary sources:

1. Delegated Authority from the Department of General Services (DGS)
2. Statutory authority from various state laws, such as:
    - California Constitution, Article XXII
    - Public Contract Code (PCC) §10351 and 10295
    - Government Code (GC) §11256 and 19130 (b)
    - Streets and Highway Codes (S&HC) §135, 136, 136.1

A clearance contract provides for the demolition or relocation of improvements, as well as for the removal of Lead, Asbestos and other Miscellaneous Toxic Material from State-owned property.

The relocation or sale of improvements shall be avoided statewide, with the exception of historically significant improvements that are ineligible for demolition. There are significant costs, legal risks, regulations and potential time delays associated with the relocation or sale of improvements.

The two types of right of way clearance contracts are demolition clearance contracts and relocation clearance contracts. Information on service contracts, including relocation and demolition contracts, can be found on the DPAC website.

12.04.02.00 Proper Use of Clearance Contracts

Clearance contracts are not used for repairing houses, constructing new fences, renting equipment, or performing work within the right of way limits. Clearance contracts are used only for demolishing or moving improvements or obstructions. It would also be an appropriate use of clearance contracts to abate Lead, Asbestos or miscellaneous toxic materials prior to moving or selling an improvement.

© 1994-2025 California Department of Transportation. All rights reserved.

12.04.03.00 Contract Request

For either a demolition contract or a relocation contract, the Clearance Agent starts their contract request using the ADM 360 document (internal Caltrans link), which is approved by the District's budgets office, prior to submission to the Department of Procurement and Contracts (DPAC). Right of Way Planning and Management staff can assist the Clearance Agent with coding funding data on the ADM 360 document. The Clearance Agent will become the Caltrans Contract Manager and will administer the contract that is bid and awarded by DPAC.

12.04.04.00 Labor Compliance

State Prevailing Wages are governed by the California Labor Code; Federal Prevailing Wages are governed by the Code of Federal Regulations, Title 29, Part 5 (29 CFR 5 et seq.). Additionally, labor compliance is also governed by regulations of the Federal Highway Administration (FHWA) and the U.S. Department of Labor; and the California Code of Regulations. Collectively, the entities provide the basis for contract administration protocol and the statutory authority to enforce labor compliance contract provisions.

State and Federal law require contractors working on public works contracts to pay prevailing wages to their employees. Prevailing wages are predetermined hourly rates for each craft that are set by both the California Department of Industrial Relations and the U.S. Department of Labor. In addition, these laws set guidelines for the following:

- Overtime,
- Length of shifts or workdays,
- Substantiation of wages,
- Fringe benefits paid; and
- Covered work (work done under control and paid for in whole or in part out of public funds, thus requiring the payment of prevailing wages) and non-covered work.

Each district within Caltrans has a District Labor Compliance Officer (LCO) (internal Caltrans link) who may assist in determining if Prevailing Wages apply to the Scope of Work of Clearance contract's or in enforcing Prevailing Wage requirements in the contract. See the Department's Division of Construction Labor Compliance resources.

© 1994-2025 California Department of Transportation. All rights reserved.

Some categories of work that require State Prevailing Wage rates include:

- Construction or demolition work
- Maintenance/repairs performed on state-owned real property
- Repairs of installed equipment (affixed to state-owned real property)
- Land Surveying (e.g. survey party chief, roadman/chainman, flagger)
- Materials sampling and testing (e.g. personnel operating drilling rigs/cranes, pile drivers, or testing
  materials such as concrete/asphalt testing
- Construction and/or materials inspection on or off the project site

The California Labor Code (LAB) governs the payment of state prevailing wages. The LAB requires that contracts exceeding $25,000 for a public works construction project; or $15,000 for alteration, demolition, repair, or maintenance and installation, shall provide that all workers be paid not less than the predetermined general prevailing wage rate (GPWR), including the GPWR for holiday and overtime work. The prevailing wage rate (PWR) is based upon the worker's actual working classifications for the county in which the work is performed, regardless of the type of contract or the working title of the employee.

In addition to the Division of Construction's Labor Compliance intranet site (internal Caltrans link) and the District LCO, the Clearance Agent should refer to the Department's Division of Construction Manual that covers Labor Compliance; Chapter 8, Section 1.

12.04.05.00 Daily Site Inspection

A Clearance Agent shall make a daily site visit during any active project, documenting that visit in a diary entry.

Included in the diary entry shall be:

- Date/time Agent was onsite,
- First and Last names of all contractor personnel onsite that day,
- The duty that each worker is performing (laborer using hand tools, operator piloting an excavator, driver operating a water truck, etc. etc.)
- Documentation of any complaints or issues noted on the site.

The Clearance Agent shall compare daily diary entries to the contract invoices to verify that certified payrolls match the names of the contractor personnel that the Agent noted in their diary.

© 1994-2025 California Department of Transportation. All rights reserved.

12.04.06.00 Contract Manager Training

Public Contract Code sections 10348.5 and 10351 requires designated Contract Managers be trained and have knowledge of legal contractual arrangements. Caltrans Deputy Directive DD-112 Contract Manager Responsibilities (internal Caltrans link) mandates that Contract Managers receive annual Contract Manager training.

DPAC is responsible for training Contract Managers (internal Caltrans link); the Caltrans Contract Manager shall take this training annually and provide DPAC analysts with a copy of a current certificate upon request.

- Handbook for Contract Management (internal Caltrans link)

The Clearance Agent should also take the Contract Manager Training for Service Contracts class. This is a two-day class that is presented by the Department's Labor Compliance Division for any staff who manages a Public Works Contract.

12.04.07.00 Scope of Work

Few aspects of Clearance and Demolition contracts are as critical as the Scope of Work (SOW): the directive language within a contract that explains what the contractor is to do, and to what level of quality. Bid values and project outcome are 100% dependent on a clear and detailed scope of work. DPAC provides standardized service contracts and can assist with modifying contract language as directed by the Clearance Agent and/or the Caltrans Contract Manager; if those roles are not shared by one agent. The Clearance Agent must ensure the contract's SOW addresses the particular clearance work appropriately; therefore, the Caltrans Contract Manager shall work with the DPAC analyst and the Department's Legal to modify any clauses in the SOW to meet the District's Clearance needs.

12.04.08.00 Demolition Clearance Contracts

Demolition clearance contracts are used for the removal of improvements; the two types of demolition contracts are site specific contracts and on-call contracts. Site-specific contracts are written for the sole purpose of clearing improvements at the locations identified in the site-specific contract. An on-call demolition contract typically covers a period of up to two years and is written to handle the expected volume of clearance work over that period. Where possible, clearance of improvements should be grouped by proximity or

© 1994-2025 California Department of Transportation. All rights reserved.

other common factors so demolition is accomplished in the most efficient manner.

The Clearance Agent and/or the Caltrans Contract Manager will work with a DPAC contract analyst to draft an appropriate scope of work that DPAC will incorporate into the contract bid package. The DPAC contract analyst will ultimately be responsible for verifying all received bids and awarding the contract to the qualified bidder with the lowest responsive bid.

Demolition contractors must be licensed in accordance with the California Department of Consumer Affairs, Contractors State License Board. The license requirement shall be included in the bid documents drafted by the DPAC contract analyst. For additional information on contractor licenses, visit the California Contractors State License Board.

12.04.09.00 Relocation Clearance Contracts

Relocation clearance contracts are used for moving, severing, reconstructing, or relocating structures to clear proposed right of way. Minor amounts of incidental new construction may be included. This type of contract is necessitated by a R/W Contract obligation. Refer to section 12.03.08.00 regarding moving or transferring structures, which should only occur when mandated due to the structure being historically significant.

The Clearance Agent would work with DPAC to obtain a relocation clearance contract, starting with the ADM 360 document (internal Caltrans link).

12.04.10.00 Unforeseen Work

Certain conditions may arise during a clearance project that were not anticipated or called for in the original plans. When this work is essential to fulfillment of the State's obligations, such work is classed as extra work and payment is made in accordance with contract provisions. The need for extra work shall be fully documented and approved by a Clearance Agent.

Where unforeseen work exceeding any contingency costs reserves in a contract emerges, the Clearance Agent must submit a revised ADM 360 (internal Caltrans link) to DPAC to prepare an amendment to the original contract to cover the extra work. The amendment should define the unforeseen work and the agreed-upon price and set forth any time extension required because of the additional work. Beware that a service contract can only be amended for time or money; up-to either one additional years' time or 30% additional funds; but not both.

© 1994-2025 California Department of Transportation. All rights reserved.

12.04.11.00 Relocation Clearance Contract Work

The Clearance Agent should pay careful attention to the extent of the State's obligation and responsibility for the work to be done on any particular project. Legally, the extent of the State's obligation is set forth in the Right of Way Contract. Since it is not practical to embody lengthy and detailed specifications in that document, the Agent must exercise great care in interpreting the Right of Way Contract clauses; prior to Clearance work, care should be taken to ensure the SOW for the Clearance contract aligns with the Right of Way Contract.

In general, the owner's improvements to be relocated or reconstructed shall be left in as good a condition as found and all facilities previously enjoyed shall be replaced or compensated for. The State shall not repair or correct damage or impaired conditions in existence prior to work on the property by the State that are not changed or aggravated by the relocation work. Although some repair work is unavoidable, it should be kept to a minimum. Also, the State cannot assume costs of betterment in relocation of owner's improvements. The Agent must exercise careful judgment to avoid involving the State in costly and unjustified expenditures.

12.04.12.00 Inventory of Impaired Conditions

Before the contractor undertakes any work, the Clearance Agent shall thoroughly inspect, with the owner present, all improvements to be relocated or reconstructed to determine existing conditions. The Agent shall make appropriate written notes of existing conditions and call them to the owner's attention. This will avoid later misunderstanding about responsibility for correcting such conditions. Photographs are useful in documenting conditions prior to, during and after work is completed.

12.04.13.00 Liability for Correcting Structure Deficiencies

Any new work incidental to the relocation or reconstruction of an improvement, such as laying new foundations and utility extensions and connections, shall be done in accordance with applicable building, safety, and health ordinances. Such obligation shall not be construed to impose on the State any liability for correcting an existing condition of an improvement in nonconformity to local building ordinances when such condition is not caused, affected, or aggravated by the proposed work.

© 1994-2025 California Department of Transportation. All rights reserved.

When a relocation project involves an improvement (that falls within the local building department's purview) having nonconforming conditions, the Clearance Agent shall explain that the proposed relocation work is being done with public funds to clear an area for a public improvement; and consult with the local building department and the Department's Legal, if the scope of the project warrants it.

Although not attempting to avoid legal responsibility for replacing privately-owned improvements in as good condition as found, the State shall not be placed in the position of spending public funds unnecessarily to improve private property. Such would be the case if the State attempted to correct existing nonconforming conditions not caused by the proposed relocation operations.

Hazardous nonconforming conditions may exist that will be impossible for the local building department to overlook. It is important to note that the local building department has authority at any time to condemn and demand correction by a property owner, who has actual liability, and that correction could be required whether or not the State proposes to relocate the improvements. In such cases, the local building department may require correction made at the owner's expense at the time of, or immediately after, the State's relocation work. The local building department should clearly set forth the above-mentioned facts to limit future misunderstandings.

12.04.14.00 Letters of Acceptance from Property Owners

The Clearance Agent shall obtain a letter of acceptance from the owner after completion of the work performed. In some cases, the owner may make unreasonable demands for work over and above that to which legally entitled. To avoid these types of misunderstandings, the agent must maintain a careful check to ensure the work performed conforms with the understanding reached with the owner at the time of the Acquisition.

12.04.15.00 Notice of Completion

In rare circumstances, the District may file and record a Notice of Completion on clearance contracts within 10 days after completion only if it has cause to believe a contractor is in financial difficulty and there is a possibility of claims being made or liens filed. This reduces the time limit for filing liens or claims. Documents should be letter-size to facilitate filing.

© 1994-2025 California Department of Transportation. All rights reserved.

If more than one unit (work on one property) is included in a contract, a separate Notice for each unit should be filed and recorded within 10 days after completion of work, even though work on other items under the same contract may still be in progress.

If requested by the Accounting Office at the time a receiver document under the approved clearance contract is submitted, a copy of the filed Notice of Completion and transmittal letter to the County Recorder shall be forwarded to Accounting.

12.04.16.00 Certificate of Completion and Final Report

The Clearance Agent, Contract Manager or other Department personnel assigned to field inspection of clearance contracts certifies in a final report that the items of work have been completed. The report includes, but is not limited to, the following:

- Performance by the contractor as to compliance with the contract requirements.
- Adequacy and condition of equipment and/or materials used.
- Conformance with State and Federal requirements for payment of minimum wages, nondiscrimination practices, and any other applicable regulations or ordinances.

The report is submitted to the Accounting Office with the bill for final payment.

© 1994-2025 California Department of Transportation. All rights reserved.

12.05.00.00 – HAZARDOUS WASTE AND HAZARDOUS MATERIALS

12.05.01.00 Policy

The Department's policy is to consider fully all aspects of potential hazardous waste sites ensuring that adequate protection is afforded to employees, workers, and the community prior to, during, and after construction. District Property Management staff must be aware of all such potential and confirmed sites and any use of hazardous materials on properties held for future projects and excess lands. The District must monitor these sites, terminate leases where required, and consider potential clearance of wastes when planning for right of way certification dates.

This chapter regards demolition only, so references to activities only needed for acquisition and/or property management have been omitted. However, there is a great deal of overlap, as many of the same environmental laws, regulations and issues must be considered by those people involved in acquisition, property management or clearance and demolition activities.

12.05.02.00 Definition

A material is hazardous if it poses a threat to human health or the environment. Hazardous Materials exhibit one or more of the following characteristics:

- Flammable;
- Reactive (subject to spontaneous explosion or flammability);
- Corrosive;
- Toxic; and,
- Radioactive.

12.05.03.00 General

The Department strives to identify, investigate, and clean up sites at the earliest opportunity during the project development process. Occasionally these activities may not be accomplished prior to Property Management involvement. Under a normal project development sequence, the entire process is completed in accordance with governmental hazardous waste requirements. The Division of Environmental Analysis (DEA), in coordination with Project Management is the lead unit for the identification, investigation,

© 1994-2025 California Department of Transportation. All rights reserved.

and cleanup process. Right of Way assists by obtaining necessary rights to enter for testing purposes and by negotiating cleanup agreements prior to acquisition.

On projects where the normal sequence cannot be followed, Right of Way requests DEA to review and identify potential hazardous waste sites and initiates the cleanup process for all **MINOR** hazardous waste problems not requiring a Hazardous Waste Management Plan, such as underground tanks or hazardous material businesses.

All investigative work performed by the Right of Way Clearance Agent should be in consultation with the District's Hazardous Waste Coordinator (HWC) of the Department's Hazardous Waste Management Branch, of the DEA. If at any time a formal Hazardous Waste Management Plan is required, the District's Hazardous Waste Management Branch, of DEA shall assume the lead role.

12.05.04.00 Hazardous Waste Coordinator (HWC)

Generally, the Right of Way Clearance Agent works directly with the District's Hazardous Waste Coordinator (HWC) as the point of contact for the Division of Environmental Analysis.

The DEA is responsible for implementing the Department's Hazardous Waste Management program, which provides statewide assistance to districts in managing contaminants and wastes encountered on highway projects and Caltrans properties.

DEA will engage technical experts (biological - cultural - historical - hazardous waste) based upon what specific site conditions require. The Clearance Agent should engage DEA as early as possible to address any potential environmental concerns on a project. Other activities conducted by DEA staff include, but are not limited to, ensuring that the hazardous waste sections of environmental documents prepared for CEQA and NEPA compliance are complete and that contract specifications addressing hazardous waste and substances prepared for construction activities are accurate.

As a Best Business Practice, when Right of Way contracts directly with private sector environmental consultants, copies of those consultants' hazardous waste surveys should be provided to the HWC to ensure awareness of the work, and to ensure such work will not be repeated by environmental staff.

© 1994-2025 California Department of Transportation. All rights reserved.

For additional information on DEA, specifically regarding hazardous waste, visit Hazardous Waste.

12.05.05.00 Estimating for Hazardous Waste

There are numerous laws and regulatory organizations at the federal, state and local level, and all the relevant laws and regulations must be considered. For example, the appropriate management of lead-based materials is regulated by:

- The federal Environmental Protection Agency;
- The federal Department of Housing and Urban Development;
- The federal Occupational Safety and Health Administration of the Department of Labor;
- The California Department of Public Health;
- The California Department of Toxic Substances Control; and,
- Local Municipalities.

Complex hazardous waste and environmental compliance issues should be identified as early as possible during project development. Support costs necessary to perform, or contract for, technical Hazardous Waste expertise should be included in Right of Way estimates to address complex issues.

12.05.06.00 Inspection of Inventory

All buildings should be inspected for asbestos, lead; and other miscellaneous toxic materials including universal wastes such as oils, refrigerants, solvents, polychlorinated biphenyls (PCBs), radioactive materials, and mercury should be tested for if there is evidence of, or an increased probability of those materials being present on the site. Copies of those inspections shall be provided to the demolition contractor – preferably as part of the demolition contract bid materials - so that they can provide an accurate abatement plan and cost analysis; DEA shall also receive a copy of hazardous materials surveys when Right of Way contracts with the inspecting consultant directly.

12.05.07.00 Underground Tanks – Removal Procedures

Underground tanks on State property should be removed as soon as possible, as they could leak or have previously leaked, contaminating soil and/or groundwater. While the Hazardous Waste Management Branch of the DEA has basic responsibility for removal of all underground storage tanks, those which have no, or only minor leakage can be removed under a contract initiated by Right of Way. Request for Proposal or service – Scope of Work

© 1994-2025 California Department of Transportation. All rights reserved.

documents for any clearance or demolition contract that will be used for underground tank removal should be reviewed by the District's HWC before the Right of Way Clearance Agent works with Department of Procurement and Contracts (DPAC) to bid that contract.

The contractor who performs the removal work must obtain the required permits for removing all existing underground storage tanks on-site. Any contract for underground storage tank removal must include provisions for barricades and clean up. If any significant leak is discovered, the Hazardous Waste Management Branch of the DEA shall be notified of the leak and shall take over control of the clean-up work.

The DEA HWC will obtain the name of the local permitting agency responsible for underground tanks. Since the contractor must obtain the required permits for operating or closing all existing tanks from the local permitting agency, this information should be included in the removal contract bid documents.

A Phase I Environmental Investigation will indicate the potential or known presence of such tanks, but it is possible that unknown tanks could be encountered. A Phase II Environmental Investigation is normally performed to determine the extent of any suspected leakage. Prior to any tank removal, Right of Way must execute an agreement regarding the allocation of liability with the tenant in occupancy and the owner of the property.

Removal of underground storage tanks and associated piping shall be documented with good quality photographs showing the major tasks performed, including images of the bottoms of the excavations.

Underground storage tanks on State property should be removed as soon as possible. Non-leaking underground storage tanks may have a minor deposit of product under the tank that can be cleaned-up as part of the tank removal contract, if this is included in the contract's scope of work.

12.05.08.00 Solvents

Solvents used for parts cleaning, dry cleaning and other commercial and industrial activities could contaminate soil and/or groundwater. Usages which may have been legal in the past may now be prohibited. A Phase I Environmental Investigation will indicate the potential or known usage of solvents and any signs of improper disposal, but unknown usage may have occurred.

© 1994-2025 California Department of Transportation. All rights reserved.

12.05.09.00 Asbestos

Asbestos is a group of heat resistant and nonconducting minerals, used in many common building materials; referred to generally as Asbestos Containing Materials (ACM), with usage peaking in the 1970s, and tapering to almost nothing by 1990. However, some ACM are still legal, such as vinyl floor tile (still legal to make with asbestos) and drywall joint compound. Naturally Occurring Asbestos (NOA) is typically present in rock and aggregate; particularly in concrete and asphalt made with NOA. In areas with known NOA, or where it is reasonable to believe that NOA could have been used to make concrete or asphalt, sampling the concrete and asphalt on parcels shall occur.

An asbestos testing consultant, whenever possible, should be financially independent of and unrelated to the contractor who physically performs the abatement of asbestos to prevent a conflict of interest.

Asbestos is regulated by numerous federal, state and local government organizations. The main regulations for people working with demolition projects are:

- The federal Environmental Protection Agency (EPA) Asbestos National Emission Standard for Hazardous Air Pollutant (NESHAP), found at 40 CFR Part 61, Subpart M (amended several times);

- The Asbestos Hazard Emergency Response Act (AHERA) which created the Asbestos in Schools Rules at 40 CFR Part 763, Subpart E which specify training requirements for asbestos removal personnel and the main sampling protocols;

- The federal Asbestos School Hazard Abatement Reauthorization Act of 1990 (ASHARA) which extended the scope of training requirements of AHERA to public and commercial buildings;

- Federal OSHA asbestos regulations for the construction industry contained in 29 CFR 1926.1101 (summarized in publication OSHA 3096, revised in 2002), and its published interpretation letters;

- California Code of Regulations, Title 8 – Industrial Relations, Division 1- Industrial Relations, Chapter 4 – Division of Industrial Safety, Sub-chapter 4 – Construction Safety Orders, Article 4 – Dusts, Mists, Fumes, Vapors, and Gases, §§1529 Asbestos;

© 1994-2025 California Department of Transportation. All rights reserved.

- Chapter 3.2. California Occupational Safety and Health Regulations (CAL/OSHA) Subchapter 2 Regulations of the Division of Occupational Safety and Health Article 2.6. Asbestos Consultants and Site Surveillance Technicians;

- California Code of Regulations, Title 8, Chapter 3.2. California Occupational Safety and Health Regulations (DOSH or CAL/OSHA), Subchapter 2. Regulations of the Division of Occupational Safety and Health, Article 2.5. Registration – Asbestos-Related Work, Sub-section 341.6. Registration Requirements, which defines an Asbestos Containing Construction Material (ACCM) as any manufactured construction material which contains more than 1/10th of 1% (0.1%) asbestos by weight; and,

- AQMD and APCD regulations, such as the SCAQMD Rule 1403 and the BAAQMD Regulation 11.

California has many Air Pollution Control Districts (APCDs) and Air Quality Management Districts (AQMDs). Note that the AQMDs are empowered to develop their own asbestos regulations which add to the other existing regulations.

The Right of Way Clearance Agent should work with a Hazardous Materials Testing consultant who is not only properly licensed to perform the work, but has a thorough working knowledge of local regulations to ensure complete compliance. DPAC and DEA can assist the Clearance Agent in drafting contract language to properly address asbestos in their contracts.

All improvements shall be inspected for the presence of Asbestos Containing Materials, and a copy of the report placed in the District permanent parcel file.

If improvements were not inspected at the appraisal or acquisition stage, the Clearance Agent must ensure that a licensed person completes an ACM inspection prior to sale or demolition.

The Clearance Agent ensures that any improvements containing ACM have the ACM abated prior to demolition in accordance with applicable laws, regulations, and ordinances.

© 1994-2025 California Department of Transportation. All rights reserved.

12.05.10.00 Lead

The Clearance Agent shall ensure that all improvements are tested by a qualified consultant for the presence of lead; a survey provided by the inspecting consultant to the Clearance Agent is ultimately furnished to the demolition or clearance contractor. The Clearance Agent shall consult with DEA to ensure complete compliance with local, state and federal law pertaining to lead.

Lead paint was widely used prior to the 1960s, especially on exterior wood and metal materials, interior wood work, and walls in kitchens and bathrooms. The paint chalks as it ages, producing fine lead-containing dust, not just the large chips or flakes which are common when paint has failed. Lead was also widely used in ceramic tile glazes, so demolition of such tiles may release large amounts of lead dust; these tiles were often used in kitchens and bathrooms. Lead was added to older plastic mini-blinds, and the blinds produce lead dust as they deteriorated in the sun. The Consumer Products Safety Commission reduced the allowable amount of lead in residential paints to a trivial level in 1979. Lead use continued in industrial paints for many more years.

Three federal agencies regulate lead paint under Title X of the Housing and Community Development Act of 1992: the Environmental Protection Agency (EPA), the Department of Housing and Urban Development (HUD), and the Occupational Safety and Health Administration (OSHA). The federal lead regulations for construction work are found in 29 CFR 1926.62, the corresponding California regulations at 8 CCR 8 Section 1532.1 add further requirements.

In California, accreditation, certification, and work practices for lead-based paint and lead hazards are regulated by:

- 17, CCR 36000 et seq., generally;
- Health and Safety Code (HSC) Section 17920.10 on lead hazards;
- HSC Section 17961 on local enforcement of regulations; and,
- HSC e Section 105251-105256 on local enforcement of contractor-created lead hazards.

In California, lead abatement work must be performed by California Department of Public Health accredited (licensed) supervisors and workers.

© 1994-2025 California Department of Transportation. All rights reserved.

Hazardous wastes must be disposed of at a hazardous waste landfill and must be hauled under a proper manifest by a licensed hazardous waste transporter.

Whenever possible, a lead testing consultant should always be financially independent of and legally unrelated to the contractor who physically performs the abatement of lead to avoid a conflict of interest.

12.05.11.00 Waste Hauling and Disposal

Owners of properties from which asbestos, lead, and other hazardous wastes are hauled need to obtain a generator identification number. Such numbers are site (generally one address or facility) specific. The California Department of Toxic Substances Control (DTSC) issues ID numbers to generators, transporters, and disposal facilities. This includes federal EPA ID numbers, and State ID numbers for non-RCRA hazardous waste. Temporary ID numbers are issued to people or businesses who do not typically generate hazardous waste. These ID numbers are valid for 90 days and cannot be extended past 90 days. A permanent ID number is needed for longer periods. Permanent ID numbers are issued to people or businesses who routinely generate hazardous wastes.

The Clearance Agent should contact the District HWC in DEA to provide assistance in obtaining this temporary EPA ID and State ID numbers from DTSC.

There is no fee to obtain an ID number. Processing of EPA ID and State ID numbers may take up to 15 working days from the date DTSC verifies the application is complete.

There are numerous regulations for transporting and disposing hazardous wastes; experienced and properly licensed remediation contractors are familiar with them. In all cases, hazardous wastes are hauled under a manifest. Generally, the Clearance Agent signs such manifests as the Department's (Generator's) representative, retaining the Generator's/Shipper's initial copy of the manifest once it is countersigned by the transporter. The transporter should send the Clearance Agent a copy of the Designated Facility Generator sheet of the manifest once the material is delivered to the facility, and the Clearance Agent should forward a copy of this sheet to the HWC for compilation of DEA's annual generator report.

12.05.12.00 Potential Surface Contamination

Many properties have the potential for hazardous waste contamination. Examples include service stations and bulk plants, paint companies, machine shops, plating companies, light and heavy industrial manufacturing, dry cleaning establishments, fertilizer companies, junkyards, auto wrecking yards, and muffler shops.

Right of Way must notify the District HWC in writing when a property containing either identified hazardous waste or asbestos containing materials is to be cleared and should coordinate clearance with the HWC. Special clauses are required in the clearance contract to address surface/soil contamination, and the contractor or subcontractor must have the proper licenses to handle such materials. It is important for the Clearance Agent to consider surface contamination when drafting RFP/SOW documents with DPAC to obtain a demolition contract. DPAC and DEA can assist the Clearance Agent in writing clauses that specifically deal with their project's environmental concerns.

12.06.00.00 – DELEGATIONS

12.06.01.00 Delegations of Authority

As referenced in Section 2.05.01.00, the delegation matrix for Clearance and Demolition is noted below. The delegation matrix reflects the associated policy and RW Manual reference for each delegated item. The matrix also distinguishes whether an item is delegated to the District or Headquarters (HQ) level, along with the lowest level of sub-delegation authorized.

Reference (Statutory, WBS, Director's Policy, Deputy Directive, etc.)	**RW Manual Section**	**Responsibility**	**Delegation**	**Lowest Level of Sub-Delegation**
	12.01.08.00 12.01.09.00 12.03.05.00	Approval of Improvement Disposal Authorization (IDA)	District	Senior R/W Agent
	12.02.02.00	Approval of Advance Transfers to Clearance Status	District	Senior R/W Agent
	12.03.18.00	Bill of Sale for Sold Improvements or State Owned Personal Property	District	Senior RW Agent
	12.03.21.00	Request for Refund to Defaulted Bidder	District	Senior RW Agent
	12.04.15.00	Notice of Completion	District	Senior RW Agent

CHAPTER 13

UTILITY RELOCATIONS
TABLE OF CONTENTS

13.01.00.00 INTRODUCTION

01.00 General
01.01 District Utility Coordinator Responsibilities
01.02 Definitions
01.03 Utility Relocations Reference Materials
01.04 Utility File and Diary
02.00 Applicable Utility Laws and Policies
02.01 Delegation of Authority
02.02 Incorporation of City Streets or County Roads into the State Highway System
02.03 Encroachments Within Conventional Highways
02.04 Encroachments Within Freeways and Expressways
02.05 Hazardous Waste Impacted by Facility Relocations
02.06 Work Before Environmental Approval
02.07 Verification of Utility Facilities
02.08 Policy on High Priority Underground Facilities Within Highway Rights of Way
02.09 Advance Deposit for State Contract Performed Work
02.10 Inspection of Relocation Work
02.11 Application of Master Agreements/Freeway Master Contracts to Special Funded Projects
02.12 Utility Facilities Within State Highways
02.13 Greenhouse Gases
03.00 Private Utility Facility Relocations
03.01 Private Facilities in State Highways
04.00 Encroachment Exceptions
05.00 Right of Way Management Information System II (ROWMIS II)
06.00 Charging Practices
06.01 EA Phases
06.02 EA Splits, Combines and Revisions

13.02.00.00 PLANNING PHASE

01.00 General
01.01 Preliminary Engineering in Support of the Environmental Document
01.02 Future Project Coordination
02.00 Work Before Environmental Approval
02.01 Corridor/Route Preservation
02.02 Preliminary Engineering Prior to Environmental Approval
03.00 Utilities on Donated or Dedicated Future Right of Way
04.00 Utility Estimates
04.01 Right of Way Data Sheet
04.02 Project Study Report (PSR) Review
05.00 Environmental Document Review
05.01 Special Environmental Reviews for 50KV Electric Facilities
05.02 Draft Environmental Document to Owners
05.03 Hazardous Waste Exceptions

13.03.00.00 DESIGN PHASE

01.00 General
01.01 Commencement of Design If Preliminary Engineering Is Used
01.02 Identification and Protection of Utility Facilities
01.03 Utility Facility Avoidance
01.04 Design of Utility Facility Relocations
01.05 Replacement Right of Way for Utility Facilities
01.06 Utility Consultant Design Requirements
02.00 Utility Verifications
02.01 Preparation of Verification Maps
02.02 Utility Verification Request to Owner
02.03 Owner's Verification of Facilities
02.04 Non-Disclosure Agreements (NDA)
03.00 Positive Location of Underground Facilities
03.01 Positive Location Agreements (PLAs)
03.02 Positive Location (Pos-Loc) Contracts
03.03 Positive Location Service Requests
03.04 Positive Location Requirements for High Priority Utility Facilities
03.05 Liability for Ordered Positive Locations
03.06 Prevailing Wage Requirements for Positive Location Contracts
03.07 Contract Manager's Working File
03.08 Contract Manager Certification Under CMIST (Contract Management Information and Specialized Training)

13.03.00.00 DESIGN PHASE (Continued)

03.09 Utility Coordinator Responsibilities
03.10 Project Engineer or Utility Engineering Workgroup Responsibilities
04.00 Utility Conflicts Identified
04.01 Manhole Cover Agreement
04.02 Encroachment and Utility Policies for Freeways and Exceptions to the Policy
04.03 Identify CURE/CRZ Conflicts
04.04 Conflict Maps
04.05 Request for Relocation Plans, Claim of Liability, and Estimate of Cost
04.06 Receipt of Relocation Plans, Claim of Liability, and Estimate of Cost
05.00 Utilities on Structures
05.01 Coordination Requirements
05.02 Guidelines for Utilities on Structures
06.00 Utility Acquisitions
06.01 Uniform Acquisition Act Requirements
06.02 Acquisition from the Utility Owner
06.03 Acquisition for the Utility Owner (Replacement Right of Way)
06.04 Consent to Condemnation for Exchange Purposes from the Owner
06.05 Utility Easements on Federal Lands

13.04.00.00 LIABILITY DETERMINATION PHASE

01.00 General
01.01 Determining Superior Rights
01.02 Liability Calculation
01.03 Report of Investigation (ROI) Plan
02.00 Conventional Highway or Freeway
02.01 Conventional Highway Relocations
02.02 Freeway Relocations
02.03 Bicycle Path Construction
03.00 Master Contracts
03.01 Interpretation of Master Contracts
03.02 Application of Master Contracts
04.00 Property Rights
04.01 Fee Ownership
04.02 Easement
04.03 Implied/Secondary Easement
04.04 Joint Use and Consent to Common Use Agreements

© 1994-2025 California Department of Transportation. All rights reserved.

13.04.00.00 LIABILITY DETERMINATION PHASE (Continued)

04.05 Perfected Prescriptive Right
04.06 Lease
04.07 License
04.08 Franchise
04.09 Encroachment Permit
04.10 Joint Pole Agreement Cost Liability Determination
05.00 Streets and Highways Code
05.01 Section 673 – Relocation or Removal of Encroachment
05.02 Section 680 – Franchises in State Highways; Temporary Relocations
05.03 Section 702 – Relocation Outside Freeway
05.04 Section 703 – Relocation Within Freeway
05.05 Section 704 – Subsequent Relocation
05.06 Section 705 – Allowable Credit on Relocation
05.07 Section 707.5 – Contracts with Utilities; Freeway Master Contracts
06.00 Water Codes
06.01 Section 7034
06.02 Section 7035
07.00 Special Liability Issues
07.01 Interest During Construction
07.02 Contributions in Aid of Construction (CIAC)/Income Tax Component of Contributions and Advances (ITCCA)
07.03 Clearance of Highway Adjunct Properties
07.04 Extraordinary Relocation Costs
07.05 Delayed or Canceled Projects
07.06 Future Maintenance of Water Conduits
07.07 Loss of Plant, Investment, or Business
07.08 Undergrounding
07.09 Abandonment or Removal Costs
07.10 Additional Spare Ducts for Underground Conversion of Aerial Telephone Facilities
07.11 Disruption of Service Facilities
07.12 Storage Fees
08.00 Liability in Dispute
08.01 Liability in Dispute – Master Contract
09.00 Processing Approved Liability Package

13.05.00.00 REPORT OF INVESTIGATION

01.00 General
02.00 Owner's Estimate of Cost
02.01 Standard Estimate Format
02.02 Pre-award Evaluation
03.00 ROI Plan
03.01 ROI Plan Requirements
04.00 Lump-Sum Utility Agreements
04.01 Lump-Sum Payments for Completing Positive Location Work

13.06.00.00 NOTICE TO OWNER

01.00 General
01.01 Joint Facility Relocations
02.00 Preparation
02.01 Storm Water Plans
03.00 Processing
03.01 Utility Coordinator Responsibilities
03.02 Owner Responsibilities
03.03 Construction Responsibilities
03.04 Expedited Procedures for Positive Location Notices
03.05 Revised Notices
03.06 Notices Issued with Liability in Dispute

13.07.00.00 UTILITY AGREEMENTS

01.00 General
02.00 Circumstances Requiring a Utility Agreement
03.00 Standard Clauses
03.01 Section I. Work to Be Done:
- I-1. Work Performed by Owner per Owner's Plan
- I-2. Work Performed by State's Contractor per State's Plans
- I-3. Work Performed by State's Contractor per Owner's Plan
- I-4. Work Performed by Both Owner and State's Contractor per Owner's Plan
- I-5. Preliminary Engineering by Utility Owner

© 1994-2025 California Department of Transportation. All rights reserved.

13.07.00.00 UTILITY AGREEMENTS (Continued)

03.02 Section II. Liability for Work:

- II-1. State's Expense – SHC Section 702 or 703
- II-2. State's Expense – SHC 704
- II-3. State's Expense – Superior Rights
- II-4. State's Expense – Service Line on Private Property
- II-5. Owner's Expense – Encroachment Permit
- II-6. Owner's Expense – Trespass
- II-7. State or Prorated Expense – Right of Way Contract
- II-8. State or Prorated Expense – Master Contract
- II-9. Prorated Expense – No Master Contract
- II-10. Liability in Dispute – Deposit is Not a Waiver of Rights
- II-11. State/Local Public Agency (LPA) Requests Undergrounding – Engineering or Cost-Effective Option
- II-12. Local Public Agency (LPA) Requests Undergrounding

03.03 Section III. Performance of Work:

- III-1. Owner's Forces or Continuing Contractor Performs Work
- III-2. Owner Performs Work by Competitive Bid Process
- III-3. State's Contractor Performs All or a Portion of Work
- III-4. Owner to Hire Consulting Engineer
- III-5. Owner and State's Contractor Performs Work
- III-6. Travel Expenses and Per Diem
- III-7. Prevailing Wage Requirements
- III-8. Owner to Prepare Preliminary Engineering Plans

03.04 Section IV. Payment for Work:

- IV-1. Owner Operates Under PUC, FERC or FCC Rules
- IV-2. Owner Does Not Operate Under PUC, FERC or FCC Rules
- IV-3. For All Owners – Progress/Final Bills
- IV-4. Advance of Funds – State Liability
- IV-5. Loan of Funds – Owner Liability
- IV-6. Agreement for Identified Betterments
- IV-7. State Performs Work – Owner Requested Betterments
- IV-8. Lump-Sum/Flat-Sum Billing Utility Agreements (Excluding Pac Bell/SBC)
- IV-9. Lump-Sum/Flat-Sum Pac Bell/SBC Billing Utility Agreements
- IV-9a. Lump-Sum/Flat-Sum AT&T Billing Utility Agreements

© 1994-2025 California Department of Transportation. All rights reserved.

13.07.00.00 UTILITY AGREEMENTS (Continued)

03.04 Section IV. Payment for Work: (Continued)

IV-10. State's Contractor Performs Portion of Work-Owner Liability

03.05 Section V. General Conditions:

V-1. State Liable for Review and Design Costs, Project Cancellation Procedures and Utility Agreement Subject to State Funding Clauses – FOR ALL OWNERS

V-2. Notice of Completion – FOR ALL OWNERS

V-3. Owner to Acquire New Rights of Way with STATE Liable for a Portion of Costs

V-4. State to Provide New Rights of Way Over State Lands

V-5a. State to Provide New Rights of Way Over Private Lands 100% State Liability

V-5b. State to Provide New Rights of Way Over Private Lands 100% Owner Liability

V-6. State to Issue a JUA or CCUA

V-7. Master Contract Specifies Equal Replacement Rights

V-8a. Facilities Replaced per Liability Determination Under Water Code Section 7034

V-8b. Facilities Replaced per Liability Determination Under Water Code Section 7035

V-9a. Acknowledgments

V-9b. Acknowledgments (Mandatory Language FOR ALL OWNERS)

V-10. Greenhouse Gases

03.06 Section VI. Oil Company Clauses (Only):

VI-1. Replacement Right of Way

VI-2. Indemnity

VI-3. Choice of Law

VI-4. Force Majeure

VI-5. Entire Agreement

03.07 Section VII. Buy America Clauses

VII-1a. Federal Aid Clause – No Master Contract, No NEPA Document, and No Federal Funding on a Project

VII-1b. Federal Aid Clause – No Master Contract, No NEPA Document, Federal Funding on Project, and Relocation Claim Letter Date Prior to July 1, 2025

VII-1c. Federal Aid Clause – No Master Contract with NEPA Document, and Federal Funding on Project and Relocation Claim Letter Date on/After July 1, 2025

© 1994-2025 California Department of Transportation. All rights reserved.

13.07.00.00 UTILITY AGREEMENTS (Continued)

03.07 Section VII. Buy America Clauses (Continued)
VII-2a. Federal Aid Clause – No Master Contract, No NEPA Document, and No Federal Funding on a Project
VII-2b. Federal Aid Clause – Master Contract, No NEPA Document, and No Federal Funding on a Project
VII-2c. Federal Aid Clause – Master Contract, NEPA Document, Federal Funding on Project, and Relocation Claim Letter Date is Prior to July 1, 2025
VII-2d. Federal Aid Clause – Master Contract, NEPA Document, Federal Funding on Project, and Relocation Claim Letter Date is on/After July 1, 2025
VII-3. Certification of Buy America Materials
VII-3a. Utility Owner Self-Certification Method
VII-3b. Vendor/Manufacturer Certification Method
VII-4. Utility Agreement Not Subject to Buy America
VII-5. De Minimis for All Non-Compliant Non-Domestic Buy America Compliant Materials
VII-6. Acknowledgments
04.00 Processing
04.01 Processing a Phase 4 Utility Agreement Where the State's Contractor Will Be Handling All or a Portion of the Utility Relocation for the Owner
04.02 Processing a Phase 4 Construction Funds and a Phase 9 Capital Right of Way Funds as One Utility Agreement
05.00 Amendments to Utility Agreements
05.01 Amendments for Payments in Excess of Original Utility Agreement
05.02 Amendments for Change in Scope of Work
06.00 Special Utility Agreements
06.01 Utility Agreement to Cover Advance Engineering Effort
06.02 Utility Agreements with Oil Companies

13.08.00.00 CERTIFICATION PHASE

01.00 General
02.00 PS&E Review
02.01 Work Performed by State Contractor
03.00 Right of Way Utilities Certification
03.01 Utility Certification for Design/Build Projects

© 1994-2025 California Department of Transportation. All rights reserved.

13.09.00.00 CONSTRUCTION PHASE

01.00 General
01.01 Pre-Construction Notification/Meeting
01.02 Positive Location Work During Construction
02.00 Inspection of Utility Relocation Work
03.00 Discovered Work and Emergencies
03.01 Changes to Planned Relocation Work
04.00 Wasted Work
04.01 Payment for Wasted Work
04.02 Payment for Betterment Portion of Wasted Work

13.10.00.00 PAYMENT PHASE

01.00 General
02.00 Processing Bills from Owners
02.01 Prompt Payment of Bills
02.02 Review of Owner's Bill
02.03 Bill Discrepancies
02.04 Partial Billings
02.05 Payment for Engineering Effort
02.06 Final Bills
02.07 Payment Request Form
02.08 Audit of Owner's Bill
03.00 Advanced Relocation Payments to Owners
03.01 Loan Relocation Funds to Owner
04.00 Delay Charges to Utility Owner

13.11.00.00 PROPERTY RIGHTS CONVEYANCES

01.00 General
02.00 Requirements for JUA/CCUA
02.01 Joint Use Agreements
02.02 Consent to Common Use Agreements
02.03 Water Code 7034 and 7035
02.04 Local Agency Owned Facilities Within Highways and Frontage Roads
02.05 Prescriptive Rights Claim
03.00 JUA/CCUA Preparation
03.01 Description of Owner's Rights
03.02 Vicinity Description
03.03 Location Description
03.04 Access Control Clauses
04.00 JUA/CCUA Processing
04.01 Recording JUA/CCUA Prior to Relinquishment of Frontage Roads

13.01.00.00 – INTRODUCTION

13.01.01.00 General

This chapter prescribes policies, procedures, standards, and practices for the statewide coordination of utility relocations required for construction of transportation projects. The chapter is organized based on the usual sequence of events from project inception (planning) to project completion (construction). Although it is impractical to include all policy interpretations and instructional material, this chapter does contain the information required to do the job.

In general, Departmental Utility policies apply to public utilities. "Public utilities" are defined as those utilities either publicly, cooperatively or privately owned that provide a product or service, either directly or indirectly, to the public for a fee.

Separate "Utility Reference File" memorandums supplement this chapter and provide background or guidance on subjects that occur less frequently. (See Section 13.01.01.03.)

13.01.01.01 District Utility Coordinator Responsibilities

The District Director is responsible for relocation or removal of utility facilities that are either in physical conflict or in violation of the Department's utility accommodation policy for transportation projects. This responsibility shall be delegated to the District Division Chief-RW, who will authorize the District Utility Coordinator(s) to implement the Department's policies, including the following specific directions:

- Establish files that document actions taken or recommended during the life of a project. (Section 13.01.01.04)

- Prepare route estimates based on possible relocations. Update and revise the estimates, when necessary. These estimates are used for capital and support budgeting needs for current and future fiscal years. (Sections 13.02.04.00, 13.02.04.01, and 13.02.04.02)

- Act as the Department's primary point of contact with Utility Owners for identifying and verifying all utility facilities lying within existing and proposed rights of way of planned construction projects. (Section 13.03.02.00)

© 1994-2025 California Department of Transportation. All rights reserved.

- Coordinate positive location requirements for all High Priority Utility Facilities within the project limits. (Section 13.03.03.00)

- Coordinate with P&M on preparing the FHWA Authorization to Proceed (E-76) for projects that will be federally funded. (Section 13.14.03.00)

- Coordinate "avoidance" of utility facilities and/or transmit identified conflicts to Utility Owners. (Sections 13.03.01.03 and 13.03.04.00 through 13.03.04.04)

- Actively participate on Project Development Teams. (Section 02.02.02.00)

- Obtain and analyze data to allocate cost between Owner and State for all required utility adjustment work and to clearly document, support and, in cases where the State has cost liability, set forth the basis of this finding in a Report of Investigation. (Section 13.05.00.00)

- Assist in preparing and/or reviewing (1) encroachment exception requests and (2) High Priority Policy exceptions. (Section 13.01.04.00)
- Review utility consultant design agreements when required for utility relocation. (Section 13.03.01.06)

- Prepare and approve FHWA Specific Authorization and FHWA Approval of Utility Agreement for federally funded utility work in accordance with delegated authority. (Sections 13.14.02.00, 13.14.04.00, and 13.14.08.00)

- Prepare and issue Notices to Owner, Utility Agreements, and Encroachment Permits in accordance with delegated authority. (Sections 13.06.00.00 and 13.07.00.00)

- Coordinate with P&M on preparing a RW Certification for proposed construction projects. (Section 13.08.00.00)

- Verify Owner's relocation bills and process for payment when acceptable. (Section 13.10.00.00)

- Coordinate preparation of and review necessary property right conveyances for Owners. (Section 13.11.00.00)

- Provide oversight activities to LPAs and consultants on State highway projects funded by others. (Section 13.12.00.00)

- Provide stewardship role to Local Public Agencies on federally funded Local Streets and Roads projects. (Section 13.12.00.00)

© 1994-2025 California Department of Transportation. All rights reserved.

- Coordinate billing and refunding of LPA funds relating to utility costs pursuant to Cooperative Agreement provisions. (Sections 13.12.05.02 and 13.12.05.03)

- Coordinate with the Department's offices, divisions, and branches and external organizations, both public and private, to ensure the above directions are implemented.

- Coordinate with the Department's Encroachment Permits Section regarding review of permits for wireless facilities on conventional highways.

13.01.01.02 Definitions

The following definitions are for purposes of the Utility Relocations Chapter and the Department's RW utility relocations only.

- **FACILITY** – Facility is synonymous with utility facility. A facility is any pole, pole line, pipe, pipeline, conduit, cable, aqueduct, or other structure or appurtenance used for public or privately-owned utility services or used by any mutual organization supplying water or telephone service to its members.

- **OWNER** – Owner is synonymous with Utility Owner. An Owner is any private entity or public body (including city, county, public corporation, or public district) that owns and/or operates a utility facility which directly or indirectly serves the public for a fee.

- **LIABILITY** (COST LIABILITY) – A financial obligation or responsibility to pay for relocation of utility facilities affected by the State's project.

- **POSITIVE LOCATION** (POS-LOC) – Positively determining the existence, location and identification of a utility facility to within 0.5 feet both horizontally and vertically through the use of vacuum excavation, potholing, probing, electronic detection, or a combination thereof as deemed acceptable by the Project Engineer. Refer to the Policy on High Priority Underground Facilities within Highway Rights of Way for specific requirements. For more information on this policy, refer to the Project Development Procedures Manual Chapter 17 Encroachments and Utilities, Section 3 Utility Policies, Article 2 Policies.

© 1994-2025 California Department of Transportation. All rights reserved.

13.01.01.03 Utility Relocations Reference Materials

The Reference File System has been established by Right of Way as a tool to supplement the RW Manual in order to provide guidance on infrequently occurring situations, more extensive background information, policy interpretations, and instructional material impractical to include within the basic Manual. The "Utility Reference File" (URF) memorandum has been established as the vehicle to supplement the Utilities Chapter of the RW Manual.

The District Utility Coordinator is responsible for maintaining a complete set of the "Utility Reference File" memorandums (URFs). To provide a basis for uniform and equitable service to all Utility Owners (Owners), this file is to be made available to all Utility Coordinators. In addition, URFs can be found on the HQ RW Utility Relocations Intranet site (internal Caltrans link).

All Regions/Districts should also assemble and maintain a library of pertinent, supplemental Utility Relocations reference material to assist the Utility Coordinators in doing their jobs. To help the Districts compile a library, a listing of selected manuals, guidelines, and other references is listed in Exhibit 13-EX-01. It is up to the region/district to obtain the materials.

13.01.01.04 Utility File and Diary

The diversity and complexity involved in the relocation of utility facilities and their potential safety impacts make it mandatory that files be established and thoroughly documented. In addition, FHWA regulations (23 CFR 645.119 [c][1][iv]), Alternate Procedure approval) require documentation of actions taken in compliance with State and Federal policies.

A separate utility file should be established for each involvement on a project. An "involvement" is defined as the issuance of a Notice to Owner for a specific utility facility on one project (EA). For example, if a project has relocations for PG&E-Gas Transmission, PG&E-Gas Distribution, and PG&E-Electric Distribution, it would equal three (3) involvements.

Each District Utility Coordinator should consider the needs and methods of their district and initiate a district procedure for a utility file diary. Each file shall contain all of the mandatory components and shall be organized in a uniform fashion throughout the district.

© 1994-2025 California Department of Transportation. All rights reserved.

The utility file shall contain the following items, as applicable:

- Diary notes.
- Copies of the supporting liability documentation.
- Report of Investigation.
- A copy of the Notice to Owner.
- A fully executed wet-ink original of the Utility Agreement.
- A copy of the relocation plans.
- Copies of the E-76.
- Copies of the FHWA Approval of the Utility Agreement and Specific Authorization.
- Any correspondence with Project Engineers, the Resident Engineer, and with other Departmental divisions.
- Any correspondence with Utility Owner.
- Any discussion, meeting, or review of importance that does not generate a document for the file must be recorded in the diary or in a memorandum to the file.

In every instance, the author shall date and sign (or initial) all diary entries and notations in the file. A sample diary is shown in Exhibit 13-EX-02 (internal Caltrans link).

13.01.02.00 Applicable Utility Laws and Policies

The following is a selected list of laws, regulations, and policies that shall be uniformly applied.

13.01.02.01 Delegation of Authority

Regions/Districts are authorized to approve all Reports of Investigation (Form RW 13-03), including liability determination, Notices to Owner, FHWA Specific Authorization to Relocate Utilities (Form RW 13-15), Utility Agreements and FHWA Approval of Utility Agreement (also on Form RW 13-15) for all utility relocations and positive locations, in accordance with the policies set forth in this Manual, and appropriate memoranda, with the exception of "liability in dispute." (Section 13.04.09.00 et seq.) See the Delegation Matrix in this chapter for any changes to the delegations.

The Department's agreement with FHWA requires that a Senior Right of Way Agent fully versed in Utility Relocations must make the Region/District approvals. Further delegation to an Associate Right of Way Agent is not authorized under any circumstances.

© 1994-2025 California Department of Transportation. All rights reserved.

Region/District approval shall only be granted when all documentation is complete and in the file. Knowledge that documentation is "pending" is not sufficient to place the Region/District in a position to make an approval.

All Region/District approvals will require compliance with current pre-award evaluation criteria. (Section 13.05.02.02 and URF 02-2)

As a condition of the delegation to the Region/District, the Report of Investigation Approval Guide (Form RW 13-16) must be completed by the delegated Senior RW Agent at the time of approval and retained in the utility file. An approved E-76, meeting the criteria specified in Section 13.14.02.00, must be received prior to the approval of any FHWA Specific Authorization.

Additionally, as part of our agreement with FHWA under the Alternate Procedure, the delegated Senior RW Agent must complete form FHWA Guide for Review of Utility Agreements (Form RW 13-17) (internal Caltrans link) for every relocation where Federal aid funding will be sought.

Delegated Senior RW Agents are to fully review and familiarize themselves with the FHWA publication Program Guide "Utility Adjustments and Accommodation on Federal-Aid Highway Projects" and 23 CFR 645.

If it is discovered that Federal procedure or delegation authorization has not been followed, the Region/District will be responsible for ensuring that Federal reimbursement is not sought. Should the error be discovered after Federal vouchering, the Region/District will be responsible for refunding the incorrectly vouchered funding. The delegated Senior Utility Agent or Utility Coordinator should contact Planning and Management to determine the process for correcting the vouchering errors.

13.01.02.02 Incorporation of City Streets or County Roads into the State Highway System

City streets or county roads that become part of the State highway right of way shall be considered incorporated into the State highway system on the date of the CTC resolution or, if later, the date specified for taking actual physical possession of the road. (See SHC Sections 81, 82, and 83.)

© 1994-2025 California Department of Transportation. All rights reserved.

13.01.02.03 Encroachments Within Conventional Highways

All utility encroachments within State highway rights of way shall be installed and maintained so as to minimize traffic disruption and other hazards to highway users. Facilities shall be located as close to the edge of the highway right of way line as reasonably practicable. Facilities shall be installed to minimize interference with highway maintenance and operation and to prevent impairment of the stability of the highway or its appurtenances to the maximum extent practicable.

13.01.02.04 Encroachments Within Freeways and Expressways

The Department allows encroachments within access control right-of-way in accordance with Federal and State regulations and Departmental policies. Utility crossings are permitted where supporting structures or manholes are located outside access control lines. Encroachment exceptions are permitted only where space is available, facilities may be safely installed and maintained, and no other reasonable alternative is available. The Division of Design, Office of Project Support, must approve all exceptions to the policy.

NOTE: See Encroachment Permit Manual Section 300, Exceptions to Policy, and Project Development Procedures Manual Chapter 17, Encroachments and Utilities, for exception requirements.

13.01.02.05 Hazardous Waste Impacted by Facility Relocations

State ordered utility relocation work to be done within the highway project limits is a necessary part of the highway project construction. Any hazardous waste (HW) encountered within the project limits as a result of State ordered utility work is handled in the same manner as HW encountered by any other part of the highway project construction. Immediately inform the Project Engineer of all potential utility adjustments that may affect identified HW sites so the remediation work is identified as part of the project remediation requirements.

HW encountered outside the project limits, such as on the grantor's remaining property, other private property, or on local streets and roads beyond the limits of the State highway project, is not the Department's remediation responsibility. Any extraordinary costs associated with remediation or unusual work requirements due to HW encountered outside the highway right of way are considered part of the Owner's necessary relocation effort. The Department

© 1994-2025 California Department of Transportation. All rights reserved.

may pay its proportionate share of these costs as part of normal relocation reimbursement in accordance with the usual liability determination process.

See the Freeway Master Contract for details of handling hazardous materials and their associated costs on freeway projects for those Owners who have signed a new Freeway Master Contract.

All exceptions to this policy shall be processed through Headquarters RW for approval.

See Section 13.02.05.03 for Hazardous Waste Exceptions.

13.01.02.06 Work Before Environmental Approval

Pursuant to California Public Resources Code Sections 21102 and 21150, environmental approval shall be received prior to any expenditure of capital funds for detailed design or relocation of utility facilities. This does not preclude an expenditure of funds for the Owner's preliminary engineering or State's positive location work in support of the environmental document.

The Department has established a process to order an Owner to commence design activities prior to the approval of the environmental document but after the selection of the preferred alternative.

If, at any time during the project, an environmental reevaluation is required, no work other than studies or positive location work should proceed outside of the "area of potential effect" (APE) evaluated and approved in the original environmental document until the reevaluation is completed.

13.01.02.07 Verification of Utility Facilities

Pursuant to Government Code Section 4215, governmental agencies shall make every reasonable effort to locate all existing utility facilities within the right of way of a proposed construction project and to identify the facilities on construction contract plans. Failure to identify utility facilities on plans may make the State liable for damages to the facilities resulting from planned construction.

© 1994-2025 California Department of Transportation. All rights reserved.

13.01.02.08 Policy on High Priority Underground Facilities Within Highway Rights of Way

The Department is responsible to provide a safe environment for employees of the Department and its contractors, as well as the traveling public. An important element of the safe environment is providing a clear and safe right of way through the proper placement, protection, relocation, or removal of utility facilities that may pose a safety risk to the highway worker or user when the utility is excavated, cut, or penetrated. Toward this end, the Department shall establish and enforce mandatory standards and procedures for the placement and protection of underground utility facilities within highway rights of way and for the safety of highway workers involved in maintenance or construction operations in proximity to underground utility facilities. These mandatory standards and procedures are known as the Policy on High Priority Underground Facilities Within Highway Rights of Way. For more information on this policy, refer to the Project Development Procedures Manual Chapter 17 Encroachments and Utilities, Section 3 Utility Policies, Article 2 Policies.

13.01.02.09 Advance Deposit for State Contract Performed Work

State administrative rules require that an advance deposit must be made to the State for the estimated cost of work to be done by the State on behalf of another entity (Owner). An exception is authorized for any Owner possessing a Master Agreement or Freeway Master Contract with the State.

13.01.02.10 Inspection of Relocation Work

The Department's Construction Manual, Chapter 3, General Provisions, Section 3-809 Utility and Non-Highway Facilities, provides that whenever work is underway on any relocation being done to clear the right of way for construction, an engineer must be assigned to inspect and accept the work. Depending on the state of development of the project, the engineer may be a Project Engineer (PE) or a Resident Engineer (RE). If no engineer has been assigned, the Utility Coordinator shall contact the Project Manager or Construction Senior to ensure an engineer is assigned. Without an assigned engineer to inspect the work, the utility relocation should not proceed.

The PE or RE, or his/her delegate, shall inspect all utility relocation work. The inspection must be documented in Inspector's diary notes. Copies of these notes should be sent to the Utility Coordinator on a regular basis and placed in the Utility File.

© 1994-2025 California Department of Transportation. All rights reserved.

As soon as an RE is formally assigned to a project, the RE assumes primary responsibility for coordinating all construction activities. However, all communications with the Owners, including modification of the scope of work or the need to have utility work performed on premium or overtime shall be the responsibility of the Utility Coordinator and shall be done in writing. All decisions relating to utility relocation work, including additional or supplemental liability determinations, shall be made by the Region/District Utility Coordinator or HQ RW, as applicable. Under no circumstances is Construction allowed to make liability determinations. Significant changes shall be covered by an amended Notice to Owner and Utility Agreement issued by the Utility Coordinator.

13.01.02.11 Application of Master Agreements/Freeway Master Contracts to Special Funded Projects

The Department has entered into Master Agreements or Freeway Master Contracts with several Owners for the apportionment of relocation costs on freeway projects. (Section 13.04.03.00). These agreements, authorized by SHC 707.5, shall be applied in lieu of otherwise applicable SHC sections and shall be applicable to all freeway projects on State highways that are part of the California Freeway and Expressway System no matter what the source of project funds or agency responsibility for project design. The only exception is when the freeway or expressway improvement project is the result of a private development mitigation requirement, in which case the private developer is responsible for all utility relocation costs in accordance with applicable law. (Section 13.12.04.00)

13.01.02.12 Utility Facilities Within State Highways

State law allows the use of State highway rights of way for public utility facilities owned by public agencies or by private companies recognized by the California Public Utilities Commission as a provider of a public utility service, when such use does not interfere with the primary purpose of the State highway. (SHC 117)

All utility facilities and other encroachments located within State highway rights of way must be covered by an Encroachment Permit and placed in accordance with the Department's standards. All exceptions to applicable requirements as set forth in the Department's Encroachment Permits Manual must have Division of Design, Office of Project Support, prior approval.

© 1994-2025 California Department of Transportation. All rights reserved.

NOTE: See Encroachment Permit Manual Section 300, Exceptions to Policy, and Project Development Procedures Manual Chapter 17, Encroachments and Utilities, for exception requirements.

13.01.02.13 Greenhouse Gases

In 2017, the California Legislature passed and the Governor signed AB 262 – Buy Clean California Act. This law enacted new requirements for State Agencies to meet when executing public works contracts. Specifically, the law requires the Department of General Services (DGS) to publish in the State Contract Manual (SCM) a maximum acceptable level of Global Warming Potential (GWP) for each category of required materials. The categories of required materials are:

1. Carbon Steel Rebar
2. Flat Glass
3. Mineral Wool Board Insulation
4. Structural Steel

Typically, utility relocations completed as a result of the Department's projects are done with the Owners forces and are not considered public works contracts and therefore do not fall under this law/statute. However, there are some exceptions where the law might apply, if the utility is unable to complete the relocation with its own forces and bids out the work then the law would apply. The contractor is required by law certify the qualify materials by signing an Environmental Product Declaration (EPD) prior to the start of work. The utility Owner will be required to ensure contractors compliance by retaining a copy of the EPD for a minimum of three years.

NOTE: If the conditions of Greenhouse Gases apply, please use clause number V-15.

© 1994-2025 California Department of Transportation. All rights reserved.

13.01.03.00 Private Utility Facility Relocations

Relocation of all private utility facilities shall be by the usual appraisal/acquisition process rather than by the public utility relocation process.

A private utility facility is one that provides a utility service for the exclusive use of a privately-owned business, farm operation, etc., or provides an exclusive service to improvements and occupants of an individually owned property. Examples of this type of utility facility are:

- Facilities located on a military base, school grounds, manufacturing complex, etc., owned and maintained by the property owner for their exclusive use.

- A facility interconnecting individually owned but dispersed operating sites providing an exclusive and private service to the site owners.

Separation of the private utility facility from the public utility facility occurs at the point where the privately owned and maintained facility connects to the public facility.

13.01.03.01 Private Facilities in State Highways

Private transverse crossings shall not be unreasonably denied as long as they meet the Department's standards.

However, the longitudinal placement of private utility facilities within the State highway right of way is generally prohibited by law, as the free use of public property by private entities is tantamount to a "gift of public funds." Any exception request must have Division of Design, Office of Project Support, prior approval.

Private longitudinal installations within State highways may be allowed only under the following circumstances:

A. The private use is based on a retained property right.

B. Oil company facilities that were placed within the right of way of a city or county road under a local agency issued franchise agreement before the road became a State highway may remain within the State highway for the duration of its useful life or until physically impacted by a highway improvement project, at which time it shall be relocated outside the highway right of way. If the oil company facility is claimed and proven to

© 1994-2025 California Department of Transportation. All rights reserved.

be a "common carrier," it should be handled in the same manner as a public utility facility.

C. Cogeneration plants' transporting lines that transport electricity to a public utility may be treated as public utilities and their transporting lines allowed as encroachments within the State highway subject to the usual utility accommodation requirements. The electrical generator portion of the operation, if impacted by the highway project, should be treated as any other business operation subject to the acquisition process.

13.01.04.00 Encroachment Exceptions

The Division of Design, Office of Project Support, is responsible for review and approval of specific requests for exceptions to established standards and policies governing encroachments within State highway rights of way. Requests for encroachment exceptions must be prepared by the Project Engineer, in writing, and sent to the Division of Design, Office of Project Support. A copy of all utility relocation exception requests should be forwarded to Headquarters RW for concurrent review. When the District has been delegated the task of approving encroachment exceptions, a copy of all utility relocation exception requests should be forwarded to District RW for concurrent review.

NOTE: See Encroachment Permit Manual Section 300, Exceptions to Policy, and Project Development Procedures Manual Chapter 17, Encroachments and Utilities, for exception requirements.

13.01.05.00 Right of Way Management Information System II (ROWMIS II)

The ROWMIS II database system is used to track the progress of projects that involve utilities. This system identifies a project by district and EA. Within a project, utility information is further broken down for each Owner involvement. Each Owner's involvement is identified by a unique file number.

ROWMIS II is an online system, which means you interact directly with the system through your personal computer to input and update the data. Owner data for a project and/or utility file number is displayed along with some project data pulled from the Project Management panel.

Relocation milestones for each Owner on the project are viewed and updated directly in the system. Reports can also be produced from ROWMIS II.

© 1994-2025 California Department of Transportation. All rights reserved.

The District Utility Coordinator is responsible for ensuring the information in the ROWMIS II system is up to date and accurate. Headquarters Right of Way can provide training and assistance if needed.

NOTE: The Right of Way Utility Management System (RUMS) is available in read-only mode if historical information is needed.

13.01.06.00 Charging Practices

The Department maintains a comprehensive cost accounting system, major segments of which involve accounting for employee time (support) and expenditure of funds (capital) and reporting production. Ensuring support and capital are correctly charged enables the Department to report expenditures and maintain financial control on active budgets and serves as the foundation for justifying and developing future budgets. Accurate time reporting also provides cost data for effective project management, preparation of annual financial statements and legislatively mandated reports, and billing of reimbursable work.

Before any work is performed on any project, the Utility Coordinator will verify with P&M that a valid EA has been established. Actual work performed or costs incurred must always be charged to the correct EA and Work Breakdown Structure (WBS) code. See also the RW Time Charging Manual, a copy of which must be maintained in the Utility Relocations library.

© 1994-2025 California Department of Transportation. All rights reserved.

13.01.06.01 EA Phases

PHASE 0 (PA&ED)

- Charge very early preliminary engineering to Phase 0 (e.g., PID review).

PHASE 1 (Design – PS&E)

- Charge preliminary engineering to Phase 1 (e.g., route adoption studies, data sheet, field review).

PHASE 2 (Right of Way Operations)

- Charge Capital Outlay Support charges to Phase 2 (i.e., staff/time charges for completing all RW utility work after PA&ED is complete).

- In some cases, where no other RW work is required and no Notices to Owner will be written, Phase 2 may not be established.

PHASE 4 (Major Construction Contract)

- Charge capital outlay for utility relocation work performed by the State's highway contractor to Phase 4. Only Construction can encumber and charge Phase 4.

- No Right of Way capital support/outlay charges should be made to Phase 4.

PHASE 9 (Right of Way Capital Outlay)

- Charge the actual cost of the relocation work to Phase 9 (i.e., utility company billing for State's share of the relocation costs).

- Charge payment of all positive location billings to Phase 9.

- No Utilities Capital Support charges should be made to Phase 9.

© 1994-2025 California Department of Transportation. All rights reserved.

13.01.06.02 EA Splits, Combines and Revisions

Through the duration/life of a project, the EA may change for a variety of reasons. The Project Engineer/Manager may need to split or combine projects for delivery or programming reasons. These changes may occur at any time. If the EA changes during the utility relocation stage, it is a good practice to include the original EA on all documents, along with the current EA. For example, EA 443329 (original EA 443309). That way, the document contains current information for accounting and charging, but still retains the history of the project for tracking purposes.

© 1994-2025 California Department of Transportation. All rights reserved.

13.02.00.00 – PLANNING PHASE

13.02.01.00 General

Duties relating to this phase of the project are normally performed prior to Environmental Clearance and Project Report approval. Activities generally consist of:

- Corridor/Route Preservation.
- Route Estimating.
- RW Data Sheet preparation.
- Draft Project Report review.
- Draft Environmental Document review.

13.02.01.01 Preliminary Engineering in Support of the Environmental Document

Public Resources Code Sections 21102 and 21150 state that environmental clearance must be received prior to any expenditure of capital funds for a project (Phase 9 funds). This does not preclude expenditure of (Phase 9) funds covering Owner performed work critical for inclusion in the environmental document. This work is sometimes referred to as "preliminary engineering" and includes such items as:

- Facility verification effort, including necessary positive location work.
- Owner effort required to determine and identify new utility facility rights of way and resultant environmental impacts.
- Preparation of Plans in Support of the Environmental Document (ED).

FHWA must approve an E-76 prior to authorization of preliminary engineering so that Owner's preliminary engineering costs may be federally reimbursed. The approved E-76 does not provide FHWA Specific Authorization. FHWA Specific Authorization must be obtained separately before the actual relocation work is started. See Section 13.14.00.00 for more discussion on federal-aid procedures.

© 1994-2025 California Department of Transportation. All rights reserved.

13.02.01.02 Future Project Coordination

Utility Owners, like the State, require lead time to develop budgets and plan work required for ordered relocations. Additional lead time may be required to order long lead time materials, to schedule work during non-peak demand periods when utility facilities may be removed from service, to comply with PUC General Orders, and to comply with Buy America requirements. Streets and Highways Code (SHC) Section 680 requires "the department shall specify in the demand a reasonable time within which the work of relocation shall commence …" The district must, therefore, provide timely planning information to ensure that our relocation notices withstand challenge.

It is critical that the District Utility Relocation staff establish early and continuing coordination with all Owners being affected by proposed projects. Many local agencies hold periodic coordination meetings with Owners within their jurisdictions to discuss planned public works projects in general. District Utility Coordinators are encouraged to discuss State projects at these meetings or to conduct their own liaison meetings.

13.02.02.00 Work Before Environmental Approval

California Public Resources Code Sections 21102 and 21150 do not preclude an expenditure of funds for the Owner's preliminary engineering or State's positive location work in support of the environmental document.

If, at any time during the project, an environmental reevaluation is required, no work other than studies, preliminary engineering or positive location work should proceed outside of the "area of potential effect" (APE) evaluated and approved in the original environmental document until the reevaluation is completed.

13.02.02.01 Corridor/Route Preservation

At times and in an area of development, Owners may plan extensions or additions to their utility facilities within State highway right of way under the terms of their franchise agreements. (See Section 13.04.04.08 for additional information on franchises.) Planned or proposed highway construction may affect these new utility facility installations. The District Utility Coordinator, where feasible, may notify the Owner of all planned highway improvement projects within the district to enable the Owner to make an informed decision about placement of utility facilities within the highway right of way.

© 1994-2025 California Department of Transportation. All rights reserved.

If an Owner decides to go ahead with new facility construction and the installation is in a local street or road underlying the State's proposed highway project, the additional cost incurred to install their facilities clear of the State's future construction shall be paid by the Owner.

Although there is no requirement for the Owner to install their facilities to clear State's future construction, it will eliminate the possible relocation, at Owner's expense, of these new facilities in the near future, providing less disruption to their services, less cost to their ratepayers and more efficient project delivery for the Department.

If the Owner decides to go ahead with the new facility construction and the installation is in a location where the Owner has a right that is superior to the State's, the additional cost incurred to install their facilities clear of the State's future construction shall be paid by the State. A special Utility Agreement may be entered into with the Owner to cover the extra cost of the installation. (See Section 13.07.00.00 for additional information on Utility Agreement preparation.)

13.02.02.02 Preliminary Engineering Prior to Environmental Approval

In certain circumstances and to ensure RW's timely project delivery, it may be necessary to begin design activities prior to Environmental Approval. RW has established this process that allows for Preliminary Engineering Design Work before Environmental Document to proceed in a timely manner. The decision to use this process will be made on a project-by-project basis by the District Utility Coordinator. This process may work well on some projects and not others. In making the decision on whether to use this process, the District Utility Coordinator should consider the following:

- At what point after Project Initiation Document (PID) to initiate this process.
- When to obtain facility mapping and verify existing utilities.
- Determine the route alignment/easement needs for utilities.
- Define the Footprint, that is the "Area of Potential Effect" (APE) for the Environmental Document, as it affects utilities.
- The possibility of wasted work.
- The feasibility of the project actually going forward.
- Federal funding will be lost for any physical relocation work prior to Environmental Document.

© 1994-2025 California Department of Transportation. All rights reserved.

The following factors should be considered before initiating Preliminary Engineering prior to the Environmental Document:

- Owner's Preliminary Engineering cannot commence until the preferred alternate route has been selected.
- Evaluate the Environmental Document as follows:
    - If Environmental issues arise, such as an Environmental Sensitive Area (ESA), biological, archeological, or water quality sites, what areas are then available for route alignment and future relocation activities?
    - Obtain a time estimate from the Environmental section as to how long it will take to complete the Environmental Document and mitigate any issues.
- Evaluate schedule milestone dates to determine a reasonable starting time for Engineering to begin.
- Determine when to request facility mapping and start the conflict determination stage.
- Determine when to send conflict mapping to the Utility Owner.
- Positive Location (Potholing) is allowed during Preliminary Engineering.

Process for Implementing Owner's Preliminary Engineering prior to approval of the Environmental Document:

- Prepare the Data Sheet to reflect funding for Utility Owner's Preliminary Engineering so the Project Manager can properly fund at this early phase.
- Prepare the liability package once the final alternative has been selected following all liability determinations shown in 13.04.00.00 of this manual.
- Prepare a Report of Investigation, Notice to Owner, and Utility Agreement for encumbrance of funds. (**NOTE:** New standard clauses have been developed and approved by Legal for this process – Refer to Section 13.07.00.00.)
- Use Phase 9 Capital funding.

© 1994-2025 California Department of Transportation. All rights reserved.

13.02.03.00 Utilities on Donated or Dedicated Future Right of Way

Donated right of way is property for which the owner was entitled to receive just compensation, but for personal reasons waived that right and deeded to a public agency without compensation. If the donated right of way location is satisfactory to the State's needs, the property may be acceptable even though encumbered with utility facilities. This is based on the premise that even if the State had purchased the right of way, the State may have been liable for any necessary adjustment or relocation of the utility facilities occupying private property.

Dedicated right of way is property that the owner is obligated to convey to public ownership as a condition prior to the granting of a permit, license, or zoning variance for a planned property development. The State must not accept dedicated right of way if it is encumbered with existing or planned utility facilities that are in conflict with the State's accommodation policy. Since the property owner is obligated to provide the right of way without compensation, this obligation extends to conveying it free and clear of all conflicting encumbrances that would otherwise have to be removed through payment of public funds. All conflicting utility encumbrances must be cleared by the property owner prior to conveyance to the public agency or prior to acceptance by the State.

13.02.04.00 Utility Estimates

RW Estimating usually requests the project utility relocation estimate. These estimates are used for the Project Study Report (PSR). The PSR is an engineering report used to document agreement on scope, schedule, and estimated cost of the project so it can be included in a future STIP or other programming document.

Since accurate estimates are crucial to both scheduling and ultimate delivery of any given project, utility estimates must be as accurate as possible. Accuracy of any estimate, however, is subject to the quality of plans received and the lead time given. If the plans or lead time are inadequate, the Utility Coordinator shall inform RW Estimating and/or P&M of such when submitting the estimate. Significant cost contingencies should be specifically identified in the estimate. For example, a potential conflict with a major facility where the project's impact cannot yet be fully determined.

© 1994-2025 California Department of Transportation. All rights reserved.

Estimates should always be based on the most probable "worst case" and "highest cost" assumptions. A frequently overlooked cost is that of relocating a facility currently located within an existing freeway as an exception to the Department's utility accommodation policy. Policy requires all utility facilities located within project limits in violation of current utility accommodation requirements be adjusted to meet current requirements. If the facility is located in the project limits subject to a previous encroachment exception and the Utility Coordinator feels the facility may safely remain, it must be reevaluated and resubmitted to the Division of Design, Encroachment Exceptions Section, for approval. (See Section 13.01.04.00.) Therefore, for estimating purposes, the Utility Coordinator should assume an exception will not be granted and include estimated costs for a relocation.

NOTE: See Encroachment Permit Manual Section 300, Exceptions to Policy, and Project Development Procedures Manual Chapter 17, Encroachments and Utilities, for exception requirements.

The Utility Coordinator should take the following steps in preparing the utility estimate:

- Field review all proposed project route alternatives.

- Identify each Owner and type of utility and prepare a relocation cost estimate for each. The relocation cost estimate may be based on past experiences with relocation costs, adjustment of manhole covers, unit costs, broad gauge estimates, consultation with utility owners or other method suitable to the facility to be relocated.

- Prepare a total relocation cost estimate for the project, including updating escalation rates when appropriate. Escalation rates can be measured by identifying industry-wide rates in increases in labor, products, and materials. These increases can be estimated by comparing current labor rates, accessing industry Web sites for information, reviewing current utility owner invoices and consulting with the Utility Owners.

- Identify the Owner's requirement to complete an environmental study for the proposed utility work or to order long lead time materials for the project and estimate additional lead time necessary for completion.

- Consult with the Project Engineer to identify possible modification of right of way lines or early design changes to avoid potential conflicts, when appropriate.

© 1994-2025 California Department of Transportation. All rights reserved.

- Provide workload estimates for all utility related WBS codes. The Utility Coordinator can use past experiences, previous support charges for production of utility documents or workload estimating norms created at the district level.

- Prepare data for the RW Data Sheet(s) for the project discussing the items above and submit to RW Estimating.

Use of Exhibit 13-EX-06 (internal Caltrans link) is recommended for preparing estimates for all route reviews.

13.02.04.01 Right of Way Data Sheet

The RW Data Sheet is used to provide cost data to be included in the Project Study Report. It is critical that the Utility Coordinator review all proposed projects to ensure any and all possible utility relocation costs are included. This data becomes the basis for RW project programming in the STIP and SHOPP, which establishes the project's capital and support budgets. Accurate and up-to-date data on project costs and work units are critical. Workload and cost data from the RW Data Sheet is entered into PRSM. (See Chapter 3 for more information and detail about Programming and Budgeting).

The District Utility Coordinator is responsible for ensuring that all utility adjustments, relocations' capital and support needs are up to date at all times and are input into PRSM (or other resource estimating database) via the RW Data Sheet. The Estimating Chapter (Chapter 4.00.00.00) requires the RW Data Sheet be updated whenever there is significant change or at least annually. The Utility Coordinator must be sure the Utility Estimate conforms to this same requirement. All cost estimates should be noted in as much detail as possible. If the information is not up to date, the Utility Coordinator shall inform P&M by memorandum or revised by RW Data Sheet.

For instructions and explanations on filling out the utilities portion of the RW Data Sheet, see Exhibit 13-EX-06 (internal Caltrans link).

On federal-aid projects, the E-76 can be prepared and transmitted to P&M for processing after all known conflicts have been identified. See Section 13.14.00.00 for more discussion on federal-aid procedures.

© 1994-2025 California Department of Transportation. All rights reserved.

13.02.04.02 Project Study Report (PSR) Review

The draft PSR incorporates the RW Data Sheet or includes information from it. The draft is circulated through District RW for review and concurrence. It is imperative that a thorough review of all aspects of the project-impacted facilities takes place prior to approval of the PSR. The review should ensure that all facilities to remain within the project area either meet the Department's accommodation policy or that estimated relocation costs are included.

If discrepancies are found in the draft PSR, a revised RW Data Sheet shall be prepared. The revised RW Data Sheet, along with a thorough explanation of the discrepancies and/or changes, must be sent to P&M for submittal to the preparer of the draft PSR.

The approved PSR should be circulated through District RW, with a copy included in RW's project files.

NOTE: Occasionally, if there are no required RW acquisitions, utilities may be overlooked. The District Utility Coordinator must proactively identify planned projects to ensure that all draft PSRs are reviewed, and RW Data Sheets are prepared for all projects.

13.02.05.00 Environmental Document Review

The District Utility Coordinator must review the draft environmental document to ensure that utility relocation impacts are addressed. These typically occur, for instance, where an underground facility will be relocated across an environmentally sensitive area, such as a wetland, or where new utility rights of way are to be acquired. The Utility Coordinator must ensure the "area of potential effect" identified in the environmental document covers any parcels identified as potential replacement easements for utility relocations.

Potential Hazardous Waste (HW) impacts resulting from the highway project are usually addressed in the environmental document. If HW is a potential problem on the project, the Utility Coordinator must ensure that the requirements of Section 13.01.02.05 are addressed in the document.

It is also critical to ensure the environmental document does not propose utility-related mitigation commitments that may be in conflict with existing laws or current Departmental policies. Conflicting commitments must have Headquarters RW prior approval. For example, it is incorrect to propose undergrounding for aesthetic purposes or to require underground utility

© 1994-2025 California Department of Transportation. All rights reserved.

crossings to be placed as part of the highway construction to mitigate future needs since these commitments may constitute "a gift of public funds."

If utility facility relocations are addressed in the document, then the following suggested wording should be used, but not placed in the "Mitigation Section:"

> "All public utility facilities impacted by the proposed transportation project will be relocated and/or accommodated in accordance with State law and regulations and the Department's policies concerning utility encroachments within State highway rights of way."

13.02.05.01 Special Environmental Reviews for 50KV Electric Facilities

Major electric facilities involving substations and/or power lines operating in excess of 50KV may require special permits and environmental review per PUC General Order 131-D. Potential relocations of this type require early coordination with PUC regulated electric Utility Owners to determine General Order applicability. If an environmental review is necessary, including the potential utility relocation in the State's environmental document may substantially reduce lead time requirements for the utility relocation. Questions concerning applicability of this Order to a particular relocation must be resolved between the Owner and the PUC.

13.02.05.02 Draft Environmental Document to Owners

The Utility Coordinator must alert all Owners impacted by a proposed highway project when the draft environmental document is circulated for review. This allows Owners to recommend inclusion of utility relocation needs and thus minimize risk for later project delay resulting from unanticipated relocation environmental problems.

© 1994-2025 California Department of Transportation. All rights reserved.

13.02.05.03 Hazardous Waste Exceptions

The Department's hazardous waste policy specifies that remediation of project-related contamination should be completed prior to construction activities. In cases where cleanup prior to construction is not feasible and remediation is proposed during project construction, an exception to this policy must be requested. This policy applies to State ordered utility relocation work within highway project limits (see Section 13.01.02.05).

The Project Manager, working in coordination with the District Project Development functional manager and the Utility Coordinator, shall prepare an exception request for the Regional or District Director's approval. The exception request must be reviewed by the Hazardous Waste Management Office, Headquarters Environmental Program, prior to submission for the Regional or District Director's signature.

Exception requests shall, as a minimum, address the following:

1. A summary of the project and how the project will impact the contamination area;

2. The type and extent of hazardous waste (summary of the hazardous waste investigation), including source and responsible party, if known;

3. The estimated cost to the Department for remediation, including an assessment of future liability if the Department assumes responsibility for remediation;

4. Why it is not practical to defer the project or to modify the project to avoid the contaminated property(ies);

5. The type of remediation proposed, including whether the Department has approval from the appropriate regulatory agencies;

6. Why the property owner or other responsible parties have not assumed responsibility for cleanup;

7. The steps that have been or will be taken to recover cleanup costs and an evaluation from the Legal Division regarding the chance of success; and,

8. The draft special provisions for the remediation items of work.

© 1994-2025 California Department of Transportation. All rights reserved.

13.03.00.00 – DESIGN PHASE

13.03.01.00 General

Activities allowed in the preliminary engineering portion of a project include:

- Update data sheet, as necessary, after review of the Project Report.
- Coordinate identification and verification of existing utilities.
- Assist in identification of utility facilities in physical conflict or in violation of the Department's utility accommodation policy.
- Assist in identification of all high priority utility facilities and coordinate the positive location of these facilities as required.
- Request preparation of an E-76 covering all utility facilities when identified. See Section 13.14.00.00 for additional information regarding Federal-aid procedures.
- Prepare the Notice to Owner, Utility Agreement, and Report of Investigation for Owner-conducted positive location.
- Prepare the Service Request and Notice to Owner for State Contractor-conducted positive location.
- Request and review Owner's relocation plans, claim of liability, and estimate of cost.
- Prepare the Report of Investigation, Notice to Owner, and Utility Agreement for preliminary engineering.

Activities generally performed in the design phase of a project include:

- Coordinate planned placement of utility facilities on structures if an encroachment policy exception is approved.
- Identify and submit utility-related "Special Provisions" to Design Engineer.
- Bill the local agency pursuant to a Cooperative Agreement when there is one.
- Coordinate with the Project Engineer or Utility Engineering Workgroup (UEW) to review encroachment and/or utility policy exception requests for policy conflicts.
- Prepare the Report of Investigation, Notice to Owner, and Utility Agreement for relocations.

© 1994-2025 California Department of Transportation. All rights reserved.

13.03.01.01 Commencement of Design If Preliminary Engineering Is Used

As a first step, the Utility Coordinator shall arrange a meeting with all impacted Owners, the Project Engineer, Utility Engineering Workgroup, and a Structures Representative if a structure (bridge) is involved. The meeting purpose is to:

- Discuss the general project.
- Identify utility impacts.
- Discuss alternative solutions to highway/utility conflicts.
- Identify need for Owner required utility consultants.
- Identify potentially required new utility right of way.
- Determine a schedule for future coordination meetings.

A prime responsibility of the District Utility Coordinator is to take a proactive role to ensure that all projects are proceeding in a timely manner and that verifications are requested for all projects.

NOTE: If at any point during the design stage an Environmental Reevaluation is necessary, no work other than studies, preliminary engineering or positive location work should proceed outside the original environmental "footprint" and/or "area of potential effect" or in the area under reevaluation. Contact HQ RW for additional guidance.

13.03.01.02 Identification and Protection of Utility Facilities

Government Code Section 4215 states that the public agency shall assume responsibility for protecting utility facilities not identified in the plans and specifications for the project. If a utility facility cannot be relocated to outside the State right of way, every reasonable effort, therefore, should be made to locate all existing facilities and delineate their locations on project plans. The law is not restricted to hidden or underground facilities. All aerial facilities located within the project must also be included if the facility will remain within the project.

Government Code Section 4216 states that the State's Highway contractor is required to take reasonable and prudent steps to ascertain the exact location of underground facilities. If the contractor has done so but still

© 1994-2025 California Department of Transportation. All rights reserved.

damages a facility not shown on the plans, the State may be responsible for damages to the facility and all resulting protection requirements and/or project delays.

13.03.01.03 Utility Facility Avoidance

The Project Engineer should design highway facilities to miss existing utility facilities whenever possible and be cost effective. A design-to-miss approach will assist in faster project delivery, particularly where impacted existing utility facilities require complex relocations or special ordered material. As Project Engineers strive to simplify their projects, one of the most effective ways to prevent project failure is to design around existing utilities at every possible opportunity. Just as Design Engineers avoid environmentally sensitive areas, e.g., biological, archeological or water quality sites, so should existing utilities be avoided whenever possible.

13.03.01.04 Design of Utility Facility Relocations

The facility owner shall be responsible for design of their own utility facility relocations. The only exception occurs when the Owner has requested the State to perform the design of the relocation and physical relocation will be included as a bid item in the highway construction contract. The design and construction of the relocation require execution of a Utility Agreement, and the Utility Coordinator shall remain the primary point of contact for liability and coordination of work activities between Owner and State. Liability is determined using the same methodology as if the Owner were conducting the relocation. (See Section 13.04.00.00.)

13.03.01.05 Replacement Right of Way for Utility Facilities

Acquisition of a replacement right of way for relocated utility facilities may become a major obstacle to timely relocation. Utilities, like highways, are an essential service for users and cannot be severed for lack of an alternate replacement location. Either the State or the Owner can acquire the replacement right of way. If acquired by the State, needs must be identified early for inclusion in the State's RW acquisition program.

When the District Utility Coordinator determines that State acquired replacement right of way is needed, the Owner's plans are forwarded to the Project Engineer for inclusion in the State's highway design. The Project Engineer will prepare plans and forward them to District RW for acquisition. The Utility Coordinator must work closely with the Project Engineer to ensure

© 1994-2025 California Department of Transportation. All rights reserved.

the proposed replacement right of way has been included in the Environmental Document.

For more discussion on right of way acquisition for Owners, see Section 13.03.06.00.

13.03.01.06 Utility Consultant Design Requirements

Normally, the Owner designs their own utility relocations. If the Owner is unable to perform their own design or elects to have design work done by a consultant, and the design costs are to be reimbursed by the State, the Utility Coordinator must discuss with the Owner the State's need to review the Owner's consultant selection process to ensure reasonable consultant costs. This requirement must be discussed with the Owner early in the process to ensure no action is taken prior to our review. In addition, any Third-Party Consultant Agreement over $250,000 must be submitted to Audits for pre-award evaluation. For a detailed discussion on consultant agreements, see Section 13.14.09.00.

13.03.02.00 Utility Verifications

The Project Engineer or Utility Engineering Workgroup (UEW) is responsible for determining the identification and location of all existing or abandoned utility facilities that lie within the right of way boundaries of the planned construction project. This is accomplished by: 1) a joint field review of the project area by the Project Engineer or UEW and the Utility Coordinator, 2) reviewing Departmental as-builts, permit records and geographic information systems, 3) asking the Utility Coordinator to verify existing or abandoned utility facilities from each Owner that may have facilities within the project area, 4) requesting field surveys to verify existing utility facilities and 5) utilities that remain unidentified will require additional work for the PE or UEW in conjunction with the Utility Coordinator. As a team they should do their best at identifying all utility facilities within the project limit. Below are some additional resources that may assist with this:

1. Check RW record maps.
2. Review old utility file(s) in the project area.
3. Check the County Recorder's Office.
4. Check with other agents in the Office.
5. Check with members of the PDT, Is it a Caltrans facility?
6. USA or Dig Alert
7. Pothole

© 1994-2025 California Department of Transportation. All rights reserved.

8. UEW electronic database for Utilities within the RW
9. Check with other Federal, State and Local Agencies
   a. Check with the Local City Engineer or Public Work Departments Engineer.

The need for this identification and verification is:

- To identify all potential utility/project conflicts so they may be cleared before project construction commences, either through avoidance or relocation.

- To meet the requirements of California Government Code Section 4215, which states in part that all utility facilities shall be identified on the State's project plans and if not so identified, the State may be liable for all resulting damages to the facilities. The cost of such damages to the facilities is not Federal-aid reimbursable.

13.03.02.01 Preparation of Verification Maps

The Project Engineer or UEW is responsible for ordering preparation of mapping to be used for the delineation and verification of utility facilities within the project limits. Identification is necessary even if proposed construction is entirely within existing rights of way. The Project Engineer or Utility Engineering Workgroup obtains this utility information from the following sources:

- State's as-built construction drawings for prior projects.
- Ground and aerial surveys.
- Encroachment Permit files.
- Field review of the project.

These maps will also show existing and proposed right of way lines, as well as existing and proposed access control lines, where applicable. A sufficient number of verification maps, as needed, will be prepared.

© 1994-2025 California Department of Transportation. All rights reserved.

13.03.02.02 Utility Verification Request to Owner

The Utility Coordinator must send the verification maps to each Owner with existing or potentially existing facilities within the project area. The request letter should include the elements shown in Exhibit 13-EX-10 (internal Caltrans link). The Owner should be encouraged to add to the maps with as much detail and accuracy as possible to the extent available, any facilities not already located or depicted on the verification maps and show any abandoned facility. Normally, the Owner is allowed 30 days to respond. The Utility Coordinator is responsible for follow-up to ensure timely completion of verification. (See also CPUC General Order 128, Rule 17.7 for legal requirements for regulated Owners to provide facility location information.)

13.03.02.03 Owner's Verification of Facilities

Once the Owner returns the verification maps, if the Owner's verification indicates existing facilities within the project limits, the Utility Coordinator must:

- Transmit Owner's verified facility locations to the Project Engineer or Utility Engineering Workgroup (UEW) for review and inclusion on project plans.
- Assist the Project Engineer or UEW in identifying existing and abandoned utility facilities in conflict with the State's accommodation policy.
- Assist the Project Engineer or UEW in identifying high priority facilities.

If no physical or encroachment and/or utility policy conflicts are identified, the Utility Coordinator notifies the Owner(s) involved in the verification process of the finding(s). The letter advising them must include the elements shown in Exhibit 13-EX-11 (internal Caltrans link).

13.03.02.04 Non-Disclosure Agreements (NDA)

Headquarters Right of Way Utilities continues to advise all districts not to sign any NDAs with utility companies. The primary reason for an NDA is to keep all critical, sensitive, and confidential information between the signing parties. Executing an NDA restricts sharing information internally and externally which means the information obtained could not be shared with Design and/or State Contractors; therefore, signing an NDA is prohibited.

© 1994-2025 California Department of Transportation. All rights reserved.

If a utility company requests an NDA at any time and/or is unwilling to provide verification, the district should advise Design to complete a permit search, As-builts, and ensure field reviews have been conducted. Thereafter, the utility facility shall be called out as a conflict and utility coordination shall move forward with the conflict process.

13.03.03.00 Positive Location of Underground Facilities

To accurately determine the type and location of all potentially impacted utility facilities, it is frequently in the State's and Owner's mutual interest to provide positive location of underground facilities. The process of obtaining this information may require that an excavation hole be made to expose the facility and allow the precise location to be surveyed to the State's datum. The excavation to expose the facility is frequently referred to as "potholing." Other methods of determining the positive location of an underground facility include probing, electronic detection, etc. Refer to the Department's encroachments and utilities policies for policy specifics. For a copy of these policies, refer to Chapter 17 of the Project Development Procedures Manual.

The Project Engineer is responsible for determining when positive location is required, usually whenever facilities are known to exist within the project construction area but cannot be precisely located, particularly as to depth. Without precise location information, physical conflicts within the project cannot be determined nor safe construction assured.

The Utility Coordinator shall provide reasonable notice to the Owner regarding positive location of underground utility facilities and is responsible for determining liability for costs in accordance with Positive Location Agreements (Section 13.03.03.01) or usual liability requirements.

If the Owner is conducting the positive location, the Utility Coordinator shall obtain the required Encroachment Permit with the Notice or assist Owner in obtaining it.

If the State's Positive Location Contractor is conducting the positive location, the Utility Coordinator shall submit a Service Request to the contractor. The Utility Coordinator must still provide notice to the Owner so that they are aware of the work and may have an inspector present during the positive location process.

© 1994-2025 California Department of Transportation. All rights reserved.

13.03.03.01 Positive Location Agreements (PLAs)

The Department has created and executed a Positive Location Agreement (PLA) with numerous utility owners throughout the State. PLAs were created in 2003 as a tool to improve the efficiency of RW Utility Relocations project delivery. The agreements provide for the State to assume 100% of the liability for ordered positive locations and provide Owner's consent for the State's positive location contractor to conduct the positive locations. If the Owner requests to conduct the positive location with their own staff, the State will pay only the going contract rate in effect at the time. If, however, the State requests the Owner to conduct the positive location because of a lack of an ongoing contract or insufficient contractor staff, the State will pay 100% of the Owner's actual and necessary costs.

A list of current PLAs is located at the Executed PLAs webpage.

A PLA should be offered to any Owner not on the list that requires positive location as a means of streamlining project delivery. The Utility Coordinator prepares two originals of the standard PLA and sends both to the Owner with a cover letter describing the PLA. Once the Owner executes the PLAs and returns them to the Department, the Utility Coordinator sends them to the Utility Relocations Chief in HQ for signature. Once signed, a scanned "PDF" copy is added to the Web site. One original is kept on file in HQ and one is returned to the District. The Utility Coordinator then sends the original to the Owner.

When positive location is ordered for an Owner, the Utility Coordinator sends either a Notice to Owner or a notification letter advising the Owner of the scheduled positive location of their facilities so they may have an inspector present.

The PLA, under paragraph 8, gives the Department permission to enter upon the private right of way (usually an easement) of the Utility Company. The Utility Company should notify the underlying fee owner as a courtesy and confirm the landowner does not have any activities planned.

© 1994-2025 California Department of Transportation. All rights reserved.

13.03.03.02 Positive Location (Pos-Loc) Contracts

The Pos-Loc Contract is an on-call service contract to provide positive location services to the Department. Each District independently advertises for bids for the contract. To begin the process of obtaining a Pos-Loc Contractor, the District Utility Coordinator must complete a Service Contract Request (ADM 360) (internal Caltrans link).

As the Contract Manager, the District Utility Coordinator works closely with the assigned Contract Analyst through the entire bid process. They determine the timing of the new contract, the length, and ultimate award of the contract. The contract may involve multiple fiscal years. (Most contracts can be amended once to extend the contract life or contract amount, if circumstances warrant.) Once a contract is awarded, the executed contract is then encumbered at the "program level." (See P&M for specifics.) The on-call service is then accomplished through the use of Service Requests.

13.03.03.03 Positive Location Service Requests

The Service Request must provide for a minimum payment of six "holes" for vacuum excavations. The Contract Manager shall send the appropriate number of maps along with the Service Request.

When an invoice is received from the Pos-Loc Contractor, a Request for Utility Payment (Form RW 13-06) (internal Caltrans link) is prepared and sent to HQ RW Accounting. The request for payment is charged to the specific project Phase 9 EA(s). (P&M will instruct RW Accounting to disencumber the same amount of the program level encumbrance.) Vendor information is required for all payments and the Contract Manager may have to send the Pos-Loc Contractor a STD 204 (internal Caltrans link) to complete prior to payment of the initial invoice.

13.03.03.04 Positive Location Requirements for High Priority Utility Facilities

All existing underground high priority utility facilities within the construction area of a project shall be positively located in accordance with the Department's encroachments and utilities policies. For a copy of this policy, refer to Chapter 17 of the Project Development Procedures Manual. The Project Engineer or Utility Engineering Workgroup (UEW) is responsible to ensure the policy requirements have been met and to provide a certification to that effect as part of the PS&E.

© 1994-2025 California Department of Transportation. All rights reserved.

The Project Engineer or UEW makes a written request to the Utility Coordinator to obtain positive location information for all utility owned high priority utility facilities that may be in physical conflict with planned construction or that may be exposed to risk of damage during construction. The request must identify the location where the high priority utility facilities are to be positively located and include three sets of maps for each utility involvement (two sets for the Owner and one set for the Utility Coordinator's files).

For Owners who have a current PLA on file, the Utility Coordinator prepares a Service Request for the State's Pos-Loc Contractor and a written notification to the Owner.

For Owners who do not have a current PLA on file, the Utility Coordinator arranges a meeting between the Owner and the Project Engineer to go over the plan for determining positive location requirements.

The Project Engineer or Utility Engineering Workgroup is also responsible for obtaining the necessary positive location information for Department owned high priority utility facilities and for including this information on project plans; the Utility Coordinator is not involved.

13.03.03.05 Liability for Ordered Positive Locations

If the Owner has a current PLA, the Department ordered positive location conducted by our contractor or by the Owner is 100% State liability. If the Owner does not have a current PLA, liability is determined using the same rules that are applied to normal relocations. The liability is based on the occupancy rights possessed by the State and Owner as to each positive location site. Exhibits 13-EX-12 and 13-EX-13 (internal Caltrans link) provide sample letters for requesting liability information and issuance of the Notice.

NOTE: See Section 13.06.03.04 for expedited procedures for issuance of the Notice and Section 13.05.04.02 for lump-sum payments.

13.03.03.06 Prevailing Wage Requirements for Positive Location Contracts

Contract Managers share in the Department's responsibility to comply with federal and state prevailing wage laws when they request, write, award or manage any publicly funded contract.

When a new Positive Location contract is awarded, the Contract Manager should brief the contractor on all prevailing wage requirements, among other

© 1994-2025 California Department of Transportation. All rights reserved.

expectations, at a contract "kickoff" or pre-job conference. A record of the conference and an attendance sheet signed by the contractor, Contract Manager, and all attendees are retained with the contract.

California Law requires the Department to have an orderly system of auditing contractor payrolls. The Positive Location contract requires the contractor submit a certified copy of all payroll records for verification by the Department's Contract Manager and/or Designee with each invoice. When progress payments are called for, the Contractor shall submit a certified copy of all payroll records for verification for the work completed to date with each invoice. Delinquent or inadequate certified payrolls or other required documents will result in the withholding of payment until such documents are submitted by the Contractor. If payment is withheld, Invoice Dispute Notification, Form STD. 209 (internal Caltrans link), must be filled out in order to suspend the Prompt Payment Act. The Contract Manager will review and maintain the certified copy of the payroll.

The Contract Manager, or their Designee, will conduct interviews with employees of the Pos-Loc Contractor to verify compliance with prevailing wage laws.

13.03.03.07 Contract Manager's Working File

The Contract Manager is required to maintain a "working" contract file for each separate contract. The file should contain all the information or documentation:

- Copy of Service Contract Request Form (ADM 360) (internal Caltrans link) with all the supporting documentation
- Copy of the executed contract
- Copy of all Certificates of Insurance, if applicable
- Copies of Payment and Performance Bonds, if applicable
- Copy of each executed contract amendment, if applicable
- Log or diary of all contract activity
- Correspondence to Contractor or other correspondence relating to the contract, including the "kickoff" meeting or pre-job conference documentation
- Copy of each invoice, backup documentation and approval documentation
- Spreadsheet of contract funds and expenses

© 1994-2025 California Department of Transportation. All rights reserved.

- Spreadsheet indicating DVBE/DBE usage, if applicable
- Evaluation of the Contractor/Consultant, if applicable
- Copy of CMIST certification (see Section 13.03.03.08)

Additional information can be found in the Contract Manager's Handbook.

13.03.03.08 Contract Manager Certification Under CMIST (Contract Management Information and Specialized Training)

Contract Managers are required to register as a certified Contract Manager. The training and certification is online at DPAC's Intranet webpage (internal Caltrans link) under Contracts Management Information and Specialized Training (CMIST).

13.03.03.09 Utility Coordinator Responsibilities

The Utility Coordinator is responsible to coordinate all positive location requirements specified in the Notice to Owner (NTO) and in the Service Request. Duties performed generally consist of:

- Request/prepare Positive Location Service Requests and NTO based on the maps.
- Follow up to ensure the positive location work will be done by the date specified in the Notice to Owner and/or in the Positive Location Service Request.
- Verify with the office/branch that necessary inspections were completed.
- Process Pos-Loc Contractor's invoices for payment, subject to the Prompt Payment Act.

© 1994-2025 California Department of Transportation. All rights reserved.

13.03.03.10 Project Engineer or Utility Engineering Workgroup Responsibilities

Pursuant to the Plans Preparation Manual Section 2-2.13, the Project Development Procedures Manual, and this manual, the Project Engineer (PE)or Utility Engineering Workgroup (UEW) is responsible to:

- Prepare estimate mapping using all available resources i.e., permit search, as-builts, old utility relocation files, field reviews among other resources.
- Coordinate with Surveys to obtain required horizontal and vertical location data for utility facilities. See high priority utility facility positive location requirements in Chapter 17 "Encroachments and Utilities," of the Project Development Procedures Manual.
- Ensure that survey information is transmitted to the Project Engineer or UEW for inclusion in the contract plans.
- Oversee pos loc/test hole activities.
- Prepare survey request for pos loc/test holes.
- Assist in identifying longitudinal utility facilities not meeting the encroachments and/or utilities policies.
- Prepare verification plans as required in section 13.03.02.00 Utility Verification.
- Participate in field reviews for Utility facilities.
- Identify "physical" and "policy" conflicts.
- Prepare utility conflict maps.
- Prepare a Utility Conflict Matrix (UCM)/Utility Management Matrix (UMM) for the Owner to prepare relocation plans, as required by the PDPM.
- Review and approve Utility Relocation Plans with PDT.
- Recommend all existing or new Encroachment and/or Utility policy exceptions to Division of Design, Office of Project Support, for approval.
- Plot survey information on the contract plans.
- Prepare Utility Policy Certification.
- Obtain as-builts, survey data, and inspector diaries of relocated utilities from Resident Engineer during construction.

© 1994-2025 California Department of Transportation. All rights reserved.

NOTE: See Encroachment Permit Manual Section 300, Exceptions to Policy, and Project Development Procedures Manual Chapter 17, Encroachments and Utilities, for exception requirements.

13.03.04.00 Utility Conflicts Identified

The PE is responsible to review all existing utility locations for conflicts, determine which facilities need to be relocated, and make a written request to the Utility Coordinator to obtain affected Owner's relocation plans, and Owner's approval to adjust manhole covers. The PE or Utility Engineering Workgroup (UEW) will provide the Utility Coordinator with conflict maps (see Section 13.03.04.03) and a UCM/UMM the Utility Coordinator will send both to the Owner to accompany a request for relocation plans or approval to adjust manhole covers, the Owner's claim of liability, and estimate of cost. (See Section 13.03.04.04.)

Some conflicts may not be immediately evident on the plans, such as staged construction requirements, detours, pile-driving operations, signal and lighting facilities, longitudinal encroachments, and encasement requirements. The Utility Coordinator shall review all plans with the Project Engineer for possible conflicts with all facilities within the project.

If after reviewing all utility information, including positive location data, the Project Engineer or UEW determines certain utility owners have no conflict with the State's proposed construction project, the PE or UEW notifies the Utility Coordinator who must then notify those Owners of this determination. The letter advising them must include the elements shown in Exhibit 13-EX-11 (internal Caltrans link).

If the PE identifies conflicts with the State's proposed construction project, the Utility Coordinator must arrange a meeting with all affected Owners, the Project Engineer, or UEW, and a Structures representative if a structure (bridge) is involved. The purpose of the meeting is to discuss the project, identify needed relocations, and work out the most economical and practical solutions consistent with highway and utility design standards. The Utility Coordinator should document the meeting in the Utility File and should include a list of attendees, items of discussion, and any agreed upon solutions.

If a Local Public Agency (LPA) Cooperative Agreement with cost sharing is involved, the Utility Coordinator must ensure the LPA is billed for their share of the estimated total relocation costs for all Owners in advance of the work

© 1994-2025 California Department of Transportation. All rights reserved.

being completed and prior to RW certification. See Section 13.12.00.00 for procedures in dealing with Cooperative Agreement projects.

Ensure that the E-76 (if a federal aid project) has been prepared and transmitted to P&M for processing. See Section 13.14.00.00 for more discussion on federal aid procedures.

The District Utility Coordinator is responsible to ensure that all budgeting information (specifically the RW Data Sheet) is up to date. If the information has changed as a result of conflict identification, the Utility Coordinator shall update the data sheet. A sample memorandum to P&M for updating capital and support budget information is shown in Exhibit 13-EX-14 (internal Caltrans link).

13.03.04.01 Manhole Cover Agreement

Manhole Cover Agreements used during highway construction projects require coordination with Utility Owners. Utility Owners can't always meet the State highway contractors schedule, which can lead to construction delays. In an effort to speed up project delivery and reduce the level of coordination with Utility Owners, Headquarters Right of Way has created the Cover Agreement (Agreement). The Agreement is intended to save the Department money and time when working on projects involving the adjustment of manhole and valve covers.

The Agreement is available to the Project Delivery Team anytime a project requires the adjustment to grade of manhole and valve covers. The Agreement must be reviewed and approved by Headquarters Right of Way. If the District and/or Utility Owner's request any changes to the Agreement, a written Non-Standard Agreement Request must be submitted to Headquarters for review and approval. Completion of the Agreement(s) must be done prior to Right of Way Certification. This agreement cannot be used for discovered work during construction and/or utility relocation, nor can the Agreement be used by a Local Public Agency as funding is derived from the State's project cost. Local Public Agencies are encouraged to develop their own Agreement.

The Right of Way Utility Coordinator must communicate with Project Delivery and Utility Owners early to assure the use and available funding for the Agreement.

NOTE: See Exhibit 13-EX-04 (internal Caltrans link) for more detailed instructions.

© 1994-2025 California Department of Transportation. All rights reserved.

13.03.04.02 Encroachment and Utility Policies for Freeways and Exceptions to the Policy

The Department's basic accommodation policy for utilities within freeways is available in Chapter 17, "Encroachments and Utilities," of the Project Development Procedures Manual. Utility facilities within the project limits of planned freeway projects that are in violation of this policy must be relocated to clear the project. Division of Design, Office of Project Support, must approve exceptions to this policy prior to RW Certification.

NOTE: See Encroachment Permit Manual Section 300, Exceptions to Policy, and Project Development Procedures Manual Chapter 17, Encroachments and Utilities, for exception requirements.

New longitudinal installations are not allowed within the State's access control right-of-way. Existing longitudinal installations or support facilities for crossings must be relocated to outside of the State right of way. If that is not feasible, they may only be allowed to remain within the State's access-control right of way with an approved exception to the Encroachment and/or Utility policy by the Division of Design, Office of Project Support. The following restrictions apply to existing facilities:

A. The facility must be a public utility facility.

B. The facility must not adversely affect highway safety, maintenance, and traffic operations.

C. The facility should be installed outside the desired clear recovery zone where reasonable. (See Section 13.03.04.03 for a description of "clear recovery zones.")

D. Relocation of the facility would be inordinately difficult or unreasonably costly.

E. Access for construction and maintenance of a facility located within the access-controlled area must not be from the traveled way of the freeway or ramps. Construction or maintenance activity access must be from adjoining frontage roads or nearby streets or trails.

F. Utility service connections to adjacent properties shall not be permitted.

© 1994-2025 California Department of Transportation. All rights reserved.

G. All high priority facilities shall meet the Department's policy and procedures set forth in Chapter 17, "Encroachments and Utilities," of the Project Development Procedures Manual.

13.03.04.03 Identify CURE/CRZ Conflicts

"Clean Up the Roadside Environment" (CURE) is a State program for removing fixed objects from within the clear recovery zone (CRZ) adjacent to the traveled way of State highways. The objective of CURE is to remove fixed objects such as signs, trees, culvert heads, and utility poles from within the CRZ, thus improving the recovery opportunity for errant vehicles leaving the traveled way and reducing accidents. CURE is to be part of every new project undertaken on rural high-speed highways. Policies and procedures for handling CURE projects can be found in Appendix 2.0 of the Department's Highway Safety Improvement Program (HSIP) Manual. More information about the CRZ can be found in the Department's Highway Design Manual, Chapter 300, "Geometric Cross Section," Topic 309, "Clearances."

13.03.04.04 Conflict Maps

Utility conflict maps are essentially the State's preliminary layout sheets for the PS&E. They should show any construction feature that may affect the Owner's facilities including, but not limited to, the following:

- Utility location
- Right of Way lines
- Cross Sections
- Profile
- Drainage
- Stage Construction
- Bridge Structure

© 1994-2025 California Department of Transportation. All rights reserved.

13.03.04.05 Request for Relocation Plans, Claim of Liability, and Estimate of Cost

Prior to issuing the Notice to Owner, Utility Agreement, and Encroachment Permit, the Utility Coordinator must obtain the Owner's claim of liability, estimate of cost, and relocation plan. An exception can be made for expedited positive location. See Section 13.06.03.04.

The letter to the Owner must include the elements shown in Exhibit 13-EX-09 (internal Caltrans link) and normally allows the Owner **60 to 120 days to respond**. Since this is a crucial element in the utility relocation process, the Utility Coordinator must actively follow up with the Owner to ensure they maintain a schedule that will allow successful project delivery.

13.03.04.06 Receipt of Relocation Plans, Claim of Liability, and Estimate of Cost

Upon receiving the Owner's relocation plans, the Utility Coordinator routes the plans to the Project Engineer or Utility Engineering Workgroup for review and approval, comparison with other Owners' plans for compatibility, and review for compliance with the Department's Encroachments and Utilities Policies in Chapter 17 of the Project Development Procedures Manual.

NOTE: See Encroachment Permit Manual Section 300, Exceptions to Policy, and Project Development Procedures Manual Chapter 17, Encroachments and Utilities, for exception requirements.

The district's Environmental Branch should review the Utility Relocation Plans whenever there is a possible relocation of 50KV and higher power lines and/or electrical substations, to ensure inclusion in and/or changes to the Department's environmental document.

NOTE: If changes to the environmental document are required at this stage, there may be a delay in project delivery as no relocation work can take place in any location not previously included in the "area of potential effect" (APE) described in the approved document unless the area of utility relocation has a blanket ND or CatX by the CPUC.

© 1994-2025 California Department of Transportation. All rights reserved.

The District Utilities Coordinator ensures all utility relocation plans are submitted to the Utility Engineering Workgroup (UEW) who has responsibility for reviewing all relocation plans to determine that they provide a cost-effective functional restoration of the utility facility. Betterments are to be identified on the plans (if applicable) and all other elements of the planned relocation must be supportable as necessary and appropriate. The Utility Coordinator works with UEW and the Project Engineer.

Where any portion of the utility work claimed by the Owner is to be at State expense, the Utility Coordinator must review the Owner's claim letter that sets forth the basis for the State's liability and the estimated cost of relocation. (See Section 13.04.00.00 for liability determinations.) When the claim of liability and estimate of cost are found acceptable, the Utility Coordinator prepares the Report of Investigation (ROI) package for transmittal to the authorized district person. The ROI package should consist of the Report of Investigation, the Owner's claim letter, the estimate of cost, the Notice to Owner, and a draft Utility Agreement along with any supporting documentation and mapping.

13.03.05.00 Utilities on Structures

All requests for Utility Facilities on structures must follow the Department's policy for utilities on structures found in Chapter 17, "Encroachments and Utilities," of the Project Development Procedures Manual, Section 2 "Encroachments." If the policy cannot be met, an exception to the Encroachment Policy must be approved by the Division of Design, Office of Project Support to allow accommodation of a utility on a structure.

The Utility Manual for Bridges and Other Structures consolidates information related to utilities on or in bridges into a single comprehensive source. Its intent is for the various functional units to develop specific standards and additional guidance as needed. Its guidance and requirements apply to utility installations, whether owned and operated by utility companies or Caltrans.

© 1994-2025 California Department of Transportation. All rights reserved.

13.03.05.01 Coordination Requirements

The placement of utility facilities on structures requires special coordination between the Owner, the Department, and the highway contractor as to who provides what material, who installs it, Owner's time frame for required installations, who pays for what and when, etc.

If the Division of Engineering Services, Office of Structures Design (Structures) finds the preliminary information acceptable, they advise the Utility Coordinator through the Project Engineer or UEW. The Owner should then submit detailed installation plans by the date Structures specifies. The Utility Coordinator then requests the Owner's estimate of cost and claim of liability (see Section 13.03.04.04). The Owner should normally be given a minimum of 60 days to prepare plans (see Exhibit 13-EX-09 [internal Caltrans link]).

If Structures does not find the preliminary plans acceptable, they inform the Project Engineer or UEW. The Utility Coordinator conveys this decision to the Owner and advises them to redesign or to develop plans not using the structure.

As an alternative procedure, the Utility Coordinator may, by a focus meeting or series of focus meetings, coordinate the relocation with Design, Structures, the utility company, and other personnel the Coordinator deems necessary to complete the design.

13.03.05.02 Guidelines for Utilities on Structures

The Division of Engineering Services has established guidelines that define size limitations and special design requirements for utility installations on bridge structures. These guidelines apply to normal installations where utilities are installed in a box girder cell, suspended between girders (I- or T-girder structure types), or in sidewalk slab. Unusual utilities must be analyzed on a case-by-case basis. The PE should make preliminary decisions on possible utility placement on the bridge before design of the structure has begun.

© 1994-2025 California Department of Transportation. All rights reserved.

GUIDELINES FOR UTILITIES ON STRUCTURES

Size

The maximum allowable utility size depends on structural constraints. When the utility depth, including its casing, exceeds one-third the bridge structure depth, accommodating the utility is difficult. Any utility or its casing over 20 inches may not be acceptable, and Structures Design or Structure Maintenance and Investigations must be consulted. The maximum diameter conduit allowed in sidewalks is 4 inches.

Type

1. Electrical – The maximum voltage allowed in an electrical line is 69kv. High voltage installations in the sidewalk portions of the structure are strongly discouraged. Installing high voltage lines in box girder cells or between girders is preferable. Exceptions to this policy should be directed to Structures Design or Structure Maintenance and Investigations.

2. High-Pressure Water and Sewer – The maximum diameter carrier pipe or casing allowed is 20 inches. The maximum operating pressure of a 20-inch carrier line is 100 psi. Full-length casing is required for all installations, but exceptions may be allowed for facilities in box girder bridges.

   Volatile Gas – Installation must be approved and conform to Structures Guidelines in the Structure Utility Manual.

Combinations of Utilities

Volatile fluids, gases, or high voltage lines shall not occupy the same cell or area between girders with any other utility or with each other.

Seismic Design Requirements

The following utilities must be designed to accommodate seismic movement:

- Toxic, hazardous, and flammable substance utilities
- Natural gas utilities
- Water utilities over 4”
- Sewer utilities
- Electrical utilities 60kV or greater

© 1994-2025 California Department of Transportation. All rights reserved.

Though a utility may not be listed above, utility owners should still design for seismic movement if they want to increase the probability their utility remains in service after a seismic event. In addition, there may be situations where the utility type, bridge type, or other factors are such that designing for seismic movements will be required regardless.

The utility owner must perform a seismic analysis to determine the seismic displacements.

When the seismic movement is too large to design for, the seismic clearances cannot be obtained, or when a bridge spans over a fault, the following two requirements apply:

- For new bridges, the superstructure end diaphragm openings must be made as large as reasonably possible.

- Seismically activated automatic shut off devices must be installed at each end of the bridge except for the following utilities:
    - Small waterlines
    - Electric lines
    - Phone and fiber optic lines

© 1994-2025 California Department of Transportation. All rights reserved.

13.03.06.00 Utility Acquisitions

Public utility facilities impacted by highway construction normally have a functional replacement constructed and are seldom acquired. Exceptions are where the facilities are for administrative or other nonutility service uses.

The distinction between a public utility service use versus a nonutility use may be based on whether severance of the particular improvement directly affects utility service to one or more customers. An improvement that is determined to be a nonutility, e.g., corporate office, is appraised and acquired in the usual fashion.

The distinction between a public utility service and similar facilities that may only provide service to the Owner is frequently confusing (see Section 13.01.01.03). The latter improvements are appraised and acquired in the usual manner.

An exception to the purchased acquisition of private facilities is permissible for major oil companies where the Owner has agreed to application of standard rules on the functional replacement of facilities.

13.03.06.01 Uniform Acquisition Act Requirements

When the State or LPA acquires replacement right of way, the requirements of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 (Uniform Act), as amended (42 U.S.C 4601 et seq.) "(Uniform Act)" apply.

When a privately-owned utility acquires its own replacement right of way, the requirements of the Uniform Act do not apply.

13.03.06.02 Acquisition from the Utility Owner

Properties that lie in the path of transportation projects and are held in fee by Utility Owners must be purchased outright or exchanged.

Generally, most fee-owned property is for substations or pumping plants, although some Owners have fee-owned corridors for transmission purposes.

© 1994-2025 California Department of Transportation. All rights reserved.

ACQUISITION FROM THE UTILITY OWNER

Fee-owned

All fee-owned property is acquired by RW Acquisition via RW Contract and Deed. Terms of the RW Contract depend on whether the property in question is vacant or improved, and whether it is a site or a corridor. In all cases, the Utility Coordinator should consult with Acquisition to reach a full understanding about what the property is and how it may be used, now and in the future. Things to look for include:

1. Vacant Site – The Owner may be holding the site for future use in conjunction with an existing facility, such as a substation expansion.

2. Vacant Corridor – Although treatment is similar to a vacant site, the possibility of easement acquisition on the Owner's behalf or JUA/CCUA should be explored.

3. Utility Facility Improved Site – Replacement of the site is usually necessary. If done, Acquisition may handle via a RW Contract. Relocation or rearrangement of utility facilities shall be handled by the Utility Coordinator via Utility Agreement in coordination with Acquisition.

4. Utility Facility Improved Corridor – Same as for an improved site; however, the possibility of replacing fee with easement or JUA/CCUA should be explored. Access to the replacement corridor must be considered.

5. Nonutility Occupied – Acquire via normal appraisal/acquisition procedures.

Easement-owned

1. Utility Occupied – Occupied easements are usually for transmission or distribution of the Owner's product. Where a replacement right of way is needed, the State or the Owner may acquire an easement. Usually the Owner's existing easement interest is quitclaimed to the State in exchange for the new location by executing a JUA/CCUA as a part of the utility relocation.

2. Nonutility Occupied – Acquisition is responsible for clearance of vacant easements.

© 1994-2025 California Department of Transportation. All rights reserved.

Franchise/Permit Privileges

Except as noted below, the State is not obligated to provide a replacement right of way for utility facilities installed under a franchise or permit. In some cases, the State may need to make the method of installation for safety or other good reason a requirement for occupancy under an Encroachment Permit. For instance, the most common requirement is that the facility cannot continue to be installed within the right of way as an aerial facility. If the Owner does not meet our requirements for relocation within the new right of way, the Owner is responsible to provide any needed easement at their own expense.

The exception is for facilities located within a freeway that will be relocated under SHC Section 702. Under Section 702, the State is obligated to provide a replacement easement if one is needed. Section 702 does not apply to Owners with master contracts that contain language superseding Section 702.

© 1994-2025 California Department of Transportation. All rights reserved.

13.03.06.03 Acquisition for the Utility Owner (Replacement Right of Way)

If the Utility Owner has superior occupancy rights, the State can acquire the needed replacement right of way. The Owner normally selects the replacement right of way location, subject to the normal constraint of providing for necessary functional replacement only. Either the State or the Owner may accomplish the acquisition. If the replacement location crosses a parcel where the State is to make a highway acquisition, the preferred acquisition method is to include it in the State's acquisition program. The State may acquire the replacement right of way by one of the following methods (in order of preference):

- Acquired in the name of the Owner, preferably on the Owner's own deed form.

- Acquired in the name of the State by deed and subsequently conveyed to the Owner by Director's Deed.

- Use of State-owned (or to be acquired) excess land. Care must be exercised in making any commitments regarding acquisition of excess land. Liaison with Excess Land should be maintained so easements are reserved in excess land conveyances.

If the utility facility being displaced is not in a superior right status, the State may acquire the replacement utility easement as a convenience to and at the expense of the Owner but cannot condemn for it. Where the facility was in an encroachment permit status only (non-prior rights), replacement utility easements must never be acquired at State expense as this would constitute a gift of public funds.

Occasionally, due to physical constraints the situation may arise where the Utility Owner agrees to an easement with a smaller easement area. The Utility Owner must be made whole. The difference in value must be compensated and an appraisal must be made to establish an estimate of value.

© 1994-2025 California Department of Transportation. All rights reserved.

13.03.06.04 Consent to Condemnation for Exchange Purposes from the Owner

Condemnation may be necessary if the State is unable to acquire the replacement right of way through normal negotiations. A "Consent of Owner to Condemnation for Exchange Purposes" must be obtained from the Owner pursuant to Code of Civil Procedure Section 1240.320 to support a "Resolution of Necessity" from the CTC.

Individual consent forms need not be secured on each condemnation for the Owners listed below that have a basic form of consent on file with the State.

- **Pacific Gas and Electric Company** (Exhibit 13-EX-15A) – The State can condemn for PG&E without additional authorization, except that easement needs and location must have PG&E's prior acceptance.

- **Southern California Edison Company** (Exhibit 13-EX-15B) – SCE requires the Company's written approval of both the complaint form and easement location.

- **AT&T California** (formerly SBC, Pacific Bell Telephone Company, and Pacific Telephone and Telegraph Company) (Exhibit 13-EX-15C) – AT&T California requires the Company's written approval of the easement location.

- **Southern California Gas Company** (Exhibit 13-EX-15D)

- **General Telephone Company** (Exhibit 13-EX-15E)

For Owners that do not have a consent form on file, the Utility Coordinator shall prepare a consent form using one of the accepted filed forms (13-EX-15A through E) as a guide and forward it to the Owner for execution on an individual parcel basis. Upon return of the executed consent form, it should be filed in the parcel file.

© 1994-2025 California Department of Transportation. All rights reserved.

13.03.06.05 Utility Easements on Federal Lands

On Federal Lands, the State acquires a DOT Highway Easement, a Right of Way Easement, a License or a Permit, not fee title, for the project. Therefore, the State does not have the authority to allow a utility company to relocate within our right of way. The utility company's Real Estate Department will be required to deal directly with the involved Federal agency. Depending on the authority at the time the existing utility easement was issued, the Federal agency may amend or require a new right of way. The time frame is typically six months to a year from the date the requested easement package is given to the Federal agency. Utility relocation cannot begin until the issuance by the Federal agency of the new right of way to the utility company.

The Utility Coordinator's responsibilities include:

- Contact the Regional/District FHWA Coordinator as soon as possible to establish a plan.
- Provide early identification of required utility easements at field review.
- Coordinate between Federal Lands Specialists, Utility Owner staff, and our environmental department.
- Ensure the potential easement rights are considered during the environmental document stage. If covered in the State's environmental document, the Federal agency will require a copy of the final environmental document. (This could save the utility company time in obtaining the new right of way.)
- Provide the Utility Owner with necessary mapping and forms.
- Follow the progress of the negotiations between the Utility Owner and the Federal agency to ensure timely delivery.

© 1994-2025 California Department of Transportation. All rights reserved.

13.04.00.00 – LIABILITY DETERMINATION PHASE

13.04.01.00 General

Liability determination is the process of analyzing the occupancy rights of the owner of utility facilities being impacted by a highway project versus the State's rights. Prior and/or superior rights in the area of the impacted facility form the basis for determining responsibility for payment of relocation costs. The burden of establishing prior and/or superior rights rests with the Owner. If the State has cost liability, the district is responsible for accumulating the data, providing a complete and accurate Report of Investigation, and confirming and approving the liability. In the case of 100% Owner liability, a Report of Investigation is not required if the Utility Coordinator has a written acknowledgment or diary entry to document the Owner's acceptance for 100% liability. Until liability is approved, the district is not to provide any determination to the Owner.

Since an incorrect liability determination may be interpreted by Utility Owners as representing a change in current Department policy, thus adversely impacting statewide relationships, the Region/District will be required to immediately contact the Utility Owner and correct any errors.

13.04.01.01 Determining Superior Rights

The Owner is responsible to prepare, document and submit a claim for their declared right of occupancy. If the Utility Coordinator's investigation confirms the Owner has rights prior and superior to those of the State, and Headquarters RW or the authorized district person concurs, the Owner is paid for all or a portion of the actual and necessary costs of the required relocation work.

13.04.01.02 Liability Calculation

Liability determination is generally based on occupancy rights. Liability for the relocation cost is the responsibility of the entity that has the subservient right in the area of the existing impacted facility. However, the factors entitled "Liability Determination Factors" must be taken into consideration. Also, if an Owner has an executed Freeway Master Contract, all liability determinations on freeway projects are governed by the terms in the contract. See Section 13.04.03.00, et seq.

© 1994-2025 California Department of Transportation. All rights reserved.

LIABILITY DETERMINATION FACTORS

- **What is the legal basis, if any, under which the utility facility is occupying the property?**

  Property rights are the primary determinant of the superior right of occupancy and will be based on one of the following:

  1. Fee Ownership
  2. Easement (recorded or unrecorded)
  3. Implied/Secondary Easement
  4. Joint Use and/or Consent to Common Use Agreements
  5. Perfected Prescriptive Claim
  6. Lease
  7. License
  8. Franchise
  9. Encroachment Permit
  10. Trespass

  Normally, Items 1 through 5 establish prior rights, and the State is probably liable for relocation costs, unless the documents involved contain clauses that reserved to the original grantor the right to order one or more relocations at the grantee's expense. Occupancy item 5 is a claim that is established by a court proceeding against the record owner.

  Occupancy under Items 6 through 10 usually requires that relocations be at the Owner's expense on conventional highways.

  Item 8 is addressed in SHC Section 680 for conventional highways. Item 9 is addressed in SHC Section 673. Item 7 is generally like a permit and can be canceled by the fee owner of the property; therefore, the State must be the fee owner of the property to exercise any contractual rights that were originally reserved by the grantors. Item 10 is generally treated as a highway encroachment permit.

© 1994-2025 California Department of Transportation. All rights reserved.

LIABILITY DETERMINATION FACTORS (Continued)

- **Is there a Freeway Master Contract between the Owner and State?**

  The State has entered into Freeway Master Contracts with several Owners. When the terms of a Freeway Master Contract address any specific SHC section or right, the terms of the Contract supersede the requirements of the applicable statute.

- **When was the route adopted by formal action of the CTC as a State Highway?**

  This date establishes the order of priority for the State and Owners for superior rights.

- **When was the adopted route declared by formal action of the CTC to be a freeway or expressway?**

  After the date of formal action, freeway statutes, and Freeway Master Contracts apply.

If the entire impacted facility is within an area of a single type of occupancy right, the entry in the subservient position is responsible for 100% of the relocation cost. If the facility area of occupancy consists of more than one type of occupancy right, e.g., part within a utility easement and part under an Encroachment Permit, then a proration between Owner and State of the total cost must be calculated using one of the three methods shown in "Methods of Calculating Proration of Cost."

It is important to remember that only the impacted portion of the existing utility facility that lies within the defined project limits is counted or measured, as applicable, for use in the proration formula. However, the total cost to be prorated includes the cost of relocated facilities both within and outside the right of way. This total cost must not include any betterment or other non-reimbursable items of cost.

© 1994-2025 California Department of Transportation. All rights reserved.

METHODS OF CALCULATING PRORATION OF COST

- **Pole Count**

  Usage:
  Pole count is the normal method used for aerial facilities.

  Explanation:
  The calculation is based exclusively on the number of impacted poles located within the project limits where the Owner has the superior right, divided by the total number of impacted poles within the project limits. This calculation produces the State's share of the total relocation cost. Equal weight is normally given to each impacted pole within the project limits regardless of ancillary equipment or attachments such as guys, transformers, and switches. The impacted poles must be otherwise similar, as wood pole relocation costs are greatly different than special designed steel poles or other supporting structures. If impacted poles are of a mixed type, separate costing may be necessary for the dissimilar poles. See "Dollar Weighted" method below.

- **Facility Length**

  Usage:
  Measurement of the length of the impacted facilities is normally used for underground facilities, such as gas, sewer, and water, or for cables either directly buried or within conduits and for facilities on the surface, such as ditches or conduits.

  Explanation:
  The calculation to prorate liability is similar to the pole count method above and is based on the Owner's superior right length of the impacted facility lying within the project limits divided by the total impacted length within the project limits.

  The measured lengths must be of the same or similar size and type of facility, irrespective of ancillary equipment or features such as valves, manholes, switches, and transformers.

© 1994-2025 California Department of Transportation. All rights reserved.

- **Dollar Weighted**

  Usage:
  This method is used where mixed facilities are to be prorated.

  Explanation:
  This approach requires considerably more effort and documentation, as it is necessary to establish and support an installed replacement cost new for the existing facilities. The simple cost of the materials is not sufficient to establish this proration. The calculation is based on the installed replacement cost new of the existing facilities located within the project limits where the Owner has the superior right, divided by the total of the installed replacement cost new for all of the impacted existing facilities within the project limits. This calculation produces the State's share of the total relocation cost.

13.04.01.03 Report of Investigation (ROI) Plan

The ROI plan is crucial to liability determination. Like an appraisal map, it shows who owns what and shows the before and after location of improvements and property rights. Since relocation liability is generally based on property rights, accurate plotting of the State's and Owners' rights of way is essential to an accurate liability determination. See Section 13.05.03.01 for specific ROI plan requirements.

13.04.02.00 Conventional Highway or Freeway

Liability determination methodology for conventional highway projects and freeway projects is basically the same. However, different SHC sections apply and some owners have signed Master Contracts that apply only to freeway projects. In addition, the Department has entered into numerous Positive Location Agreements where the cost of the positive locations, whether on a highway or freeway, will be the liability of the State. (See Section 13.03.03.01 for information about Positive Location Agreements.)

© 1994-2025 California Department of Transportation. All rights reserved.

13.04.02.01 Conventional Highway Relocations

Liability for the cost of relocating facilities to provide for conventional highway construction is primarily based on occupancy rights. The Owner is generally obligated to remove, relocate, etc., their facilities at their sole expense unless such facilities are in place pursuant to rights prior and superior to those of the State. In addition, Section 13.04.05.02 (the relocation of a facility for a temporary move of the highway [detour]) and Sections 13.04.06.00-13.04.06.02 (a facility to be relocated pursuant to Water Code Section 7034 or 7035) modify and/or supersede basic occupancy rights.

If an existing conventional State highway route has been declared/designated a freeway, the project is considered a conventional highway project unless both the following conditions are met:

- The current project includes acquisition of access rights from adjoining properties, AND
- The current project right of way acquisition and roadway improvement are part of the ultimate freeway design.

NOTE: Where access rights are being acquired as part of a conventional highway, the project shall not be considered a freeway project unless the route has been designated as part of the freeway and expressway system (SHC Section 250, et seq.). Therefore, the Freeway Master Contract and SHC Sections 703 through 707.5 are not applicable to liability determination.

13.04.02.02 Freeway Relocations

Liability for the cost of relocating facilities to provide for construction of a State freeway or expressway is determined by a combination of occupancy rights, statutes (SHC Sections 700 through 707.5), and applicable Master Contracts.

Extension or reconstruction of city streets or county roads done in accordance with a Freeway Agreement that provides for closure of streets or roads for freeway construction is considered part of the freeway project for the purpose of determining liability.

© 1994-2025 California Department of Transportation. All rights reserved.

Facilities installed in a road prior to a CTC resolution adopting the road as a State highway shall be considered as originally installed before the road became a State highway for application of SHC Sections 700, et seq. All new facilities, including additional equipment and cables installed in existing facilities, placed within the State freeway after the CTC resolution shall be relocated at the Owner's expense.

13.04.02.03 Bicycle Path Construction

SHC Section 885, et seq., provides that the Department may enter into an agreement with another agency for construction of bicycle paths or other nonmotorized transportation facilities along State highway rights of way. The Department's contribution, if any, toward the construction cost shall be based upon a finding that the facility will result in increased traffic safety or highway capacity. If construction of a new freeway will cause the severance or destruction of an existing nonmotorized transportation facility, the Department is to provide a reasonable alternative routing for the facility.

The Department's cost liability for relocation of utility facilities impacted by construction of bicycle paths is dependent on a number of factors and is determined in accordance with the rules entitled "Liability for Bikeways."

LIABILITY FOR BIKEWAYS

- **Freeway construction where there is no increase in highway safety or capacity due to the bikeway construction.**

  Rule:
  1. Use of State highway funds for utility relocation is not authorized for a bikeway construction project when there is no increase in traffic safety or capacity.
  2. If freeway construction severs or destroys an existing improved nonmotorized transportation route, Department shall pay the cost of utility relocation to provide a reasonable alternate route.
  3. In designing freeways, Department shall consider local agencies' master plans for nonmotorized transportation, but the cost of construction other than design cost is the responsibility of the local agency or others.

© 1994-2025 California Department of Transportation. All rights reserved.

- **Freeway construction with a supportable determination of increased highway safety or capacity due to the bikeway construction.**

  Rule:

  1. If the nonmotorized transportation facility is designed and built within the freeway right of way and in connection with the freeway construction project, liability for utility relocation is pursuant to SHC Section 700, et seq., or the Freeway Master Contracts where applicable.
  2. If construction of a nonmotorized transportation facility is outside the freeway right of way but within a frontage road, either State-owned or relinquished to a local agency, liability is based on common law priority of rights except when a Freeway Master Contract is involved. In the latter situation, the Contract will control.

- **Conventional State highway construction where there is no increase in highway safety or capacity due to the bikeway construction.**

  Rule:
  Use of State highway funds for utility relocation is not authorized for a bikeway construction project when there is no increase in traffic safety or capacity.

- **Conventional State highway construction with a supportable determination of increased highway safety or capacity due to the bikeway construction.**

- **Rule:**
  Cost of facility relocation is based on common law priority of rights. If the Utility Owner has prior and superior rights, payment for utility relocations may be paid from State highway funds.

13.04.03.00 Master Contracts

Following enactment of the Collier-Burns Act in 1947 (which includes most of SHC Sections 700-711), the accumulation of disputed claims was of such magnitude as to threaten delay of the newly enacted freeway program. To meet the problem, the Legislature in 1951 enacted SHC Section 707.5, which authorizes the Department to enter into contracts with Utility Owners that supersede the provisions of the SHC identified in such contracts and govern exclusively the apportionment of relocation costs.

Section 707.5 has been interpreted to allow the Department to apportion liability under these contracts so as to achieve the result that would have been obtained over a period of time in the absence of such contracts. Thus, the determination of the apportionment provisions, as well as other terms, has been based on examination of past experience and evaluation of liability in the future. These contracts, while involving compromise, reflect as nearly as the Department can predict the overall liability that would exist without them.

Freeway Master Contracts (FMCs) govern apportionment of the cost of rearranging facilities in connection with freeway projects in lieu of the provisions of SHC Section 700, et seq. In other words, under FMCs, the provisions of the SHC and other laws have no application to the rearrangement of the facilities on freeway projects and are replaced by the terms of the FMC. The contracts do not affect relocations on conventional highways.

13.04.03.01 Interpretation of Master Contracts

The FMC liability determinations apply to all State freeway projects regardless of who funds the project or does the work; therefore, consistent statewide interpretations are mandatory. (See Section 13.12.02.00 for more information.) However, the Master Contracts do not apply to any private-developer-initiated and privately funded project. In accordance with statutory and judicial law, the developer shall pay for all utility adjustments required to accommodate a private-developer-sponsored project. (See Section 13.12.04.00.)

There are several FMCs in place with different utility companies. Although the current FMCs are much simpler than previous Master Agreements, careful interpretation is crucial.

© 1994-2025 California Department of Transportation. All rights reserved.

Application of FMC to relocations on adjunct, ancillary or nonhighway use parcels/projects must be carefully considered and the HQ RW Utility Liaison should be contacted for discussion.

Any question or conflict concerning interpretation of any terms or scope of a Master Contract may be submitted to Headquarters RW if the district cannot resolve.

13.04.03.02 Application of Master Contracts

FMCs apply to freeway projects as defined in the FMC on highways that are part of the California Freeway and Expressway system. See SHC Section 250, et seq., as a guide for a listing of applicable highway routes.

The project is not considered a freeway project unless access rights to adjoining property have been previously acquired or are being acquired as part of the immediate project.

FMCs apply to utility facilities within the freeway rights of way and any other frontage or local road being reconstructed as a direct part of the freeway project. The FMC terms should not be applied to other ancillary highway improvement projects, such as park-and-ride lots and acquisition of replacement property sites, unless such sites are acquired as part of a freeway project.

NOTE: When a co-operative Agreement (Co-op) is in use, the FMC applies to the entire freeway project, as applicable.

13.04.04.00 Property Rights

The Owner may submit one or more superior right claims for a facility. Each prior right claim the Owner submits must be fully documented and supported. The documentation must be referenced in, and attached to, the Report of Investigation (ROI) (see Section 13.05.00.00). The types of property rights in the following sections are applicable to both conventional highways and freeways. They generally indicate how each superior right should be documented and the extent to which the Utility Coordinator should investigate the validity of the Owner's claim. (See also Section 13.03.06.02, "Acquisition from the Utility Owner.")

NOTE: When reviewing a superior rights claim, the Utility Coordinator must determine if there is a Master Contract with the Owner that may modify or

© 1994-2025 California Department of Transportation. All rights reserved.

supersede normal occupancy rights or statutes and establish the basis of the Owner's claim.

13.04.04.01 Fee Ownership

The State is liable for relocation costs any time the facility is on property where the Owner has fee title. The Utility Coordinator shall review title reports and right of way maps to verify Ownership.

All fee-owned property must be acquired by RW Acquisition via RW Contract and Deed. Relocation or rearrangement of utility facilities shall be handled by the Utility Coordinator via Utility Agreement in coordination with Acquisition. The Utility Coordinator must ensure the RW Contract and/or Utility Agreement covering relocation does not set up a double payment for property rights.

13.04.04.02 Easement

In most cases, when the facility is located within an easement, recorded or unrecorded, the State is liable for relocation costs. When the Owner claims a superior right pursuant to a prior easement, the Utility Coordinator must verify the location of the easement, that the easement is valid and that the Owner's rights are prior and superior to the State's.

Any Owner's relocation obligation or other limitation clauses within the easement document may be passed to the State upon acquisition of the underlying fee and must be investigated to determine if they are in conflict with the Owner's claim. State's liability for relocation costs under a valid easement extends to subsequent additions to those facilities originally installed as long as the additions are not inconsistent with the terms of the easement.

13.04.04.03 Implied/Secondary Easement

All city-owned facilities located in city streets and county-owned facilities located in county roads that were installed in the street or road within the city or county jurisdictional limits prior to their becoming a State highway are considered to be installed in the Owner's implied easement reservation. All facilities so located are relocated at State expense. The Utility Coordinator should check permits, "as-built" drawings, and the Owner's records to confirm the facilities were installed prior to the date the CTC adopted the route.

© 1994-2025 California Department of Transportation. All rights reserved.

After the date the CTC adopted the route, the local agency may maintain or even improve their facilities as long as the improved facility remains in substantially the same location. The local agency may not, however, expand upon their existing system by installing new parallel facilities except under the usual encroachment permit requirement.

Facilities not under the city's or county's direct ownership and control, such as regional sanitation or fire districts, are not subject to the implied/secondary easement liability rule.

13.04.04.04 Joint Use and Consent to Common Use Agreements

In most cases, the State will bear relocation costs for facilities installed within a JUA or CCUA area. The Utility Coordinator must determine that the JUA/CCUA existing facility is, in fact, in the area of the JUA/CCUA by comparing the facility location with the JUA/CCUA description. The document must also be reviewed for any conditions that may change or limit the Owner's rights such as:

- JUA/CCUA has an expiration date for the Owner's rights.
- A JUA/CCUA shall be used only on the State Highway System (SHS).
- Local Public Agencies shall use an easement on their local streets or roads to replace prior rights.

An Owner has the legal right to expand their facilities to the extent allowed by the terms and conditions of an easement deed. This right extends to a JUA and CCUA granted in recognition of existing easement deeds but does not extend to prescriptive claims. Regardless of Owner's prior rights or existing JUA/CCUA, any expansion of Owner's facilities within the highway right of way must be in accordance with encroachment permit requirements. (See Section 13.11.00.00 for more information on JUA/CCUAs.)

13.04.04.05 Perfected Prescriptive Claim

Relocation costs for facilities installed under a right of occupancy established by a perfected prescriptive claim may become the State's liability if the occupancy condition meets statutory requirements. The occupancy right must have been established by a court proceeding against the record owner.

Prescriptive claims cannot be established on publicly owned property.

© 1994-2025 California Department of Transportation. All rights reserved.

13.04.04.06 Lease

A lease is similar to an easement; however, it is restricted to a specific time period written into the lease. The Utility Coordinator should investigate the validity of the lease in the same manner as for easements, e.g., the ownership and description. Any Utility Owner's relocation obligations or other limitation clauses contained in the lease may be passed to the State upon acquisition of the underlying fee and must be investigated to determine if they conflict with the Utility Owner's claim. If the Utility Owner has a valid lease and there are no provisions for Owners to pay for the relocation, the cost is usually the burden of the State.

13.04.04.07 License

A license is permission from a property owner for another person to use land. A license differs from an easement or a lease in that it is only between the two parties and cannot be transferred unless it is specifically written into the license. Normally, when an Owner has a license and the State acquires the property on which the facility exists, the license is no longer valid, and the State can require the Owner to relocate at their own expense.

The Utility Coordinator must read the license to determine if the above requirements, such as successors or assigns, are mentioned in the license. When evaluating a license, the Utility Coordinator must take into account the level of title the State has already acquired at the time of issuance of the Notice to Owner because only the fee owner of property can enforce conditions reserved in the license.

NOTE: When the Owner has placed substantial improvements within the license area, a review by Legal is necessary before determining liability.

13.04.04.08 Franchise

Utility facilities that are placed in public rights of way pursuant to a franchise privilege from a city or county, or pursuant to State Law do not convey any property rights and Utility Owners are to relocate at their own expense whenever requested to do so for a legitimate or proper governmental purpose by State or local authorities. Required relocations for construction of maintenance stations, highway drainage, truck inspection facilities, accommodation of other relocated utility facilities, functional replacement acquisition sites, etc., are covered under "proper governmental purpose." However, circumstances of each utility relocation, with respect to provisions

© 1994-2025 California Department of Transportation. All rights reserved.

of the specific franchise involved, must be carefully reviewed. See also Section 13.04.05.02.

13.04.04.09 Encroachment Permit

An Encroachment Permit is a form of license that provides permission to the Owner to install a facility but does not convey any property rights. The permit also imposes certain restrictions on the Owner. The permit contains a relocation clause that states the Owner must relocate their facilities upon request at the Owner's own expense. See also Section 13.04.05.01.

13.04.04.10 Joint Pole Agreement Cost Liability Determination

The California Public Utilities Commission has authorized the joint sharing of poles by different Utility Owners, through a Joint Pole Agreement (JPA) as a means of providing more cost-effective service and to reduce "utility pole blight." The JPA rarely, if ever, will convey property rights to the joint pole user. The Lead Pole Owner's (Owner of the Pole) rights must be reviewed to determine joint pole user's rights. As with any claim of property right, the Owner making such a claim must submit all necessary documents to support that claim.

On joint pole facilities, when multiple Owners are found sharing the pole, each joint pole user must submit all necessary documents to support their claim whether or not the JPA covers such use. The joint pole user may have a valid cost liability claim even though they occupy the pole under a lease, license, or permit with the Lead Pole Owner.

If the Utility Owner has a Freeway Master Contract, liability for the JPA will be determined pursuant to the Freeway Master Contract. If the Region/District is unclear as to liability at this point, Headquarters' Right of Way and Legal should be consulted.

© 1994-2025 California Department of Transportation. All rights reserved.

13.04.05.00 Streets and Highways Code

The provisions of SHC Sections 673 and 680 authorize the State to issue a written notice to the Owner to remove, relocate, positively locate, etc., facilities installed under permit or franchise privilege at the Owner's expense (see Sections 13.04.04.08 and 13.04.04.09).

Sections 700 through 711 pertain only to utility facilities in access-controlled freeways or expressways. Where the Owner has a valid superior right and is also entitled to reimbursement under one of the 700 series of the Code, the basis for the State's liability must be the Owner's superior right (unless modified by a Master Contract). This allows the State to perpetuate the Owner's superior right within the freeway right of way.

Liability for the cost of relocating facilities to provide for improvement of State freeways is generally based on the superior occupancy right in the same manner as previously discussed for conventional highways. However, SHC Sections 702 through 707.5 modify this basis for freeway projects and must therefore be carefully reviewed and applied. In addition, Master Contracts modify and/or supersede SHC Sections 702 through 707.

Following is a description of each section within the SHC that applies to the relocation of utility facilities.

NOTE: As used in the following SHC Sections, "lawfully maintained" means "A utility facility that has a legal basis/right to be in its present location and, therefore, is not in trespass." An Encroachment Permit satisfies the requirement of "lawfully maintained."

13.04.05.01 Section 673 – Relocation or Removal of Encroachment

This section applies to publicly owned facilities, such as counties, cities, public corporations, or political subdivisions (governmental agencies), where the governmental agency has been issued an Encroachment Permit by the Department to install facilities within a conventional highway. When the facility requires relocation for improvement of the highway, the governmental agency must relocate at their own expense. See also Section 13.04.04.09.

© 1994-2025 California Department of Transportation. All rights reserved.

13.04.05.02 Section 680 – Franchises in State Highways; Temporary Relocations

This section applies to Owners who have installed their facilities within a conventional highway by a franchise privilege guarded by a governmental agency. When the facility requires relocation for a highway improvement, the Department can enforce provisions of the franchise and require the facility to be relocated at Owner's expense. An Owner may occasionally claim relocation is at State's expense pursuant to provisions of their franchise. In these situations, the Utility Coordinator must review the franchise to ensure the provisions apply. See also Section 13.04.04.08.

Relocation for temporary purposes has historically been interpreted to mean a utility relocation that results from a temporary move of the highway (a detour). Thus, any utility adjustment resulting from a temporary move of the highway (a detour) is at State's expense.

Utility relocations necessary to permit the safe construction of the highway project, such as utility "shooflies," are not considered to be relocations for temporary purposes under the law. In this situation, the Owner has the option to temporarily relocate to clear construction or to permanently relocate to another location rather than to go back to their original location. In this situation, the Notice must not refer to a temporary relocation as it is entirely the Owner's option as to whether they wish to return to the original location.

Liability for temporary relocations that are requested by the highway contractor as a means of convenience for construction shall be the highway contractor's responsibility. The Project or Resident Engineer, as appropriate, shall determine construction necessity versus contractor's convenience.

13.04.05.03 Section 702 – Relocation Outside Freeway

This section applies in situations where the Owner is required to remove and relocate their existing lawfully maintained facility to a location entirely outside the freeway right of way. The State must pay the reasonable and necessary cost of such removal, relocation, and reinstallation into the new location.

This section does not apply to relocation of the facility from one location within the freeway to another location within the freeway, nor does it apply to relocations into a service road or outer highway because these are considered part of the freeway.

© 1994-2025 California Department of Transportation. All rights reserved.

Essentially, this section only applies if a utility easement is required to accomplish the relocation of the Owner's facilities entirely outside the State's or other public road right of way.

13.04.05.04 Section 703 – Relocation Within Freeway

This section applies to situations where the State requires the Owner to relocate their existing facilities from one location within a freeway right of way to another location within the freeway right of way. Several different types of facilities are covered as shown in "SHC 703 – Relocations Within Freeways – Types of Facilities."

© 1994-2025 California Department of Transportation. All rights reserved.

SHC 703 – RELOCATIONS WITHIN FREEWAYS – TYPES OF FACILITIES

Publicly owned utility facilities other than sewers, fire hydrants, and street lights:

Whenever relocation of such facilities is required, the State shall pay the cost of relocation, provided the facility was lawfully maintained and originally installed in its existing location prior to the public roadway becoming part of a State highway.

NOTE: An important critical control date for determining liability is the CTC freeway adoption date. The State highway alignment, including the local streets and roads within its boundaries, shall be considered a part of the State freeway from the CTC freeway adoption date forward.

Privately owned water facilities:

Whenever relocation of such facilities used solely to supply water is required, the State shall pay the cost of relocation, provided the water facility was lawfully maintained and originally installed in its existing location prior to the local street or road becoming a State highway.

Privately owned utility facilities other than water:

Whenever relocation of such facilities is required, the State must pay the cost of relocation provided:

1. The facility was lawfully maintained and originally installed in its existing location prior to the local street or road becoming part of a State highway.
2. The facility, as established by the Owner, is not under an express contractual obligation to relocate at the Owner's expense.

NOTE: The term "express contractual obligation" means a written obligation. Franchises dated after 1937 were generally written to comply with the State Franchise Act, which does spell out the obligation in writing.

Sewers, fire hydrants, and street lights:

Publicly owned sewers, publicly or privately-owned fire hydrants, and publicly or privately-owned street lighting structures that are required to relocate shall be relocated at State expense, regardless of maintenance or original date of installation in the local street or road.

© 1994-2025 California Department of Transportation. All rights reserved.

13.04.05.05 Section 704 – Subsequent Relocation

If the State requires an Owner to relocate any of their facilities within the freeway right of way more than once within a period of ten years, the State shall pay the cost of the second relocation and any subsequent relocation within the ten-year period. The ten-year period is interpreted as the date between completion of the original relocation to the beginning of construction on the subsequent relocation. Each time a new relocation is accomplished, the ten-year period starts anew.

13.04.05.06 Section 705 – Allowable Credit on Relocation

In any case in which the State is required under the provisions of the SHC to pay the cost of rearranging, removing or relocating any facility, the State shall be entitled to credits as shown in "SHC Section 705 – Allowable Credits."

© 1994-2025 California Department of Transportation. All rights reserved.

SHC SECTION 705 – ALLOWABLE CREDITS

Betterment Credit

The State should only pay for a functional equivalent replacement of the impacted utility facility. Any increase in the size or capacity of the facility that is for the Owner's benefit is considered the Owner's betterment. The State shall receive a credit for the difference between the cost of the functional replacement of the original facility and the cost of the facility as constructed.

There are exceptions to the general rule. However, any betterments that result in increased capacity or more desirable placement that the Owner may claim to be at State's expense must be carefully reviewed. In the following instances, betterment may, at the State's discretion, be accepted as part of the State's liability:

1. Required by the highway project.
2. Replacement devices or materials that are of equivalent standards although not identical.
3. Replacement of devices or materials no longer regularly manufactured with next higher grade or size.
4. Required by State or Federal law or regulation.
5. Required by current design practices regularly followed by the Owner in their own work, but only if there is a direct benefit to the highway project.

The Utility Coordinator is responsible to determine the overall scope of the betterment, and Audits is responsible to verify accuracy of the Owner's calculation. Usually, betterment issues must be discussed with Headquarters RW before final resolution.

Betterment is normally measured by an increase in size or capacity such as a larger pipe, a greater number of telephone circuits, additional conduits, or a higher capacity power line. A betterment credit is not limited to the cost of materials but must include all increased costs of engineering and installing the betterment facilities. Examples of some extra costs may be additional engineering, special construction methods, and increased overhead.

Salvage Credit

When relocation is required, the State shall be given credit for the value of any materials from the old facility that the Owner removes and/or retains from the construction project. Generally, such material is either reconditioned and returned to stock or sold as scrap. Under PUC accounting regulations, Utility Owners shall provide a credit based on the original cost.

© 1994-2025 California Department of Transportation. All rights reserved.

Salvage Credit (Continued)

The State is entitled to a credit for each item of material returned to stock at its current inventory price less depreciation and less cost of reconditioning. The State is also entitled to a credit in the amount of the sales price or, if not sold at the time of billing, the estimated value for materials sold or to be sold as scrap or junk.

The amount of credit the State is entitled to is directly related to the percentage of liability the State pays on the Utility Agreement. (i.e., If the liability percentage is 100% State, State will receive full salvage credit. If the liability percentage is 50% State, State will receive 50% of the salvage credit.)

The Owner must be made aware that the State will not participate in the cost of removing a facility where the cost is greater than its salvage value unless it has to be removed for safety or aesthetic reasons. See Section 13.04.07.09 for additional discussions of removal of hazardous material.

Accrued Depreciation Credit

The State shall receive credit for accrued depreciation on the old facilities whenever the relocation of a facility is required. Where there are no replacement facilities, such as for abandoned facilities, credit for depreciation shall not be taken.

Accrued depreciation credit is an allowance for the value of expired service life. Expired service life is that portion of a facility's useful life for which the Owner has received a return on their investment or benefit of service.

The credit given shall be based on straight line depreciation computed on original installed cost, age of facility and normal expected life as reflected in the Owner's books or calculated by industry standards. For example:

$$\text{Credit} = \frac{\text{Age of Facility}}{\text{Normal Expected Life}} \text{ (Original Cost)}$$

The amount of credit the State is entitled to is directly related to the percentage of liability the State pays on the Utility Agreement. (i.e., If the liability percentage is 100% State, State will receive full accrued depreciation credit. If the liability percentage is 50% State, State will receive 50% of the accrued depreciation credit.)

© 1994-2025 California Department of Transportation. All rights reserved.

Accrued Depreciation Credit (Continued)

Following are special conditions for handling accrued depreciation credits for publicly owned sewers and private oil company facilities:

1. Publicly owned sewers – The State is not entitled to receive a credit for accrued depreciation on relocations of publicly owned sewers.

2. Private oil companies – The State is to receive a credit for depreciation on noncommon carrier (nonpublic utility) longitudinal facilities owned by oil companies. The State has historically calculated accrued depreciation credit on the following basis:

   - Straight-line depreciation, as with other Utility Owners, except the normal expected life will always be 40 years, as previously agreed to by the State and the oil companies. In other words, only for the purpose of calculating accrued depreciation credits, the subject oil facility will always have a normal expected life of 40 years.

   - Credit is not to exceed 70 percent of the original installation cost.

   - When no accrued depreciation credit is provided, or the credit supplied is zero, the Owner must supply proof of the remaining service life of the facility and a written certificate from the Owner's comptroller or chief accountant stating that no part of the replacement facility will be capitalized or depreciated. (See Section 13.07.06.02.)

© 1994-2025 California Department of Transportation. All rights reserved.

13.04.05.07 Section 707.5 – Contracts with Utilities; Freeway Master Contracts

Statutes provide that the State and any Owner, as defined in SHC Section 700, may enter into a contract providing for pro rata liability for the costs for affected utility facilities.

(See Section 13.04.03.00 for further information on Master Contracts.)

13.04.06.00 Water Codes

Water Code Sections 7034 and 7035 were enacted to cover liability for existing bridges and water conduits lying within the existing right of way for crossings of either freeways or conventional highways. Conduits include canals, ditches, culverts, pipelines, flumes, or other facilities for conducting water. "Bridge" means a structure constructed to allow the conducting of water underneath by canal, ditch, flume or other uncovered facility for conducting water.

If a conduit is relocated or replaced pursuant to Section 7034 or 7035, the State is not entitled to credit for depreciation, but will be entitled to credits for betterments and salvage. The State shall only be responsible for replacement in kind, e.g., same size and type.

Application of Section 7034 or 7035 is not to be considered where the conduit is located longitudinally in the highway. Where the facts of a situation fall within both sections, Section 7034 will be applied. Sections 7034 and 7035 are not to be used if the Owner of the facility has some form of property right, such as fee title or easement.

When the Utility Company cannot provide information showing the facility predated the highway, the Utility Coordinator may have to make some additional verification efforts. The Utility Coordinator should refer to old Departmental as-builts, old subdivision maps, old title reports, or old aerial or other historical photographs. The Utility Coordinator should also discuss the existing facility with District Maintenance to determine if the Department has ever performed maintenance acts that may tie the Department to liability for the relocation.

The determination of liability under the Water Code requires the completion of Form RW 13-19.

© 1994-2025 California Department of Transportation. All rights reserved.

13.04.06.01 Section 7034

Section 7034 provides that the bridge or conduit will become the sole responsibility of the county (or the State where the county road has subsequently become a State highway) where it has been or will be placed across county roads, if:

- The facility has been constructed in a permanent manner and constructed or brought up to county standards.

- The facility has been accepted either formally or informally by the county.

Acceptance is defined as:

- **Formal acceptance** – Formal acceptance means the County Board of Supervisors has taken appropriate action, usually in the form of a motion or resolution.

- **Informal acceptance** – While the meaning of informal acceptance (action) is not free from doubt, evidence of the act or acts by the county exercising jurisdiction over the conduit or bridge and indicating an intent on the part of the county to take over the facility, such as periodic acts of maintenance or substantial repairs or replacement, represent informal acceptance of the facility.

If both of the above requirements are fulfilled, the bridge or conduit becomes the sole responsibility of the county or the State if the county road has subsequently become a State highway. The State is obligated to structurally maintain, repair, improve for the benefit of the county or the State, reconstruct, or replace such bridge or conduit. The Owner shall be responsible for keeping the conduit clean and free from obstruction and debris to ensure the free passage of water in the conduit. (See Utility Clause V-10 in Section 13.07.03.05 for specific utility clause language.)

In a relocation under Section 7034, a JUA or CCUA should not be issued to the Owner as this implies the Owner had prior rights. The Utility Owner would remain under an encroachment permit.

© 1994-2025 California Department of Transportation. All rights reserved.

13.04.06.02 Section 7035

The effect of Section 7035 is to establish responsibility for relocation costs when an existing conduit (but not a bridge) crosses the highway without evidence of prior rights and the State's records of its right of way do not establish a superior right. Section 7035, where applicable, establishes a conclusive presumption of prior rights in the conduit Owner. Use Section 7035 only if some other form of prior rights cannot be established. This law also requires the replaced or reconstructed conduit resulting from a State-initiated project to become the State's responsibility for future repairs, relocation, replacement and structural maintenance similar to that required by Section 7034. This applies only to the conduit portion of Owner's facilities that lie within the State highway right of way and does not apply if such repair or replacement is necessary by negligent or wrongful acts of the Owner.

In addition, the Owner shall be responsible for keeping the conduit clean and free from obstructions and debris to ensure the free passage of water in the conduit. (See Utility Clause V-10 in Section 13.07.03.05 for specific utility clause language.) In no event is the State to accept responsibility for maintenance of the conduit, such as cleaning out dirt or silt.

The issuance of a JUA or CCUA is appropriate for a relocation under Water Code Section 7035.

Special clauses in the JUA/CCUA may be appropriate (see Sections 13.07.03.05 and 13.11.05.01).

13.04.07.00 Special Liability Issues

There are numerous types of miscellaneous costs for which the Owner may or may not be reimbursed that do not directly relate to a single authorizing statute. Liability for reimbursement of such costs is determined by previous legal interpretation or judicial ruling of existing utility relocation law and from nonutility related statutes. Unique costs must be cleared with Headquarters RW before entering into an agreement requiring State reimbursement of such unique costs.

© 1994-2025 California Department of Transportation. All rights reserved.

13.04.07.01 Interest During Construction

State utility regulations permit Utility Owners to be reimbursed for interest expenses on funds used or borrowed for use during construction as a cost of construction (also known as Allowance on Funds Used During Construction or AFUDC). The California PUC has accepted these regulations as being applicable to State-ordered relocation work. In general, interest is allowed only where unreimbursed completed work is substantial, the facility has not yet been put back into service, in support of construction (i.e., preliminary engineering work, materials, etc.), and the Owner is using monthly or quarterly progress billing to minimize outstanding reimbursable costs and payable when invoiced. These interest expenses are not Federal-aid reimbursable. (See also Sections 13.07.03.04 IV-3 and 13.14.08.01.)

13.04.07.02 Contributions in Aid of Construction (CIAC)/ Income Tax Component of Contributions and Advances (ITCCA)

Utility billings for reimbursement of relocation expenses pursuant to a Utility Agreement are not subject to CIAC/ITCCA and will not be paid. This also includes Local Public Agency (LPA) projects, but not private developer initiated, or privately funded projects.

In December of 2017, Congress passed a new tax bill, known as the House of Representatives (H.R.) 1 Tax Cuts and Jobs Act of 2017. It is the responsibility of the Internal Revenue Service (IRS) to provide guidance on tax law. As of this publishing, the IRS has not issued guidance via a Bulletin on H.R. 1 Tax Cuts and Jobs Act of 2017. The Department will continue to follow the guidance provided in Bulletin 1987-51.

Furthermore, the California Public Utilities Commission (CPUC) has issued a letter in January 2019, that provides guidance on this tax issue to a California utility company. In summary, the letter states that a governmental agency is exempt from the tax because it is a benefit of the public at large.

In addition, the Federal Highway Administration (FHWA) has provided guidance that in summary, the federal income tax that was paid by the utility is not eligible for federal reimbursement with Federal-aid Highway funds; i.e. Federal funds may not be used to reimburse CICA/ITCCA.

© 1994-2025 California Department of Transportation. All rights reserved.

If the Utility Coordinator receives an estimate or bill including this charge, immediately dispute and pay the invoice minus the ITCCA tax portion. The Utility Coordinator will advise the Owner to file a claim with the Government Claims Board or Caltrans. See Section 13.10.02.01.

13.04.07.03 Clearance of Highway Adjunct Properties

On occasion, the State acquires separate properties for the purpose of fulfilling a highway construction or operational need, such as roadside rests, park-and-ride lots, weigh stations, and mitigation parcels. Relocation of utility facilities on these properties follows the same laws and rules applicable to the highway project for which these adjunct sites were acquired. This means that a park-and-ride lot in support of a freeway follows laws and rules applicable to freeways. See Section 13.04.03.02, Application of Master Contracts.

13.04.07.04 Extraordinary Relocation Costs

The State normally pays its pro rata share of all reasonable and necessary utility relocation costs. The State generally does not accept total responsibility for a unique item of cost merely on the basis that the Owner would not have incurred the extra cost except for the State-ordered relocation. Some of the more frequent examples are discussed below. Other less frequently occurring examples may be found in the Utility Reference File.

- **Clearing and grubbing of new right of way** – Where possible, utility relocations are coordinated with the highway construction project so the utility relocation may take place after the highway contractor has cleared the new right of way. If this delayed relocation is not feasible, the utility work may have to proceed in advance. The State is not liable for the additional cost beyond its usual pro rata share.

- **Owner's overtime costs** – If the State fails to provide a reasonable time frame for the Owner to complete necessary relocation activities without incurring highway construction contractor delay costs, the State may be liable for the additional expense. The District Utility Coordinator may authorize State-paid labor overtime upon approval by the HQ Utility Liaison. The authorization should be made a part of the Notice and clearly state the necessity for such extraordinary costs. Whether or not the State is responsible for a pro rata portion of the relocation costs, the State's specific liability for the cost of overtime is limited to the difference between the premium wage and the regular wage. The District Utility Coordinator should not request HQ's approval for payment of labor overtime simply because of the Owner's lack of

© 1994-2025 California Department of Transportation. All rights reserved.

planning or scheduling. This additional cost is not Federal-aid reimbursable.

- **Wasted work** – Sometimes as a result of a change in design or construction change order, completed relocation work has to be redone. The State is liable for all such wasted relocation work regardless of the initial liability proration (see Section 13.09.04.00). The cost of such wasted relocation work is not Federal-aid reimbursable.

- **Hazardous waste costs** – Should the Owner incur extra costs due to the removal or disposal of hazardous waste, the State, at a minimum, pays its pro rata share of the extra costs. If hazardous waste is encountered within the project limits, the spoils and associated handling costs are dealt with in the same manner and liability as project construction hazardous waste costs. The extra costs incurred for hazardous waste found outside the project right of way, such as on local streets beyond project construction, are reimbursed in accordance with the State's pro rata liability in the same manner as for any other type of extraordinary construction costs associated with utility relocations. (See Section 13.01.02.05.) (Refer to the Freeway Master Contract for details of handling hazardous materials and their associated costs on freeway projects for those Owners who have a current Freeway Master Contract.) The cost of hazardous waste removal is Federal-aid reimbursable.

13.04.07.05 Delayed or Canceled Projects

Owners are required by law to relocate their facilities in compliance with an issued Notice. If such a required relocation is completed in part or totally at the Owner's expense, and the project is subsequently canceled by the CTC's official action, the Owner shall be entitled to reimbursement of their wasted work costs. A utility agreement shall be executed for the reimbursement. If the project is merely delayed, even for what appears to be an indefinite period of time, reimbursement is not required so long as the project remains on the State's program for future construction. Headquarters RW prior approval shall be obtained before obligating the State to any reimbursement of this type. If HQ RW approves the State's reimbursement of these costs, the Utility Coordinator must ensure the costs are not billed to FHWA, as they are not Federal-aid reimbursable.

© 1994-2025 California Department of Transportation. All rights reserved.

13.04.07.06 Future Maintenance of Water Conduits

The State shall not accept liability to maintain the interior of a water conduit, such as silt removal, on the basis of a claim that the conversion or extension of an existing open ditch to a conduit has increased the Owner's operating costs. Even though the State may have placed the conduit and is thus becoming the owner of it, the water provider shall be responsible for all maintenance associated with the product conveyance.

On the basis of a factual, non-speculative showing that there are additional real costs arising out of the State-caused relocation, the State may be liable for some of the additional new costs. Compensation must be based on the present worth of the future labor and equipment costs that are shown to substantially exceed current maintenance costs for open ditch maintenance. This same premise may be applied to other similar situations that may cause increased costs associated with a major change to an existing facility, such as the addition of a sewer lift pump. HQ RW prior approval should be obtained before entering into any Utility Agreement obligating the State to these types of costs.

13.04.07.07 Loss of Plant, Investment, or Business

The State is required by law to physically replace the utility facility in the same functionally equivalent state of operation in the after condition as it was before. Relocation costs, therefore, do not include the cost of abandoned property, loss of income resulting from loss of customers, loss of revenue due to temporary shutdowns, or for any other form of consequential damages.

13.04.07.08 Undergrounding

When a project conflict exists, and the State must relocate an existing aerial utility facility, the State cannot pay any portion of the undergrounding costs unless the undergrounding is based on an engineering need for the State's project or is the most cost effective as determined by the Project Development Team (PDT). Undergrounding requirements as established by local government for aesthetic purposes (Rule 20) are not binding upon the State. **The State does not participate in Rule 20.** The State is only obligated to pay for replacement of the functional utility that previously existed. If the State determines undergrounding is necessary for engineering reasons or is the most cost-effective option for relocation, only then are these costs Federal-aid reimbursable.

© 1994-2025 California Department of Transportation. All rights reserved.

When the State/Local Public Agency (LPA) requires undergrounding per the requirements above, clause II-12 must be used.

When a Local Agency chooses to pay for undergrounding not necessary for the project, clause II-13 must be used.

Example:

> Overhead costs for relocation = $100,000.00
> Liability split is 50/50 (State pays $50,000.00 and Utility Company pays $50,000.00)
>
> Undergrounding cost = $200,000.00
> State pays $150,000.00 and Utility Company pays $50,000.00

NOTE: The Utility Company is still liable for the cost that would have incurred if the facilities were relocated above ground. It is important to remember the proration of cost is directly dependent on the liability, and liability is determined by the property rights of the Utility Companies at the time of the original installation. The $50,000.00 would show up on the invoice as an Allowance for Conversion (AFC). Salvage credit will be addressed in Section IV Payment for Work clauses, if applicable.

13.04.07.09 Abandonment or Removal Costs

Costs for removal or abandonment of existing utility facilities are reimbursable provided the removal or abandonment is necessitated by the highway project, required for aesthetic or safety reasons, or contains hazardous material that cannot safely remain. In many cases, it may be feasible to abandon the existing utility facilities in place if the existing facilities will not conflict with the proposed highway project. Abandonment of underground facilities containing hazardous material, e.g., asbestos and lead, should be discussed with Region/District Environmental. If removal is required, the State will reimburse Owner for normal pro rata costs for removal effort only.

In cases where there is no need to remove the existing utility facilities but the Owner elects to proceed with the removal, the State shall not pay any removal costs above the salvage value of recovered materials credited to the project.

NOTE: The vacancy or demolition/removal of an improvement with a gas meter is not a utility relocation as this is a Service line. The removal date must be coordinated with RW Real Property Services.

© 1994-2025 California Department of Transportation. All rights reserved.

13.04.07.10 Additional Spare Ducts for Underground Conversion of Aerial Telephone Facilities

A long-term understanding with telephone Owners provides that the State will reimburse additional duct costs for State-ordered conversion of non-fiber-optic aerial facilities to underground. This was based on the premise that typical aerial installation was constructed to provide for a minimum capability to install four cables even if fewer were initially installed. Therefore, whenever non-fiber-optic aerial facilities are ordered to be converted to a like-form underground installation, the following table is used as a basis for allowed State reimbursement.

Number of Existing Cables	Number of Replacement Ducts
1	4
2	4
3	4
4	6
5	7
6	8
7	9
8	10

If the existing facilities to be placed underground are fiber-optic, the State will only reimburse for duct installations on the basis of the number of ducts needed to replace the existing telephone capability plus one spare duct.

NOTE: FHWA will only reimburse on the basis of providing one spare duct regardless of the type of existing facility.

13.04.07.11 Disruption of Service Facilities

Service facilities that are located on the property being served are usually there by permission of the property owner as a requirement for receiving utility service. The State in acquiring the property being served may, as the new property owner, revoke the owner's permission for occupancy and thus require the service facilities to be removed or abandoned.

If some portion of the impacted property remains in private ownership with a continuing need for utility service or provides current service to other remaining properties, the State is liable for whatever facility adjustments may be necessary. Other than removal of portions of the severed facilities for safety reasons, which is handled by Notice and Agreement, all other utility

© 1994-2025 California Department of Transportation. All rights reserved.

adjustment costs are treated as cost-to-cure damages in the acquisition of the impacted parcel.

13.04.07.12 Storage Fees

Material storage fees are reimbursable per 23 CFR 645.117(e)(4).

13.04.08.00 Liability in Dispute

Unlike right of way acquisition, there is no administrative settlement process to resolve disputes in utility relocations. Liability issues are based on a factual determination of what is required to produce a functional replacement for the impacted facility and who has the superior right. At times the resolution may be too complex to be resolved timely, which may lead to "liability in dispute."

The preferred method of resolution is to determine liability based on the Owners installation rights. When a resolution can not be agreed upon, the Utility Coordinator should draft a "liability in dispute" agreement. With the Owner's concurrence, the Notice may be issued using "liability in dispute" as the liability statement. All Agreements issued in this manner require HQ Office of Utility Relocation approval prior to issuance.

If the Owner does not concur with the issuance of a Notice on this basis, the provisions of SHC 706 shall be enforced, and the State **may** advance 90% of the State's determined liability. Upon issuance of the Notice to Owner, the Owner is legally obligated to complete the utility relocation as ordered. The Utility Coordinator is required to ensure work progresses and continue to work toward a final resolution of the dispute.

Many Utility Owners areas of operation may encompass several districts, and the dispute may occur with another Owner. Headquarters RW and Legal will work with the district to resolve any liability dispute issues.

Once the liability in dispute has been issued, the decision to proceed to arbitration or litigation is the responsibility of the Utility Owner within 3 years of the completed relocation per SHC 707. If the Utility Owner decides to pursue arbitration or litigation, the cost will be borne 100% by the Utility Owner unless determined by a court of competent jurisdiction order.

© 1994-2025 California Department of Transportation. All rights reserved.

13.04.08.01 Liability in Dispute – Master Contract

On Freeway projects where there is a Master Contract between the Owner and the State and liability is in dispute, the liability statement on the Notice to owner should state "Liability per Freeway Master Contract, dated _____, is in dispute."

13.04.09.00 Processing Approved Liability Package

Once liability is approved, either by Headquarters RW or the authorized district representative, the Utility Coordinator prepares a cover letter to the Owner transmitting the Notice to Owner, Encroachment Permit, and Utility Agreement (if required). See Exhibit 13-EX-13 (internal Caltrans link) for elements of the transmittal letter.

© 1994-2025 California Department of Transportation. All rights reserved.

13.05.00.00 – REPORT OF INVESTIGATION

13.05.01.00 General

The Report of Investigation (Form RW 13-03) documents facts and circumstances that support the liability determination. All information, documentation, and analysis supporting the liability determination for the required relocation must be included in the Report. The Report of Investigation (ROI) must be prepared and approved before the district obligates the State for the cost of relocation. An ROI is not required for a relocation that is 100% Owner liability if the Utility Coordinator has a claim letter from the Owner acknowledging 100% liability. The ROI package (sometimes referred to as the "Liability Package") includes the following mandatory items. Additional supporting documentation may be included as deemed necessary by the Utility Reviewer to support the determination.

A. Original, signed Report of Investigation (Form RW 13-03.

B. Owner's estimate of cost of work to be done.

C. Color-coded ROI plan showing work to be done, or a copy of the Approved Relocation Plan.

D. Copy of the Owner's claim letter.

E. Copy of the Owner's documents that support their prior and/or superior rights claim.

F. Copy of the proposed Notice to Owner.

G. Copy of the proposed Utility Agreement.

H. Copy of the E-76, if federal reimbursement will be used.

I. The Request for FHWA Specific Authorization, if federal reimbursement will be used.

J. Proposed special provisions, if applicable.

Instructions for filling out the Report of Investigation are included with Form RW 13-03.

© 1994-2025 California Department of Transportation. All rights reserved.

13.05.02.00 Owner's Estimate of Cost

The Owner's estimate of cost serves the following purposes:

- The estimate details, along with the proposed utility relocation plan, allow a preconstruction determination of reasonableness of the planned functional replacement for the impacted utility facility.
- It provides support for FHWA Specific Authorization.
- It provides an amount to be used for encumbering capital dollars for utility work.
- It becomes a contract pay amount for lump-sum agreements.

13.05.02.01 Standard Estimate Format

The standard estimate format (Exhibit 13-EX-21) must contain the following elements:

A. Cost of labor.

B. Cost of materials (include a list of major items).

C. Cost of transportation and equipment.

D. Cost of contracted out work.

E. Cost of overhead (include a list of major components).

F. Cost of new right of way (if required).

G. Credits due the State shown separately for betterment, depreciation, and salvage.

H. Percentage and dollar amount of the State's liability.

Each item above must be shown on the estimate. If an item does not apply, it still must be listed with a zero in the cost column. The same format is used for lump-sum estimates, except all costs must be itemized and detailed by category, e.g., labor by number of hours and dollars, materials by quantity and dollars, etc.

© 1994-2025 California Department of Transportation. All rights reserved.

The cost estimate for work to be performed or paid for by the Owner must come from the Owner. If the Owner uses broad-gauge units in their estimates, e.g., a per-pole or per-meter cost factor, the broad-gauge units may be substituted for the cost of labor, material, and transportation and equipment (Items A, B, and C above). The Owner must provide a statement about the methodology used in arriving at the broad-gauge unit cost, e.g., "based on costs incurred at a recently completed similarly scoped project." Right of way costs, credits, and the State's liability must still be listed separately.

If for timing reasons it is not possible to obtain an adequate estimate from the Owner, the Utility Coordinator may prepare an estimate based on the Owner's plan using the Owner's current cost data from similar utility relocation work. Justification for district-prepared estimates must be in the file. District-prepared estimates shall not be used as a basis for lump-sum agreements. The Utility Coordinator should ensure an Owner's prepared estimate is received as soon as possible, normally within 30-45 days of issuing a District-prepared estimate.

13.05.02.02 Pre-award Evaluation

Audits no longer requires pre-award evaluations. However, the Region/District may request a pre-award evaluation if there is a high priority utility owner.

The Region/District is responsible to carefully review the estimate to ensure it is fully detailed, is reasonable, contains all of the elements required in Section 13.05.02.01, and complies with Departmental policy.

13.05.03.00 ROI Plan

The ROI plan is crucial not only to liability determination, but also to the engineer's ability to determine that the relocation clears project construction. It shows who owns what and shows the before and after location of improvements and property rights. The plan also provides a visual picture of what the estimate is based on, thus allowing a quick check of the reasonableness of various measurements and quantities listed in the estimate.

© 1994-2025 California Department of Transportation. All rights reserved.

13.05.03.01 ROI Plan Requirements

A color-coded or an Approved Relocation Plan shall be included with every liability package. The plan must accurately and clearly plot the following elements:

A. Existing and proposed right of way lines.

B. Existing and proposed access control lines (if applicable).

C. Existing and proposed highway centerline.

D. Existing, abandoned and proposed utility facility features: location, subsurface depth (if applicable), type, size, length, access points, and encasement (if applicable).

E. Owner's easements or other claimed prior right areas.

F. Proposed property rights the State is to supply (if applicable).

G. Highway geometric features, if the relocation is related to them.

H. Legend and title block.

13.05.04.00 Lump-Sum Utility Agreements

To reduce the Owner's administrative and record keeping costs associated with documenting payment for completed work and to reduce postconstruction audits, the Department has adopted a federal provision (23 CFR 645.113) that allows lump-sum (also called flat-sum) payments for utility relocations. This procedure provides for reimbursement of relocation costs based on an Approved Relocation Plan and a detailed preconstruction estimate and should only be used where the utility adjustment can be clearly and accurately defined. If actual costs should vary from the accepted estimate, neither the Owner nor the State can adjust the agreed upon lump-sum payment amount. Savings to either party could be quickly offset by inaccuracies in the cost estimating process.

© 1994-2025 California Department of Transportation. All rights reserved.

The use of the lump-sum payment process shall only be authorized where:

- A detailed and itemized estimate has been provided by the Owner and the Utility Coordinator has verified the costs are accurate, comprehensive, reasonable, and in sufficient detail to give a clear picture of the work involved and the cost of individual items. (See Section 13.05.02.00.)

- A utility relocation plan is developed per requirements of Section 13.05.03.00 that clearly correlates with the detailed estimate.

An additional provision must be added to Clauses IV-8 and IV-9 when the lump-sum payment will exceed $25,000. (See Section 13.07.03.04.) This provision allows the State to perform an informal post audit of the Owner's costs to ascertain the reasonableness of lump-sum payments and thus judge the continued effectiveness of this type of reimbursement.

13.05.04.01 Lump-Sum Payments for Completing Positive Location Work

Where no positive location agreement exists with the Owner, and as an exception to the general requirement that a preconstruction estimate be obtained and approved before authorizing the work, the district is delegated authority to enter into a lump-sum agreement with an Owner for doing positive relocation work, without a preliminary detailed cost estimate from the Owner when:

- The preconstruction estimate of cost indicates it will not exceed $25,000 for the State's liability as documented in the district's files. (See Section 13.06.03.04 for additional expediting procedures.)
  and

- A specific plan, approved by the Project Engineer or Utility Engineering Workgroup, is issued with the Notice showing the location of necessary positive location work.
  and

- The district performs a review during the positive location operation to document the number of workers and pieces of equipment and the approximate on-the-job time for comparison with the bill when received.

© 1994-2025 California Department of Transportation. All rights reserved.

A lump-sum Utility Agreement for positive location work may also be necessary if the Owner has signed a Positive Location Agreement and requests to conduct their own positive location work. If their cost exceeds the per-hole cost of the current Positive Location Contract, the State will pay a lump sum per-hole rate at the Contract rate in effect at the time of issuance of the NTO. (See Section 13.03.03.01 for additional information.)

Owner's positive location work costs anticipated to exceed $25,000 for the State's liability shall be processed as directed in Section 13.05.04.00.

© 1994-2025 California Department of Transportation. All rights reserved.

13.06.00.00 – NOTICE TO OWNER

13.06.01.00 General

SHC Sections 673, 680, and 720 require that Owners be given formal notice to relocate, remove, abandon, protect, pothole, etc., their utility facilities to accommodate proposed State transportation projects. This Notice to Owner (Form RW 13-04) also sets forth a schedule for performing proposed utility relocation work and a statement of liability for the cost of relocation.

It is essential that the Notice reflects a true agreement between the Department and the Owner regarding the location and type of facility, the work that is being ordered, the schedule to accomplish it, and the liability for the cost of work. The issuance of a Notice sets forth terms, covenants and conditions that are mutually agreed upon by the parties, and the Notice constitutes a written agreement required by 23 CFR 645.113 ("Written Agreement").

An agreement is necessary to prevent subsequent disagreements about the need for the work, scheduling, liability, etc., that may arise and delay the project. Since issuance of the Notice may obligate the State to pay for all or a portion of the cost of relocation, there must be a specific understanding of the required work to which the State is obligating itself to be liable.

A Notice is required when the State's contractor is doing facility adjustment and an executed Utility Agreement with the Owner has been obtained prior to RW Certification. An Encroachment Permit is not required.

13.06.01.01 Joint Facility Relocations

When two or more Utility Owners occupy or are relocating to joint poles or joint trenches, the relocation work normally cannot be performed concurrently. It must instead be performed sequentially. If, after the first Owner's work is completed, the last Owner to move does not have sufficient remaining time to perform work as ordered by the Notice, it would be very difficult to hold them responsible for right of way delays if the Department did not adequately coordinate the work of all Owners.

To be fair to all Owners involved and to ensure timely utility clearance of the project, the Utility Coordinator must establish the overall relocation time frame and the sequence of operations for each Owner involved in the joint relocation. The completion dates set out in each Notice must be specific to

© 1994-2025 California Department of Transportation. All rights reserved.

each Owner and be based on the overall coordinated schedules necessary to complete all work within the project clearance schedule.

13.06.02.00 Preparation

The Utility Coordinator is responsible for preparing the Notice to Owner in accordance with the following guidelines:

- The Notice will be prepared only after the Utility Coordinator has received relocation plans and the Owner's estimate of cost and has determined liability. (See Sections 13.04.08.00 and 13.04.09.00, etc., for exceptions.)

- The Notice will be prepared and issued to the Owner with sufficient lead time to allow a reasonable relocation schedule. SHC Section 680 states, "The department shall specify in the demand a reasonable time within which the work of relocation shall be commenced." Failure to provide reasonable notice may jeopardize timely project certification or result in the State becoming liable for contractor delay caused by unresolved utility conflicts.

- The Notice should never state how the Owner is to perform the relocation work, such as: "Owner shall underground the relocated facility" or "Owner shall temporarily relocate their facilities." The details of the method and conduct of the relocation must be left to the Owner's discretion. Including requirements of this type in the Notice may obligate the State to reimburse the Owner for any additional costs associated with the work.

- A single Notice should be used covering each Owner's involvement on each project to the extent possible. Instructions for completing the Notice are included with Form RW 13-04.

NOTE: An "involvement" is defined as the issuance of a Notice to Owner for a specific utility type on one project (EA). Multiple Notices are issued when an Owner operates multiple utility types, e.g., if a project has relocations for PG&E-Gas Transmission, PG&E-Gas Distribution and PG&E-Electric Distribution, on a single project (EA) it would require three (3) Notices to Owner, equaling three (3) involvements. Involvement also includes providing a separate Notice for positive location work.

© 1994-2025 California Department of Transportation. All rights reserved.

13.06.02.01 Storm Water Plans

Work within the State highway right of way shall be conducted in compliance with all applicable requirements of the National Pollutant Discharge Elimination System (NPDES) permit issued to the Department to govern the discharge of storm water and non-storm water from its properties. The permit requires the preparation, submission and approval of a Storm Water Pollution Prevention Plan (SWPPP) or a Water Pollution Control Program (WPCP) prior to the start of any work. (Information on these requirements may be reviewed at Construction's Storm Water site.)

13.06.03.00 Processing

All Notices to Owner must be submitted with the Report of Investigation package (see Section 13.05.00.00). Upon approval of the Report of Investigation package, the Notice can be transmitted to the Owner.

When a Utility Agreement is needed for the required relocation work, it shall be transmitted to the Owner along with the Notice. Because the Notice may obligate the State to pay for portions of the work to be done, a completely prepared and encumbered Utility Agreement must also accompany the Notice.

An Encroachment Permit is required before the Owner can start work within the right of way. Owners are not to be charged permit fees for any State-ordered relocation work or for any work an Owner undertakes in a prior right area. The procedure for obtaining an encroachment permit is covered in the Encroachment Permits Manual, Section 621.

The letter transmitting the Notice, Encroachment Permit, and Utility Agreement (if required) must include the elements shown in Exhibit 13-EX-13 (internal Caltrans link).

To ensure all parties concerned with a utility relocation are notified, the Utility Coordinator must distribute copies as specified on the Notice form, along with any necessary plans and specifications.

© 1994-2025 California Department of Transportation. All rights reserved.

13.06.03.01 Utility Coordinator Responsibilities

The Utility Coordinator is responsible to coordinate all activities required to support the Notice to Owner. Duties performed generally consist of the following:

- Obtain an approved Encroachment Permit with the Notice for required work within the right of way.
- Follow up to ensure relocation is done by the date specified in the Notice.
- Coordinate with Construction for inspection of the Owner's relocation work.
- Coordinate preconstruction meetings with the project Resident Engineer, the Owner's representative, and the highway contractor on utility adjustments planned to take place after award of the highway contract.
- Resolve conflicts with newly discovered facilities in coordination with the project Resident Engineer.
- Obtain approval for all change-in-scope relocation work resulting from project changes and issue Revised Notices to Owner, when necessary.

13.06.03.02 Owner Responsibilities

The Owner is responsible for completing all work as specified in the Notice to Owner, Encroachment Permit, and Utility Agreement (if required). Upon receipt of Notice to Owner, the Owner shall have a minimum of 60 days to complete Owner's facilities rearrangement, unless the Owner agrees to a shorter time frame. If the Owner agrees to a shorter time frame, this agreement must be documented in the Utility File/Diary. Failure to comply with terms of the Notice may potentially subject the Owner to payments for resulting construction delays.

© 1994-2025 California Department of Transportation. All rights reserved.

13.06.03.03 Construction Responsibilities

District Construction is responsible for monitoring the Owner's relocation of their facilities to ensure compliance with approved relocation plans. This is normally accomplished through assignment of a Resident Engineer to inspect the Owner's work. The inspector will monitor all utility relocation work and keep records for State reimbursed work in accordance with the Department's Construction Manual, Chapter 3, General Provisions, 3-518C – Nonhighway Facilities.

The inspection has two major objectives:

- To ensure that all utility facility conflicts within the project limits are resolved.

- To observe and record the amount of labor, equipment, and materials used to accomplish State reimbursed work and to provide an estimate of the amount of materials removed for salvage. This is necessary to provide reasonable verification of the Owner's bills.

NOTE: Under no circumstances is Construction authorized to deviate from the approved plan of work as ordered in the Notice. Construction must have the District Utility Coordinator's authorization to proceed with any changes as any alterations in the Owner's work may change the State's liability obligation. See Section 13.06.03.05 for information on revisions to/changes in planned work. If Construction authorizes a change and it improperly increases the State's liability, it could be considered a "gift of public funds."

13.06.03.04 Expedited Procedures for Positive Location Notices

To expedite Design requests for positive location of potentially impacted utility facilities, the district is authorized to issue the Notice to Owner without the usual requirements of first obtaining an estimate of cost and determining liability for these costs. This procedure should only be used where project scheduling is extremely tight and the Owner concurs with issuance of the Notice without an accompanying Utility Agreement. (See Section 13.05.04.02.)

© 1994-2025 California Department of Transportation. All rights reserved.

13.06.03.05 Revised Notices

The Notice to Owner is a legally binding order on the receiving Owner to adjust their facilities in a prescribed manner and time. As such, the issued Notice in effect must always agree with the latest plan for adjustment and ordered completion time. The standard Utility Agreement clauses provide that a Revised Notice to Owner (Form RW 13-04R) shall be issued whenever there is a deviation from the agreed plan for adjustment of the facility or whenever the completion date is changed. It may also be necessary to issue a revised Utility Agreement. These changes are comparable to construction change orders and are crucial to establishing a legally binding understanding with the Owner.

To ensure federal participation in the additional expenditures, a supplemental FHWA Specific Authorization (Form RW 13-15) will be required and the E-76 estimate of cost may have to be increased. (See Section 13.14.00.00.)

13.06.03.06 Notices Issued with Liability in Dispute

A Notice issued with liability in dispute requires HQ RW approval prior to being sent to the Owner. See Section 13.04.09.00 for additional information.

When a Notice is issued for a freeway project with liability in dispute (pursuant to Section 13.04.09.00), there are two liability statements that can be used in the Notice. They are:

- Liability is in dispute.
- Liability per Freeway Master Contract, dated xx/xx/xxxx, is in dispute.

The latter liability statement is used in lieu of "Liability is in dispute" as liability for Owners with Master Contracts is normally resolved based on one or more sections of the Contract.

13.07.00.00 – UTILITY AGREEMENTS

13.07.01.00 General

Pursuant to State Administrative Manual 8300, et seq., and SHC Section 94, the State and the Utility Owner must enter into a Utility Agreement (Form RW 13-05) whenever the State is paying or receiving payment for all or a portion of the cost of relocation of a utility facility, regardless of who performs the work. The number assigned to each Utility Agreement shall be the same number assigned to the corresponding Notice to Owner covering the same facilities. Each Utility Agreement must be submitted with the Report of Investigation package (see Section 13.05.01.00).

13.07.02.00 Circumstances Requiring a Utility Agreement

The State must prepare a Utility Agreement for each facility being relocated, adjusted, or protected in place by the Utility Owner or its contractor with State reimbursement of the cost or being relocated, adjusted, or protected in place by the State's contractor, regardless of who is responsible for the cost (see section 13.07.04.01). The Utility Coordinator is responsible for preparing the Utility Agreement.

A single Agreement is used for each Owner's involvement on a single construction project to the extent possible. Separate Agreements may be necessary for individual purposes such as design (preliminary engineering), advance of funds, or physical relocation(s).

Instructions for completing the Utility Agreement are found with Form RW 13-05.

NOTE: An "involvement" is defined as the issuance of a Notice to Owner to a Utility Owner for a specific utility type on one project (EA). For example, if a project has relocations for PG&E-Gas Transmission, PG&E-Gas Distribution, and PG&E-Electric Distribution, it would require three (3) Notices to Owner, equaling three (3) involvements. An involvement also includes a Notice for Positive Location (potholing) for each specific utility type.

© 1994-2025 California Department of Transportation. All rights reserved.

13.07.03.00 Standard Clauses

The clauses in the following sections have been standardized and shall be used whenever possible. Use of these standard clauses will reduce errors and omissions as well as save preparation, review, and approval time as the clauses have been reviewed and approved by most major Utility Owners and Department's Headquarters Legal Division. The following standard clauses are numbered for ease of reference. The Utility Coordinator preparing the Utility Agreement selects the appropriate clause(s) to be used.

On projects where, Federal reimbursement will be sought, additional information is necessary on the FHWA Specific Authorization (Form RW 13-15). See Section 13.14.04.00 for specific wording requirements.

From time to time, it may be necessary to change the standard clauses to fit a specific Project, Owner, or Local Public Agency need. To ensure compliance with Federal Regulations, State Statutes, and Departmental Policies, approval of any non-standard clause is to be approved by Headquarters Division of Right of Way Office of Utility Relocations and Headquarters Legal Division. When seeking such approval, please submit the request as directed by the memo dated July 11, 2019, titled "Process to Gain Approval of Non-Standard Utility Agreement Clauses." All Local Agencies shall send the request to the District Utility Coordinator for processing. Please allow up to 45 working days for review and approval.

13.07.03.01 Section I. Work to Be Done:

I-1. Work Performed by Owner per Owner's Plan:

"In accordance with Notice to Owner No. _____ dated _____, OWNER shall _____. All work shall be performed substantially in accordance with OWNER's Plan No. _____ dated _____ consisting of _____ sheets, a copy of which is on file in the District office of the Department of Transportation at _____. Deviations from the OWNER's plan described above initiated by either the STATE or the OWNER, shall be agreed upon by both parties hereto under a Revised Notice to Owner. Such Revised Notices to Owner, approved by the STATE and agreed to/acknowledged by the OWNER, will constitute an approved revision of the OWNER's plan described above and are hereby made a part hereof. No work under said deviation shall commence prior to written execution by the OWNER of the Revised Notice to Owner. Changes in the scope of the work will require an

© 1994-2025 California Department of Transportation. All rights reserved.

amendment to this Agreement in addition to the revised Notice to Owner."

NOTE: Significant changes in previously approved plans and estimates require a revised FHWA Specific Authorization (Form RW 13-15).

I-2. Work Performed by State's Contractor per State's Plans:

"In accordance with Notice to Owner No. _____ dated _____, STATE shall relocate OWNER's _____ as shown on STATE's contract plans for the improvement of State Route _____, EA _____ which by this reference are made a part hereof. OWNER hereby acknowledges review of STATE's plans for work and agrees to the construction in the manner proposed. Deviations from the plan described above initiated by either the STATE or the OWNER, shall be agreed upon by both parties hereto under a Revised Notice to Owner. Such Revised Notices to Owner, approved by the STATE and agreed to/acknowledged by the OWNER, will constitute an approved revision of the plan described above and are hereby made a part hereof. No work under said deviation shall commence prior to written execution by the OWNER of the Revised Notice to Owner. Changes in the scope of the work will require an amendment to this Agreement in addition to the revised Notice to Owner. OWNER shall have the right to inspect the work during construction. Upon completion of the work by STATE, OWNER agrees to accept ownership and maintenance of the constructed facilities and relinquishes to STATE ownership of the replaced facilities, except in the case of liability determined pursuant to Water Code 7034 or 7035."

NOTES:

1. In the event the Owner wants to retain ownership of their old facilities removed by the State's highway construction contractor, a clause stating this fact must be included in the "Special Provisions" portion of the State's highway construction contract. Otherwise, the "Standard Specifications" of the contract will award all salvaged material to the State's contractor. If the Owner wants to retain ownership of the replaced facility, the Clause above must be modified to delete "and relinquishes to STATE ownership of the replaced facility."
2. Whenever liability is determined pursuant to Water Code Section 7034 or 7035, Standard Clauses V-10a or V-10b shall then be added to the Utility Agreement.

© 1994-2025 California Department of Transportation. All rights reserved.

I-3. Work Performed by State's Contractor per Owner's Plan:

"In accordance with Notice to Owner No. _____ dated _____, STATE shall relocate OWNER's _____ as shown on OWNER's Plan No. _____ dated _____, which plans are included in STATE's Contract Plans for the improvement of State Route _____, EA _____ which, by this reference, are made a part hereof. Deviations from the OWNER's plan described above initiated by either the STATE or the OWNER, shall be agreed upon by both parties hereto under a Revised Notice to Owner. Such Revised Notices to Owner, approved by the STATE and agreed to/acknowledged by the OWNER, will constitute an approved revision of the OWNER's plan described above and are hereby made a part hereof. No work under said deviation shall commence prior to written execution by the OWNER of the Revised Notice to Owner. Changes in the scope of the work will require an amendment to this Agreement in addition to the revised Notice to Owner. OWNER shall have the right to inspect the work by STATE's contractor during construction. Upon completion of the work by STATE, OWNER agrees to accept ownership and maintenance of the constructed facilities and relinquishes to STATE ownership of the replaced facilities, except in the case of liability determined pursuant to Water Code 7034 or 7035."

NOTE: See NOTES under Clause I-2.

I-4. Work Performed by Both Owner and State's Contractor per Owner's Plan:

"In accordance with Notice to Owner No. _____ dated _____, OWNER shall _____. All work shall be performed substantially in accordance with OWNER's Plan No. _____ dated _____ consisting of _____ sheets, a copy of which is on file in the District office of the Department of Transportation at _____."

"Deviations from the OWNER's plan described above initiated by either the STATE or the OWNER, shall be agreed upon by both parties hereto under a Revised Notice to Owner. Such Revised Notices to Owner, approved by the STATE and agreed to/acknowledged by the OWNER, will constitute an approved revision of the OWNER's plan described above and are hereby made a part hereof. No work under said deviation shall commence prior to written execution by the OWNER of

© 1994-2025 California Department of Transportation. All rights reserved.

the Revised Notice to Owner. Changes in the scope of the work will require an amendment to this Agreement in addition to the revised Notice to Owner."

"It is mutually agreed that the STATE will include the work of _____ as part of the STATE's highway construction contract. OWNER shall have access to all phases of the work to be performed by the STATE for the purpose of inspection to ensure that the work being performed for the OWNER is in accordance with the specifications contained in the highway contract. Upon completion of the work performed by STATE, OWNER agrees to accept ownership and maintenance of the constructed facilities and relinquishes to STATE ownership of the replaced facilities, except in the case of liability determined pursuant to Water Code 7034 or 7035."

NOTE: See NOTES under Clause I-2.

I-5. Preliminary Engineering by Utility Owner:

"In accordance with Notice to Owner No. _____ dated _____, OWNER shall prepare their relocation plans. Any revision to the OWNER's plan described above, after approval by the STATE, shall be agreed upon by both parties hereto under a Revised Notice to Owner. Such Revised Notices to Owner, approved by the STATE and agreed to/acknowledged by the OWNER, will constitute an approved revision of the OWNER's plan described above and are hereby made a part hereof. No redesign or additional engineering, after approval by the STATE, shall commence prior to written execution by the OWNER of the Revised Notice to Owner and may require an amendment to this Agreement in addition to the revised Notice to Owner."

13.07.03.02 Section II. Liability for Work:

II-1. State's Expense – SHC Section 702 or 703:

"The existing facilities are lawfully maintained in their present location and qualify for relocation at STATE expense under the provisions of Section (702) (703) of the Streets and Highways Code."

II-2. State's Expense – SHC 704:

"This is a second or subsequent relocation of existing facilities within a period of ten years; therefore, relocation is at STATE expense under the provisions of Section 704 of the Streets and Highways Code."

II-3. State's Expense – Superior Rights:

"Existing facilities are located in their present position pursuant to rights superior to those of the STATE and will be relocated at STATE expense."

II-4. State's Expense – Service Line on Private Property:

"The facilities are services installed and maintained on private property required for highway purposes and will be relocated at STATE expense."

II-5. Owner's Expense – Encroachment Permit:

"The existing facilities are located within the STATE's right of way under permit and will be relocated at OWNER's expense under the provisions of Section (673) (680) of the Streets and Highways Code."

II-6. Owner's Expense – Trespass:

"The existing facilities are located within the STATE's right of way in trespass and will be relocated at OWNER's expense."

II-7. State or Prorated Expense – Right of Way Contract:

"The existing facilities described in Section I above will be relocated (at STATE expense) (at _____% STATE expense and _____% OWNER expense) as set forth in Right of Way Contract No. _____ dated _____."

© 1994-2025 California Department of Transportation. All rights reserved.

II-8. State or Prorated Expense – Master Contract:

"The existing facilities described in Section I above will be relocated (at STATE expense) (at _____% STATE expense and _____% OWNER expense) in accordance with (Section _____ of the Master Contract dated _____.) (Sections _____ of the Master Contract dated _____ in accordance with the following proration: _____.)"

NOTE: Where liability for portions of the utility facility to be relocated will be based on different sections of the Master Contract, insert the equation used to develop the overall percentage of liability in the Utility Agreement in the space following the word "proration."

II-9. Prorated Expense – No Master Contract:

"The existing facilities described in Section I above will be relocated at _____% STATE expense and _____% OWNER expense in accordance with the following proration: _____."

NOTE: Where liability for portions of the utility facility to be relocated will be based on different sections of the SHC or other government code, insert the equation used to develop the overall percentage of liability for the relocation in the space following the word "proration."

II-10. Liability in Dispute – Deposit is Not a Waiver of Rights:

"Ordered work described as _____ is in dispute under Section _____ of the Streets and Highways Code. That in signing this Agreement neither STATE nor OWNER shall diminish their position nor waive any of their rights nor does either party accept liability for the disputed work. In an attempt to keep a project(s) moving forward or to meet project(s) timeline, OWNER agrees to perform relocation of facilities. Both Parties reserve all rights and claims, and do not waive any rights they may have with respect to any such claims. STATE and OWNER reserve the right to have liability resolved by future negotiations or by an action in a court of competent jurisdiction."

NOTE: The appropriate Payment for Work clause (IV-1, 2, 8 or 9) must also be modified by inclusion of "after final liability determination and" immediately following "45 days." HQ must approve the use of this clause prior to sending to Owner for review and approval.

© 1994-2025 California Department of Transportation. All rights reserved.

II-11. State/Local Public Agency (LPA) Requests Undergrounding – Engineering or Cost-Effective Option:

"The State has determined the best engineering and/or most cost-effective solution as determined by the Project Development Team (PDT) is to underground the existing utility facilities. Since undergrounding is at State's request, State will pay 100% of underground relocation cost less the percentage Owner would be responsible for under an aerial relocation in accordance with the liability determination."

II-12. Local Public Agency (LPA) Requests Undergrounding:

"LPA chooses to have the utility company relocate their facilities underground, unrelated to engineering necessity or documented cost effectiveness. The underground relocation work is not federally eligible for reimbursement, however, federal reimbursement will be allowed and limited to the cost of overhead relocation."

NOTE: When a Local Agency chooses to pay for undergrounding not necessary for the project, clause II-13 in the Local Assistance Procedures Manual must be used.

13.07.03.03 Section III. Performance of Work:

III-1. Owner's Forces or Continuing Contractor Performs Work:

"OWNER agrees to perform the herein described work with its own forces or to cause the herein described work to be performed by the OWNER's contractor, employed by written contract on a continuing basis to perform work of this type, and to provide and furnish all necessary labor, materials, tools, and equipment required therefore, and to prosecute said work diligently to completion."

III-2. Owner Performs Work by Competitive Bid Process:

"OWNER agrees to cause the herein described work to be performed by a contract with the lowest qualified bidder, selected pursuant to a valid competitive bidding procedure, and to furnish or cause to be furnished all necessary labor, materials, tools, and equipment required therefore, and to prosecute said work diligently to completion."

© 1994-2025 California Department of Transportation. All rights reserved.

III-3. State's Contractor Performs All or a Portion of Work:

"OWNER shall have access to all phases of the relocation work to be performed by STATE, as described in Section I above, for the purpose of inspection to ensure that the work is in accordance with the specifications contained in the Highway Construction Contract; however, all questions regarding the work being performed will be directed to STATE's Resident Engineer for their evaluation and final disposition."

III-4. Owner to Hire Consulting Engineer:

"Engineering services for locating, making of surveys, preparation of plans, specifications, estimates, supervision, inspection, _____ (delete or add services as established by the Owner's Agreement with the consultant) are to be furnished by the consulting engineering firm of _____ on a fee basis previously approved by STATE. Cost principles for determining the reasonableness and allowability of consultant costs shall be determined in accordance with 48 CFR, Chapter 1, Subpart E, Part 31; 23 CFR, Chapter 1, Part 645; and 18 CFR, Chapter 1, Parts 101, 201 and OMB Circular A-87, as applicable."

NOTES:

1. If the Utility Owner is not regulated by the Federal Energy Regulatory Commission (FERC), you may delete reference to 18 CFR.
2. OMB Circular A-87 applies to local agencies and local governments.

III-5. Owner and State's Contractor Performs Work:

"OWNER agrees to perform the herein described work, excepting that work being performed by the STATE's highway contractor, with its own forces and to provide and furnish all necessary labor, materials, tools, and equipment required therefore, and to prosecute said work diligently to completion."

© 1994-2025 California Department of Transportation. All rights reserved.

III-6. Travel Expenses and Per Diem: (Has been made as part of the mandatory language of the agreement)

"Use of personnel requiring lodging and meal 'per diem' expenses shall not exceed the per diem expense amounts allowed under the California Department of Human Resources travel expense guidelines. Accounting Form FA-1301 is to be completed and submitted for all non-State personnel travel per diem. Owner shall also include an explanation why local employee or contract labor is not considered adequate for the relocation work proposed."

NOTE: Clause may be omitted if State's Contractor is performing the work and the Owner is 100% liable for the relocation costs.

III-7. Prevailing Wage Requirements:

(a) "Work performed by OWNER's contractor is a public work under the definition of Labor Code Section 1720(a) and is therefore subject to prevailing wage requirements.

(b) Work performed directly by Owner's employees falls within the exception of Labor Code Section 1720(a)(1) and does not constitute a public work under Section 1720(a)(2) and is not subject to prevailing wages. OWNER shall verify compliance with this requirement in the administration of its contracts referenced above."

III-8. Owner to Prepare Preliminary Engineering Plans:

"Engineering services for locating, making of surveys, preparation of plans, specifications, estimates, supervision, inspection, _____ (delete or add services as established with the Utility Owner) are to be furnished by the Utility Owner and approved by the STATE. Cost principles for determining the reasonableness and allowability of OWNER's costs shall be determined in accordance with 48 CFR, Chapter 1, Subpart E, Part 31; 23 CFR, Chapter 1, Part 645; and 18 CFR, Chapter 1, Parts 101, 201 and OMB Circular A-87, as applicable."

© 1994-2025 California Department of Transportation. All rights reserved.

13.07.03.04 Section IV. Payment for Work:

IV-1. Owner Operates Under PUC, FERC or FCC Rules:

"The STATE shall pay its share of the actual and necessary cost of the herein described work within 45 days after receipt of OWNER's itemized bill, signed by a responsible official of OWNER's organization and prepared on OWNER's letterhead, compiled on the basis of the actual and necessary cost and expense incurred and charged or allocated to said work in accordance with the uniform system of accounts prescribed for OWNER by the California Public Utilities Commission, Federal Energy Regulatory Commission or Federal Communications Commission, whichever is applicable.

It is understood and agreed that the STATE will not pay for any betterment or increase in capacity of OWNER's facilities in the new location and that OWNER shall give credit to the STATE for the accrued depreciation of the replaced facilities and for the salvage value of any material or parts salvaged and retained or sold by OWNER."

NOTES:

1. When a lump-sum payment method is to be used, substitute Clause IV-8 or IV-9 as appropriate in place of Clause IV-1 or IV-2 and IV-3.
2. See Clause IV-10 for work being done by State's contractor.
3. Accrued depreciation refers to the period of economic usefulness in a particular owner's operations as distinguished from physical life; it is evidenced by the actual or estimated retirement and replacement practice of the owner or the industry.
4. See Section 13.07.06.02 for depreciation clause for Oil Companies.
5. For "Liability in Dispute" Utility Agreements, add the wording "after final liability determination and" immediately following "45 days" on IV-1, 2, 8 or 9. See Note II-10 for cross reference.

IV-2. Owner Does Not Operate Under PUC, FERC or FCC Rules:

"The STATE shall pay its share of the actual and necessary cost of the herein described work within 45 days after receipt of OWNER's itemized bill, signed by a responsible official of OWNER's organization and prepared on OWNER's letterhead, compiled on the basis of the actual and necessary cost and expense. The OWNER shall maintain records of

© 1994-2025 California Department of Transportation. All rights reserved.

the actual costs incurred and charged or allocated to the project in accordance with recognized accounting principles.

It is understood and agreed that the STATE will not pay for any betterment or increase in capacity of OWNER's facilities in the new location and that OWNER shall give credit to the STATE for the accrued depreciation of the replaced facilities and for the salvage value of any material or parts salvaged and retained or sold by OWNER."

NOTES:

1. SHC Section 705 states that "A credit allowance for age shall not be applied to publicly owned sewers." In these cases, the following words "... for the accrued depreciation of the replaced facilities and" shall be eliminated from the second paragraph above.
2. See NOTES under Clause IV-1.

IV-3. For All Owners – Progress/Final Bills: (Has been made as part of the mandatory language of the agreement)

"Not more frequently than once a month, but at least quarterly, OWNER will prepare and submit detailed itemized progress bills for costs incurred not to exceed OWNER's recorded costs as of the billing date less estimated credits applicable to completed work. Payment of progress bills not to exceed the amount of this Agreement may be made under the terms of this Agreement. Payment of progress bills which exceed the amount of this Agreement may be made after receipt and approval by STATE of documentation supporting the cost increase **and** after an Amendment to this Agreement has been executed by the parties to this Agreement."

"The OWNER shall submit a final bill to the STATE within 360 days after the completion of the work described in Section I above. If the STATE has not received a final bill within 360 days after notification of completion of OWNER's work described in Section I of this Agreement, and STATE has delivered to OWNER fully executed Director's Deeds, Consents to Common Use or Joint Use Agreements for OWNER's facilities (if required), STATE will provide written notification to OWNER of its intent to close its file within 30 days. OWNER hereby acknowledges, to the extent allowed by law, that all remaining costs will be deemed to have been abandoned. If the STATE processes a final bill for payment more than 360 days after notification of completion of OWNER's work, payment of the late bill may

© 1994-2025 California Department of Transportation. All rights reserved.

be subject to allocation and/or approval by the California Transportation Commission."

"The final billing shall be in the form of a detailed itemized statement of the total costs charged to the project, less the credits provided for in this Agreement, and less any amounts covered by progress billings. However, the STATE shall not pay final bills which exceed the estimated cost of this Agreement without documentation of the reason for the increase of said cost from the OWNER and approval of documentation by STATE. Except, if the final bill exceeds the OWNER's estimated costs solely as the result of a revised Notice to Owner as provided for in Section I, a copy of said revised Notice to Owner shall suffice as documentation. In either case, payment of the amount over the estimated cost of this Agreement may be subject to allocation and/or approval by the California Transportation Commission."

"In any event if the final bill exceeds 125% of the estimated cost of this Agreement, an Amended Agreement shall be executed by the parties to this Agreement prior to the payment of the OWNER'S final bill. Any and all increases in costs that are the direct result of deviations from the work described in Section I of this Agreement shall have the prior concurrence of STATE."

"Detailed records from which the billing is compiled shall be retained by the OWNER for a period of three years from the date of the final payment and will be available for audit by State and/or Federal auditors. In performing work under this Agreement, OWNER agrees to comply with the Uniform System of Accounts for Public Utilities found at 18 CFR, Parts 101, 201, et al., to the extent they are applicable to OWNER doing work on the project that is the subject of this agreement, the contract cost principles and procedures as set forth in 48 CFR, Chapter 1, Subpart E, Part 31, et seq., 23 CFR, Chapter 1, Part 645 and 2 CFR, Part 200, et al. If a subsequent State and/or Federal audit determines payments to be unallowable, OWNER agrees to reimburse AGENCY upon receipt of AGENCY billing. If OWNER is subject to repayment due to failure by State/Local Public Agency (LPA) to comply with applicable laws, regulations, and ordinances, then State/LPA will ensure that OWNER is compensated for actual cost in performing work under this agreement."

© 1994-2025 California Department of Transportation. All rights reserved.

NOTES:

1. See NOTES under Clause IV-1.
2. Contract Cost Principles and Procedures of 48 CFR, Federal Acquisition Regulations Systems, Chapter 1, Subpart E, Part 31 have been accepted as the State's standards for all projects including State-only funded projects.
3. See Manual Sections 13.04.07.01 and 13.10.02.03 for additional information.
4. If Utility Owner is not regulated by FERC, modify above clause by deleting reference to "and/or 18 CFR, Chapter 1, Parts 101, 201, et al."
5. Clause may be omitted if the State is liable for the work, the work is performed by the State or Local Agency Contractor, and utility owner is not claiming reimbursement for inspection fees.

IV-4. Advance of Funds – State Liability:

"OWNER, at the present time, does not have sufficient funds available to proceed with the relocation of OWNER's facilities provided for herein. It is estimated that the cost of the work provided for by this Agreement and, as hereinafter set forth, is the sum of $_____. STATE agrees to advance to OWNER the sum of $_____ to apply to the cost of the work to be undertaken as provided hereinabove. Said sum of $_____ will be deposited by the STATE with OWNER within 45 days after execution of the Agreement by the parties hereto and upon receipt of an OWNER's bill for the advance."

"It is further agreed that upon receipt of the monies agreed upon to be advanced by STATE herein, OWNER will deposit said monies in a separate interest-bearing account or trust fund in state or national banks in California having the legal custody of said monies in accordance with and subject to the applicable provisions of Section 53630, et seq., of the Government Code; and all interest earned by said monies advanced by STATE shall be remitted to STATE quarterly, via a separate check, even when the cost of relocation exceeds the advance amount."

"At least quarterly, the Utility OWNER must prepare and submit detailed itemized progress invoices for costs incurred to clear the advance. Payment of progress bills not to exceed the amount of this Agreement. When the work is completed, OWNER shall send the STATE a Final Bill for reconciliation of the advance. In the event actual and necessary relocation costs as established herein are less than the sum of money

© 1994-2025 California Department of Transportation. All rights reserved.

advanced by STATE to OWNER, OWNER hereby agrees to refund to STATE the difference between said actual and necessary cost and the sum of money that was advanced. The remittance check for the balance of advanced funds will be separate from the remittance check for the earned interest. In the event that the actual and necessary cost of relocation exceeds the amount of money advanced to OWNER, in accordance with the provisions of this Agreement, STATE will reimburse OWNER said excess costs upon receipt of an itemized bill as set forth herein."

NOTE: Advance of funds should not exceed 90% of the Utility Agreement amount due to possible credits for depreciation, salvage, etc. No funds are to be advanced to cover owner-initiated betterments. Per 2010 Accounting procedural requirements, two separate checks are required for remittance of: a) advanced funds and b) interest on advanced funds. (All invoices must comply with the "Invoice Checklist.")

IV-5. Loan of Funds – Owner Liability:

"OWNER recognizes its legal obligation to relocate its facility at its own cost, but, at the present time does not have sufficient funds available to proceed with the relocation of OWNER's facilities provided for herein. It is estimated that the cost of the work provided for by this Agreement and, as hereinafter set forth, is the sum of $_____. STATE agrees to advance to OWNER the sum of $_____, in accordance with Section 706 of the Streets and Highways Code, to apply to the cost of the work to be undertaken as provided hereinabove. Said sum of $_____ will be deposited by the STATE with OWNER within 45 days after execution of the Agreement by the parties hereto and upon receipt of an OWNER's bill for the advance."

"It is understood that OWNER shall pay interest upon receipt of said advance. The rate of interest shall be the rate of earnings of the Surplus Money Investment Fund and computation shall be in accordance with Section 1268.350 of the Code of Civil Procedure. The total loan will be repaid to the Department within a period of time not to exceed 10 years."

NOTE: See State Controller's Office website for the Surplus Money Investment Fund rate chart.

© 1994-2025 California Department of Transportation. All rights reserved.

IV-6. Agreement for Identified Betterments:

"It is understood that the relocation as herein contemplated includes betterment to OWNER's facilities by reason of increased capacity in the estimated amount of $_____ (which represents _____% of the estimate dated _____. Said _____% shall be applied to the actual and necessary cost of work done), and OWNER shall credit the STATE for the actual and necessary cost of said betterment, all of the accrued depreciation and the salvage value of any materials or parts salvaged and retained by OWNER."

IV-7. State Performs Work – Owner Requested Betterments:

"The STATE shall perform the work under Section I above at no expense to OWNER except as hereinafter provided."

"It is understood that the relocation as herein contemplated includes betterment to OWNER's facilities by reason of increased capacity in the estimated amount of $_____, said amount to be deposited upon demand in the _____ Office of the Department of Transportation, prior to the time that the subject freeway/highway contract bid is opened by the STATE. The final betterment payment shall be calculated based upon the actual quantities installed as determined by the STATE's engineer, and the current cost data as determined from the records of the OWNER. In addition, the OWNER shall credit the STATE at the time of the final billing for all the accrued depreciation and the salvage value of any material or parts salvaged and retained by the OWNER."

NOTE: A memorandum must be sent to Accounting requesting the Owner be billed for the amount of betterment.

IV-8. Lump-Sum/Flat-Sum Billing Utility Agreements (Excluding Pac Bell/SBC):

"Upon completion of the work, and within 45 days after receipt of OWNER's bill, signed by a responsible official of OWNER's organization, and prepared on OWNER's letterhead, STATE will pay OWNER the lump-sum amount of $_____. The above lump-sum amount has been agreed upon between the STATE and the OWNER and includes any credits due the STATE for betterment, depreciation and salvage."

NOTE: For lump-sum amounts in excess of $25,000, the following clause should be added.

© 1994-2025 California Department of Transportation. All rights reserved.

"STATE and OWNER further agree that for lump-sum payments in excess of $25,000, that STATE shall have the option of performing an informal audit of OWNER's detailed records from which the billing is compiled. The purpose of STATE's audit shall be to establish the continued acceptability of using lump-sum payments for high cost relocations and shall not in any way affect the amount or acceptability of the lump-sum amount herein agreed to. OWNER shall keep supporting detailed records available for STATE review for a period of one year following OWNER's submittal of final bill."

NOTE:

1. Lump-sum Utility Agreements should be used for all utility involvements where the STATE's cost is estimated to be $100,000 or less, and the conditions of Section 13.05.04.00 can be met.
2. See Clause IV-9 for Pac Bell/SBC lump-sum Utility Agreements.

IV-9. Lump-Sum/Flat-Sum Pac Bell/SBC Billing Utility Agreements:

"Upon completion of the potholing and relocation work, and within 45 days after receipt of OWNER's bill, signed by a responsible official of OWNER's organization, and prepared on OWNER's letterhead, STATE will pay OWNER the lump-sum amount of $_____. The above lump-sum amount, for the physical relocation work, has been agreed upon between the STATE and the OWNER and includes any credits due the STATE for betterment, depreciation and salvage."

NOTE: Although most positive location will be done pursuant to the Positive Location Agreement, if Pac Bell/SBC will be conducting their own potholing, the following clause should be added.

"In addition to the amount specified above, the STATE will pay the OWNER an additional amount of $_____ for each pothole location requested by the STATE in order to determine the location of the OWNER's facilities. It is estimated that _____ pothole locations will be required. The final cost for potholing will be the lump-sum amount of $_____ per pothole location times the actual number of pothole locations."

NOTE: For lump-sum amounts in excess of $25,000, the following clause should be added.

© 1994-2025 California Department of Transportation. All rights reserved.

"STATE and OWNER further agree that for lump-sum payments in excess of $25,000, that STATE shall have the option of performing an informal audit of OWNER's detailed records from which the billing is compiled. The purpose of STATE's audit shall be to establish the continued acceptability of using lump-sum payments for high cost relocations and shall not in any way affect the amount or acceptability of the lump-sum amount herein agreed to. OWNER shall keep supporting detailed records available for STATE review for a period of one year following OWNER's submittal of final bill."

NOTE: Lump-sum Utility Agreements should be used for all utility involvements where the STATE's cost is estimated to be $100,000 or less and the conditions of Section 13.05.04.00 can be met.

IV-9a. Lump-Sum/Flat-Sum AT&T Billing Utility Agreements:

"Upon completion of the Preliminary Engineering, and within 45 days after receipt of OWNER's bill, signed by a responsible official of OWNER's organization, and prepared on OWNER's letterhead, STATE will pay OWNER the lump-sum amount of $_____. The above lump-sum amount, for the preliminary engineering design work, has been agreed upon between the STATE and the OWNER."

IV-10. State's Contractor Performs Portion of Work-Owner Liability:

NOTES:

1. Insert the following Clause after Clause IV-1 or IV-2, unless the Owner is liable. As soon as the Utility Agreement is executed, a memorandum shall be sent to Accounting requesting the OWNER be billed.
2. Use only this Clause if a Phase 4 Utility Agreement where the Owner is liable for any portion of work.

"The OWNER shall pay its share of the actual cost of said work included in the STATE's highway construction contract within 45 days after receipt of STATE's bill, compiled on the basis of the actual bid price of said contract. The estimated cost to OWNER for the work being performed by the STATE's highway contractor is $_____."

"In the event actual final relocation costs as established herein are less than the sum of money advanced by OWNER to STATE, STATE hereby agrees to refund to OWNER the difference between said actual cost and the sum of money so advanced. In the event that the actual cost of

© 1994-2025 California Department of Transportation. All rights reserved.

relocation exceeds the amount of money advanced to STATE, in accordance with the provisions of this Agreement, OWNER hereby agrees to reimburse STATE said deficient costs upon receipt of an itemized bill as set forth herein."

13.07.03.05 Section V. General Conditions:

V-1. State Liable for Review and Design Costs, Project Cancellation Procedures and Utility Agreement Subject to State Funding Clauses – FOR ALL OWNERS:

"All costs accrued by OWNER as a result of STATE's request of ___(date)____ to review, study and/or prepare relocation plans and estimates for the project associated with this Agreement may be billed pursuant to the terms and conditions of this Agreement."

"If STATE's project which precipitated this Agreement is canceled or modified so as to eliminate the necessity of work by OWNER, STATE will notify OWNER in writing and STATE reserves the right to terminate this Agreement by Amendment. The Amendment shall provide mutually acceptable terms and conditions for terminating the Agreement."

"All obligations of STATE and/or LPA under the terms of this Agreement are subject to the acceptance of the Agreement by LPA Board of Directors or the Delegated Authority (as applicable), the passage of the annual Budget Act by the State Legislature, and the allocation of those funds by the California Transportation Commission."

V-2. Notice of Completion – FOR ALL OWNERS: (unless State or Local Agency performs the work)

"OWNER shall submit a Notice of Completion to the STATE within 30 days of the completion of the work described herein."

V-3. Owner to Acquire New Rights of Way with STATE Liable for Costs:

"Total consideration for rights of way to be acquired by OWNER for this relocation shall not exceed $_____(e.g., $2,500) unless prior approval is given by the STATE. Said property shall be appraised and acquired in accordance with lawful acquisition procedures."

NOTE: A reasonable easement cost limitation must be stated to preclude excessive acquisition cost.

© 1994-2025 California Department of Transportation. All rights reserved.

V-4. State to Provide New Rights of Way Over State Lands:

"Such Director's Easement Deeds as deemed necessary by the STATE will be delivered to OWNER, conveying new rights of way for portions of the facilities relocated under this Agreement, over available STATE owned property outside the limits of the highway right of way."

NOTE: New rights of way shall mean a right of way described in the same language as found in the OWNER's document by which it is acquired, or held, in its original right of way. Use this clause for excess land parcels.

V-5a. State to Provide New Rights of Way Over Private Lands 100% State Liability:

"STATE will acquire new rights of way at 100% State cost, in the name of either the STATE or OWNER through negotiation or condemnation and when acquired in STATE's name, shall convey same to OWNER by Director's Easement Deed."

V-5b. State to Provide New Rights of Way Over Private Lands 100% Owner Liability:

"STATE will acquire new rights of way in the name of either the STATE or OWNER through negotiation or condemnation and when acquired in STATE's name, shall convey same to OWNER by Director's Easement Deed. OWNER shall reimburse the STATE all costs for the easement."

NOTE: In those cases where the OWNER requests acquisition be made in their name, it will be permissible to negotiate or condemn in their name, providing the OWNER has the power to condemn and the State has OWNER's consent for condemnation on OWNER's behalf.

V-6. State to Issue a JUA or CCUA:

"Where OWNER has prior rights in areas which will be within the highway right of way and where OWNER's facilities will remain on or be relocated on STATE highway right of way, a Joint Use Agreement or Consent to Common Use Agreement shall be executed by the parties."

© 1994-2025 California Department of Transportation. All rights reserved.

V-7. Master Contract Specifies Equal Replacement Rights:

"Upon completion of the work to be done by STATE in accordance with the above-mentioned plans and specifications, the new facilities shall become the property of OWNER, and OWNER shall have the same rights in the new location that it had in the old location."

V-8a. Facilities Replaced per Liability Determination Under Water Code Section 7034:

"Inasmuch as Water Code Section 7034 requires STATE to be responsible for the structural maintenance of the conduit portion of OWNER's facilities which transports water under the highway at Engineer's Station _____, STATE will repair or replace the conduit portion of OWNER's facilities which lies within the STATE highway right of way when such becomes necessary. In no event shall STATE be liable for any betterments, changes or alterations in said facility made by or at the request of the OWNER for its benefit."

V-8b. Facilities Replaced per Liability Determination Under Water Code Section 7035:

"Inasmuch as Water Code Section 7035 requires STATE to be responsible for the structural maintenance of the conduit portion of OWNER's facilities which transports water under the highway at Engineer's Station _____, STATE will repair or replace the conduit portion of OWNER's facilities which lies within the STATE highway right of way when such becomes necessary unless such repair or replacement is made necessary by negligent or wrongful acts of the OWNER, its agents, contractors or employees; provided that the OWNER shall keep the conduit clean and free from obstruction, debris, and other substances so as to ensure the free passage of water in said conduit. In no event shall STATE be liable for any betterments, changes or alterations in said facility made by or at the request of the OWNER for its benefit."

NOTES:

1. Use of Clause V-10 is dependent upon the delegated approval of the Water Code Checklist (Form RW 13-19).
2. See NOTE under Clause I-2.

© 1994-2025 California Department of Transportation. All rights reserved.

V-9a. Acknowledgments:

"If, in connection with OWNER's performance of the Work hereunder, STATE provides to OWNER any materials that are subject to the Buy America Rule, STATE acknowledges and agrees that STATE shall be solely responsible for satisfying any and all requirements relative to the Buy America Rule concerning the materials thus provided (including, but not limited to, ensuring and certifying that said materials comply with the requirements of the Buy America Rule)."

NOTE: Clause is used when the STATE is supplying any material that falls within the Buy America Rule to the OWNER.

V-9b. Acknowledgments: (Mandatory Language FOR ALL OWNERS)

"STATE further acknowledges that OWNER, in complying with the Buy America Rule, is expressly relying upon the instructions and guidance (collectively, "Guidance") issued by Caltrans and its representatives concerning the Buy America Rule requirements for utility relocations within the State of California. Notwithstanding any provision herein to the contrary, OWNER shall not be deemed in breach of this Agreement for any violations of the Buy America Rule if OWNER's actions are in compliance with the Guidance."

V-10. Greenhouse Gases – For Owner's Contractor

"AB 262 – Buy Clean California Act of 2017 requires as of January 1, 2019 that the Department of General Services (DGS) is to publish in the State Contracting Manual (SCM) a maximum acceptable level of global warming potential (GWP) for each category of required materials. The categories of eligible materials are, carbon steel rebar, flat glass, mineral wool board insulation and structural steel. A statement of Environmental Product Declaration (EDP) is required prior to beginning of relocation work, to the extent required by law."

NOTE: Insert/use this clause when the Owner cannot complete the work with its own forces and must bid out the worker to a contractor.

© 1994-2025 California Department of Transportation. All rights reserved.

13.07.03.06 Section VI. Oil Company Clauses (Only):

VI-1. Replacement Right of Way:

"STATE will be responsible for granting OWNER, at STATE's sole cost and expense, all appropriate and necessary replacement easements and rights- of-way for the relocated Pipeline Facilities, equivalent to and with the same priority and permanence as OWNER's existing rights-of-way under the same terms and conditions as provided under easement and deed agreements. The replacement right-of way shall include any area where the new Pipeline Facilities are relocated outside the present easements and shall enable OWNER to timely complete the work contemplated herein and in Exhibit A hereto. OWNER shall not be required to proceed with any of the work described in Section 1 until acquisition and assignment of STATE's Orders of Possession for the entire replacement easement and rights-of-way required for relocation of the Pipeline Facilities has been provided to OWNER by STATE. STATE's obligations with respect to the replacement rights-of-way shall not be complete until, final recordable easement rights have been obtained by STATE and assigned in writing to OWNER."

VI-2. Indemnity:

"STATE shall to the extent allowed by State law, indemnify and hold harmless OWNER from any and all claims, damages or liability arising from or in connection with OWNER's performance under this Agreement. Claims, damages or liability for bodily injury and/or death and damage to property assessed against the STATE will be determined in accordance with the provisions of the California Tort Claims Act."

VI-3. Choice of Law:

"The validity, interpretation and performance of this Agreement shall be governed by and construed in accordance with laws of the State of California without regard to its choice of law rules."

© 1994-2025 California Department of Transportation. All rights reserved.

VI-4. Force Majeure:

"In the event that the performance required under the terms of this Agreement by OWNER or STATE is delayed or prevented by fire, explosion, act of God, breakdown of machinery or equipment, riots, strikes, labor disputes, any order, regulation, request or recommendation by a governmental authority, or similar cause which is reasonably outside the control of the parties, such required performance shall be excused for that period of time the force majeure prevents performance. In the event the delay due to force majeure occurs or is anticipated, the affected party shall promptly notify the other party of such delay and the cause and estimated duration of such delay. The affected party shall exercise due diligence to shorten, avoid and mitigate the effects of the delay and shall keep the other party advised as to the affected party's efforts and its estimate of the continuance of the delay. In no event shall STATE be entitled to damages of any kind, including without limitation direct, consequential or otherwise, whether based in contract tort (including negligence and strict liability) or otherwise or to any adjustment to the compensation payable hereunder because of any delay due to force majeure."

VI-5. Entire Agreement:

"This Agreement and all exhibits and attachments hereto constitute the entire Agreement between the parties and supersedes all previous oral and written communications, including specifically, and without limitation, the provisions of any bid, quote, proposal or request therefore unless and only to the extent such provision is expressly contained herein. No amendment shall be effective unless in writing, specifically referencing this Agreement, and signed by all parties."

VI-6. Special depreciation clauses are used in utility agreements with oil companies:

VI-6a. To be used for a transverse relocation:

"No depreciation is required for a transverse relocation."

© 1994-2025 California Department of Transportation. All rights reserved.

VI-6b. To be used when there is a longitudinal relocation:

"State shall be entitled to a depreciation credit, based on the straight-line method and a total estimated service life of 40 years for the replaced facilities, such credit not to exceed 70% of the original installed cost of such facilities, unless owner shall claim no credit is due because the remaining service life of the replaced facility is as great as the anticipated service life of the replacement facility, and in support of such claim supplies:

(a) proof of the remaining service life of the replaced facility, the sufficiency of which to substantiate such claim shall be determined in the sole discretion of State, and

(b) a written certification by owner's controller or chief accounting officer that it is not Owner's normal accounting procedure to capitalize and depreciate portions of its facilities which are relocated, and that no part of the replacement facility will be capitalized and depreciated."

NOTE: Invoices for Utility Agreements covering longitudinal relocations that do not reflect a credit for depreciation must be accompanied by written certification of the oil company's controller or chief accounting officer and by a statement signed by a State Engineer, that in the opinion of the Engineer:

- The remaining service life of the replaced facility is as great as the service life of the replacement facility, and

- The evidence submitted by the oil company (which must be described in the statement) fully supports the oil company's claim to that effect.

NOTE: These clauses are to be used when executing Utility Agreements with oil companies.

13.07.03.07 Section VII. Buy America Clauses

In October of 2023, FHWA finalized the Buy America guidance with new regulations. The new regulations consist of 2 CFR 184 Buy America Preferences for Infrastructure Projects, 2 CFR 200.322 Domestic Preferences for Procurements, and Memo M-24, "Implementation Guidance on Application of Buy America Preference in Federal Financial Assistance Programs for Infrastructure," from the Office of Management and Budget, Executive Office of the President, dated October 25, 2023. Additional requirements are implemented in the Build America, Buy America (BABA Act of 2025). In an effort to explain the complexities of the old and the new regulations and guidance, a new section for Buy America clauses has been created. The new clauses are in sections VII-1 and VII-2 below and are separated by either highway, freeway, or expressway. In addition, because it is Caltrans policy to remain eligible for Federal Aid on all projects, there is a further separation based on the National Environmental Protection Act (NEPA) document.

The clauses will be determined based on what date the Relocation Claim Letter was sent to the Owner. The determination should be based on whether the project is on a highway or freeway/expressway. Sections VII-1 and VII-2 are separated into multiple clauses based on time periods. The first period is prior to July 1, 2025, and the second period is on/after July 1, 2025.

APPLIES TO HIGHWAY PROJECTS

NOTE: If the project is on a Highway, one clause from section VII-1a. through VII-1c. must be selected and used in the Utility Agreement.

The date the Relocation Claim Letter is sent to the Owner determines the Buy America clauses to use.

VII-1a. Federal Aid Clause – No Master Contract, No NEPA Document, and No Federal Funding on a Project:

> "It is understood that said highway is a Federal aid highway and accordingly, 23 CFR, Chapter 1, Part 645 is hereby incorporated into this Agreement."
>
> **NOTE:** Applies to projects with no Buy America compliance required.

© 1994-2025 California Department of Transportation. All rights reserved.

VII-1b. Federal Aid Clause – No Master Contract, No NEPA Document, Federal Funding on Project, and Relocation Claim Letter Date Prior to July 1, 2025:

"It is understood that said highway is a Federal aid highway and accordingly, 23 CFR, Chapter 1, Part 645 is hereby incorporated into this Agreement."

"In addition, the provisions of 23 CFR 635.410, Buy America, are also incorporated into this agreement. The Buy America requirements are further specified in Moving Ahead for Progress in the 21st Century (MAP-21), section 1518; 23 CFR 635.410 requires that all manufacturing processes have occurred in the United States for steel and iron products (including the application of coatings) installed on a project receiving funding from the FHWA."

NOTE: This applies to materials that were originally added to be Buy America compliant according to the following timeline:

- Iron and Steel: Currently, all Iron and Steel need to be Buy America compliant.

*For additional details, see section 13.15, Buy America.

VII-1c. Federal Aid Clause – No Master Contract with NEPA Document, and Federal Funding on Project and Relocation Claim Letter Date on/After July 1, 2025:

"It is understood that said highway is a Federal aid highway and accordingly, 23 CFR, Chapter 1, Part 645 is hereby incorporated into this Agreement."

"In addition, the provisions and guidance of 23 CFR 635.410, Buy America, 2 CFR 184 Buy America Preferences for Infrastructure Projects,2 CFR 200.322, Domestic Preferences for Procurements, and Memo M-24-02, "Implementation Guidance on Application of Buy America Preference in Federal Financial Assistance Programs for Infrastructure", from the Office of Management and Budget, Executive Office of the President, dated October 25, 2023, are also incorporated into this agreement."

NOTE: This applies to materials that were originally added to be Buy America compliant according to the following timeline:

- Iron and Steel: Currently, all Iron and Steel need to be Buy America compliant.

© 1994-2025 California Department of Transportation. All rights reserved.

- Construction Materials: Relocation Claim Letter between July 1, 2025, and September 30, 2025.
- Manufactured Products: Relocation Claim Letter on or after October 1, 2025.

*For additional details, see section 13.15, Buy America.

APPLIES TO FREEWAY/EXPRESSWAY PROJECTS

NOTE: If the project is on a Freeway/Expressway, one clause from section VII-2a through VII-2d must be selected and used in the Utility Agreement.

The date the Relocation Claim Letter is sent to the Owner determines the Buy America clauses to use.

VII-2a. Federal Aid Clause – No Master Contract, No NEPA Document, and No Federal Funding on a Project:

"It is understood that said highway is a Federal aid highway and accordingly, 23 CFR, Chapter 1, Part 645 is hereby incorporated into this Agreement."

NOTE: Applies to projects with no Buy America compliance required.

VII-2b. Federal Aid Clause – Master Contract, No NEPA Document, and No Federal Funding on a Project:

"It is understood that said highway is a Federal aid highway and accordingly, 23 CFR, Chapter 1, Part 645 is hereby incorporated into this Agreement by reference; provided, however, that the provisions of any agreements entered into between the STATE and the OWNER pursuant to State law for apportioning the obligations and costs to be borne by each, or the use of accounting procedures prescribed by the applicable Federal or State regulatory body and approved by the FHWA, shall govern in lieu of the requirements of said 23 CFR 645."

NOTE: The FHWA allows liability to be determined in accordance with the terms of Master Contracts in lieu of otherwise applicable SHC sections.

© 1994-2025 California Department of Transportation. All rights reserved.

VII-2c. Federal Aid Clause – Master Contract, NEPA Document, Federal Funding on Project, and Relocation Claim Letter Date is Prior to July 1, 2025:

"It is understood that said highway is a Federal aid highway and accordingly, 23 CFR, Chapter 1, Part 645 is hereby incorporated into this Agreement by reference; provided, however, that the provisions of any agreements entered into between the STATE and the OWNER pursuant to State law for apportioning the obligations and costs to be borne by each, or the use of accounting procedures prescribed by the applicable Federal or State regulatory body and approved by the FHWA, shall govern in lieu of the requirements of said 23 CFR 645."

"In addition, the provisions of 23 CFR 635.410, Buy America, are also incorporated into this agreement. The Buy America requirements are further specified in Moving Ahead for Progress in the 21st Century (MAP-21), section 1518; 23 CFR 635.410 requires that all manufacturing processes have occurred in the United States for steel and iron products (including the application of coatings) installed on a project receiving funding from the FHWA."

NOTE: This applies to materials that were originally added to be Buy America compliant according to the following timeline:

- Iron and Steel: Currently, all Iron and Steel need to be Buy America compliant.

*For additional details, see section 13.15, Buy America.

VII-2d. Federal Aid Clause – Master Contract, NEPA Document, Federal Funding on Project, and Relocation Claim Letter Date is on/After July 1, 2025:

"It is understood that said highway is a Federal aid highway and accordingly, 23 CFR, Chapter 1, Part 645 is hereby incorporated into this Agreement by reference; provided, however, that the provisions of any agreements entered into between the STATE and the OWNER pursuant to State law for apportioning the obligations and costs to be borne by each, or the use of accounting procedures prescribed by the applicable Federal or State regulatory body and approved by the FHWA, shall govern in lieu of the requirements of said 23 CFR 645."

© 1994-2025 California Department of Transportation. All rights reserved.

"In addition, the provisions and guidance of 23 CFR 635.410, Buy America, 2 CFR 184 Buy America Preferences for Infrastructure Projects and 2 CFR 200.322, Domestic Preferences for Procurements and Memo M-24-02, Implementation Guidance on Application of Buy America Preference in Federal Financial Assistance Programs for Infrastructure, from the Office of Management and Budget, Executive Office of the President, dated October 25, 2023, are also incorporated into this agreement."

NOTE: This applies to materials that were originally added to be Buy America compliant according to the following timeline:

- Iron and Steel: Currently, all Iron and Steel need to be Buy America compliant.
- Construction Materials: Relocation Claim Letter between July 1, 2025, and September 30, 2025.
- Manufactured Products: Relocation Claim Letter on or after October 1, 2025.

*For additional details, see section 13.15, Buy America.

VII-3. CERTIFICATION OF BUY AMERICA MATERIALS
Utility owners are required to certify their domestically produced Buy America materials and products.

VII-3a. Utility Owner Self-Certification Method:

"OWNER understands and acknowledges that this project is subject to the requirements of the Buy America law (23 U.S.C., Section 313) and applicable regulations, including 23 CFR 635.410 and FHWA guidance. OWNER hereby certifies that in the performance of this Agreement, for products where Buy America requirements apply, it shall use only such products for which it has received a certification from its supplier, or provider of construction services that procures the product certifying Buy America compliance. This does not include products for which waivers have been granted under 23 CFR 635.410, 2 CFR 184, or other applicable provisions."

NOTES:

1. Utility Owner will source materials that comply with Buy America requirements, including but not limited to: Iron, Steel, Manufactured products, and Construction Materials.
2. Utility Owner will certify compliance via a contract provision in the Utility Agreement above.

© 1994-2025 California Department of Transportation. All rights reserved.

3. Utility Owner will not be required to provide copies of supplier certifications or other utility owner-signed certifications as part of this Agreement or with the final invoice.
4. Supplier Certification will be maintained in project files and made available to CT/FHWA upon request.
5. More detail in the FHWA guidance.

VII-3b. Vendor/Manufacturer Certification Method:

"OWNER understands and acknowledges that this project is subject to the requirements of the Buy America law (23 U.S.C., Section 313) and applicable regulations, including 23 CFR 635.410, 2 CFR 184 and 2 CFR 200.322 and FHWA guidance, and will demonstrate Buy America compliance by collecting written certification(s) from the vendor(s) or by collecting written certification(s) from the manufacturer(s) i.e. mill test report (MTR)or letter from Manufacturer on company letter head with an authorized representative signature stating the following, "All manufacturing processes for these materials, including the application of coatings, have occurred in the United States."

"All documents obtained to demonstrate Buy America compliance will be held by the OWNER for a period of three (3) years from the date of final payment to the OWNER and will be made available to STATE or FHWA upon request."

"One set of copies of all documents obtained to demonstrate Buy America compliance will be attached to, and submitted with, the final invoice."

"This does not include products for which waivers have been granted under 23 CFR 635.410, 2 CFR 184, or other applicable provisions.

NOTE: Supplier Certification will be maintained in Utility Owner and District project files and made available to HQ/FHWA upon request.

VII-4. Utility Agreement Not Subject to Buy America:

"STATE represents and warrants that this Utility Agreement is not subject to 23 CFR 635.410."

© 1994-2025 California Department of Transportation. All rights reserved.

VII-5. De Minimis for All Non-Compliant Non-Domestic Buy America Compliant Materials:

"It is understood that said highway is a Federal aid highway and, accordingly, 23 CFR 635.410(b)(4) and 23 U.S.C. 313, 2 CFR 184 Buy America Preferences for Infrastructure Projects and 2 CFR 200.322 Domestic Preferences for Procurements, and Memo M-24, from the Office of Management and Budget, Executive Office of the President, dated October 25, 2023, as applicable, is hereby incorporated into this Agreement by reference. However, OWNER represents and warrants that the value of the non-compliant products is no more than the lesser of $1,000,000 or 5% of total applicable costs for the project."

NOTES:

1. The De Minimis equation is calculated according to the following formula:

$$\frac{\text{Combined cost of only those materials that are subject to Buy America and are non-compliant (only the cost of non-compliant materials)}}{\text{Total utility material cost (All applicable items, construction materials, steel, iron, manufactured products, and construction materials)}}$$

2. Applies only to nondomestic iron and steel, manufactured products, and Construction Materials used in this relocation

NOTE: The total cost of all foreign source items used in the contract, as delivered to the project site, is no more than the lesser of $1,000,000 or five percent of the total applicable costs for the project.

VII-6. Acknowledgments:

"If, in connection with OWNER's performance of the Work hereunder, STATE provides to OWNER any materials that are subject to the Buy America Rule, STATE acknowledges and agrees that STATE shall be solely responsible for satisfying any and all requirements relative to the Buy America Rule concerning the materials thus provided (including, but not limited to, ensuring and certifying that said materials comply with the requirements of the Buy America Rule)."

NOTE: Clause is used when the STATE is supplying any material that falls within the Buy America Rule to the OWNER.

© 1994-2025 California Department of Transportation. All rights reserved.

13.07.04.00 Processing

Beginning in December 2021, per Director's Policy for Electronic Signatures (DP-038) (internal Caltrans link), Caltrans has implemented eSignatures for documents. Utility Agreements should follow this signature process.

All Utility Agreements must be submitted for approval, along with the Report of Investigation, to the authorized Region/District representative. Each Region/District may have its own internal procedures for processing the Utility Agreement for approval. The following are the minimum requirements:

- Prepare a final Utility Agreement for signature and download to your Acrobat Sign account.

- Process the Utility Agreement through P&M for EA setup and funding verification. P&M shall electronically sign the Utility Agreement. All Utility Agreements where work is done by the Utility Owner/Owner's contractor will be encumbered with RW ("Phase 9") funds.

- Construction ("Phase 4") funds will be needed for any utility relocation work done by the State's contractor. Construction funds are normally not encumbered by RW; therefore, P&M must coordinate with District Construction before encumbrance of "Phase 4" funds can be accomplished.

- The funding block on the last page of the Utility Agreement must reflect all project phases funding the specific Utility Agreement.

- P&M will electronically sign the Utility Agreement to show funds have been certified (encumbered).

- The Utility Coordinator will notify Utility Owner Representative that their Utility Agreement is ready for eSignature, along with the Notice and a Permit as required. See Exhibit 13-EX-13 (internal Caltrans link) for elements of the transmittal letter. The letter should instruct the Owner to make a copy of an executed Utility Agreement for the interim for their files.

NOTES:

1. There is no State requirement that the Owner execute the Utility Agreements first. With some Owners, it may be more expedient for the State to execute first and then forward to the Owner for execution.

© 1994-2025 California Department of Transportation. All rights reserved.

2. One of the restrictions of Legislative Budgeting is the State can only pay bills the owner presents within four fiscal years following the fiscal year in which funds were encumbered. If payment is necessary after the five fiscal years, the Utility Agreement may need to be encumbered again, or an Amended Utility Agreement may be needed. P&M receives an annual report of Utility Agreements about to expire and will notify Utilities.
3. Utility Agreements encumbered during the fiscal year should be fully executed prior to the end of the same fiscal year, or shortly thereafter. HQ Accounting has been instructed to disencumber any encumbered Utility Agreements not fully executed by the end of the fiscal year. If the Utility Agreement remains partially executed/unexecuted, the Utility Coordinator shall coordinate with P&M and/or Accounting to determine how to proceed.

As soon as the Owner returns the Utility Agreement:

- Check electronically signed Utility Agreement. The person or official signing the agreement should have the proper authority delegated to him/her by the Utility Company/Owner to sign the agreement.

- If the Utility Agreement is not dated, date it to match the Owner's transmittal date.

- Obtain State execution of the Utility Agreement as required. If needed, make one machine copy of the Utility Agreement, for filing purposes.

- Distribute the fully executed original Utility Agreement as follows:

    - Send an electronic copy to the Utility Owner with instructions to replace and destroy the interim copy in their files. The transmittal letter must include the elements shown in Exhibit 13-EX-23 (internal Caltrans link).

    - Retain electronic document in the Region/District's file. The fully executed, electronic Utility Agreement shall never be removed from the file, unless required in response to a written request from HQ Legal or in compliance with a court order.

    - Send an electronic copy to RW Accounting. One (I) is for RW Accounting's files and RW Accounting will include an electronic copy to the State Controller's Office at the time of the first payment request.

© 1994-2025 California Department of Transportation. All rights reserved.

NOTE: Utility Coordinators should familiarize themselves with Caltrans eSignature Portal (internal Caltrans link). The Portal contains training on how to Send, Sign and Track a document.

13.07.04.01 Processing a Phase 4 Utility Agreement Where the State's Contractor Will Be Handling All or a Portion of the Utility Relocation for the Owner

The primary purpose of a Phase 4 Utility Agreement is to correctly allocate the Liability for the work per relocation plans and estimate the amount of construction funds that the State will need to complete the utility relocation, including protection in place, when the State's contractor performs the work. Per Section 13.07.02.00, a Utility Agreement is needed for work completed by the State's Contractor, regardless of the extent of State liability or reimbursement.

The Utility Agreement will be prepared with specific attention to the paragraphs which show the work, part or all, the State's Contractor will perform. The "Funding Type" block (generally on the last page) will use a Phase 4 Expense Authorization under Construction Funds and show the estimated amount. P&M must coordinate with District Construction per 13.07.04.00, processing of Utility Agreements.

If the Liability is 100% State

- The Utility Agreement will be sent to the Owner for signature and then signed by authorized Region/District Representative (13.07.04.00) and retained in the Utility File. The Utility Coordinator will show the estimated amount on the "Funding Type" block and No Routing to Headquarters "Accounts Receivable" is required. The relocation is processed as a bid item in the contract. This agreement is primarily prepared for the purpose of Paragraph I to have the Owner agree to the relocation plans being used, and Paragraph III-3 to specify that the Resident Engineer has the final disposition.

© 1994-2025 California Department of Transportation. All rights reserved.

If the Liability is Prorated

- The Department's estimated portion of the liability will be shown on the "Funding Type" block of the Utility Agreement. A fully executed electronic copy of the Utility Agreement will be emailed to Headquarters "Accounts Receivable" (see 13-EX-29 [internal Caltrans link]) where an invoice will be prepared and sent to the Owner. Headquarters Accounting will place the Owner's funds in the Construction Contract and the Resident Engineer will handle them in the same manner as other construction funds. The State's portion of liability for the relocation is processed as a bid item in the contract. An actual cost Utility Agreement is preferred when the relocation costs are significant. Headquarters Accounting will reconcile the final cost by creating a refund of excess amounts paid by the Owner or a billing for underestimated amounts.

If the Liability is 100% Owner

- A fully executed electronic copy of the Utility Agreement will be emailed to Headquarters "Accounts Receivable" (see 13-EX-29 [internal Caltrans link]) where an invoice will be prepared and sent to the Owner for their portion. The remaining procedure is the same as shown in "Prorated" above.

In all circumstances, the Utility Coordinator should prepare an ROI package (13.05.01.00) and verify that the work is listed as a bid item on the utility portion of the Right of Way Certification. A fully executed electronic copy of the Utility Agreement must be sent to the Utility Owner in all circumstances.

On a Minor B Project where the State's Contractor will relocate the Owner's facilities (i.e., adjustment of manhole or value covers to grade), use a Phase 4 Expense Authorization on the Utility Agreement and process as normal.

© 1994-2025 California Department of Transportation. All rights reserved.

13.07.04.02 Processing a Phase 4 Construction Funds and a Phase 9 Capital Right of Way Funds as One Utility Agreement

Section 13.07.02.00 indicates that the Utility Coordinator should process a single agreement to the extent possible for each involvement. Although you can process a single utility agreement for Phase 4 Construction Funds and Phase 9 Capital Right of Way together on one agreement form, there are situations where this may not be practical. Although this issue does not arise frequently, the District Utility Coordinator should evaluate each situation to determine if a single agreement versus two separate agreements for a single involvement is the best choice. In evaluating each situation, the following are some of the factors to be considered:

- The funding for a Phase 4 Construction and a Phase 9 Capital Right of Way Utility Agreement is routed to different Accounting Departments.

- To prevent confusion by third parties, such as Utility Owners, Headquarters Accounting, and Resident Engineers as to Right of Way's internal funding process.

- Whether there is an increased overall efficiency of a single agreement as opposed to two separate agreements.

If the decision is to issue two separate utility agreements, each agreement should have a different Utility File number.

For Minor B Projects:

- Use Phase 4.

13.07.05.00 Amendments to Utility Agreements

Whenever portions, but not all, of a Utility Agreement must be changed, the change shall be accomplished through an "Amendment to Utility Agreement" following the format shown in Exhibit 13-EX-24 (internal Caltrans link).

In most cases, Amended Utility Agreements are processed the same as Utility Agreements. However, Amendments that do not have a change in the dollar amount do not need to go to RW Accounting.

© 1994-2025 California Department of Transportation. All rights reserved.

13.07.05.01 Amendments for Payments in Excess of Original Utility Agreement

Normal State Controller procedures do not allow payments in excess of contractual amounts. The State Controller has granted an exception for Utility Agreements whereby they will process **final payment** requests for reimbursement of relocation costs not exceeding 125% of the estimated amount as stated in the original Utility Agreement.

The basis for this exception is the State has obligated itself to participate in the actual and necessary cost of State-ordered relocation of the Utility Owner's facilities at an estimated cost to the State. Since the cost amount shown in the Utility Agreement is an estimate and not a fixed contractual amount, the State Controller allows for reasonable adjustments to the estimate.

Progress bills in excess of 100% of the original Utility Agreement estimate must be covered by an Amended Utility Agreement before payment is requested. If a progress payment utilizes all of the funds in a Utility Agreement, an Amended Utility Agreement must be processed to add funds for remaining invoices that may be received. In addition, before an Amended Utility Agreement or a bill exceeding 100% of the estimated amount of the original Utility Agreement can be processed, the Utility Coordinator must receive **and approve** written documentation of the reasons and identification of the basis for the increase. (See Section 13.07.03.04, Clause IV-3.)

Amended Utility Agreements are not required whenever the total billing is less than the original Utility Agreement amount except as described in Section 13.07.05.02. An Amended Utility Agreement must not exceed the amount of the final invoice.

NOTE: This section does not apply to lump-sum/flat-sum Utility Agreements. 125% equates to 25% of encumbered amount, i.e., $100,000 x 1.25 = $125,000.

13.07.05.02 Amendments for Change in Scope of Work

Any significant change to the originally planned and agreed-upon work must be covered by an Amended Utility Agreement, a Revised Notice to Owner (RW 13-04R), and a Supplemental FHWA Specific Authorization before work on the proposed changes commences. (See Sections 13.06.03.05 and 13.14.05.00.)

© 1994-2025 California Department of Transportation. All rights reserved.

Preparing an Amended Utility Agreement and Revised Notice for a change in scope is necessary to:

- Comply with Federal requirements for preapproval of relocation plans.
- Provide for any needed change in the proration of liability.
- Provide for necessary modification to the previously ordered plan of relocation.

13.07.06.00 Special Utility Agreements

Occasionally, a Special Utility Agreement is needed for a variety of reasons, e.g., liability disputes, engineering or construction reimbursement for a project that has been canceled, or where a Utility Agreement does not exist. The "WHEREAS AND NOW THEREFORE" type of Utility Agreement is usually adaptable and is acceptable. A sample Special Utility Agreement is shown in Exhibit 13-EX-25 (internal Caltrans link).

13.07.06.01 Utility Agreement to Cover Advance Engineering Effort

Occasionally, an Owner will expend considerable engineering effort on a planned relocation long before the usual Utility Agreement is executed. Upon request, a Special Utility Agreement may be completed and used as a basis for reimbursing the Owner's costs. The usual ROI is required to support the State's liability to pay. Upon issuance of the Notice for actual physical relocation, the Special Utility Agreement should be amended to cover the remaining items pertinent to relocation work.

13.07.06.02 Utility Agreements with Oil Companies

The relocation of oil company facilities to accommodate construction has historically been done under the terms of a modified Utility Agreement even though oil companies are privately owned, are not a public utility, and are not under the PUC's purview. Relocation is completed in the normal manner: preliminary letter, Report of Investigation, Notice, Utility Agreement and Joint Use Agreement, as required.

Oil Company clauses are mandatory language to be used when a utility agreement is necessary with an oil company as referred to in Section 13.07.03.06 Oil Company Clauses.

© 1994-2025 California Department of Transportation. All rights reserved.

13.08.00.00 – CERTIFICATION PHASE

13.08.01.00 General

Activities performed in this phase of the project generally consist of:

- Reviewing the PS&E.
- Ensuring the Owner is billed for work the State's contractor performs.
- Preparing the RW Utilities Certification.

13.08.02.00 PS&E Review

The Project Engineer's PS&E is to be completed prior to RW Certification. The Utility Coordinator is responsible for reviewing the PS&E to verify:

- Plans show all underground utility facilities remaining within the right of way limits of the project in accordance with Government Code Section 4215.
- Special provisions have been included concerning coordination requirements for all utility work that will be done in coordination with the State's contractor.
- Construction estimates (Basic Engineering Estimating System – BEES) include "Phase 4" utility relocation costs that will be used for billing purposes when the State's contractor performs work for the Owner and the Owner is responsible for the expense.

13.08.02.01 Work Performed by State Contractor

When the State's contractor performs the work for the Owner and the Owner is liable for all or a portion of the costs, the Utility Coordinator obtains funds from the Owner prior to award of the State's construction contract, using the following procedure:

- Obtain an estimate for the work from the PS&E or request an estimate from the Utility Owner after consulting with the Project Engineer.
- Prepare a Phase 4 Utility Agreement. (Refer to Sections 13.07.04.01 and 13.07.04.02.)

© 1994-2025 California Department of Transportation. All rights reserved.

13.08.03.00 Right of Way Utilities Certification

The RW Utilities Certification is a written statement to P&M summarizing the status of all utility facilities located within the limits of the proposed construction project. The certification identifies all utility facilities found to be within the project area and documents if they are impacted and, if so, whether they have been or will be relocated, removed, or protected as required for the construction, operation, and maintenance of the proposed project. RW Utilities shall certify all projects where a PS&E is prepared, or federal funds are involved, prior to the district advertising and awarding a construction contract.

In accordance with 23 CFR 635.309(b), utility work should be accomplished during construction only when it is not feasible or practical to complete the work prior to construction due to economic or special coordination features. Utility work that cannot be completed in advance of construction contract award shall have special provisions in the standard specifications portion of the PS&E identifying the utility work and details of the coordination involved. All facilities not cleared from the project limits before construction commences shall be shown in the project plans to provide the necessary coordination. (Refer to Section 13.09.01.00.)

In order for the project to be certified, all Utility Agreements must be signed and executed by the appropriate Utility Owners, and Notice to Owners must also be issued. When the Utility Coordinator satisfies the utility requirements of the RW Certification, e.g., "Status of Required Utility Relocations," the project can be certified from a RW Utilities standpoint. (Refer to Section 14.03.07.00.) On the RW Certification (Exhibit 13-EX-26) (internal Caltrans link) under the column "Agreement Date," a date must be stated for all utility relocations in order to meet FHWA requirements. When the State is paying for a portion of the utility relocation, enter the date when the Utility Agreement is fully executed. In all other circumstances, i.e., when the utility relocation is at 100% cost of the Utility Owner and an Encroachment Permit will be issued, enter the date of the Notice to Owner, which constitutes a written agreement between the Utility Company and the Department.

When the State will be performing all or a portion of the utility relocation work under the highway contract on the Owner's behalf, this work will need to be listed as a "Bid Item" on the Utilities Certification portion of the Right of Way Certification.

© 1994-2025 California Department of Transportation. All rights reserved.

The Utility Coordinator shall update and recertify any certification of a project over one year old where the project has not been listed for advertising and any certified project where there was a subsequent design change.

Refer to Manual Chapter 14, Right of Way Certification, for further discussion on certifications and Exhibit 13-EX-26 (internal Caltrans link) for the suggested format of RW Utilities Certification with instructions.

Note: An Encroachment Permit is an Agreement per 23 CFR 710.

13.08.03.01 Utility Certification for Design/Build Projects

Until project design is completed, it is impossible to determine possible impact on utility facilities. A Utility Certification must be delayed, therefore, until design is completed, but before construction commences. (Refer to Section 14.01.11.00.)

© 1994-2025 California Department of Transportation. All rights reserved.

13.09.00.00 – CONSTRUCTION PHASE

13.09.01.00 General

Utility Coordinator activities performed during the construction phase of the project generally consist of:

- Coordinating with Construction and Owner on compliance with Notice to Owner requirements.
- Handling utility relocations discovered during construction.
- Resolving utility relocation work that becomes wasted work.
- Monitoring district Construction review and documentation activities for State reimbursed utility relocation work.

By the time a project reaches the construction phase, the Utility Coordinator should already have sent copies of all Notices to Owner and approved relocation plans to Construction. Ideally, all utility relocation work will be finished before project construction commences. However, since this is not always possible, coordinated utility work may be necessary. Coordinated work must be addressed in the "Special Provisions/Obstructions" portion of State's PS&E. (Refer to Section 13.03.04.06.)

13.09.01.01 Pre-Construction Notification/Meeting

Each Owner of impacted facilities remaining within the project construction limits shall be notified in writing of the bid opening date, the contract award date, and the name and address of the selected highway contractor. Arrangements should also be made for a joint field meeting of the Owner's representatives, the project Resident Engineer, the utility inspector and the highway contractor to work out construction schedules.

13.09.01.02 Positive Location Work During Construction

Standard special provisions require the highway contractor to contact a regional notification center (Government Code Section 4216.2) before conducting any excavation on the project, as well as to exercise due diligence in working in areas of possible underground facilities. If the utility verification and positive location processes were properly completed during design, any additional positive location demands the State's contractor

© 1994-2025 California Department of Transportation. All rights reserved.

places upon the Owner should be at the contractor's sole expense. If additional positive location work was planned by the Utility Coordinator to be done during construction, this work should be included in the original Notice.

13.09.02.00 Inspection of Utility Relocation Work

The Utility Coordinator is responsible for ensuring that relocation and positive location work is inspected as required and that adequate records are maintained for State reimbursed work. The Utility Coordinator is responsible to notify district Construction of planned relocation and positive location work requiring inspection and the Resident Engineer is responsible for inspection of such work and maintaining diaries to document such work. (Refer to the Construction Manual, Section 3-518C Nonhighway Facilities.) Inspection has three major objectives:

- Ensure Owner's work complies with design, construction, and traffic requirements within, or in the vicinity of, the roadway.

- Ensure proper placement of utilities to clear project construction in accordance with the Notice to Owner, Encroachment Permit, and Utility Agreement.

- Observe and record the labor, equipment, and materials used to accomplish the work, as well as materials removed for salvage when any work is to be performed at State expense. By reviewing the inspector's diaries, the Utilities Coordinator can make a reasonable verification of the Owner's bills.

NOTE: Proper construction for utility companies regulated by the California Public Utilities Commission (CPUC) is controlled by PUC-issued General Orders. Under no circumstances is the Utility Coordinator, the Project Engineer, the Utility Engineering Workgroup (UEW), or the Resident Engineer to review the engineering adequacy of utility facilities except for those features that may adversely affect highway integrity or safety.

13.09.03.00 Discovered Work and Emergencies

Discovered work includes additional unanticipated utility facility adjustments that are required as a result of newly identified facilities, incomplete or inaccurate verification of known facilities, or the discovery of previously unidentified project conflicts. Emergencies are usually a result of storm damage.

© 1994-2025 California Department of Transportation. All rights reserved.

The Resident Engineer (RE) should immediately notify the Utility Coordinator, the district Utility Engineering Workgroup (UEW) and the Project Manager (PM) when there is a newly discovered conflict or emergency requirement. In turn, the Utility Coordinator must immediately notify the Owner of this new conflict. The RE should follow up, in writing, providing the location, type, and all known information of the discovered facility to the Utility Coordinator and UEW. If able, the RE should include a suggested plan for conflict resolution to avoid contractor delays. UEW, Utility Coordinator and Owner are responsible for determining/designing a constructible solution to the conflict. Although the RE is normally already aware of this responsibility, the Utility Coordinator should request the RE to investigate other work that the State's highway contractor can do to avoid potential contractor delays.

The Utility Coordinator must expedite liability determination and preparation of a new or revised Notice to Owner and Utility Agreement along with any new Encroachment Permit required for the new work. In addition, the Utility Coordinator must ensure that any additional or unanticipated utility work takes place within the original environmental "footprint" described in the environmental document. If environmental reevaluation in the new area is necessary, no work other than studies or positive location should proceed.

If conditions merit verbal approval, it must then be documented in the Utility File in a memo or a diary entry. The District Utility Coordinator should evaluate the following Reasons for special expedited authorization and consequences of delay:

- Name of the Owner of the facility.
- Type of facility.
- Best available cost estimate.
- Is the Owner listed on the Utility E-76?
- Identification of who will do the work. If the Owner's contractor is to do the work, indicate how the contractor was selected.

© 1994-2025 California Department of Transportation. All rights reserved.

If federal aid funding is involved on the project, FHWA Specific Authorization must be prepared prior to authorizing the work. The Owner and type of utility must already be listed on the approved E-76 or the discovered work cannot be approved for Federal-aid reimbursement. (Refer to Section 13.14.05.00.)

After the District Utility Coordinator has provided verbal approval of liability and prepared FHWA Specific Authorization (as applicable) and the Owner has agreed to the scope of and liability for the work, the Utility Coordinator should verbally authorize commencement of relocation work to minimize contractor delays. A written Notice to Owner (Form RW 13-04) or Revised Notice to Owner (Form RW 13-04R) should immediately be sent to the Owner. Formal liability approval should be completed within 30 days following issuance of verbal authorization, as well as the Utility Agreement if necessary, based on the liability determination.

13.09.03.01 Changes to Planned Relocation Work

The Utility Coordinator must issue a Revised Notice to Owner (Form RW 13-04R) under the terms of the Utility Agreement when it is discovered that a planned relocation needs to be changed. The Owner must agree to/acknowledge the change as provided for on the Revised Notice Form. Work on the change may not be started until the Revised Notice has been agreed to/acknowledged by the Owner. Changes in the scope of the work will also require an amendment to the Utility Agreement.

13.09.04.00 Wasted Work

Wasted work occurs when the Owner has relocated their facilities in accordance with a Notice to Owner and the State subsequently determines that all or a portion of the newly relocated facility must be adjusted again to avoid conflict with planned construction. Some Master Contracts address wasted work relocations and payments on freeway projects.

The procedures for handling wasted work are similar to discovered work (refer to Section 13.09.03.00) except that the State is liable for the cost of all completed relocation work deemed to be wasted as a result of a change in construction plans. The Resident Engineer must verify the wasted work resulted from plan changes rather than improper contractor work procedures.

The Revised Notice to Owner shall identify what work in the original Notice was wasted and what new work is to be done. The Revised Notice must also state that liability for wasted work is State expense. Cost of all new work is

© 1994-2025 California Department of Transportation. All rights reserved.

based on liability as set forth in the current Agreement or as determined by usual liability procedures.

13.09.04.01 Payment for Wasted Work

The Owner is responsible to submit a bill identifying the wasted work. The Utility Coordinator is responsible for verifying the Owner's bill. (Refer to Section 13.10.00.00 for processing procedures.) Verifying the cost of wasted work may require the Utility Coordinator to review the bill in greater detail as the wasted work effort must be singled out from costs of other remaining work performed. State's costs for wasted work are not Federal-aid reimbursable.

13.09.04.02 Payment for Betterment Portion of Wasted Work

Normally, the Owner is responsible for all betterment costs except where the betterment is caused by or necessitated by the project. However, when Owner initiated betterment is considered "wasted work" due to a post-relocation construction change, the State is liable to pay for that portion of completed betterment work rendered wasted by the State's action. All reinstallation of the Owner initiated betterment following the change in construction plans shall be at the Owner's expense.

© 1994-2025 California Department of Transportation. All rights reserved.

13.10.00.00 – PAYMENT PHASE

13.10.01.00 General

Activities performed during this phase generally consist of:

- Obtaining bills from Owners.
- Checking and verifying bills.
- Processing bills for payment.
- Verifying transactions entered into TRAMS.
- Billing or refunding local agencies pursuant to Cooperative Agreements.

13.10.02.00 Processing Bills from Owners

It is essential to the efficient operation of the State's transportation program that funds encumbered for Utility Agreements be paid as soon as possible. The Utility Agreement billing clause requires Owners to bill the State at least quarterly but not more than monthly, during relocation of their facilities. Immediately after completion of the Owner's work, for which reimbursement is due and a bill has not been received, the Utility Coordinator should make a written request to the Owner requesting submittal of the final bill within 90 days of the date of the letter.

The Utility Coordinator should follow up with a letter to the Owner every 60 days if the bill has not been received. The Utility Coordinator must give the Owner a 30-day notice before closing the file.

13.10.02.01 Prompt Payment of Bills

The State's Prompt Payment Act requires that bills be paid within 45 days after the date specified in the contract; and if not specified, the date the invoice is stamped received by the Department. All invoices must be date stamped. This includes the time for the invoice to be reviewed against inspector's diaries, preparation of the payment request package, transmittal to HQ Accounting, submission to State Controller's Office (SCO) and processing of the check. If invoices are not paid within the required time frame, SCO will

© 1994-2025 California Department of Transportation. All rights reserved.

pay late payment penalty funds to the Owner, which could be substantial. These penalty funds are not Federally reimbursable.

If, after a review of the invoice (using the invoice checklist), the Utility Coordinator has concerns or questions about the validity of any part of the invoice, the Utility Coordinator **must** send an official invoice dispute form back to the Owner (Form STD. 209) (internal Caltrans link) via United States Postal Service (mail). An Invoice Dispute must be sent immediately. This has the effect of "resetting" the Prompt Payment Act "clock." An example of an Invoice Dispute form and letter are available to view under the "Guidance Section." The Utility Coordinator should monitor payment of received bills using AMS Advantage to ensure the applicable payment date is met.

If an invoice is received after a project EA has been closed or all the funds on a project have been expended, a Utility Owner can submit a claim with Caltrans or an appeal with the Board of Government Appeals. This depends on the dollar amount of the claim where the claim should be submitted.

- For claims less than $12,500, submit a claim through Caltrans.
- For claims more than $12,500, submit a Government Claim through the Office of Risk Management.

13.10.02.02 Review of Owner's Bill

When the bill is received, the Utility Coordinator shall check to see if it is a partial or final bill. Since consistent format will facilitate review, the bill should be in a format similar to that used for the original estimate of cost (Exhibit 13-EX-27). The Utility Coordinator is responsible to check the bill for consistency with the Utility Agreement and the Owner's previously submitted and approved relocation plan and estimate of cost and to ensure credit for previously identified betterments has been received. The bill must be on the Owner's letterhead with the vendor's full address and contain the date of service, the invoice date, and an itemized description of the services. If the bill is not the original invoice, it must be signed by the appropriate Owner representative. All bills must be addressed to the Department of Transportation, or the Controller will not pay the bill, and must contain the Utility Agreement number. If the Owner's invoice does not contain the Utility Agreement number, the Coordinator must imprint the Utility Agreement number on the invoice or bill. When the Coordinator completes the Utility Payment Request (Form RW 13-06) (internal Caltrans link), the number(s) of the Owner's invoice(s) to be paid must be listed on the form. Coordination between Right of Way, Construction, and Accounting is essential to adequately verify the bill.

© 1994-2025 California Department of Transportation. All rights reserved.

IRS requires that all payments to vendors be recorded under the recipient's Tax Identification Number (TIN). Accounting maintains a TIN file for all Owners with whom the State normally does business. If the TIN is not on file, Accounting will advise the Utility Coordinator. The Utility Coordinator then sends the Owner Form STD. 204, Payee Data Record (internal Caltrans link), for them to complete and sign, and forwards the completed form to Accounting.

13.10.02.03 Bill Discrepancies

If discrepancies are discovered in the Owner's bill, the Utility Coordinator must return the bill to the Owner within 15 days of receipt with a request for correction. The Utility Coordinator completes Form STD. 209 (internal Caltrans link) identifying the type of discrepancy or deficiency in the bill and sends the original bill with the completed form back to the Owner. The Utility Coordinator must keep a copy of the bill and the form in the Utility File for documentation.

If the Owner's response is not acceptable, the Utility Coordinator should forward the bill to HQ RW with a request for Audits' assistance. However, it is important for the Utility Coordinator to make every effort to resolve discrepancies before requesting Audits' help.

Some of the more usual discrepancies include:

- Failure to provide credits for betterments, salvage, or depreciation associated with the relocated facilities (see Section 13.04.05.06).
- Interest beyond the date the utility facility is put back into service (Section 13.04.07.01).
- Partial/progress billings that exceed the Agreement amount (see following sections).

13.10.02.04 Partial Billings

Partial bills are usually paid routinely, if the total of the partial bills does not exceed the amount encumbered under the Utility Agreement. All partial bills must show an itemization of the charges. A review of partial bills is essential where the State is due an unusually large credit, e.g., large betterments, or where billing exceeds work actually completed. The procedure for payment is the same as for final bills as described in Steps 5-10 in "Processing Final Bills."

© 1994-2025 California Department of Transportation. All rights reserved.

13.10.02.05 Payment for Engineering Effort

Occasionally, an Owner will expend considerable engineering effort for a required relocation in advance of executing the Utility Agreement. If the Owner requests to be paid for these efforts as they progress, a separate Utility Agreement must be entered to cover this portion of the overall relocation. This payment is sometimes referred to as a progress payment and is processed the same as for a partial billing.

13.10.02.06 Final Bills

The process for paying final bills, including Utility Agreements for advanced relocation payments, is shown in "Processing Final Bills." Final bills must contain detailed charges in a format similar to that in the original estimate and must contain all information listed in Section 13.10.02.02. (If partial bills contained detailed charges, the details in the final bill could cover only the final portion of work.) The final bill must also contain the "start date" of the physical relocation work. The Utility Coordinator must check the start date against the FHWA Specific Authorization date, if applicable, to ensure proper Federal reimbursement. Based on an agreement with the State Controller's Office, payment of a final bill may be made up to 125% of the Utility Agreement amount without an amendment.

© 1994-2025 California Department of Transportation. All rights reserved.

PROCESSING FINAL BILLS

1. Utility Coordinator reviews the bill against the Utility Agreement (UA), the Owner's approved relocation plans, and the Owner's estimate of cost. Utility Coordinator ensures that the Owner has submitted the required notice of completion.
2. Utility Coordinator checks total cost billed to State against amount encumbered by the UA. If final bill exceeds encumbrance by more than 25%, an amended UA must be processed before payment is requested (see Section 13.07.05.00).
3. Utility Coordinator sends a copy of the bill to Construction requesting them to review the bill and return it with a copy of the utility inspector's daily diary pursuant to the Construction Manual, Chapter 3, Section 3-809, General Provisions.
4. Utility Coordinator reviews the bill against the inspector's diary, paying particular attention to items of credit to which the State is entitled. Credits for betterment, salvage, and depreciation are to be checked to ensure that they appear reasonable in the bill (see Section 13.04.05.06).
5. Utility Coordinator prepares the Utility Payment Request (RW 13-06) (internal Caltrans link). Refer to Section 13.14.00.00 for federal aid procedures.
6. Utility Coordinator prepares the Checklist for Final Utility Invoice (RW 13-07).
7. Utility Coordinator sends the original invoice, the Utility Payment Request (RW 13-06) (internal Caltrans link), and a copy of the UA signature page to HQ Accounting.
8. Region/District P&M complete unshaded coding boxes on the Utility Payment Request (RW 13-06) (internal Caltrans link). Region/District P&M route package to RW Accounting for payment.
9. RW Accounting schedules the bill for payment through the State Controller. (Check is mailed directly to Owner.)
10. Utility Coordinator verifies the transaction against the following week's 1A report, electronically issued by RW Accounting and forwarded by Region/District P&M.

© 1994-2025 California Department of Transportation. All rights reserved.

11. Utility Coordinator sends the following package to Audits for review. Copies of:
    a. Final billing invoice and RW 13-06 (internal Caltrans link). (Include partial billings and related RW 13-06s if they contain details of the charges.)
    b. Executed Utility Agreement, with amendments if applicable.
    c. Notice to Owner, with Revised Notices to Owner if applicable.
    d. Approved E-76, if applicable.
    e. RW Accounting's weekly 1A report(s).
    f. Identification of specific concerns in need of Audit review.
12. At their discretion, Audits will perform an audit of the Owner's bill and prepare the Audit Report, requesting that District RW initiate the process to collect funds from the owner.
13. If funds are to be collected from the Owner, Utility Coordinator prepares an Accounts Receivable memorandum requesting preparation of a bill. A copy of the Audit Report must be included with the memorandum for forwarding to the Owner with the bill. Utility Coordinator forwards both documents to Accounting – Accounts Receivable.
14. If a Cooperative Agreement with an LPA involves cost sharing, Utility Coordinator ensures the LPA is billed (or refunded) for their share of relocation costs for all owners. See Section 13.12.00.00 for procedures in dealing with Cooperative Agreement projects.

13.10.02.07 Payment Request Form

Payments for both partial and final bills are requested on the Utility Payment Request, Form RW 13-06 (internal Caltrans link). The form is fairly self-explanatory. However, the Utility Coordinator must take special care when more complex relocations are being handled. If there are costs that are not Federally reimbursable, these costs must be separated out and coded appropriately. Costs of this type most often include wasted work, discovered work, spare duct charges, costs incurred prior to Federal authorization and interest during construction.

In the case of an advance of funds to the Owner, the advance payment request is originally coded with an "FAE" code of "8" to suspend the funds. As invoices are received for actual work completed, even though no actual "payment" occurs, the Utility Coordinator must process the RW 13-06 (internal Caltrans link) and note in the "Other" category that the request is to "transfer" funds from FAE 8 to FAE 6 (federally reimbursable) or FAE 7 (State only funds).

13.10.02.08 Audit of Owner's Bill

Audits will no longer be performing audits on every Utility Agreement. However, Audits reserves the right to audit any Utility Agreement at their discretion. Audits will issue an Audit Report identifying any discrepancies discovered during the audit. For money due the State on final bills, Audits sends the Audit Report to the Utility Coordinator with instructions to initiate billing the Owner for reimbursement of the discrepancy amount cited. Usually, the auditor will have reached an agreement with the Owner on any identified discrepancies. If the auditor cannot resolve the discrepancy with the Owner, the auditor notifies the District Utility Coordinator, who shall take necessary steps to resolve it.

© 1994-2025 California Department of Transportation. All rights reserved.

13.10.03.00 Advanced Relocation Payments to Owners

Streets and Highways Code (SHC) Section 706 provides criteria for the advancement of funds for utility relocations. When a Utility Owner is responsible for a relocation where the State shares in the cost and the Utility Owner is unable to fund the relocation cost (State portion), State may advance up to 90% (to allow for credits for salvage, depreciation, etc.), of the State's share at its sole discretion.

Qualifications for receiving an advance include: Owner must conclusively demonstrate to State, through the Owner's financial reports and/or records, that they are unable to afford the cost of relocation. Owner must also provide documentation that they have attempted to secure other outside financing and have been denied.

A proposed/draft Utility Agreement and all supporting documentation must be sent to Headquarters for review and approval of advance payment before being sent to the Utility Owner for signature. Once the Utility Coordinator receives the executed Utility Agreement and the Owner's estimate for the advance, the Utility Coordinator shall process a Request for Payment through Accounting for disbursement (Form RW 13-06) (internal Caltrans link) within 45 days. The funds advanced by the State must be deposited into a separate interest-bearing account or trust fund in a California state or national bank. (See California Government Code Section 53630, et seq.) Any interest earned on the funds must be credited to the State.

At least quarterly, the Utility Owner must prepare and submit detailed itemized progress invoices for costs incurred to clear the advance. If the actual and necessary relocation costs are less than the amount advanced, the Owner must refund the overpayment. If the actual and necessary relocation costs are more than the amount advanced, the Owner must process a final bill and the payment will be processed as in "Processing Final Bills." (See Section 13.10.02.06.) Advances must be cleared within 90 days after completion of work.

NOTE: No funds are to be advanced to cover Owner betterments.

© 1994-2025 California Department of Transportation. All rights reserved.

13.10.03.01 Loan Relocation Funds to Owner

If the Owner recognizes their obligation to relocate their facility at the Owner's cost but does not have sufficient funds available to proceed with the relocation, the State may agree to loan the funds to the Owner in accordance with SHC Section 706. It must be conclusively shown through Owner's internal financial records that they are financially unable to afford the cost of relocation and are unable to secure other financing. The Owner shall provide a signed statement by an Executive Officer of the company requesting a loan. The Owner must also provide documentation that they have attempted to secure other outside financing and have been denied by at least 3 financial institutions. Funds shall not be loaned to cover any Owner requested betterments to the facility. Once the Utility Coordinator receives an executed Utility Agreement (UA) and the Owner's estimated cost of their relocation, the Utility Coordinator shall process the payment by sending the estimate and an original executed UA to Accounting for disbursement within 45 days. The Owner must pay interest on the loan at the rate of earnings of the Surplus Money Investment Fund and the funds must be repaid within 10 years. (See Section 13.07.03.04 IV-5 for specific Utility Agreement clause.)

NOTE: See State Controller's website for the Surplus Money Investment Fund rate chart.

© 1994-2025 California Department of Transportation. All rights reserved.

13.10.04.00 Delay Charges to Utility Owner

The process for charging Owners for delay charges incurred for utility relocations not being performed as coordinated with the Utility Coordinator are outlined below.

1. Utility Coordinator prepares a delay letter to utility owner.
2. Utility Coordinator receives a copy of delay charges from Construction RE, for example i.e. copy of delay letter from contractor to Caltrans, or a copy of Construction's Change Order.
3. Utility Coordinator ensures the charges for utility owner are clear. (Reviews dates, delay charges, ensures information matches).
4. Utility Coordinator prepares Invoice Request to Accounts Receivables (Form ADM 4025) (internal Caltrans link).
5. Utility Coordinator sends two copies of the following as a packet to Division of Accounting – Office of Receivable, Services & Administration Abatement & Reimbursement Unit:
    a. Invoice Request to Accounts Receivable form (ADM 4025)
    b. Copy of delay letter or Construction's Change Order
    c. Copy of Notice to Owner showing relocation deadline completion date
6. Utility Coordinator obtains Unit Code and Object Code from Construction (used when coding invoices or paperwork).
7. Utility Coordinator follows-up with Accounting to ensure the following:
    a. 30 days – Accounting issued invoice to utility owner
    b. 90 days – Status of invoice? Paid or Amount Outstanding
    c. 180 days – Is invoice still outstanding, or has it been sent to collections?

13.11.00.00 – PROPERTY RIGHTS CONVEYANCES

13.11.01.00 General

This section explains usage, preparation, and processing of Joint Use Agreements (JUA), Consent to Common Use Agreements (CCUA), and easement (replacement right of way) conveyances to the utility owner.

The Utility Coordinator is responsible for preparing JUA and CCUA on Form RW 13-01 and Form RW 13-02 respectively, except for Southern California Edison Company's JUA and CCUA, which are prepared on Form RW 13-08 and Form RW 13-09 respectively.

13.11.02.00 Requirements for JUA/CCUA

JUA and CCUA are documents that replace (JUA) or perpetuate (CCUA) the Owner's rights of way that are within the State's highway right of way. Both documents place limiting restrictions on the Owner's use to ensure the Owner's utility use is compatible with highway traffic safety. In the case of a JUA, if the Owner possessed prior rights, the Owner will obtain new rights that replace the prior rights. In the case of a CCUA, the Owner retains their original easement use rights. The fact that the State is obligated to pay the cost of relocating the utility facility with prior rights does not, in itself, entitle the Owner to such an agreement. The documents may be entered into only where the Owner's original easement:

- Possessed prior rights in the right of way acquired by the State.
- Did not contain termination or relocation clauses that were enforceable by the State.

These documents are used only for the portion of the Owner's utility easement that is within the State's highway right of way. These documents cannot be used for any property that is outside the State's highway right of way or that is owned by a third party (such as a Local Public agency or a private party), and the Department shall not enter into a JUA or CCUA for any property that is outside the State's highway right of way nor condition, limit or reference such property in a JUA or CCUA. The State may own the right of way either in fee (JUA or CCUA) or in easement (CCUA only).

© 1994-2025 California Department of Transportation. All rights reserved.

When a Local Public Agency (LPA) owns parcels or acquiring parcels which are expected to be incorporated into the State's right of way, and where a JUA/CCUA are needed, the following steps are needed:

1. Prepare the JUA/CCUA
2. Complete the land transfer from the LPA to the State
3. Once the state owns the property, the JUA/CCUA may be processed
4. The JUA/CCUA must be dated after the land transfer is complete

In the case of an easement, the Owner's prior rights must be carefully checked for unusual conditions. For example:

- The Owner may have an easement that requires relocation at the Owner's expense but obligates the landowner (State) to issue a new easement (JUA or CCUA) for the newly relocated facilities.

- The Owner's easement may have been granted for a specific time period, in which case the JUA or CCUA must be written to terminate on the specified date. Following termination, the utility facility is considered as being under an Encroachment Permit.

NOTE: A JUA cannot be used where the State only possesses an easement right of way. The State as an easement holder has no legal right to grant a utility easement in a new location.

13.11.02.01 Joint Use Agreements

A JUA (Form RW 13-01 or RW 13-08) is used when the Owner's facility will remain on lands used for highway purposes but will be relocated to a position outside, or partly outside, the Owner's existing right of way where the Owner had prior rights. It is also used where the Owner's right of way is not occupied by any existing utility facilities, but the Owner will not quitclaim the easement because of an unknown future use.

When existing facilities have been relocated to a new location both within the highway right of way and outside the right of way on a newly acquired utility easement, the JUA describes only the new location of the facilities within the highway right of way (and cannot be used for any property that is outside the State's highway right of way or that is owned by a third party, such as a Local Public Agency or a private party). The easement area outside the highway is covered by acquisition on the Owner's easement form or conveyed by State Director's Easement Deed (DED) if acquired in the State's name.

© 1994-2025 California Department of Transportation. All rights reserved.

13.11.02.02 Consent to Common Use Agreements

A CCUA (Form RW 13-02 or RW 13-09) is used when all of the Owner's facilities, whether rearranged or not, will remain within the highway area covered by the Owner's existing easement area.

13.11.02.03 Water Code 7034 and 7035

Water Code Sections 7034 and 7035 specify the rights and obligations of each party regarding water facilities that fall under these statutes. A JUA or CCUA will be issued only for Section 7035. No JUA/CCUA shall be issued for Section 7034.

13.11.02.04 Local Agency Owned Facilities Within Highways and Frontage Roads

A JUA/CCUA is not required for facilities relocated to frontage roads to be relinquished to the local agency, as the local agency will be vested with all the title the State previously held.

In those cases where the local agency's facilities remain within the highway right of way and not in a frontage road and the facilities were installed in local agency streets prior to inclusion in the highway system, the practice is to enter into a JUA/CCUA only if the local agency so demands.

If the local agency's facilities exist upon a recorded easement, a JUA/CCUA with the local agency covering these facilities is in order.

© 1994-2025 California Department of Transportation. All rights reserved.

13.11.02.05 Prescriptive Rights Claim

A prescriptive right allows someone other than the property owner to gain the rights to use the land. It is done so under adverse possession laws and by demonstrating that the use has been:

- **Open and notorious:** It is obvious that the possession is taking place. This should have given the owner notice that their land is being used.
    - **Under Claim of Right:** The person must possess some claim of right. The claim must be recognized by California law.
    - **Hostile to the True Owner:** This doesn't mean adversarial. Instead, a trespasser must possess the land in a manner that is hostile to the owner's legal rights.
    - **For the Statutory Period of Five years:** The elements described above must be for the statutory period of 5 years.
    - **Continuous and Uninterrupted:** The trespasser has used the land on a continuous and uninterrupted basis.

If a Utility Owner meets these criteria it is said to have a "claim of prescriptive right or easement."

The Department will perpetuate the Owner's Prescriptive Rights with a JUA/CCUA **IF** the prescription has been perfected by a court proceeding against the record owner.

A prescriptive claim cannot be established over land owned by any governmental entity, per the California Civil Code Section 1007:

> *"No possession of any land, water, water right, easement, or other property that is dedicated to or owned by the state or any public entity-- no matter how long-- can ever ripen into any title, interest or right against the public owner."*

13.11.03.00 JUA/CCUA Preparation

Following are guidelines for preparing JUA/CCUAs:

- The State normally prepares JUA/CCUA, and coordination between the Utility Coordinator and RW Engineering is essential.

- To the extent practicable, a single JUA/CCUA document is used covering each location or related series of the Owner's easements for either a conventional highway or freeway transaction.

© 1994-2025 California Department of Transportation. All rights reserved.

- Since the document must be returned to the State to allow for documenting the recording information on State Record Maps, the State's return address must be shown in the upper left-hand corner of the document.

- The document shall have the same number as the Utility Agreement with another numerical digit after the Utility Agreement number, e.g., Utility Agreement No. 01-UT-1234 corresponds to JUA/CCUA Document No. 1234-1.

13.11.03.01 Description of Owner's Rights

The "Owner's easement" portion of the JUA/CCUA document is described by reference to the document and recording information, if any, by which the Owner acquired the utility easement. If the document is unrecorded, language shall be inserted in the JUA/CCUA description stating that a copy of the unrecorded document is attached and made a part of the JUA/CCUA. (The unrecorded document is then attached.) In the case of Pacific Gas and Electric Company, a copy of the unrecorded document should not be attached to the JUA/CCUA to be recorded. A copy is retained and attached to the RW Utilities file copy only.

When the Owner's easement rights have been acquired by prescription, or in any other manner that does not exactly describe the specific location or rights acquired, the "Owner's easement" must be described in precise terms using one of the following clauses as appropriate:

A. "The easement for a (voltage) electric distribution line consisting of a single line of poles with (number) conductors suspended therefrom and appurtenant thereto, together with a right of way along said pole line, acquired by (occupancy, etc., as appropriate to the circumstances)."

   NOTE: If a telephone facility is involved, this clause should be modified to describe the number of circuits instead of voltage. It should also include the number of poles erected within the area being described.

B. "The easement for a (size) inches or feet (gas, water, steam, oil, etc.) pipeline with valves and other appurtenances, fittings and connections thereto, together with a right of way along said pipeline acquired by (occupancy, etc., as appropriate to the circumstances)."

© 1994-2025 California Department of Transportation. All rights reserved.

C. "The easement for a canal or ditch and pertinent structures within a strip of land (number) feet in width, together with a right of way along said strip acquired by (occupancy, etc., as appropriate to the circumstances)."

13.11.03.02 Vicinity Description

The "highway right of way" portion of the JUA/CCUA document is described by reference to the vicinity of a city, town, or other commonly recognized locality, the county, and the State Route.

13.11.03.03 Location Description

RW Engineering prepares the description of the "new location" or "area of common use." The description is included in the JUA/CCUA in accordance with the following requirements:

A. In some instances, the Owner's existing facility will be located partially within an easement and partially under permit or other lesser right. In those cases, the "new location" or "area of common use" must be apportioned so the Owner has the same ratio of ownership and rights in the new location as were held in the old location. The Owner must not receive a betterment by a grant of an easement for the portion that was previously held under permit or lesser right.

B. The foregoing rule applies notwithstanding the fact that the existing facilities may leave the highway right of way for a portion of their length, so there is in effect more than one crossing of the highway or right of way line.

C. The description preferably should be by attached map, provided the map can be reduced to the size of a recordable document without being illegible.

D. For the purpose of the referenced apportionments, distances are determined by measurement on a scaled map that is an accurate horizontal plan of the affected easements. To the extent possible, the new easement location is described as a continuous strip even though the original easement locations may not have been continuous and abutting. The description for a new longitudinal location generally commences opposite the lowest highway engineer's station and is measured in the direction of increasing stations. In the case of

© 1994-2025 California Department of Transportation. All rights reserved.

perpendicular crossings, it commences at the right of way line, right or left of the highway station.

E. If two or more of the Owner's original easements are being combined into a single JUA, the following statement is added to the end of the description of the "new location":

"For the purpose of determining the position and length of each of Owner's easements in the new location, said easements shall be deemed to be located in the same sequence as is set forth above, and the length of each easement in the new location shall bear the same proportion to the entire length of the new location as the length of such easement in the old location within the right of way of the highway bore to the entire said length, all lengths to be measured on a scaled map which is an accurate horizontal plan of the affected easements."

F. Where practical, more than one crossing of the highway right of way may be covered in a single JUA/CCUA.

G. When the Owner's rights have been acquired by prescription, or in any other manner that does not exactly describe the specific location or rights acquired, "Owner's easement" must be described in precise terms in the form as shown in Section 13.11.03.01.

13.11.03.04 Access Control Clauses

The JUA or CCUA specifies any limitations on the Owner's right to cross access control lines or fences erected across the new location of the Owner's easement or the area of common use. If the highway is not a freeway, the words "conventional highway, not applicable" are inserted as Paragraph 4 of the JUA or Paragraph 3 of the CCUA. If the Owner's facilities in the new location or area of common use do not cross a freeway access control line or fence, the following provision is inserted:

"State's access control line does not intersect Owner's easement; not applicable."

If the State highway involved is a freeway and the Owner's facilities in the new location or area of common use will cross the freeway access control line or fence, the parties must enter into a specific understanding on how the Owner will access their right of way along the easement portions at each crossing of the freeway fence. Usually, the JUA/CCUA uses one of the clauses

© 1994-2025 California Department of Transportation. All rights reserved.

in "Clauses – Access Control Across Freeway Fence," for the situations presented. If none of the clauses fits the situation, the parties will agree upon the manner in which the Owner is to exercise their rights. The clause negotiated shall be subject to Headquarters RW, Design and Legal review and approval.

CLAUSES – ACCESS CONTROL ACROSS FREEWAY FENCE

- **The Owner needs (a) gate(s) in the freeway fence, and the State accepts the need.**

  NOTE: This situation also requires approval from the Division of Design and/or FHWA.

  Clause:

  "Owner shall exercise its rights of way solely by use of the gate installed in the freeway fence (right or left) of Engineer's Stations _____ (Insert as necessary: "together with the road approach thereto constructed within the freeway"). Said gate (and road approach) shall not be used for any purpose other than construction, reconstruction, operation, inspection, repair or maintenance of Owner's facilities now or hereafter installed pursuant to Owner's easement. Owner shall close and lock said gate after each use thereof by Owner."

- **The Owner agrees that it can adequately maintain the facilities installed on their easement by traveling over city streets, county roads, or State highways that are not planned to be closed, or a private easement owned by the utility.**

  Clause:

  "Owner shall not, in the exercise of its rights under its easement, pass through or over the freeway fence(s) constructed by State across Owner's easement (right or left) of Engineer's Station _____ except in emergencies or when necessary to permit the construction, reconstruction or replacement of Owner's facilities."

© 1994-2025 California Department of Transportation. All rights reserved.

CLAUSES – ACCESS CONTROL ACROSS FREEWAY FENCE (Continued)

- **If neither previous clause is applicable, the State shall provide a substitute route (or means) for the Owner's use for accessing the easement areas at each crossing of a freeway fence or access control line. In each case, the substitute route (or means) shall be fully described in the document.**

  Clause:

  "So long as Owner shall have a right to exercise its right of way along its easement by the means hereinafter described, or a reasonable substitute therefore, provided by State, Owner shall not pass through or over the freeway fence constructed by State across Owner's easement except in emergencies or when necessary to permit the construction, reconstruction or replacement of Owner's facilities. Said route (or means) is described as follows:

  (Provide description of route or means.)"

- **The Owner's easement does not cross the freeway access control line, or the Owner can only adequately reach their facilities from the freeway.**

  NOTE: This situation also requires Division of Design encroachment exception approval.

  Clause:

  "Owner shall enter and leave said (new location or area of common use) only by way of said freeway."

© 1994-2025 California Department of Transportation. All rights reserved.

CLAUSES – ACCESS CONTROL ACROSS FREEWAY FENCE (Continued)

- **The Owner's facilities in the new location are entirely outside of the freeway fence and the Owner can adequately reach their facilities without crossing the fence.**

  Clause:

  "Owner's facilities in the new location are located entirely outside the freeway fence. This paragraph is therefore not applicable."

  Or

  Clauses in the four sections above, as applicable, plus:

  "The foregoing is not applicable to that portion of the new location within a frontage road outside of the freeway in which the Owner's rights can be exercised by entry from such frontage road."

© 1994-2025 California Department of Transportation. All rights reserved.

13.11.04.00 JUA/CCUA Processing

The Utility Coordinator processes the JUA/CCUA as shown below.

JUA/CCUA PROCESS

1. Request RW Engineering to prepare the necessary maps and legal descriptions for the JUA/CCUA.
2. Review the JUA/CCUA for accuracy and compliance with policy.
3. Transmit the original, one counterpart, and one copy of the JUA/CCUA to Owner with the following instructions:
    - Request Owner to sign, notarize, and return the original and the counterpart. The copy is for the Owner's records.
    - Request Owner to provide full organizational names and titles of the signing officers with their signatures acknowledged on the JUA/CCUA.
    - Advise that a fully executed and recorded original will be returned to Owner following State's processing.
4. Upon receipt from the Owner, review the documents to ensure they have been properly executed and acknowledged and sign both the original and the counterpart under "Recommended for Approval."
5. Forward the documents to the district person who is appointed as the Department's Attorney in Fact to sign and notarize both the original and the counterpart of the JUA/CCUA on the State's behalf.
6. Record the executed original JUA/CCUA. The State's return address must be shown in the upper left-hand corner of the document.
7. Upon return of the recorded JUA/CCUA, the district will:
    - Send the original recorded JUA/CCUA to the Owner with reference to County, Route, Post, EA, Utility Agreement No., Owner's file reference, and any other information pertinent to the project and file.
    - Send a copy of the recorded JUA/CCUA to RW Engineering for entering on the District's Record Maps.
    - Retain the original, counterpart, and the copy of the recorded JUA/CCUA in the Utility File.

© 1994-2025 California Department of Transportation. All rights reserved.

13.11.04.01 Recording JUA/CCUA Prior to Relinquishment of Frontage Roads

Occasionally, an Owner's prior rights easement will impact both a State freeway and a frontage road that will be relinquished to a local agency. To protect the Owner's prior rights, the JUA/CCUA must be recorded in advance of the relinquishment resolution.

13.11.05.00 Special Clauses

Where the Owner is in a prior right status to the State highway and is requesting a special clause in the JUA/CCUA, one of the following standard clauses may be used as appropriate to cover the Owner's needs. Use of these clauses requires written approval from Headquarters RW. The circumstances warranting use of these clauses shall be included in the transmittal memo to HQ RW. Under no circumstances are these clauses to be modified without Legal's prior approval.

13.11.05.01 Conversion of Open Ditch to Conduit When Owner Has Prior Rights

Where an open ditch exists under a granted easement, the highway is on a new alignment, and the State is changing the facility to a closed conduit within the highway right of way, the following clause may be added to the JUA/CCUA:

> "Inasmuch as Water Code Section (7034) (7035) requires STATE to be responsible for the structural maintenance of the conduit portion of OWNER's facilities which transports water under the highway at Engineer's Station _____, STATE will repair or replace the conduit portion of OWNER's facilities which lies within the STATE highway right of way when such becomes necessary unless such repair or replacement is made necessary by negligent or wrongful acts of the OWNER, its agents, contractors or employees; provided that the OWNER shall keep the conduit clean and free from obstruction, debris, and other substances so as to ensure the free passage of water in said conduit. In no event shall STATE be liable for any betterments, changes or alterations in said facility made by or at the request of the OWNER for its benefit."

© 1994-2025 California Department of Transportation. All rights reserved.

13.11.05.02 Special Clause for Public Agencies

Sometimes the standard form of JUA/CCUA cannot be used when dealing with another public agency, such as the federal government. To establish equal and concurrent rights to a common use area to be jointly used with the State, conveyances to another public agency may include the following clause with Headquarters RW prior approval:

> "This grant is subject to all valid and existing encumbrances of record, and is subject to the continuing right of the grantor and its successor to use the said land hereof, in common with the grantee and its successors, with the understanding that after completion of the highway construction work presently contemplated, whenever either party alters or improves its facilities within such common area, such party shall assume the actual and necessary costs, exclusive of betterments, of accommodating the other's facilities located in such common use area and necessarily affected by the proposed alteration or improvement, and that neither party will undertake any such alterations or improvements without first submitting to and obtaining the written approval by the other of the plans and specifications thereof, which approval shall not be unreasonably withheld."

This clause is readily adaptable where the State is either the grantor or the grantee. Inasmuch as the party initiating the work of altering their own facility within the common use area is liable for the cost of reconstruction and relocation of the other public facility, it is important to carefully consider respective rights of the parties before consenting to use of this clause, and then only after Headquarters RW review and approval.

13.11.06.00 Agreements with Public Agencies

The Bureau of Reclamation and the Department of Water Resources have special agreements with the Department that provide instructions for preparation of a JUA/CCUA going to them.

© 1994-2025 California Department of Transportation. All rights reserved.

13.11.06.01 Bureau of Reclamation Agreements

The State and the Bureau of Reclamation have entered into master contracts as shown below:

- **Bureau of Reclamation Contract No. 14-06-200-6020 (CVP) dated October 12, 1956**

  Coverage:

  Joint use areas of State highways and facilities of the Central Valley Project.

  Explanation:

  Provides for perpetual joint use in common areas by either party on lands of the other party by means of a one-page form labeled "Exhibit 'C'" of the contract (Form RW 13-10). Each joint use is subject to the terms and conditions in the master contract.

- **Bureau of Reclamation Contract No. 14-06-200-503-A (Non-CVP) dated October 9, 1963**

  Coverage:

  Joint use of State highways and Bureau of Reclamation facilities, other than those of the Central Valley Project (Contract No. 14-06-200-6020).

  Explanation:

  Provides for the form of "JUA" to be used when the State or the Bureau proposes construction on the other's property. The forms of "JUA" are:

  1. "Exhibit 'B'" (Form RW 13-11) of the master contract provides for the form of JUA to be issued by the State when the Bureau proposes transverse construction on the State's property.
  2. "Exhibit 'C'" (Form RW 13-12) of the master contract provides for the form of JUA to be issued by the Bureau when the State proposes construction on the Bureau's property.

© 1994-2025 California Department of Transportation. All rights reserved.

13.11.06.02 Department of Water Resources Agreement

The Department and the Department of Water Resources entered into an agreement dated December 13, 1961 covering, among other things, the form of "Certificate of Common Use" to be used when the Department or the Department of Water Resources proposes construction on the other's property. The forms of "Certificate of Common Uses" are:

- Exhibit "A" (Form RW 13-13) of the master contract is used when the Department proposes construction on the Department of Water Resources' property.

- Exhibit "B" (Form RW 13-14) of the master contract is used when the Department of Water Resources proposes construction on the Department's property. Transverse crossings by the Department of Water Resources are the only permitted crossings under this agreement.

13.11.07.00 Easement Conveyance Processing

Conveyance of easements to Owners is by deed. To initiate this procedure, the Utility Coordinator must include a clause/clauses in the Utility Agreement for property rights to be conveyed and the form of conveyance. Clause(s) should also include credit to the State for the Owner's share of the cost or market value of easements conveyed, as applicable. The cost of State acquired utility easements is part of the cost of relocation and must be apportioned between the State and the Owner in accordance with the Utility Agreement. See Section 13.07.00.00 for standard Utility Agreement clauses.

NOTE: Easements to be conveyed across excess lands or developable airspace parcels must be located so as to minimize possible adverse conflicts to site development. Requests for easements across airspace or excess lands not originating as a result of a Utility Agreement obligation should be handled in accordance with usual excess or airspace procedures.

© 1994-2025 California Department of Transportation. All rights reserved.

13.11.07.01 Easement Billing Process with RW Contract (No Utility Agreement)

This process is used when there is no Utility Agreement because liability is 100% Owner expense, easements have been purchased for the Utility Owner with State funds through a RW Contract, and the deed has been recorded. The Utility Owner must reimburse the State for this cost.

When Acquisition has acquired the easement(s), the Utility Coordinator is responsible to:

- Document the Owner's request for the State to purchase easements in the Utility Diary.
- Obtain a copy of the RW Contract and Memorandum of Settlement (RW 08-12 or RW 08-13 [internal Caltrans link]) from Acquisition.
- Highlight the easement description and settlement cost in Paragraph 8 of the Memorandum of Settlement.
- Verify with Planning and Management (P&M) that the payment has been made to the grantor of the property and the project EA is open.*

*If the project EA is not open, request P&M to supplement the EA for the purpose of processing the invoice for the easement.

13.11.07.02 Acquired in Owner's Name

Acquisition of easements in the Owner's name using their deed form is the preferred method since the procedure for transferring this easement deed is the simplest. When Acquisition has acquired the easement in the Owner's name, the Utility Coordinator is responsible to:

- Obtain the Owner's approval of the description in advance of execution.
- Collect money due the State from the Owner for their share of the easement costs, if applicable.
- Ensure the easement deed is recorded.
- Retain a copy of the easement deed along with a copy of the recording request to the County Recorder.

© 1994-2025 California Department of Transportation. All rights reserved.

13.11.07.03 Acquired in State's Name

The process for conveying an easement acquired in the State's name is slightly more difficult than conveying an easement in the Owner's name. When Acquisition has acquired the easement in the State's name, the Utility Coordinator is responsible to:

- Transmit necessary maps and/or legal descriptions (taken from the State's Grant Deed) to Excess Lands with a request for Director's Easement Deed (DED) preparation.

- Review the prepared DED for accuracy and transmit a copy of the DED to the Owner for review and approval. Any money due the State should be requested pursuant to the Utility Agreement.

- Upon Owner approval and receipt of money due State, request Excess Land to process the DED as provided for in Section 16.07.00.00.

- Ensure receipt of a copy of the DED for the District's Utility files and follow up to make sure the DED was recorded and sent to the Owner.

13.12.00.00 – LOCAL PUBLIC AGENCY PROJECTS

13.12.01.00 General

This section covers oversight requirements for utility involvements on the following three types of projects:

- Local Public Agency (LPA) Funded State Highway Projects.
- Federal Aid Local Streets and Roads Projects.
- Private Developer Funded State Highway Improvement Projects.

This section also covers review of Cooperative Agreements.

13.12.01.01 Preliminary Engineering Allowed for Local Programs

The use of Preliminary Engineering by Local Agencies is allowed prior to and in support of the Environmental Document. The Local Agencies are to follow the procedures outlined in 13.02.02.02 and other sections of this Manual.

13.12.02.00 Locally Funded State Highway Projects

Locally funded State highway projects are those projects on the State highway system that are locally sponsored through use of LPA and/or private funding. They typically are not CTC-initiated STIP projects, but are included in the STIP for project identification and approval. These projects do not include federal-aided local projects that are included in the Local Streets and Roads Program. The more common types of Special Funded projects are:

- Tax Measure Projects
- "$1" Projects
- Interchange Cost Sharing Projects
- Cooperative State/Local Projects
- Toll Road Projects

© 1994-2025 California Department of Transportation. All rights reserved.

13.12.02.01 Oversight of Locally Funded State Highway Projects

The Utility Coordinator provides oversight on locally funded State Highway projects. Oversight includes the activity of monitoring as well as the effort of assisting, guiding, and advising the LPA to ensure that all utility adjustments and encroachments are accomplished in accordance with the Department's policies, procedures, standards, practices, statutes, contracts, and agreements. Within this context, use of State-mandated forms shall be required of all LPAs and/or their consultants.

Where protection, relocation, or removal of facilities is required, the work shall be performed and liability determined in accordance with:

- State law, policy, procedure, contracts, and agreements for those facilities located within the project limits providing improvements to the State highway.

- Local agency policy and procedures for those facilities located outside the project limits of the State highway.

This requires the local agency to adhere to all requirements of the State's Master Contracts for work related to the State freeway portion of the locally funded project.

The SHC authorizes the State to issue Notices for ordered relocations on the State highway system. This authorization can be specifically delegated to an LPA. If the impacted Owner of facilities refuses to accept an LPA-issued Notice, the Utility Coordinator may issue the Notice after appropriate review.

13.12.02.02 Use of Scopes of Work

To ensure the State's policies and practices are followed whenever work is performed by consultants on State highways, work products and services should be performed as described in Exhibit 13-EX-28, Utilities Scope of Work (SOW). The recommended SOW establishes requirements necessary for consultants to complete the required service or product and establishes minimum acceptable standards. To ensure minimum standards are followed, districts shall monitor LPAs in accordance with procedures outlined in the Local Programs Chapter of this Manual. As stated therein, district functional units have the responsibility to provide input, review, supervision, and contract administration.

© 1994-2025 California Department of Transportation. All rights reserved.

13.12.02.03 Use of State Forms

The Department's standard forms shall be used as a consistent approach with all Owners in the utility relocation process. In addition, Owners have become familiar with the forms and understand and accept their usage. It is mandatory, therefore, that all outside entities performing work on State highways use these standard forms.

For local streets and roads projects, the Forms and Exhibits are intended to be guides and may be used by the LPA as desired. Approved local forms are available in Chapter 14 of the Local Assistance Procedures Manual.

13.12.02.04 Project Completion

The LPA shall transfer all project and utility files to the Utility Coordinator upon completion of their work or their consultant's work and not later than overall completion of the construction project. The information in the files should include at a minimum:

- Completed Utility Diary.
- All correspondence between the LPA, Owners, design engineers, consultants, and the State.
- All documents executed between the LPA, Owners, design engineers, consultants, and the State.
- All project design plans and survey data.
- Utility facility As-Builts, where available.

All files are to be in a neat and orderly condition upon the Utility Coordinator's acceptance.

© 1994-2025 California Department of Transportation. All rights reserved.

13.12.03.00 Federal Aid Local Streets and Roads Projects

FHWA places overall responsibility on the State for all right of way work performed on federal aid projects. Federal regulations allow the State to use an LPA for RW work performed. The State must monitor the LPA's activity for compliance with State and federal laws and regulations. In addition, the State is responsible to fully inform LPAs of their responsibilities in connection with federal aid projects. The State must ensure every LPA receives all current regulations and procedural instructions affecting RW activity and must provide guidance and advice on RW matters. Each district should have a RW LPA Coordinator or a Utility Coordinator who is responsible for liaison and consultation with the LPA and for providing the FHWA Specific Authorization on RW Utility matters on behalf of FHWA. See the Local Programs Chapter of this Manual for procedures on dealing with local streets and roads projects.

13.12.03.01 Review Procedures

Most utility facilities within local streets and roads are located under a franchise agreement that requires all facility adjustments caused by the project to be accomplished at the Owner's expense. As a result, there are limited utility relocation costs to be reimbursed, and FHWA's primary concern lies with ensuring that required utility adjustments are properly planned and coordinated with construction. This requires timely issuance of a Notice that clearly states how the utilities will be adjusted to allow conflict-free construction.

If the Owner possesses a right superior or prior to that of the LPA, the normal rules of liability determination with appropriate agreements and audits shall apply. (See Section 13.04.00.00.)

The Utility Coordinator is responsible to perform a full review of the LPA utility reimbursement in the same manner as the District Utility Reviewer now uses on district federal-aid projects.

13.12.04.00 Private Developer Funded State Highway Improvement Projects

The Utility Coordinator's responsibility for private developer-funded State Highway Improvement Projects is to ensure standard clauses are used in the Highway Improvement Agreement and to review and recommend approval of the developer's Encroachment Permit application.

© 1994-2025 California Department of Transportation. All rights reserved.

This type of project uses the State's Encroachment Permit for projects under $1 million and the Highway Improvement Agreement on permit projects of $1 million or more that are funded entirely from private sources. These Highway Improvement Agreements are similar to Cooperative Agreements in form, context, and legal commitment. District Encroachment Permits initiates the Agreements with input from RW. For standard clauses to be used in the Highway Improvement Agreement, see the Local Programs Chapter of this Manual.

Often, these projects require the developer to acquire additional right of way that is subsequently conveyed to the State to become part of the State highway system. For this reason, it is important that the Utility Coordinator ensures that all utility adjustments meet the State's requirements.

Since no governmental funding is involved in these projects, the Federal Uniform Act and the State Eminent Domain Law do not apply to any private-developer-initiated and privately funded project. In accordance with statutory and judicial law, the developer shall pay for all utility adjustments required to accommodate a private-developer-sponsored project.

13.12.05.00 Cooperative Agreement Reviews

Project Development, Traffic, etc., may enter into Cooperative Agreements with LPAs for a variety of projects, and these Cooperative Agreements must circulate through RW Utilities for review and comment. Cooperative projects often involve cost sharing that benefits both parties. The Utility Coordinator must review each Cooperative Agreement for disposition of utility relocations. Some critical items to be covered are:

- The terms of the Cooperative Agreement shall establish the LPA's responsibility for the cost of protection, relocation, or removal of utility facilities located within the State highway right of way. Only those facilities that meet State's encroachment policy shall be allowed to remain.

- The LPA responsible for project design shall assume responsibility for identification and location of all utility facilities within the area of project construction and shall assume responsibility for payment of identification and location costs pursuant to applicable Positive Location Agreements with Utility Owners. All utility facilities not relocated or removed in advance of construction shall be identified on the project plans and specifications.

© 1994-2025 California Department of Transportation. All rights reserved.

- All underground high and low risk utility facilities shall be handled in accordance with the State's "Policy on High and Low Risk Underground Facilities Within Highway Rights of Way." (For a copy of this policy, refer to Appendix LL of the Project Development Procedures Manual.)

- HQ Legal has determined that a specific delegation must be made to the LPA in order to authorize them to execute the Notice to Owner. In the absence of the delegation, the Utility Coordinator must execute it. The benefit to the district of retaining execution authority is that this facilitates the oversight process.

For standard clauses to be used for Cooperative Agreements, see the Local Programs Chapter of this Manual.

13.12.05.01 Work Under Cooperative Agreement

When reviewing the Cooperative Agreement for right of way activities, regardless if the LPA or the State performs the work, all Federal and State laws and regulations, policies, practices, agreements, and procedures shall be followed. If the State performs the work, the LPA shall be advised immediately of any cost changes that may be significantly higher than earlier project estimates or result from amended Utility Agreements.

13.12.05.02 Cooperative Agreement Billings

When utility relocation cost sharing is involved, the Utility Coordinator shall take steps necessary to ensure the LPA is billed for their share of the estimated costs, as stipulated in the Cooperative Agreement. The LPA shall be billed when all known relocations have been determined, but prior to RW Certification. The State must receive all funds for the LPA's share of the estimated relocation costs prior to award of the State's construction contract.

Procedures for billing LPAs are as follows:

- Determine the estimate of cost for utility relocation work.
- Send a memorandum to Accounting requesting billing of the LPA. (13-EX-30 [internal Caltrans link])
- Retain a copy of the memorandum in the RW Utility File.

© 1994-2025 California Department of Transportation. All rights reserved.

13.12.05.03 Cooperative Agreement Final Bills

The Utility Coordinator is responsible to ensure that LPAs are billed for their share of utility relocation costs pursuant to the Cooperative Agreement. A final accounting should take place as soon as all relocations are complete and all costs have been determined. The LPA's share shall be calculated from the final billings obtained from the Owners. If the LPA owes more than the amount previously billed, the LPA shall be billed the difference. If the LPA was overbilled, the LPA shall be refunded the difference immediately.

The Utility Coordinator shall send a memorandum to Accounting requesting billing or refund. The memorandum to Accounting must show previous amounts billed and collected.

© 1994-2025 California Department of Transportation. All rights reserved.

13.13.00.00 – NON-PROJECT RELATED RESPONSIBILITIES

13.13.01.00 General

The Utility Coordinator is responsible for taking appropriate action on policies emanating from within Right of Way and other Department programs, offices, and branches that involve utilities.

13.13.02.00 Excess Land

The purpose of the RW Utilities review of a proposed excess land sale is to identify utility easements that should be conveyed or reserved prior to sale. The review should include the steps in Table 13.13-1 entitled "Excess Land Review."

Table 13.13-1

EXCESS LAND REVIEW

Step	Action
1	Identify and complete easement obligations still outstanding as a condition of a relocation.
2	Identify easements for future relocation needs for projects in the current STIP.
3	Identify existing facilities on the property where the Owner may need to acquire an easement from the State.
4	Transmit a copy of the excess land property map to the potentially affected Owners asking for: • Identification of facilities on the property. • Size and type of facility on property. • Owner's rights of occupancy on the property. • Owner's interest in purchasing property rights from the State. • Owner's response within 30 days.

© 1994-2025 California Department of Transportation. All rights reserved.

Table 13.13-1 (Continued)

EXCESS LAND REVIEW

Step	Action
5	Review Owner's response and provide Excess Land with the findings: • If no obligations are pending, return to Excess Land with "No objections to sale." • If the State's obligations are still pending, request Excess Land to prepare and issue a Director's Easement Deed (DED) to the Owner or to insert a clause in the deed of the property to be sold reserving an easement to the Owner. The Utility Coordinator must provide Excess Land with a plan showing the easement width, location with ties, size and/or type of facility to occupy the easement, and a copy of the Utility Agreement containing the State's obligation for the DED or reservation, as appropriate. • If the Owner wishes to acquire property rights, the Utility Coordinator should furnish Excess Land with the information listed above. • If the Utility Owner does not have a vested or prior right, the Excess Land Agent will request an appraisal and offer the Utility Owner the opportunity to purchase an easement for their facility. The easement reservation will be done in the same manner as shown above. • If the Utility Owner does not wish to purchase the easement, the Excess Land Agent will request the Utility Owner to relocate their facilities outside the surplus parcel.
6	The Utility Coordinator should retain a copy of all correspondence and deeds in the RW Utility File.

13.13.03.00 Vacations and Relinquishments

- **Vacation** – A *vacation* is the CTC action by which the public right of use is removed from a State highway right of way. Whenever utility facilities are within the area to be vacated, the district advises the Owners and determines whether they wish utility reservations as provided in SHC Sections 8340 and 8341. The Utility Coordinator must establish a procedure with the District's RW Engineer to ensure that right of way on which utilities are located is not vacated without appropriate reservations or a JUA/CCUA. Prior rights are not necessary: if the owner requests a reservation, it shall be provided.

© 1994-2025 California Department of Transportation. All rights reserved.

- **Relinquishment** – A *relinquishment* is the act of and process of legally transferring property rights, title, liability, and maintenance responsibilities of a portion or entirety of a state highway or a park and ride to another entity. The Utility Coordinator is responsible to review any area to be relinquished and determine if all JUA/CCUAs have been issued to the Owners. The Utility Coordinator shall make arrangements to be notified of all proposed relinquishments and shall check RW Utility files for outstanding JUA/CCUAs. If any are incomplete, the Utility Coordinator must complete them prior to relinquishment.

13.13.04.00 Airspace Leases

Airspace leases may require investigation prior to execution of the lease. Both parties to the lease should be aware of existing utility facilities and the liability for relocation if necessary. The Utility Coordinator will not initiate action on airspace leases until requested.

13.13.04.01 Airspace Lease Not Allowed for Utility Facilities

Since State franchise laws do not allow the renting of freeway airspace for utility facility use, all utility use of freeways is covered by Encroachment Permit rules and regulations only.

13.13.05.00 Encroachment Permits

Caltrans policy for encroachments, including utilities, is found in the Project Development Procedures Manual (PDPM) Chapter 17 and the Encroachment Permit Manual (EPM) Chapter 600. Should there be any discrepancies or omissions found between the EPM and the PDPM, the PDPM will take precedence.

All utility facilities must be designed, installed and maintained in accordance with the Department's PDPM Chapter 17, the EPM, and other applicable federal and state laws, regulations and requirements. Facilities shall also be installed, maintained and operated in accordance with PUC General Orders 95, 112-D, 128, and others, if the Utility Owner is regulated by the CPUC, as may be applicable, in a manner that does not impede the safety, design, traffic operations, maintenance, integrity and stability of the highway. Utility construction activities shall be performed in accordance with prescribed Encroachment Permit requirements.

© 1994-2025 California Department of Transportation. All rights reserved.

Longitudinal utility placements are prohibited within State highway access control right-of-way (with the exception of subsurface conduits with no access points in highway right-of-way) and may be permitted on conventional highways in accordance with Caltrans policy.

13.13.05.01 Review of Encroachment Permits

Utility Coordinators are to review all "state required relocation" utility Encroachment Permit applications. These applications should be logged in and out by date and number since definite time limits for review and issuance of permits have been established by law.

- **Encroachment Permits** – Master Contracts between the State and some Owners contain conditions providing that when an Owner initially installs new facilities within the right of way of an existing freeway or frontage road by encroachment permit, the Owner will pay in its entirety that portion of the cost associated with any future rearrangements of the facilities. These contracts further provide that where the facilities are initially installed before the highway became a freeway, the cost for rearrangement shall be shared. Any betterment, such as an expansion of capacity, installed following designation of the highway as a freeway shall be covered by an encroachment permit, and that portion of the relocation costs associated with the betterment shall be the Owner's liability. Whenever new facilities are installed in an Owner's prior right area and are installed consistent with the granting document, whether installed before or after the freeway designation, subsequent relocation costs shall be the State's liability.

  NOTE: The Utility Coordinator may encounter some encroachment permits which are stamped "Freeway Permits." Disregard the stamp and handle as an encroachment permit.

- **For Record Purposes Only Permits** – In those cases where the Owner has, or is entitled to, a JUA/CCUA, the Encroachment Permit shall be stamped or typed with the words, "FOR RECORD PURPOSES ONLY." Care must be exercised to determine that the use proposed by the Owner granted in the JUA/CCUA does not exceed the rights granted in the Owner's original document.

  Example 1: The Owner proposes to install a "buried telephone cable" within the JUA/CCUA area that is limited to "four circuits of open wire;" the permit would not be stamped "Freeway Permit" as the new buried cable is not consistent with the rights covered in the JUA/CCUA.

© 1994-2025 California Department of Transportation. All rights reserved.

Example 2: The Owner proposes to install larger conductors going from "60KV" to "115KV" and the JUA/CCUA is for the "transmission of electrical energy;" the permit would be stamped "FOR RECORD PURPOSES ONLY" as the new 115KV conductors are consistent with the rights covered under the JUA/CCUA.

- **Permits for New Longitudinally Installed Facilities Within Freeways** – Provided an encroachment exception is approved to allow a new longitudinal facility within State highway access control rights-of-way in accordance with PDPM Chapter 17, the statutory right conferred by SHC Section 703 for publicly owned sewers, fire hydrants, and streetlights can be waived under the provisions of Civil Code Section 3513. The following provision should be included in all Encroachment Permits issued for new longitudinal encroachments of this type to be installed in an existing freeway:

  > "(Name of persons or entity waiving right), with full knowledge of the provisions and its rights thereunder, expressly waives all right whatsoever under Section 703 of the Streets and Highways Code, which provides that publicly owned sewers in any freeway shall be relocated when necessary at the expense of the Department."

  - **Wired Broadband** – California Assembly Bill 1549 (2017), an act to add Section 14051 to the Government Code relating to highways, requires that the Department notify broadband companies of transportation projects that are suitable for installation of wired broadband. (See the Department's broadband guidelines.) The Utility Coordinator shall have no responsibility during the installation of wired broadband under Government Code Section 14051.

13.13.06.00 Utility Franchise Reviews

Pursuant to SHC Section 682, all cities and counties have the right to grant franchises within the right of way of a conventional State highway subject to the conditions and limitations provided in Sections 682 through 695. The district shall take steps to establish liaison with all city councils and county boards of supervisors within the district so the district will receive notice of all pending applications for utility franchises coming before each city council and county board of supervisors. It is the district's responsibility to determine whether the requested franchise will affect any existing or contemplated State highway or freeway.

© 1994-2025 California Department of Transportation. All rights reserved.

13.13.06.01 District Review of Franchise Applications

If the requested franchise is to be situated in or serve in an area in which there are no State highways or freeways, whether existing or contemplated, the district shall, without referral to Headquarters RW, advise the city or county that the Department has no objection to granting the requested franchise. The district, in each case, shall forward a copy of the related correspondence to Headquarters RW.

13.13.06.02 Headquarters RW Review of Franchise Applications

Where the requested franchise is to be situated in or serve an area in which State highways or freeways are located or contemplated, the franchise shall be submitted for Headquarters RW and Legal review. The district must furnish the following information along with the proposed franchise:

- The name of the Utility Owner requesting the franchise.
- A copy of the proposed franchise and applicable ordinance.
- The date of the public hearing.

Initially, Headquarters RW will communicate directly with local representatives of the governmental unit concerned. Copies of correspondence will be sent to the affected district. Headquarters RW will advise the district, in writing, of action or disposition to be taken. The district will then handle the matter on the local level with the municipality.

© 1994-2025 California Department of Transportation. All rights reserved.

13.14.00.00 – FEDERAL AID PROCEDURES

13.14.01.00 General

Utility relocations on projects with federal participation are generally processed in the same manner and with the same forms as State-only financed projects. The only difference is that FHWA Authorization to Proceed (E-76) and FHWA Specific Authorization (Form RW 13-15) must both be obtained before commencement of any work to qualify for FHWA reimbursement of relocation costs.

It is not intended that this section cover all the detailed requirements for Federal-aid reimbursement of State costs. The Utility Coordinator should review the Code of Federal Regulations (CFRs), in particular 23 CFR 645 and the additional instructions contained in FHWA's "Program Guide Utility Relocation and Accommodation on Federal-Aid Highway Projects."

13.14.02.00 FHWA Alternate Procedure

In accordance with 23 CFR 645.119, the State has been granted authority under the Alternate Procedure process to act in the relative position of FHWA for reviewing and approving arrangements, fees, estimates, plans, agreements, and other related matters required by the CFR as prerequisites for authorizing a utility to proceed with and complete the work.

The State must obtain Federal Authorization to Proceed (E-76) for the project authorizing the use of the Alternate Procedure and listing every utility company for which Federal-aid reimbursement will be sought, with an estimate of the cost of the relocation, before the State may issue a Specific Authorization under the Alternate Procedure process.

Issuance of FHWA Specific Authorization has been delegated to the Regions/Districts except those listed in the following manual section (refer to Section 13.01.02.01).

© 1994-2025 California Department of Transportation. All rights reserved.

13.14.02.01 Nondelegated Relocations

In accordance with 23 CFR 645(b), the FHWA retains approval of relocations under the following four circumstances:

- Utility relocations and adjustments of major transfer, production, and storage facilities such as generating plants, power feed stations, pumping stations, and reservoirs.

- Advance installation of new utility facilities, within the proposed right of way prior to the right of way being purchased or under the State's control to provide for installation of the new facilities in a manner that will meet the requirements of the planned project.

- Utility relocations entirely or partly on right of way FHWA has authorized for acquisition under the hardship and protection provisions of 23 CFR 710.

- Utility relocations when the State and the Owner cannot reach agreement on their separate responsibilities.

Approval of these items must be requested directly from the FHWA through HQ RW. See Section 13.14.07.00 below.

13.14.03.00 Federal Authorization to Proceed (E-76)

FHWA authorization to proceed with utility relocation work must be obtained prior to issuance of a Notice to Owner for all projects proposed for Federal-aid reimbursement. Authorization is obtained by submittal and approval of Form E-76. P&M normally processes all E-76s, but the Utility Coordinator is responsible to provide accurate utility information and ensure the Alternate Procedure is requested.

FHWA must authorize the State to proceed with utility relocations on a project-by-project/owner-by-owner basis before a Specific Authorization to relocate any Owner's facilities may be issued. Any facility relocation or acquisition of replacement right of way the Owner does prior to approval is not Federal-aid reimbursable.

© 1994-2025 California Department of Transportation. All rights reserved.

13.14.04.00 FHWA Specific Authorization to Proceed

The Specific Authorization must be issued before any physical relocation work is commenced or Owner-contracted engineering services are authorized. The Specific Authorization (Form RW 13-15) affirms the need for relocation is justified, liability for the cost is proper, and the Owner's plans and estimate are reasonable for accomplishing the necessary relocation.

When the utility relocation work is to be performed by our highway contractor, and is part of the PS&E, the "RELOCATION COST ESTIMATE" item in the FHWA Specific Authorization (Form RW 13-15) must include a line for Phase 4 (Construction Funding) and show the amount authorized.

The following statement must be added to the "Remarks" section of the Specific Authorization:

> "The proposed adjustment of utility facilities to be performed by the highway contractor is approved. Payment for the utility adjustment will be vouchered through the construction program, therefore, the authorization date for this work will be the date that FHWA approves the construction project.
>
> This memorandum must be attached to the District Certification."

13.14.05.00 Changes After FHWA Specific Authorization Is Issued

Major changes, such as changing from Owner-accomplished work to Owner-contracted-out work, or additional work not shown on the original authorization, will require a supplemental authorization in the same form as the original request (Form RW 13-15). Major changes or additions are not eligible for Federal-aid reimbursement unless authorized.

Minor changes, additions, and deletions do not need supplemental approval; however, to be included under the original authorization, they must be documented by memorandum in the Utility File. The documentation must include a description of the change and revised maps and estimates. Refer to Section 13.06.03.05, Revised Notices.

See Section 13.09.03.00 for discovered work and emergencies.

© 1994-2025 California Department of Transportation. All rights reserved.

13.14.06.00 FHWA Approval of Nondelegated Relocations

Headquarters RW obtains FHWA approval of nondelegated relocations (see Section 13.14.02.00) via transmittal of the ROI package, with attachments, to FHWA. The district is advised of approval of the nondelegated relocations by an endorsement on the FHWA Specific Authorization. Any exception to approval is noted in the Specific Authorization, and the district is required to adhere to all exceptions.

13.14.07.00 FHWA Approval of Utility Agreements

Utility Agreements on Federal-aid projects also require FHWA's approval. Upon execution of the Agreement by the Owner and the Region/District, the Utility Reviewer prepares and approves the FHWA Approval of Utility Agreement (Form RW 13-15) on FHWA's behalf.

13.14.07.01 Buy America Clauses

Buy America Clauses must be included on any Utility Agreement, in which the project is eligible for Federal Funds. Regardless if there is Federal Aid on the project or not, if the project at some point could receive Federal Funds (NEPA document on the project), Buy America Clauses must be used in the Utility Agreement. (See 13.07.03.05 for Buy America Clauses.) See Section 13.15.00.00 for Buy America information.

13.14.08.00 Special Federal Reimbursement Procedures

Department procedures have been designed to provide a uniform approach to all transactions regardless of whether or not there is federal funding in the project. This reduces procedural complexity and ensures a more consistent process with Owners. Special rules affect Federal-aid reimbursement and approval requirements and the Utility Coordinator must be aware of these to minimize loss of federal funds where applicable.

13.14.08.01 Nonreimbursable Costs

Federal reimbursement of State costs is limited to the more restrictive requirement of either State law or Federal regulation. If State law, e.g., payment of interest, is more liberal, reimbursement is limited to the Federal standard. If State law, e.g., required depreciation credits (see 13.04.05.06), is stricter, State rules must be followed. Each element of cost or credit must be

© 1994-2025 California Department of Transportation. All rights reserved.

individually reviewed and decided. Fortunately, there are only a couple of items, as discussed below, where the Federal rule is more restrictive and therefore controlling for reimbursement.

- **Interest During Construction** – FHWA regulations prohibit payment of interest on funds used during construction or borrowed by the Owner (a.k.a. AFUDC). State law recognizes interest during construction as a valid charge to the job, with some restrictions. Interest during construction shall be deleted from the voucher for FHWA reimbursement (coded as nonreimbursable).

- **Additional Ducts** – There is a Statewide understanding with telephone Owners to allow spare ducts under certain conditions (see Section 13.04.07.09). FHWA will reimburse only for the number of ducts required to convert existing aerial facilities to underground facilities, plus one spare duct. The cost of nonparticipating ducts must be set out in the billing, with final cost determination identified during the audit process and excluded in the Federal voucher.

13.14.08.02 Nonreimbursable Costs – Work Completed Prior to Authorization

The following are ineligible for Federal-aid reimbursement:

- All costs incurred prior to FHWA Authorization to Proceed (approved E-76).

- Utility relocation engineering done by a consulting engineer completed in advance of FHWA Specific Authorization.

- Relocation work done by newly identified Owners covered by Notices issued subsequent to the RW Certification date.

© 1994-2025 California Department of Transportation. All rights reserved.

13.14.08.03 Service Disconnects and Removals

Ordered utility service disconnects and removal of meters and meter set assemblies should be handled as right of way clearance items as this qualifies the associated costs for Federal-aid reimbursement. Payments to Owners should be coded with the appropriate object code for a federal-aid reimbursable demolition or clearance cost.

Federal regulations prohibit reimbursement for the cost of removing facilities under normal utility relocations unless salvage credits are received by FHWA for the removed facilities (see Section 13.04.07.09).

13.14.08.04 Owner Retention of Records

Section 23 CFR 645.117(i)(3) requires that the Owner retain all records and accounts relating to reimbursed relocation costs for a period of three years from date of final payment to Owner. This requirement exists for State-only funded projects as well.

13.14.09.00 Owner's Consulting Engineer Agreements

The Owner's employees normally do utility relocation engineering. When a Utility Owner is not adequately staffed to pursue the necessary preliminary engineering work for the utility relocation, a consultant may perform the required engineering if the Owner and the consultant agree in writing on the services to be provided and the fees and arrangements for the services, and if the fees charged are not based on a percentage of the cost of relocation.

When a consultant is used to provide relocation engineering services, the district ensures the Owner's consultant contract is administered in accordance with 23 CFR 172 and 48 CFR 31. The consultant selection process should closely follow the State's own consulting engineer selection process.

The Owner's continuing contractor may be used where the district has determined it is cost effective to do so and verified that the contract between the Owner and the contractor is in writing and that similar work is regularly performed for the Owner under the contract at reasonable costs.

If the amount to be paid under the consultant agreement exceeds $100,000, the agreement must be submitted to Audits for preaward evaluation.

© 1994-2025 California Department of Transportation. All rights reserved.

All consultant agreements should:

- identify the maximum fee to be paid under the agreement,
- include a fee schedule,
- provide for inspection by the State of all books and records,
- require the three-year retention of those books and records,
- contain a description of the work to be performed, and
- include the following clause:

  "The Contractor agrees that the Contract Cost Principles and Procedures, 48 Code of Federal Regulations, Chapter 1, Part 31 shall be used to determine the allowability of individual items of cost. Any costs for which payment has been made to Contractor that are determined by subsequent Caltrans audit to be unallowable under these regulations, are subject to repayment by Contractor to State."

13.14.09.01 Nonapplicability of Federal EEO and Wage Rate Laws

FHWA has advised the State that federal laws relating to equal employment opportunities, wage rate requirements, and other similar requirements for recipients of federal aid do not apply to Owner-let contracts. This exception does not relieve the Owner of meeting federal laws that would apply irrespective of whether federal assistance is involved.

13.15.00.00 – BUY AMERICA

13.15.01.00 General

Buy America regulations have been updated, which include the following references consisting of 2 CFR 184 Buy America Preferences for Infrastructure Projects, 2 CFR 200.322 Domestic Preferences for Procurements, and Memo M-24, "Implementation Guidance on Application of Buy America Preference in Federal Financial Assistance Programs for Infrastructure," from the Office of Management and Budget, Executive Office of the President, dated October 25, 2023. Additional requirements are implemented in the Build America, Buy America (BABA Act). The reference documents broadened how Buy America is applied to federally funded highway construction projects. Previous MAP-21, section 1518, amended 23 U.S.C. 313, and the new Buy America regulations are to apply to all contracts eligible for Federal Assistance carried out under a NEPA document, regardless of funding, if at least one contract has Federal Funds.

13.15.02.00 Buy America Requirements

The Buy America requirements stated in 23 U.S.C. 313, 23 CFR 635.410, 2 CFR 184, 2 CFR 200.322, Memo M-24, and the Build America, Buy America (BABA Act) apply to all iron, steel, construction materials, and/or manufactured products that are permanently incorporated in a project. The provision requires that all manufacturing processes be done domestically. Manufacturing begins with mixing and melting and continues through the coating stages. "Coatings" include epoxy coatings, galvanizing, painting, or any other coating that protects or enhances the value of the material.

© 1994-2025 California Department of Transportation. All rights reserved.

13.15.02.01 Materials Subject to Buy America

For utility relocations, the following materials are subject to the Buy America requirements:

- Iron & Steel
- Construction Materials
- Non-ferrous metal
- Plastic and polymer-based products
- Glass
- Fiber Optic Cable
- Optical Fiber
- Lumber
- Drywall
- Engineered wood
- Manufactured Products

13.15.02.02 Materials Not Subject to Buy America

The following is a list of materials that are **NOT** subject to the Buy America requirement (pending further guidance):

- Temporary Utility Relocation – A temporary utility relocation is generally subject to the schedule necessary to accomplish the scope as defined by the NEPA document. A temporary utility relocation is one that is needed to allow the roadway construction to proceed but is not required to remain in its relocation as a result of the ultimate roadway improvement. For example, if the scope requires the sequential completion of six separate construction contracts, theoretically, a temporary utility relocation could remain in place prior to commencement of the first construction contract and extend beyond completion of the sixth construction contract prior to its final placement. A temporary utility relocation can also be established if the contract specification or plans require that the steel or iron material used on the project either must be removed at the end of the project or may be removed at the contractor's convenience.

© 1994-2025 California Department of Transportation. All rights reserved.

13.15.03.00 Buy America Certification

The State requires that the Utility Owners provide reasonable assurance that utility materials subject to the Buy America requirements are compliant prior to permanent installation. The State will accept either the Utility Owner's Self Certification, or the Vendor/Manufacturer's Certification.

13.15.03.01 Utility Owner Self-Certification Method

The Utility Owner may self-certify that materials used in the relocation are Buy America Compliant. See Section 13.07.03.07 (VII-3a) for specific Utility Agreement clause. The following provisions must be met by the Utility Owner:

1) Utility Owner will source materials that comply with Buy America requirements.

2) Utility Owner will certify compliance via a contract provision in the Utility Agreement.

3) Utility Owner will not be required to provide copies of supplier certifications i.e. Mill Test Report (MTR) or other utility owner-signed certifications as part of this Agreement or with the final invoice.

13.15.03.02 Vendor/Manufacturer Certification Method

The Department or Local Agency will enter into a legally binding Utility Agreement (UA) with each Utility Owner on a project-by-project basis. See Section 13.07.03.07 (VII3b) for specific Utility Agreement clause. The following provisions must be met by the Utility Owner:

1) Utility Owner will source materials that comply with Buy America requirements.

2) Utility Owner will demonstrate Buy America compliance by one of the two (2) following methods (or a combination of both):

    a) Utility Owner will collect written certification from the vendor(s);

        i. The written certification will be signed by the vendor on company letterhead, or other acceptable documentation, signed by an authorized representative of the vendor and

© 1994-2025 California Department of Transportation. All rights reserved.

will declare that all supplied materials subject to the Buy America provisions are fully compliant.

b) Utility Owner will collect written certification from the factory(ies);

i. The MTR issued and signed by the initial fabricator stating that the materials subject to Buy America were melted and manufactured in the United States.

ii. Other written statements on company letterhead, or other acceptable documentation, signed by an authorized representative from the manufacturers providing any additional treatment to the fabricated material (such as blasting, galvanizing or painting) will state that all treatment processes occurred in the United States in accordance with FHWA guidelines.

3) All documents obtained to demonstrate Buy America compliance will be held by the Utility Owner for a period of three (3) years from the date the final payment was received by the Utility Owner and will be made available to Caltrans or FHWA upon request.

4) One (1) set of copies of all documents obtained to demonstrate Buy America compliance will be attached to, and submitted with, the final invoice.

5) If no materials were subject to Buy America, the Utility Owner will indicate that as part of the final invoice submittal (i.e., with a separate memo, rubber stamp on the invoice or other reasonable method).

13.15.03.03 Additional Provisions Common to both Certification Methods

1) No certification (demonstration of Buy America compliance) is required for any materials or parts that are not subject to Buy America requirements for any reason, including, but not limited to, application, material composition, and the minimal use threshold exclusion.

2) Utility Owners will bear responsibility to ensure all materials permanently incorporated into their utility relocations are either compliant or not required to be compliant.

© 1994-2025 California Department of Transportation. All rights reserved.

3) Where a Utility Owner purchases manufactured products from a vendor for use by the owner in its relocation activities, a certification from the vendor to owner that the materials meet Buy America requirements shall be deemed to constitute compliance by the Utility Owner.

4) Where a Utility Owner obtains construction services in connection with utility relocation work and the provider of construction services is also responsible for provision of manufactured products used in connection with that project, a certification from the provider of construction services that the materials provided by that construction services provider meet Buy America requirements shall be deemed to constitute compliance by the Utility Owner.

13.15.04.00 Exclusions to the Buy America Requirements

The Buy America requirements will **not** apply in the following cases:

- Existing materials that are relocated from one location to another within the project limits

- Any associated materials (including spare materials) required for maintenance

- Any materials necessary to repair equipment that was discovered or damaged during construction and requires immediate action to restore to safe conditions or to minimize adverse public impact (i.e.: discovered work)

- Any necessary materials associated with a temporary utility relocation

- If the utility relocation effort is not eligible for reimbursement with federal funds. (i.e., If the Utility Owner is required to pay for 100% of the entire relocation effort, then the materials associated with that relocation are not subject to Buy America. However, all work must remain separate and cannot be accomplished under a utility agreement or contract that includes work that is eligible for Federal funds.)

© 1994-2025 California Department of Transportation. All rights reserved.

13.15.04.01 De Minimis

It is up to the Utility Owner to declare compliance with the minimal use threshold exclusion. Non-domestic iron, steel, construction materials, and manufactured products may be used if the cost of such materials do not exceed the lesser of $1,000,000 or 5% of total applicable costs for the project. The De Minimis equation is calculated according to the following formula:

$$\frac{\text{Combined Cost of Only those Materials that are Subject to Buy America } \textbf{and} \text{ are Non-Compliant (limited to the individual UA)}}{\text{Total Utility Material Cost (cited in the individual UA)}}$$

See Section 13.07.03.07 (VII-5) for specific Utility Agreement clause.

13.15.04.02 Buy America Compliant Materials Increase Cost by at Least 25%

Per 23 CFR 635.410, 2 CFR 184, 2 CFR 200.322, Memo M-24, and the Build America, Buy America (BABA Act), the work to be performed under the utility agreement may include foreign iron and steel products if the cost of Buy America compliant materials will cause the cost of the work to increase by at least 25%. To determine applicability of this provision, one of the following two procedures shall be used:

1) If the Utility Owner will use a contractor to perform the work included in the utility agreement, the following procedures apply: Demonstration of meeting the 25% excess cost requirement must be accomplished by receiving two separate bids each from at least two qualified contractors for the work. Requests for bids from the qualified contractors must conform to 23 CFR 635.410(b)(3), 2 CFR 184, 2 CFR 200.322, Memo M-24, and the Build America, Buy America (BABA Act). One bid from each contractor will include a cost of performing the work described in the utility agreement using Buy America compliant material and the other bid will include a cost for the same work assuming foreign materials. If the bid with the Buy America compliant materials is at least 25% greater than the bid that includes foreign material, then the contract can be awarded to the lowest bid based on materials that are not compliant with Buy America.

© 1994-2025 California Department of Transportation. All rights reserved.

2) If the Utility Owner will perform work in the utility agreement with its own forces, the following procedures apply: Demonstration of meeting the 25% excess cost requirement must be accomplished by receiving two separate bids from vendors or manufacturers listing the cost of the Buy America compliant materials on one bid document and listing the cost of non-compliant materials on a separate bid document. The Utility Owner will take the cost of the Buy America compliant materials and use it to create the total estimated cost of the work included in the utility agreement. The Utility Owner will do the same with the cost of the non-compliant materials. If the cost of the work included in the utility agreement with Buy America compliant materials is at least 25% greater than the cost using the materials that are not compliant with Buy America, than the non-compliant materials may be used.

13.15.05.00 Waivers to the Buy America Provisions

The Utility Company, through the STATE may request a waiver if, the Buy America provisions are inconsistent with the public interest or iron and steel are not produced domestically in sufficient quantities and at a satisfactory quality. Waivers are allowed for specific materials on a project-by-project basis. There are nationwide waivers, but these are extremely rare and not advisable. A Waiver is a tool of last resort when all other avenues have failed.

13.15.05.01 Requirements

A Waiver request shall include:

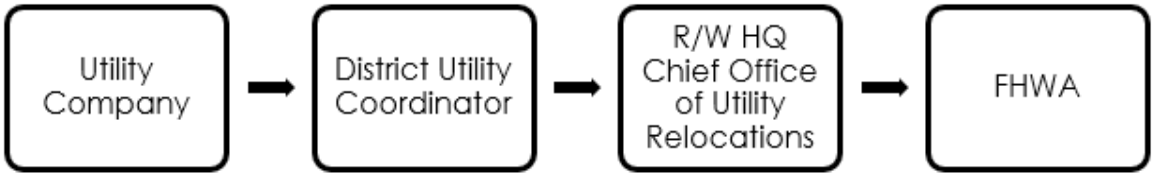
1) Federal-Aid/ARRA Project Number
2) Project Description
3) Project Cost
4) Waiver item cost
5) Brief description of the item's function
6) Country of origin for the product
7) Reason for the Waiver

The reason for the Waiver must give sufficient detail and analysis on why the specific material cannot be produced domestically, in sufficient quantities, and at satisfactory quality.

© 1994-2025 California Department of Transportation. All rights reserved.

13.15.05.02 Process

The following flowchart outlines the sequence of steps that involves a Waiver request from inception to approval.



The Waiver request shall be developed and written by the Utility Company and submitted to the District Utility Coordinator. The District Utility Coordinator will forward the request to RW HQ Chief, Office of Utility Relocations. HQ will review the request for completeness and forward to FHWA. The process can take anywhere from six (6) to twenty-four (24) months depending on the complexity of the project, thoroughness of the request, and review by FHWA.

For more detailed information on waivers, please see the FHWA website.

13.16.00.00 – DELEGATIONS

13.16.01.00 Delegations of Authority

As referenced in Section 2.05.01.00, the delegation matrix for Utility Relocations is noted below. The delegation matrix reflects the associated policy and RW Manual reference for each delegated item. The matrix also distinguishes whether an item is delegated to the District, Headquarters (HQ), or FHWA, along with the lowest level of sub-delegation authorized.

Reference (Statutory, WBS, Director's Policy, Deputy Directive, etc.)	**RW Manual Section**	**Responsibility**	**Delegation**	**Lowest Level of Sub-Delegation**
	13.01.01.01 13.05 (all)	Report of Investigation (ROI) Package Approval – All*	District	Senior RW Agent
	13.01.02.01	Notice to Owner Approval*	District	Senior RW Agent
	13.01.02.01	Utility Agreements Approval*	District	Senior RW Agent
	13.07.03.00	Non-Standard Clause Approval	HQ	Supervising RW Agent
	13.11.02.01 13.11.04.00	Joint Use Agreements (JUA) Approval	District	RW Manager
	13.11.02.02 13.11.04.00	Consent to Common Use Agreements (CCUA) Approval	District	RW Manager
	13.11.07.03 16.07.02.00	Acquired in State's Name, Director's Easement Deeds Over $15,000 (CTC Approval Required)	District	RW Manager

* Except those falling within the scope of 23 CFR 645.119(b).

14.01.00.00 – INTRODUCTION

14.01.01.00 General

This chapter defines and describes the nature, uses, and procedures of R/W Certifications essential for project delivery. For purposes of this chapter, the term project certification refers specifically to the R/W Certification.

14.01.01.01 Definition

R/W Certification is a written statement summarizing the status of all right of way related matters pertaining to a proposed construction project. The purpose of the R/W Certification is to document the construction project is ready for advertising and states:

- Real property interests have been, or are being, secured.
- Physical obstructions including utilities and railroads have been or will be removed, relocated, or protected as required for construction, operation, and maintenance of the proposed project.
- Right of way acquisition and relocation assistance program requirements were conducted in accordance with applicable federal and state laws and procedures.

The Federal Highway Administration (FHWA), pursuant to 23 CFR 635.309, recognizes all four certification levels utilized by the State. These four levels are as follows: Certification No. 1, Certification No. 2, Conditional Certification No. 3, and Special Certification No. 3 with Work-Around (Special Certification No. 3W). Under the Federal rule, projects may be advertised, bid proposals opened, and construction contracts awarded using a Certification No. 1, Certification No. 2, or a Special Certification No. 3W pursuant to 23 CFR 635.309(c)(ii)(iii)(iv).

Additionally, a Conditional Right of Way Certification No. 3 for advertisement only (23 CFR 635.309[c][i][iii][iv]) may be used on a limited basis when believed to be in the public interest. This Conditional Certification No. 3 only allows for the project to be advertised; construction bids MAY NOT be opened until the certification is upgraded to a Certification No. 1 or No. 2. Approval of a Conditional Certification No. 3 is limited to an exceptional circumstance that warrants advertising prior to completion of right of way acquisition activities. Criteria for using these certifications can be found in Chapter 14.02.00.00.

© 1994-2025 California Department of Transportation. All rights reserved.

14.01.02.00 Projects Requiring R/W Certification

The DDC-R/W must certify the following types of projects.

- Any project for which Plans, Specifications, and Estimates (PS&E) are submitted to the district/region Office Engineer for contract advertisement and award.
- Any project where federal funds participate in any phase of the project.
- Any project that is authorized for district/region contract advertisement and award.
- Any project to be undertaken by day labor, casual labor, or force account.

14.01.03.00 Projects Exempt From R/W Certification

Projects conducted solely for the purpose of emergency reopening only of transportation facilities under authority of Government Code Sections 14120-23 are exempt from the formal R/W Certification processes if no PS&Es are prepared. However, a R/W Certification will be needed if the District is planning on seeking Federal Reimbursement. This can be done concurrently with the NEPA.

For permanent repair projects, Right of Way will follow the traditional procedures for delivery.

14.01.04.00 Responsibility for R/W Certification

The DDC-R/W is responsible for certification of the right of way to the Project Manager for project advertisement or contract award.

District/Region R/W confirms or rescinds certification to the Project Manager, and district/region Office Engineer.

All matters affecting the validity of a previously issued R/W Certification shall be brought to the attention of the Project Manager to determine the need to update or rescind the original certification.

© 1994-2025 California Department of Transportation. All rights reserved.

14.01.04.01 Input to PRSM and ROWMIS

On the date the district/region R/W certifies the project, the district/region shall enter the R/W Certification number and date into PRSM and ROWMIS (ROWMIS Data Sheet Tab; see R/W Manual Chapter 3 for details).

14.01.04.02 Certification Rescinded by District/Region

When a district/region rescinds a R/W Certification, for reasons such as design changes prior to advertising or discovery of facts that otherwise make the certification invalid, it shall remove the certification date from PMCS. The District/Region Project Manager, district/region Office Engineer, and FHWA, when necessary, shall be notified in writing that the R/W Certification has been rescinded.

14.01.04.03 Project Canceled by Office Engineer

When the district/region Office Engineer cancels a project, it will notify the DDC-R/W in writing. District/Region R/W shall rescind the R/W Certification, remove the certification date from PMCS, and enter a new certification target date (Month-Year) if necessary.

14.01.05.00 Age of Certification

For projects not yet listed for advertising, district/region R/W shall update any certification over one year old, and when requested by the Project Manager or district/region Office Engineer. (See Section 14.01.08.00 also.)

14.01.06.00 Unusual Project Circumstances

"Unusual circumstances" are any deviations from the requirements or standard practices outlined in this chapter. When there are unusual circumstances in a project, the district/region shall forward a full explanation of the circumstances to HQ R/W for approval prior to certification and at least one month prior to the project advertising date. The approval should be included in the certification or in an attachment and made a part of the certification.

© 1994-2025 California Department of Transportation. All rights reserved.

14.01.07.00 Modifications to R/W Certifications

District/Region R/W shall not take action on verbal requests to alter significant factual data in a certification until the Project Manager or District Office Engineer confirms the request in writing. The request must be attached to and made a part of the original certification. Revised certifications must have the word "Revised" clearly stamped and centered at the top of the front page.

14.01.08.00 Project Design Changes

A R/W Certification must be updated when the project design changes in any project phase, even if the right of way requirements have not changed. In cases of design changes that affect right of way, the Project Manager should allow at least six months prior to the new scheduled project advertising date to assure timely clearance of the new certification.

14.01.08.01 Split and Combined Projects

Occasionally a large project that has been certified under a single EA is split into several smaller projects, which are then advertised under separate EAs. In these cases, a separate (and new) R/W Certification is required for each project EA. Two or more separately advertised projects shall not be combined in a single certification. Each advertised project must have a separate certification matching the specific project PS&E.

Conversely, when two projects are combined into one project for advertising and construction, a new R/W Certification must be prepared for the combined project being advertised. (See Section 14.03.02.00.)

14.01.09.00 Local Public Agency (LPA) Work for State Project

A construction project on a state highway may include work on LPA streets or roads where the LPA acquires some or all of the required right of way. This includes tax measure and privately funded projects (see Section 14.01.09.02). Those parcels the LPA acquires for the construction project on a state highway, or as part of the state's contract, must be included in the district/region's certification. Any other applicable work done by an LPA must also be included, such as clearance, utility relocation, and relocation assistance. Complete documentation of the LPA acquisitions and certification shall be retained in the district/region certification file.

© 1994-2025 California Department of Transportation. All rights reserved.

14.01.09.01 Certification for Local Streets and Roads Projects

Refer to Local Assistance Procedures Manual Chapter 13 for certification procedures for Local Street and Road projects with federal funding.

14.01.09.02 Certification of Specially Funded Projects on State Highway System

Caltrans is required to accept the completed project (tax measure, locally or privately funded) into the state highway system if the project was Caltrans approved and the right of way was acquired and the project was constructed in accordance with Caltrans' practices. (See R/W Manual Chapter 17 for details for certification of this project type.)

14.01.10.00 Certifications and Hazardous Waste

Currently there is no requirement for R/W to certify the status of hazardous waste on a project. Typically, Project Development's Attachment A in the PS&E package addresses and attests to the existence and mitigation of hazardous waste.

14.01.11.00 R/W Certification for Design-Build Projects

Design-Build (D-B) contracting is a method of project delivery where the design and construction phases of a project are combined into one contract. The D-B method allows the contracting agency to advertise the project for construction with conceptual plans, typically at 30% design, and having the design-builder complete the design. The risk and responsibility for design details are shifted from the Department to the design-builder. The D-B contract is awarded on either a low-bid or best-value basis. Significant time savings can be achieved through the D-B process compared to the typical Design-Bid-Build method in which the design and construction must be performed sequentially.

The D-B method accelerates project delivery by allowing the design and construction teams to work together early on, enabling the sharing of expertise, minimizing risk of design errors, and improving the constructability of the design. The D-B delivery method has resulted in many State DOTs reducing risks and shortening project delivery by at least one to two years.

© 1994-2025 California Department of Transportation. All rights reserved.

Close scrutiny of a D-B project is necessary due to the phased delivery of many of the R/W deliverables. R/W Certification provides the same assurance as Design-Build-Bid projects: acquisition of right of way and the relocation of displaced persons and/or businesses has been completed in compliance with state and federal regulations, including the Uniform Act, and all R/W clearance, utility, and railroad work has been completed or, all necessary arrangements have been made (e.g., Utility Notices issued, demolition contracts awarded, and railroad contracts executed) as required for construction, operation, and maintenance of the proposed project.

Certification of D-B projects will follow the policies and procedures outlined in the D-B sections below and will comply with all other provisions in Chapter 14 when applicable.

14.01.11.01 Design-Build Right of Way Statement

The traditional Design-Bid-Build (D-B-B) delivery method requires a R/W Certification prior to advertising the project for bid. The R/W Certification is an important component of the PS&E package. The PS&E package is the instrument for advancing the Design-Bid-Build project to advertisement. However, with a D-B project, the submittal of a R/W Certification is typically not feasible prior to the release for the Request for Proposals (RFP). In order to proceed with advertisement on a D-B project, a provision in the Code of Federal Regulations allows for advertisement without the requirement of a R/W Certification. In accordance with 23 CFR 635.309(p)(1)(v), a statement must be received by Headquarters Division of Right of Way and Land Surveys which states all right-of-way work has been completed, or that all necessary arrangements will be made for the completion of right of way, utilities, and railroad work.

The Right of Way Statement will be prepared by the District and will provide the status of the project right of way at the time of advertisement. The statement will include the following:

1. Project description and location;
2. Status of the Environmental Document;
3. Statement certifying that all right of way work has been or will be completed in accordance with all state and federal laws (including the Uniform Act) and in accordance with Caltrans policies and procedures.
4. Status of all right of way activities including acquisition of property rights, railroad facilities, utility relocations, compliance with the Relocation Assistance Program, Cooperative Agreements, environmental mitigation, Buy America, etc.;

© 1994-2025 California Department of Transportation. All rights reserved.

5. Statement indicating the right of way plan and technical provisions have been included in the RFP.

The statement will be forwarded to Headquarters Division of Right of Way and Land Surveys for approval and, if required, forwarded to FHWA for review and approval. An example of the Right of Way Statement is provided as Exhibit 14-EX-14 (internal Caltrans link).

14.01.11.02 R/W Certification Flexibilities for Design-Build Projects

Right of Way acquisition and utility relocations are often perceived as the greatest risk component in a project's schedule. Construction of the project is dependent upon the availability of right of way. In order to expedite the right of way process for D-B projects, a project can be broken into phases or segments. Unlike Design-Bid-Build projects where right of way clearance is required along the entire corridor prior to certification, for D-B projects the right of way can be certified based on these phases or segments. In accordance with 23 CFR Section 710.309, a D-B project may be authorized for construction in phases or segments as right of way for an individual property or a group of properties becomes available. The right of way clearance for the phases or segments of a D-B project must match the accompanying Release for Construction (RFC) (i.e. the construction package) for that particular phase or segment. Per Department policy, construction cannot begin on any portion of work identified within a plan set (RFC) until all of the right of way activities for that Plan set (RFC) are complete and certified. If any right of way activities are incorporated into the D-B Contract, the design-builder is expected to fully comply with all of the specific requirements related to right of way acquisition and certification as stated in the FHWA regulations 23 CFR Section 710.309.

Flexibility in delivering the right of way is one of the greatest advantages of a D-B project. Parcels that are considered critical to construction, regardless of their location on the proposed route can be targeted. A nonlinear progression of right of way acquisition allows for the potential for construction to commence while design continues on other segments of the project. As a result, sections of a project may be in different stages of the right of way process. Appraisals, acquisitions, RAP, utility relocations, railroad coordination, demolition & clearance, and planning & management/coordination can occur simultaneously. Therefore, it is necessary to develop a strong right of way team and an efficient process in order to successfully handle multiple aspects of right of way delivery. Involving the right of way team early in the design stage of a D-B project is critical to developing a successful D-B

© 1994-2025 California Department of Transportation. All rights reserved.

program. It is the responsibility of District R/W to advise the D-B Team to develop, to the extent possible, parcel delivery packages that are contiguous and/or grouped within close proximity, as this increases the chances of advancing a project to construction in an efficient and timely manner.

14.01.11.03 R/W Certification Process for Design-Build Projects

Processing certifications for D-B projects is very similar to certifying Design-Bid-Build projects. Criteria for certifying D-B projects remain the same. The distinction between certifying D-B projects vs. Design-Bid-Build is the submittal of multiple certifications due to segmented delivery of right of way.

- At a minimum, each RW certification must be consistent with 100% design plans for construction and include all project RW parcels and involvements (including all utility and railroad involvements) as defined by the construction package (RFC).
- Typically, 100% plans are completed 3 weeks prior to the RFC which will allow adequate time for HQ and FHWA final review.
- However, early involvement/pre-reviews of the draft RW Cert is expected by the PDT including HQ prior to final submittal, particularly the first RW Cert submittal.

The Design Build, DB Project Delivery method requires that DB contractor submit a Release for Construction Plan set for each portion of work on the project. This in turn requires that all RFC Plan sets have a separate Certification Package that aligns with work being to be performed in that Release for Construction. There will be instances where subsequent certifications could overlap post mile limits within the project that have already been certified, but for a different construction purpose.

Planned right of way limits will be identified in the Right of Way Acquisition Maps which are provided in the Release for Proposal. Scheduled delivery of right of way to the D-B Contractor is outlined in the Technical Provisions included in the RFP. Typically, parcels are segmented, or grouped, into delivery packages. As a result, several certifications will be processed throughout the D-B project. When a certification is submitted for approval, it should be crossed referenced with the parcel groups identified in the Technical Provisions. This is to ensure that the certification includes all the right of way parcels scheduled to be delivered to the D-B contractor. Any delays in providing access to scheduled right of way parcels may result in substantial costs due to potential D-B Contractor delay claims.

© 1994-2025 California Department of Transportation. All rights reserved.

Example:
A RFC is submitted to perform construction of a sound-wall. All permanent and temporary construction easements have been acquired as needed for construction of the sound-wall. A Certification for these parcel acquisitions, (Cert Package A) can be submitted for approval. Also, within these same project limits, there are utility conflicts that require relocation and to be relocated by the DB construction contractor at a future date, and not in conflict with the construction of the sound-wall. However, some of the utility agreements for these relocations are not yet executed. Once the Utility agreements are executed there will be a new RFC describing that work, then a subsequent Certification, (Package B) can be submitted for approval.

All the right of way required to complete the work identified in the RFC must be included in the aligning certification package, i.e. the construction of the sound-wall would require that the property rights from all owners be acquired where the sound-wall is to be constructed. It is not feasible to construct a partial sound wall and leave an owner(s) property unsecured because the rights of an adjacent owner have not been secured.

Certifications for D-B projects should meet the standard requirements for Certification No. 1 and Certification No. 2 levels. Due to right of way flexibilities afforded with D-B projects, the use of a Conditional Certification No. 3, or a Special Certification No. 3 with Work-Around is negated. If it is determined a Special Certification No. 3 with Work-Around is needed, HQ will review and may approve on a case-by-case basis. Per 23 CFR 710.309, the decision to advance a right of way segment to construction shall not impair the safety, or be coercive in the context of 49 CFR 24.102(h) with respect to unacquired or occupied properties within the same segment or adjacent segments. Additional care must be taken to ensure that owners of unacquired parcels are not unduly inconvenienced or harmed as a result of the design-builder's construction activities.

FHWA approval may be required on D-B certifications, regardless of the certification level achieved. The Project Oversight Agreement (POA) delegation matrix will outline if FHWA's approval is needed.

© 1994-2025 California Department of Transportation. All rights reserved.

14.01.11.04 R/W Certification Document Format for Design-Build Projects

The R/W Certification format for D-B projects is very similar to the standard format used for Design-Bid-Build projects. The only difference is the initial and subsequent certifications for a D-B project will provide a means for tracking the progress of the right of way deliverables. D-B certifications will include the total number of parcels required for the project, the total number of parcels acquired to date, and the remaining number of parcels to be acquired.

R/W Certification for all D-B projects will use the certification format shown in Exhibit 14-EX-13 (internal Caltrans link). Since the format contains specific wording required by FHWA, specifically the Certification statement, changes made in wording could invalidate the certification. Any deviation from the format or the wording must be fully explained in the certification and approved by HQ R/W.

14.01.12.00 R/W Certification for Construction Manager/General Contractor Projects

Construction Manager/General Contractor (CM/GC) is another alternative project delivery method that allows the Department to hire a construction manager during the design process to provide constructability feedback. Visit the CM/GC projects at the CM/GC Program page.

CM/GC has benefits that are not achievable through Design-Bid-Build. These benefits include innovation, risk mitigation, improved design quality, improved cost controls, and optimized construction schedules. More specifically, CM/GC potentially allows for:

- Increased cooperation and coordination among the CM/GC, the designer, and owner;
- Improved constructability of design due to the contractor's input during the preconstruction design process;
- Making design decisions with full consideration of the construction perspective as it relates to types of materials used and means and methods of construction;
- Reduced owner exposure to contractor claims and change orders due to design and constructability issues;
- The ability to procure early work packages in order to mitigate risk of construction price volatility and accelerate project schedule;

© 1994-2025 California Department of Transportation. All rights reserved.

- Reduced project delivery time due to overlapping design and construction.

CM/GC is advantageous when delivering complex projects and is less suitable for straightforward projects that are easily defined and lack schedule sensitivity. Projects that benefit from CM/GC delivery may involve one or more of the following:

- The design is technically complex and/or has several design options that would benefit from contractor input prior to construction;
- There is a high coordination requirement with various stakeholders that has a potential to result in cost overruns and concerns with construction schedule;
- A need exists to prioritize acquisition of right of way parcels, factoring in the contractor's phasing and preferred means and methods;
- Collaboration is required for complex third-party issues (e.g., utilities).
- Project is schedule sensitive;
- Project is considered high risk.

CM/GC delivery consists of two phases: design (preconstruction services) and construction. During the design phase, the construction manager works with the project owner and design engineer (in-house or contracted) to identify risks and provide input on costs projections, phasing, schedule, best practices, and other input that helps to design a more constructible project. When design approaches 60% to 90% completion, the construction manager has the opportunity to bid on the construction package based on a defined scope and schedule. If the price is acceptable to all parties (owner, designer, and an independent cost estimator), the construction contract is executed and the construction manager becomes the general contractor. If the parties cannot agree on pricing, the project may revert to a Design-Bid-Build delivery method.

The rationale behind the CM/GC delivery concept is to allow for contractor collaboration, input, and expertise during project development beginning at the front end of the design process and continuing through construction. Early collaboration and coordination between the designer and the construction manager may lead to innovations that reduce costs, increase efficiency, and accelerate project delivery. This is in stark contrast to traditional Design-Bid-Build where contractors do not participate in the design phase of project development.

Federal rulemaking is currently underway to provide federal guidance for the CM/GC delivery method. These rules will eventually be codified in the Code of Federal Regulations, Title 23.

© 1994-2025 California Department of Transportation. All rights reserved.

14.01.12.01 R/W Certification Flexibilities for CM/GC

CM/GC enables the design team to identify the critical path of right of way and utility issues, allowing for a greater focus on those issues that affect the overall schedule. Like D-B, flexibility in delivering right of way is one of the greatest advantages of a CM/GC project. In order to expedite the right of way process for CM/GC projects, a project can be segmented to target the right of way activities on the critical path. Department policy requires all the right of way for a segmented package to be certified prior to beginning construction. Exceptions to this policy must be preapproved by HQ R/W&LS and, if required, by FHWA.

If any right of way activities are incorporated into a CM/GC Contract (e.g., clearance and demolition), the CM/GC is expected to fully comply with all the specific requirements related to right of way acquisition and certification in accordance with the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, as amended, as well as State eminent domain laws, and the Caltrans Right of Way Manual.

Refer to Section 14.01.11.02 for additional guidance regarding flexibilities.

14.01.12.02 R/W Certification Process for CM/GC Projects

Processing certifications for CM/GC projects is similar to certifying both Design-Bid-Build and D-B projects, with the key distinction that both CM/GC and D-B projects may be certified in increments as the right of way is acquired. A primary objective of CM/GC is to begin construction as early as possible and continue construction with little or no work stoppages while the remaining design deliverables are completed and the right of way certified.

Planned right of way limits are identified in the Right of Way Acquisition Maps as is also typical for a Design-Bid-Build project. Parcels may be segmented or grouped into early delivery packages. Each delivery package will have its own R/W Certification. As a result, multiple certifications may be required during CM/GC delivery until a project's right of way is certified in total.

© 1994-2025 California Department of Transportation. All rights reserved.

Certifications for CM/GC projects should meet the standard requirements for Certification No. 1 and Certification No. 2 levels. When certifying a CM/GC project, the subject line in Exhibit 14-EX-15 (internal Caltrans link) must clearly define the project, explain the right of way delivery plan, and identify how many certification packages will be submitted for the project (e.g., "This is Package 1 of a proposed six certification packages."). If a parcel identified in a specific segment cannot be delivered at the time of certification, the PS&E may need to be modified to reflect the re-scoping of the segmented package. However, due to the work involved with a scoping change, this is not recommended.

In such an instance, HQ R/W&LS may approve a Special Certification No. 3 with Work-Around on a case-by-case basis. HQ R/W&LS retains sole discretion on whether to approve any District/Region request for a Special Certification No. 3 with Work-Around. FHWA approval may also be required on CM/GC certifications, regardless of certification level achieved, based upon the classification of the project. If a project is identified as a Project of Division Interest (PoDI), delegations will be outlined in the Project Oversight Agreement and may require FHWA approval. Also, if the project is located on the Interstate Freeway System, FHWA approval may be required if federal dollars are used in any phase of the project.

In lieu of no federal guidelines pertaining to right of way certifications under CM/GC delivery, the standards for certifying a project involving a work-around shall mimic the criteria for a Design-Bid-Build Special Certification No. 3 with Work-Around. Per 23 CFR 635.309(c)(3)(iii), the decision to advance a right-of-way segment to construction shall not result in unnecessary inconvenience and/or disproportionate injury to those occupants who have not yet moved from the right of way. Furthermore, per 49 CFR 24.102(h), no coercive action shall be taken in order to induce a settlement agreement with occupants who remain in the right of way that is scheduled for (a segmented) certification. Care must be taken to ensure owners of unacquired parcels are not unduly inconvenienced or harmed as a result of the CM/GC's collective construction activities. This includes owners located throughout a project's footprint.

© 1994-2025 California Department of Transportation. All rights reserved.

14.01.12.03 R/W Certification Document Format for CM/GC Projects

The R/W Certification format for CM/GC projects is similar to the standard format used for Design-Bid-Build projects. The only difference is that the initial and subsequent certifications for a CM/GC project will provide a means for tracking the progress of the right of way deliverables. CM/GC certifications will include the total number of parcels required for the project as well as the total number of parcels being certified under each certification.
R/W Certification for all CM/GC projects will use the certification format shown in Exhibit 14-EX-15 (internal Caltrans link). Any deviation from the format or wording must be fully explained in the certification and preapproved by HQ R/W&LS and when applicable, FHWA.

14.01.12.04 R/W Certification Process for Design-Sequencing Projects

Design-Sequencing is a method of contracting that enables the sequencing of design activities and permits each construction phase to commence when design for that phase is complete. The contract for the entire project is awarded to one contractor with a minimum of 30 percent complete plans. This process allows for the successful contractor to work with the designers to incorporate innovative designs and construction methods to improve delivery. With design-sequencing, there is a potential for faster performance, cost savings, and earlier delivery of the project to the public. There have been no projects authorized for this delivery method since 2004.

Currently Caltrans does not have authority to deliver projects utilizing design-sequencing, however, there are local agencies with authority to deliver design-sequencing projects.

Design-Sequencing guidelines for project certification can be found on the Design Sequencing page (internal Caltrans link).

© 1994-2025 California Department of Transportation. All rights reserved.

14.01.13.00 R/W Certification for Additive Bidding Projects

Additive alternate bidding is a technique used by owner agencies to achieve the maximum project scope within an available budget. Under this procedure, the owner-agency defines its critical project scope components as the "base" and defines specific additional components as "alternates" that will be added to the base in a pre-defined order to establish the low bid. The contract will be awarded to the bidder providing the maximum scope within the budget.

Right of Way will certify the base project. Any work being added after the Certification will be work that will not have RW involvement.

14.01.14.00 R/W Certification File

The district/regions shall maintain both a hard-copy and electronic (e.g., ROWMIS) R/W Certification files containing pertinent documents related to the certification of a project, such as but not limited to:

- A diary for recording relevant information about the project.
- The project schedule, project design changes, and correspondence to and from Project Development and the Project Manager.
- Any necessary HQ R/W and FHWA approvals of unusual project circumstances.
- All clearance documents from various R/W functional areas.
- The original certification.

The R/W Certification file shall be transferred to the project file system immediately after the project is certified and the contract has been awarded.

© 1994-2025 California Department of Transportation. All rights reserved.

14.01.14.01 Project File System

District/Region P&M shall maintain both a hard-copy and electronic (e.g., ROWMIS) project file system that contains at a minimum the following documents:

- R/W Data sheet.
- R/W Certification file containing the original R/W Certification.
- Title VI Survey Forms (hard-copy only).
- Other project-related correspondence.

14.01.14.02 Functional Clearances and Record Retention

R/W functional clearances must be documented in the district/region R/W Certification files. The minimum requirement to certify a project is to obtain clearance memorandums from the utilities and railroads functions. Such clearances, together with the original R/W Certification and any pertinent correspondence, will be retained in accordance with the Department's Standardized Records Disposition Schedule for R/W project general files.

© 1994-2025 California Department of Transportation. All rights reserved.

14.02.00.00 – CRITERIA FOR CERTIFICATION

14.02.01.00 Prerequisites

Prior to issuing a R/W Certification, district R/W should review the draft district PS&E and PS&E submittal report to confirm pertinent data. Items to review include:

- Project identification (Co.-Rte.-KP-EA).
- Federal Aid Project Number.
- Location description.
- Work description.
- Special provisions relating to utility, railroad, and right of way clearance coordination.
- Confirmation that right of way construction contract obligations are properly included in the PS&E.
- Confirmation that the right of way as shown on the construction plans is consistent with district R/W records.

14.02.02.00 Submittal of R/W Certification to Office Engineer

At the time of PS&E to DES-Office Engineer (DES-OE), the project will be "Ready to List" (RTL). Right of Way Certifications should be indicated as Certification No. 1, Certification No. 2, or Special Certification No. 3 with Work-Around. If certifying a project with a Special Certification No. 3 with Work-Around, submittal of an updated certification to the DES-OE is required no later than 15 working days prior to the bid opening date. Refer to the Construction Contract Development Guide (CCDG), Section 10 for further information on right of way submittals to the DES-OE.

© 1994-2025 California Department of Transportation. All rights reserved.

14.02.02.01 Submittal of R/W Certification to FHWA

If federal funding is used in any portion of a project, the FHWA, Federal Transportation Engineer (T.E.) must receive a R/W Certification a minimum of 15 working days prior to the FHWA "Authorization to Proceed" (concurrence and award) date. This authorization is given by the T.E. prior to the award of the construction contract. The HQ Budgets Program, Federal Aid Resources, is responsible for forwarding all required certifications to FHWA.
***Use of a Special Certification No. 3 with Work-Around requires conceptual approval through HQ R/W&LS and may also require FHWA approval. See Section 14.02.03.05.**

14.02.03.00 Criteria for R/W Certification

Right of Way Certification formats and sample certifications can be found in the Exhibits section of this chapter. Exhibit 14-EX-03 is used for Design-Bid-Build Certifications, 14-EX-13 for Design-Build Certifications, and 14-EX-15 for Construction Manager/General Contractor Certifications (internal Caltrans link). Eliminating any section in a certification is not permitted; if a section is not applicable to a project, indicate "N/A." Footnotes are provided for instructional purposes only and should be eliminated in the final certification. Nonrelevant language within a section (e.g., non-applicable utility/railroad statements) should be deleted.

14.02.03.01 R/W Certification No. 1

A Certification No. 1 requires the DDC-R/W to certify the state has full legal and physical possession of all right of way, including control of access rights when pertinent, and the right to remove, salvage, or demolish any improvements remaining in the right of way. A Certification No. 1 indicates:

- All work is within existing right of way;

  OR

  Acquisitions are complete (escrows closed and/or Final Orders of Condemnation recorded); AND/OR
- Orders for Possession are effective on **all** remaining unacquired parcels and occupants have vacated; AND
- Relocation assistance and payment requirements have been met; AND
- All necessary material and disposal sites have been secured; AND

© 1994-2025 California Department of Transportation. All rights reserved.

- All R/W clearance, utility, and railroad work has been completed, or all necessary arrangements have been made (e.g., Utility Notices issued, demolition contracts awarded, and railroad contracts executed) for the work to be undertaken and completed as required for proper coordination with the project's physical construction schedule.

14.02.03.02 R/W Certification No. 2

Requirements for a Certification No. 2 are similar to the requirements for a Certification No. 1 except the State's right to occupy and use some remaining parcels is by virtue of a Possession and Use Agreement. Other acquisition documents, such as a permit, license, or an approved R/W Contract with an effective right of possession date also requires the use of a Certification No. 2. If control of a parcel is obtained with a Possession and Use Agreement, or a R/W Contract with an effective right of possession date, funds must be deposited into an escrow account in order to meet the requirements for a Certification No. 2.

14.02.03.03 Conditional R/W Certification No. 3

A Conditional Certification No. 3 may be used on a limited basis when believed to be in the public interest. This level of certification allows a project to advance to bid advertisement; bids cannot be opened, nor a construction contract awarded until the certification is upgraded to a Certification No. 1 or 2. The upgraded certification must be provided to the District Office Engineer a minimum of 15 working days prior to bid opening.

NOTE: A request for a manual exception is required for any deviation from this process (e.g., upgrading a Conditional Certification No. 3 to a Certification No. 3 with Work-Around) and will be considered on a case-by-case basis. HQ/FHWA approval is subject to substantiation and justification of the extraordinary circumstances warranting such deviation.

Every R/W Certification No. 3 requires submittal of a memorandum from the district containing the information below. The memorandum is included as an attachment to the certification when submitting to HQ R/W&LS for review and approval. Approval requirements for a Conditional Certification No. 3 are pursuant to a conditional certification as outlined in 23 CFR 635.309(c)(3)(i)(iii), (iv). Approval of a conditional certifications requires evidence of exceptional circumstances. Meeting project schedules or avoiding escalation of project costs (when considered alone) are not deemed exceptional circumstances as these situations effectively apply to every project.

© 1994-2025 California Department of Transportation. All rights reserved.

- **Full justification** for using a Conditional Certification No. 3, including the very unusual circumstances that require early advertisement.

- **Full explanation** describing the circumstances leading to a Conditional Certification No. 3 along with a realistic date when physical occupancy and use is anticipated and substantiation that such a date can be achieved.

The DDC-R/W shall consider very carefully whether a Conditional Certification No. 3 is really necessary for a specific project. Additional information may be requested from the district to further justify the need for a Conditional Certification No. 3. Reasonable justifications include:

- Weather considerations.
- Construction and seasonal windows.
- Source of funds (other than federal aid) to be lost.
- Construction dollar savings by earlier advertisement.

Requirements for certifying a project with a Conditional Certification No. 3 are similar to requirements for a Certification No. 1 except legal possession or right of occupancy and use of some remaining parcels is not complete. A Conditional Certification No. 3 must contain the following additional information, as applicable:

- A statement that all remaining residential occupants have had replacement housing made available to them in accordance with 49 CFR 24.204 and R/W Manual Chapter 10, Relocation Assistance.
- A statement assuring that occupants of residences, businesses, farms, or nonprofit organizations who have not yet moved from the right of way are protected against unnecessary inconvenience and disproportionate injury or any action coercive in nature.

NOTE: A statement as to these assurances and the date when the contractor may enter the affected property must also appear in the bid documents.

- Identification of Right of Way milestones
- Identification of each parcel on which legal possession, and/or right of occupancy and use, has not been obtained. Appropriate notification shall be provided in the bid documents identifying all locations where state's right of occupancy and use has not yet been obtained.

© 1994-2025 California Department of Transportation. All rights reserved.

- Perform risk analysis and identify controls to mitigate risks to substantiate that the anticipated actual dates when legal possession and physical occupancy and use will be obtained are reliable and realistic.

14.02.03.04 Standard Usage for Conditional R/W Certification No. 3

The CTC Resolution of Necessity is the minimum requirement for a Conditional Certification No. 3. Although this is the minimum requirement, using Resolutions of Necessity to certify a project should only occur in exceptional circumstances such as safety or emergency work.

NOTE: Per CTC guidelines, a Conditional Certification No. 3 is not acceptable for seeking a funds vote from the CTC.

14.02.03.05 Special R/W Certification No. 3 with Work-Around

A Special Certification No. 3 with Work-Around (Certification 3W) allows physical construction of a project to commence while occupants of residences, businesses, farms, or nonprofit organizations remain within the right of way. All occupants of residences must have replacement housing made available to them in accordance with R/W Manual Chapter 10, Relocation Assistance.

HQ R/W&LS and FHWA approval of a Certification 3W is required on all projects, regardless of funding type or location of project. Conceptual approval of the work-around must be obtained by HQ R/W&LS and FHWA in advance of certifying the project for advertising. Delegations are outlined in the Stewardship and Oversight Agreement between FHWA and the Department.

A Special Certification 3W requires submittal of an updated certification to the OE no later than 15 working days prior to bid opening. The certification does not need to be raised to a Certification No. 1 or No. 2, but must be updated to provide any progress pertaining to the work-around parcel(s).

© 1994-2025 California Department of Transportation. All rights reserved.

14.02.03.06 Standard Usage for Special Certification No. 3 with Work-Around

A Special Certification 3W may only be used in the most extraordinary circumstances. A critical need to advertise and award the project must exist. The district is required to identify and consider all risks and controls to mitigate associated with certifying the project with a Special Certification 3W and shall include such risks in the project's risk register. District Right of Way must manage all risks to the best extent possible.

Approval from HQ R/W&LS and FHWA is required whenever a district proposes to use a Special Certification 3W. A memorandum (similar to the requirements outlined above for a Conditional Certification No. 3) requesting approval must be submitted to HQ R/W&LS. The memorandum will describe the extraordinary circumstances and include a targeted plan detailing how the district proposes to achieve targeted dates for possession. Use of a Special Certification 3W shall not be approved unless the district can show substantial guarantees that vacation, possession, and clearance dates are completely realistic and enforceable. The district will submit the memorandum, along with a draft certification, to HQ R/W&LS at least four weeks prior to the required certification date for HQ and FHWA review. HQ R/W&LS will obtain FHWA's approval.

As an example, use of a Special Certification 3W may occur where all parcels have been acquired, or have effective Orders for Possession, and occupants have vacated. However, personal property remains on one or more parcels. In this case, the right of way corridor has not been cleared. The RAP section of the certification must provide an explanation of what personal property remains in the right of way, why it still remains, and how and when it will be removed. Any work-around parcel shall be clearly identified in the certification along with an explanation of the circumstances and a targeted date for providing access to the contractor.

© 1994-2025 California Department of Transportation. All rights reserved.

14.02.03.07 R/W Clearance Under Special Certification No. 3 with Work-Around

Clearance work to be performed is listed on the R/W Certification as usual, except that occupied structures must be noted. Work-around times and how coordination with the contractor can be achieved must be explained in the certification giving reasons therefor and approximate dates for clearance work and how it will be accomplished. (Also see Section 14.03.09.00.)
If **occupied, non-salvable** improvements are to be left in the right of way until occupants have vacated, it is preferable to include demolition in the highway construction contract. The resident engineer must be notified when the improvements have been vacated. Separate demolition contracts running concurrently with the highway contract **cannot** be used.

Appropriate notification shall be provided in the contract special provisions when clearance cannot be completed on **salvable** improvements prior to start of construction on the project (usually because it is not feasible or practical due to economy, remaining occupants, or special operational problems). R/W clearance work that others are to accomplish must be completed prior to start of construction activities, as right of way Phase 9 funded demolition contracts cannot run concurrently with the construction project.

The State may sell salvable improvements in advance of vacation by the occupants. For example, the buyer of the improvements may be asked to agree to start removal of improvements with 10 days' notice and to complete removal within a certain number of days. Adequate time must be included in the work-around provisions to allow for both vacation by occupants and removal of improvements.

If the construction contractor is to demolish or remove any **salvable** improvements, the district R/W Clearance section must follow all procedures in R/W Manual Chapter 12 regarding appropriate levels of approval.

© 1994-2025 California Department of Transportation. All rights reserved.

14.02.04.00 Certification Statements

The following certification statement is used when certifying a project with a Certification No. 1 or a Certification No. 2:

> *"I hereby certify the right of way on this project as conforming to 23 CFR 635.309(c)(1) or (c)(2) and 49 CFR Part 24. This project may be advertised with contract award being made at any time."*

The following certification statement is used when certifying a project with a Conditional Certification No. 3:

> *"I hereby certify the right of way on this project as conforming to 23 CFR 635.309(c)(3)(i), (iii), and (iv) and 49 CFR Part 24. The project may be advertised at any time. The project will be certified as conforming to 23 CFR 635(c)(1) or (c)(2) by ____(date)____."*

The following certification statement is used on the initial submittal of a Special Certification No. 3 with Work-Around:

> *"I hereby certify the right of way on this project as conforming to 23 CFR 635.309(c)(3)(ii), (iii), and (iv) and 49 CFR Part 24. The project may be advertised at any time. Appropriate notification has been included in the bid documents. An updated certification will be provided by __(date)__."*

The following certification statement is used on the "Updated" Special Certification No. 3 with Work-Around, which is required no later than 15 working days prior to bid opening:

> *"I hereby certify the right of way on this project as conforming to 23 CFR 635.309(c)(3)(ii), (iii), and (iv) and 49 CFR Part 24. The project has been advertised and the contract may be awarded. I have confirmed that all appropriate notifications have been included in the bid documents concerning said work-around."*

14.02.05.00 R/W Certification Approval and Distribution

After the certification is prepared in accordance with the current status of the property rights, it must be approved by the DDC for R/W or the delegated representative. R/W will submit the original to Project Development and distribute copies of the certification to the certification file, the Office Engineer (district or region), the Design Engineer, and others as appropriate.

© 1994-2025 California Department of Transportation. All rights reserved.

14.02.05.01 Submitted With PS&E Submittal

The DDC-R/W shall:

- Deliver (address) the R/W Certification to the District Director, Attention DDC-Project Development, at the earliest date possible after receiving the request to certify the project, but no later than two months prior to the proposed advertising date.
- Obtain HQ R/W advance approval for any deviation in the certification requirements as set forth in Section 14.01.06.00.
- Obtain advance approval, through HQ R/W, for authority to issue a "Special Certification No. 3 with Work-Around" and secure concurrence, as necessary, from district Project Development and Construction.
- Coordinate with district Project Development concerning the status and expected delivery date of a certification to meet tentative advertising dates.
- Report immediately to district Project Development any changes in the status and expected delivery date of a certification that will affect the district's ability to meet the scheduled advertising date. Approval of and input into PMCS for certification dates should be coordinated at this time.

  NOTE: For the above two Items, the R/W Project Coordinator should be responsible for reporting on the status of all projects nearing projected delivery dates to the Project Managers.
- Notify the DDC-Project Development, Project Manager, and the district Office Engineer, in writing that a certification is rescinded or changed because of right of way reasons (see 14.01.04.02).
- Make arrangements with district Project Development to notify district R/W when a project is canceled.

When a certification is revised, a Conditional Certification No. 3 is elevated to a Certification No. 1 or a No. 2, or the status of a Certification No. 3 with Work-Around is updated, the district shall provide the following at least 15 working days prior to a bid opening.

- Deliver a copy of the new executed certification to District Office Engineer.
- Provide district Project Development, Project Manager with a copy of the new executed certification.

© 1994-2025 California Department of Transportation. All rights reserved.

- Provide HQ R/W with a copy of the new executed certification if they received the original.
- For projects that have been listed for advertising and include federal-aid R/W or construction funds, provide two copies of the new executed certification to either Headquarters Federal Resources or Headquarters Office of Local Programs, as appropriate. The DDC-R/W shall be responsible for determining which of these units should receive the certification.

14.02.05.02 Not Submitted With PS&E Submittal

If the initial R/W Certification cannot be prepared in time to accompany the PS&E submittal, the DDC-R/W shall provide written notification to the District Director, Attention DDC-Project Development, of the anticipated certification level (No. 1, 2, Conditional 3, or Special 3 with Work-Around) and the realistically anticipated date of certification delivery. This information is required in the PS&E submittal memorandum.

When the certification is ready to be issued, the district should address it to the District Director, Attention DDC-Project Development, and email a PDF copy of the original certification to the District Office Engineer.

For projects where federal-aid construction funds are anticipated, and when the project appears on the "Projects Tentatively Proposed for Advertisement" list, and no later than 15 working days prior to the proposed advertising date, the district should provide two copies of the original certification to either Headquarters Federal Resources or Headquarters Office of Local Programs, as appropriate.

© 1994-2025 California Department of Transportation. All rights reserved.

14.03.00.00 – CERTIFICATION FORMAT/CONTENTS

14.03.01.00 R/W Certification Format

The method of Certification specified under 23 CFR, Part 635.309, Subpart C, entitled "Physical Construction Authorization" is applicable to all federal-aid construction projects. Nonfederal participating projects are certified in the same manner as federal projects.

R/W Certification for all projects is made using the R/W Certification formats shown in Exhibits 14-EX-03, 14-EX-13, and 14-EX-15 (internal Caltrans link). Since the format contains specific wording required by FHWA, changes made in wording could invalidate the certification. Any deviation from the format or the wording must be fully explained in the certification and must be approved by HQ R/W.

14.03.02.00 Description of Project Being Certified

The items in the R/W Certification listed below must match the construction project that is to be advertised.

- Phase 1 Project EA
- Federal Aid Project Number
- District-County-Route(s)
- Post Mile Limits
- Location Description
- Work Description

This data is available in the District Status of Projects and from the PS&E, which will have the most current information. (Also see Sections 14.01.08.01 and 14.02.01.00.)

The Construction and R/W Federal Aid Project Numbers, if available, should be shown on the R/W Certification. If pending, the word "pending" should be shown. If it is verified that no construction and/or R/W federal-aid exists for the project, the word NONE should appear on the certification.

© 1994-2025 California Department of Transportation. All rights reserved.

14.03.03.00 Required Right of Way

All property rights required for a project must be included in the R/W Certification. A state construction project may include work on local agency streets or roads where the local agency acquired some or all of the required right of way. Those parcels acquired by the local agency must be included in the certification.

Parcels to be included in a R/W Certification include regular right of way parcels acquired by deed, Final Order of Condemnation, Order for Possession, Right of Entry, Possession and Use Agreement, license, permit, or other acquisition documents used by certain governmental entities. This section shall include a full explanation of the circumstances regarding the status of possession on each parcel where the state does not have full legal and physical possession by virtue of a recorded deed, recorded Final Order of Condemnation, effective Order for Possession, or effective date of Right of Entry or Possession and Use Agreement.

Temporary rights, such as temporary easements (whether parcels or subparcels) and Permits to Enter (or Enter & Construct), must also be listed in the certification. It is important to include the effective date and expiration date of any temporary rights so they may be evaluated in terms of the final construction schedule.

© 1994-2025 California Department of Transportation. All rights reserved.

14.03.04.00 Certification with Caltrans Rights of Entry (Exhibits 08-EX-23 and 08-EX-24)

Certifying a project with parcels acquired under Caltrans Rights of Entry (Exhibits 08-EX-23 and 08-EX-24) shall be avoided. Said documents do not meet the Uniform Act compliance standards for establishing just compensation and payment prior to possession (49 CFR 24.102). Use of these Caltrans Rights of Entry documents are limited to exceptional circumstances only (e.g., emergency purposes) in accordance with 49 CFR 24.102(j) where rapid response is required and there is no time to appraise and make an offer to purchase. See Acquisition Chapter, Sections 8.09.09.00 and 8.09.09.01.

Non-Caltrans Rights of Entry documents issued by other Federal, State or Local (County, City) governmental agencies typically do not fall into the same category as the Caltrans Rights of Entry documents (Exhibit 08-EX-23 and 08-EX-24). These types of documents are similar to a Caltrans Encroachment, issued upon consideration of an offer of just compensation for the project required right of way. Careful review of these non-Caltrans Right of Entry documents must be undertaken to confirm that the language of the non-Caltrans Right of Entry document meets the Uniform Act compliance standards of 49 CFR 24.102.

14.03.05.00 Status of Affected Railroad Operating Facilities

This section of the R/W Certification is meant to cover operating property of railroads (typically within two feet of rail crossing). The railroad determines which of their properties are operating and non-operating. See R/W Manual Chapter 18 for a detailed discussion on railroads.

Clearance of projects that involve railroads consists of three distinct and mandatory project deliverables:

1. CPUC Application Approval of project railroad plans for final project PS&E;
2. Identification and acquisition of railroad real property rights; and
3. Obtaining an agreement with the railroad for physical construction of a project when operating within railroad right of way.

Project right of way requirements from railroad property creates an acquisition parcel that must be covered under Section 1 of the Certification, "Status of Required Right of Way."

© 1994-2025 California Department of Transportation. All rights reserved.

Depending on the complexity of Railroad involvement, either the District Railroad Coordinator, or HQ's R/W Railroad and Utilities Section is responsible for issuing a clearance memorandum (also see R/W Manual Exhibit 14-EX-10) to the Headquarters Office Engineer when all railroad matters have been resolved and the project can be advertised. The clearance memorandum forwards clauses required for the Contract Special Provisions, confirms that any required PUC authorization has been obtained for the project, and provides details of any Service Contracts and Construction and Maintenance Agreements with the railroads.

A copy of the clearance memorandum is sent to district R/W requesting that the District Railroad Agent insert the railroad clearance data into the PMCS AGRE Screen so it will print in the Agreements Column of the District Status of Projects.

The DDC-R/W usually should not provide Office Engineer or FHWA with an approved R/W Certification until the clearance memorandum has been received from Structures. If the clearance memorandum has not been received, however, the certification shall indicate this fact.
The clearance memorandum is required for ANY project with railroad involvement that is advertised by district or Headquarters Office Engineer, even when a local agency makes the railroad arrangements.

The operating facilities of a railroad can be "affected" by a construction project in several ways, which would require a statement in this section of the certification.

14.03.05.01 Railroad Agreements

A "Right of Way Railroad Agreement" will be used when a Construction and Maintenance Agreement is not appropriate during both the PS&E and Construction phases of project delivery to formalize obligations between a railroad and the Department. An agreement is needed during PS&E for preliminary plan review and for protection of PS&E activities within the rail corridor. An agreement is needed during the construction phase to secure flagging services and project inspection. For example, an agreement with the railroad is used where the railroad is paid to do some work. Caltrans may not perform any work within two feet of either side of the tracks. Only railroad personnel can perform work in the track area. Refer to R/W Manual Chapter 18.

© 1994-2025 California Department of Transportation. All rights reserved.

14.03.05.02 Clauses in Contract Special Provisions (Clearance Memorandum Required)

Clauses are required in the Special Provisions as follows:

- **Construction work will be performed within the railroad operating right of way and within 25 feet of the track** – The railroad must be provided insurance, and clauses are required in the Special Provisions.

- **Work is done in the railroad operating right of way but more than 25 feet from the track** – The contractor is responsible for damages and clauses are required in the Special Provisions.

- **Work is done over or under a railroad facility in connection with construction of a grade separation structure** – The contractor must notify the railroad when work is to be done. Railroad protection clauses are required.

- **Work is done over or under an existing grade separation** – The Agreements Branch will determine if the railroad should be notified and if clauses are required.

NOTE: The clearance memorandum is required when any work is performed within the railroad's operating right of way, regardless of the actual distance from the railroad tracks.

14.03.05.03 Railroad Rights of Entry

A right of entry from a railroad is a key document before construction can commence. This document is a permit which allows encroachment within the rail corridor. It does not convey any real property rights. Both the project sponsor (i.e., Caltrans) and the primary contractor must obtain railroad rights of entry before the start of construction. The Department is responsible for securing rights of entry for Caltrans employees and the contractor must secure rights of entry with the railroad as a condition of contract award, and prior to ingress on railroad right of way.

A railroad "Right of Entry" does not meet the definition of Right of Entry pursuant to 49 CFR 24.102(j). Caltrans Right of Entry documents 08-EX-24 and 08-EX-25 are not used for railroad rights of entry. When railroad "Rights of Entry" are required, approval is to be reflected pursuant to the information contained in either a "stand alone" fully executed "Railroad Right of Entry," or when applicable, within (attached to) a fully executed Construction and

© 1994-2025 California Department of Transportation. All rights reserved.

Maintenance Agreement (C&M). List the identifying right of entry or C&M reference (attachment) in the R/W Certification, Section 1 (A) "Parcels covered by other acquisition documents."

Generally, rights of entry on railroad operating property are not **effective** until the Agreement has been fully executed.

14.03.06.00 Material and Disposal Sites

The R/W Certification should list all optional or mandatory material and disposal sites that require a state secured agreement and that will be made available for use for the project being certified.

On some projects, bidders are advised of available sites that have been previously tested and approved for use. Contractors make their own arrangements for use of such sites. These sites are NOT listed on the R/W Certification when the project does not require a state secured agreement with the site owner.

© 1994-2025 California Department of Transportation. All rights reserved.

14.03.07.00 Status of Required Utility Relocations

A R/W Certification must not be issued until either there are no required utility relocations or, if there are, that:

All utility work has been or will be completed in accordance with applicable policy and procedure including appropriate Buy America requirements covering the adjustment of utility facilities. All utility notices have been issued and arrangements have been made with the owners of all conflicting utility encroachments remaining within the right of way so that adequate control of the project right of way will be achieved. If applicable, federal participation has been determined.

AND

All utility work has been completed.

OR

All utility work will be completed by a stated date prior to award of the contract.

OR

All necessary arrangements have been made for remaining utility work to be undertaken and completed as required for proper coordination with project construction. The Contract Special Provisions provide for the coordination.

AND

All utility work completed or remaining to be completed must indicate one of the following:

- Project specific utility agreement(s) is (are) fully executed and include(s) the Buy America language.
- Project is not covered by a NEPA document and Buy America requirements do not apply.
- Buy America compliance is not applicable for utility relocations as Utility Agreements are not required.

NOTE: 23 CFR 635.309(b) requires utility arrangements to be completed prior to project construction except where it is determined such work is not feasible or practical; e.g., due to economy or special operational problems. If

© 1994-2025 California Department of Transportation. All rights reserved.

relocation has not been completed, the relocation schedule must be included in the R/W Certification and the Contract Special Provisions.

The R/W Certification shall include a listing by owner and type of all utility facilities located within the project right of way. For those in conflict with the project it shall also include:

- Notice number
- Notice date
- Company name
- Liability determination – percentage of state/owner expense
- Date of Executed Utility Agreement
- Federal participation
- A schedule for the utility relocation work (Actual Dates)

The schedule shall indicate:

- Specific date owner has agreed to complete work, AND/OR
- Highway contractor will complete work as part of the highway contract. Dates would reflect entire Construction window. A bid item number should be included in the highway contract with an explanation of the conditions of the bid item and liability for the work. If the state has any liability, include percentage of liability attributed to owner and state. If the utility relocation is eligible for federal participation, a signed copy of the Specific Authorization to Relocate Utilities memorandum must be attached to the R/W Certification. (See Utility Form RW 13-15.) Also refer to 23 CFR 645.119.

14.03.08.00 High and Low Risk Underground Facilities

A statement is **NOT** required in the R/W Certification on the status of High and Low Risk Underground Facilities within the construction project limits. The Project Engineer is responsible for administration of the High and Low Risk policy.

© 1994-2025 California Department of Transportation. All rights reserved.

14.03.09.00 R/W Clearance

The R/W Certification requires one of the following statements:

- No improvements or obstructions were located within the project limits.
- All R/W clearance work has been completed, and no improvements or obstructions are remaining within the right of way area required for construction.
- All necessary arrangements have been made for remaining R/W clearance to be undertaken and completed as required for proper coordination with the construction schedule.

All improvements should be cleared from the right of way **prior to R/W Certification** by sale, R/W Clearance Contract, district forces, or Grantor(s) pursuant to R/W Contract agreement. When this is not possible, one or more of the following procedures will apply.

- **Remaining improvements will be removed prior to advertisement of the construction project** – Clearance contracts and sales agreements have been executed and firm dates established for completion of the work. Notification in the highway construction project bid documents is not required.

- **Remaining improvements will be removed prior to award of the construction project** – Clearance contracts and sales agreements have been executed and firm dates established for completion of the work. Notification to prospective bidders describing the location and nature of improvements that will (or may) remain after the advertising date but will be cleared prior to award of the construction contract **must** be provided in the bid documents so bidders will know they are not to include clearance of these items in their bids.

- **Removal of remaining improvements will not be complete until some time *after award* of the construction contract** – Clearance contracts and sales agreements have been executed and the bid documents for the project contain appropriate notification of same with a date when clearance work will be complete. Notification **must** be included in the bid documents outlining locations, time periods, and coordination aspects that prospective bidders must consider in calculating their bids and to assure they are aware that they are **not** to include removal of these items in their bids.

© 1994-2025 California Department of Transportation. All rights reserved.

- **Removal of remaining improvements *will be included* in the plans and special provisions of the construction contract** – This option should only be considered in exceptional situations because most project construction contractors charge inordinately high amounts for demolition and salvage work. The improvements also may be in the way of other construction work. It should be noted that salvable improvements and materials cannot be sold by the contractor within the construction project limits, thereby minimizing any potential salvage value.

- **Occupied improvements will remain within the right of way.** This situation requires use of Special Certification No. 3 with Work-Around.

- **Salvable Improvements** – The state's policy is that salvable improvements be sold prior to project construction. If no buyer is found to purchase/remove a salvable improvement, then demolition/removal of this salvable improvement should occur prior to the start of construction activities via a separate demolition/removal contract (See Section 14.02.03.07). Note: Only rarely should salvable improvement removal/demolition occur as part of the construction contract. It should be noted that salvable improvements and materials cannot be sold by the contractor within the construction project limits, thereby minimizing any potential salvage value.

14.03.10.00 Airspace Agreements

If airspace agreements are in effect within the project limits, an explanation of any arrangements required with the lessee must be included in the R/W Certification and the bid documents.

14.03.11.00 Compliance with RAP Requirements

This section provides assurances that all current policy and procedure requirements for relocation advisory assistance and payments have been followed. Detailed data on any remaining occupants and personal property is also provided in this section of the R/W Certification. (Also see requirements for Special Certification No. 3 with Work-Arounds.)

© 1994-2025 California Department of Transportation. All rights reserved.

14.03.12.00 Environmental Mitigation

All R/W Certifications must address the status of any environmental mitigation on a project. This section describes the three status categories.

- No environmental mitigation parcels are required for the project.
- All environmental mitigation parcels on the project have been acquired.
- Acquisition of environmental mitigation parcels is ongoing. Explain acquisition status.

14.03.13.00 Certification – Authorized Signature

R/W Certifications are issued over the signature of the DDC-R/W or designee. The signature authority may be delegated provided it is in writing and a current copy of the delegation is on file with HQ R/W.

© 1994-2025 California Department of Transportation. All rights reserved.

14.04.00.00 – MIDDLE MILE BROADBAND NETWORK (MMBN)

14.04.01.00 General

In the State of California, broadband is not considered a utility, and therefore, installation of wired broadband in the right of way is considered an alternate use of the right of way. Consequently, installation of broadband infrastructure should follow standard procedures as outlined in the Right of Way Manual Chapter 15, Airspace. Please note, paperwork expectations for interstate and non-interstate properties are the same within the broadband file. Requirements for interstate and non-interstate submittal for approval through the Federal Highway Administration (FHWA) is outlined below.

A complete package for a broadband installation must include District Airspace Review Committee notes, plans, maps, NEPA document, Right of Way Use Agreement (RUA), and Right of Way Acceptance Document.

14.04.02.00 Right of Way Acceptance Document

In support of the Middle Mile Broadband Network (MMBN) Program, the Division of Right of Way and Land Surveys developed a Middle Mile Broadband Network – Right of Way Acceptance Document, Exhibit 14-EX-12 (internal Caltrans link), to ensure that Right of Way involvements are adequately considered, appropriately addressed, and memorialized for each MMBN project. This document is required for all MMBN projects. District Right of Way Seniors are delegated to sign the Middle Mile Broadband Network – Right of Way Acceptance Document. Each MMBN project will also require an executed Right of Way Use Agreement (RUA) to cover the alternative use of the operating right of way for the MMBN installation. For non-MMBN projects (Capital Outlay, Local Projects, etc.), the Middle Mile Broadband Network – Right of Way Acceptance document may not be substituted for the Right of Way Certification (RWC) and will follow the normal certification process as outlined in the Right of Way Manual.

For transportation projects where the MMBN project is incorporated into the transportation construction contract, or the MMBN is a separate EA added to the overall transportation project:

- Transportation project will require a RWC
- MMBN installation project will require a Middle Mile Broadband Network – Right of Way Acceptance document and an executed RUA.

© 1994-2025 California Department of Transportation. All rights reserved.

For MMBN projects not associated with any transportation project:

- MMBN installation project will require a Middle Mile Broadband Network – Right of Way Acceptance document and an executed RUA.

The MMBN project will not be able to proceed to an advertisement if there is no Middle Mile Broadband Network – Right of Way Acceptance document. If the RUA is pending, an exception may be approved in a "conditional" Right of Way Acceptance document so that the project may proceed to advertisement and award. Conditional Right of Way Acceptance documents will need Headquarters approval. Pre-construction activities, such as administrative activities related to construction paperwork and pre-construction meetings, are permissible. However, no physical construction, including site preparation and breaking ground can begin without the fully executed RUA.

In addition, all parties acknowledge and agree that NO CONSTRUCTION ACTIVITIES WILL BE PERFORMED:

- Within the Railroad right of way until a Railroad exception has been approved by HQ allowing for the construction and/or a separate Wireline Permit is executed by all parties (Railroad & CDT).

- Within the postmile limits or areas excluded in an approved, "conditional" Right of Way Acceptance document.

14.05.00.00 – DELEGATIONS

14.05.01.00 Delegations of Authority

As referenced in Section 2.05.01.00, the delegation matrix for Right of Way Certification is noted below. The delegation matrix reflects the associated policy and RW Manual reference for each delegated item. The matrix also distinguishes whether an item is delegated to the District or Headquarters (HQ) level, along with the lowest level of sub-delegation authorized.

Reference (Statutory, WBS, Director's Policy, Deputy Directive, etc.)	**RW Manual Section**	**Responsibility**	**Delegation**	**Lowest Level of Sub-Delegation**
23 CFR §635.309	14.01.02.00	Projects Requiring Right of Way Certification	District	Senior RW Agent

15.01.00.00 – GENERAL

15.01.01.00 Function

The Airspace function is responsible for managing real property within the boundaries of both federally-aided and non-federally aided facilities where an alternate use is permitted by Federal regulation or State regulation and such use is consistent with the continued operation, maintenance, and safety of the facility. Per 23 Code of Federal Regulation (CFR) 710.403 (b), the Department must ensure that all real property within the boundaries of a federally-aided facility is devoted exclusively to the purposes of that facility and is kept free of all other public or private alternate uses, unless such alternative uses are permitted by Federal law (including regulations) or the FHWA. An alternate use, whether temporary or permanent, must be in the public interest, consistent with the continued safety, operation and maintenance of the facility, and such use must not impair the highway or interfere with the free and safe flow of traffic. Some basic examples of alternate uses are parking or construction staging.

Leasing of Department property that is being held for future transportation projects but is not yet part of an operating transportation facility is managed by the Property Management function (see RW Manual Chapter 11.)

15.01.01.01 Definitions

Airspace

The definition of "Airspace" within 23 CFR 710.105 (b) was deleted per the August 23, 2016 Federal Register. The term "Airspace" was replaced by the all-encompassing term "Right of Way." "Right of Way" is defined as "real property and rights therein obtained for the construction, operation, maintenance, or mitigation of a transportation or related facility under Title 23, United States Code (USC)." For purposes of this chapter the term "Airspace" will still be used because as explained in 15.01.01.00 above, the Airspace function manages alternate land use only for Department-owned land within the operating right way footprint, and within Department operational facilities.

© 1994-2025 California Department of Transportation. All rights reserved.

Right of Way Use Agreement (RUA)

The document utilized by the Department to allow for alternate use of Airspace is the Right of Way Use Agreement (RUA), formerly known as an Airspace lease. The updated RUA terminology is more appropriate because our agreement language reserves out the Department's right to unilaterally pause or terminate the alternate use due to Departmental transportation needs. As the Department transitions into this new agreement terminology and agreement templates are updated and approved by HQ Legal, the current agreement templates utilizing airspace lease terminology shall still be used by all Districts. Other types of documents including but not limited to Joint Use Maintenance Agreements (JUMA's), Encroachment Permits or Consent Letters, authorize use of Department right of way by other parties, but these authorizations and associated documents are not managed by the Airspace function.

Airspace Site

For purposes of this section and California State Statutes, an "airspace site" (also known as an airspace parcel) is a site located in operating right of way within, above or below Interstate or conventional highway facilities, or non-operating right of way located within operational facilities such as Maintenance Stations, Traffic Management Centers (TMC's) and Department-owned Park & Ride facilities, that is capable of development in a manner that ensures adequate protection to safety and adequacy of highway facilities and to abutting or adjacent land uses. Typically, a compatible alternate use within the Right of Way will not be within the traveled way or its immediate shoulder. An airspace site may consist of:

- Surface rights under a bridge or viaduct structure.
- Space above the traveled lanes.
- Space within a loop of an interchange.
- Space between the main lanes and on or off ramps.
- Area in cut or fill slopes.
- The parking lane and adjacent sidewalk of a highway facility.
- An area within a Safety Roadside Rest Area.
- Space within an operating facility such as a Maintenance Station, TMC, Department-owned Park & Ride, etc.*

*Caltrans Division of Business Operations (DBO) manages district offices and satellite offices are not considered airspace.

© 1994-2025 California Department of Transportation. All rights reserved.

15.01.01.02 General Airspace Policy

Streets and Highways Code (SHC) 104.12, "Leasing of Airspace," authorizes the Department of Transportation (Department) to lease airspace above, below and adjacent to State highways to public agencies and private entities in accordance with prescribed CTC procedures. CTC resolutions G-24-14 (internal Caltrans link) (which superseded G-02-14) and G-19-43 (which superseded resolution G-03-03) outline some specific procedural requirements for initiation and execution of Right of Way Use Agreements. These various requirements are discussed in Section 15.01.01.03.

Airspace leasing activities by means of an RUA are conducted pursuant to the CTC Resolutions noted above, Streets and Highways Code (SHC) 104.12, 23 CFR 710.403, 23 CFR 710.405, and policy and procedures established in this chapter. While this chapter may at times refer to a "lease agreement" (as this continues to be used historically in statute and CTC resolution), it is noted that there is no "leasehold interest" being conveyed. All agreements must be revocable, should the Department of Transportation need the property. An RUA allows alternate use for non-highway purposes where the alternate use is in the public interest, consistent with the continued operation, maintenance, and safety of the facility, and such use will not impair the highway or interfere with the free and safe flow of traffic (see also 23 CFR 1.23). These rights may be granted only for a specified period of time because the real property interest may be needed in the future for highway purposes or other purposes eligible for funding under Title 23.

In general, the Airspace Program applies to access controlled freeways and highways (interstates and/or federally funded transportation facilities). However, in certain circumstances, Right of Way Use Agreements can be utilized on non-access controlled conventional highways under the same guidelines. (For example, a permanent sign erected within the right of way of a conventional highway by an adjacent owner or a scaffolding lease on the State sidewalk for temporary construction.)

© 1994-2025 California Department of Transportation. All rights reserved.

Parcels located outside the operating right of way (non-operating right of way) but located within operational facilities may also be leased using airspace procedures. These include space within a maintenance station, traffic management centers, etc. Often telecommunications facilities and cell towers can safely be accommodated within Departmental Airspace (if access and utilities are from outside the traveled way). Guidelines for allowing alternate use of department right of way for telecommunications and cell tower purposes fall outside this chapter and are detailed in the Caltrans Wireless Communication Guidebook. Master License Agreements with telecommunication carriers and Site License Agreements for specific telecommunication sites are the instruments that allow for and document the terms of the telecommunications alternate use.

Established policies and procedures within this chapter provide guidelines to allow alternate use of airspace sites where practicable, to maximize use of property acquired for transportation purposes.

See CTC Resolutions G-24-14 (internal Caltrans link) and G-19-43.

15.01.01.03 Statutory and CTC Resolution Requirements – Direct Negotiation vs. Competitive Bidding

In addition to authorizing the Department to allow alternate use of Airspace via an RUA, Streets and Highways Code 104.12 states the RUA processes "shall be made in accordance with procedures to be prescribed by the California Transportation Commission (CTC), except that, in the case of RUA execution with private entities, the RUA's shall only be made after competitive bidding unless the CTC finds, by unanimous vote, that in certain cases competitive bidding would not be in the best interest of the state."

Direct Negotiation – Private Entities:

Per CTC Resolution G-24-14 (internal Caltrans link), when approached directly by a private entity to initiate alternate use of a specific Airspace site, listed below are the only scenarios under which the Department may enter into Direct Negotiations for alternate use without first obtaining CTC permission:

- Negotiation and execution of a non-bid, non-developmental lease of up to three years to construction contractors for construction staging alternate use.
- Negotiation and execution of short-term non-bid leases up to a period of six months with no extensions allowed without CTC approval.

© 1994-2025 California Department of Transportation. All rights reserved.

- Negotiation and execution of month-to-month rental agreements with non-profit organizations on Park & Ride lots.
- Negotiation and execution of long-term development agreements for any location when only one telecommunications (wireless) carrier has indicated interest, provided that those agreements only involve cash payments and no "in kind" payments. The Caltrans Wireless Communication Guidebook policy and procedure must be used for negotiation and execution of these telecommunications agreements.

The Department must first obtain CTC permission prior to entering into direct negotiations with a private entity for all other alternate use scenarios other than those listed above. In order for CTC to approve a direct negotiation proposal, the Department must clearly justify why it is in the State's best interest to lease directly with a proposed entity instead of bidding out the site in the marketplace. See RW Manual 15.06.05.01 for a more detailed discussion regarding justification.

Direct Negotiation – Public Entities:

Per CTC Resolution G-19-43, when approached directly by a public entity for alternate use of a specific Airspace site, the Department may enter into Direct Negotiations for alternate use without first obtaining CTC permission ONLY if ALL of the following conditions below are satisfied:

- The lessee is a public entity as defined in the Public Contract Code.
- The lease will fulfill a public purpose.
- The Department will receive either (1) Fair market rent for the property (only exceptions to this fair market rent requirement listed in CTC Resolution G-19-43), or (2) A lesser amount as authorized by any statute enacted by the Legislature, so long as the property satisfies the limitations and conditions set forth in the applicable statute.

Except for the conditions listed immediately above, the Department must first obtain CTC permission prior to entering into Direct Negotiations for all other alternate use scenarios with a public entity.

Competitive Bidding – Public and Private Entities:

Lease of all Airspace sites other than those CTC-authorized Direct Negotiation scenarios discussed earlier in this section must be competitively bid per Streets and Highways Code 104.12. A maximum authorized lease term of five years for Airspace sites offered by the Department via the bidding process.

© 1994-2025 California Department of Transportation. All rights reserved.

Districts may request a policy exception to this five-year term limit from HQ RW RPS prior to bid for the two alternate use scenarios listed below:

- Renewable Power Generation and/or Storage. Up to a twenty-year term may be allowed. This exception supports Senate Bill 1020 which creates clean electricity targets of 90% by 2035 and 95% by 2040.
- Parking and Zero Emission Vehicle (ZEV) Motor Vehicle Charging. This exception supports Governor's 2018 ZEV Action Plan and the Caltrans 2020-2024 Strategic Management Plan by helping achieve the goal of ensuring convenient charging and fueling infrastructure to the public.

The District Airspace Review Committee (DARC), HQ RW RPS, and FHWA for those Airspace sites along/under Interstates must all approve this greater than five-year lease term. District's request package submitted to HQ RW RPS must include a copy of the DARC memo and a record of responses from all DARC members approving the proposed use and lease term, a District justification memo to HQ RW RPS citing reasons supportive of the increased lease term, and applicable Airspace site map, bid-lease estimate, draft lease and selection criteria.

15.01.01.04 Statutory Provisions Related to Leased Rights of Way

- Streets and Highways Code 104.12 authorizes the Department to lease to public agencies or private entities subject to conditions it deems necessary to ensure adequate protection to the safety and the adequacy of highway facilities and to abutting or adjacent land uses. The leases shall be made in accordance with procedures to be prescribed by the California Transportation Commission (CTC), except that, in the case of leases with private entities, the leases shall only be made after competitive bidding unless the CTC finds, by unanimous vote, that in certain cases competitive bidding would not be in the best interests of the State.

- Streets and Highways Code 225.5(a): no person shall display, sell, offer for sale, or otherwise vend or attempt to vend any merchandise, foodstuff, or service within any vista point or safety roadside rest area. However, SHC Section 220.5(a) allows vending machines in safety roadside rest areas.

© 1994-2025 California Department of Transportation. All rights reserved.

- Vehicle Code Section 22518:
  (a) Fringe and transportation corridor parking facilities constructed, maintained, or operated by the Department of Transportation pursuant to Section 146.5 of the Streets and Highways Code shall be used only by persons using a bicycle or public transit, or engaged in ridesharing, including, but not limited to, carpools or vanpools. No person shall park any vehicle 30 feet or more in length or engage in loitering or camping, or vending or any other commercial activity, on any fringe or transportation corridor parking facility.
  (b) This section does not apply to alternatively fueled infrastructure programs in park-and-ride lots owned and operated by the Department of Transportation.

- Public Resources Code 25722.9(b) specifically authorizes the Department to develop incentive programs for EV charging stations within park and ride lots of 50 spaces or more.

- 23 USC 111 specifically allows the Department to use airspace on interstate for non-transportation uses, so long as it meets all the necessary requirements of this section.

- 23 USC 137(f)(2) specifically allows EV charging stations within fringe or corridor parking facilities on the Interstate. Any fees charged for the use of any such facility in connection with the purpose of this subsection shall not be in excess of the amount required for operation and maintenance, including compensation to any person for operating the facility.

- 23 CFR 710.403(b) specifically allows for alternative use of Department right of way funded under Title 23 if subject non-highway alternative uses are permitted by Federal law (including regulations) or the FHWA, are in the public interest, consistent with the continued operation, maintenance and safety of the facility, and such use will not impair the highway or interfere with the free and safe flow of traffic. Park and Ride lots are exempted from the provisions of this part and their requirements are found in 23 USC 137 and 23 CFR 810.106.

- 23 CFR 710.405 specifies the scenarios under which the FHWA must approve third-party alternate use of Interstate right of way.

© 1994-2025 California Department of Transportation. All rights reserved.

15.01.02.00 Responsibilities of Headquarters Airspace

Headquarters Airspace (HQ A/S) is responsible for:

- Developing all policies and procedures governing all aspects of airspace alternate use and management. Uses within operating right of way of a duration of 30 days or less may also be processed by the Encroachment Permits office unless the use is of a recurring nature. A further breakdown of the different uses covered by the Encroachment Permit Office versus Right of Way can be found by looking at the Right of Way Use Agreement Exhibit 15-EX-17.

- Establishing delegation levels for review and approval of airspace uses and RUA's (previously known as lease agreements).

- Review the Airspace Inventory twice annually to ensure the district is adequately enforcing airspace right of way use agreements.

- Complete a data pull of the airspace inventory every quarter and report findings to the districts by the last day of the month.

- Review right of way use agreement accounts for compliance with inspections, insurance certifications, notice provisions, lease terms, etc.

- Preparing periodic reports on statewide and region/district income, expenses, inventory, production, and goals.

- Establishing standards to measure Airspace activity (i.e., expenses like independent appraisals, advertising, and remedies to breaches in contracts; production; and workload) in accordance with current and future contracts for region/district performance.

- Liaison with region/district Airspace Seniors, CTC, FHWA, other programs, and external agencies on Airspace matters.

- Coordinating budget requests for region/district Personnel Year (PY) allocation and workload projections.

- Resolving complex technical issues with potential statewide impacts through research and subsequent written guidance.

- Holding meetings, functional councils, training seminars, and workshops.

© 1994-2025 California Department of Transportation. All rights reserved.

- Developing standardized Right of Way Use Agreement (templates) and language to protect the Department from potential liabilities and claims from the lessee and adjoining owners. Note: Developing standardized template language to address potential liabilities and claims from sub-lessees is now not needed as subleasing is prohibited. Any changes to a pre-existing agreement that contains a subleasing provision must be approved by HQ RW and HQ Legal.

- Management of the Right of Way Real Property Services Airspace section of the Caltrans intranet (internal Caltrans link) and internet websites.

15.01.02.01 Annual Reports

HQ A/S prepares three reports:

- **Report to the CTC** – on the number of executed leases pursuant to Streets and Highways Code 104.30 or other statutes that allow for temporary homeless shelters for $1. The CTC may require further information be reported to them as necessary.

- **Report to the CTC** – regions/districts provide information on inventory, income, and leasing activity for the previous fiscal year with the specifics on Marler Johnson Right of Way Use Agreements, Park and Ride Joint Development, Park and Ride Demonstration Program, internal uses, building development, seismic retrofit, and other major programs.

- **Business Plan** – a component of the Annual Report, containing a statewide plan for the Airspace program that establishes next year's objectives and goals. This report must be presented to the CTC each State Fiscal Year.

Caltrans Executive Management, the Transportation Agency, or the California Legislature may also require special reports or information.

© 1994-2025 California Department of Transportation. All rights reserved.

15.01.02.02 HQ Liaison Region/District Visits

HQ A/S staff will visit the Region/District Airspace (R/D A/S) Staff at least every other year, often in conjunction with the Quality Enhancement Joint Review (QEJR), to review current operations, and ensure accurate policies and procedures are in place to assist Region and District Airspace Units (Airspace) with the work products and goals. Some of the items that may be discussed are the effectiveness of:

- Airspace efforts to maximize public and private use of the right of way.
- Written policies, procedures, and instructions.
- Annual marketing, workload, and budgetary plans used to track PY effort.
- HQ A/S assistance and training to improve region/district operations and prepare for the next budget cycle.

15.01.03.00 Responsibilities of Region and District Airspace Development Units

To manage an effective Airspace program, the Senior and staff will:

- Administer and manage all airspace agreement areas.
- Identify potential airspace sites and maintain a current and accurate database in the inventory.
- Develop sites where appropriate in partnership with both private and public end users.
- Coordinate with the Environmental Branch and developers to identify project environmental implications or determinations and to provide developers with requirements for environmental clearances, storm water pollution prevention, and air qualify studies or statements.
- Coordinate with region/district Maintenance and Landscape units for the joint use of roadside rest areas and park and ride lots as applicable to provide better services to the traveling public while decreasing the Department's maintenance expenses on the sites.
- Protect airspace sites against adverse economic impacts, such as inappropriate utility encroachments.

© 1994-2025 California Department of Transportation. All rights reserved.

- Develop an effective management program to minimize vacancies for parcels in inventory when this is not in conflict with the safety or use of the transportation system.

- Obtain approval from HQ RW RPS for any actions not discussed in this chapter or not delegated in the delegation matrix.

15.01.04.00 Region/District Airspace Review

R/D A/S is responsible for conducting a region/district review of proposals to develop a new Airspace site, proposals to lease an existing airspace site for a new use, or proposals to lease an existing Airspace site to perpetuate a previously approved alternate use. A District Airspace Review Committee (DARC) consisting of representatives from Right of Way, Planning, Design, Traffic Operations, Landscape Architect, Project Development, Maintenance, Environmental, Structures, Hydraulics, and the State Fire Marshal must approve proposed Airspace uses. Additional programs may be included if the program is affected by the proposed use (e.g., the Park and Ride representative from Traffic Operations). For telecommunications reviews, the HQ telecommunication coordinator must be included.

Prior to submitting the proposal to DARC, R/D A/S should review the proposal and develop a plan for leasing the site, including:

- Best method to lease the site (bid or directly negotiated).
- Adjacent property management and excess sites that could be joined to the site and leased together.
- History of prior leases (including term and use). If this is a renewal of the lease or use, it may be subject to the shorter Renewal DARC process described in 15.06.11.04.

Although formal meetings are suggested, informal discussions and routing of the proposal will suffice if the proposal is not complex.

© 1994-2025 California Department of Transportation. All rights reserved.

R/D A/S shall provide relevant information to DARC members, such as:

- Proposed use and term.
- Site improvements (proposed and existing) – paving, striping, curbing, lighting, etc.
- Access – ingress and egress.
- Utilities, including water.
- Major developments – buildings, storage tanks.

DARC representatives should be permanent members from each program who have committed to participate fully in the review. Responses should be returned in the established time frame (e.g., 15 days for conceptual and 45 days for preliminary and final). Close coordination with the proposed lessee is necessary to ensure documents are submitted on time to obtain all approvals prior to scheduled construction or occupancy date.

The DARC is responsible for reviewing the proposal to ensure the use and improvements will not adversely affect highway safety nor interfere with operations. Any conflicts between the proposal and internal uses should be mitigated with the proposed lessee to the fullest extent possible.

DARC reviews are held at the conceptual, preliminary, and final phases to ensure previous concerns have been addressed and the proposal has not dramatically changed since conceptual approval. R/D A/S should use discretion when forming a DARC review for a proposed use. Only those members that can provide valuable input on the impact to their program should be included in the review. A legal, low-value, noncomplex proposal with no improvements may require a less intensive review than a parking structure underneath a highway structure. Additionally, many of these types of proposals may not require extensive review at the conceptual phase. This can be done at the preliminary and final stages after the potential lessee provides more detailed information on the proposed Right of Way Use Agreement.

The preliminary phase is at R/D A/S's discretion considering the proposal's complexity and the level of review that was performed at the conceptual phase.

Although Encroachment Permits is typically not involved in the DARC as a reviewer, RW should meet and confer with the District Encroachment Permit Engineer to confirm the requirements between the permit's General and Special Provisions and the Airspace Lease Agreement.

© 1994-2025 California Department of Transportation. All rights reserved.

Functional branches involved in the review of airspace Right of Way Use Agreement proposals shall charge their time to their own program overhead Project ID (Encroachment Permits Manual Section 500.3).

REGION/DISTRICT AIRSPACE REVIEW PHASES

Stage	Review
Conceptual	• Does the proposal make sense? • Any program objectives? • Identify upgrades or modifications to site (e.g., slope or column protection.) • Other interested parties? • Highest and best use. • Can an agreement be directly negotiated, or must a public bid process be used? • Advise proposed lessee of DARC comments (lessee is identifiable only under a Direct Negotiation scenario.) • Does the lessee understand the requirement to pay a fair market lease rate (lessee is identifiable in a Direct Negotiation scenario?)
Preliminary	• Preliminary plan review (effect on operations): o access, utilities. o highway structures. o lessee's improvements. • Potential risks and liabilities compared to benefits and revenue. • Advise proposed lessee of DARC comments.
Final	• All DARC comments addressed in final plans. • Local and environmental approvals obtained. • Construction and maintenance schedule. • Final plans showing excavation and trenching. • Advise proposed lessee and Permits Office of status.

15.02.00.00 – INVENTORY OF AIRSPACE LEASES AND INTERNAL USES

15.02.01.00 Inventory Requirements

Each airspace site shall be entered into Right of Way Management Information System (ROWMIS).

The inventory data is used to obtain site-specific information, track maintenance, renewals, delinquencies and other important information on some or all parcels within the Region/District or Statewide.

15.02.01.01 Identification Numbers

ROWMIS has replaced the previous RWPM system for Airspace administration.

Airspace Site Number:
Prior to ROWMIS implementation, each site was assigned a freeway lease area (FLA) number using two-digit region/district number, three-letter county abbreviation, three-digit highway route number, and a four-digit site number (e.g., 04-SFX-101-0010). Under ROWMIS the site number consists of two-digit region/district number, two-letter county abbreviation, three-digit highway route number, and a three-digit site number (e.g., 04-SF-101-001). Please see the County Abbreviations table (internal Caltrans link).

Unit Number:
In ROWMIS each individual tenant on a single site must occupy its own unit number.

Tenancy Number:
Each tenancy will have its own tenancy number in ROWMIS consisting of the Airspace Site number, two-digit unit number, and two-digit tenancy number (e.g., 04-SF-101-001-01-01).

As new tenants move in or as their RUA's are renewed each tenancy is given a new sequential tenancy number (e.g., 04-SF-101-001-01-02).

© 1994-2025 California Department of Transportation. All rights reserved.

Airspace Site Number Table

Site Numbers	Types of Use
100-299	General Airspace
300-399	Hold for Future Use
400-499	MMBN
500-599	Tie-Backs & Tower Cranes
600-699	Hold for Future Use
700-799	Undergrounding Electric in Fire Designated Areas
800-899	Oil & Gas
900-999	Telecommunications (Wireless)

15.02.01.02 New Sites in Inventory

New sites should be added to the inventory when money is accepted on the account or when the lease is executed. Examples of when money may be deposited prior to execution of a lease include, but are not limited to, when the Conceptual or Preliminary DARC review requires a deposit for support costs or when accepting deposits from successful bidders after an auction once it is determined a tenancy will in fact proceed.

15.02.01.03 Mapping

Maps shall be prepared for each airspace site in accordance with R/W Engineering Section 6.01.05.00 (except for temporary sites**).** Temporary sites are mapped from the construction maps on the adjacent parcel.

Each airspace site must have a vicinity map and a site map. The vicinity map shows the general location of the site and its relationship to the state highway and local roads. The site map shows the perimeter of the site and its relationship to the highway centerline and right of way lines, including all structures. It also denotes the square feet of leasable area, usable area, and the area restricted from use (e.g., footprint of the columns).

Refer to Plans Preparation Manual, Division of Design, Section 4-15.

The vicinity map is the only mandatory requirement for obtaining a conceptual approval or adding a site to the inventory prior to an executed lease. The site map can be requested from R/W Engineering if there is agreement on the size, shape, and area that will be leased and if the likelihood of leasing the site is high. Otherwise, use a copy of the record map with appropriate markings of the proposed airspace site, noting approximate

© 1994-2025 California Department of Transportation. All rights reserved.

boundaries and square feet. (Dual notations on maps of the area to be leased are allowed for local agency and lessee purposes, e.g., square footage, acreage.)

15.02.02.00 Department Use of Airspace Sites

A Department program may need to use an airspace site for a future transportation highway project or reserve it for an internal use (temporary or permanent). Any vacant or soon to be vacant site may be held for "CALTRANS USE" if the requesting program's submittal is approved.

15.02.02.01 Future Transportation Project Use

Future transportation Project Uses include new construction or modifying an existing highway facility. Internal construction staging leases are considered a temporary internal use and are discussed in 15.02.02.02.

The date the requesting program needs the site for proposed construction or modification to an existing facility should be provided to the DARC for their approval.

Transportation projects take precedence over any airspace lease. If the site is currently leased, probable cost to cancel the Right of Way Use Agreement should be calculated if the requesting program's need is immediate. The cost of buying out the lease should be covered through the project.

An expiring lease should not be renewed if a future transportation project is imminent.

A final decision by the Headquarters Deputy Director of Project Delivery is required if the DD's conclusion is at variance with other Department guidance, instructions, standards, or delegations for approval. HQ A/S approval is not required.

© 1994-2025 California Department of Transportation. All rights reserved.

15.02.02.02 Department Uses for Non-Project Purposes

A Department program may need an airspace site for a permanent or temporary internal use. Examples of permanent uses are maintenance operations (e.g., vehicle storage), landscaping projects, employee parking, and park and ride lots. Examples of temporary uses are sites for relocated businesses due to seismic retrofit, internal construction staging areas, holding areas for historic buildings pending sale, and other immediate needs of the Department.

The District Director (DD) approves such requests after Region/District Airspace (R/D A/S) analyzes the economic and local factors of removing the sites from the list of "available" sites. The analysis should include:

- Estimated fair market lease rate (FMLR) is based on the fair market value (FMV) of the site considering the highest and best use, the potential length of a Right of Way Use Agreement, and the present worth of the income stream.
- Potential loss of possessory interest tax revenue to the local agency.
- If the site is currently leased, probable cost to cancel the Right of Way Use Agreement if the requesting program's need is immediate.
- Environmental considerations of the proposed internal use, including potential neighborhood and community impact.
  Airspace presents its analysis of the proposed use to DARC for a recommendation to the DD to approve or deny the request.

A final decision by the Headquarters Deputy Director of Project Delivery is required if the DD's conclusion is at variance with other Department guidance, instructions, standards, or delegations for approval. HQ A/S approval is not required.

To help ensure the Department is using its land assets properly, it is recommended that the R/D A/S annually review all sites held for Caltrans use to verify the need still exists for the current usage and the current usage is still the best use of the property, considering other potential uses and net return. R/D A/S may discontinue the internal use if it is a significant underutilization. However, R/D A/S should consider Caltrans needs as a high priority and recognize that there may not be an alternative site that will adequately serve the Department's needs. If the Department intends to provide Caltrans' project contractors with an airspace site for a construction staging area, this should be announced in the Construction Bid Package. If not, the site may be leased to the successful construction contractor prior to the start of the project.

© 1994-2025 California Department of Transportation. All rights reserved.

15.02.02.03 Existing Internal Uses and Potential Airspace Right of Way Use Agreement

If a site currently held for Caltrans use can generate a higher return if leased, R/D A/S must prepare an economic analysis for the DD and request termination of the current use so the site can be developed for an external use.

If the internal use is an underutilization of the site and an adequate replacement site is available, R/D A/S and the user program may consider terminating the existing use and making the property available for lease. A Project Report is required, and the cost to relocate and reestablish the internal use at the new site should be considered. The analysis should consider the potential revenue against the cost to relocate the impacted facility and program, factoring in the probability of leasing the site and any risks the proposed lessee may encounter, thus reducing the probability of a successful lease. Relocation should occur only when the program using the site funds the cost.

The analysis may indicate (1) the existing internal use is proper, (2) the use should be discontinued and the site made available for lease, or (3) a portion of the property should be retained and a portion made available for lease as the program will no longer need the entire site.

A program (maintenance, construction) using a site must submit formal written notice to R/D A/S prior to vacating the site. The notice must state when the site will be vacated, the current condition of the site (e.g., hazardous materials) and list improvements that will remain. R/D A/S must coordinate termination of the use with the vacating program to ensure the site is ready to lease to a private entity.

© 1994-2025 California Department of Transportation. All rights reserved.

15.03.00.00 – PLANNING AND MARKETING

15.03.01.00 General

Properties offered for lease must attract the widest possible market to achieve the maximum return. Standard real estate marketing techniques should be used to ensure adequate exposure of the property for lease. Region/District Airspace (R/D A/S) should use additional methods to achieve the widest distribution of leasing information for **specialized** property, such as advertising in technical magazines, developing a home page on the Internet, or hiring a leasing agent or broker.

15.03.02.00 Planning

R/D A/S is responsible for working with Project Development and Environmental to identify potential multiple use or joint use opportunities in the planning and design phases of transportation projects.

Pursuant to SHC Section 104.12(c), R/D A/S shall take necessary action to implement multiple use concepts developed in the project planning and design stage; therefore, staff should provide necessary technical information, including DARC recommendations.

Good working relationships with local agencies responsible for approval of R/D A/S proposals are necessary for successful planning and marketing activities.

15.03.03.00 Marketing

Prior to preparation of the annual budget, R/D A/S should prepare its annual plan for the next two fiscal years for marketing and budgeting purposes. The plan includes target workloads for all short term, long term, and telecommunications leasing activity. The plan shows sites R/D A/S intends to market, by quarter, and the lessee selection process (direct negotiation or bid). The plan is used to forecast, schedule, and identify resources.

In addition, each vacant site should have a specific marketing plan identifying and scheduling the leasing activities (e.g., appraisals, CTC approval, Right of Way Use Agreement and construction).

Although sites in the plan are usually in the R/D A/S inventory, new sites (not yet approved conceptually) can be included if external interest is high.

© 1994-2025 California Department of Transportation. All rights reserved.

As part of the plan, R/D A/S should review the economic viability of airspace sites in the inventory. If there is little or no interest in a site, R/D A/S should either change the proposed use (requires prior FHWA approval if on the Interstate) or remove the site from the inventory. All site mapping and preliminary work should be retained in a Region/District archive file for future use should interest in the site resurface.

15.03.03.01 Advertising

Sites should be advertised using the appropriate media, e.g., newspapers, radio announcements, Internet Web sites, and developers' periodicals. Note all advertising efforts in the site diary.

Methods used to advertise low value airspace sites should be limited to those methods that will attract some interest but will not cost more than the potential revenue. For example, an airspace site that can be used only as unimproved overflow parking does not warrant a major marketing campaign.

The method in which a site was advertised should be documented in the parcel file.

15.03.03.02 Signs for Advertising Site Prior to Auction

Advertising signs can be placed on airspace sites in accordance with the marketing plan, per District discretion, and as follows:

- **Parking** – at least one month prior to bid opening.
- **Non-development or Development** – at least three months prior to bid opening.

R/D A/S should maintain an adequate supply of signs.

© 1994-2025 California Department of Transportation. All rights reserved.

15.03.03.03 Promotion

There are several ways to make the public more aware of the R/D A/S Program, such as:

- **Standard "For Lease" and "For Auction" Signs** should be at least 2' x 3' (aluminum or plastic) and mountable in some fashion. Example:

FOR LEASE
Contact: (Phone Number)
Right of Way Office
(Property of State of California)

- **District Public Affairs Office's** news releases and radio and television public announcements on ongoing and completed developments.
- **Staff Presentations** to community, local governmental entities, and professional real estate organizations.
- **Personal Contact** with local builders and developers to discuss the program.

15.03.03.04 Adjoining Owners

When a site becomes available, R/D A/S may contact adjoining owners and occupants to give them pertinent information about upcoming bid auctions to lease the site. Note all discussions in the site diary.

15.03.04.00 Broker Commissions

Although not currently a common practice, the Department is authorized, per CTC Resolution G-24-14 (internal Caltrans link), to contract for the services of a real estate broker to assist in developing a long-term Right of Way Use Agreement. If approved by DDC-R/W, the standard agreement must state:

- Commission is paid after the first lease payment is received.
- Installment payments will be made if the commission exceeds the monthly lease rate (e.g., broker receives half the rent paid until the commission is satisfied).
- Commission will not exceed three percent of FMV appraisal.
- The proposed lessee's offer and proposal are submitted with the broker's agreement.
- The proposed lessee's option period does not exceed six months.

© 1994-2025 California Department of Transportation. All rights reserved.

- The broker's agreement is site specific and limited to five sites per year.

15.03.05.00 Discriminatory Rezoning

The Department is concerned about local agency proposals to change the zoning of potential airspace sites that adversely affect their marketability. R/D A/S should work closely with local planning agencies to prevent general plan and zoning proposals that adversely affect existing or potential Airspace properties. R/D A/S may be notified of a planning action by direct correspondence from the local agency or by formal notice in a newspaper of general circulation pursuant to Government Code Sections 65854, et seq. Although formal notices are usually required, Government Code Section 65858 provides authority for local agencies to adopt certain interim zoning ordinances as urgency measures without the above notice requirements.

R/D A/S shall immediately notify the DDC-R/W, who will advise the District Director (DD), of any proposed planning or zoning action affecting Airspace property. The DD may intercede in instances where it is believed to be in the Department's best interest to oppose a local agency's planning or rezoning activity. At that point, the DD advises R/D A/S to contact the Legal Office and HQ A/S for assistance. If the DD determines it is not in the Department's best interest to intercede, the DD will document in writing the reasons for not contesting the local agency's proposed action and forward a copy to the Deputy Director of Project Delivery.

Legal and HQ A/S will jointly evaluate the local agency's proposed action to determine the appropriate method to oppose the action (e.g., formal correspondence, appearing at public hearings, formal meetings, and legal actions). HQ A/S may also involve the CTC as appropriate. Prior to initiating any legal action, the matter will be referred to the Director to review opposition attempts to date and to concur that the case warrants legal action.

Opposition will never include applying political pressure on individuals involved in the local planning process.

© 1994-2025 California Department of Transportation. All rights reserved.

15.04.00.00 – AIRSPACE RIGHT OF WAY USE AGREEMENTS

15.04.01.00 Types of Right of Way Use Agreements

23 CFR 710.105 states: "*ROW use agreement* means real property interests, defined by an agreement, as evidenced by instruments such as a lease, license, or permit, for use of real property interests for non-highway purposes where the use is in the public interest, consistent with the continued operation, maintenance, and safety of the facility, and such use will not impair the highway or interfere with the free and safe flow of traffic (see also 23 CFR 1.23). These rights may be granted only for a specified period of time because the real property interest may be needed in the future for highway purposes or other purposes eligible for funding under title 23."

The typical Right of Way Use Agreements (formerly known as airspace leases) are:

- **Rental Agreement** – noncomplex, non-developmental use for six months.
- **Parking Agreement** – short term, non-developmental use for up to five years with no options or extension. Usually the result of an open bid process.
- **Non-Developmental Agreement** – which may involve non-structure improvements to the site. Usually the result of direct negotiations.
- **Developmental Agreement** – prohibited.
- **Marler Johnson Park Agreement** – Local public agency's use of a site for a park or recreational facilities.
- **Park and Ride Agreement** – month-to-month agreement with a nonprofit organization to use the park and ride facility in exchange for maintenance and security services.
- **Three-Year Directly Negotiated Non-Developmental Agreement** – three-year lease with no right of extension, resulting from direct negotiations for sites that will be utilized by a contractor in support of construction and/or maintenance of State routes and/or Interstates.
- **Telecommunications Wireless License (Site License Agreement)** – specific site agreement for a wireless facility for an initial ten-year term with three consecutive 5-year extension options. Carrier must have executed a HQ A/S Master License Agreement, which defines the specific terms and conditions for all sites.

© 1994-2025 California Department of Transportation. All rights reserved.

- **Tieback Agreement** – agreement for tiebacks to be inserted into Caltrans operating right of way. Tensioning must be removed from the tiebacks prior to expiration of the lease. The Right of Way Use Agreement is handled through R/D A/S, but the clearances and other activities will be handled through the Design and Encroachment Permit Office.
- **Tower Crane Agreement** – agreement to allow tower cranes over operating right of way. As in tiebacks, the Right of Way Use Agreement will be done through Right of Way and all other parts of the process, including clearances, will be done through Design and Encroachment Permits.

See Section 15.06.00.00 for processing these leases.

Lease templates may be found on the Exhibits and the Real Property Services webpage (internal Caltrans link).

Current delegations for approvals are found at the end of this Airspace chapter in Manual section 15.09.

Other Right of Way Use Agreement agreements may be entered into with public agencies (e.g., local public agencies, school districts, and government agencies).

15.04.01.01 Rental Agreement

Rental agreements are for interim uses (e.g., Christmas tree sales, radio frequency testing, and construction staging areas). The term is limited to six months. At no time will the use be extended beyond 6 months with the same tenant for the same purpose. In situations that require longer than 6 months, CTC approval must be obtained per CTC Resolution G-24-14 (internal Caltrans link).

15.04.01.02 Parking Agreement

Short-term parking Right of Way Use Agreements, which are parking of operable vehicles, are used when the airspace site is already improved to support the intended use or the proposed lessee intends to make improvements limited to paving, curbs, lighting, landscaping, and fencing to the site. The improvement to the site could be as minimal as grading and gravel. The term should be a period long enough to amortize the cost of improvements. The term is normally two years but can be for five years,

© 1994-2025 California Department of Transportation. All rights reserved.

depending on the need of the lessee and the potential rate of return that may result from a longer-term agreement.

The standard agreement can also be used for other non-developmental uses that will not exceed five years as long as all other provisions in the agreement remain the same. HQ A/S shall be contacted for approval prior to modifying any standard provisions or clauses.

The agreement is usually used after a competitive bid process but in rare circumstances can be used after direct negotiations (e.g., with an adjoining owner of a landlocked site or when in the best interest of the State).

15.04.01.03 Open Storage

Open Storage under structures or adjacent to structures is currently a prohibited use and any future agreements for this use will not be approved or allowed. Existing open storage, under structures or adjacent to structure, leases will not be renewed.

Any airspace open storage site shall not contain any items contained in the prohibited items list. See Section 15.07.09.03 for prohibited items.

(Please contact HQ A/S for the most up to date policy).

15.04.01.04 Non-Developmental Agreement

This agreement is very similar to the Parking Agreement, except they are used in scenarios where tenant will install non-structural improvements that require substantive investment (e.g. solar, EV Charging, new construction for a parking lot facility and other alternate uses.)

15.04.01.05 Developmental Agreement

The Department is prohibiting any development of buildings or parking garages on any Airspace sites.

© 1994-2025 California Department of Transportation. All rights reserved.

15.04.01.06 Marler Johnson Agreement

Pursuant to the Marler Johnson Highway Park Act of 1969 (reference Government Code Section 14013) and the terms and conditions established by the CTC Resolution G-19-43, a local agency can request use of an airspace site for public park or recreational purposes. The normal DARC process is followed and a FMLR is established. Rental offsets for anticipated savings to the Department can be deducted from the FMLR to determine the actual rate.

Example 1:

FMLR	$825/mo
Security costs from previous Fiscal Year (FY)	-$212/mo
Maintenance costs (debris, weeds, fire abatement) from previous FY	-$372/mo
Actual rate	$241/mo

R/D A/S should ensure all safety procedures for safe and healthy human exposure are followed. HQ Environmental (Hazardous Waste, Air, Noise & Paleontology Office) may need to be involved to review the Aerial Lead Deposit for areas proposed underneath or adjacent to highway structures.

15.04.01.07 Park and Ride Agreement

These types of agreements allow month-to-month tenancies on park and ride lots to enhance lot occupancy by providing security and maintenance.

Leasing a portion of the lot provides on-site management of the facility to assist with maintenance and security, which should improve facility usage. In some cases, longer-term leases with other entities may be considered. Consult with HQ A/S on specific proposals.

The FMLR for the area to be leased is offset against the savings to the Department from not having to provide security and maintenance. The nonprofit organization's use cannot reduce the number of parking spaces available. The minimum lease rate is $1 per month, calculated by subtracting the savings to the Department from an approved FMLR or $500 (minimum lease rate), whichever is greater. Despite the exceptions to the minimum $500 FMLR discussed in 15.05.05.01, Park and Ride agreements are not

© 1994-2025 California Department of Transportation. All rights reserved.

allowed to go below the $500/month minimum lease rate unless allowed per statue or offset by maintenance costs as shown below.

Example 2:

FMLR	$400/mo
Minimum Lease Rate	$500/mo
Maintenance Offset	$600/mo $499/mo (maximum offset)
Lease Rate	$ 1/mo (minimum lease rate)

R/D A/S should review leases annually to ensure usage at the site has improved with on-site management, and that continuing the month-to-month arrangement is in the Department's best interest. All Right of Way Use Agreements shall contain clauses that state the agreement can be terminated with 30-day notice if the Department needs the entire area, if on-site management has not improved usage, or if the lessee is not providing the required level of security and maintenance.

15.04.01.08 Three-Year Directly Negotiated Nondevelopment Agreement

R/D A/S is authorized to negotiate directly under the following conditions per CTC Resolution G-24-14: Lessee is a contractor engaged in construction and maintenance of a State route or interstate and the alternate use is for Construction Staging. The term cannot exceed three years, even with extensions, and the use cannot require any major site improvements. No other three-year directly negotiated scenarios are allowed without HQ Right of Way and CTC approval. The following guidelines apply:

- The use is non-developmental, with limited improvements (e.g., paving, curbs and lighting).
- Lease rate is based on an estimate of the Fair Market Lease Rate (FMLR).
- FMLR is escalated each year by an appropriate negotiated percentage or by the area's Consumer Price Index (CPI).
- There is only one potential lessee.

© 1994-2025 California Department of Transportation. All rights reserved.

- DARC must approve the use.
- FHWA approval may be required, see 15.06.13.00.
- The use complies with local zoning and is considered noncontroversial.
- No hazardous materials can be produced, stored, or transported.

This process was developed to streamline R/D A/S attempts in the Department's best interest to support transportation projects that maintain and/or enhance our facilities; but the intended use, rate, and term do not justify the time needed to get CTC approval.

The CTC is advised annually on the status of these Right of Way Use Agreements and can terminate this practice if the agreements are not being used in accordance with the manual and/or CTC Resolutions.

15.04.01.09 Telecommunications Licenses

A statewide Master License Agreement (MLA) for Wireless Communications Services Carriers allows a licensed carrier to install and operate a wireless facility. Each carrier must execute the MLA with HQ A/S prior to executing a specific Site License Agreement (SLA) with R/D A/S.

The MLA allows the carrier to install a facility on any Caltrans owned property (maintenance facility, park and ride lot, office building, and within operating and nonoperating right of way) where it is in the public's best interests and does not interfere with the free and safe flow of traffic.

The MLA generally applies only to controlled access freeways and highways. Proposals to install wireless facilities on non-access controlled conventional highways is usually only through the Encroachment Permits Office.

Refer to the current Telecommunications Licensing Process and Guidelines for further details.

© 1994-2025 California Department of Transportation. All rights reserved.

15.04.01.10 Public Agency Right of Way Use Agreements

A school district, local public agency, or other governmental agency can lease an airspace site at the Fair Market Lease Rate (FMLR) for public use (refer to CTC resolution G-19-43 [revised from G-03-03] or the most recent resolution). R/D A/S should coordinate renewals and payment schedules with the agency's budget cycles to ensure lease payments are allocated in its budget. R/D A/S should contact the agency at least six months prior to the budget cycle date to determine if the lease will be renewed. If so, an appraisal should be requested with a due date prior to the date of the lessee's budget request. After the appraisal is approved, R/D A/S should begin discussions immediately with the lessee to ensure adequate time for the lessee to request additional funds if the lease rate increases.

15.04.01.11 Filming on State Right of Way

In accordance with Government Code 14998.8, all applications for Film Industry use of State-owned property are processed through the California Film Commission. The Film Commission then contacts the Department of Transportation. The Encroachment Permit Office in Los Angeles (District 7) is the Caltrans Statewide Film Coordinator (CSFC) and acts as the film liaison to approve or deny all applications for film activities under Caltrans' jurisdiction. The CSFC coordinates with Encroachment Permit staff in the other Districts where the film activity is proposed. Fees collected by the Film Commission are deposited into the State Highway Account. The Department shall charge compensation in accordance with Federal and State requirements. Encroachment Permits staff is responsible for coordinating all necessary internal and external approvals, and activities, related to this use. This includes all filming and special event encroachment requests that involve interstate right-of-way, which must be submitted to FHWA for approval. The timelines for a filming application are as follows:

- COMPLEX Filming requests (including Freeway closures or Ramp Closures with major detours)– 8 business days.
    - For Complex Filming requests that involve full freeway closures, stunts, pyrotechnics etc. within interstate right-of-way, Caltrans statewide film coordinator will invite the FHWA engineer to pre-permit meetings to explore impacts and feasibility of the proposal.
- NONCOMPLEX Filming requests (including simple Ramp Closures) – 3 business days.

© 1994-2025 California Department of Transportation. All rights reserved.

- All other ROUTINE Filming requests (filming with flow of traffic, camera on overcrossing, filming with rolling traffic breaks etc.) – 2 business days.

Please refer to Encroachment Permit Manual Section 503 for more information.

15.04.01.12 Statute Directed Use – Emergency Shelter and Feeding Program

Occasionally the State Legislature will pass legislation authorizing certain uses, either at or below fair market rent, for Department-owned property. The State Legislature, in response to the housing crisis in California, has passed numerous pieces of legislation authorizing the use of Department-owned property for temporary emergency shelters or feeding programs. The Department is not mandated to allow such uses on Department-owned property. Currently, the various statutes authorizing the use of Department-owned property for temporary emergency shelters or feeding programs include the following:

- Streets and Highways Code 104.16: San Francisco
- Streets and Highways Code 104.17: Stockton and Santa Barbara
- Streets and Highways Code 104.18: San Diego
- Streets and Highways Code 104.21: Stockton
- Streets and Highways Code 104.24: Oakland
- Streets and Highways Code 104.25: San Diego
- Streets and Highways Code 104.26: Los Angeles and San Jose
- Streets and Highways Code 104.30: Statewide

Streets and Highways Code 104.30 (SHC 104.30) was included in Senate Bill 211 during the 2019-2020 Legislative Session. SHC 104.30 authorizes the Department to make airspace or other real properties available to other gov't agencies for temporary emergency shelters or feeding programs.

If Local Public Agencies that implement their own transportation projects are subject to similar legislation, then Local Public Agencies should follow guidelines outlined in sections below.

For statutes directing the use of an airspace property for park and recreation use, please follow the Marler Johnson Park Act provisions (15.04.01.06).

© 1994-2025 California Department of Transportation. All rights reserved.

15.04.01.13 Site Identification for Statute Directed Use – Emergency Shelter and Feeding Program

Due to the complexities and potential environmental impacts of developing a site for temporary emergency shelter or feeding program, site suitability and allowable uses of the site shall be determined through a Region/District DARC review process, which shall include, at a minimum, the Region's/District's External/Public Affairs Office, Division of Environmental Analysis, Planning, Design, Encroachment Permits, and Maintenance. Pursuant to SHC 104.30(d), temporary emergency shelters and feeding programs are under local fire authority for the approval of plans, issuance of building permits, and certificates of occupancy for any improvements developed on the site. Considerations of a suitable site must include access, geography, seismic activity, traffic patterns, etc. Local agencies must be encouraged to engage the community for possible solutions, needs, and wants.

15.04.01.14 Rental Rate for Statute Directed Use – Emergency Shelter and Feeding Program

The rental rates for the use of Department-owned property is specified in the various statutes. At this time, all of the aforementioned Streets and Highways Codes called out in Section 15.04.01.12 have a specified rental rate of $1.00 per month.

In addition to the rental rates, the various statutes also specify the administrative fees that the Department may charge local agencies to cover the support costs expended by the Department in developing and administering the lease.

The administrative fee specified in the various statutes range from $500.00 per year to $5,000.00 per year, unless the Department determines that a higher administrative fee is necessary to cover the Department's costs. Of all the Streets and Highways Codes identified in Section 15.04.01.12, only SHC 104.30 caps the annual administrative fee (stating that it is not to exceed $15,000.00), irrespective of the Department's determination of an administrative fee necessary to cover the Department's costs.

© 1994-2025 California Department of Transportation. All rights reserved.

Until sufficient resource expenditure data has been collected for this lease type, the Department's policy is to charge the local agency a flat rate for administrative fees while tracking actual administrative resource expenditures with a unique reporting code. This reporting code is established to accurately track actual support costs and may be used to establish future administrative fees charged for leases of this type. The flat rate for administrative fees shall be $5,000.00 for leases pursuant to SHC 104.30, and $500.00 for all other leases identified in Section 15.04.01.12.

In order to closely monitor and track the Department's actual expenses associated with developing and maintaining these types of leases, charging for all work associated with these leases must include a unique "Reporting Code as instructed below.

Requesting a Reporting Code: Complete Form FA-1036 (REV 06/2018) (internal Caltrans link) and email the completed form. Reporting Codes must be assigned for **each** separate homeless lease account. For the following three sections, please complete the form in the following manner:

- *Reporting (10 characters maximum):* The reporting code should be constructed as "HOMEL", followed by the two-digit District number, followed by a unique 3-digit number the District assigns (it is imperative that this number does not conflict with any Airspace tenancy numbers). For example – "HOMEL04001" would be a potential reporting code for a District 4 homeless lease.
- *Short name (15 characters maximum):* Short name should be the complete tenancy number.
- *Reporting Code Name (60 characters maximum):* This name should be "Homeless Lease", including the space between the two words, and the full tenancy number including the pertinent dashes. For example – "HOMELESS LEASE 04-ALA880-0001-01" would be a potential reporting code for a District 4 homeless lease.

15.04.01.15 FHWA Approval for Statute Directed Use – Emergency Shelter and Feeding Program

If the site identified was acquired with Title 23, United States Code, funding, FHWA approval must be obtained for leasing the site at less than fair market value. As discussed in Manual Section 15.04.01.12, the Region/District shall submit a written Public Interest Finding (PIF) to HQ R/W for submission to FHWA for the approval of the statutory less than fair market rental rate.

© 1994-2025 California Department of Transportation. All rights reserved.

The site must also be submitted for FHWA approval if the airspace lease is within the operating right of way of an interstate. Further information on what documents are required and the approval process can be found under Airspace Manual Sections 15.06.13.00 through 15.06.13.03.

15.04.01.16 Park and Ride Lots as Shelter Sites

FHWA released a letter on March 19, 2021 titled "Alternative Uses of the Highway" that focuses on shelter placement within the Right of Way. Within the letter, placement of the shelters within Park and Rides are allowable under certain circumstances as described below. FHWA has determined that *temporary* alternate uses of the ROW for shelter and other facilities that provide services to people experiencing homelessness provide urgently needed social benefits to impacted individuals and the public at large. Language from the letter is as follows:

There are three statutory provisions in Title 23, United States Code, that States use to construct and operate Park and Ride lots: 23 U.S.C. 137 (Fringe and corridor parking facilities), 142 (Public transportation), and 149 (Congestion mitigation and air quality improvement [CMAQ] program).

Those statutes authorize the use of Federal-aid funds for Park and Ride activities and impose certain restrictions on the use of the lots. When considering potential use of a Park and Ride lots for purposes not expressly allowed under 23 U.S.C. 137 or 142, FHWA evaluates whether the original purpose of the lot will be adversely affected. For example, if CMAQ program funds were used to construct the Park and Ride lot, any proposed use that would result in a reduction of the congestion or air quality benefits stemming from the lot, would not be an acceptable alternative use of the lot. The FHWA Division Office will make this determination for any proposal involving Park and Ride lots that were constructed pursuant to 23 U.S.C. 137 or 142, and those lots involving the use of CMAQ funding (23 U.S.C. 149).

When making this determination, the FHWA Division Office will consider:

1) the past, current, and foreseeable future parking and transit-related occupancy rates of the Park and Ride lot;
2) the number of parking spaces that would remain if the proposed use will result in any temporary reduction in parking capacity;
3) impacts on any transit-related activities on the lot;
4) the impacts on safety and operation of the Park and Ride lot; and
5) any additional State and local commitments related to the original use of funds, including those commitments made through the National Environmental Policy Act (NEPA) review.

© 1994-2025 California Department of Transportation. All rights reserved.

If the FHWA Division Office determines that the proposed alternative use of the Park and Ride lot will not conflict or otherwise adversely impact the transportation functions at the site, the alternative use may be approved provided that adequate measures are in place to protect the continued operation, maintenance, and safety of the facility.

In addition, Park and Ride lots in the Interstate ROW are subject to 23 U.S.C. 111(a) provisions prohibiting States from permitting automotive service stations or other commercial establishments for serving motor vehicle users.

15.04.01.17 Rental Agreement for Statute Directed Use – Emergency Shelter and Feeding Program

Please refer to the specific lease template on the Real Property Services Airspace website (internal Caltrans link). Local Public Agencies, that implement their own transportation projects who are subject to be a lessor for any such homeless support use, requiring access to the Lease template on the Division of Right of Way and Land Surveys, Real Property Services intranet website should contact an HQ R/W liaison for further assistance.

The HQ R/W liaison contact information may be found at the internal Real Property Services Airspace website (internal Caltrans link). Any changes to the templates, excluding information pertaining to site specific developments, must be approved by HQ and the District's legal office.

15.04.01.18 Term for Statute Directed Use – Emergency Shelter and Feeding Program

Temporary homeless support leases shall be for a term pursuant to a statute that specifically dictates the term of the lease agreement. Additionally, the Region/District shall not execute any leases after the sunset date specified in the specific statute. Furthermore, the Region/District shall not allow the term of any lease to extend beyond the sunset date specified in the specific statute. The intent of such statutes authorizing the use of Department-owned properties for homeless support sites is not to permanently shelter people but to erect these facilities as an emergency measure. Should a local agency wish to extend a lease term beyond three years, or renew the lease after three years, the Region/District shall obtain approval by HQ R/W. Please send all requests for extended terms or renewals to your HQ liaison.

© 1994-2025 California Department of Transportation. All rights reserved.

15.04.01.19 Construction Staging Leases for Caltrans Projects

Section 5-1.32, "Areas for Use," of the Department's *Standard Specifications* allows the Department's contractor to occupy the highway only for purposes necessary to perform the work. The areas for use available to the Department's construction contractor must be within the project limits and must be within the environmentally approved project footprint.

It is preferable for the construction staging areas to be incorporated into the Construction Bid Package. This may be achieved by the Plans, Specifications, and Estimates (PS&E) package including designated temporary construction easements or the contract's standard specifications allowing the use of Airspace Freeway Lease Areas (FLAs) within the project's limits. If the standard specifications allow the use of any Airspace Freeway Lease Area to the Department's construction contractor within the project's limits, prior approval must be obtained from R/W. In this case, a separate Right of Way Use Agreement is not required, please refer to the Project Manager for property use requirements. It is imperative for R/W to closely review all iterations of the PS&E package and provide comments regarding the FLAs and the disposition of those FLAs.

In the instances in which the Department's construction contractor requires a construction staging area not included within the Construction Bid Package, Airspace properties may be used for construction staging if the following conditions are met:

- Be approved by the HQ Division Chief of RWLS so long as it meets the requirement stated in the FHWA memo dated 11/15/2023, "absent a showing that such uses would provide for the safe and secure operation and maintenance of the highway facility." See Exhibit 15-EX-20.
- If the site is not within the project's scope, the rental rate must be at Fair Market Value (FMV). If federal funds were used to purchase the real property interest, and rent is less than FMV, FHWA must approve a Public Interest Finding (PIF). A less than FMV rental situation would arise when the Department is required to compensate the construction contractor a certain percentage markup for costs incurred, e.g., force account due to a Director's Order.
- Rental terms can only be for the length of the construction project (with allowances for short periods before and after the project for preparations and clean up).

© 1994-2025 California Department of Transportation. All rights reserved.

- All Airspace processes and procedures must be followed for the staging use (DARC, environmental document approval, FHWA approval, and in certain cases CTC approval).
- Rental conditions will include environmental protections appropriate for the proposed use (non-permeable barrier, etc.).
- The construction company is responsible for obtaining all local permitting.
- The property must be returned to the original condition after the construction staging use is completed.

15.04.01.20 Batch Plants

Batch plants as defined by the Standard Identification Code (SIC) can be established on Caltrans property as described. The SIC defines batch plants as establishments primarily engaged in manufacturing portland cement, and concrete manufactured and delivered to a purchaser in a plastic and unhardened state. This industry includes production and sale of central-mixed concrete, shrink-mixed concrete, and truck-mixed concrete.

Batch plants should only be allowed when the batch plant has been reviewed by the DARC. The Caltrans Stormwater contact approval for such uses as batch plants will also be required. If this is within an active Caltrans construction zone or project, construction policies apply. For specific questions, Right of Way should contact the Division of Construction.

For properties that are not related to Caltrans projects or construction, under no circumstances should a batch plant be allowed in or within close proximity to a Residential neighborhood due to dust and noise concerns. The batch plant also requires the pertinent County, Air Quality, and Water Quality permits. These permits should be obtained by the proposed tenant. A copy of these permits will be kept in the file. If the proposed tenant cannot produce these permits, then the use will not be allowed on the property. A written plan should be established prior to use for how material disposal occurs. This written plan should be added to the signed Right of Way Use Agreement as well as the expectation that the property will be returned to its prior condition. Other major considerations include safe access to and from the site. The expectation is that a clause in the rental agreement will be added for the property to be reverted back to its condition prior to its use as a batch plant.

The property should be regularly inspected including pictures taken at each inspection. Pictures will be kept in the Airspace file documenting the property prior to use as a batch plant and at every inspection. The District Stormwater

© 1994-2025 California Department of Transportation. All rights reserved.

contact should inspect with District Right of Way agent as often as required to protect the NPDES Stormwater Permit Caltrans uses for overall Stormwater requirements. This required inspection ensures the tenant is complying with these Stormwater requirements. An initial walk-thru must occur with the District Stormwater contact as well as a final inspection when the agreement is terminated. The Districts Airspace will also receive and retain these required inspection reports.

15.04.01.21 Tie Back and Tower Crane Agreements

Per the interdivisional memos dated December 28, 2016 on Tower Crane Agreements (Exhibit 15-EX-10) and dated July 26, 2017 on Tiebacks Agreements (Exhibit 15-EX-09), the Encroachment Permit office will circulate for all divisional clearances, although Right of Way is still responsible for the Right of Way Use Agreement. The agreements are only applicable for temporary tiebacks which are de-tensioned when no longer needed for structural support and for Tower Cranes under specific conditions. Permanently tensioned tiebacks are not permitted within the state highway rights-of-way. For further information on requirements, refer to the Memos.

The Encroachment Permit office has a maximum time constraint of 60-days to issue an encroachment permit. Due to this constraint, any Right of Way Use Agreements should be worked on and executed diligently.

The Headquarters Division of Design, Office of Project Support, will facilitate the FHWA review and approval.

Fair market value (FMV) must be paid for both tie back and tower crane agreements. The FMV for tiebacks is the cost to remove the remaining rods in case of a future project conflict. For Tower Cranes, the FMV is nominal.

15.04.01.22 Parklets

A parklet is a small, temporary, publicly accessible constructed seating or community gathering area sited over an on-street parking space or on an extension of the sidewalk into the highway right of way. The local public entity representing the area in which the parklet is proposed is responsible for its proposal, application, installation, maintenance, and removal. An Encroachment Permit and parklet design and plans which adhere to section 500.3I of the Caltrans Encroachment Permit Manual are required. A temporary barrier may be required to separate the parklet from the traveled way. Pedestrian and State highway safety and the ongoing transportation use of the highway facility must be maintained.

© 1994-2025 California Department of Transportation. All rights reserved.

The Marler-Johnson Agreement (reference 15.04.01.06 and Government Code Section 14013) is used pursuant to terms and conditions established by CTC Resolution G-19-43. The normal DARC process is followed and a FMLR is established. Lease term for a parklet is up to one year and additional one-year periods may be considered.

15.04.01.23 Pocket Parks

A pocket park is a small open space and/or community gathering area located on a small portion of right of way which is not serving a transportation purpose and is safely accessible by the public for recreation purposes. Pocket parks may be located behind sound walls and outside of the right of way fence, are generally larger than parklets and not typically sited on converted parking spots. An Encroachment Permit is required for pocket parks. The lessee is responsible for its proposal, application, installation, maintenance, and removal at termination of the lease. The proposed pocket park location and use will be reviewed to ensure it will not risk public safety or interfere with the State highway's primary transportation use. A permanent barrier from the traveled way is required for safety. Pedestrian and State highway safety and the ongoing transportation use of the highway facility must be maintained. The normal DARC process is followed and a FMLR is established. The Marler Johnson Park Agreement (see 15.04.01.06) is used for leasing to a local public entity and the Non-developmental Agreement (see 15.04.01.04) is used for leasing to a private entity. CTC requirements for direct negotiations must be fulfilled. All pocket parks are to be accessible by the general public.

R/D A/S should ensure all safety procedures for safe and healthy human exposure are followed. HQ Environmental (Hazardous Waste, Air, Noise & Paleontology Office) may need to be involved to review the Aerial Lead Deposit for areas proposed adjacent to highway structures.

15.04.02.00 Oil and Gas Leases

To generate revenue, oil and gas rights may be leased to any oil and gas company that will pay rates equal to or greater than the rate being paid to individuals in the same geographical area.

To lease a site, the company will provide R/D A/S with its proposed Right of Way Use Agreement, the anticipated revenue, a vicinity and site map, and a written legal description. After R/D A/S review of the agreement (with assistance from HQ A/S and Legal as appropriate), the company must execute the agreement before the Department executes it. Generally, the

© 1994-2025 California Department of Transportation. All rights reserved.

Right of Way Use Agreement or the memorandum of the lease is recorded. R/D A/S should ensure that the Department's signature is authorized to execute recordable documents in the county where the site is located. The company must pay a fixed lease rate based on market data until the drilling operation begins.

When the company starts actual production, royalties become due (percentage of gross revenues). R/D A/S must change the account to reflect zero rent and schedule the lease for an annual payment (in arrears). When the Right of Way Use Agreement is terminated, a quitclaim must be recorded, with a copy to R/W Engineering to update their records.

Oil and Gas leases are numbered using the same method of numbering for regular airspace properties, but use the 8000 number for sequence (e.g. 03-YOL113-8001-01).

15.04.03.00 Utility Companies

R/D A/S Right of Way Use Agreements and procedures are not used to establish or to continue the placement of public utility lines in freeway rights of way. The Caltrans Encroachment Advisory Group (EAG) in Headquarters issues permits for the use and occupancy of such rights of way for a public utility purpose. In other words, under no circumstances will the Department grant a Right of Way Use Agreement to a utility company for utility distribution or service lines. Exceptions are granted if a utility company proposes to lease an airspace site for parking, office space or a staging area. The utility company must be referred to the Office of Permits, which will handle all requests for an encroachment permit, including requests for exceptions to the longitudinal encroachment policy.

Telecommunications Wireless Carriers are not treated as utility companies, even if part of their functioning is regulated by the California Public Utilities Commission (CPUC), as they do not provide a necessary service to the public, and they operate in a competitive arena. Sites for wireless facilities are handled exclusively via "site licenses" subject to the Master License Agreement (see 15.04.01.09) by Airspace.

© 1994-2025 California Department of Transportation. All rights reserved.

15.04.04.00 Right of Way Use Agreement

Standard agreements for all types of airspace leases are available in each region/district. Right of Way Use Agreement templates may also be found in the Exhibits and the Real Property Services Airspace (internal Caltrans link) websites.

HQ A/S must approve all modifications to the standard lease provisions, and the R/W Program Manager or a delegated representative must execute the agreement. One original executed copy of all long-term leases (more than 5 years) must be sent to HQ A/S.

15.04.04.01 Terms and Conditions

The standard terms and conditions of a Right of Way Use Agreement must include (23 CFR 710.405[b]):

- Use and improvements.
- Term of the agreement, including options and extensions.
- Lease rate per approved valuation report, if not prescribed by legislation, and also the rate of return.
- If a bid, the lease rate must be based on the last bid or the previous lease rate.
- Reevaluation provisions and periodic adjustments to the lease rate.
- Insurance and indemnification requirements.
- FHWA indemnification requirements.
- Default, liability, and termination provisions.
- Sublease, assignment, and transfer provisions.
- Retention and removal of improvements.
- Maintenance responsibilities of all parties.

The standard Right of Way Use Agreement provides for all the above and more, and HQ A/S must preapprove any modifications to the clauses. Requests for "CTC Approval of Terms and Conditions" of a Right of Way Use Agreement must provide detailed information about the above terms and conditions.

© 1994-2025 California Department of Transportation. All rights reserved.

Sample format:

Use:	Improved parking
Term:	10 years, one 5-year extension
Lease Rate:	$835 (rounded) per month
Fair Market Value:	$100,000 as plottage
Rate of Return:	10%
Adjustments:	3.5% annually
Reevaluations:	After 10 years
Improvements:	Paving, striping, curbing
Termination:	Standard – either party after the first 5 years
Liability Coverage:	Standard $5,000,000

15.04.04.02 Insurance Requirements

Each airspace site must be insured for a minimum of $5,000,000 in liability and, if the site is developed, 100% of replacement cost. The lessee must provide a current certificate of insurance each year. R/D A/S should review it to ensure the fire coverage is sufficient considering increases in value. Each telecommunications wireless facility must be insured for $5,000,000 liability. R/D A/S shall monitor the insurance requirements for the Telecommunications licenses. Some prior or previous existing leases only required $2,000,000 or less at the time of execution, and these should be increased to the new minimum as the leases are amended or enter the option periods. Use Form RW 15-03.

15.04.05.00 Option to Lease and Processes

An option allows the proposed lessee to hold the site while obtaining all reviews and approvals necessary to construct (e.g., local permits and construction funding). The use of an option for long-term competitive bids does not require prior HQ A/S approval, but R/D A/S should consult with HQ A/S about the applicability of an option.

15.04.05.01 Option Agreements

HQ A/S will assist R/D A/S in preparing the Option Agreement. If the Right of Way Use Agreement is through direct negotiations, the CTC must approve terms and conditions (Exhibit 15-EX-06 [internal Caltrans link], for internal Caltrans use), "CTC Approval of Terms and Conditions." The standard option period is three to six months.

© 1994-2025 California Department of Transportation. All rights reserved.

15.04.05.02 Option Payments

The Option Agreement will specify the amount of option payment that the proposed lessee (Optionee) must pay to hold the site pending all approvals and executing the Right of Way Use Agreement. The option cost shall be the prorated monthly as determined from an Airspace estimate (based on the minimum bid and the potential rate if leased). The standard minimum option payment is one month's rent based on the successful bid.

15.04.05.03 Exercising Option Rights

The optionee/lessee must notify R/D A/S, in accordance with the notice provisions in the option agreement, whether or not optionee/lessee intends to exercise the option to execute the Right of Way Use Agreement. Extensions can be granted in rare circumstances, and provisions for such extensions should be addressed in the initial Option Agreement.

15.04.06.00 Exercising Option to Extend an Existing Lease

Not to be confused with the Option Agreement, some CTC-approved Right of Way Use Agreements provide for an option to extend the original term (e.g., 10-year initial term with three consecutive 5-year extension options). The lessee must state in writing 60 days before the end of the initial term its intent to exercise the option and identify any anticipated changes to the use or the agreement. R/D A/S must review terms of the agreement to ensure conditions to extend have been met and determine if the lessor (Department) agrees to or denies the option. If so, R/D A/S must immediately conduct a DARC review of the site before formally acknowledging the request. Also, the Right of Way Use Agreement may provide for reevaluation of the lease rate prior to the extension, requiring R/D A/S to coordinate the reevaluation with the Appraisal Branch and the lessee (see 15.05.05.03). R/D A/S sends an acknowledgment letter to the lessee and sends copies of the letter and notice to HQ A/S.
If there is no change in the provisions of the Right of Way Use Agreement, an amendment to exercise an option is not needed. If there is a change, it is handled in the same manner as amendments.

As of June 2024, new leases cannot contain an option to extend language without unanimous CTC approval.

© 1994-2025 California Department of Transportation. All rights reserved.

15.04.07.00 Renewals of Long-Term Developmental Leases

Caltrans has a number of long-term developmental leases with terms of up to 50 or more years that will soon be expiring. It is preferred that renewals be negotiated with the current tenants to avoid Caltrans ownership of various buildings throughout the state. However, there are a number of factors to consider prior to renewing the lease and despite not wanting ownership from these long-term leases, negotiations to the satisfaction of both Caltrans and the tenant may not be possible.

The renewal process should be initiated a minimum of 18-months prior to the expiration of the lease.

The necessary considerations will be detailed in the sections below.

15.04.07.01 Current Lease Terms and Current Standing of the Tenant

Current lease terms should be evaluated to determine if the ownership of the improvements revert to Caltrans (this will likely be the case for most leases). If the lease allows for an alternate solution, such as demolition, the district should consider whether this alternate path or renewal is best for the district and the public.

If the district decides that a renewal is the best course forward, the district should review the tenants file to determine whether the tenant has been a good tenant, paying their rent in a timely manner, and abiding by the lease terms for maintenance and other issues prior to initiating a renewal.

Current use of the property must also be analyzed. A use that is incompatible with proximity to the transportation system should not be renewed. Such uses include the storage or sale of hazardous materials, daycare centers, and schools. Exceptions for these uses must be obtained from HQ Airspace concurrently with the DARC.

© 1994-2025 California Department of Transportation. All rights reserved.

15.04.07.02 DARC and External Reviews for Long-Term Renewals

The typical DARC members must be included in the DARC for renewal, including maintenance, traffic operations, design, environmental, project development, hydraulics, and landscape architecture as applicable. The Structure, Maintenance, and Investigation group must also be forwarded the request to allow renewal. The Structure, Maintenance, and Investigation group will perform an inspection of any building within the airspace site to determine if the building will interrupt or endanger the transportation system by its continued proximity or due to build quality, lack of code updates, or other concerns.

If the airspace site contains a building, the State Fire Marshall must perform an inspection of the building and also support renewing the lease. A certificate of occupancy must be on file with the State Fire Marshall before approval for renewal can be granted.

The Structure, Maintenance, and Investigation group and the State Fire Marshall will likely identify items that need to be addressed prior to renewing the lease.

15.04.07.03 CTC Approval and FHWA Approval for Long-Term Developmental Renewals

Because the lease will be with a private entity and will not go to competitive bid, it will be necessary to approach CTC twice during the transaction. The first time will be for permission to negotiate directly with the tenant. A limited DARC review will be required prior to seeking CTC Approval for permission to directly negotiate.

The second time CTC is approached will be to approve the terms of the agreement.

FHWA approval will be necessary on interstates. FHWA approval will be necessary for every renewal of leases on the interstates. If there is no documentation within the file that FHWA approval was obtained during the first lease, then FHWA approval must be sought and obtained again in writing. Approval must be kept in the file permanently.

© 1994-2025 California Department of Transportation. All rights reserved.

15.04.07.04 Long-Term Developmental Renewal Agreements

The renewal must be at fair market value with all currently approved legal language. Clauses should include, but are not limited to, Stormwater clauses, indemnification clauses, fire codes, condemnation clauses, use of property for transportation purposes, and insurance clauses. The lease should not be for longer than a 20-year period, not to exceed the functional obsolescence of the building, with CPI adjustments and periodic re-evaluations built into the lease. The security deposit may need to be updated to reflect an increase in rent (if one occurred). Per 15.05.05.03, CPI adjustments should occur annually and periodic lease rate evaluations will preferably occur every 5 years, but at least every 10 years. Periodic adjustments to the lease rate will also trigger increases in the security deposit.

The District Legal Division should review all Long-term Developmental Renewal Agreements.

Under no circumstances will the site be leased for longer than the usable life of the improvements.

15.04.07.05 Encroachment Permit for Renewals

Before a tenant is able to start any construction, even as a result of deficiencies identified by the SFM or Structures, an Encroachment Permit must be obtained. This should be done through the Administrative Permit process for Right of Way Airspace Leases described in Section 500.3.

15.04.08.00 Requirements for Continued Occupancy and/or Use of the Improvements Subject to Long-Term Renewals

Prior to the tenant's continued occupancy or continued use of any of the improvements on the site, the tenant must receive final building approval and a renewed Certificate of Occupancy from the State Fire Marshal should the State Fire Marshal deem it necessary. The Tenant shall provide a copy of the Certificate of Occupancy to the Agent for the tenancy file prior to occupying the property or a written record that State Fire Marshall is not requiring renewal of the Certificate of Occupancy.

All costs incurred with securing the Certificate of Occupancy are the responsibility of the tenant. However, the State Fire Marshal will bill the

© 1994-2025 California Department of Transportation. All rights reserved.

Department of Transportation for securing this document. Districts shall expect to bill the tenant for the amount incurred.

© 1994-2025 California Department of Transportation. All rights reserved.

15.05.00.00 – LEASE RATES AND ADJUSTMENTS

15.05.01.00 Valuation of Lease Rate

The lease rate for airspace sites is the Fair Market Lease Rate (FMLR). Any rate below the FMLR is subject to the conditions set by the 23 CFR 710, the State Statutes, and the CTC resolutions. The FMLR is established by the following methods:

- **Airspace Estimates** – used for preliminary discussions with potential users, for minimum value sites, or for uses of six months or less and may be used to establish value for these agreements. This will be delivered to the airspace agent on RW 07-19 along with the vicinity and parcel map.

  Refer to Right of Way Manual Chapter 7, Appraisal section 7.15.02.00 for more information on this form of valuation.

- **Airspace Appraisals** – A market value airspace appraisal is required for any site that will be leased on a direct basis without competitive bids and for those situations not meeting the criteria for bid lease valuations. This format is used for all development leases or when there is a question as to the site's highest and best use. The appraisal is valid for one year. When direct negotiations for a development lease are entered into, the appraisal should not be requested until the potential lessee executes a Letter of Understanding (see Section 15.06.05.02) and makes a deposit that is sufficient to cover the cost of the appraisal. The potential lessee has the option of obtaining an independent appraisal report from an appraiser certified and licensed in the state of California (see Right of Way Manual 7.01.18.00; Criteria for Use of Contracted or Independent Fee Appraisers).

  A reevaluation of the current lease rate is required prior to extending the term of a long-term Right of Way Use Agreement, requiring a new airspace appraisal.

  Further information can be found in 7.15.03.00 of the appraisal chapter of the Right of Way Manual.

- **Bid Lease Valuations** – A bid lease valuation is required to establish a range of value in determining minimum rental rates on the basis of competitive bids. The valuation is valid for one year.

  Further information can be found in 7.15.04.00 of the appraisal chapter of the Right of Way Manual.

© 1994-2025 California Department of Transportation. All rights reserved.

- **Rental Rate Appraisals** – Valuation method for qualifying, nondevelopmental uses on directly negotiated airspace leases. Meant to be used for noncomplex, noncontroversial airspace parcels. Further explanation below in 15.05.01.01 and Section 7.15.05.00 of the Appraisal Chapter of the Right of Way Manual.

- **Annual Base License Fee Matrix** – A statewide wireless comparable site fee review is made by Airspace or Appraisal functional staff every five (5) years. Annual fees for comparable urban and rural sites are made for all categories of cell towers and small cell sites. A matrix is compiled denoting appropriate annual rates for Prime Urban, Urban and Rural sites to equipment categories. This matrix is reviewed and approved by the CTC. The approved fee matrix is considered to be the FMLR for wireless sites statewide.

  For all valuations other than Annual Base License, both current use and lease rate should be considered when the airspace site is leased and the determination of the lease rate will be used to establish a new minimum bid.

See Section 7.15.00.00 for specific procedures.

When the valuation is complete, R/D A/S should summarize the report to use in discussions with the proposed lessee or to present the terms and conditions to the CTC.

15.05.01.01 Rental Rate Appraisal

In lieu of a full appraisal report for any nondevelopmental uses on directly negotiated airspace leases, the R/D Airspace Manager can directly request a simplified format to determine the lease rate (rental rate) of sites used for parking, storage, or public parks. (Please see the Right of Way Manual 07.15.05.00; Rental Rate Appraisals for additional information.)

The appraisal will conclude a specific market lease rate as appropriate to the airspace site's attributes, limitations, benefits, and proposed use and terms.

This streamlined approach cannot be used if the highest and best use is in question or if the airspace site is considered as plottage to an adjoining property.

© 1994-2025 California Department of Transportation. All rights reserved.

15.05.01.02 Percentage Leases

In rare cases, the FMLR will be a percentage of the gross income the lessee will generate at the site. R/D A/S must determine the best percentage and establish the method for calculating same (e.g., five percent of gross revenues over a base rent). In addition, the Right of Way Use Agreement must provide for an audit by R/D A/S, usually on an annual basis, of the lessee's records to ensure the calculated amount is accurate. R/D A/S can also request assistance to calculate the annual percentage rate if there is a question about the information the lessee provided.

15.05.02.00 Plottage Value

R/D A/S should advise the Appraisal Branch if the airspace site will be joined to an adjacent site for development. The airspace site may provide additional square footage for parking that a local agency requires before the adjacent site can be developed, or the site may provide needed access to all or a portion of the adjacent site. An airspace site that increases the value of the adjacent site should generate a higher rate of return to the Department.

15.05.03.00 Rate of Return

A full appraisal report requires the property rights be valued as fee. A suggested rate of return based on market data should be included when the data is readily available. The rate of return will provide R/D A/S with a tight range of lease rates to use in negotiating all terms and conditions of the Right of Way Use Agreement. If no data is available, R/D A/S must determine the comparable rates of return to use in establishing a lease rate from the FMV of fee; e.g., $100,000 FMV x 10% rate = $10,000 annual FMLR (monthly = $835 rounded).

15.05.04.00 Scheduling Valuation Requests

Annually during the budget process, R/D A/S estimates the number and type of airspace site appraisals needed for the next fiscal year. This will include such factors as approximate dates when the appraisal/valuation will be needed, what kind of valuation or appraisal will be required, and expected uses of the property. The list should be provided to the Appraisal Branch by June 1. The list identifies the lease areas to be valued and the dates by which the appraisals are needed. This list is then given to Appraisals, where it is used to prioritize preparation of airspace appraisals. R/D A/S should also request

© 1994-2025 California Department of Transportation. All rights reserved.

updates of appraisals over one year old. Any other updates to this list should be provided to the Appraisal Branch well in advance of the need in writing.

Information about the site relevant to its valuation should be given to the appraiser. In cases of direct negotiation, the potential lessee's name and intended use are included in the appraisal request.

Effective communication between R/D A/S and Appraisals is essential. Changes to the schedule should be closely coordinated. The formal request for an estimate, valuation, or appraisal states the Airspace site number, the property rights to be appraised, and includes necessary appraisal maps, plans, and profiles of the freeway. It must include any restrictions that will be placed on use of property. R/D A/S should formally check on the status of its request well before the date the requested information is needed.

The appraiser and R/D A/S agent should discuss site use and restrictions before start of the appraisal and at the rough draft stage. The appraiser should include in the appraisal, or otherwise convey to R/D A/S, any data useful in marketing the area to be leased.

15.05.05.00 Lease Payments

The lease rate is typically paid monthly (except for Wireless sites which are always annual payments). Advance lump sum payments can be made on a semiannual or annual basis (e.g., governmental entities that operate on a specific budgeting cycle or for minimum lease rates to save administration costs). As an informational item, if advanced payments are made for greater than a year, Accounting might ask that a refund be paid to the lessee. At that time HQ will notify Accounting as to why the account is paid into the future.

Prior notice or approval to HQ A/S is required in cases of any payments less than the minimum amount.

© 1994-2025 California Department of Transportation. All rights reserved.

15.05.05.01 Minimum Lease Rate

The minimum lease rate is the appraised FMLR, but not less than $500 per month or $6,000 per year, with exceptions:

- For Park and Ride (nonprofit) and Marler Johnson lessees only, the lessee will provide a service to the Department (e.g., maintenance or security) or there is some other benefit.

- The legislature mandates lease rate (e.g., public agency use, homeless shelters).

- The approved FMLR appraisal supports a minimum rent of less than $500 per month, and the proposed use will benefit the local community or neighborhood. Where there is a question of the FMLR being below $500 per month, the R/D A/S Senior should consult with the Appraisal Branch to determine what the proper valuation is for the site.

Any other circumstances should prompt R/D A/S to consult with HQ A/S.

Note: Below FMLR leases might conflict with 23 CFR 701.403(e) requirement for FMLR and will require a public interest finding to be sent to FHWA for all federally funded properties. Any below market valuation, except as prescribed in the CTC Resolutions, will also require CTC Approval.

15.05.05.02 Minimum Security Deposit

The minimum security deposit for any airspace site is one month's rent for nondeveloped, short-term sites, but not less than $500, and three months' rent for nondeveloped long-term sites. The minimum security deposit for developed sites is three months' rent, or more if the risk to the Department is great or the potential for damage and removal of improvements is high. Any renewals of agreements may necessitate an increase in the security deposit collected per this section. Security deposits are required for all Right of Way Use Agreements except Telecommunications Licenses and agreements with public agencies.

The Security deposit should be collected when the lease is signed for direct negotiations and within 30-days following the auction if it's leased through public auction to the highest bidder.

When the proposed use represents an extraordinary risk to the Department, R/D A/S will need to ensure the minimum security deposit is increased to

© 1994-2025 California Department of Transportation. All rights reserved.

reflect this additional risk or liability. R/D A/S should only allow high-risk uses in special circumstances with legislation or after legal consultation when the benefits of the proposed use outweigh any risks or liability to the Department.

15.05.05.03 Periodic Adjustments

The lease rate must be adjusted for all Right of Way Use Agreements every two years. At a minimum, the rate will be equal to the Consumer Price Index (CPI) for the area and adjusted annually or a set annual escalator based on the average CPI of the last 3 years. Right of Way Use Agreement provisions establish a base rent and may not allow the adjusted rate to fall below the initial base rent (the lease rate when the Right of Way Use Agreement was executed). Other Right of Way Use Agreement provisions may not allow the adjusted rate to be less than the previous year's rate. It is imperative that R/D A/S review the Right of Way Use Agreement provisions to determine if negative adjustments to the lease rate can be applied. Other proposals to adjust the rate can be based on a range (e.g., more than 2%, but less than 7%) of the CPI, or adjusted at greater intervals than annually, but are compounded annually (e.g., adjusted every year based on the annual CPI not to exceed 25%).

Reevaluations of the lease rate for long-term Right of Way Use Agreements should occur at least every ten years (preferable every five years) unless otherwise called out in the Right of Way Use Agreement.

Increases in the lease rate require periodic adjustments to the security deposit to ensure there are sufficient funds to cover potential damages or losses. Some basic Right of Way Use Agreement types establish a mandatory rate increase.

15.05.06.00 Rental Offsets

Rental offsets may not be promised or offered to a lessee unless the offset is part of an approved Right of Way Use Agreement. Rental offsets are reimbursements for expenses paid by the tenant to maintain or clean-up the property for initial use. Rental offsets come out of the property management 058 fund. If a Right of Way Use Agreement is already in effect, the Senior must approve the offset in writing. This includes Marler Johnson leases and Park and Ride lots. Offsets are for materials only. Receipts for all materials in the offset must be provided by the lessee, copied and sent to Caltrans Accounting with the Senior approved adjustment.

© 1994-2025 California Department of Transportation. All rights reserved.

Rental offsets should not be confused with rental adjustments to correct RWPS occupancy and billing errors or to process approved adjustments for certain maintenance activities and seismic retrofit credits.

The R/D A/S section should discuss a rental offset with their R/W Budget section to determine that there are sufficient funds to cover a rental offset from the Operating Budget. Should insufficient funds be available, a rental adjustment should be explored as a potential solution.

15.05.07.00 Seismic Retrofit Adjustments

If the Right of Way Use Agreement provides for such, adjustments may be made when the region/district needs temporary access to the Airspace site for seismic retrofitting. The temporary use must be less than six months, impact less than 50% of the site, and not impact any of the improvements.

HQ A/S must preapprove R/D A/S's request for an adjustment. The request must be accompanied by the lessee's statement that no other form of compensation will be solicited.

The Department's long-term use of all or a portion of a leased airspace site may require the leasehold interest be acquired, depending on the specific provisions in the Right of Way Use Agreement.

Refer to appropriate Acquisition and Appraisal policy and procedural instructions for more details.

© 1994-2025 California Department of Transportation. All rights reserved.

15.06.00.00 – AIRSPACE LEASES – PROCESSING

15.06.01.00 Applications & Credit Checks

All prospective non-public agency airspace lessees will be required to complete an application (15-EX-19 Airspace Lease Application) and submit a copy of their credit report, no older than 60 days from date of application, before doing business with the Department. An application is required for all bidders. 15-EX-19, the Airspace Lease Application, has language that requires a potential lessee to attest to having no unlawful detainers (UDs) and no bankruptcies within the last 10 years. All applicants must get a credit report from a major credit bureau at their own expense and will not be reimbursed. An applicant must not have any negative marks, i.e., unlawful detainers, or bankruptcies. The applicant will be rejected for any unlawful detainers or bankruptcies in the past 10 years. A copy of the prospective lessee's credit report must be attached to the application to prove compliance. Corporate Business Reports should only be requested for Corporations and Limited Liability Companies (LLCs) that have been in existence for at least one year. The Articles of Incorporation will indicate the date of Incorporation. The reporting credit bureau will not have any information on newly formed corporations or LLCs until financial history is established.

15.06.01.01 Rental Agreement (Private Entities)

The potential lessee must submit a letter to Region/District Airspace (R/D A/S) stating the proposed use, the proposed rate, and the rental period (not to exceed six months).

After the DARC determines the appropriateness of the use and the lease rate is established, R/D A/S executes the standard rental agreement and opens an account in ROWMIS. HQ A/S and FHWA review, approval, and concurrence are not needed, unless the site is on an interstate, and no copies need to be submitted to HQ A/S. If the site is within the operating right of way of an interstate, then the site must be submitted to FHWA for review. See 15.06.13.00 to determine what documents should be submitted to obtain approval.

Any further extension of these airspace leases require unanimous approval by the CTC and shall not be granted through any other means. While non-bid, non-developmental six month Right of Way Use Agreements at fair market are permitted, if other parties express interest in the site, the competitive bid process must be initiated immediately.

© 1994-2025 California Department of Transportation. All rights reserved.

Please see CTC Resolution G-24-14 Item 2.4 (internal Caltrans link) or the most current resolution.

15.06.02.00 Short-Term Leases (Private Entities) – Competitive Bid

Many sites in the inventory are not suitable for development or have not yet attained their highest and best use. In some cases, parking may be the highest and best use. These sites can generate substantial revenue if leased for uses with shorter terms, such as parking.

Short-term uses are for two to five years and are most commonly used for parking lots with private lessees. When a site is offered for bid, R/D A/S should attempt to contact all interested or potentially interested parties. Marketing efforts may include media advertising, signing of the property, personal contact with owners and tenants of abutting properties, and mailing notices to all parties on the inquiry list.

15.06.02.01 Bid Auction

A bid auction shall be held at least three months prior to expiration of any existing Right of Way Use Agreement. The normal process is to hold an oral auction unless R/D A/S anticipates more interest and a higher rate of return by asking for sealed bids. The bid package should identify proposed use, term, conditions, minimum bid, proposed occupancy date, insurance requirements, and selection process (e.g., highest bid). It should also require a minimum deposit to participate in the bid and provisions for payment to secure the site. A copy of the standard Right of Way Use Agreement should be attached or made available to all interested parties. See Exhibit 15-EX-02 (internal Caltrans link) for a sample bid package and Exhibit 15-EX-03 for sample bid instructions. HQ A/S review and approval of a short-term bid package is not required.

Failure to complete a bid auction and engaging in direct negotiation may result in conflict with CTC regulation and jeopardize the Department's authorization to enter into other agreements without CTC approval.

© 1994-2025 California Department of Transportation. All rights reserved.

15.06.02.02 Minimum Bids

The minimum bid for a short-term use is established by the following:

- **Site Has Never Been Bid or Leased** – minimum bid is based on market data the Appraisal Branch establishes.
- **Site Has Been Previously Bid** – new minimum bid is based on the last minimum bid adjusted for current market conditions, but not less than 75% of the previous minimum bid.
- **Site Has Been Previously Leased** – new minimum bid is based on the most recent FMLR adjusted for current market conditions and annual adjustments (e.g., CPI percentage).

HQ A/S must approve reducing the minimum bid below 75% of the bid valuation, the previous minimum bid, or the previous lease rate if R/D A/S can substantiate the need to attract more interest in the bidding process.

The maximum return to the State should be obtained.

15.06.02.03 Bid Deposit and Payment

Each interested party in the competitive bid process must bring a cashier's check equal to three months of the minimum bid (Bid Deposit) to be allowed to participate in the auction. After completion of the bid or auction, R/D A/S shall immediately contact the successful bidder and request an **immediate** payment of the balance due, calculated by multiplying the successful bid by two months, adding the security deposit, and then subtracting the Bid Deposit. All other Bid Deposits are returned to the originators. The successful bidder, now the proposed lessee, must execute the standard Right of Way Use Agreement within 30 days of the bid, or R/D A/S will contact the second successful bidder in the process. Funds are not returned to the proposed lessee if the agreement is not executed.

15.06.02.04 Renewals

When the current lessee is the successful bidder in a competitive bid to lease the same property, a Lease Renewal (Form RW 15-04) may be used to identify any new provisions in the terms and conditions for continued use (such as storm water pollution prevention requirements), as well as the new rental rate. Extensive changes to the previous agreement would require a new Right of Way Use Agreement.

© 1994-2025 California Department of Transportation. All rights reserved.

A renewal is different from an extension to an existing long-term Right of Way Use Agreement.

15.06.03.00 Long-Term Leases – Competitive Bid

Long-term bid Right of Way Use Agreements are not commonly used for nondevelopment. The lease process is generally the same for both nondevelopment and development Right of Way Use Agreements. Since there will be at least minimal construction (e.g., fences, landscaping, curbing, lighting, and paving) in most non-developmental Right of Way Use Agreements, the requirements for plans may still apply. The plans should also show circuitry of traffic on the site and the ingress and egress routes. Lessees may require longer term leases to cost out and amortize even minor improvements.

Refer to Table 1, "Process – Long Term Bid Lease," on the following pages.

© 1994-2025 California Department of Transportation. All rights reserved.

TABLE 1 PROCESS – LONG-TERM BID LEASE

Step	Responsible Party	Action
1	R/D A/S	Identify site to be leased, either by an inquiry or as part of the marketing plan.
2		If not in inventory, request maps from R/W Engineering.
3		Request DARC conceptual approval of proposed use. Include Permits and State Fire Marshal approvals as appropriate.
4	DARC	Review and approve/disapprove request. Comments to disapprove should accompany the review.
5	R/D A/S	If DARC does not approve, determine the problem and try to resolve any difficulty with the proposal. If the problem cannot be resolved and a short-term use cannot be identified, remove the proposal from the marketing plan and the inventory.
6		If DARC approves the request, collect airspace review fee and ensure all program restrictions and conditions are included in the bid package and the Right of Way Use Agreement (e.g., access limitations, column protection, and landscaping).
7		If possibly controversial and on the Interstate, send proposal, DARC comments and a site map to HQ A/S for FHWA ***conceptual*** approval.
8		Request bid lease valuation if not already scheduled.
9		Send proposed marketing plan and bid package to HQ A/S for review and approval. If the bid package suggests an option period, the proposed Option Agreement should be developed and included in the package. If not, the standard agreement should be included.
10		Sign site, place media ads, and contact neighboring owners/tenants.
11		Mail bid package to interested parties; conduct a site review as needed.

© 1994-2025 California Department of Transportation. All rights reserved.

TABLE 1 PROCESS – LONG-TERM BID LEASE (Continued)

Step	Responsible Party	Action
12	R/D A/S	Open Offer and Proposal bids. Analyze all bids received and send recommendation of the successful bidder to HQ A/S. Prepare memo requesting FHWA approval if the proposal differs slightly from the approved use, and submit through HQ A/S. Obtain DARC preliminary review if proposal differs slightly from conceptual plans.
13* 14	Lessee	Any modifications or changes require prior HQ A/S approval. An Option Agreement requires payment when executed by Optionee. Obtain local agency concurrence and evidence of insurance.
15 16 17	R/D A/S	Obtain District Environmental approval of lessee's environmental document. Obtain DARC approval of final construction plans. Send to HQ A/S to obtain FHWA approval of final construction plans (including maps), NEPA document, and air quality study if required for the project on the Interstate. (FHWA approval is required before any execution of agreement.)
18	Lessee	Execute Right of Way Use Agreement and pay lease rate per terms of the Agreement.
19	R/D A/S	Submit Agreement to HQ Program Manager or delegated representative for approval if Developmental Right of Way Use Agreement.
20	HQ A/S Delegated Rep	Developmental lease only: Sign Option and/or Agreement and return to Airspace.
21	Lessee	After final reviews/approvals are obtained, apply for an encroachment permit to construct.
22	R/D A/S	Monitor lessee's move onto the site, including any construction, and begin property management activities.

*Note – required for development purposes only.

© 1994-2025 California Department of Transportation. All rights reserved.

15.06.03.01 Offer and Proposal

An airspace site with a developmental Right of Way Use Agreement and a longer-term Right of Way Use Agreement requires a different method of selecting the successful bidder. While shorter-term parking or nondevelopment Right of Way Use Agreements are awarded based on the highest bid (lease rate), the preferred method for longer-term development Right of Way Use Agreements is to evaluate the offers and proposals received from developers.

The bid package should specify exactly how the successful bidder will be selected, requiring an Offer and Proposal (O&P) from prospective bidders. The O&P describes in detail the type of development proposed (e.g., amusement park, office building and major recycling center) and the proposed lease rate over a period of years (e.g., graduated payments and percentage of revenues). The airspace site should be awarded to the developer that proposes the best and highest return to the Department.

Selection of the successful bidder should involve evaluating the best development and use of the site, as well as the quality and certainty of the investment return ("income") to the Department. The construction of an amusement park may be less intensive than an office building, but the Department may have little use for the amusement park after the Right of Way Use Agreement has expired. A major recycling center may generate a higher return in the earlier years of the lease but not generate the highest return over the entire term of the lease. Also, there may be more risks associated with a major recycling center because of contaminants, which may conflict with Caltrans Stormwater Permit. An office building, however, may require a longer option period before all approvals to construct are obtained.

HQ A/S will work closely with R/D A/S in determining the best method to lease a site for development and, if a competitive bid is selected because of considerable interest in the site, provide assistance in developing the bid package for O&Ps.

© 1994-2025 California Department of Transportation. All rights reserved.

15.06.04.00 Directly Negotiated

The CTC must approve directly negotiated Right of Way Use Agreements, with some exceptions which are documented in CTC Resolutions G-19-43 (Procedure for Leasing to Public Entities) and G-24-14 (Procedure for Leasing Airspace to Private Entities). Direct negotiations are often approved when an airspace site's potential revenue is increased if the site is "joined" with an adjacent site (whether privately or governmentally owned). Processing a directly negotiated Right of Way Use Agreement is generally the same for development and nondevelopment Right of Way Use Agreements. In most nondevelopment Right of Way Use Agreements, there will be at least minimal construction (such as fences, landscaping, curbing, lighting and paving), so the requirements for plans may still apply.

Per CTC Resolution G-19-43 (revised from G-03-03), CTC concurrence is not needed to directly negotiate with a public agency if certain conditions are met. The terms and conditions for a directly negotiated landlocked site require CTC approval.

Refer to Table 2, "Process – Directly Negotiated Right of Way Use Agreement," on the following pages.

© 1994-2025 California Department of Transportation. All rights reserved.

TABLE 2 PROCESS – DIRECTLY NEGOTIATED RIGHT OF WAY USE AGREEMENT

Step	Responsible Party	Action
1-7	Various	See Steps for Long Term Bid Right of Way Use Agreement
8	R/D A/S	Send "Consent to Directly Negotiate from the CTC" (see Exhibit 15-EX-05 [internal Caltrans link]) to HQ A/S.
9	HQ A/S	Submit the Request to Directly Negotiate to CTC for approval.
10	R/D A/S	If approved by the CTC, R/D A/S may provide the proposed lessee with a Letter of Understanding (Exhibit 15-EX-04 [internal Caltrans link]) detailing the anticipated Right of Way Use Agreement, with a copy to HQ A/S.
11		Request an appraisal report for the proposed use, either through the Appraisal Branch or from the proposed lessee. HQ must approve the appraisal report.
12		After lessee is advised of the FMLR, negotiate all other terms and conditions of the Right of Way Use Agreement, including time frame, term, and extensions. *No term is independent of another, so Airspace should negotiate the best terms for the Department, with the understanding that a favorable position for the Department in one area may require a less favorable term elsewhere.*
13		Secure preliminary plans and submit for preliminary DARC approval.
14		Send to HQ A/S to obtain FHWA approval of final agreement, construction plans (including maps), NEPA document, and air quality study if required for the project on the Interstate. (FHWA approval is required prior to any execution of agreement.)
15		Request "CTC Approval of Terms and Conditions" by sending a memorandum to HQ A/S.

© 1994-2025 California Department of Transportation. All rights reserved.

TABLE 2 PROCESS – DIRECTLY NEGOTIATED RIGHT OF WAY USE AGREEMENT (Continued)

Step	Responsible Party	Action
16	HQ A/S	Request "CTC Approval of Terms and Conditions" at the next monthly meeting.
17	R/D A/S	If CTC approves terms and conditions, request lessee to execute the Right of Way Use Agreement, and forward it to HQ A/S for execution (unless delegated). All final approvals must be obtained PRIOR to execution (see 15.06.11.03).

15.06.05.00 CTC Approval

The CTC must consent to Airspace's recommendation that direct negotiations with a proposed lessee will result in a higher rate of return to the Department and that it is in the State's best interest to deal directly with one entity. After CTC approval of the initial request, the Letter of Understanding (Exhibit 15-EX-04) is sent to the Lessee.

Once negotiated, the terms and conditions, along with the appraisal summary, are presented to the CTC for final approval.

After CTC approval of the terms and conditions, the R/W Program Manager or delegated representative can execute the standard Right of Way Use Agreement.

Please see CTC Resolution G-24-14 (internal Caltrans link) or the most current resolution.

15.06.05.01 CTC Consent to Directly Negotiate

The request for CTC approval to direct negotiations must clearly state **why** it is in the State's best interest to lease directly to the proposed entity (e.g., plottage value, rate of return, and improvements to the site). It is best to state direct benefits in terms of financial return for the State of California. Indirect terms, such as a general benefit to the local community is difficult to quantify, but should be included nonetheless.

Each proposed lessee must pay a minimum processing fee of $1,000 (or, depending on the complexity of the issues, an appropriate amount required

© 1994-2025 California Department of Transportation. All rights reserved.

to negotiate the Right of Way Use Agreement) if the CTC consents to direct negotiations. The Right of Way Manager is responsible for determining the appropriate processing fee for complex parcels.

CTC's consent to negotiate directly is only good for one year. Airspace must request an extension from the CTC to negotiate beyond that time. An additional processing fee is not required.

See Exhibit 15-EX-05 (for internal Caltrans use).

15.06.05.02 Letter of Understanding

A Letter of Understanding (Letter) (Exhibit 15-EX-04 [internal Caltrans link]) is sent to the proposed lessee after CTC consents to direct negotiations. The letter states the Department's intent to negotiate in good faith for the proposed Right of Way Use Agreement. This will assist the proposed lessee in obtaining all local approvals and construction funding prior to executing the Right of Way Use Agreement, as the Department is agreeing to keep the site off the market pending successful negotiations.

The Letter states the CTC consent to directly negotiate is valid for **one year**. The Letter will also request funds to pay for the region/district's appraisal of the airspace site, which must be received prior to the Appraisal Branch completing the report (see 15.06.07.00). The Letter should also outline the time frame for negotiations and satisfaction of any issues Airspace, FHWA, DARC, or CTC have identified.

If mutual agreement cannot be reached on the terms and conditions within one year, the CTC may grant an extension. If the proposed lessee wishes to continue negotiating, there is no additional processing fee. If negotiations will not continue beyond the first year due to CTC, lessee, or R/D A/S desiring to terminate discussions, R/D A/S must send written notice to the proposed lessee canceling the negotiations and any and all agreements stated in the Letter. No fees or funds are returned to the proposed lessee.

15.06.05.03 CTC Approval of Terms and Conditions

R/D A/S must submit final negotiated terms and conditions via HQ A/S to the CTC. CTC must approve terms and conditions before the Right of Way Use Agreement is executed.

© 1994-2025 California Department of Transportation. All rights reserved.

15.06.06.00 Public Agency Leases

Right of Way Use Agreements with public agencies do not require CTC consent to negotiate directly or approval of the terms and conditions. The lessee must be a public entity as defined in the Public Contracts Code, the lease rate must be at a minimum FMLR, and the use must be for a public purpose. Prior to concluding negotiations, R/D A/S must advise HQ A/S of the proposed rate and the appraised value. The executed Right of Way Use Agreement must have the appraisal summary supporting the lease rate stating it is fair market.

Although no maximum term is set by CTC Resolution or statute for leasing to a public agency at fair market value or a public transportation agency at 80% of fair market value, the negotiated term should be a maximum of 20 years to ensure that clauses regarding liability and safety are adequately updated. If the public agency requires a term longer than 20 years, the District would need to have sufficient documentation to justify the longer term.

Please see CTC Resolution G-19-43 (revised from G-03-03) or the most current resolution.

NOTE: Uses for Agricultural Inspection Stations (with the Department of Food and Agriculture) and Weigh Stations (with the California Highway Patrol) are addressed through state-wide interagency agreements or MOUs coordinated through the Division of Maintenance and Operations.

15.06.07.00 Processing Other Right of Way Use Agreements

Three-Year Directly Negotiated Nondevelopment Right of Way Use Agreements, and month-to-month rental leases with nonprofit organizations on park and ride lots should follow a process similar to the directly negotiated Right of Way Use Agreement. R/D A/S should document the file as to why direct negotiations are in the State's best interest, the lease rate is based on market, and the standard Right of Way Use Agreement is being used.

It is important to note that "for profit" uses on a park and ride lot can be approved by following the normal lease process, and, although generally the lessee should be selected via a competitive bid, direct negotiations can be used if that method is in the best interest of the State.

© 1994-2025 California Department of Transportation. All rights reserved.

Processing **Telecommunications Site License Agreements (SLAs)** is described in the Department's Telecommunications' Licensing Process and Siting Guidelines.

If several carriers are interested in the same site for a wireless facility, then Airspace must offer the site through competitive bidding, using the Annual Base Fee Matrix in the Master License Agreement (MLA) as the basis for the minimum bid. However, if the carriers can agree on a colocation (multiple carriers at the same site) or select other sites that are more feasible for their facility, Airspace can initiate the process to execute the SLA.

15.06.08.00 Marler – Johnson Act Park Lease

R/D A/S shall specifically notify all appropriate local agencies of the availability of airspace for park and recreational uses that meet CTC criteria. Local agencies should be contacted about leasing potential sites.

Right of Way Use Agreements under this statute shall be made on the standard Right of Way Use Agreement format for the Marler - Johnson Highway Park Act. R/D A/S shall ensure that development is made in accordance with approved plans and within the time limits set forth in the Right of Way Use Agreement.

Local agencies should contact R/D A/S about leasing a site within nonoperating rights of way (Government Code Section 14013). R/D A/S shall review the local agency's request and, if the site will not generate a higher return if leased for some other use, initiate the process to lease the site to the local agency. Note: Government Code Section 14013 calls out leasing "nonoperating" right of way which by definition is not considered Airspace. Historically the Department has interpreted the Government Code's section intent to reference Airspace.

After determining that a Marler Johnson park or recreational use is appropriate, the Department may offer a lease for a period of ten years with five year extensions at the Senior's discretion. FMLR is required, but the rate may be offset up to the amount the Department will save in landscaping and maintenance expenses. Special provisions to terminate the Right of Way Use Agreement whenever the leased land is needed for transportation purposes are included in the standard Right of Way Use Agreement. CTC approval is not required if the Right of Way Use Agreement meets all other Marler-Johnson Right of Way Use Agreement requirements. Please see CTC Resolution G-19-43 (revised from G-03-03) Items 1.3 and 2.3 or the most current resolution.

© 1994-2025 California Department of Transportation. All rights reserved.

15.06.09.00 Toll Bridge Authority Lease

Special handling is required for revenue received from airspace sites created by construction of bridges under authority of the Toll Bridge Authority Act and from concession leases in Terminal Facilities. Because these facilities were financed by the Toll Bridge Authority Act and bond indentures were executed under such Act, the Department's accounting procedures provide for handling and distribution of funds through District 4. Although the revenue is treated differently, all sites identified as airspace on the toll bridges shall be controlled by the same procedures established for any airspace site, including processes and approvals.

Property Management manages terminal facility leases under the same procedures as regular accounts are managed.

15.06.10.00 Subsequent Right of Way Use Agreement Documents

After a Right of Way Use Agreement has been executed, the lessee may need additional formal consent from R/D A/S to construct or modify operations on the site.

The lessee should be charged a processing fee to obtain approval of most subsequent documents, primarily subleases, assignments, and encumbrances. The processing fee is based on time involved in the review and provisions in the Right of Way Use Agreement to charge fees. Fees charged should be per the Right of Way Use Agreement or, if not in the contract, as follows:

- Assignment: $2,500
- Renewal: $0
- Change in use: Consistent with Right of Way Use Agreement type
- Encumbrance: $1,000
- Estoppel: $1,000
- Substitution: $1,000
- Amendments:
  - Minor changes: $0
  - Major change (tantamount to new Right of Way Use Agreement, requiring DARC review, CTC and/or FHWA approvals): $2,500 to $5,000 at district's discretion. Amount charged over $2,500 requires file documentation as to why the fee is in excess to the minimum $2,500 amount.

© 1994-2025 California Department of Transportation. All rights reserved.

- Major change (tantamount to new Right of Way Use Agreement, DARC review, CTC approval, FHWA approvals): $2,500-$5,000 at district's discretion; amount charged over $2,500 requires file documentation to support the excess fee.

15.06.10.01 Estoppel Certificate

Lenders and potential assignees may want assurances that the lessee is not in default prior to executing any agreements with the lessee. The lessee's financial institution may request Airspace provide the lease status prior to approving the lessee's construction loan. The Estoppel Certificate states there is a valid Right of Way Use Agreement, the lessee is in full compliance with the terms and conditions, and the lease payments are current.
See Exhibit 15-EX-08 (internal Caltrans link) for the **mandatory** format.

15.06.10.02 Encumbrance

The lessee may need to encumber the airspace site in order to secure a loan. Standard Right of Way Use Agreement may allow encumbrance with R/D A/S approval before the loan is secured. If granted, R/D A/S should ensure the financial institution will be responsible for all lease payments in the event lessee defaults on the airspace Right of Way Use Agreement.

The Right of Way Use Agreement should be reviewed carefully regarding any special language or provisions for encumbering. Any non-standard language shall be approved by HQ A/S and HQ Legal.

15.06.10.03 Memorandum of Lease

When a lessee applies for a loan, the lending institution may require a Memorandum of Lease (MOL) signed by R/D A/S. If the MOL will be recorded, a region/district representative authorized to execute real estate documents for that geographical area must sign it.

Prior to executing the MOL, R/D A/S must recommend its execution, stating the lessee is not in default with any provisions of the Right of Way Use Agreement.

© 1994-2025 California Department of Transportation. All rights reserved.

15.06.10.04 Sublease and Assignment

The Department is no longer allowing subleases in new agreements. Existing leases with subleasing clauses must comply with terms of the lease agreement. Any deviations must be approved by HQ RWLS. R/D A/S must approve lessee's request to assign or sublease any or all interests in an Airspace Right of Way Use Agreement. Each Right of Way Use Agreement provides for the notice and approval process, along with a fee and a sharing of any increase in the lease rate generated by the transfer.
R/D A/S will execute the Assignment of Lease (Forms RW 15-06 or RW 15-07 [internal Caltrans link]) or Consent to Sublease (Form RW 15-08 [internal Caltrans link]) after review of the:

- Right of Way Use Agreement with the lessee.
- Proposed assignment or sublease between the parties.
- Statement detailing assignee's or sublessee's proposed use.
- Proposed assignee's or sublessee's financial statement (unless it is a bank or financial institution), application (15-EX-19), and credit report. See Section 15.06.01.00.
- Current lessee's status as a tenant. In rare circumstances, R/D A/S may relieve the primary lessee of the responsibilities in the Right of Way Use Agreement should the assignee or sublessee default. In some cases, the primary lessee's bank or financial institution may become the new lessee due to defaults between the two parties.

FHWA concurrence with subleases is required only if on the Interstate or is leased at less than fair market value on federally funded routes. FHWA concurrence is not required for assignment when use and agreement terms remain the same.

Public Agencies are barred from subleasing or assigning lease. Public Agencies are granted leases at preferable terms and should not benefit from this arrangement.

© 1994-2025 California Department of Transportation. All rights reserved.

15.06.10.05 Amendments

If an amendment to an executed Right of Way Use Agreement is considered a **major** change, prior approval from CTC and may be required. All amendments to an executed Right of Way Use Agreement require FHWA approval when on the Interstate or at less than FMV on federally funded routes. R/D A/S shall submit the request to HQ A/S for processing. Any change that affects the following is considered major:

- Term of lease (primary or option).
- Reduced rental rate or the return to the State for the remaining term.
- Use including the type and square footage of the development.
- Lease adjustments and reevaluations (e.g., frequency or rate).
- Change in use.

R/D A/S must explain the effect of the amendment, justifying their recommendation of it. Any standard Right of Way Use Agreement provisions that were not part of the existing agreement should also be included at this time.

15.06.11.00 Reviews and Approvals

R/D A/S must ensure that each airspace site is thoroughly reviewed and appropriately approved to reduce potential risks to the Department. All affected programs and those entities with authority over the process should review each use. R/D A/S review fees are collected when district has obtained DARC and FHWA conceptual approval (if proposal is controversial and if on the Interstate) or for subsequent Right of Way Use Agreement documents, at the time of the request.

Fees for Airspace review are as follows:

- Short-term rental agreements up to six months with one 6-month extension: $0
- Directly negotiated short-term Right of Way Use Agreements (two to five years): $2,500
- Competitively bid short-term Right of Way Use Agreements: $0 (Winning bidder pays Liquidated Damages or Forfeiture of Deposit)

© 1994-2025 California Department of Transportation. All rights reserved.

- Long-term nondevelopment Right of Way Use Agreements: $2,500-$5,000; amounts above minimum at district's discretion, file documentation is required in support of amount over minimum (e.g., proposed development includes new technology requiring extraordinary time and consultation with DARC)
- Long-term developmental Right of Way Use Agreements: $10,000. Note: Some projects may require a Project ID to cover work not captured in the standard review fee.

Review fees may be waived by district with Senior approval and supporting reasoning (e.g., hardship to small agency) and documentation to file with an informational copy to HQ.

15.06.11.01 Conceptual Approval

Either R/D A/S or a proposed lessee may want to have an airspace site approved for a conceptual use. DARC must recommend the proposed use to R/D A/S. R/D A/S will contact FHWA through HQ A/S for parcels located on the Interstate. Based on information provided by R/D A/S, FHWA approves the general concept of the proposal only and is in no way bound to accept the final proposal. FHWA does not need to conceptually approve the use if the same use was approved when entered into the inventory.

15.06.11.02 Preliminary Approval

Preliminary approval is only needed when the information at conceptual approval was insufficient to determine the major impacts on the property or when the proposed use differs. A site may have conceptual approval as unimproved parking, but at the preliminary phase the lessee wants to pave, light, and stripe (with some excavation). The DARC should review the proposal again to determine the effects on operations (e.g., drainage, column protection, ingress, and egress). Restrictions and conditions are provided to the proposed lessee so all requirements are identified on the final plans. FHWA preliminary approval is also required for parcels on the Interstate with controversial uses.

© 1994-2025 California Department of Transportation. All rights reserved.

15.06.11.03 Final Approval

Before the Right of Way Use Agreement is executed, the proposed use must receive final approval. Generally, formal approval for a lease includes:

- DARC approval of the final construction plans of the proposal.
- Local agency concurrence that the proposal does not conflict with local zoning ordinances (as evidenced by issuing a building permit).
- Recommendation of lessee's environmental document by District Environmental.
- Sites on the Interstate require FHWA approval of the final construction plans, environmental document, and, if necessary, an air quality study.
- Evidence of insurance per the Right of Way Use Agreement.

Sites offered for competitive bid must have conceptual approval for the proposed use. The bid package must state that final approval in accordance with these procedures must be obtained before the site is occupied.

Airspace sites for short-term unimproved parking, with no change in the approved use or improvements, may need less formal review for final approval.

When formal approval has been obtained, the Right of Way Use Agreement may be executed, and the tenant may make application for an encroachment permit to construct from the District Permits Office.

15.06.11.04 Renewal DARC

Long-term leases, wireless site license agreements, and other renewals will go through a Renewal DARC. Renewal DARCs are to check-in with the other DARC members to verify that the proposed timeline for the renewal will not interfere with Caltrans plans or the transportation system. Typically, new improvements are not being added to the site, which allows for a much quicker review. If no new improvements are being added, then no plans need to be provided for the DARC to occur, although DARC members may ask for the as-builts for the improvements currently on site.

Should the lessee desire to add new improvements or renovate the items on-site, this will require following the normal DARC process of a Conceptual DARC, Preliminary DARC, and Final DARC.

© 1994-2025 California Department of Transportation. All rights reserved.

15.06.12.00 Environmental Status

Every site must have a NEPA/CEQA, including a "6010 metal study" report written by the lessee and the document approved by Caltrans Environmental Division for the proposed use that addresses environmental issues. Proposed lessee might also need to obtain final approval of their plan from the local agency. The study must be submitted to Caltrans District Environmental for review and approval. The approval memo must state that the document meets applicable CEQA and NEPA requirements.

Airspace should consult the Environmental Manual or the District Environmental Unit on specific questions.

15.06.12.01 Aerially Deposited Lead

Within the NEPA/CEQA report, the contents must address Aerially Deposited Lead (ADL) levels and other heavy metals. Results of the "6010 metal study" must demonstrate results of ADL to be less than 320 parts per million for all commercial and industrial uses. If an airspace property is being used for parks and recreation or statute directed shelter use, ADL levels must be below 80 parts per million. Testing must be to the depth of excavation. It is the tenant's responsibility to bring a proposed airspace site to acceptable use levels. Remediation plans must be approved by Caltrans District Environmental.

15.06.13.00 FHWA Approval for Use and PIF

FHWA approval of airspace Right of Way Use Agreements is required only when the airspace site is located on an Interstate or on non-federal routes that have federal funding when the site is being leased at less than FMV. All federal requirements in 23 CFR 710 shall be followed.

All FHWA Approvals must be kept in the file for duration of that particular use.

FHWA APPROVAL OF AIRSPACE SITES ON THE INTERSTATE ARE REQUIRED FOR:

- Conceptual use of an airspace site not in the current inventory for proposed controversial uses.
- A change in use (whether new Right of Way Use Agreement, assignment, amendment, etc.).
- Preliminary and final approval of the new proposed use.
- Categorical Exemption or Environmental Impact Document of any new Right of Way Use Agreement or a new lessee if the previous Categorical Exemption is over five years.
- Air Quality Statement.

© 1994-2025 California Department of Transportation. All rights reserved.

If the proposal is considered a major environmental action, FHWA will require an appropriate Environmental Impact Statement (EIS) or Environmental Assessment (EA) in accordance with 23 CFR 771.

15.06.13.01 FHWA Approval for Use

When a new use is proposed for a site on a federal route, a letter requesting approval of use must be submitted to FHWA.

Conceptual approval requires a narrative describing the use and a location map. This is sent only if the proposed use is controversial.

Preliminary and final approval of proposed use must include site plans (including 3D plans) and NEPA findings, on any airspace site within the right of way (Includes telecom sites).

Note 1: Preliminary approval not required if only minor improvements (paving, striping, lighting) will be made.

Note 2: Final approval of an airspace or telecom site requires detailed mapping and plans of all impacts to the land (location of buildings, excavation, trenching, utilities).

Note 3: DARC notes must be submitted with any request for conceptual, preliminary, or final approval.

15.06.13.02 FHWA Approval for Less Than FMV (PIF)

When the site is on a federal route, or the non-federal route has federal funding, and is being leased at less than FMV according to 23 CFR 710.403(e), then a Public Interest Finding (PIF) must be submitted to FHWA for approval. In addition, maps of the proposed lease area, and the NEPA document must be sent to FHWA for approval.

15.06.13.03 Final FHWA Approval Process

FHWA's final approval, and final execution of the Right of Way Use Agreement post-approval, is required before the encroachment permit for construction can be issued. R/D A/S must submit, through HQ A/S, the final approved DARC comments, the proposed Right of Way Use Agreement document, the environmental document, an air quality statement or study (if applicable), the proposed use and terms, the final construction plans, and a PIF if the property will be leased at less than FMV. A proposed Right of Way Use Agreement shall be signed by the proposed tenant, but shall not include signatures from Caltrans until after FHWA approval.

© 1994-2025 California Department of Transportation. All rights reserved.

All issues DARC and FHWA raised at the conceptual phase must be addressed in the final package.

15.06.13.04 Park and Ride Lot Development

FHWA released a letter on March 19, 2021 titled Alternative Uses of the Highway that focuses on shelter placement within the Right of Way, but also includes FHWA expectations in regards to development of alternative uses within Park and Rides. Within the letter, development within Park and Rides are allowable under certain circumstances as described below.

When any kind of development is being considered on a Park and Ride, the District should engage HQ early to verify that the proposed development is likely to approved by FHWA. It may be necessary to obtain a Conceptual Approval by FHWA.

Districts should refer to the letter released on March 19, 2021 titled Alternative Uses of the Highway or the most recently released letter or policy regarding Park and Rides.

Language from the letter is as follows:

There are three statutory provisions in Title 23, United States Code, that states use to construct and operate Park and Ride lots: 23 U.S.C. 137 (Fringe and corridor parking facilities), 142 (Public transportation), and 149 (Congestion mitigation and air quality improvement [CMAQ] program).

Those statutes authorize the use of Federal-aid funds for those activities and impose certain restrictions on the use of the lots. When considering potential use of a Park and Ride lots for purposes not expressly allowed under 23 U.S.C. 137 or 142, FHWA evaluates whether the original purpose of the lot will be adversely affected. For example, if CMAQ program funds were used to construct the Park and Ride lot, any proposed use that would result in a reduction of the congestion or air quality benefits stemming from the lot, would not be an acceptable alternative use of the lot. The FHWA Division Office will make this determination for any proposal involving Park and Ride lots that were constructed pursuant to 23 U.S.C. 137 or 142, and those lots involving the use of CMAQ funding (23 U.S.C. 149).

© 1994-2025 California Department of Transportation. All rights reserved.

When making this determination, the FHWA Division Office will consider:

1) the past, current, and foreseeable future parking and transit-related occupancy rates of the Park and Ride lot;
2) the number of parking spaces that would remain if the proposed use will result in any temporary reduction in parking capacity;
3) impacts on any transit-related activities on the lot;
4) the impacts on safety and operation of the Park and Ride lot; and
5) any additional State and local commitments related to the original use of funds, including those commitments made through the National Environmental Policy Act (NEPA) review.

If the FHWA Division Office determines that the proposed alternative use of the Park and Ride lot will not conflict or otherwise adversely impact the transportation functions at the site, the alternative use may be approved provided that adequate measures are in place to protect the continued operation, maintenance, and safety of the facility.
In addition, Park and Ride lots in the Interstate ROW are subject to 23 U.S.C. 111(a) provisions prohibiting States from permitting automotive service stations or other commercial establishments for serving motor vehicle users.

15.06.13.05 NEPA Delegation to Caltrans

On May 24, 2021, the Federal Highway Administration (FHWA) and Caltrans entered into a Programmatic Agreement for Categorical Exclusions (CE) covering actions that are subject to the National Environmental Policy Act (NEPA) and are classified as non-highway projects, such as Right of Way Use Agreements under the Airspace and Encroachment Permit Offices. This agreement includes NEPA actions for non-highway projects and will be in effect until the Division of Environmental Analysis can address this issue as part of the 326 Memorandum of Understanding (MOU) renewal process, which is currently underway. It is anticipated that this agreement will be in effect until the 326 MOU is renewed in April 2022.

When submitting packets for FHWA approval for use and/or public interest findings, the expectation is that the packet include the Caltrans' approved NEPA document.

The only exceptions are when "significant impacts" or "unusual circumstances" might occur from the use of the airspace. In those cases, FHWA may still be the lead for NEPA. FHWA regulation 23 CFR 771.117(b) provides that any action which normally would be classified as a Categorical Exclusion (CE) but could involve unusual circumstances requires Caltrans to

© 1994-2025 California Department of Transportation. All rights reserved.

conduct appropriate environmental studies to determine whether a CE is proper. Unusual circumstances include actions that involve:

1. Significant environmental impacts;
2. Substantial controversy on environmental grounds;
3. Significant impact to properties protected under 4(f) of the USDOT Act or section 106 National Historic Preservation Act;
4. Inconsistencies with any Federal, State or local law relating to environmental impacts.

A determination of significant impact or unusual circumstance should be made by the District Environmental team in conjunction with the District Airspace team, with the Environmental team being lead.

15.06.14.00 Air Quality

An air quality study or statement is required for all airspace sites when the use will involve vehicle traffic, especially short-term parking. Like all other environmental documents, the air quality support needs to be provided by the lessee. The study or statement will consider the impact of the frequency of hot and cold starts of the vehicles.

The determination of whether an air quality statement or study is needed depends on the site's status. If the site has never been leased, an Air Quality Assessment from the local Air Quality Regional Board or the local Association of Governments (e.g., SCAG) is required. This assessment must address the impacts of the proposed use on air quality based on each Region's Air Quality Assessment Model.

If the proposed use is the same as the previous use, a statement from the local Metropolitan Transportation Commission (MTC) is needed. The statement should address the fact that the Airspace Right of Way Use Agreement is not regionally significant and is not a transportation project. A blanket approval for all future Airspace Right of Way Use Agreements (new and renewals) for a specified use only (e.g., parking lots with less than 250 parking spaces) may be obtained from the local MTC.

FHWA must approve the air quality study or statement prior to execution of the Right of Way Use Agreement.

The air quality requirement applies to all new leases, any lease with a change in use, or a renewal of a lease if it is a different lessee. All other leases are currently exempt from the process.

© 1994-2025 California Department of Transportation. All rights reserved.

15.06.15.00 Requirements for Occupancy and/or Use of the Improvements

Prior to the tenant occupying or using any of the improvements on the site, the tenant must receive final building approval and a Certificate of Occupancy from the State Fire Marshal. The Tenant shall provide a copy of the Certificate of Occupancy to the Agent for the tenancy file prior to occupying the property.

All costs incurred with securing the Certificate of Occupancy are the responsibility of the tenant. However, the State Fire Marshal will bill the Department of Transportation for securing this document. Districts shall expect to bill the tenant for the amount incurred.

© 1994-2025 California Department of Transportation. All rights reserved.

15.07.00.00 – INSPECTION AND USE REQUIREMENTS

15.07.01.00 Inspections

Region/District Airspace (R/D A/S) is responsible for security and maintenance of all leased airspace sites, so the R/D A/S agent must regularly inspect sites to ensure lessees are maintaining sites properly. Inspections of all developed sites (e.g., buildings, restaurants, mini storages, motels, shelter developments, etc.) are required quarterly and inspections of all non-developed sites (e.g., parking lots, parking garages, parks, telecommunications, seasonal lots, etc.) are required annually. R/D A/S shall coordinate with SFM for annual inspections. Some uses may require more periodic inspections based on the usage and past inspection results. Sites that historically have had compliance issues need to be inspected quarterly. Flammable materials are not permitted within airspace sites. **Refer to the FHWA memo of 11/15/23 (15-EX-20) for guidance on the definition of flammable material.** Airspace should inspect and document all activities related to the lessee's property management activities. All documentation of the site inspections and lessee notifications shall be maintained in the parcel file diary notes by using Exhibits 15-EX-15 or 15-EX-16 (internal Caltrans link) and with yearly site pictures taken. RWPM shall be updated immediately for the dates on which the inspections occurred.

When a leased site is not properly maintained, R/D A/S shall immediately inform the lessee by written letter sent by certified mail of the violation and provide the lessee with a list of actions that must be taken and a time period within which to make corrections. If action is not taken, R/D A/S e initiate default proceedings to secure the site. A copy of the letter shall be kept in the parcel file.

If a condition requires **immediate attention** (e.g., public safety and/or hazardous materials), R/D A/S **must**:

- Notify the SFM and/or CHP as needed.
- Give a formal 24-hour notice to lessee, unless otherwise directed by the agreement, to correct the problem or to quit.
- Serve a three-day notice to vacate if the condition is not corrected within the allotted time, as the lessee is now in default.

Violations requiring any notice must be reported to HQ A/S. Further information on defaults can be found in Section 15.07.11.00.

© 1994-2025 California Department of Transportation. All rights reserved.

R/D A/S may negotiate with District Maintenance to assist with periodic inspections of occupied sites, charging their time to the Airspace account. As maintenance crews are in the field on a more regular basis, their assistance is needed in ensuring that hazardous or unsightly conditions and trespassing does not occur. If problems are found, Maintenance should notify R/D A/S in writing.

Stormwater inspections of leased airspace are required under the Department's Stormwater Management Plan (see Section 15.07.10.00 and Exhibit 15-EX-14 [internal Caltrans link]). Stormwater inspections can be done at the same time as regularly scheduled airspace inspections, but should be done at least annually. Date of inspection must be entered into ROWMIS.

15.07.01.01 Notices

R/D A/S agents are to provide written notices of default in all cases of default when corrective action has not been taken by the tenant. Any deviations must be approved by the District Director and RW Division Chief. R/D A/S agents are to immediately initiate a written notice to terminate the lease agreement if the tenant has not corrected the violations outlined in the notice of default by the due date on the default notice. There are four different types of notices: 24-hour, 3-day, 15-day, and 30-day.

24-Hour Notice: A 24-hour notice is an immediate safety violation. Items or actions that are life-threatening or pose a danger to the traveling public, roadway, or structure. Examples of this include blocked or locked exits, lack of or obstructed sprinkler system (if required) or fire extinguishers, explosives, fireworks, illegal drug manufacturing, obvious electrical violations, indoor use of anything that produces flames, gasses, or fumes, high piles of combustible materials, sheets/tarps used as walls.

A copy of this notice is also to be sent to the SFM and/or CHP if they are not the documenting source. If a 3rd party vendor is required to correct the violation, the tenant has 24 hours to show proof of an appointment with the vendor or licensed contractor.

3-Day Notice: A 3-day notice is for non-immediate safety violations – items or actions that are prohibited but not life-threatening. Removal of prohibited items not covered under a 24-hour notice, structures, or people, vegetation abatement, high piles of non-combustible materials, and non-functioning safety signage.

© 1994-2025 California Department of Transportation. All rights reserved.

If the SFM is not the documenting source, the tenant will be notified that the SFM will be notified of the violation and may conduct their own inspection and issue a separate notice.

15-Day Notice: Removal of items or people that may require additional time to correct and are not covered by the above notices. Mini storage facilities shall contact customers to remove prohibited items or reduce overfilled units. Vegetation abatement of larger areas, removal of larger quantities or larger items.

If the SFM is not the documenting source, the tenant will be notified that the SFM will be notified of the violation and may conduct their own inspection and issue a separate notice.

30-Day Notice: Situations or activities that do not pose an immediate safety threat or may require a 3rd party vendor or special planning/handling to complete. Removal of unauthorized/unpermitted improvements. These may include lease violations such as a non-approved use.

15.07.01.02 Inspections of Vacant Sites

District Maintenance is responsible for inspection, security, and maintenance of all vacant airspace sites within operating and nonoperating right of way.

Maintenance work on vacant sites is charged to the appropriate maintenance expenditure authorization. R/D A/S should not budget property management funds (Object x058) for sites that are or will be vacant because Airspace is not allotted x058 funds. R/D A/S should also consider removing them from the Airspace inventory and move them back into maintenance control.

R/D A/S will advise Maintenance when a site has been vacated and there are no immediate plans to lease it. Maintenance will not automatically maintain vacant sites that appear to be leased (e.g., improved sites).

© 1994-2025 California Department of Transportation. All rights reserved.

15.07.02.00 Column Protection

R/D A/S sites underneath highway structures require special provisions to protect support columns. Two basic elements to consider in determining what type of protection is required is based on:

- Design of the columns.
- How the property will be used.

If the columns are made of steel and the use is anything other than passive (e.g., park or landscaping use), they must be protected. Note that use of 0.109 galvanized steel pipe is not acceptable as a barrier protecting steel columns.

If the columns are concrete, the Structures Office will determine specific column protection. Protection may not be required for all parking leases as the types of vehicles and the specific parking area may not mandate barriers. Heavy usage, pattern of traffic, truck parking, and RV storage, however, require the maximum level of column protection. The required protection method ranges from nominal to sophisticated.
On all new Right of Way Use Agreements, renewals, or extensions, column protection must be installed as part of the terms for renewing, extending, or leasing the site.

There are various methods of column and other structural protections. The SMI Guidelines are Exhibit 15-EX-11.

15.07.03.00 Backflushing

Vertical drains are susceptible to clogging. On open systems, Structures Maintenance must backflush with air and water from the outlet end.

Backflushing is very difficult where enclosed columns and closed drainage systems have been installed. To make backflushing possible on closed systems, gate valves accessible from within the structure are required on the outlet end of column drains.

© 1994-2025 California Department of Transportation. All rights reserved.

15.07.04.00 Highway Structures

Development underneath structures is rarely permitted. If considered, all proposed developments underneath a highway structure (e.g., buildings, multilevel parking structures, recreational areas) require the lessee to prepare a Project Study Report (PSR) addressing the safety and potential liability of leasing the site. Issues to address are number and frequency of people at the site, proposed use, hazardous or valuable materials to be stored, and current status of seismic retrofit work on the structure and its columns.

HQ A/S will review and approve the PSR when requested through a formal letter.

At-grade parking proposals to use an airspace site underneath a highway structure will require less review than a parking structure or office building.

15.07.05.00 Mini-Warehouse Inspections

New mini-warehouse structures construction is not permitted. Inspections of existing (grandfathered in) mini-warehouse structures should include reviewing the resident manager's restrictions on storage of high value or high-risk personal property. The resident manager shall be required to provide immediate access to individual storage units for Fire Marshal inspection. The resident manager shall be required to provide immediate access, or per the time period required by the lease, to individual storage units. R/D A/S should review the Right of Way Use Agreement for specific provisions on access and inspections. R/D A/S should review the lessee's standard sublease agreements to ensure the tenants are advised of all the Department's restrictions and rights.

15.07.06.00 Stormwater Inspections

Local agency or other mandate may require R/D A/S to inspect airspace sites after a storm to ensure standing water does not collect contaminants before entering the stormwater drainage system. Typical sites are paved parking sites that may have oil and gas residue.

© 1994-2025 California Department of Transportation. All rights reserved.

15.07.07.00 Encroachment Permits

A determination should be made on the kind of Right of Way Use Agreement that needs to be implemented for a lease within operating right of way. Some uses may go through the Encroachment Permit Office only. Other uses will require both a Right of Way Use Agreement through R/D A/S in addition to an Encroachment Permit through the Permits Office. Lastly, there will be uses that only require a Right of Way Airspace Agreement.

Uses on access-controlled right of way of a duration of 30 days or less may be processed solely by the Encroachment Permits Office unless the use is of a recurring nature (e.g. pumpkin farms or Christmas tree lots that occur annually). A further breakdown of the different uses covered by the Encroachment Permit Office versus Right of Way can be found by looking at the Right of Way Use Agreement Exhibit 15-EX-17.

A Right of Way Use Agreement through R/D A/S and an Encroachment permit must be obtained when construction occurs. This requirement applies to new paving, striping, lighting, electrical, and curbing, as well as all buildings. Modifications to an existing parking or storage area's traffic pattern may also require an encroachment permit. Minor modifications to the site will generally not require a permit.
An encroachment permit should not be issued prior to the DARC approval, FHWA approval, and execution of the lease. Construction must not occur prior to obtaining the Encroachment Permit.

Refer to the Encroachment Permits Manual for specifics.

15.07.07.01 Encroachments by Exception

Encroachments in access controlled right of way are handled by an exception process. The Program Manager for Design, with assistance from the Encroachment Advisory Group (EAG) in HQ, will review region/district recommendations to allow use of the operating right of way when safe and noninterfering. Typical requests are:

- Utility company installation of a pipeline parallel to the right of way line (not an Airspace use).
- Telecommunications carrier access to maintain the antenna and/or vault from the traveled way (part of the site license agreement).
- Access from the traveled way to adjoining private property (no exceptions granted).

© 1994-2025 California Department of Transportation. All rights reserved.

- Access from adjoining property to landscape or otherwise improve the appearance of the private property (can be an Airspace use or handled by cooperative agreement through the Office of Landscape Architect).

R/D A/S should coordinate work with the Permits Office before transmitting the request to the EAG.

FHWA approval is required if a design exception is required and the location is on an interstate corridor.

15.07.07.02 Permits for Telecommunications Licenses

The Telecommunications License Program may require three encroachment permits to perform work in the right of way. These are:

- **Survey Permit** – to test the radio frequency of proposed facility prior to submitting preliminary proposals to Airspace.
- **Encroachment Permit** – to construct if proposed use is approved.
- **Annual Permit** – to maintain the equipment if the proposal is within operating right of way.

Refer to the Telecommunications License Process and Guidelines and the Encroachments Manual for more information.

15.07.07.03 Permits Office

As required in the Right of Way Use Agreement, the lessee shall obtain an encroachment permit prior to construction. In no case shall an encroachment permit substitute for a Right of Way Use Agreement.

To make a determination on what requires a Right of Way Use Agreement, please refer to Exhibit 15-EX-17 which delineates what uses require a Right of Way Use Agreement through the R/D A/S instead of only an encroachment permit through the Encroachment Permits Office.

Lessees may be required to obtain an encroachment permit prior to making any changes to the airspace site. The standard Right of Way Use Agreement requires R/D A/S to advise the Permits Office that all DARC concerns have been satisfactorily addressed and that DARC has reviewed and approved the final plans.

© 1994-2025 California Department of Transportation. All rights reserved.

R/D A/S should formally advise the lessee of the encroachment permit process (e.g., application and required sets of plans). A copy of the letter to Permits will advise that all final approvals (e.g., environmental, local building permit, and DARC review) have been obtained and the Right of Way Use Agreement has been executed.

The lessee must obtain a performance bond and a payment bond, or a performance bond containing the provisions of the labor and material bond supplied by tenant's contractors, provided the bonds are issued jointly to tenant and Caltrans as obligees. An "Irrevocable Letter of Credit" is not acceptable as evidence for performance of a construction obligation.

NOTE: Permits Office does not accept dual obligee bonding. Caltrans must be the only agency on the bond.

15.07.07.04 Monitoring Construction

Permits and R/D A/S shall carefully monitor construction of all developments on airspace sites. The permit shall provide that lessee will not occupy the improvements until all work is completed to the Department's satisfaction and a notice of completion has been issued to the lessee.

These permits shall specify that notice to the Bridge Structures Unit is required 48 hours prior to installing any attachments to a structure. If construction involves bridge structures, R/D A/S may request assistance from Structures Operations in monitoring the project.
Any changes in the plans shall require prior written approval of R/D A/S and Permits and revised plans covering these changes must be attached to the permit.

The local agency's planning department issues a Notice of Completion in accordance with their building permit. Permits issues an Encroachment Permit Completion Notice. The Permits Inspector does not ensure that building construction conforms to local standards; that is the responsibility of the local agency.

A copy of the final plans shall be forwarded to Structures Operations to ensure that a complete set of as-builts is on file for every structure in the State.

© 1994-2025 California Department of Transportation. All rights reserved.

15.07.08.00 State Fire Marshal Inspections

State Fire Marshal (SFM) will inspect for fire safety, unapproved construction, illegal or dangerous storage practices, wiring, fire extinguishers, and sprinklers.

The Office of Structure Maintenance and Investigations (OSM&I) established general guidelines (Exhibit 15-EX-12) the SFM uses to inspect all facilities. R/D A/S should advise potential developers of these standards.

Health and Safety Code, Section 13108, specifies that the State Fire Marshal (SFM) prepare and adopt building standards relating to fire protection in the design and construction of the means of egress and the adequacy of exits from, and the installation and maintenance of fire alarm and fire extinguishment equipment or systems in, any state institution or other state-owned building or in any state-occupied building and submit those building standards to the State Building Standards Commission for approval pursuant to the provisions of Chapter 4 (commencing with Section 18935) of Part 2.5 of Division 13 of the Streets and Highways Code. Right of Way's policy is that the SFM is required to review and approve plans, prior to the execution of any Right of Way Use Agreement, when the Department of Transportation (the Department) is locating into an existing building and there will be tenant improvements prior to occupation. R/D A/S staff are responsible for ensuring that appropriate SFM review of plans and/or inspections are accomplished prior to execution of all Right of Way Use Agreements.

The regional SFM supervisor, whose final approval is required for all uses underneath a structure, is a member of the DARC. At a minimum, separate copies of the preliminary and final plans for all uses should be submitted to the regional SFM office for review and comments.

The SFM will also make an initial inspection of telecommunications wireless facility prefabricated shelters.

Prior to a tenant occupying an Airspace property improved with a structure, the State Fire Marshal must perform an inspection of the property and provide a Certificate of Occupancy.

All costs incurred with securing the Certificate of Occupancy are the responsibility of the tenant. However, the State Fire Marshal will bill the Department of Transportation for securing this document. Districts shall expect to bill the tenant for the amount incurred.

© 1994-2025 California Department of Transportation. All rights reserved.

For SFM Inspections for temporary emergency shelters, please see section 15.04.01.12 under Site Identification for Statute Directed Use-Emergency Shelter and Feeding Program.

15.07.08.01 SFM Inspection Responsibilities

All Right of Way Use Agreements require SFM have access to the property at any reasonable time for appropriate inspection of the site.

Annually, R/D A/S and the SFM will develop a list and schedule of required inspections, identifying those sites needing annual inspections and any new sites that will be leased requiring initial and periodic inspection.

The SFM will conduct internal and external inspections of all buildings, and all other airspace inventory based on their determination. The SFM will establish a schedule based on the risk to the State depending on the airspace use and whether the site is developed or not.

The SFM will also inspect sites by request as well. See Section 15.07.08.04.

The SFM inspection is independent of the inspection that the R/D A/S agents must perform. For the inspections done by R/D A/S agents, please refer to Section 15.07.00.00, *Inspection and Use Requirements*.

15.07.08.02 Conducting Inspections

The SFM shall conduct inspections per the established schedule, contacting R/D A/S when a problem is identified, when assistance is needed to gain access to the site, or when the inspection cannot occur as scheduled.

15.07.08.03 Inspection Reports

The SFM shall submit an inspection report, identifying any areas needing immediate correction. R/D A/S will confirm the problem and give the lessee a 30-day notice to correct deficiencies. R/D A/S may initiate default proceedings if lessee does not correct the problem.

© 1994-2025 California Department of Transportation. All rights reserved.

15.07.08.04 Special Requests

R/D A/S may request special assistance from the SFM for:

- Persistent problems with lessee's correction of noted deficiencies, especially if R/D A/S has instituted legal action.
- Situations involving extreme danger of fire or explosion requiring SFM and R/D A/S to take immediate action to remedy the problem and to prevent the lessee from continuing the practice.

The SFM must send a written report within one week. R/D A/S will forward a copy to HQ A/S.

15.07.08.05 Reporting of Fire

Section 13107 of the Health and Safety Code requires that all fires or explosions in or on all State-owned properties be investigated by the State Fire Marshal. All fires and explosions must be reported to the State Fire Marshal immediately following the knowledge of a fire. The number to contact the State Fire Marshal Duty Officer is (916) 323-7390. The Duty Officer will answer this number on a 24/7 basis. You need to have the following information:

1. Type of incident (fire or explosion, etc.)
2. Location of incident
3. Time of incident
4. Was Fire/Police Department dispatched
5. Information on any injury or fatality
6. Name and phone number for a call back.

Rebuilding or repairing damage caused by the fire may begin without delay whether or not an investigation is made.

Note: Local agencies using this manual for non-state-owned properties shall follow their agencies' fire reporting protocol.

© 1994-2025 California Department of Transportation. All rights reserved.

15.07.09.00 Hazardous Materials and Waste

The Department's policy is to ensure that all airspace sites are, and continue to be, free of hazardous materials and waste. A material is hazardous if it poses a threat to human health or the environment. Hazardous materials are defined in the California Code of Regulations, Title 26, Division 4, Section 8-339. R/D A/S must review all proposals to use or store hazardous materials on an airspace site.

Environmental should be included in the DARC to ensure any approved use of hazardous material is under control and in accordance with applicable statutes and regulations. Of particular concern are materials that are flammable, reactive (subject to spontaneous explosion or flammability), corrosive, toxic, or radioactive.

Hazardous waste is any of the above materials that have escaped or been discarded or abandoned creating a potential liability for the Department. R/D A/S should closely monitor all approved uses of hazardous materials on an airspace site to ensure conformity with applicable laws, regulations, and local ordinances.

15.07.09.01 Inspections for Hazardous Material and Waste

Airspace sites should be inspected regularly for hazardous materials or waste that could contaminate the property. If R/D A/S discovers hazardous waste, the following action should be taken.

- **Hazardous Waste Exists** – If lessee's operation is causing the waste, immediately notify lessee the action must cease or the Right of Way Use Agreement will be terminated. Lessee is required to clean up any hazardous waste or material. Cooperation with Environmental, Legal, and Project Development may be required. HQ A/S must specifically approve any new Right of Way Use Agreement or Right of Way Use Agreement renewal for a site confirmed to contain hazardous waste or materials.

- **Hazardous Materials Exist** – The risk to the roadway and the public safety of allowing the operation to continue with possible cleanup costs must be weighed against long-term liability, community safety/impact and external positive factors. Documentation to justify continuing the Right of Way Use Agreement shall be retained in the file.

© 1994-2025 California Department of Transportation. All rights reserved.

In each situation, the Right of Way Use Agreement should be reviewed to determine what is allowed and what remedial action is needed. R/D A/S should request amending the Right of Way Use Agreement to include the standard hazardous waste clause if the lessee will continue to occupy the site.

Environmental can assist R/D A/S in all inspections and determinations of hazardous materials or waste.

15.07.09.02 Hazardous Waste

If inspection of an airspace site indicates a potential for a problem with hazardous waste, R/D A/S should formally request the District Environmental Office with coordination of the HQ Environmental Division to investigate and test the site immediately to determine if the site is actually or potentially contaminated.

Environmental will inspect the site and determine if:

- **Testing Is Not Necessary** – Environmental provides a written statement that no hazardous waste is present.
- **Further Investigation Is Necessary** – Environmental hires a consultant to determine if hazardous waste actually exists.
- **No Hazardous Waste Is Present** – Lessee is authorized to use hazardous materials, but the use prompts the Hazardous Waste Coordinator (HWC) to recommend future inspections and specific controls to reduce the Department's potential liability.
- **Hazardous Waste is Present** – Lessee is required to immediately and effectively remediate hazardous situations.

Environmental's recommendation may require corrective action by the lessee, more frequent monitoring of the condition, or termination of the current use or the Right of Way Use Agreement.

15.07.09.03 Prohibited Items within Airspace Sites

Per the FHWA Memo dated 11/15/2023 (15-EX-20), "Within the scope of the proposed non-highway use of the facility, there is a presumption that any structures, buildings, or facilities which utilize combustible materials (such as wood, wood fiber, plastic, etc.) that may be fire hazards do not satisfy 23 CFR 710.405(a). Such non-highway uses cannot be allowed under or adjacent to overpasses and bridges, absent a showing that such uses would provide for the safe and secure operation and maintenance of the highway facility."

© 1994-2025 California Department of Transportation. All rights reserved.

Prohibited hazardous items include but are not limited to:

- Oil
- Gasoline (when outside of an operable vehicle)
- Wood/Lumber
- Portable buildings/structures
- Pallets
- Wood chips
- Flammable/Hazardous landscaping materials
- Non-operable vehicles
- Plastic piping/Tubing
- Tires (when not on an operable vehicle)
- Paper/Paper products (when stored in quantities beyond consumer use)
- Fabrics
- Batteries (excluding alkaline types)
- Chemicals/Cleaning supplies in industrial quantity
- Any other combustible, hazardous, or flammable materials that are capable of being easily ignited and burning quickly

Should these items be discovered during inspections, follow default proceedings for corrections. See Section 15.07.01.01.

15.07.09.04 Inventory of Hazardous Waste Sites

R/D A/S and Environmental must ensure all vacant or occupied sites with any identified hazardous waste are included in the tracking system maintained by Project Development. This includes all airspace sites with underground storage tanks.

On a semi-annual basis, the R/D A/S must report to HQ A/S confirmation of any and all items being stored within all airspace areas. A statewide report is provided to Caltrans Structures and the State Fire Marshal as requested.

15.07.09.05 Potential Surface Contamination

Certain developments may have a greater potential for hazardous waste contamination. Examples include machine shops and light and heavy industrial manufacturing. Proposals to use airspace sites for these uses should not be allowed in most cases.

© 1994-2025 California Department of Transportation. All rights reserved.

15.07.09.06 Lease Clause for Hazardous Materials and Waste

Standard Airspace Right of Way Use Agreements kept on the RPS intranet website contain a hazardous materials clause stating the lessee is responsible for cleanup and mitigation of all hazardous material and waste deposits on the site, regardless of the source or cause.

Use of the hazardous waste clause and the lessee's proposed list of hazardous materials to be permitted should alert R/D A/S to potential problems. Before any Right of Way Use Agreement is executed, R/D A/S must inquire into the specific type of use and consider the risk.

15.07.10.00 Storm Water Management

Airspace sites are within the Department's municipal separate storm sewer system (MS4) and are covered by the Department's Statewide Storm Water Permit and Storm Water Management Plan (SWMP). Airspace sites are therefore managed to prevent the discharge of pollutants to the storm water drainage system in compliance with the Department's Permit and SWMP. R/D A/S will use standardized Right of Way Use Agreement language that conforms with the SWMP in new Right of Way Use Agreements and in existing leases that come up for renewal. The Right of Way Use Agreement language requires implementation of storm water best management practices (BMPs) that are activity specific and elimination of unauthorized illicit connections/illegal discharges to the storm drain system. Storm water education and outreach materials, including storm water pollution prevention fact sheets, will be provided to the lessee/tenant. The fact sheets contain the BMPs applicable to the lessee's activities.

R/D A/S will maintain a list of Right of Way Use Agreements with industrial activities that require coverage under the General Permit for Storm Water Discharges Associated with Industrial Activity (General Industrial Permit) issued by the State Water Resources Control Board (SWRCB). The list of leases requiring such coverage will be included in the Department's Annual Report to the SWRCB.

Lessees whose industrial activities on the lease premises require coverage (e.g. a batch plant) under the General Industrial Permit will be required to provide the following:

- Copy of Notice of Intent (NOI) filed with SWRCB (or No Exposure Certification).

© 1994-2025 California Department of Transportation. All rights reserved.

- Copy of Receipt letter from SWRCB with Waste Discharge Identification (WDID) number.
- Copy of Storm Water Pollution Prevention Plan (SWPPP) covering lessee's facility and activities.

In addition to obligations to maintain compliance with lease terms pertaining to storm water pollution prevention, lessees are required to comply with all federal, state and local storm water laws and ordinances.

R/D A/S will conduct annual inspections of leased property using the Airspace Storm Water Inspection Report (Exhibit 15-EX-14 [internal Caltrans link]), to comply with the SWMP's measurable objectives and assess lessee's conformance with lease terms. The results of the inspections will be kept in the parcel file and will be used to develop annual reports that document the Department's compliance with its SWMP.

Refer to the Right-of-Way Property Management and Airspace Storm Water Guidance Manual for storm water pollution prevention fact sheets, guidance materials and compliance procedures.

15.07.11.00 Defaults

The lessee is considered in default if any of the Right of Way Use Agreement provisions are violated, and the tenant has been properly noticed with an opportunity to cure, per the terms of their lease. Typical defaults are:

- Prohibited or Hazardous items on site. See Section 15.07.09.03.
- Violations identified by State Fire Marshal.
- Delinquent account.
- Insurance certificate not current.
- Failure to maintain site to current lease standards.
- Current use not authorized.
- Allowing others to use the site without Airspace's prior approval (e.g., assignment and sublease).

© 1994-2025 California Department of Transportation. All rights reserved.

R/D A/S must monitor each Airspace leased site to ensure any violations are found while there is still time to take corrective action (e.g., collect delinquent rent prior to lessee vacating, getting a current insurance certificate before a situation occurs, and preventing hazardous materials from becoming hazardous waste). When a leased site is not properly maintained or a violation is discovered, the agent will inform the tenant of the violations by written letter sent by certified mail, a copy of the letter is to be kept in the airspace file. The notification must also set a timeframe for the violations to be cured. If the violation is not cured within an appropriate timeframe the region or district must begin default proceedings.

The lessee must correct violations in a timely manner as specified by the e. To ensure this, R/D A/S must issue a formal written notice to make corrections within a specific time frame (usually 15-day, 30-days, or, if it is an immediate safety issue, a 24-hour or three-day notice). Further information on Notices can be found in Section 15.07.01.01.

If action is not taken, R/D A/S must initiate default proceedings (e.g., termination, eviction, lawsuit, and collections).

Prior to initiating action, R/D A/S must carefully review the Right of Way Use Agreement to determine the appropriate remedies available. HQ A/S and Legal e be contacted to determine if there are additional steps that can be implemented.

15.07.11.01 Unlawful Detainers

The District Right of Way Division Chief has the authority to approve unlawful detainers of tenants. The District Director and the HQ Right of Way Division Chief must be notified prior to approval. The District Right of Way Division Chief has 30 days to respond to a request to initiate default proceedings by ROW staff if a tenant is unable or unwilling to correct violations.

© 1994-2025 California Department of Transportation. All rights reserved.

15.07.12.00 Vacated Delinquent Accounts

When a delinquent tenant vacates and does not leave a forwarding address, the Region/District has 15 calendar days to conduct an investigation to locate the former tenant before further collection efforts proceed. The Region/District/Local Agency does not, however, have to wait until the end of the 15 days to submit the account to the Division of Accounting, R/W Accounts Receivable (or appropriate local agency accounting division). The following are sources of information that may lead to the former tenant's whereabouts:

- Certified mail with return receipt requested sent to the tenant's last address.
- Utility companies that show transfer of service.
- Banks, places of employment, or other references that may be listed on the tenant's rental application.
- Labor union affiliations, depending upon the tenant's profession.
- Department of Motor Vehicles, using driver's license number, California ID number, or car license number from the application.

As soon as a delinquent tenant vacates, the Region/District should process the vacated tenancy through the ROWMIS Adjustment Screen. Within 15 days, the district should refer the account to Accounting for write-off or for referral to the collection agency for further collection efforts.

15.07.12.01 Amounts $250 or Less

If the delinquent amount is $250 or less, the Region/District forwards a completed Form RW 11-25, Authorization to Write Off or Adjust Accounts Receivable Bill (internal Caltrans link), to Accounting and requests write-off of the account through the ROWMIS Adjustment Screen. The write-off request should include a brief justification (e.g., collection efforts are not cost effective based on Board of Control guidelines). Accounting will immediately write off the account. If the delinquent amount is over $100 and the delinquent tenant's Social Security Number is known, Accounting will submit the account to the Franchise Tax Board (FTB) for two successive years only. However, the Intercept Program is for intercepting refunds of Personal Income Tax accounts only and cannot be used for corporations or partnerships. If all or a portion of the delinquent amount is collected, either through the FTB Intercept Program or from the vacated tenant, Accounting will reestablish the receivable account.

© 1994-2025 California Department of Transportation. All rights reserved.

15.07.12.02 Amounts Greater Than $250

If the delinquent amount is greater than $250, the Region/District prepares an Exhibit 15-EX-18, Collection Agency Transmittal (internal Caltrans link), and forwards it to Accounting with the required documentation listed below. The vacancy date and amount due will be of critical importance if the collection agency pursues legal action against the debtor, and the Region/District is responsible for ensuring the accuracy of this information. In addition, the Region/District must enter the date the collection package is forwarded to Accounting on the Delinquent Tenancy Screen (TPR521M) in ROWMIS.

- Copy of first and last pages of rental agreement
- Copy of rental application
- New address documentation
- Copies of diary notes regarding efforts to collect
- Copy of judgment
- Copy of driver's license or California identification card

Accounting will verify the amount owed and forward the collection package to the collection agency under contract to the Department. In addition, Accounting will submit accounts with Social Security Numbers to FTB under terms of its Intercept Program.

15.07.12.03 Collection Agency Procedures

The collection agency receives 3.5% commission on whatever they collect. If the collection agency collects 100% of the debt, the Department receives 96.5%. It is in the contract that the collection agency can settle the debt with the debtor at 80%. Any percentage lower than that needs to be approved by the Department's Accounts Receivable/Management. The collection agency will still receive 3.5% of the amount collected based upon the settlement.

Once an account is referred to the collection agency, Accounting takes on all responsibility for the account and makes all further contact with the collection agency. Any calls or letters from the delinquent tenant should be referred to the collection agency for response. **Under no circumstances should the Region/District enter into a repayment plan with the delinquent tenant once the account has been referred to the collection agency.**

© 1994-2025 California Department of Transportation. All rights reserved.

In accordance with terms of the contract, the collection agency will submit a monthly report to Accounting showing the status of all accounts referred to them for collection. Accounting will forward a copy of the report to HQ R/W to be shared with the Regions/Districts.

Under terms agreed to among the collection agency, Accounting and HQ R/W, Accounting will write off accounts that are deemed to be uncollectable. If all or a portion of the delinquent amount is subsequently collected, Accounting will reestablish the receivable account.

A collection packet should be submitted within 15 days of vacancy. **Do not delay in submitting your collections packet to accounting**. The State only has four years to collect payments.

On rare occasions, a Region/District may engage in a payment plan with a vacating tenant that will prevent a file from going to collections. As long as the tenant is paying according to the plan, this is permissible. However, if the tenant begins to miss payments, immediately send to collections. **Do not keep renegotiating the terms of a payment plan.** Always keep in mind of the statute of limitations to collect funds is 4 years after vacate date.

15.08.00.00 – MANAGING THE AIRSPACE PROGRAM – PROPERTY MANAGEMENT AND THE MARKETING PLAN

15.08.01.00 General

The R/D Senior should ensure sufficient staff is assigned to and adequate time is spent on managing the region/district's Airspace program, which includes property management activities, marketing plan to lease sites, and program efficiency.

15.08.02.00 Property Management

Property management activities are those actions taken after a site is leased and developments (if any) are constructed. (See Section 15.07.00.00.) Airspace must ensure the lessee is complying with all terms and conditions of the Right of Way Use Agreement. As each site is developed differently, the degree of property management activities will differ with each Right of Way Use Agreement. At a minimum, R/D A/S should review the current status of each Right of Way Use Agreement to ensure:

Monthly –

1) The lease payment has been received and the account is not delinquent. If after proper notification, the lessee does not pay any arrears, default proceedings must be initiated.

2) Expiring rental agreements or Right of Way Use Agreement will be scheduled for renewal, extension, or termination.

Quarterly –

1) Future adjustments to the lease rate have been calculated and are scheduled to be billed per the percentage established in the Right of Way Use Agreement. The lessee must be advised in writing of the increase in the lease rate at least 30 days prior to the billing date.

2) Lessee's insurance certificate provides the appropriate liability coverage and is current. Developed sites will also require fire insurance for all improvements. Failure to provide a current insurance certificate is cause to initiate default proceedings.

© 1994-2025 California Department of Transportation. All rights reserved.

3) SFM's inspection report has been received on all developed properties. Follow up when necessary to ensure deficiencies are corrected.

Annually –

1) SFM's inspection report has been received on all non-developed properties requiring inspection. Follow up as necessary to ensure deficiencies are corrected.

2) Lessees paying on a percentage of gross revenues have scheduled audits to calculate the next year's lease payments. Airspace and the lessee should initiate the review of gross receipts at least 60 days prior to the next billing cycle.

Field reviews are important in property management activities, and each site should be inspected on a regular basis to ensure the site is being used and maintained as authorized (see 15.07.00.00). The lessee should keep the site clean of debris and of **hazardous waste**. Upkeep should be consistent with or superior to neighborhood standards. At a minimum, Airspace should inspect each expiring Right of Way Use Agreement prior to renewal, extension, or termination (monthly); each developed site (quarterly); and each non-developed and vacant site (annually).

All activities should be noted in the site diary with copies of all correspondence kept in the site file.

15.08.03.00 Right of Way Use Agreement File

Each Airspace Right of Way Use Agreement must have a file that includes a diary of all written and verbal communications, including all requests and approvals. The site file must contain written documentation (letters, memoranda, and attachments) on the leasing procedures (bid vs. direct negotiations), proposed use, DARC comments (all phases), development plans, environmental and air quality documents, marketing plan for the site, standardized Right of Way Use Agreement, bid package, RWPS setup, request to add to inventory, field inspections, deficiencies corrected by lessee, default actions initiated, and all other pertinent information.

© 1994-2025 California Department of Transportation. All rights reserved.

15.08.04.00 Right of Way Property Management System

The Airspace Inventory is maintained in the Right of Way Property Management System (RWPM), which generates reports on region/district property management workload, number and type of Right of Way Use Agreements, potential and actual income, internal uses, high priority sites, telecommunications licenses, and due dates (e.g., expiration, inspections, and adjustments). Accounting also uses RWPM to generate bills and to track account payments and adjustments. All Airspace Right of Way Agents shall be proficient in using RWPM until such time as a new database system is implemented. When the new system is implemented, all Airspace Right of Way Agents shall be proficient in the new system.

R/D A/S shall ensure the system is current and all relevant data is input by reviewing the data entries on a regular basis. The list of sites in the inventory should also be reviewed to determine if vacant sites could be marketed.

Integrated Right of Way System (IRWS), if used, must also be updated as the two systems are integrated. Airspace site numbers cannot be entered into RWPM unless the route and site are first entered into IRWS. In the rare case where IRWS is used, please contact HQ Right of Way Airspace. Once a new database system is adopted, both IRWS and RWPMS will be retired.

NOTE: ROWMIS cannot be used to input an airspace property into RWPM, as airspace properties are Alpha-Numeric (county-route) as part of the numbering system. ROWMIS does not accept letters in the numbering system.

15.08.05.00 Income

ROWMIS and Caltrans Accounting track all revenues received through leasing sites. All funds are deposited into the State Highway Account (SHA), which is used for transportation purposes. As such, FHWA does not require a percentage of the income received but expenses are not eligible for federal reimbursement.

Since gross income (funds actually received) is reported to management and the legislature periodically, it is critical Airspace make all efforts to collect lease payments on a timely basis.

© 1994-2025 California Department of Transportation. All rights reserved.

15.08.06.00 Marketing Plan

The marketing plan to lease sites provides a working plan for Airspace on high priority sites, a marketing plan to lease vacant sites, and anticipated workload and schedule to lease all sites.

The R/D Senior should review the marketing plan at least quarterly to ensure all ongoing negotiations and activities are on schedule and that appropriate reviews and approvals are being obtained as scheduled. Processing the documents and following up on their review and approval are critical (e.g., requests for appraisals, reviews of environmental documents, and FHWA's concurrence).

The success of the program depends greatly on R/D A/S's responsiveness to the proposed lessee and the reviewing and approving entities (e.g., CTC, FHWA, and DARC members). Resolving problematic leasing issues shall be a high priority.

R/D A/S shall monitor the future expiration of rental agreements and Right of Way Use Agreements and develop plans to lease the sites before the current Right of Way Use Agreement expires through the bid or direct negotiation process.

The marketing plan for high priority sites (those that will generate the highest return if leased) should be evaluated to ensure the best methods for marketing and advertising the sites are used. Additionally, any interim uses shall be considered pending longer-term site Right of Way Use Agreements. Scheduling competitive bids for sites new to the inventory, recently vacant, or expiring should be part of the marketing plan. Each site should be evaluated to determine:

- Highest and best use (if different than the previous use).
- Fair market lease rate based on the term of the new lease (e.g., a five-year Right of Way Use Agreement may generate a higher rate of return than a two-year Right of Way Use Agreement).
- Best method for leasing the site.

© 1994-2025 California Department of Transportation. All rights reserved.

15.08.07.00 Program Efficiency

The R/D Senior is responsible for program efficiency. This requires monitoring the current year income and expenditures closely to ensure the income to expense ratio is within the norm for the region/district and the statewide program, based on past year results and any new procedures in place. HQ Program Managers should be informed of any significant fluctuations from year to year.

PY usage should not exceed the budget allocation nor be less than the contracted usage for delivering the program. Modifications to the allocation and contract require HQ Program Manager approval.

HQ A/S prepares periodic reports to the CTC and the Legislature on income and expenses for the region/districts and the statewide program. The R/D Senior should use the periodic reports to monitor gross revenues and operational expenses quarterly to evaluate possible changes in activities and to correct charging errors. HQ A/S will provide R/D A/S with special reports and assist in analyzing the data.

The targeted workload and actual work production should be reviewed quarterly. The report assists the Senior with evaluating charging practices versus statewide average, monitoring staff production, and accomplishing R/D A/S's annual goals.

15.08.08.00 Policy and Procedural Manuals

The R/D Senior should ensure each Airspace Agent has the current Airspace procedures outlined in the Airspace Chapter with Exhibits and Forms, the Reference File, region/district forms and exhibits, and other written guidance or instructions.

There should also be a plan to review the staff's work product to ensure it complies with all applicable laws and policies and that the work is being done on time and in accordance with the marketing plan.

15.08.09.00 Training and Development

Agents assigned to lease Airspace sites should be at the Associate level and have rotated through the major disciplines within Right of Way. A lesser degree of training and experience is acceptable for Agents who are assigned to property management activities only.

© 1994-2025 California Department of Transportation. All rights reserved.

The R/D Senior shall ensure staff have adequate training and experience to accomplish assigned tasks to manage the R/D Airspace program in an efficient and compliant manner.

In addition to the Airspace Chapter:

Agents assigned property management activities should be familiar with property management requirements, RWPM procedures, TRAMS and ROWMIS reports, and rules on collecting funds.

Agents assigned non-developmental leasing activities through competitive bid should be familiar with standard bidding and auctioning techniques, appropriate laws on contracting with the private sector, clauses in standard Right of Way Use Agreement, marketing techniques, and rules on collecting bid deposits.

Agents assigned more complex leasing activities (developmental, direct negotiations, and local agencies) should be familiar with negotiation and conflict resolution techniques, development costs, rates of return, CPI trends, special Right of Way Use Agreement language, provisions for assignments and subleases, and CTC procedures to obtain approval to execute Right of Way Use Agreement.

Agents should expand their knowledge and skills by attending formal courses on leasing, development, auctioning, marketing, and negotiating offered by the California Department of Real Estate, IRWA, and other organizations.

R/D Seniors should also encourage staff to expand their knowledge of Airspace practices by providing opportunities to:

1) Conduct sealed bids and auctions.

2) Meet with and make presentations to local agencies and the planning departments and the program or areas of concern to the local agencies and cities.

3) Negotiate terms, including fair market lease rate and rate of return, for all Airspace developmental uses.

4) Evaluate the risks and benefits of potential uses and proposed non-standard clauses to standard Right of Way Use Agreements.

5) Develop site specific and overall program marketing plans.

© 1994-2025 California Department of Transportation. All rights reserved.

15.08.10.00 Reference Materials

The following reference materials can be found on the Caltrans intranet site and can be helpful in leasing airspace property:

1) Airspace Chapter with exhibits, forms, and reference file.

2) Appropriate R/W policies and procedures from Appraisals, Property Management, Planning and Management, Encroachment Permits, Environmental, and Maintenance.

3) All references in the Right of Way Airspace Chapter, exhibits, forms, and reference file (e.g., 23 CFR, Streets and Highways Code, and CTC Resolutions).

4) Standard Right of Way Use Agreement (kept on the RPS intranet website).

5) CTC agenda and minutes, CTC agenda, minutes and approvals, and reports to the CTC and CalSTA.

6) ROWMIS inventory.

15.09.00.00 – DELEGATIONS

15.09.01.00 Delegations of Authority

As referenced in Section 2.05.01.00, the delegation matrix for Airspace is noted below. The delegation matrix reflects the associated policy and RW Manual reference for each delegated item. The matrix also distinguishes whether an item is delegated to the District or Headquarters (HQ) level, along with the lowest level of sub-delegation authorized. Any activities outside of the scope of this manual or the delegation matrix shall be subject to HQ RW's approval. Approval may be conveyed in writing or electronically. The Region/District shall maintain a copy of the approval in the Airspace file(s) to which it applies.

01.00 Delegations of Authority

© 1994-2025 California Department of Transportation. All rights reserved.

16.01.00.00 – GENERAL

16.01.01.00 Function and Responsibility

The Excess Land function is responsible for administering the inventory and disposition of Department-owned real property that is no longer required for rights of way or other operational purposes.

Region and District Excess Land staff have full delegation to operate and approve within the parameters outlined herein, and as specifically discussed in Section 16.14.01.00. Any activities outside the scope of this Manual and/or the delegation matrix shall be subject to approval by HQ R/W. Such approval may be conveyed either in writing or by electronic means. A copy of said approval shall be placed in each Excess Land parcel file to which it applies.

16.01.02.00 Creation of Excess Land

Excess land may be created in several ways. Landlocked or uneconomic remnants not required for the right of way may have been acquired. Downscoped projects, superseded highway segments, route rescissions, route unadoptions by legislative action, and lands decertified at the request of adjoining owners may also create excess. Properties no longer required for operating purposes, such as maintenance facilities or material and disposal sites, may be declared excess.

16.01.03.00 Definitions

Sections 16.01.03.01 Through 16.01.03.25

16.01.03.01 Excess Land

Excess land consists of real property rights, title to which is vested in the State of California, Department of Transportation, and which is determined and certified to be not required for rights of way or other operational purposes of the Department (see California Streets and Highways Code 118). The requirements for rights of way are established by the certificate of sufficiency contained in the appraisal report. Requirements for real property for other operational purposes are established and authorized by approval of specific Project Reports.

© 1994-2025 California Department of Transportation. All rights reserved.

Excess land does not include:

- Airspace under or over State highways
- Hydrocarbon, mineral, or water rights
- Personal property
- Operating material and disposal sites

16.01.03.02 Inventory Parcel

An inventory parcel is excess land that is carried on the accounting inventory as an asset. Each inventory parcel has a Value at the Time of Acquisition (VTA) which is often based on the value listed under the RW 07-13 (Excess Property Inventory Valuation). Inventory parcels are all excess land, as defined above, except those parcels specifically defined as non-inventory. Inventory parcels include land decertified at the request of adjoining owners.

16.01.03.03 Non-Inventory Parcel

A non-inventory parcel is excess land the Department intends to convey to a specific entity under the terms of a written agreement, and decertified access rights. These parcels are not part of the Division of Accounting (Accounting) inventory and do not have a VTA.

Examples of non-inventory parcels of excess land include:

- Property rights to be conveyed pursuant to an executed utility agreement for facility relocations.
- Property specifically acquired for another agency under terms of a written agreement.
- All decertified access rights where no other property rights are involved.
- Property rights, including underlying fee in local streets, to be conveyed to a local agency under terms of a freeway and/or cooperative agreement.
- Parcels acquired for exchange pursuant to a written agreement.
- Parcels acquired for replenishment housing facilities.
- Parcels acquired for functional replacement (see Section 8.30.00.00).

© 1994-2025 California Department of Transportation. All rights reserved.

16.01.03.04 Planning Parcel

A planning parcel is a parcel identified only for planning purposes. It represents unacquired or undeclared excess land which may or may not eventually become excess. These parcels are not part of the Accounting system.

16.01.03.05 Disposal Unit

A disposal unit is the number given to the property for disposal purposes. It may consist of one or more parcels. When parcels are grouped for disposal, the lowest parcel number becomes the disposal unit number. Multiple parcel disposal units may be split or combined along the original parcel lines ONLY at the discretion of the Excess Land Manager to optimize marketability or disposal potential as necessary.

16.01.03.06 Inventory Value (VTA)

Inventory Value (also known as VTA) is the fair market value of the excess at the time of acquisition, considered as a separate parcel. The inventory value may not exceed the pro rata cost of the parcel. For more information on how VTA is determined, please see Section 7.03.07.00 in the Appraisal chapter of the Right of Way manual.

16.01.03.07 Acquisition Price (Pro Rata Cost)

The amount paid by State for the excess parcel at the time of original acquisition.

16.01.03.08 Direct Conveyance of Easements

This category is limited to the State's conveyance of easements to public utility companies and political subdivisions, special districts, etc., or by direct sale where grantee has the power of eminent domain. Such conveyances must be approved by the CTC.

© 1994-2025 California Department of Transportation. All rights reserved.

16.01.03.09 Direct Conveyance Pursuant to Cooperative Agreement

Pertains to the State's conveyance of property acquired pursuant to an agreement under which the public body and the State agree to jointly share in the acquisition and construction of an improvement jointly benefiting the State and the public body, with the fee or easement title to be conveyed to the public body for their future maintenance of the facility. Such conveyances must be approved by the CTC.

16.01.03.10 Direct Fee Sale to Government Agencies

Used when excess fee-owned property is sold to public entities without calling for competitive bids for consideration equal to the appraised fair market value of the property (CTC Resolution G-98-22 – as amended). Such conveyances must be approved by the CTC.

The Department may elect, upon approval of the District Right of Way Deputy, to apply the authority provided in Government Code (GOV) Section 14012(a) to sell or lease excess right-of-way parcels to municipalities or other local agencies for public purposes. GOV Section 14012 may only be used in narrow and unusual circumstances, such as when an excess parcel is unique and there is a high likelihood there is only one potential buyer. For example, disposal of a drainage basin to a flood control district may be eligible for the use of GOV Section 14012.

Pursuant to GOV Section 14012, the Director of Transportation may accept as all or part of the consideration for such sale or lease, any substantial benefits the state will derive from the municipality or other local agency's undertaking of the maintenance or landscaping costs that would otherwise be the obligation of the state. In other words, the Department may offset maintenance or landscaping costs from the purchase price of excess property to relieve the State of its landscaping and/or maintenance duties.

© 1994-2025 California Department of Transportation. All rights reserved.

The Department has established the following policy guidance for application of GOV Section 14012:

- GOV Section 14012 will only be implemented in very unusual circumstances where excess property is being sold to a municipality or local agency for public purposes. Approval by the District Right of Way Deputy is required.
- The specific public purpose must be specified.
- Fair Market Value will be determined by a Department approved appraisal that must be reviewed and approved by Headquarters.
- Any offset for maintenance or landscaping costs must be based on historic information whenever possible and must be appropriately sourced. Sources generally include records and/or contracts from Property Management, Maintenance, and/or Landscape Architecture. District, statewide, or commonly used industry standards may be considered if historic information is not available.
- A deed restriction is required for the intended public purpose for a period of no less than 15 years. Duration of the deed restriction will be commensurate with the amount of offset; the longer the deed restriction, the greater the offset. A resolution in lieu of a deed restriction is not permitted.
- At no time will the State pay a municipality or a local agency to receive a conveyance under GOV Section 14012.

District Excess Land must ensure that applicability of GOV Section 14012 is in the best interest of the Department. Determining applicability requires districts to apply the ultimate test: if the excess land can be sold at fair market value, relieve the Department of landscaping and maintenance costs, and still generate full fair market revenue, then the application of GOV Section 14012 is not appropriate. When achievable, the primary method of disposal should be direct conveyance at fair market value.

16.01.03.11 Direct Sale to Eligible Present Occupants

Direct sale, at fair market value to present occupants (tenants) who meet the eligibility requirements under CTC Resolution G-98-22 – as amended, commercial tenants in accordance with California Streets and Highways Code 118, or to present occupants subject to Government Code Section 54235. Such conveyances must be approved by the CTC.

© 1994-2025 California Department of Transportation. All rights reserved.

16.01.03.12 Direct Sale to Former Owners

Direct sales, at fair market value, to former owners who have remained in occupancy (CTC Resolution G-98-22 – as amended). Such conveyances must be approved by the CTC.

Direct sales to former grantors under Roberti Act in Section 54235-54238 of Government Code. Such conveyances must be approved by the CTC.

Pursuant to California Code of Civil Procedure section 1245.245, the Department can sell directly to a former grantor if the Department acquired the property subject to a resolution of necessity and that property is not used for the public purpose stated within ten years following passage of the resolution by the CTC. Such conveyances must be approved by the CTC.

16.01.03.13 Direct Sale to Housing Entity

Direct sale, at less than fair market value (i.e., at a reasonable price), to a housing entity that will use the property for low-and moderate-income housing purposes pursuant to Roberti Act, Government Code sections 54235-54238.9. Such conveyances must be approved by the CTC.

NOTE: also subject to Chapter 9.5 in Division 2 of Title 21 of the California Code of Regulations, which sets forth the priorities and procedures for state-owned surplus residential properties located within the State Route 710 (SR 710) corridor in the County of Los Angeles.

16.01.03.14 Exchange Per Contract

Authorized by Streets and Highways Code (SHC) section 118, whereby excess land is conveyed to a party from whom the State is acquiring right of way and by using the value of the excess land as whole or part consideration for the required property or interest needed for State highway purposes. Such conveyances must be approved by the CTC.

© 1994-2025 California Department of Transportation. All rights reserved.

16.01.03.15 Finding "A" Sales

Direct sale to an adjoining owner, without calling for competitive bids, of small, oddly-shaped, fee-owned parcels incapable of independent development and having a higher and better use as part of the adjoining property or, if sold to other than the adjoining owner, would cause an undue or unfair hardship to such adjoining owner in the normal development or operation of their property (CTC Resolution G-98-22 – as amended). Such conveyances must be approved by the CTC.

16.01.03.16 Finding "B" Sales

The sale of such excess parcels to other than the adjoining owner would deprive such adjoining owner of vested right of access to a public highway and would create a possible cause for action against the Department (CTC Resolution G-98-22 – as amended). Such conveyances must be approved by the CTC.

16.01.03.17 Miscellaneous Conveyances

Pertains to the sale of State's interests (such as access rights, mineral rights, or easements outside of the operating right of way) no longer required for operation of the highway facility. Such conveyances must be approved by the CTC.

16.01.03.18 Fair Market Value

A conclusion of value as defined in R/W Manual Chapter 7, Appraisals. Excess land appraisals are discussed in R/W Manual Chapter 7 and Section 16.04.00.00.

16.01.03.19 Nominal Value Appraisals

A conclusion of value as discussed in R/W Manual Chapter 7 and Section 16.04.00.00.

16.01.03.20 Public Sale Estimate (PSE)

An estimate of current market value, in brief written form as discussed in R/W Manual Chapter 7 and Section 16.04.00.00.

© 1994-2025 California Department of Transportation. All rights reserved.

16.01.03.21 Private Sale

A private auction of "Finding A" parcels (see 16.01.03.15 – Finding "A" Sales) that have multiple adjoining owners who could use the property. If the parcel is of peculiar size, shape, or in landlocked condition precluding it from independent development and is being sold by sealed bid or private auction, all adjacent owners must be notified by mail.

16.01.03.22 Public Sale

Oral auction or sealed-bid auction that is open to any member of the public, public entities, etc. Public sales are by oral auction, or, sealed bid. All public sales are advertised through the Department's Excess Land website, real estate advertisement companies or directly mailed or e-mailed to prospective purchasers.

16.01.03.23 Liquidated Damages

Liquidated damages are damages whose amount the buyer and Department designate and agree upon during the formation of a contract to sell for the injured party to collect as compensation in the event of a breach of the sale contract.

16.01.03.24 Bid Registration Deposit

A bid registration deposit of no less than $1,000 shall be presented by every bidder for every oral auction or sealed bid sale. The successful high bidder shall submit this deposit at the close of the auction, to be applied toward the purchase of excess land. This deposit shall be liquidated damages if the highest bidder breaches, defaults, or withdraws in the first three days following the public sale. Bid registration deposits may be increased for sales of high value properties at the discretion of the Excess Land Manager.

16.01.03.25 Purchase Deposit

A purchase deposit of at least 10% of the sale price shall be remitted by the highest bidder at public sale within five business days following the public sale. This deposit shall be liquidated damages if the highest bidder breaches, defaults, or withdraws after remittance of this deposit.

© 1994-2025 California Department of Transportation. All rights reserved.

16.01.04.00 Organization

The DDC-R/W shall establish a District Excess Land Unit, hereinafter referred to as Excess Land, to efficiently and expeditiously dispose of excess land and improvements thereon in accordance with SHC Section 118. Responsibilities for all parcels in the Excess Land Inventory shall be properly assigned to ensure disposal in accordance with the principles outlined herein. HQ R/W will evaluate the effectiveness of the Excess Land Unit through periodic reviews and audits of district procedures.

In accordance with community planning and environmental values, sound business practice, integrity, and State law, Excess Land will:

- Minimize the number of parcels on the Excess Land Inventory.
- Minimize the holding period from date of acquisition to date of disposal.
- Maximize the return from sale of the land or interest conveyed.

16.01.05.00 Parcel File

Excess Land maintains a file on every parcel in the Excess Land Inventory until final disposition is completed, including full reconveyance. The parcel file shall contain as a minimum the items listed below:

- Clearance circulation memorandums
- Economic justification and hold authorization forms, where applicable
- Copy of Form 16-01(internal Caltrans link)
- Copy of waiver letters from adjoining owners if the sale is a Finding "A or B"
- Current excess land mapping
- Parcel Diary
- Copy of recorded deed
- Copy of payments to accounting with a copy of Form 16-29 (internal Caltrans link)
- Executed Purchase Agreement
- Sales Brochure
- Correspondence
- ELMS printouts – Disposal Unit and Parcel Screens

© 1994-2025 California Department of Transportation. All rights reserved.

16.01.06.00 Parcel Diary

A parcel diary sheet is required for each disposal unit. The diary is maintained in sufficient detail to document the steps taken towards ultimate disposal of the property. It is part of the Excess Land parcel file and includes the following information as a minimum:

- **Name of Assigned Agent**

- **Signed and Dated Entries** – documenting verbal and written inquiries, review dates and suggested actions, personal contacts regarding design studies and proposed routes, personal contacts involving sales attempts, when "FOR SALE" sign(s) were posted on the property, when advertisements were placed on the State's excess land website, when advertisements were placed through other advertising resources (where appropriate and cost-effective), when notices of sale were sent to appropriate governmental agencies (if applicable), and/or when copies of brochures were mailed to all owners adjoining the property being sold.

- **Public Sales** – dates and results.

- **Other** – any information necessary to understand the handling of the disposal unit.

The diary and/or file shall contain documentation that prior to public sale, "FOR SALE" sign(s) were posted on the property, advertisements were placed in real estate advertisement resources when appropriate and cost effective, notices of sale were sent to appropriate governmental agencies, notices posted on the Department's excess land auction Web site, and copies of brochures were mailed to all owners adjoining the property being sold.

16.01.07.00 Excess Land Parcel Acquisition/Disposal Summary (Form RW 16-01)

An Excess Land Parcel Acquisition/Disposal Summary (Form RW 16-01 [internal Caltrans link]) is prepared and maintained for each individual parcel of excess land and retained in the Excess Land parcel file during the Department's ownership.

Districts are to provide a copy of the completed RW 16-01 (internal Caltrans link) to Accounting after recordation of the Director's Deed. The Form RW 16-01 (internal Caltrans link) notifies Accounting to remove the VTA from the Accounting inventory.

© 1994-2025 California Department of Transportation. All rights reserved.

16.01.08.00 Excess Land Inventory Memorandum (Form RW 16-28)

Excess Land prepares Form RW 16-28 (internal Caltrans link) and sends it to Accounting to record the VTA. This form is also used to make changes to the VTA. VTA additions or expenditure adjustments are due to actions district staff takes to create, adjust, return, incorporate, or delete excess parcels.

16.01.09.00 Excess Land Fiscal Transmittal (Form RW 16-29)

Excess Land prepares Form RW 16-29 (internal Caltrans link) to document fiscal transmittals to Accounting:

- **Cashiering Unit** – funds received from a buyer in connection with sale of excess land, decertification deposit, or miscellaneous fees.

- **Accounts Receivable Unit** – request regarding related adjustments, such as refunds or forfeiture of deposits.

© 1994-2025 California Department of Transportation. All rights reserved.

16.02.00.00 – EXCESS LAND INVENTORY

16.02.01.00 Inventory

Excess Land maintains records in the Excess Land Management System (ELMS) of all parcels defined as "excess land," inventory and non-inventory. There are three independent records of excess land that constitute the official inventories:

- **Accounting Records** – General ledger accounts maintained by the Accounting Service Center (ASC). ASC records do not include noninventory parcels.
- **Right of Way Record Maps** – maintained by Right of Way Engineering.
- **Excess Land Parcel Files** – maintained by Right of Way.

Each record serves a separate purpose; together they provide a record of accountability that facilitates management and disposition of excess land. The respective functions independently input data to the inventory from the three basic records. The three records must be kept current and the Right of Way Record Maps and Excess Land Parcel files and reconciled.

On federal-aid projects, all excess land files and documents, including maps, Inventory Disposal Records, correspondence, options, leases, notices, contracts, and agreements, shall carry the federal-aid project number for federal vouchering purposes.

ELMS is used to record, monitor, reconcile, and report the status of the excess land inventory. The ELMS User's Handbook for use of this system is available on the Right of Way Real Property Services (RPS) intranet page (internal Caltrans link). All parcels in ELMS are carried in "disposal units" consisting of one or more parcels. Multiple parcel disposal units may be split or combined (along original acquisition parcel lines ONLY) at the discretion of the Excess Land Manager to optimize the marketability or disposal potential as necessary. Each parcel has an inventory or non-inventory category. Disposal units may be comprised of both inventory and noninventory parcels.

Discoverer is another tool for extracting data from ELMS.

© 1994-2025 California Department of Transportation. All rights reserved.

16.02.01.01 Creation of Excess Lands

Excess Lands can be created in the following ways:

1. Regular Excess Parcels Acquired Through Acquisition
2. Rescinded Route Parcels
3. Excess Created by Design Change
4. Former Maintenance Stations and Material or Disposal Sites
5. Decertification (adjoining owner, public request or underlying fee owners)

16.02.02.00 Inventory Categories

All excess parcels will have disposable category assigned.

A summary of the inventory categories is as follows:

1 Disposable Category:
1A Available for immediate sale

2 Hold Category:
2A Engineering Hold
2B Public Agency Hold
2C Administrative/Legal Hold
2D Environmental Hold

3 Entry Category:
3 New excess land pending immediate clearance or pending hold category assignment

16.02.03.00 Inventory Category and Updating ELMS Accordingly

New excess parcels are placed in Category 3 pending clearance and transfer to another category. (See 16.03.00.00 for clearance procedures.) Parcels can remain in Category 3 no longer than 90 days and are automatically classified as 1A (available for sale) at 90 days.

Parcels in Category 1A should be disposed of as soon as possible. In accordance with Streets & Highways Code Section 118.6, property must be offered for sale within 12 months from the time it is determined to be surplus. If parcels in Category 1A do not have clearances, valuations, and/or maps and

© 1994-2025 California Department of Transportation. All rights reserved.

deeds, they are NOT available for immediate sale and should be transferred immediately to the appropriate hold category. Authority to transfer excess from 1A to a hold category requires specified approvals by the District Real Property Retention Review (RPRR).

16.02.04.00 RPRR and Transmittal of Hold Requests

The DD appoints the RPRR to evaluate properties to be retained. The committee meets annually, or as required.

At least two weeks prior to the RPRR meeting, Excess Land staff transmits request for approval to place a hold on excess land to H.Q.'s RPRR with the following:

- Map of the property.
- Signed Form RW 16-03 (internal Caltrans link).
- Any other data to facilitate review.

Upon request, the RPRR Chair can extend a hold up to 12 months by entering the extension date on the current RW 16-03 (internal Caltrans link).

New holds required before a scheduled meeting shall be placed in the appropriate hold category with approval of the RPRR Chair. The "release date" on the RW 16-03 (internal Caltrans link) will be the meeting date plus one month.

Excess Land staff is responsible for updating entries into the ELMS upon approval of hold requests.

Headquarters staff is responsible for reviewing ELMS reports and periodically auditing the District RW 16-03 forms to assure procedures and approvals are correctly being followed. See the "Inventory Matrix" on the following pages for additional information.

16.02.05.00 Decision Tree for Holds by Division

To obtain a copy of the RPRR procedure, please contact HQ.

© 1994-2025 California Department of Transportation. All rights reserved.

16.02.06.00 Detailed Inventory Matrix

The following section will help determine the proper inventory category for a parcel when a parcel is entered into ELMS. A detailed description of the process for each inventory category is as follows:

INVENTORY MATRIX

Category 1 – Disposable – 1A:

- **Description:**
  Parcels Available for Immediate Sale – placed in Category 1A and disposed of as soon as possible.

  If parcels in Category 1A do not have clearances, valuations, and/or maps and deeds, they are NOT available for immediate sale and should be transferred immediately to the appropriate hold category.

  1A Parcels having former owners or that are a part of the Roberti properties will have different clearance requirements.

- **Process:**
  Authority to transfer excess to any other category requires approvals as described in Section 16.02.04.00.

  Dispose of in accordance with guidelines set forth in Section 16.05.00.00.

Handle improved properties occupied by former owner or on rescinded routes in accordance with CTC Resolution G-98-22 and Government Code Sections 54235, 54237, and 54238.6, and CCP 1245.245.

© 1994-2025 California Department of Transportation. All rights reserved.

Category 2 – Hold – 2A:

- **Description:**
  Parcels held for a specific request of an Engineering Branch for possible right of way requirement or mitigation purposes:

  - On the same project for which the parcel was acquired.
  - Possible additional right of way requirement for another project.
  - Parcels required for operational purposes, for example:
    - To provide the contractor with improved access to a construction site.
    - Batch plant site or similar use.
    - Parking space for trailers to be used by Engineering personnel (vacant land only).
    - Temporary detours.
    - Temporary material/disposal sites
    - Property Management

- **Process:**
  Each hold form (16-03 [internal Caltrans link]) must specifically identify the planned use for the property and the date by which the parcel will be transferred to the project or released. A parcel map must be attached to each application.

  Hold approval subject to the review process in Section 16.02.04.00.

© 1994-2025 California Department of Transportation. All rights reserved.

Category 2 – Hold – 2B:

- **Description:**
  Parcels held for sale to a Public Agency – parcels shall not be held for a public agency unless an official authorized to bind the agency to buy the land is submits a written, signed request. With RPRR's approval, the property may be held up to a maximum of one year after receipt of the written request and deposit; this allows the agency time to arrange financing. The request must contain:

  - Property description or map.
  - The public purpose for which the land will be used.
  - The agency's intent to buy the property.
  - The date the sale will be concluded and reason for delay, if any.

  Authority for direct sales of properties of notable environmental value is found under SHC Section 118.6; and all other sales to public agencies for a public use under G-98-22. All public sales under G-98-22 are at the discretion of the excess lands manager.

- **Process:**
  Order maps, deeds, and appraisals if not previously requested.

  Offer property at market value after appraisal approved and give 60 days to respond.

  If official written acceptance is not received within 60 days, transfer to Category 1A and sell.

© 1994-2025 California Department of Transportation. All rights reserved.

INVENTORY MATRIX (Continued)

Category 2 – Hold – 2C:

- **Description:**
  Parcels held for Administrative or Legal reasons – examples are:

  - Clearances, valuations, maps/deeds not completed.
  - Relocation assistance or replenishment housing purposes.
  - Pending resolution for potential claims against the Department.
  - Judicial or legislative actions.
  - Routes that are candidates for rescission or down scoping.
  - Written instructions to hold received from CTC, the Director, or the HQ R/W Program Manager.
  - Parcels held for optimum return or for exchange. Examples include:
    - Other acquisition of adjacent land will provide access or make salable unit,
    - Access will not be available until construction is completed,
    - Exchange for needed right of way requested by Acquisition.

- **Process:**
  Document holds by written communication from the appropriate department including the reason for the hold and the release date.

  Hold approval subject to the review process in Section 16.02.04.00. Document hold request for exchange with a memo from Acquisition justifying the hold.

Category 2 – Hold – 2D:

- **Description:**
  Parcel held for environmental compliance or for mitigation purposes.

- **Process:**
  A Division requesting a "Hold" on an excess land property must include the reason and release date for the hold.

© 1994-2025 California Department of Transportation. All rights reserved.

INVENTORY MATRIX (Continued)

Category 3 – Entry – 3:

- **Description:**
  Temporary Hold for Clearance – place new parcels in this category pending clearance and transfer to another category.

  Parcels cannot remain in this category longer than 90 days. The ELMS will automatically place Category 3 disposal units in 1A after 90 days. To subsequently transfer from 1A to a hold category, follow the approval process in Section 16.02 04.00

- **Process:**
  Upon entry, immediately obtain internal functional clearances; e.g.,

  - Right of Way (Acquisition, Relocation Assistance, Property Management, Utilities)
  - Environmental
  - Maintenance
  - Project Management
  - Planning (Park & Ride)
  - Right of Way Engineering
  - Traffic
  - Design
  - Construction

If a property is determined to be of notable environmental value, the District must follow SHC Code 118.6.

© 1994-2025 California Department of Transportation. All rights reserved.

16.03.00.00 – CLEARANCE PROCEDURES

16.03.01.00 Various Functional Reviews

Excess Land establishes clearance procedures to assure that the property is not required for a definite use by other units in the Department. The various functional units are consulted, including:

- **Acquisition** – to determine if the excess is needed for exchange.

- **Relocation Assistance** – to determine if an eligible relocatee is in possession of an improved property or if the property can be used by a displacee.

- **Property Management** (Rentals and Clearance) – to determine whether a State tenant occupies the property. If a property will be sold subject to a tenancy, no State property shall be removed without full knowledge of its removal being given to prospective purchasers. If the State is leasing or renting the property to be sold, Property Management attaches a copy of the lease or rental agreement to the clearance document.

- **Utilities** – to determine if the excess parcels are needed for utility purposes.

- **Park and Ride** – to determine if the excess is suitable for use as a Park and Ride lot. Selected and approved parcels are incorporated into the right of way for the Park and Ride project.

- **Environmental** – to determine if the excess has potential for use as a mitigation site, either for projects currently being developed or for mitigation banking purposes. The District Environmental Branch will determine which parcels are suitable for such use. These parcels will be transferred to Category 2D.

- **Planning** – to determine if the excess is required by any planning project.

- **Project Development** – to determine if the excess is needed for a project.

- **Maintenance** – to determine if the excess is needed for maintenance purposes.

© 1994-2025 California Department of Transportation. All rights reserved.

16.03.02.00 Environmental Compliance

Excess properties are analyzed prior to disposal to determine if they are categorically exempt from the requirements of the California Environmental Quality Act (CEQA). Environmental and Excess Land jointly determine the CEQA requirements for excess land sales. CEQA requirements for surplus government property are contained in Class 12, CEQA Guidelines 15312. (See Section 16.12.02.00.)

Excess Land should initiate environmental compliance procedures as soon as it knows property may become excess. Although most parcels can be cleared in less than 30 days, the process may require several months if an environmental document is required.

See the table entitled "Environmental Compliance Process" on the following pages for additional information on environmental clearance.

© 1994-2025 California Department of Transportation. All rights reserved.

ENVIRONMENTAL COMPLIANCE PROCESS

	Excess Land	Environmental
All Excess	Circulates all excess parcels through Environmental for completion of a preliminary survey.	Conducts preliminary survey to identify any factors that may disqualify the proposed sales from being categorically exempt.
Categorically Exempt	Retains the Categorical Exemption Determination Form in the Excess Land file. Assesses the real estate market to determine an appropriate time frame for disposal that avoids significant disruption of the market. Careful planning is required to assure the disposal program avoids adverse cumulative effects. The sale of property that is categorically exempt shall not be delayed because other parcels in the area may not be exempt. The Sales Notice to Bidders should clearly state that sale of the excess is exempt from CEQA, but that future development or alteration of the property may be subject to CEQA and other environmental permit processes. (See Section 16.05.04.00.)	Notifies Excess Land promptly upon determination that a parcel is categorically exempt and completes a Categorical Exemption Determination Form.

© 1994-2025 California Department of Transportation. All rights reserved.

	Excess Land	Environmental
Not Categorically Exempt	Offers properties with notable environmental value to other governmental agencies, pursuant to SHC Section 118.6, at their current appraised fair market value. Transfer of such properties normally does not require an environmental document if the existing use of the property is expected to remain the same. Properties that require an environmental document are not advertised for sale or sold until the environmental document is completed and the Notice of Determination (NOD) is filed and the 30-day legal challenge period has expired. The Sales Notice shall state whether an ND or EIR was prepared.	Prepares an environmental document, Negative Declaration (ND) or Environmental Impact Report (EIR), as appropriate, if governmental agencies are unwilling or unable to purchase the properties within a reasonable time. Prepares and files the NOD with the Office of Planning and Research.

16.03.03.00 Hazardous Substances

Excess parcels may not be offered for sale until the District Hazardous Substances Coordinator has provided a Hazardous Substances Disclosure Document allowing sale of the parcel. The disclosure document will certify one of the following three conditions:

1. The parcel is clear of hazardous substances and may be offered for sale; or

2. That hazardous substances exist on the property but the property may be offered for sale with appropriate and full information disclosure regarding the nature and extent of the contamination; or

3. That hazardous substances exist/may exist on the property and further investigation or remediation is required, and the disclosure document is an attachment to an Excess Land Hold Request.

© 1994-2025 California Department of Transportation. All rights reserved.

The Hold Request must show the Project Manager an estimated schedule for the investigation or remediation. The responsible unit for the investigation or remediation will normally be the unit that controlled or maintained the property (e.g., Facilities, Maintenance, Traffic Operations).

16.03.03.01 Lead-Based-Paint Disclosure

For properties constructed prior to 1978, Excess Land must disclose the possible exposure to lead-based paints. See Excess Land Reference File 96-06 (internal Caltrans link) for procedures, forms, and requirements.

16.03.04.00 Notices to Other State Agencies

Notification to other State agencies of the proposed sale of excess land is required as shown on the table entitled "Notice Requirements for Other State Agencies" on the following pages.

Offers of direct sale to federal agencies may be made at the discretion of the Excess Land Manager based on knowledge of interest by a federal agency or physical proximity to a federal facility.

16.03.05.00 Offers to Local Public Agencies and State Resources Agency

Before any excess real property, except surplus residential property as defined in Government Code Section 54236, is offered for sale to the public, it must be offered for sale or lease to local public agencies, housing authorities, or redevelopment agencies within whose jurisdiction the property is located. (See Streets & Highways Code Section 118[a][2].)

Excess Land must send Offers to Sell or Lease Surplus Land, Exhibit 16-EX-04 (internal Caltrans link), as shown below on the table entitled "Requirements for Offering to Local Public Agencies." The important elements of the offer are shown on the table entitled "Elements of Offer."

Other than the offers as required by statute for low/moderate income housing or park/recreational use, offers of direct sale to local public agencies are at the discretion of the Excess Land Manager.

© 1994-2025 California Department of Transportation. All rights reserved.

REQUIREMENTS FOR OFFERING TO LOCAL PUBLIC AGENCIES

Purpose	Sent to	Remarks
Developing low- and moderate-income housing	Any local public agencies including, but not limited to, housing authorities or redevelopment agencies within whose jurisdiction the surplus land is located.	With respect to any offer to purchase or lease, priority shall be given to offers for development of the land to provide affordable housing for lower income elderly or disabled persons or households, and other lower income households.
Park and recreational or open-space	• Any park or recreation department of any city within which the land is situated. • Any park or recreation department of the county within which the land is situated. • Any regional park authority having jurisdiction within the area in which the land is situated. • The State Resources Agency or any agency that may succeed to its powers.	

© 1994-2025 California Department of Transportation. All rights reserved.

REQUIREMENTS FOR OFFERING TO LOCAL PUBLIC AGENCIES (Continued)

Purpose	Sent to	Remarks
Enterprise zone	Nonprofit neighborhood enterprise association corporation if the surplus is within such jurisdiction.	See Section 16.12.03.00.
Designated program area	Program area agent.	See Section 16.12.03.00.
School purposes	Public school districts whose jurisdiction is involved.	Pursuant to Government Code Section 54222.

NOTICE REQUIREMENTS FOR OTHER STATE AGENCIES (Continued)

State Agency	Description of Property	Process	Minimum Information Required
Department of Transportation Aeronautics Program P.O. Box 942873 Sacramento, CA 95273-0001	Any parcel within a two-mile radius of any public airport.	Send a notice to Aeronautics. (See Exhibit 16-EX-02 [internal Caltrans link.]) Aeronautics notifies the appropriate Airport Director of the availability of properties. The notification prescribes a 60-day response time and specifies the name and phone number of a contact person. During the prescribed 60-day period, the Airport Director should notify the district directly of their needs for the parcel. If a response is not received within the 60 days, dispose of the property in the normal manner.	• Present zoning • Highest and best use • Topography • Improvements, if any • Encumbrances or copy of State's policy of title insurance • Other remarks as appropriate, e.g., access, utilities available

NOTICE REQUIREMENTS FOR OTHER STATE AGENCIES (Continued)

State Agency	Description of Property	Process	Minimum Information Required
• Department of Parks and Recreation P.O. Box 942896 Sacramento, CA 95814 • Department of Fish and Game 1416 Ninth St., 12th Floor Sacramento, CA 95814 • Wildlife Conservation Board 801 K Street, Suite 806 Sacramento, CA 95814 • State Coastal Conservancy 1330 Broadway, Suite 1100 Oakland, CA 94612-2530	Excess parcels that meet the requirements of Section 9, Article XIX, State Constitution • Coastal Zone land as defined in Section 9 • Lands within 1000 yards of any property that has been listed on, or determined by the State Office of Historic Preservation to be eligible for, the National Register of Historic Places • Lands within the Lake Tahoe region as defined in Government Code Section 66905.5	Notify the listed State agencies. Any proposed sale of such land requires authorization by the Legislature. If the agencies do not respond within 60 days, dispose of the property in the normal manner. Notification requirements do NOT apply to "exempt surplus land." To be considered exempt, the surplus land must be sold to an owner of contiguous land and must meet one of the following criteria: 1. Less than 5,000 square feet in area. 2. Less than the minimum legal residential building lot size for the local jurisdiction or 5,000 square feet in area, whichever is less.	• Parcel number • Area • Location • Acquisition cost • Overhead to acquire the property

ELEMENTS OF OFFER

Element	Explanation
Leasing Property to Be Sold at Fair Market Value	Any direct sale pursuant to Government Code Sections 54220 et seq. must be at current fair market value. The Department may only lease surplus real property pending the sale or exchange of such property (see SHC Section 118.6). The lease rate must be high enough to ensure that the eventual sales price of the parcel, when sold subject to the lease, is no less than the fair market value of the property if sold unencumbered by such lease.
Notification of Intent to Purchase or Lease Surplus Land	The entity desiring to purchase or lease surplus land must notify the Department in writing of its intent within 60 days after receipt of the Offer to Sell or Lease Surplus Land.
Resales of Land for Development of Low- and Moderate-Income Housing	A local public agency, housing authority, or redevelopment agency that purchases land from the Department may reconvey the land to a nonprofit or for-profit housing developer for development of low- and moderate- income housing as authorized by law.
Payment Period	Government Code Section 54225 allows the Department to provide for a payment period of up to 20 years in any contract of sale or sale by trust deed for: • Surplus land to be used for park, recreation, open-space, or school purposes. • Improved surplus land to be used for low- and moderate- income housing purposes. SHC Section 118 allows the Department to provide a longer payment period of up to 40 years in any contract of sale or sale by trust deed for improved and unimproved surplus land to be used for low- and moderate- income housing purposes.

© 1994-2025 California Department of Transportation. All rights reserved.

ELEMENTS OF OFFER (Continued)

Element	Explanation
Multiple Offers	If the Department receives offers to purchase or lease from more than one eligible entity, first priority shall be given to the entity that agrees to use the site for housing for persons and families of low- or moderate- income. By exception, first priority shall be given to an entity that agrees to use the site for park or recreational purposes if the land being offered is already being used and will continue to be used for park or recreational purposes, or if the land is designated for park and recreational use in the local general plan and will be developed for that purpose.

The preferred disposition for these properties is a direct sale, and when notice is received from two or more public agencies, preference shall be given to an agency that proposes to purchase the property.

When a notice is received from any entity desiring to purchase or lease surplus land, the district prepares:

- **Appraisal** – of the fair market value if sold.
- **Lease rate** – if the property is to be leased pending sale or exchange.

After completion of an appraisal or lease rate determination, the district and the entity negotiate to determine mutually satisfactory sales or lease terms (sales price must be based on the fair market value appraisal). If the price or terms cannot be agreed upon after 60 days, Excess Land may dispose of the surplus land.

© 1994-2025 California Department of Transportation. All rights reserved.

16.03.06.00 Outdoor Advertising Signs

Excess Land must assure that the Department has no obligation for outdoor advertising signs located on excess property that continues beyond the sale of such property. Excess Land determines whether or not a sign is located on the property prior to sale by:

- Reviewing the appraisal and acquisition documents.
- Clearing the property for sale through Property Management.
- Visually inspecting the property.

To determine the status of any existing signs, Excess Land sends a Request for Information on Signs, Exhibit 07-EX-11 to HQ R/W, Outdoor Advertising Unit, and proceeds as shown on the table on the following page after receiving a response.

If previously-sold excess property involves outdoor advertising signs where the Department retains a contractual obligation to ultimately pay when said signs are removed, Excess Land should review the situation in detail and coordinate with the Outdoor Advertising unit for clearance.

16.03.07.00 Clearance of Other Items

Excess Land should ensure that a parcel is not conveyed until it determines the State has no unfilled contractual obligations to convey easements or other rights for utility or other purposes over the property. If any such unfulfilled obligations exist, appropriate exceptions or reservations shall be included in the Director's Deed. Such items should be brought to the attention of prospective purchasers in the Sales Notice.

Procedures for clearance of other items are shown in the table entitled "Procedures for Clearance of Other Items."

© 1994-2025 California Department of Transportation. All rights reserved.

OUTDOOR ADVERTISING SIGN OBLIGATIONS

Sign Status	No Executed R/W Contract and Quitclaim Deed	Executed R/W Contract & Quitclaim Deed Covering Sign Relocation/Removal
Illegal Sign – Sign that was illegally placed on State highway right of way and one that does not have a current State Outdoor Advertising Permit.	Notify sign owner to remove the sign. Removal must be accomplished prior to sale of the property.	If sign owner refuses to remove sign, Clearance and Demolition has sign removed and bills owner for cost.
Nonconforming Sign – Sign was lawfully placed but does not conform to current law.	Have the sign removed as a right of way obligation prior to sale of the excess property.	Have sign owner execute an Advertising Structure Agreement and a rescinded Right of Way Contract. Consult with Legal about filing an action to rescind the existing contract if sign owner refuses to execute an agreement and/or a rescinded contract. As an alternative to expedite sale of the excess property, order sign owner to remove the sign. The Department shall pay the amount set forth in the existing Right of Way Contract.
Old Advertising Structure Agreement • Nonconforming Signs – Sign occupies property under an old agreement with a termination clause but no reference to highway construction.	Sell the property subject to the sign interest.	

© 1994-2025 California Department of Transportation. All rights reserved.

OUTDOOR ADVERTISING SIGN OBLIGATIONS (Continued)

Sign Status	No Executed R/W Contract and Quitclaim Deed	Executed R/W Contract & Quitclaim Deed Covering Sign Relocation/Removal
• Conforming Signs – Sign conforms to current law. Occupies property under an old agreement with ambiguous termination clauses, e.g., one clause provides termination by 30-day notice; another ties removal of sign to future highway construction.	Property Management has sign owner execute a new Advertising Structure Agreement prior to sale. Consult with Legal on the next appropriate action if sign owner refuses to execute a new agreement.

PROCEDURES FOR CLEARANCE OF OTHER ITEMS

Item	Procedure
Fee Conveyances Prior to Easement Conveyance Over Same Parcel	Where the State has easements that cross excess land that have not yet been conveyed to a third party pursuant to a contractual obligation, it is permissible to include the clause below in the fee Director's Deed of the affected excess parcels. The clause is to be used only when a Director's Deed easement across excess has not been recorded and posted on the Right of Way Record Maps at the time the Director's Deed for conveyance of the excess is prepared. When the easement deed is recorded and posted prior to preparation of the Director's Deed for conveyance of the fee excess, the Director's Deed of fee will make no mention of the easement except for the clause printed on the Director's Deed form that states "...subject to special assessments, if any, restrictions, reservations and easements of record." "Subject to an easement granted or to be granted to (name of company) for (purpose of easement) and incidents thereto upon, over and across: (Description of easement area)." It is essential that the "name of company," "purpose of easement," and "description of easement" are identical in the Director's Deed for the easement and the Director's Deed for the excess fee. Under normal circumstances, property or other rights acquired expressly pursuant to a contractual obligation or easements being conveyed over excess lands are not part of the Excess Land Inventory.

© 1994-2025 California Department of Transportation. All rights reserved.

PROCEDURES FOR CLEARANCE OF OTHER ITEMS (Continued)

Item	Procedure
Easements No Longer Needed for Transportation Purposes	Easements no longer required for transportation purposes may either be vacated or sold pursuant to SHC Section 118.6, depending on the circumstances. The DDC-R/W determines the method of disposal after considering the facts. Although easements are normally vacated, they can be appraised and disposed of in the normal manner where circumstances warrant, such as when easements are acquired for a transportation use but are never used. When easements are no longer needed, they are added to the ELMS. The decision on whether they are classified as inventory or non-inventory is based on definitions contained in the user's handbook.
Superseded Fee-Owned Right of Way	When title to a superseded right of way is owned in fee, it may be conveyed to a private owner only by Director's Deed. Salable segments of such right of way may be used in exchange the same as any other fee-owned property.
Excess Property That Has a History of Soil Instability	The clause below is included in all Director's Deeds, Sales Contracts, and Sales Notices used in the disposal of excess properties that have a history of soil instability caused in part or entirely by State highway construction. "It is mutually agreed and understood that this property may be subject to soil instability and that the grantees, for themselves and their successors or assigns, hereby waive any and all claims for damages resulting from further earth movement or soil instability which may occur because of prior actions by the State of California, its officers, agents and employees."

© 1994-2025 California Department of Transportation. All rights reserved.

PROCEDURES FOR CLEARANCE OF OTHER ITEMS (Continued)

Item	Procedure
Parcel Contractual Obligation Review	All excess land resulting from partial acquisitions is subject to a contractual obligation review prior to sale. Evidence of a completed contractual obligation review is first noted in the Parcel Diary and then in the property description portion of Form RW 16-01 (internal Caltrans link) at the time the résumé package is submitted for CTC approval by the following statement: "A parcel review has been completed and there are no contractual obligations". If contractual obligations are found, their disposition must be explained in full.
Flood Hazard Notice	The following notice is placed in all Sales Notices when there is a potential for flood hazards: "CAUTION: We are hereby putting you on notice that this property may be subject to potential flood hazards. The Department of Transportation does not assume any liability for any damage which may be caused by such flood hazards. We recommend that you fully investigate the potentiality of such hazards with the appropriate Federal, State and local agencies."

© 1994-2025 California Department of Transportation. All rights reserved.

PROCEDURES FOR CLEARANCE OF OTHER ITEMS (Continued)

Item	Procedure
Excess Property Located in Fault Hazard Zones	Section 2621.9 of the Public Resources Code (See Section 16.12.04.00) requires any person who is a seller or acting as an agent for a seller of real property located within a "delineated special studies zone" to disclose to any prospective purchaser of such property the fact that it is located within such a zone. To ensure the Department complies with all statutory requirements, the following statement is added to all contracts and agreements and to all Sales Notices used to notify prospective purchasers of the Department's intent to dispose of real property located within a special studies zone: "The real property which is the subject of this sale may be situated within a Special Studies Zone as so designated under the Alquist-Priolo Special Studies Zones Act Sections 2621-2625, inclusive, of the California Public Resources Code. As such, approval of any future construction or development of any structures for human occupancy on this property may be subject to the findings contained in a geologic report prepared by a geologist registered in the State of California. No representations on this subject are made by the Department of Transportation, and any prospective purchasers should make their own inquiry or investigation into the potential effects of this Act on this Property." The California Division of Mines and Geology's Special Publication No. 42 contains an index to individual quadrangle maps that can be used to determine if excess property is located in a Fault Hazard Zone.

© 1994-2025 California Department of Transportation. All rights reserved.

16.04.00.00 – EXCESS LAND APPRAISAL

16.04.01.00 General

The appraisal or value estimate is the basis on which property is sold, and no property may be disposed of until valuation is completed. Excess land valuations shall conform to guidelines set forth in the Appraisal Chapter.

An appraisal is required for utility easements to be located on excess land, except where providing the easement is the State's obligation pursuant to a contractual obligation or SHC Section 702 or 703, or if the right of way was acquired pursuant to SHC Section 83 with the utility already there.

16.04.02.00 Public Sale Estimates (PSE)

Either a market value appraisal or a public sale estimate, as defined in the Appraisal Chapter, is sufficient for determining minimum bids when excess land is offered at public sale. Generally, the least intensive report shall be prepared where the proposed sale method is by public sale.

At the discretion of the DDC-R/W, an Agent assigned to either Appraisals or Excess Land may prepare public sale estimates. Value conclusions are reviewed and approved by a Senior Right of Way Agent assigned to Appraisals. Alternately, a Senior Right of Way Agent assigned to Excess Lands may review and approve appraisals where the value conclusion is $15,000 or less, and Public Sales Estimates where the estimated value is $500,000 or less. Consideration, however, should always be given to having complex and/or controversial valuations prepared by the Appraisal unit regardless of value. Annual reviews are not required for appraisals and public sale estimates used in connection with public sales.

16.04.03.00 Market Value Appraisals

A market value appraisal is required for all direct sales of excess land. This includes the valuation of leases, easements, and fee parcels to be conveyed to local agencies as outlined in Section 16.03.05.00. Fair market value appraisals cannot be prepared by any member of the Excess Land staff, except for "nominal" value appraisals.

Excess parcels valued for direct sale to private parties at $500,000 or more require dual appraisals as outlined in the Appraisal Chapter. Parcels conveyed to another State agency by a Transfer of Control and Possession

© 1994-2025 California Department of Transportation. All rights reserved.

Agreement are excluded from the dual appraisal requirement. Since the process for securing an independent report may be time consuming, Excess Land should identify those parcels requiring two appraisals sufficiently in advance of proposed sale dates to enable hiring fee appraisers.

Approval of a market value appraisal for a direct sale is assumed to be valid for one year from the date of the appraisal unless Excess Land determines that a significant change in value during the year requires a review by Appraisals.

16.04.04.00 Nominal Value Appraisals

Excess Land Agents may prepare nominal value appraisals following the format and approval process described in Sections 7.14.01.00 and 7.14.04.01.B of the Appraisal Chapter.

The Certificate of Appraiser statements should state:

"I understand I may be assigned as the Excess Lands sales agent for one or more parcels contained in this appraisal report, but this has not affected my professional judgment nor influenced my opinion of value."

Although a yearly review is not required, Excess Land may request a review of nominal parcels any time one is warranted.

© 1994-2025 California Department of Transportation. All rights reserved.

16.05.00.00 – DISPOSAL METHODS AND PROCEDURES

16.05.01.00 General

Excess property shall be disposed of as soon as possible commensurate with sound business practices, statutes, and CTC Resolution G-98-22 as amended, so the number of parcels on inventory is maintained at minimum levels.

Property is not to be withheld from sale without full justification, including economic, environmental, and community considerations. Parcels shall be offered for sale within one year of becoming available for sale, pursuant to Streets & Highways Code Section 118.6. All efforts made to sell the property shall be documented in the file, and all offers are input into the ELMS.

16.05.02.00 Methods of Disposal

Excess real property can be disposed of as follows:

- **Internal transfers**
- **Public sale** – by auction, sealed bid, or continuous bid
- **Direct sale** – to adjoining owner (Findings A and B), to former owners, and to eligible present occupants
- **Private sale** - between adjoining owners
- **Exchange** – by Right of Way Contract
- **Functional Replacement** – by agreement (see Section 8.30.00.00)
- **Other direct conveyances:**
  To other governmental agencies
  Pursuant to utilities agreement
  Pursuant to cooperative agreement
  Pursuant to legislation
- **Leasing** – pursuant to SHC Section 104.15
- **Lease-Purchase**
- **Transfer of Jurisdiction** – to other State agencies
- **Private Brokers**

All conveyances of excess property are subject to the CTC's final approval, except where statutory or delegated authority vests with the Director. (See also Section 16.07.01.00.) Incorporations of property within State highway operating rights of way are at the discretion of the DDs.

© 1994-2025 California Department of Transportation. All rights reserved.

All printed matter, including the terms of sale, must clearly state that the sale is subject to Department and CTC approval, and is not binding upon the State prior to such approval.

16.05.03.00 Internal Transfers

16.05.03.01 Incorporation of Excess Parcels Within Operating Right of Way

Excess Land initiates appraisal map reviews, as set forth in Sections 16.01.04.00 and 16.01.05.00, to eliminate small remnants of excess land that can be included within the right of way. Examples include:

- **Park and Ride** – If any excess land is selected for a possible Park and Ride lot, a feasibility study should be undertaken comparing the economics of using the excess land to purchasing alternate sites. The study includes an analysis of the savings resulting from fewer cars on the road because of the facility. A determination is made of the lot size necessary for the particular location and the estimated time necessary to complete a project report.

- **Enhancement of Air Space** – Excess land situated adjacent to air space may be incorporated into the right of way to enhance utility of the air space. The file must be documented with an economic justification.

- **Unsalable Excess Parcels** – Consideration should be given to incorporating small unsalable parcels into the right of way.

Once the location and size of a possible Park and Ride lot are determined, Excess Land holds the area necessary for the lot for the time needed to process a project report, normally less than six months. Any remaining excess should be released and processed for sale as soon as possible. Special consideration should be given to the sale of any remaining excess. Particular attention should be given to access and economic enhancement since the Park and Ride site will be deleted if the project report is not approved.

Excess land is not to be transferred into the right of way until a project report for the Park and Ride facility is approved.

The Ridesharing Coordinator is responsible for working with Excess Land to determine the best site available for the cost. The project report discusses use of alternate sites and includes reasons for using the excess land.

© 1994-2025 California Department of Transportation. All rights reserved.

16.05.03.02 Inter-Program Transfers

Excess property may be transferred within the Department to another program, such as Maintenance or Administration. An accounting transaction transfers the property at its VTA to the appropriate program. Excess Land initiates the transfer by completing RW 16-01 and RW 16-28 (internal Caltrans link) with the required supporting data and submitting them to Division of Accounting.

16.05.03.03 Charging Excess Land to Projects

The following rules apply to projects on which construction has not been completed:

- If there is no Federal participation in the project cost, the amount to be charged to the project is the VTA.
- If a non-Federally participating excess parcel or portion thereof was acquired on a Federally participating project and it will be included in the right of way for the same or any other Federally participating project, the amount to be charged to the project receiving the excess land is the prorata cost of the parcel if the parcel is approved in an E-76 covering the original project. Where FHWA approval has not been obtained (i.e., no E-76), the project should be charged the VTA.
- If an excess parcel acquired on a nonparticipating project will be included in the right of way for a participating project, it is not eligible for Federal participation. This is because it was acquired before Federal approval of the project for which it is used.
- If fragmentary excess land will be incorporated in the right of way of completed projects with a closed EA/Project ID Number, the amount charged is the VTA.

Charges to EAs/Project ID Numbers on active projects for incorporation of parcels require the EA/Project ID Number to be adequately funded to receive the charges. Charges exceeding $10,000 could surpass the programmed amounts for any given project. Charges should not be made until it has been verified that the project can adequately receive the amount to be charged, or until a program supplement has been approved.

© 1994-2025 California Department of Transportation. All rights reserved.

16.05.04.00 Public Sales

16.05.04.01 General

Excess Land shall develop sales procedures to attract the widest possible market and to obtain the maximum return. The sales standards described in R/W Manual Sections 16.05.04.08 and 16.05.04.14 are the minimum necessary to ensure adequate exposure of public sale property.

16.05.04.02 Purchase Agreement (RW 16-05 and RW 16-06)

Generally if an excess parcel is capable of independent development compatible with its environment, it should be disposed of by public sale. Public sale may be by oral auction, sealed bids, or continuous bid, whichever provides the greatest return. Bids that fall below the published minimum shall be rejected. If no bids are received, the minimum is reanalyzed considering market conditions and the market approach before the property is again offered for sale.

The right to purchase is awarded to the highest responsive bidder. If the highest bidder defaults, consideration should be given to awarding the right to purchase to the second highest bidder at the high bid amount.

The right to purchase is for a definite period commencing on the first day after the date of sale. The usual right to purchase period is 60–90 days; the maximum right to purchase period is 180 days. Extensions of the right to purchase period must be supported by a full written analysis, approved in accordance with the current Executive Order Delegation Matrix in Section 2.05.00.00, and retained in the parcel file. If a right to purchase extension is approved, it must include the following terms:

- A right to purchase extension charge of 1% per month on the bid amount is made for the period of the extension.
- The extension charge is not applied to the purchase price.
- If the right to purchase is not exercised, neither the bid deposit nor the extension charge is refunded.

The use of a right to purchase extension should be utilized in limited circumstances and for short time frames of 60 days or less. Extensions for longer time frames can detrimentally impact the market value of the property and the marketability of the property if it has to be auctioned again. If a

© 1994-2025 California Department of Transportation. All rights reserved.

purchaser requires more time, an alternative sales method should be utilized. Please see Sections 16.05.13.00 and 16.05.14.00 for alternative sales methods utilizing an Option-Purchase Agreement or a Lease-Purchase Agreement.

The purchase deposit must be sufficient to cover out-of-pocket costs of the sale, e.g., printing and mailing the Sales Notice and advertising. The minimum purchase deposit shall be 5% of the highest bid. In the event of a default by the buyer, this will be retained as liquidated damages.

16.05.04.03 Default or Withdrawal of Highest Bidder

If the highest bidder fails to exercise the purchase rights within the prescribed period or fails to comply with the sale terms, the Region/District retains the liquidated damages. See Section 16.07.07.00 for procedure when a bidder requests cancellation of a sale prior to CTC approval.

Upon default, Excess Land notifies the highest bidder that the Bid Registration Deposit (if the breach, withdrawal, or default occurs in the first three days following the public sale and before the highest bidder has remitted the Purchase Deposit) or Purchase Deposit (if the breach, withdrawal, or default occurs after the first three days following the public sale) is being retained as liquidated damages.

Upon default of the highest bidder, Excess Land may offer a purchase option to the second highest bidder at the high bid. If the second highest bidder accepts award, the deposit required and the terms of the purchase are the same as stated in the Sales Notice. The right to purchase period shall commence on the first day following the date Excess Land receives written notice of acceptance by the second highest bidder.

Excess Land may preclude a defaulting bidder from bidding at a subsequent public sale. See R/W Manual Section 16.05.04.15.

© 1994-2025 California Department of Transportation. All rights reserved.

16.05.04.04 Minimum Bids

The following guidelines apply to property available for public sale and property previously offered to public agencies in accordance with SHC Section 118.6.

- **First Offering** – As soon as possible after the property becomes available, offer it for sale within a range of 75-100% of PSE. The Excess Land Manager should consider the expected demand for the property, its shape and conformity of use with the neighborhood, and development potential when setting the minimum bid within the range.

- **Subsequent Offering** – If the property is not sold at first attempt, the Region/District shall prepare a marketing plan that outlines and substantiates the marketing effort and justifies the minimum bid for subsequent offerings. A copy of the marketing plan must be retained in the Region/District's excess land parcel file. If the marketing plan indicates a minimum bid below 75% of the PSE, the Region/District shall request a revised PSE.

  After receipt of the revised PSE, if Excess Land believes that a minimum bid between 60% and 75% of PSE is warranted, that decision will be fully documented by memorandum to the file, signed by a Supervising R/W Agent or above. Properties are not to be offered with minimum bids below 60% of PSE. This authority may not be delegated below the Supervising R/W Agent level.

- **Marketing Plan** – The Region/District must consider the following while preparing the marketing plan:
  - Reducing the minimum bid.
  - Using an unannounced minimum.
  - Reviewing appraisal/PSE for concepts that may be inappropriate and revising appraisal/PSE as necessary.
  - Combining with other parcels.
  - Reducing the number of parcels in the disposal unit.
  - Expanding advertising.
  - Using other innovative marketing techniques.
  - Alternate sales methods.
  - Holding the disposal unit until market conditions improve. (See Section 16.02.04.00 for Hold Request procedures.)

© 1994-2025 California Department of Transportation. All rights reserved.

16.05.04.05 Unannounced Minimum Bid

Parcels may be auctioned with an unannounced minimum bid, in which case all the foregoing requirements apply, with the following additional conditions and exceptions:

- All other terms of the sale, including required deposit, are indicated in the Sales Notice with the word "unannounced" after the term "Minimum Bid."
- The PSE and the unannounced minimum bid are confidential information and shall not, under any circumstances, be divulged to a prospective bidder or the general public. Excess Land is responsible for the actual amount of the minimum bid, which shall be established in writing by concurrence between the Excess Land Manager and his/her immediate supervisor. The minimum bid amount must be kept in a confidential and secure file. If the PSE or minimum bid is given to a prospective bidder, Excess Land shall cancel the sale and initiate a resale of the parcel using the PSE as the basis for the minimum acceptable bid.
- The Sales Notice shall include a provision allowing 10 days to evaluate the bids received. Excess Land has discretionary approval to accept any bid that exceeds 80% of the unannounced minimum acceptable bid. Otherwise HQ R/W approval is required prior to acceptance of the bid. Requests for acceptance will include the total number of bids, the bid amounts, and the Region/District's recommendation with reasons therefor.
- Bids accepted by Excess Land that are less than the unannounced minimum bid shall be justified by an Administrative Authorization memorandum signed by a Supervising R/W Agent. This authority may not be delegated.
- Unannounced minimum bids must be at least 75% of PSE.

16.05.04.06 State Financing Addendum (RW 16-06)

The State Financing Addendum, when added to the Purchase and Sale Agreement, provides that the purchaser has a prescribed number of days during the right to purchase period to open an escrow at purchaser's expense. The credit terms, the down payment amount and financing term, shall comply with Streets and Highways Code 118.

© 1994-2025 California Department of Transportation. All rights reserved.

16.05.04.07 Notice of Surplus Real Estate Sale

A Notice of Surplus Real Estate Sale (auction brochure) is used for properties sold by public auction, private auction, or sealed bid. Innovation in preparing the front cover of an auction brochure is encouraged, particularly for properties having specialized uses or high values. The auction brochure shall clearly state terms of the auction and describe the characteristics of the property including access, zoning, and availability of utilities. Investigations regarding such factors should be thorough so the auction brochure is reliable.

A copy of the auction brochure must be mailed or delivered to all adjoining owners and all other persons who may be interested in purchasing the property. Emphasis should be on reaching those segments of the market that specialize in the particular class of property.

If a public sale is by sealed bid, the appropriate bid form shall be attached and mailed with the auction brochure.

16.05.04.08 Posting of Property and Physical Inspection

Real estate type "For Sale" signs shall be placed on excess land offered for public sale and shall contain information about the parcel, the words "For Sale," and the address and phone number of the appropriate Region/District office. Signs should be of sufficient size and shape to be readily identifiable by the public and constructed of materials that will withstand the elements. Where high value or special purpose properties are for sale, consideration should be given to more extensive signing, or other types of display, to assure maximum exposure.

At the time of the appraisal and again upon posting, an Agent shall physically inspect the property documenting the property condition in the parcel file and taking photos if necessary. The physical inspections are to determine existence of any adverse interests, advertising signs, hazardous material/waste, persons in possession (trespassers or State's tenants), or easements. These interests shall be checked against the State's title policy and either cleared or brought to the attention of prospective bidders in the Sales Notice or during the auction.

Excess Land should check the property periodically during the advertising period to assure its condition remains unaltered and that "For Sale" signs are still posted.

© 1994-2025 California Department of Transportation. All rights reserved.

16.05.04.09 Public Sales of Landlocked Parcels

Excess Land should undertake public sales of landlocked parcels of substantial area or value only after it has attempted to secure an access option from adjoining owners. Negotiations should be based on securing adequate rights commensurate with the highest and best use of the parcel.

The parcel diary should contain a notation that Excess Land reviewed the landlocked parcel with Design and no alternate means of access was or could be made available.

Résumé packages for sales of landlocked parcels must include a statement in the remarks section of the résumé form about attempts made to secure an access option. If an option is secured, a copy of the option agreement is included in the package.

Options to purchase access may only be obtained on a voluntary basis, and the following guides should be used in attempts to secure options:

- **Option Period** – Sufficient to allow grantee to exercise the option within the terms prescribed in the Sales Notice. Allow sufficient time to advertise and complete all aspects of the sale.
- **Option Value** – Appraisals shall certify that the price to be paid for the optioned property is reasonable and that the optioned rights are adequate to serve the excess land.
- **Consideration for Option** – Shall normally be $500.
- **Form of Agreement** – The option agreement follows the form shown in Exhibit 16-EX-05.

16.05.04.10 Transfer Costs

The Department shall not pay fees for recording, escrow, title insurance, documentary stamp tax, or any other charges involved in the transfer of title to excess property. The payment of sales commission to buyer's agent and/or broker is strictly prohibited. This policy should be stated in the Sales Notice and brought to the attention of prospective bidders.

16.05.04.11 Oil, Gas, and Mineral Reservations

Excess Land shall avoid retention of oil, gas, and mineral rights at the time a fee-owned parcel is disposed of. In areas where active community oil and/or gas leases are in effect, the income or royalties therefrom are considered in the valuation of the excess property.

© 1994-2025 California Department of Transportation. All rights reserved.

16.05.04.12 Delinquent Taxes

Excess Land shall investigate the status of taxes and assessments and report the status on Form RW 16-01 (internal Caltrans link) under "Fee Title" information section. Although property will generally not be subject to delinquent taxes, cancellation should be requested if they do exist. If property must be sold subject to delinquent taxes or assessments, this fact shall be brought to the attention of prospective bidders in the Sales Notice.

16.05.04.13 Marketing Contact Lists

Excess Land in each Region/District shall maintain a comprehensive contact list or file with names and addresses of persons and firms who are interested in purchasing State property. Lists for hard copy mail distribution must be reviewed and purged annually in accordance with Government Code Section 14911. (See Section 16.12.03.00.)

A separate, return-addressed verification card may be attached to the material mailed. The card should state that the mailing list is reviewed annually as required by State law. It should provide a space for the recipient to affix postage when returning the card as an indication of desire to remain on the mailing list.

Suggested text for the message side of the verification card:

> "Your name is on our mailing list to receive notice and terms of sale for lands to be sold at public sale. If you wish to continue to receive these notices, please sign this card, place adequate postage on the reverse side, and mail immediately. If this card is not returned by (specify date), your name will be removed from our list. This notice is required annually by Government Code Section 14911. Please correct the address shown if incorrect; be sure to include ZIP Code."

All Department marketing contact lists are confidential and shall not be made available to the general public.

© 1994-2025 California Department of Transportation. All rights reserved.

16.05.04.14 Advertising Excess Property – Public Sale

Since advertising is the key to successful sales of real property, Excess Land must be thoroughly familiar with advertising practices of the local and national real estate markets.

Prior to the sale, Excess Land must take the following actions as a minimum, and document them in the file:

- Send notifications to appropriate governmental agencies.
- Post "For Sale" sign on property.
- Place advertising on the Department's public website.
- Provide copy of Sales Notice to adjoining owners.
- Hold at least one "Open House" on improved properties.

Use of advertising should be maximized with attention given to specialized publications, notices, or other information outlets (e.g., the Internet) for properties with special uses or characteristics. Format and placement of real estate advertisements, as well as cost, shall be in conformance with normal real estate transactions.

Minimum advertising content includes size, location, zoning, topography, other pertinent information, and date, time, and method of sale. In the case of public auctions, the location of the auction should be carefully specified. If sale is by sealed bid, the advertisement shall include date and time for receipt of bids and information on where bid proposal forms may be obtained. It should be made clear that bids must be made on the Department's bid forms. Contact information where additional information concerning the property may be obtained should be included.

16.05.04.15 Conduct of Public Auction Sales

When excess property is sold by public auction, the auction shall be conducted by at least two Agents from Right of Way, one of whom shall act as the auctioneer. The auction may be held on the premises or at another location. Sufficient copies of the Sales Notice must be available for people attending the auction.

At the time of the auction, the auctioneer should be prepared to provide any additional or special information that affects the property and to answer any questions from prospective bidders. Upon reading the breach of contract provisions and the minimum bid and deposit requirements, the auctioneer

© 1994-2025 California Department of Transportation. All rights reserved.

requalifies bidders, if practical, by asking for the showing of bid registration deposit checks. The auctioneer then announces, "The bidding is now open."

The auctioneer shall assure that adequate time is allowed for bidding before closing the sale. A right to purchase shall be awarded to the highest responsive bidder.

One of the Agents secures all necessary signatures on the purchase contract. The highest bidder signs the original purchase contract, showing address and telephone number. The Agent accepts the bid registration deposit remittance by cashier's check, certified check, or money order and delivers a receipt and a duplicate purchase contract to the high bidder. Personal checks shall not be accepted. Cash deposits should be discouraged. The Agent transmits the monies to Accounting with a RW 16-29 (internal Caltrans link), which places the funds in the special deposit account.

The highest bidder must furnish the required deposit at the time of the auction as prescribed by the Sales Notice, otherwise the auctioneer may reopen the bidding and award the right to purchase to the second highest bidder at the high bid. Alternatively, the sale may be canceled and rescheduled.

The highest bidder must furnish the purchase deposit (5% of the high bid less the $1,000 bid registration deposit) within three days following the public sale. Failure to remit the purchase deposit in a timely manner shall constitute a default by the highest bidder.

One of the Agents shall obtain the name, address, and telephone number of the second highest bidder to be used in the event the highest bidder defaults. (See R/W Manual Section 16.05.04.03 for procedures when the highest bidder defaults.)

The original bidder registration sheet(s), original bidder tally sheet(s), a copy of the sales notice, and copies of any signed purchase agreements shall be retained in the file for all auctions conducted.

When a bidder has defaulted on a previous public sale, Excess Land has the discretionary authority to exclude that bidder from the next scheduled public sale.

16.05.04.16 Personal Checks

Excess Land shall not accept personal checks.

© 1994-2025 California Department of Transportation. All rights reserved.

16.05.04.17 Conduct of Sealed Bid Sales

When sales are by sealed bids, at least two Agents must participate in the bid opening. One Agent opens the bids at the prescribed time and place in the presence of prospective purchasers who wish to be present. The other Agent tabulates all bids and announces the highest bidder.

Immediately after the bid opening, the highest bidder signs the original purchase contract, showing address and telephone number. The Agent accepts the bid registration deposit remittance by cashier's check, certified check, or money order and delivers a receipt and a duplicate purchase contract to the high bidder. Personal checks shall not be accepted. Cash deposits should be discouraged. The Agent transmits the monies to Accounting with a RW 16-29 (internal Caltrans link), which places the funds in the special deposit account.

After the high bidder has executed the purchase contract, deposits shall be returned to the unsuccessful bidders. If an unsuccessful bidder is present when the deposits are released, the check may be hand delivered if a receipt is obtained.

The highest bidder must furnish the purchase deposit (5% of the high bid less the $1,000 bid registration deposit) within three days following the public sale. Failure to remit the purchase deposit in a timely manner shall constitute a default by the highest bidder.

See Section 16.05.04.03 for procedures when the highest bidder defaults.

The number of bids received shall be kept confidential prior to opening bids, and no additional bids shall be accepted after the bid submission deadline. Bidders may withdraw or revise their bids prior to the bid submission deadline.

The original bidder tally sheet(s), a copy of the sales notice, and copies of any signed purchase agreements shall be retained in the file for all auctions conducted until the property conveyance is recorded.

© 1994-2025 California Department of Transportation. All rights reserved.

16.05.04.18 Notification of Tenants

To meet statutory requirements and maintain good public relations, Excess Land should advise tenants of progress made toward the sale of the property they occupy. Written notification shall be sent as follows:

- Notify tenants on State Route 710 in Los Angeles County that they may be eligible to purchase pursuant Government Code Section 54237.
- Notify commercial and residential tenants they may be eligible to purchase pursuant to Streets and Highways Code 118.1 (commercial) or CTC Resolution G-98-22, as amended (residential).
- Send a copy of the appropriate Sales Notice to each occupant.
- Immediately notify each occupant of the name, address, and phone number of the purchaser upon recordation of the Director's Deed. Notify each occupant if the parcel does not sell at the public sale.
- Notify each occupant of the specific date of the recording of the Director's Deed that divests the State of ownership of the particular property.

16.05.04.19 Public Sale of Fragmentary Remainders

Whether landlocked or not, fragmentary remainders are normally sold under Finding A procedures. If the adjoining owners have refused to purchase the parcel, it may be sold at public sale after a public sale estimate has been obtained. A documented refusal must be obtained from all adjoining owners within a reasonable time prior to public sale of the parcel.

© 1994-2025 California Department of Transportation. All rights reserved.

16.05.04.20 Protection of Improvements on Excess Land Following Public Sale

It is the Department's policy to minimize losses resulting from vandalism of improvements located on excess property on which a sale has been awarded. The policy is considered satisfied if the improved property is occupied by tenant(s) under a Department rental agreement.

For sales of unoccupied improved excess parcels in areas where vandalism or theft of improvements can be reasonably foreseen, Excess Land has the discretionary authority to include terms in the Sales Notice that the successful bidder will be required to execute a rental agreement that results in:

- Immediate possession of the property by the purchaser.
- The payment of fair market rent by the purchaser commencing from the date of the sale.
- The payment of a security deposit consistent with R/W Manual Chapter 11.07.14.00. This deposit is separate from the Bid Registration Deposit and the Purchase Deposit.
- Elimination of the Department's liability for claims for damage resulting from injury to any person or property.
- Cancellation on the date of expiration or extension of the sale period or recordation of the Director's Deed, as applicable.
- Return of possession of the property to the Department in the event of default in a condition equivalent to that which existed on the date the sale was awarded.

These provisions may be satisfied by minor modifications to a standard rental agreement, but the Department must receive a fair rental for the property for the specified use. Temporary access for one day or less may be given to purchasers to facilitate sale of the property. Excess Land shall request a rental rate determination to be prepared concurrently with the Public Sale Estimate. The rental rate shall be included in the sale notice. Property Management shall assist Excess Land in preparing the agreement.

Property Management is responsible for notifying Excess Land immediately of the receipt or issuance of a 30-day termination notice involving tenants of improved excess property on which escrow is still open. Excess Land notifies the purchaser of the pending termination date of the tenancy. If the property will become vacant more than 15 days prior to the last day of the right to purchase period, the purchaser is requested to accept a Right of Entry. If the purchaser will not accept a Right of Entry, Excess Land should

© 1994-2025 California Department of Transportation. All rights reserved.

make all efforts to either expedite close of escrow or ensure security of the improvements. "No Trespassing" signs and periodic checks by local police, the California Highway Patrol, and Excess Land personnel may be necessary in high-risk areas.

Improvements that contribute a zero or negative value to the property may be removed prior to public sale of the parcel with proper documentation and a request to the Clearance Agent.

16.05.04.21 Change in Terms and Conditions of Sale Subsequent to Publication of Sales Notice

Occasionally it is necessary to alter the terms and conditions of sales after initial publication of the Sales Notice. For example, Maintenance may request reservation of a slope easement, Right of Way may discover a zoning change, or some other significant change may occur that has a direct bearing on the price a purchaser may be willing to pay. If time permits, Excess Land should post to the Department's Internet ad an addendum to the Sales Notice and send the addendum to all persons known to have received the original Notice. In addition, the State representative must announce the changes at the sealed bid opening or at the public auction. The highest bidder shall be required to execute a written statement of understanding that the sale is made subject to those specific terms and conditions, as well as the terms and conditions contained in the original Notice.

16.05.04.22 Eviction of Occupants of Excess Property

Excess land is normally sold subject to the occupancy of existing tenants since a Department-initiated eviction may create renewed RAP eligibility, unless the eviction is for cause. Relocation Assistance and Excess Land must agree to all proposed evictions of former eligible occupants. Evictions of former RAP eligibles should only take place where there is a clear economic advantage or other compelling reason.

The sale of occupied excess to another public entity for ultimate clearance and use may also create RAP eligibility by the purchasing public entity. All sales agreements with other public agencies must contain a clause specifying that the purchasing agency assumes responsibility for relocation benefits that may accrue to existing occupants. If agreement cannot be reached, Excess Land should request a legal determination of liability before consummation of the sales agreement.

© 1994-2025 California Department of Transportation. All rights reserved.

16.05.04.23 Offsets and Adjustments to Sale Price Prohibited

No offsets or adjustments shall be made to the sale price following the conclusion of a competitive sale. If the condition of the property substantially changes following a competitive sale, the sale shall be canceled, the high bidder's deposit shall be returned, and a revised valuation must be requested before the property can be offered for another public sale.

16.05.05.00 Direct Sale to Adjoining Owners, Finding A and B

Excess Land may sell small, odd-shaped, fee-owned, excess parcels directly to adjoining owners without calling for competitive bids under the provisions of CTC Resolution No. G-98-22 as amended, Exhibit 16-EX-06. Finding A and B parcels are defined as follows:

- **Finding A** – Direct sale to adjoining owner, without calling for competitive bids, of small, odd-shaped, fee-owned parcels incapable of independent development and having a higher and better use as part of the adjoining property or, if sold to other than the adjoining owner, would cause an undue or unfair hardship in the normal development or operation of such adjoining owner's property.

- **Finding B** – The sale of such excess parcels to other than the adjoining owner would deprive such adjoining owner of vested right of access to a public highway and would create a possible cause for action against the Department.

Upon making either a Finding A or B determination, Excess Land may sell the excess parcel to the adjoining owner. The minimum consideration shall be the appraised fair market value of the parcel considered as part of the adjoining property.

If the adjoining owner refuses to purchase the excess for such consideration, Excess Land may sell it by competitive bid at public auction. The Department shall retain title to the excess if sale to another party would deprive an adjoining owner of an existing vested right of access to a public highway (Finding B).

© 1994-2025 California Department of Transportation. All rights reserved.

All offers of direct sales made to an adjoining owner are confirmed in writing. Any refusal to purchase at the offered price shall be documented and, if possible, signed by the adjoining owner.

16.05.05.01 Adjustment of Sales Price

Adjustment of sales price may only be done in response to specific legislation. By federal law, 23 CFR 710.403(e), sales of federally participating excess land at less than fair market value requires prior FHWA approval. Compliance with this section shall constitute compliance with FHWA regulations regarding prior approval.

All sales are subject to CTC approval, and Excess Land must fully document the statutory authority that permits the sale below the fair market value.

16.05.05.02 Payment of Recording Fees – Purchase Consideration $100 or Less

When the total consideration is $100 or less, Excess Land may pay recording fees in consideration of the savings in maintenance costs. The sales agreement must contractually obligate the Department to pay the recording fees.

16.05.05.03 Finding A and B Sales to Other Governmental Agencies

Finding A and B sales may be made to other governmental agencies in the same manner and under the same conditions that apply to privately-owned adjoining property.

Sales made to other governmental units for public road or street widening or extension purposes shall be treated as direct sales.

16.05.05.04 Informal Time Payment Sales, Finding A or B

CTC Resolution G-98-22 as amended provides for an informal time payment plan for a period not to exceed 18 months when the adjoining owner is unable to pay the value of the subject property in one payment. When property is sold under this plan, no interest is charged and a letter form of agreement is satisfactory. The signed acceptance of the conditions shall be made on one copy of the letter to be retained in the parcel files.

© 1994-2025 California Department of Transportation. All rights reserved.

This letter shall include:

- Description of the property or attached map.
- A statement that the purchaser is in fact an adjoining owner.
- A statement that the sale must be approved by the CTC.
- A statement about purchase price and monthly payments.
- A statement that the sale may be canceled if payments become delinquent, in which case the Department retains one month's installment and returns the balance to the adjoining owner.
- Provision that the purchaser will pay the recording fee.
- A statement about the vesting of the Director's Deeds.
- A statement about the Department's reservations, if any.
- A listing of any title encumbrances affecting the conveyed property.
- A statement that the Director's Deed shall be recorded upon final payment.

Excess Land requests Director's Deeds and makes entries for removal of the parcel from the Excess Land Inventory after the adjoining owner executes the agreement (Exhibit 16-EX-07 [internal Caltrans link]).

16.05.06.00 Direct Sale to Eligible Present Occupants

16.05.06.01 Direct Sale of Commercial Property Pursuant to SHC Section 118.1

Except as provided in SHC Section 118.6, Excess Land must first offer commercial property on rescinded routes to the State's tenant at fair market value provided the threshold requirement for determining applicability of Section 118.1 is met. The threshold requirement is met upon either of the following:

1. Determination that the commercial property, originally acquired for construction of a state highway, is excess as the property is no longer required because construction will not be undertaken.
2. Determination that the commercial property is excess as a result of a rescinded route.

© 1994-2025 California Department of Transportation. All rights reserved.

Although not explicitly found in Section 118.1, the term "rescinded routes" is used to clarify that Section 118.1 applies in most instances to certain types of commercial property declared to be excess property as the result of a route rescission. Chapter 23 of the Project Development Procedures Manual (PDPM) describes route rescission as follows:

> "When it is identified that an unconstructed freeway on an adopted freeway route has little potential to be constructed as a freeway, controlled access highway or conventional highway, the route can be rescinded by the CTC. (PDPM, Chapter 23, p. 23-32.)

Section 118.1 applies to rescinded routes to the extent that the route was rescinded by the CTC because it was "an unconstructed freeway on an adopted freeway route" and "has little potential to be constructed as a freeway, controlled access highway or conventional highway."

However, further clarification is warranted in that Section 118.1 is not limited to just rescinded routes, but is also applicable in situations where commercial property that was originally acquired for construction purposes has since been determined not to be required for construction. Commercial property acquired for any purpose other than for the construction of a state highway is exempt from Section 118.1.

The Department lacks authority to offer a direct sale to a commercial tenant absent compliance with the threshold criteria noted above regardless if the tenant has satisfied the other conditions required under Section 118.1, including making improvements exceeding $5,000 at tenant's own expense consistent with the terms of the rental or lease agreement. District Excess Land is responsible for confirming applicability of Section 118.1 prior to offering a direct sale to a tenant of commercial property. A direct sale cannot be assumed solely based upon the tenant spending $5,000 in property improvements.

During the clearance process Property Management identifies all improved excess commercial properties where the present tenant, at their own expense, has made authorized capital improvements valued in excess of $5,000.

Commercial property is defined as real property used for the production of income through the sale of products or services, and excludes agricultural, industrial, or residential uses. Typical commercial properties are banks, service establishments, restaurants, parking lots, retail stores, and office buildings.

© 1994-2025 California Department of Transportation. All rights reserved.

Improvements must be capital improvements that add value to the real property. The term does not include expenditures for maintenance and repair. In addition:

- The value must be documented.
- The tenant must not have been reimbursed for improvements through rental offsets.
- The improvements were made consistent with terms of the Rental Agreement.

Excess Land must determine if the eligible tenant is interested in purchasing the property at current fair market value and must document the tenant's intention in the parcel file. When there is more than one eligible tenant, the opportunity to purchase at fair market value by direct sale must be offered to each tenant.

- If waivers can be obtained from the other tenants, the property may be offered to one tenant.
- If waivers cannot be obtained, tenants may purchase property jointly or Excess Land can offer the property at a private sale.

When an eligible tenant indicates a desire to purchase at a direct sale, Excess Land shall obtain two independent appraisals of fair market value from qualified appraisers and offer the property at the approved appraised value. Refer to Right of Way Manual Section 7.14.02.02 for appraisal procedures. The Excess Land Transaction Résumé must contain a description of the improvements and must fully document the qualifying conditions set forth in the above definition of improvements.

If the eligible tenant refuses the offer to purchase at the approved appraised value, Excess Land should immediately schedule the parcel for public sale.

Excess Land should refer legal issues or questions that occur because of unusual circumstances to HQ R/W for reference to Legal for resolution prior to committing the Department to a course of action.

© 1994-2025 California Department of Transportation. All rights reserved.

16.05.06.02 Direct Sale to Present Residential Tenant-Occupant at Fair Market Value

CTC Resolution G-98-22 as amended (Exhibit 16-EX-06) authorizes the direct sale to present residential tenant occupants provided that:

- The purchase price shall be at fair market value, as supported by an approved appraisal prepared for such sale;
- The tenant is current in all rent obligations; and
- The tenant has been in occupancy as a tenant of the State for a minimum of five consecutive years.

Excess Land must determine whether an eligible residential tenant is interested in purchasing the property at fair market value, and must document the offer of direct sale and the tenant's intentions in the parcel file.

If an eligible residential tenant refuses the offer to purchase at the approved appraised value, Excess Land should immediately schedule the parcel for public sale.

16.05.07.00 Private Sale Among Adjoining Owners

Excess Land shall offer an excess parcel that qualifies under Finding A procedures for direct sale to more than one adjoining owner by private sale, sealed bid, or auction among all adjoining owners if:

- The parcel can be properly used by two or more adjoining owners, and the sale is consistent with normal land use and would not impose a hardship on any of the remaining adjoining owners.
- Written waivers cannot be obtained from all but one of the adjoining owners.

Waivers from adjoining owners are retained in the Excess Land files. Where written waivers cannot be obtained, certified letters to the adjoining owners confirming their noninterest will suffice.

The value of the excess land may differ depending upon which adjoining ownership it is considered a part of for appraisal purposes. In this case, the minimum bid is set at the lowest appraisal value as plottage to the owners who have expressed interest in bidding.

© 1994-2025 California Department of Transportation. All rights reserved.

When a parcel is offered by private sale among adjoining owners, Excess Land shall send a Sales Notice to all adjoining owners by certified mail whether waivers have been obtained or not. The Notice sets forth the terms and conditions of sale and contains sales terms in the manner detailed in Section 16.05.04.00 for public sale parcels. Sale by sealed bid or auction is discretionary.

16.05.08.00 Exchange by Right of Way Contract

The Department is authorized by SHC Section 104(b) to acquire lands in excess of its needs and to exchange the same for other property needed for State highway purposes. Information regarding exchange transactions is contained in the Appraisal and Acquisition Chapters. Appropriate documentation of exchange transactions is found in the table in R/W Manual Chapter 16.07.00.00 entitled "Excess Land Disposal File Documentation."

Excess land to be exchanged shall be valued at its highest and best use. The Department must receive full value for the excess in the exchange. Any imbalance or inequity in appraised values and proposed payments in the exchange must be justified by Administrative Settlement on the Acquisition side of the transaction pursuant to Section 8.01.28.00. The value of the excess may not exceed the value of the property acquired by the Department.

16.05.09.00 Other Direct Conveyances

16.05.09.01 Governmental Agencies

CTC Resolution G-98-22 as amended governs direct conveyances of excess land to local, State and Federal public agencies for a public purpose. This is a separate authority for conveyance of excess land to public agencies that:

- Qualify for direct sale under Finding A and B procedures.
- Qualify for direct conveyance pursuant to special legislation.

In negotiating with another public agency for direct sale, it is important for the agency to understand that the agreed sale price is subject to final approval by:

- **CTC** – if a Director's Deed is required.
- **Director** – if a Transfer of Jurisdiction is required.

© 1994-2025 California Department of Transportation. All rights reserved.

16.05.09.02 Direct Sales to Governmental Agencies

Direct sales to public agencies shall be for a public use, and generally at fair market value. The governing body of the public agency must provide a resolution that states the excess land will be used for public purposes. "Public purposes" means the preponderant area of the property shall be substantially for government, as opposed to proprietary, functions. The intended specific use of the property shall be stated in the resolution. A copy of the resolution shall be submitted with the résumé package to the CTC for approval. To ensure that the property will be used for public use, a reversionary clause may be included in the Director's Deed. Refer to R/W Manual Engineering Chapter, Section 6.15.04.04, for approved clause.

A sale to a government agency under this section requires a minimum 5% nonrefundable deposit that will be applied to the purchase price if the right to purchase is exercised. If the right to purchase is not exercised, the deposit is retained as liquidated damages.
The sales agreement may take the form of a one year exclusive right to purchase. The exclusive right to purchase may be extended for an additional year provided:

- The purchasing agency requests an extension prior to the expiration of the original extension.
- The appraisal is updated to reflect the current market value of the property and the sale price adjusted accordingly.
- The purchasing agency pays an additional 5% nonrefundable deposit, also to be applied to the purchase price.

16.05.09.03 Conveyances to Utility Companies

To avoid processing these items through the CTC, every effort should be made to acquire these replacement facilities easements directly in the name of the utility company involved. If possible, use the utility company's easement form.

Land acquired in the State's name for replacement of public utilities facilities pursuant to a Utilities Agreement is disposed of in accordance with the terms of the Agreement. The acquisition appraisal shall stand in lieu of the excess land appraisal.

Where the property was not acquired specifically for replacement purposes but by terms of the Utilities Agreement it is necessary to relocate a utility

© 1994-2025 California Department of Transportation. All rights reserved.

facility on excess land, an excess property appraisal shall be provided and the degree of title required by the Utilities Agreement shall be conveyed pursuant to terms of the specific agreement.

If the excess parcel is sold before the easement is conveyed to the utility company and the easement was acquired in the State's name, an easement shall be reserved to the State. The easement is subsequently conveyed to the utility company.

If a utility was located in a public street or highway that was incorporated into a State highway pursuant to SHC Section 83, and the area occupied by the utility is subsequently declared excess, an easement should be reserved to the utility company in the Director's Deed conveying the excess.

16.05.09.04 Cooperative Agreements

Land acquired in the name of the State for use or partial use by another agency pursuant to a Cooperative Agreement is conveyed under the terms of the Agreement. The acquisition appraisal serves as the excess appraisal.

If the Agreement provides for conveyance of lands acquired for other purposes, an excess property appraisal shall be provided.

When the Agreement provides for conveyance of land or lesser interests for nonmonetary consideration (such as construction work to be performed by the other agency or savings in future maintenance costs to the Department), the functional unit responsible for originating the Agreement must provide an evaluation of the benefits or savings accruing to the Department. This assures that the consideration being received is commensurate with the value of the property being conveyed.

16.05.10.00 Coastal Zone

Article XIX of the State Constitution, Section 10, requires the Department to offer excess land parcels in the Coastal Zone, as defined by Section 30103 of the Public Resources Code (see Section 16.12.04.00), to the following agencies and departments (see Section 16.03.04.00):

- Department of Parks and Recreation
- Department of Fish and Wildlife
- Wildlife Conservation Board
- State Coastal Conservancy

© 1994-2025 California Department of Transportation. All rights reserved.

These parcels may be transferred for a consideration at least equal to the Department's acquisition costs, including overhead. Any proposed sale requires authorization by the Legislature, and the acquiring agency is responsible for pursuing Legislative authorization.

16.05.11.00 Transfer of Jurisdiction

All transfers are authorized by Government Code Section 14673 and do not require CTC approval. However, the Public Works Board must approve proposed payment to the Department of Transportation for transfers subject to the Property Acquisition Law (PAL), Government Code Sections 15850, et seq. It is the responsibility of the agency acquiring property to inform Caltrans if the transfer of excess land is subject to PAL.
Procedures for preparing and approving Transfer of Jurisdiction are shown in the following two tables:

TRANSFERS NOT SUBJECT TO THE PROPERTY ACQUISITION LAW
Government Code Section 14673

Responsible Party	Action
Requesting State Agency	Responds within 60 days of Region/District's Notice of Intent to Sell Excess Land. Informs the Region/District of the following: 1. To transfer the excess parcel to them at fair market value and for a specified purpose. 2. The budget authority to pay for the excess parcel and that payment is NOT subject to the PAL. 3. Legislative authority if for less than fair market value.
Region/District	4. Prepares an appraisal, legal description, maps, and the Transfer of Jurisdiction Agreement (found in Exhibit 06-EX-02). 5. Requests Division of Accounting to prepare Accounts Receivable Bill (or credit to the appropriate land bank after the Transfer is recorded*) in the amount of the agreed purchase price.
Division of Accounting	Provides Accounts Receivable Bill to Region/District.

© 1994-2025 California Department of Transportation. All rights reserved.

TRANSFERS NOT SUBJECT TO THE PROPERTY ACQUISITION LAW (Continued)

Government Code Section 14673

Responsible Party	Action
Region/District	1. Has the Region/District Director or designee sign the original and one copy of Agreement. 2. Transmits agreements, maps, and the A/R Bill to the requesting agency for execution. 3. Retains a copy of the Agreement and A/R Bill for reference during processing.
Requesting Agency	Signs the original and one copy of Agreement and sends both along with maps to DGS for approval.
DGS, Real Estate Services Division	1. Reviews the transaction and has the Director of General Services approve and sign the original and one copy of the Agreement. 2. Returns one of the fully-executed Agreements to the Region/District for recording. 3. Retains the second signed Agreement for conforming recording reference on the Agreement and for the State Proprietary Index (SPI) and archives.
Region/District	4. Sends one copy of executed Agreement to HQ R/W. 5. Records the Transfer Agreement. 6. After recorded, sends original Transfer Agreement to requesting agency. 7. Sends a copy of the recorded Agreement to DGS. DGS can then conform recording reference on their original signed agreement. 8. Retains one copy of recorded Agreement in file. 9. Make entries in the ELMS according to Pages V-69 and V-70 of the ELMS Manual. 10. Forwards RW 16-01 (internal Caltrans link) to Division of Accounting to record transaction and remove parcel(s) from inventory.
HQ R/W	Enters the date the Agreement was approved by the Director of General Services in the CTC Approval field on the Disposal Unit Screen.

© 1994-2025 California Department of Transportation. All rights reserved.

TRANSFERS SUBJECT TO THE PROPERTY ACQUISITION LAW

Government Code Sections 15850, et seq., and 14673

Responsible Party	Action
Requesting State Agency	Responds within 60 days of Region/District's Notice of Intent to Sell Excess Land. Informs the Region/District of the following: 1. To transfer the excess parcel to them at fair market value and for a specified purpose. 2. The budget authority to pay for the excess parcel and that payment is subject to the PAL. 3. Legislative authority if for less than fair market value. 4. Provides billing information to be sent to DGS.
Region/District	Prepares an appraisal, legal description, and maps, and sends copies of each to DGS, Real Estate Services Division (RESD).
DGS, Real Estate Services Division	Reviews the appraisal and maps and uses the legal description to prepare the Transfer Agreement. Returns the original and one copy of the Agreement to the Region/District.
Region/District	Requests Division of Accounting to prepare Accounts Receivable Bill in triplicate in the amount of the agreed purchase price.
Division of Accounting	Provides Accounts Receivable Bill to Region/District.
Region/District	1. Has the Region/District Director sign the original and one copy of the Agreement and transmits both signed Agreements, together with A/R Bill, to the requesting agency for execution. 2. Retains a copy of the Agreement and A/R Bill for reference during processing.
Requesting State Agency	Signs the Agreement and transmits original and one signed copy of Agreement to DGS for approval. Signs the original and one copy of Agreement and sends both to DGS for presentation to the State Public Works Board for approval.
Public Works Board	Approves payment for the Agreement.

© 1994-2025 California Department of Transportation. All rights reserved.

Responsible Party	Action
DGS, Real Estate Services Division	1. Records the original Agreement (if required). 2. Sends the original recorded copy to the requesting agency. 3. Conforms recording reference on the second signed copy and retains for the SPI and archives. 4. Sends a copy of the recorded Agreement to Region/District. 5. Distributes other copies as required.
Region/District	6. Sends one copy of recorded Agreement to HQ R/W. 7. Makes entries in the ELMS according to Pages V-69 and V-70 of the ELMS Manual. 8. Forwards RW 16-01 (internal Caltrans link) to Division of Accounting to record transaction and remove parcel(s) from inventory.
HQ R/W	Enters the date the Agreement was approved by the Director of General Services in the CTC Approval field on the Disposal Unit Screen.

16.05.12.00 Requests to Decertify and Purchase

An adjoining owner or public agency may request the Department to decertify a portion of operating right of way, sell, or otherwise convey access or other property rights not considered as excess land. Excess Land shall not initiate any action until the requesting party has deposited, as a minimum amount, the estimated costs of processing the request, including appropriate overhead assessments. Accounting for the overhead should be done pursuant to procedures set forth in the Accounting Manual. Project Development reviews requests for decertification, and obtains approval from FHWA where necessary.

Overhead shall be charged for all requests for decertification, except where these areas are:

- A portion of an adjoining ownership that was inadvertently fenced within the right of way.
- Found parcels (parcels outside the defined limits of the highway).

© 1994-2025 California Department of Transportation. All rights reserved.

Excess Land shall request a separate EA/Project ID Number from Resource Management for each request and shall monitor charges to ensure that charges do not exceed the deposited amount. In the event the deposit amount is depleted, supplemental deposit payment(s) shall be required from the applicant. Any recording or incidental fees will be paid by requesting party.

© 1994-2025 California Department of Transportation. All rights reserved.

DEPOSITS – REQUESTS TO DECERTIFY AND PURCHASE

Condition	Action
The requested rights can be decertified and are salable.	Retain the amount of the deposit that equals Department expenses and overhead charges for all functional areas expending effort for the decertification, including, but not limited to, Environmental, R/W Engineering, Project Development, Design, and Right of Way. This includes preparation and review of fair market value appraisals. Apply the balance of the deposit to the sales price of the property, if the requesting party decides to complete the purchase. If mitigating measures are required from the requesting party, the Director's Deed will be recorded after the Department inspects, reviews, and releases the required mitigating measures.
The rights are found to be salable, but the requesting party decides not to complete the purchase.	Retain that portion of the deposit attributable to the costs of investigation. Internal processing costs include, but are not limited to: • Actual salary and overhead costs (Right of Way overhead assessment rate, which may be obtained from Region/District/Region Resource Management) to obtain approvals for decertification. • Right of Way Engineering costs for map and deed preparation, reproduction, and reestablishment of survey monumentation. • Costs of rearranging utilities, fencing, landscaping, and other improvements affected by the decertification.
The area sought to be acquired cannot be decertified.	Refund all monies except the cost of investigation.

© 1994-2025 California Department of Transportation. All rights reserved.

16.05.13.00 Option-Purchase Agreement up to Two Years (Public Sales and Qualifying Direct Sales)

CTC Resolution G-98-22 as amended authorizes the use of an Option-Purchase Agreement for up to two years. This alternative allows a purchaser time to make necessary studies, complete the local zoning request process, and arrange financing on properties with development potential. Such properties would include large unimproved sites with commercial or industrial development potential. This method may be used in competitive bidding situations and qualifying direct sales in the more difficult-to-sell, high-value, or specialized property.

On Federally participating parcels or those eligible for Federal participation, HQ R/W will request FHWA authorization to extend the Federal reimbursement end date to equal the option period. This will be done prior to HQ R/W approving the use of an Option-Purchase Agreement or any extensions.

The purchase price is set at the highest bid (or current fair market value for direct sales) when signing the Option-Purchase Agreement. The option deposit shall be a minimum of 5% per year of the purchase price collected at the time of execution. The option deposits shall be applied toward the option price and are otherwise nonrefundable.

An Option-Purchase Agreement gives the purchaser the right, but not the obligation, to purchase the property.

Excess Land must prepare a marketing analysis demonstrating this method will maximize the return to the State. The analysis is retained in the Region/District and a copy must be forwarded to HQ R/W for review and approval. The Option Agreement shall explicitly state that it is subject to Department approval.

CTC approval of the option price and terms is required at the time an optionee acquires the Purchase-Option and any subsequent extensions. The Purchase-Option Agreement shall explicitly state that it is subject to CTC approval.

© 1994-2025 California Department of Transportation. All rights reserved.

16.05.14.00 Lease-Purchase Agreement and Partnering with an Adjoining Owner (Public Sales and Qualifying Direct Sales)

The Lease-Purchase Agreement and Partnering with an Adjoining Owner were approved by Agency Action Request on April 15, 1997, and their use requires HQ R/W approval.

The use of either alternative shall be limited to cases where good faith attempts to sell the property have been unsuccessful or where the property is not yet ready to sell and the marketing analysis predicts that it will be difficult to sell.

The lease term should be relatively short and the Lease-Purchase Agreement should obligate the tenant-buyer to purchase the property at the end of the lease.

On Federally participating parcels or those eligible for Federal participation, HQ R/W will request FHWA authorization to extend the Federal reimbursement end date to equal the lease period. This will be done prior to HQ R/W approving the use of a Lease-Purchase Agreement or any extensions.

The purchase price is set at the current market value when the Lease is executed. The tenant-buyer is required to pay an up-front consideration equal to one percent or more of the purchase price. The up-front consideration shall be applied toward the purchase price or is otherwise forfeited. The tenant-buyer shall pay above fair market rent. A rent credit percentage must be established according to prevailing practice and will be applied to the purchase price or is otherwise forfeited.

The Region/District must prepare a marketing analysis demonstrating this method will maximize the return to the State. The analysis is retained in the Region/District and a copy must be forwarded to HQ R/W for review and approval. The Lease-Purchase Agreement shall explicitly state that it is subject to Department approval.

CTC approval of the up-front consideration, lease rate, purchase price, and terms is required before the Lease becomes effective. The Lease-Purchase Agreement shall explicitly state that it is subject to CTC approval.

© 1994-2025 California Department of Transportation. All rights reserved.

16.05.15.00 The Department's Use of Private Brokers (Including Public Auction Brokerages)

Agency Action Request approved April 16, 1997 provides that a private broker, including a public auction brokerage, with prior HQ R/W approval, may be hired to provide broader exposure for specialized or high value properties than could be realized under the normal public sales processes. This includes properties infrequently marketed by the State, such as office buildings or other commercial and industrial properties.

A broker or public auction brokerage should only be used when previous public sales attempts have not been successful and Excess Land believes there will not be sufficient qualified buyers to achieve the highest price. Broker or public auction brokerage participation should only be used if the sale cannot be conducted satisfactorily by the Excess Land Agent (Government Code Section 19130[b]).

A broker or a public auction brokerage must be solicited on an "open listing" basis. A licensed real estate broker may submit a bid, less their commission, on behalf of a potential buyer. The highest bid less the commission is selected.

A public auction brokerage and, in rare instances, a real estate broker, must be selected by a competitive process under the State's contracting process.

16.05.16.00 Sale of Access Rights Requiring FHWA Approval

FHWA approval of a proposed sale is required when any portion of the affected right of way lies within the access control lines, as shown on the plans for a federal-aid project previously approved by FHWA. Project Development determines when access rights are no longer needed and obtains the necessary approval from FHWA. Right of Way Engineering should notify Project Development at the earliest practicable time of proposals to sell access rights. This gives Project Development adequate time to obtain FHWA approval and prevents processing delays.

16.06.00.00 – FEDERAL HIGHWAY ADMINISTRATION REQUIREMENTS ON DISPOSAL OF EXCESS LAND

16.06.01.00 General Policy Regarding Acquisition of Excess

Federal statute (Public Law 105-178, the Transportation Equity Act for the 21st Century, Section 1303) provides that "the Federal Share of the net income from the revenues obtained by the State under subsection (a) shall be used by the State for projects eligible under this title." Because net proceeds of excess land sales are deposited in the State Highway Account, Excess Land need not segregate federally reimbursed excess proceeds from nonfederally reimbursed excess proceeds, and no federal credits are required. By letter dated March 4, 1999 with FHWA concurrence dated March 8, 1999 (see Exhibit 16-EX-25), Caltrans has met the requirements of Public Law 105-178 and is not required to track and report expenditures from these revenues by project.

16.06.02.00 Local Programs Use of This Chapter

The majority of this chapter focuses on the State's disposal process of its assets and the laws governing excess land disposals. Local governments will follow state and local laws for disposing of its excess land. It is the Department's policy if Federal Funds were used within a local program project, any excess land purchased for project must be disposed of within two years after opening the highway to traffic, or within two years after submitting the final voucher to the FHWA (whichever is earlier). Local Agencies will find this chapter instructive on clearance procedures (16.03.02.00-16.03.03.01 and 16.03.07.00), excess lands appraisals (16.04.00.00) and portions of the disposal methods and procedures (16.05.00.00).

© 1994-2025 California Department of Transportation. All rights reserved.

16.07.00.00 – PROCESSING TRANSACTIONS

16.07.01.00 General

Excess Land is responsible for review of all excess land transactions prior to submission to the CTC. If the Region/District has a unique or unusual transaction, informal discussions or field reviews with HQ R/W are encouraged to resolve any questions prior to submitting the résumé package. A copy of the executed contract authorizing the conveyance shall be included in the résumé package provided to HQ R/W. Following HQ R/W's review of the complete résumé package to ensure it is accurate, the Excess Land Resume can be presented to the CTC for approval. The Region/District Excess Land office is to prepare and retain in the parcel file all applicable items shown on the table in this section entitled "Excess Land Disposal File Documentation."

16.07.02.00 Deed Approval Delegated to Region/Districts

Region/Districts may approve and execute Director's Deeds on behalf of the Department for excess land conveyances that qualify pursuant to CTC Resolution G-98-22 (as amended). (See Exhibit 16-EX-06.) Staff approval of delegated Director's Deeds shall be in accordance with current delegations.

For all CTC delegated items, the Region/District should submit to HQ R/W:

- Copy of the approved Director's Deed.
- Copy of Form RW 16-01 (internal Caltrans link).

© 1994-2025 California Department of Transportation. All rights reserved.

16.07.03.00 Transmittal of Résumé Package and Director's Deed to HQ R/W – CTC-Approved Deeds

The Region/District will transmit résumé packages for Director's Deeds requiring CTC approval to HQ R/W. These packages can be transmitted electronically to HQ R/W. The packages shall include a copy of the executed authorizing contract and the following completed documents:

- Form RW 16-01 (internal Caltrans link).

- An Index Map and Parcel Map prepared in 8½" x 11" format that conform to Section 4-10 of the Department's Plans Preparation Manual, Director's Deed Mapping Standards. The electronic copies of the maps submitted to CTC must meet ADA remediation requirements to facilitate external website publication.

- Administrative Authorization (if necessary) for adjustments to direct sale price (see Section 16.05.05.01).

- A Director's Deed that conforms to R/W Manual Chapter 6, Right of Way Engineering. The electronic copy of the deed document must meet ADA remediation requirements to facilitate external website publication. The Director's Deed package, including legal descriptions shall use Arial font, point size 12. This font is subject to change; please check with HQ R/W for the latest information.

- A copy of the authorizing resolution from the public agency's governing body for direct sales to a public agency for a public purpose (see Section 16.05.09.02).

- Any other substantiating documents to explain and support the conveyance transaction when requested by HQ R/W.

All documents should be received in HQ R/W prior to District cutoff (see Section 16.07.04.00). The original deed is returned to the Region/District upon approval by the CTC. A copy is made and retained in HQ R/W files.

The Region/District executes and records the Director's Deed and sends the original to the purchaser, retaining a copy for the Region/District parcel file.

© 1994-2025 California Department of Transportation. All rights reserved.

16.07.04.00 Deadline for Submitting Résumé Package to HQ R/W – CTC-Approved Deeds

Region/District should transmit all material requiring submission to the CTC so that it is received in HQ R/W approximately 45 days prior to the CTC meeting or the District Cutoff date. HQ R/W notifies the Region/Districts of the cutoff date as soon as the CTC schedule is available. Résumé packages received after the cutoff date will be held for the next scheduled CTC meeting.

16.07.05.00 Recordation of Director's Deeds

Excess Land shall record all Director's Deeds prior to delivery to the purchaser, except for conveyances to other public agencies. The Director's Deed may be delivered to an escrow agent, when applicable, with appropriate instructions regarding recordation and payment of transfer costs. Recordation costs are borne by the purchaser, except as noted in Section 16.05.05.02.

Deeds to other public agencies may be delivered to them for acceptance and recordation. The public agency is required in these cases to provide Excess Land with recording data when available.

16.07.06.00 Nonpayment of Transfer Costs

The Department shall not participate, nor pay any costs involved in the transfer of title, such as escrow fees, seller's share of real estate commissions, and policies of title insurance. Payment of such items constitutes a gift of public funds.

© 1994-2025 California Department of Transportation. All rights reserved.

EXCESS LAND DISPOSAL FILE DOCUMENTATION

Item	Explanation
Form RW 16-01 (internal Caltrans link)	For multiple-parcel disposal units, include a separate Form RW 16-01 (internal Caltrans link) (sections I, II, and III) for each parcel in the disposal unit, and a recapitulation in sections IV through VI-A/B.
Director's Deed	The original is returned to the Region/District upon approval by the CTC. It is signed in the Region/District, recorded by Excess Land, and sent to the buyer. A copy is retained in the Region/District's parcel files.
Parcel Map	Clearly showing the property to be conveyed, and, for direct sales, identifying all adjoining owners and any abutting State-owned excess land.
Appraisal Report or Public Sale Estimate (PSE)	An original or copy of all valuations shall be retained in the file.
Index Map	In sufficient detail to show the property being conveyed in relation to adjacent streets and highways.
Correspondence	Copies of any correspondence or other information that has bearing on the disposal, gives a total picture of the transaction, or facilitates review (e.g., legal opinions, legislative inquiries, administrative authority to sell for less than appraised value or minimum bid.)
Purchase Agreement	One copy of each signed Purchase Agreement shall be retained in the file.
Additional Information	Memorandum of Substantial/Nonsubstantial Reduction For parcels that were not originally full-take acquisitions and all Finding B conveyances shall contain the following statement in the property description section of Form RW 16-01 (internal Caltrans link): "A parcel review has been completed and there are no contractual obligations." If contractual obligations are found, their disposition shall be explained in full.
Adjustments	For VTA of rescinded route parcels and any other adjustments to VTA on Form RW 16-28 (internal Caltrans link).

© 1994-2025 California Department of Transportation. All rights reserved.

EXCESS LAND DISPOSAL FILE DOCUMENTATION (Continued)

Item	Explanation
R/W Contract	Copy of the contract and any amendments, the MOS, the Federal Participation Memo (if applicable), and a parcel map for exchange transactions.
Note and Deed of Trust	One copy retained in Region/District files. (Original sent to Division of Accounting until reconveyed.)
Utility Agreement	Copy of the agreement establishing the State's obligation for transactions with utility companies.
Cooperative Agreement	Copy of the agreement for conveyance of excess real property interests to a public agency pursuant to a Cooperative Agreement.
Agreement for Transfer of Jurisdiction	Copy of the agreement for conveyance of excess real property interests to other State agencies. Archive copy.
Notice of Determination	For those parcels that require an environmental document. (See Section 16.03.02.00.)
Other Agreements	Copy of the agreement providing the authority for conveyance of excess real property interests to the purchaser.

16.07.07.00 Cancellation of Sale Prior to CTC Approval

At the Region/District's discretion, Excess Land may cancel a sale prior to CTC approval. Excess Land shall act expeditiously to notify all concerned parties of the cancellation and to reschedule the sale of the excess land at the earliest possible date. The reasons for the cancellation are documented in the parcel file. If a bidder requests cancellation of sale prior to CTC approval, Excess Land retains that portion of the deposit representing liquidated damages.

16.07.08.00 Cancellation of Sale Prior to Recordation

Prior to recordation of the deed, the buyer or the Department may wish to withdraw from the sale if it is discovered that the condition of the parcel has changed to the detriment of the buyer or material facts advertised in the selling of the parcel were in error. Under these circumstances, Excess Land shall cancel the sale, request an updated valuation, and reschedule the sale at the earliest possible date.

© 1994-2025 California Department of Transportation. All rights reserved.

16.07.09.00 Correction Deeds

When an executed Director's Deed contains deficiencies or defects in the legal description and a Correction Deed must be secured, either before or after recording of the original, Excess Land shall consult with Right of Way Engineering for appropriate corrective measures.

Director's Deeds to correct legal descriptions in previous conveyances do not require submission to the CTC. (See Exhibit 16-EX-06.) File documentation for correction deeds must clearly state the error being corrected and cite the delegated authority to approve.

16.07.10.00 Vesting Changes

Director's Deeds approved by the CTC requiring a change or correction in the vesting must be submitted to the CTC for approval with a résumé that summarizes the need for change or correction and recapitulates prior action by the CTC.

© 1994-2025 California Department of Transportation. All rights reserved.

16.08.00.00 – CREDIT SALES

16.08.01.00 General

SHC Section 118 authorizes the Department to sell, contract to sell, sell by trust deed, or exchange real property, or interest therein, found to be in excess of highway needs upon terms, standards, and conditions established by the CTC. Sales shall be for cash. Credit terms shall not be offered without prior HQ R/W approval.

All such contracts of sale or sales by trust deed shall bear interest. Except where otherwise provided by law, the payment period in any such contract of sale or sale by trust deed shall not extend longer than 10 years.

Such transactions with private parties shall require a down payment of at least 30% of the purchase price. Excess Land will verify the creditworthiness of the buyer of any property to be sold by Trust Deed. See R/W Manual Section 16.08.05.00.

16.08.02.00 Low- and Moderate-Income Housing

When unimproved real property is sold or exchanged for the purpose of housing for persons of low and moderate income, as defined in Section 50093 of the Health and Safety Code (see Section 16.12.04.00), the payment period may not exceed 40 years and the down payment shall be at least 5% of the purchase price.

The rate of interest for any such contract of sale shall be computed annually and shall be the same as the average rate returned by the State's Pooled Money Investment Fund for the five fiscal years immediately preceding the year in which the payment is made.

Such contracts of sale or sale by trust deed shall not be used if the proposed development or sale qualifies for financing from other sources and if such financing makes feasible the provision of low and moderate income housing.

© 1994-2025 California Department of Transportation. All rights reserved.

16.08.03.00 Credit Sale by Trust Deed

Credit terms should not be offered when adequate financing is available and shall not be offered without prior HQ R/W approval. A potential buyer's inability to secure financing is not adequate justification to offer credit terms. Credit terms are limited to properties selling for $100,000 or more. Sales under $100,000 must be for cash, except for those sold under informal time payment plans (see Section 16.05.04.00). Requirements for credit sales are shown on the table entitled "Credit Terms – Sale by Trust Deed" on the following page.

All improved residential property sold to a local public agency, if subsequently sold or transferred to a nonprofit housing organization for housing of persons and families of low and moderate income sold and financed pursuant to SHC Section 118 (a)(2), shall be endorsed by the city in which the parcels are located, or the county if located in an unincorporated area. The endorsement shall provide that the housing remain at affordable costs to persons and families of low or moderate income and very low income households for the longest feasible time as determined by the city or the county, but not less than 15 years. By endorsing such a sale, the city or county accepts responsibility for ensuring the housing remains affordable. The local public agency shall record covenants or restrictions implementing this provision in the office of the county recorder. Notwithstanding any other provision of law, the covenants or restrictions shall run with the land and shall be enforceable against the original purchaser from the department and successors in interest.

16.08.03.01 Escrow Requirement

For credit sales, the purchaser shall open an escrow at purchaser's expense with a title company satisfactory to both parties and shall deposit a fully executed Note and Deed of Trust into the escrow within 30 days after execution of the sales agreement. The balance of the down payment is due prior to recordation of the Director's Deed. The Note and Deed of Trust shall be written in the amount of the balance of the purchase price and shall be payable to the State of California, acting by and through the Department of Transportation. The title company handling the escrow shall be the trustee, and the purchaser shall bear all costs.

© 1994-2025 California Department of Transportation. All rights reserved.

CREDIT TERMS – SALE BY TRUST DEED

Term	Requirement	Type of Real Property
Credit Check	All purchasers on credit terms, except for government agencies, must prove creditworthiness. The cost of the credit check will be borne by the purchaser.	All property.
Payment Period	Not to exceed 10 years	All improved real property. All unimproved real property with the following exceptions.
	Not to exceed 40 years	Unimproved real property sold or exchanged to provide housing for persons of low- or moderate-income.
Down Payment	At least 30%	All real property, with the exception of unimproved property, to be used for low- or moderate-income housing.
	At least 5%	Unimproved real property sold or exchanged to provide housing for persons of low or moderate income.
Interest Rates	Prevailing federal funds rate as established by the Federal Reserve Bank, plus five percent	All properties other than unimproved real properties sold or exchanged to provide housing for persons of low and moderate income.
	Average rate (computed annually) returned by the State's Pooled Money Investment Fund for the past five fiscal years immediately preceding the year in which payment is made	Unimproved real property sold or exchanged to provide housing for persons of low or moderate income.

© 1994-2025 California Department of Transportation. All rights reserved.

16.08.03.02 Provisions of Trust Deed and Note

The Trust Deed and Note shall designate the purchaser as Trustor; the title company as Trustee; and the State of California, acting by and through the Department of Transportation, as Beneficiary. The Trust Deed shall contain provisions substantially the same as shown on Exhibit 16-EX-16. These provisions are common to those contained in the standard forms of major title companies.

16.08.03.03 Processing of Director's Deed Sale with Trust Deed

The résumé package prepared for the sale shall include a copy of the Purchase and Sale Agreement with State Financing Addendum, Trust Deed and Note, and a completed Form RW 16-01 (internal Caltrans link) indicating:

- The sale is on credit terms pursuant to Section 16.08.03.00.
- The amount of the deposit received.
- The date the required balance of the down payment will be deposited with the escrow agent.

16.08.03.04 Deposit of Director's Deed with Escrow Agent

The Department's escrow instructions, containing substantially the same language as shown on Exhibit 16-EX-17 (internal Caltrans link), shall be forwarded with the Director's Deed to the title company handling the escrow.

16.08.03.05 Retention of Trust Deed and Note

Excess Land shall forward the recorded Trust Deed and executed Note to the Division of Accounting with a request to forward a statement to the purchaser. The statement shall provide for quarterly payments at the specified interest rate for the term of the Note. The Division of Accounting is responsible for safekeeping the Note and Trust Deed during the term of the trust.

© 1994-2025 California Department of Transportation. All rights reserved.

16.08.03.06 Full Reconveyance Upon Payment

Accounting shall notify the DDC-R/W upon receipt of final payment of the outstanding balance or written notice by the trustee that full payment has been deposited in escrow for the Department. The DDC-R/W shall request the District Director to execute a Full Reconveyance.

Excess Land forwards the signed Note and Request for Reconveyance to the trustee for cancellation and issuance of the Full Reconveyance. The purchaser pays all fees in connection with the reconveyances.

16.08.03.07 Partial Reconveyances, Subordinations, and Assumptions

Partial reconveyances may be authorized if:

- It is in the Department's best interest.
- The remaining property is adequate security for the balance of the loan.

The district shall prepare an appraisal and a memorandum to the file, which shall explain and justify the proposed partial reconveyance and the value of the remaining property. An appropriate fee will be charged to the borrower sufficient to cover the administrative expenses incurred by the Department.

Subordination of the Department's interest is limited to easements required by public utilities or public agencies in connection with a public project. All monies received by the purchaser in connection with conveyance of the subordinated interest are paid to the Department and credited against the principal obligation.

Excess Land shall document requests and justify subordination approvals in the excess land parcel file.

Assumption of a loan may be allowed with Caltrans' approval. An approved credit report and an Assumption Agreement (Form RW 16-18 [internal Caltrans link]) are required.

16.08.03.08 Prepayments

The principal obligation under a Trust Deed may be prepaid in full or in part at any time without penalty. Partial payments made in advance of the regular schedule shall be applied against the principal obligation and shall not replace regularly scheduled payments.

© 1994-2025 California Department of Transportation. All rights reserved.

16.08.03.09 Fire Insurance Coverage

The purchaser shall deposit with the escrow agent a Fire Insurance Policy in an amount commensurate with the value of any substantial improvements located on the parcel at the time of purchase. This Policy names the State of California, acting by and through the Department of Transportation, as co-insured with the purchaser if the improvements are of substantial value, habitable, or usable in connection with operation of the property.

Fire insurance policies are written to cover a one or three year period. Excess Land must assure that the policy is renewed prior to expiration of the prescribed term.

The State of California may be named as co-payee on a check for settlement of a claim resulting from fire damage to insured improvements. Excess Land shall forward the check to Division of Accounting for endorsement along with a complete report of the extent of damage and a statement of the amounts, if any, to be paid to the State. Excess Land's recommendation should consider the outstanding balance under the Trust Deed and the security the remaining property represents.

16.08.03.10 Defaults

If the purchaser defaults after commencement of payments and recordation of the Trust Deed, Excess Land shall notify the trustee to begin default proceedings in accordance with terms of the Trust Deed. Excess Land shall take all actions necessary, including attendance at the default proceedings and payment of reasonable costs, to enter a bid in the trustee sale on the State's behalf. Excess Land should contact Legal regarding specific guidelines. Division of Accounting will provide the necessary calculations of amounts due.

16.08.03.11 Acceleration Clause in Trust Deeds

The acceleration clause shall be enforced if the purchaser sells the property by deed or installment contract. Before enforcing the clause, Excess Land should discuss the factual circumstances of the sale with Legal.

Enforcement of the acceleration clause is not required in the following instances:

- Conveyance of non-substantial utility easements.
- Conveyance of non-substantial portion of property for public purpose.

© 1994-2025 California Department of Transportation. All rights reserved.

- Conveyance to either spouse resulting from dissolution of marriage.
- Encumbrance of the property with a second trust deed or other junior encumbrance by the purchaser.

16.08.03.12 Trust Deed Late Payment Penalties

Quarterly payments are due on the first day of the month beginning 90 days after close of escrow and the first day of each quarter thereafter. For example, if escrow closes on December 15, the first payment is due April 1.

All credit sale promissory notes shall provide for a penalty of 5% of any trust deed payment that is paid more than 10 days after its due date.

16.08.04.00 Trustor Bankruptcy

Excess Land should contact Legal and request assignment of an attorney immediately after being notified that the Department's trustor has filed for bankruptcy.

The Clerk of the Bankruptcy Court will send a Notice of Meeting of Creditors to the debtor, the creditors, and other interested parties. Excess Land should attend this meeting to ensure the Department is on the list of creditors filed by the debtor (trustor). If not, a proof of claim must be filed with the court within a specified time.

The State's attorney should attend all subsequent meetings and hearings to ensure protection of the Department's interest.

16.08.05.00 Credit Check

Excess Land shall establish the creditworthiness of prospective credit buyers. At a minimum, existing Department records must be reviewed to determine that the applicant is not currently in default on prior credit sales, and a credit report containing a FICO score of 750 or higher must be received from an established credit reporting agency. The buyer shall pay the costs of the credit report at the public sale. Such costs are nonrefundable in the event the buyer defaults.

© 1994-2025 California Department of Transportation. All rights reserved.

16.09.00.00 – RESCINDED ROUTE PROCEDURES

16.09.01.00 General

Excess parcels created by route rescission are subject to the requirements and instructions previously set forth in this Chapter, except as modified or supplemented in this section.

16.09.02.00 Phase I – Notice of Intention to Rescind

Phase I commences when the CTC passes a Notice of Intention to Rescind. The assigned project team consists of one representative from each of the district functions indicated in the following table.

© 1994-2025 California Department of Transportation. All rights reserved.

PHASE I RESPONSIBILITIES

Team Member	Responsibilities
Excess Land	Acts as team leader and coordinates the efforts of the project team. In coordination with Project Development, completes notification to governmental agencies immediately following a Notice of Intention to Rescind. Identifies properties subject to provisions of SHC Section 118.1 and notifies eligible tenants. Simultaneously coordinates and commences development of a Project Sales Plan, including estimated sales dates and probable disposal methods. Identifies parcels that may have significant environmental sensitivity and assumes responsibility for obtaining environmental clearance.
Right of Way Engineering	Provides project and parcel mapping where needed. Provides Director's Deeds and Director's Deed maps to team leader as soon as possible after the "Notice." Completes Items A through F on Rescinded Route Parcel Inventory, Form RW 16-07 (internal Caltrans link), covering each disposable property. Forwards the form to Property Management.
Property Management	Completes Items G and H on Form RW 16-07 (internal Caltrans link).
Planning and Management	Completes Items I, J, and K on Form RW 16-07 (internal Caltrans link). Identifies those parcels that meet the three qualifying criteria under SHC Section 118.5 for payment of back taxes to local taxing agencies.
Relocation Assistance	Compares the Rescinded Route Parcel Inventory forms to existing RAP records and determines the amount of relocation assistance that may be necessary, if any.

© 1994-2025 California Department of Transportation. All rights reserved.

The project team shall:

- Complete a detailed inventory of all the Department's real property on the route segment that is a candidate for rescission within 30 days following passage of the Notice.

- Notify all appropriate State, regional, county, and city agencies as quickly as possible after the Notice of Intention to Rescind is passed. Notification should indicate the Department's intent to dispose of previously acquired rights of way and should satisfy the provisions of SHC Sections 118 and 118.6 and Government Code Sections 54220 et seq. and 54235 et seq. (See Exhibit 16-EX-02 [internal Caltrans link] for a suggested format of the notification letter or memorandum.)

- Develop Project Sales Plan.

- Complete Director's Deed and map for each property.

16.09.03.00 Phase II – Route Rescission

Phase II commences when the CTC rescinds the route adoption. The assigned project team consists of one representative from each of the district functions indicated in the following table entitled "Phase II Responsibilities." The Phase II team shall:

- Enter all Department-owned real properties on the rescinded route segment into the ELMS within 30 days following rescission.

- Settle all contractual, RAP, and other obligations in a manner equitable to both the Department and the property owners.

- Dispose of the excess properties.

16.09.04.00 Federal Advanced Acquisition Fund (FAAF)

The ultimate rescission of a route adoption and direction by the CTC to dispose of previously acquired rights of way requires the Department to withdraw the project from FAAF programming. Such withdrawal necessitates repayment of the full amount of advances received from FHWA and payment to FHWA of the net rental income received from any FAAF parcels on the project until the date of withdrawal.

© 1994-2025 California Department of Transportation. All rights reserved.

16.09.05.00 Local Real Estate Taxes

SHC Section 118.5 requires the Department to pay local real estate taxes equal to the taxes that would have been paid had the property remained in private ownership. Such taxes shall be paid only in those instances where all three of the following criteria are met:

- The parcel was acquired by Final Order of Condemnation.
- No portion of the parcel that was acquired has ever been used for any of the purposes specified in SHC Section 104.
- The parcel is being offered at public sale.

The amount of any payments made pursuant to SHC Section 104.10 with respect to the property (24% of gross rent receipts) shall be deducted from the amount required to be transmitted pursuant to this section.

16.09.06.00 RAP Policy

After the CTC rescinds a route adoption, RAP policy requires that offers of RAP benefits and services be formally withdrawn from former owners and inherited tenants. Former owners who have remained in occupancy and tenant occupants who meet the criteria of CTC Resolution G-98-22 (as amended) are given the opportunity to purchase their property by direct sale.

All occupants should be encouraged to remain in occupancy as protection against vandalism. However, their right to occupy after the Director's Deed has been recorded will be dependent upon their working out an agreement with the new owner.

If occupants are forced to relocate from a dwelling as a direct result of the Department's disposal of the dwelling, within 90 days of the recordation of the Director's Deed, Relocation Assistance shall coordinate and accomplish the following pursuant to Government Code Section 54238.3(b):

- Provide relocation advisory assistance to affected parties where appropriate.
- Make relocation payments where appropriate.

Applicability of Government Code Section 54238.3(b) is limited to Interstate Route 710 between Route 10 and Route 210.

© 1994-2025 California Department of Transportation. All rights reserved.

RAP-eligible former owners still in occupancy may elect to repurchase with applicable RAP benefits in accordance with existing policy.

RAP-eligible former tenants should be notified and advised of their eligibility in accordance with existing policy.

Excess land will normally be sold subject to the occupancy of existing tenants since State-initiated evictions may create renewed relocation eligibility unless the eviction is for cause. All proposed evictions of former eligible occupants should be mutually agreed to by Relocation Assistance and Excess Land. State-caused evictions of former RAP eligibles should only take place where there is a clear economic advantage or other compelling reason to do so.

Another action that may cause renewed eligibility for previously eligible occupants or for ineligible occupants is the sale of occupied excess to another public entity for ultimate clearance and use. All sales agreements with other public agencies must contain a clause specifying that the purchasing agency will assume responsibility for relocation benefits that may accrue to existing occupants. If agreement cannot be reached as to responsibility for relocation of existing occupants, the district should request a legal determination of liability before finalizing the sales agreement.

It is the responsibility of Excess Land to coordinate closely with the District RAP Manager to determine the most economical method of fulfilling the State's RAP obligations.

© 1994-2025 California Department of Transportation. All rights reserved.

PHASE II RESPONSIBILITIES

Team Member	Responsibilities
Excess Land	Acts as team leader and coordinates efforts for timely disposal of rescinded route properties. Enters parcels into the ELMS in accordance with the ELMS/EDP Users Handbook. Follows the Sales Plan developed during Phase I in sending appropriate notices to occupants. Handles purchase or lease requests from other governmental agencies in the normal manner. It is essential from a public relations standpoint that occupants be advised of the progress toward, and actual sale of, the parcels they are occupying. This element should be included in the plan.
Planning and Management	Requests HQ R/W to withdraw the rescinded route segment from FAAF programming, where appropriate. Works with local taxing agencies to clear the State's obligation, if any, under SHC Section 118.5. This responsibility is limited to those parcels identified during Phase I as meeting the three qualifying criteria. SHC Section 118.5 requires any back taxes to be paid prior to consummation of any public sale. It is important to clear any required back tax payments as soon as possible so that public sale of the parcel can occur promptly. Section 118.5 is imprecise about the method of calculating the Department's tax liability. If differences of opinion develop with a local assessor or tax collector, the District should work with District Right of Way Planning and Management to reach a reasonable settlement of the Department's back tax liability, if any. Provides a written certificate upon clearance of the Department's Section 118.5 obligation on a particular parcel.
Acquisition	Negotiates with former owners or their successors in interest on part-take parcels selected during Phase I for direct sale to such parties, including settlement of all deed and contractual obligations. Coordinates their efforts with other members of the Project Team.

© 1994-2025 California Department of Transportation. All rights reserved.

PHASE II RESPONSIBILITIES (Continued)

Team Member	Responsibilities
Relocation Assistance	Reviews and updates occupancy data with Property Management and confirms RAP eligibility status of occupants. Promptly issues notices to all occupants who were previously offered relocation benefits, formally effecting the change of RAP eligibility.
Appraisals	Provides necessary appraisals or disposal value estimates when requested.

© 1994-2025 California Department of Transportation. All rights reserved.

16.10.00.00 – SALES OF SURPLUS RESIDENTIAL PROPERTIES AND REPLACEMENT HOUSING

These provisions have been superseded by Government Code Section 54235, et seq., and are rescinded in their entirety.

© 1994-2025 California Department of Transportation. All rights reserved.

16.11.00.00 – PORTER BILL PARK LEASES

16.11.01.00 General

CTC Resolution No. G-3 (Exhibit 16-EX-09) sets forth the general terms and conditions of the lease of excess property to local agencies for park purposes (SHC Section 104.15).

16.11.02.00 Determination of Qualifying Parcels

Pursuant to SHC Section 104.15, District Right of Way shall assist local agencies in developing park and recreational facilities on excess land where such use represents the highest and best use.

As excess parcels are certified for disposal, Excess Land shall review them for conformance with the criteria established for Section 104.15.

Excess Land should negotiate a direct sale to a local agency on any parcel with a market value of $2,500 or less since the procedures for processing a Porter Bill application are complex and expensive for both the local agency and the Department.

Taking into consideration the terms and conditions of the lease, Excess Land shall lease only those excess parcels where the fair rental value substantially equals the value of the enhancement and benefit to the State highway in preserving its view, appearance, light, air, and usefulness. The rental rate shall be determined considering the present value of the proposed construction and maintenance of park improvements, including any cost to maintain landscaping undertaken by the lessee within the State highway right of way, which would otherwise be the Department's obligation. A minimum rental fee of $100 shall be charged.

On routes involving federal participation, the following qualifying criteria are used as a guide in obtaining FHWA participation.

- The final voucher has not been submitted for the right of way project.
- The related highway facility has not been open to traffic for more than two years.
- There would be no substantial difference in Federal participation whether the parcel is incorporated in the right of way or is disposed of by public sale.

© 1994-2025 California Department of Transportation. All rights reserved.

- The proposed use of the excess land would enhance the highway facility or further integrate the highway into the local environment.

16.11.03.00 Local Agency Notification

Where excess properties are economically and physically suited for park and recreational uses, local agencies shall be invited to consider such development.

Excess Land shall notify all interested local agencies, such as cities, counties, and recreational districts, of the availability of parcels. The notification should indicate that the Department intends to sell the excess land but will withhold the properties from public sale for 60 days to allow local agencies to respond.

The local agency shall be furnished with a copy of a Request for Consideration, Porter Bill Lease (Exhibit 16-EX-10), appropriate maps of the available area, and a copy of the proposed lease (Exhibit 16-EX-11 [internal Caltrans link]). See Exhibit 16-EX-12, Instructions for Use of Porter Bill Lease Format.

16.11.04.00 Request for Consideration of Lease

The local agency shall have no more than 60 days after receipt of the written notice to inform the Department of its intention to apply for use of excess lands for park purposes pursuant to Section 104.15. The local agency shall submit a Request for Consideration of Lease of Excess Land Pursuant to Section 104.15 within 120 days of notifying the Department of its intention. The local agency's request or application must be accompanied by the following:

- An 8½" x 11" or 11" x 17" preliminary development plan that includes a description of the proposed development, type of activity, location of active recreational facilities, and access routes from the State highway and the local community area. The plan should also provide a brief justification of need for the lease for park and recreational purposes.
- Estimates of construction and annual maintenance costs.
- Proposed method of financing the project.
- Time frame for development.

© 1994-2025 California Department of Transportation. All rights reserved.

16.11.05.00 Fair Market Value Requirement

Excess Land shall inform the local agency that it will be required to purchase the affected property at fair market value whenever the excess parcel:

- Exceeds a depth necessary to protect the State highway, public work, or improvement and its environs or will not preserve its view, appearance, light, air, and usefulness; and

- Use of a portion of the land for park purposes, pursuant to Section 104.15, may have a detrimental effect on the market value or salability of the excess land lying beyond the depth necessary to protect the State highway, public work, or improvement and its environs or will not preserve its view, appearance, light, air, and usefulness.

Fair market value shall be based on the value of the affected property as a part of the whole parcel for its highest and best use without consideration of the effects of the proposed park.

16.11.06.00 District Investigation

Upon receiving notification from the local agency of its intention to apply for use of excess lands for purposes pursuant to Section 104.15, the district will investigate the use to which the excess property will be put and the extent to which projected use will protect such highway, public work, or improvement and its environs and will preserve its view, appearance, light, air, and usefulness.

The District Porter Bill Review Committee (consisting of District Right of Way, Landscape Architecture, and Environmental Analysis) shall conduct the investigation. If the district does not have a representative available, it should request participation through the appropriate Headquarters office. The Committee shall certify that the entire area covered by the proposed application conforms to the requirements of Section 104.15 and shall make a recommendation for Certification of Conformance, Exhibit 16-EX-13 (internal Caltrans link), to the DD or the DDC-R/W. Either the DD or the DDC-R/W will execute the Certificate.

© 1994-2025 California Department of Transportation. All rights reserved.

16.11.07.00 Criteria

Criteria for determining the extent to which projected use will protect the highway, public work, or improvement and its environs and will preserve its value, appearance, light, air, and usefulness shall include, but not be limited to, the items in the chart on the following pages.

Criteria	Explanation
Economic Uses	All economic uses of the property should be considered and a determination made that park and recreational development is economically practical and that no unreasonable revenue loss will be incurred by development as proposed.
Economic Feasibility	The measure of economic feasibility shall be where the fair rental value, taking into consideration the terms and conditions of the lease, substantially equals the value of the enhancement and benefit to the highway, public work, or improvement in preserving its view, appearance, light, air, and usefulness.
Visibility	Neither immediate access from the highway nor visibility of all portions of the parcel to be leased by highway motorists is a requirement. If any portion of the parcel is not visible, an analysis should be made of the possible benefits from developing the nonvisible portion as a park or the drawbacks from selling the parcel for development, relative to the criteria established for Section 104.15. That portion of the parcel not visible may be included in the leased area if positive benefits are expected for either the State or the local agency.
Continuous Development	Portions of the larger parcel not capable of continuous development should not be considered for lease. Continuous development could be hampered by natural or man-made obstacles, such as flood control channels, tree banks, railroad tracks, or streams.
Joinder	Joinder to other parcels with different uses or a higher and better use for independent development should be considered. A narrow strip adjoining a residential development would probably be best used by joining to the residential development if it is not of sufficient size to be used for park purposes.
Value	No portion of the parcel to be leased shall unreasonably exceed in value the present enhancement and benefit criteria applied to the larger parcel.

© 1994-2025 California Department of Transportation. All rights reserved.

Criteria	Explanation
Recreation/Use	The proposed development may be either for active recreation or passive enjoyment. Active recreational facilities should be located or screened by planting or other means so use does not create a nuisance, distraction, or hazard to the highway user or nearby community. For example, parking areas and maintenance yards must be screened by landscaping and night lighted facilities must be located so lights do not create a distraction, glare, or hazard.
Environmental Hazards	Environmental hazards and constraints should be considered both for potential beneficial or adverse effect on park use, as well as in determining fair market value.
	Seismic zones • Located on fault • Near fault • Potential damage from landslides Floodplains • Likelihood of occurrence • Potential damage to wells or other improvements • Propensity to reduce capacity of flood channels • Permit required or prohibitions against development • Protection of riparian vegetation Unstable soils • Landslides or mudflows • Shrink swell characteristics • Foundation or bearing constraints • Subsidence • Erodibility Topography • Slope excessive • Access limited • Exposure to adverse weather Health and safety hazards • Dangerous areas, e.g., cliffs and crevasses • Quicksands or bog areas • Agricultural spraying • Riptides, undertows, etc. • Throwing objects on roadway • Objects thrown from roadway

© 1994-2025 California Department of Transportation. All rights reserved.

Criteria	Explanation
Sensitive Areas	Environmentally sensitive areas should be considered. Wildlife habitat • Limited extent • Unique • Rare or endangered species of wildlife present • Breeding or nursery area • Essential to life cycle of certain species • Proximity to State or Federal Refuges • Protection of wetlands or other critical habitats • Value for scientific purposes (academic research) Water areas • Potential for pollution of domestic or municipal sources • Hazard to users • Value as wildlife habitat • Aesthetic considerations • Recreational uses Coastal zone or other area of unique value • Provide beach access • Equestrian, pedestrian, bicycle use potential • Aesthetic considerations Heritage resources • Historical significance • Archaeological significance • Natural landmark • Paleontological value Vegetation • Rare or endangered species • Specimen trees • Aesthetic considerations • Erosion protection • Potential commercial value • Value for scientific purposes

© 1994-2025 California Department of Transportation. All rights reserved.

Criteria	Explanation
Sensitive Elements	Socially sensitive elements from perspective of both impact of the park on adjacent areas and the adjacent areas (including the highway) upon the park should be considered such as the following: Noise • Sensitivity of receptors • Character of neighborhood • Proposed use of park Air quality • Sensitivity of receptors • Potential for increase of pollutants due to increasing traffic Traffic • Safety • Noise and air pollution • Parking • Access • Increase on residential streets • Create barrier to circulation Storm Water Quality • Sensitivity of receptors • Potential for increase in discharge of pollutants due to site activities (e.g., litter)

© 1994-2025 California Department of Transportation. All rights reserved.

16.11.08.00 District Process

Upon receipt of the Request for Consideration of Lease of Excess Land Pursuant to Section 104.15 from the interested local agency, the district will develop the items in the following table.

Item	Explanation
Fair market value appraisal	Meeting the requirements set forth in Section 16.04.00.00.
Engineering statement	Signed by appropriate district representative containing: • Age of State highway or public work. • Estimated economic life. • Planned or anticipated additional transportation requirements for adjacent or nearby facilities that could affect the planned park and a map showing such effect. The anticipated year of impact and a negative statement, if applicable, should be included. • Traffic volumes through the planned economic life of the highway facility.
Statement of anticipated reasonable annual maintenance costs	Based on the leased portion remaining in State ownership and being incorporated into the Right of Way. This should be signed by a representative of the Landscape Architecture staff.

After receiving the items listed in the table, Excess Land shall complete the Supplemental Data Sheet (Exhibit 16-EX-14 [internal Caltrans link]).

Excess Land shall forward copies of the following documents to HQ R/W for review and submittal to the CTC:

- Local agency's request with attached preliminary development plan.
- District Certification of Conformance.
- Approved fair market value appraisal.
- Supplemental Data Sheet.
- Engineering statement.

© 1994-2025 California Department of Transportation. All rights reserved.

- Maintenance cost statement.

16.11.09.00 CTC Determination

The final determination in each case rests with the CTC and can only be made after analysis of the development plans, cost, benefits, appraisal, and other factors.

If the CTC determines such park use is appropriate, Excess Land shall notify the local agency and cooperate with it in preparing detailed plans and specifications for the proposed development.

Excess Land shall immediately advise the local agency if its application is not approved. The local agency may appeal the decision.

16.11.10.00 Lease Negotiations

Excess Land shall negotiate a lease and sales contract, where appropriate, with the local agency. The property is withheld from sale for a period of one year after the CTC approves the application.

Within the one-year period, the local agency shall submit detailed plans for development of the proposed park for the District Landscape Architect's review and approval. The local agency shall also submit proof of its financial ability to commence construction of the proposed park within two years after plan approval and to complete construction within three years after plan approval.

If the local agency is unable to complete the detailed plans or negotiate a lease and sales contract within the one-year period, a 90-day extension may be granted. Excess Land shall process the parcel(s) for public sale after the 90-day extension period unless the local agency can demonstrate substantial progress towards completing the required documents.

16.11.11.00 Lease Execution

Upon approval of the detailed development plans, execution of the lease by the local agency, and preparation of Director's Deeds and sales contract, if appropriate, Excess Land shall execute the lease according to the existing delegation of authority.

© 1994-2025 California Department of Transportation. All rights reserved.

After the lease is executed, Excess Land shall remove the parcels under lease from the Excess Land Inventory and transfer them into Special Account #784001 (excess land under long-term park leases).

16.11.12.00 Compliance

After the lease is executed, Excess Land is responsible to ensure that the local agency complies with the terms of the lease, including those pertaining to storm water pollution prevention. Porter Bill lease properties shall be annually inspected using the Property Management inspection forms, 11-EX-55 and 11-EX-55SW (internal Caltrans link). Date of inspection must be recorded in the Right of Way Property Management System.

16.11.13.00 Lease Provisions

The standard Lease for Park and Recreational Purposes Pursuant to Section 104.15 and instructions for use of the lease can be found in Exhibits 16-EX-11 (internal Caltrans link) and 16-EX-12.

The terms and conditions as shown on the standard lease are applicable to all leases executed pursuant to Section 104.15. The CTC may prescribe additional terms.

© 1994-2025 California Department of Transportation. All rights reserved.

16.11.14.00 Appraisal Requirement

A fair market value appraisal is required in all cases involving leases under Section 104.15. The fair market value appraisal must contain the additional data listed in the table below.

Data	Explanation
Breakdown statement of fair market value and fair rental value	For property as a whole and for areas carrying a different or higher value.
Map	Showing: • Areas of varying value. • Area of lease. • Area of the remainder. • Total area proposed for development as park and present ownership. • Unique topographic factors (such as power lines, freeways, rivers, and streets) as well as any environmental sensitivities or hazards.
Estimate of fair market value	Under the conditions of the lease and factors affecting value determination as to the area to be leased.
Fair market value of any remainder	Appraiser's rationale.

Appraisals shall use the information listed above to establish the rental rate appropriate under the terms of Section 104.15 and to determine whether or not the local agency will be required to purchase property lying beyond the area to be leased.

HQ R/W, Appraisal Office, must review and approve all appraisals prepared for properties proposed to be leased pursuant to Section 104.15.

16.12.00.00 – STATUTES

16.12.01.00 General

This section contains statutes referred to in this chapter that are not included in the Department of Transportation's Statutes Publication (2014) (internal Caltrans link).

16.12.02.00 CEQA Guidelines 15312 (14-CCR 15312)

15312. CLASS 12. SURPLUS GOVERNMENT PROPERTY SALES. *Class 12 consists of sales of surplus governmental property except for parcels of land located in an area of statewide, regional, or areawide concern identified in Section 15206(b)(4). However, even if the surplus property to be sold is located in any of those areas, its sale is exempt if:*

(a) The property does not have significant values for wildlife habitat or other environmental purposes, and

(b) Any of the following conditions exist:

(1) The property is of such size, shape, or inaccessibility that it is incapable of independent development or use; or

(2) The property to be sold would qualify for an exemption under any other class of categorical exemption in these guidelines; or

(3) The use of the property and adjacent property has not changed since the time of purchase by the public agency.

16.12.03.00 Government Code

§ 14911. Mailing lists; annual correction

If any state agency maintains a mailing list of public officials or other persons to whom publications or other printed matter is sent without charge, the state agency shall correct its mailing list and verify its accuracy at least once each year.

© 1994-2025 California Department of Transportation. All rights reserved.

§ 65854. Public hearing upon ordinance or amendment; notice.

The planning commission shall hold a public hearing on the proposed zoning ordinance or amendment to a zoning ordinance. Notice of the hearing shall be given pursuant to Section 65090 and, if the proposed ordinance or amendment to a zoning ordinance affects the permitted uses of real property, notice shall also be given pursuant to Section 65091.

§ 65856. Public hearing; exceptions

(a) Upon receipt of the recommendation of the planning commission, the legislative body shall hold a public hearing. However, if the matter under consideration is an amendment to a zoning ordinance to change property from one zone to another, and the planning commission has recommended against the adoption of such amendment, the legislative body shall not be required to take any further action on the amendment unless otherwise provided by ordinance or unless an interested party requests a hearing by filing a written request with the clerk of the legislative body within five days after the planning commission files its recommendations with the legislative body.

(b) Notice of the hearing shall be given pursuant to Section 65090.

§ 65858. Interim zoning; urgency measures

(a) Without following the procedures otherwise required prior to the adoption of a zoning ordinance, the legislative body of a county, city, including a charter city, or city and county, to protect the public safety, health, and welfare, may adopt as an urgency measure an interim ordinance prohibiting any uses that may be in conflict with a contemplated general plan, specific plan, or zoning proposal that the legislative body, planning commission or the planning department is considering or studying or intends to study within a reasonable time. That urgency measure shall require a four-fifths vote of the legislative body for adoption. The interim ordinance shall be of no further force and effect 45 days from its date of adoption. After notice pursuant to Section 65090 and public hearing, the legislative body may extend the interim ordinance for 10 months and 15 days and subsequently extend the interim ordinance for one year. Any extension shall also require a four-fifths vote for adoption. Not more than two extensions may be adopted.

© 1994-2025 California Department of Transportation. All rights reserved.

(b) Alternatively, an interim ordinance may be adopted by a four-fifths vote following notice pursuant to Section 65090 and public hearing, in which case it shall be of no further force and effect 45 days from its date of adoption. After notice pursuant to Section 65090 and public hearing, the legislative body may by a four-fifths vote extend the interim ordinance for 22 months and 15 days.

(c) The legislative body shall not adopt or extend any interim ordinance pursuant to this section unless the ordinance contains legislative findings that there is a current and immediate threat to the public health, safety, or welfare, and that the approval of additional subdivisions, use permits, variances, building permits, or any other applicable entitlement for use which is required in order to comply with a zoning ordinance would result in that threat to public health, safety, or welfare. In addition, any interim ordinance adopted pursuant to this section that has the effect of denying approvals needed for the development of projects with a significant component of multifamily housing may not be extended except upon written findings adopted by the legislative body, supported by substantial evidence on the record, that all of the following conditions exist:

(1) The continued approval of the development of multifamily housing projects would have a specific, adverse impact upon the public health or safety. As used in this paragraph, a "specific, adverse impact" means a significant, quantifiable, direct, and unavoidable impact, based on objective, identified written public health or safety standards, policies, or conditions as they existed on the date that the ordinance is adopted by the legislative body.

(2) The interim ordinance is necessary to mitigate or avoid the specific, adverse impact identified pursuant to paragraph (1).

(3) There is no feasible alternative to satisfactorily mitigate or avoid the specific, adverse impact identified pursuant to paragraph (1) as well or better, with a less burdensome or restrictive effect, than the adoption of the proposed interim ordinance.

(d) Ten days prior to the expiration of that interim ordinance or any extension, the legislative body shall issue a written report describing the measures taken to alleviate the condition which led to the adoption of the ordinance.

© 1994-2025 California Department of Transportation. All rights reserved.

(e) When an interim ordinance has been adopted, every subsequent ordinance adopted pursuant to this section, covering the whole or part of the same property, shall automatically terminate and be of no further force or effect upon the termination of the first interim ordinance or any extension of the ordinance as provided in this section.

(f) Notwithstanding subdivision (e), upon termination of a prior interim ordinance, the legislative body may adopt another interim ordinance pursuant to this section provided that the new interim ordinance is adopted to protect the public safety, health, and welfare from an event, occurrence, or set of circumstances different from the event, occurrence, or set of circumstances that led to the adoption of the prior interim ordinance.

(g) For purposes of this section, "development of multifamily housing projects" does not include the demolition, conversion, redevelopment, or rehabilitation of multifamily housing that is affordable to lower income households, as defined in Section 50079.5 of the Health and Safety Code, or that will result in an increase in the price or reduction of the number of affordable units in a multifamily housing project.

(h) For purposes of this section, "projects with a significant component of multifamily housing" means projects in which multifamily housing consists of at least one-third of the total square footage of the project.

§ 66905.5. Region

As used in this title:

"Region" includes that part of Lake Tahoe within the jurisdiction of the State of California, the adjacent parts of the Counties of El Dorado and Placer lying within the Tahoe Basin in the State of California, and that additional and adjacent part of the County of Placer outside of the Tahoe Basin in the State of California which lies southward and eastward of a line starting at the intersection of the basin crestline and the north boundary of Section 1, thence west to the northwest corner of Section 3, thence south to the intersection of the basin crestline and the west boundary of Section 10; all sections referring to Township 15 North, Range 16 East, MDB&M. The region defined and described herein shall be as precisely delineated on official maps of the agency.

16.12.04.00 Health and Safety Code

§ 50093. Persons and families of low, moderate, and median income; definitions; filing and publication of standards and criteria.

"Persons and families of low or moderate income" means persons and families whose income does not exceed 120 percent of area median income, adjusted for family size by the department in accordance with adjustment factors adopted and amended from time to time by the United States Department of Housing and Urban Development pursuant to Section 8 of the United States Housing Act of 1937. However, the agency and the department jointly, or either acting with the concurrence of the Secretary of the Business, Consumer Services and Housing, may permit the agency to use higher income limitations in designated geographic areas of the state, upon a determination that 120 percent of the median income in the particular geographic area is too low to qualify a substantial number of persons and families of low or moderate income who can afford rental or home purchase of housing financed pursuant to Part 3 (commencing with Section 50900) without subsidy.

"Persons and families of low or moderate income" includes very low income households, as defined in Section 50105, extremely low income households, as defined in Section 50106, and lower income households as defined in Section 50079.5, and includes persons and families of extremely low income, persons and families of very low income, persons and families of low income, persons and families of moderate income, and middle-income families. As used in this division:

(a) "Persons and families of low income" or "persons of low income" means persons or families who are eligible for financial assistance specifically provided by a governmental agency for the benefit of occupants of housing financed pursuant to this division.

(b) "Persons and families of moderate income" or "middle-income families" means persons and families of low or moderate income whose income exceeds the income limit for lower income households.

(c) "Persons and families of median income" means persons and families whose income does not exceed the area median income, as adjusted by the department for family size in accordance with adjustment factors adopted and amended from time to time by the United States Department of Housing and Urban Development pursuant to Section 8 of the United States Housing Act of 1937.

© 1994-2025 California Department of Transportation. All rights reserved.

As used in this section, "area median income" means the median family income of a geographic area of the state, as annually estimated by the United States Department of Housing and Urban Development pursuant to Section 8 of the United States Housing Act of 1937. In the event these federal determinations of area median income are discontinued, the department shall establish and publish as regulations income limits for persons and families of median income for all geographic areas of the state at 100 percent of area median income, and for persons and families of low or moderate income for all geographic areas of the state at 120 percent of area median income. These income limits shall be adjusted for family size and shall be revised annually.

For purposes of this section, the department shall file, with the Office of Administrative Law, any changes in area median income and income limits determined by the United States Department of Housing and Urban Development, together with any consequent changes in other derivative income limits determined by the department pursuant to this section. These filings shall not be subject to Article 5 (commencing with Section 11346) or Article 6 (commencing with Section 11349) of Chapter 3.5 of Part 1 of Division 3 of Title 2 of the Government Code, but shall be effective upon filing with the Office of Administrative Law and shall be published as soon as possible in the California Regulatory Code Supplement and the California Code of Regulations.

The department shall establish and publish a general definition of income, including inclusions, exclusions, and allowances, for qualifying persons under the income limits of this section and Sections 50079.5, 50105, and 50106 to be used where no other federal or state definitions of income apply. This definition need not be established by regulation.

Nothing in this division shall prevent the agency or the department from adopting separate family size adjustment factors or programmatic definitions of income to qualify households, persons, and families for programs of the agency or department, as the case may be.

16.12.05.00 Public Resources Code

§ 30103. Coastal zone; map; purpose

(a) "Coastal zone" means that land and water area of the State of California from the Oregon border to the border of the Republic of Mexico, specified on the maps identified and set forth in Section 17 of Chapter 1330 of the Statutes of 1976, extending seaward to the state's outer limit of jurisdiction, including all offshore islands, and extending inland generally 1,000 yards from the mean high tide line of the sea. In significant coastal estuarine, habitat, and recreational areas it extends inland to the first major ridgeline paralleling the sea or five miles from the mean high tide line of the sea, whichever is less, and in developed urban areas the zone generally extends inland less than 1,000 yards. The coastal zone does not include the area of jurisdiction of the San Francisco Bay Conservation and Development Commission, established pursuant to title 7.2 (commencing with Section 66600) of the Government Code, nor any area contiguous thereto, including any river, stream, tributary, creek, or flood control or drainage channel flowing into such area.

(b) The commission shall, within 60 days after its first meeting, prepare and adopt a detailed map, on a scale of one inch equals 24,000 inches for the coastal zone and shall file a copy of the map with the county clerk of each coastal county. The purpose of this provision is to provide greater detail than is provided by the maps identified in Section 17 of Chapter 1330 of the Statutes of 1976. The commission may adjust the inland boundary of the coastal zone the minimum landward distance necessary up to a maximum of 100 yards except as otherwise provided in this subdivision, or the minimum distance seaward necessary up to a maximum of 200 yards, to avoid bisecting any single lot or parcel or to conform it to readily identifiable natural or manmade features. Where a landward adjustment is requested by the local government and agreed to by the property owner, the maximum distance shall be 200 yards.

16.12.06.00 Streets and Highways Code

§ 30410. Disposition of property no longer necessary for use.

Whenever any property acquired for any of the purposes of this chapter, whether by agreement, grant, or eminent domain, either in fee or in any lesser estate or interest, is no longer necessary for use in connection with any improvement authorized to be constructed pursuant to this chapter, or whenever a lesser interest than is owned therein is sufficient for the construction, maintenance, and operation of any improvement, or whenever it is for any other reason in the public interest to do so, the property, any part thereof, or any interest therein may be leased, sold, exchanged, or otherwise disposed of or dealt with by the director in the manner, upon such terms, and subject to such reservations as are first approved by the commission.

16.13.00.00 – AFFORDABLE HOUSING

16.13.01.00 State Mandate

Under Government Code (GOV) Section 14684.3 (2023), Caltrans shall coordinate with the Department of General Services (DGS) and utilize all existing legal and financial authority to expedite and prioritize excess lands for affordable housing.

16.13.02.00 State and Federal Legal Obligations

The disposition of excess land must comply with the California Constitution Article XIX (Article XIX)[1] and Title 23 CFR Part 710, Subpart D if the original acquisition involved the use of State gas tax and/or federal funds. Article XIX protects the use of State gas tax funds[2] for transportation purposes, which obligates Caltrans to dispose excess land at fair market value, unless an alternate use meets strict exceptions of Article XIX[3]. Affordable housing is not an exception under Article XIX.

The constitutional restrictions in Section 2 of Article XIX only apply to property acquired or improved with revenues from taxes on motor vehicle fuels (state gas tax funds). These revenues are deposited into the Motor Vehicle Fuel Account (MVFA) and Highway Users Tax Account (HUTA), which are then distributed to various state and local transportation accounts for use on highways and roads. Other revenues, such as sales tax, vehicle registration and license fees, and toll revenues, that are not deposited into MVFA or HUTA are not subject to Article XIX restrictions.

Similarly, at the federal level, 23 CFR §710 also requires that "*current fair market value must be charged for the use or disposal of all real property interests if those real property interests were obtained with title 23, United States Code, funding…*" unless an alternate use of the excess land meets the exceptions listed in 23 CFR §710.403(e). Approval of such an exception, commonly known as a "Public Interest Finding," rests with the Federal Highway Administration (FHWA).

[1] Article XIX on Motor Vehicle Revenues was first adopted in 1938 as Article XXVI, which directed proceeds of the state's fuel tax be spent only for transportation purposes. The Article was renumbered as Article XIX in 1976.
[2] California passed the first state gas tax in 1923.
[3] Article XIX provides exceptions for local public park and recreational purposes (Article XIX, §9); and state park purposes, protection and preservation of fish and wildlife habitat, or for purposes of the Wildlife Conservation Law of 1947, or for the preservation of agricultural lands (Article XIX, §10).

© 1994-2025 California Department of Transportation. All rights reserved.

16.13.03.00 Exception for Affordable Housing

To expedite the transfer of excess land for affordable housing to the greatest extent possible, Caltrans will identify excess land where State gas tax and federal funds were likely not involved in the original acquisition. Such land could then be transferred to another state agency, such as the Department of Housing and Community Development, for affordable housing, if determined to be viable. This approach requires District staff to conduct a reasonable and thorough funding record search of all available files and databases, including consultation with the appropriate Caltrans District and Headquarters programs, to demonstrate due diligence in the record search to support the appropriate course of action. A funding record search must be conducted as follows:

1. Identify the date of the original acquisition.
2. Identify the funding source(s) involved in the original acquisition, particularly funding programs funded by the State gas tax and federal funds.
3. Utilize the Funding Record Search Checklist (Exhibit 16-EX-01), if needed, to demonstrate a thorough record search.

DGS will not consider an excess parcel that was originally acquired with State gas tax due to Article XIX constraints. Programs funded by the State gas tax include, but are not limited to, the State Transportation Improvement Program (STIP), the State Highway Operation and Protection Program (SHOPP), Senate Bill 1 programs, the Active Transportation Program, and local transportation programs funded by HUTA. Please refer to Exhibit 16-EX-01 for the latest list of programs.

In cases where a thorough record search does not uncover evidence of State gas tax or federal funds involved in the original acquisition, Caltrans may proceed with the transfer of excess land at or below fair market value to support affordable housing development in accordance with GOV §14684.3. Excess parcel originally acquired with federal funds or is on an Interstate will be considered by DGS for affordable housing provided there is no Article XIX constraint. A Public Interest Finding approval from FHWA is required to waive fair market value pursuant to 23 CFR §710.403(e).

© 1994-2025 California Department of Transportation. All rights reserved.

16.13.04.00 Roles and Responsibilities

District Right-of-Way:

- Conduct a thorough record search of funding sources using the Funding Record Search Checklist (Exhibit 16-EX-01), if needed, including other reasonable means available. Using Exhibit 16-EX-01 and maintaining a record is required to demonstrate a thorough research has been done and no funding records were discovered to ascertain State gas tax and/or federal funds involvement.

- Document the findings at the completion of the record search and upload Exhibit 16-EX-01, if using, and related funding records and files into ROWMIS II. If necessary, maintain a physical or electronic file of these documents.

- Upon notification from HQ RWLS confirming DGS' decision to hold the excess property for affordable housing, District must not proceed with any sale or alternative use of the excess property.

- Coordinate with HQ RWLS on transferring the excess property through the Transfer of Jurisdiction process.

Headquarters Division of Right-of-Way and Land Surveys:

- Coordinate with DGS on excess properties that are available for affordable housing development.

- Communicate with Districts on a routine basis regarding the status of excess land being held for consideration for affordable housing and transfers.

© 1994-2025 California Department of Transportation. All rights reserved.

16.13.05.00 Process

HQ RWLS will coordinate with the districts and DGS to identify excess parcels available for affording housing, as outlined in this section. HQ RWLS will monitor the effectiveness of this process through the Quality Enhancement Joint Reviews.

1. The district will obtain clearance for the excess parcel through its normal process. Refer to Sections 16.01.01.00 and 16.03.00.00 of the Right of Way Manual.

2. If the parcel is declared excess, the district will determine if federal funds and/or State gas tax were used in the original acquisition. Utilize the Funding Record Search Checklist (Exhibit 16-EX-01), if needed, to demonstrate a thorough record search.

    2a. If the excess parcel **was** acquired with State gas tax, the parcel will be excluded from consideration for affordable housing. The district does not need to notify HQ RWLS and may proceed with selling the excess parcel at public auction (oral or sealed bid) through the normal process. Refer to Section 16.01.03.22 of the Right of Way Manual.

    2b. If the excess parcel **was not** acquired with State gas tax, regardless of federal involvement, the district will send a completed Excess Land Executive Order N-6-19 and N-23-20 Clearance Checklist (Clearance Checklist) (internal Caltrans link) to HQ RWLS for processing and await further direction from HQ RWLS.

3. HQ RWLS will forward the Clearance Checklist to DGS to evaluate the excess parcel for affordable housing based on the screening criteria.

(Continued on next page)

© 1994-2025 California Department of Transportation. All rights reserved.

4. HQ RWLS will inform the district of DGS' determination. The district will take one of the actions below based on DGS determination.

    4a. **Not Viable for Affordable Housing:** If the excess parcel is determined **not viable** for affordable housing, the district will proceed with selling the excess parcel at public auction (oral, sealed bid) and process the sale through the normal process. Refer to Section 16.01.03.22 of the Right of Way Manual.

    4b. **Viable for Affordable Housing and No Federal Involvement:** If the excess parcel is determined **viable** for affordable housing and there is **no federal involvement** (not on an Interstate or acquired with Title 23 federal funds), the excess parcel will be included in DGS' excess properties map for affordable housing leasing. ***The district must not proceed with any sale or alternative use of the excess parcel.*** After being awarded to a developer, but prior to execution of a ground lease, DGS will effectuate a Transfer of Jurisdiction (TOJ) of the excess parcel from Caltrans to the Department of Housing and Community Development (HCD). DGS will execute a lease between HCD and the developer. Refer to TOJ process in Section 16.05.11.00 of the Right of Way Manual.

    4c. **Viable for Affordable Housing and Federal Involvement:** If the excess parcel is determined **viable** for affordable housing and **has federal involvement** (on an Interstate and/or acquired with Title 23 federal funds), HQ RWLS, in coordination with the district, will request approval of a Public Interest Finding from FHWA. ***The district must not proceed with any sale or alternative use of the excess parcel until further notice.***

        i. Upon receiving FHWA approval, the excess parcel will be included in DGS' excess parcels map for affordable housing leasing. After being awarded to a developer, but prior to execution of a ground lease, DGS will effectuate a TOJ of the excess parcel from Caltrans to HCD. DGS will execute a lease between HCD and the developer.

        ii. If Caltrans **does not** receive FHWA approval, the parcel will no longer be considered for affordable housing and the district will proceed to sell the excess parcel at public auction (oral or sealed bid) through the normal process.

17.01.00.00 – GENERAL

17.01.01.00 Introduction

The Right of Way Local Programs function has a dual role in assisting in the development of transportation projects on local streets and roads which use federal funding, while at the same time actively working with local and regional agencies to jointly develop special funded (e.g., tax measure) projects on the State Highway System. As such, the Local Programs function uniquely exemplifies the partnership role the California Department of Transportation (Department) plays with cities, counties, and transportation authorities.

The Caltrans Right of Way Manual (RWM) and the Local Assistance Procedures Manual (LAPM) are both key resources for local agencies when performing right of way activities. Whereas the LAPM shall represent guidance and process for right of way activities in local public agency projects, the RWM is specific for technical requirements and ensures compliance with the Uniform Act and state and federal regulations. The RWM is applicable for off-system projects with federal-aid and all on-system projects with or without federal-aid.

The Department, as a direct recipient of federal funds, maintains financial responsibility for performing oversight duties to ensure LPA projects maintain federal funding eligibility. More details may be found in the Stewardship and Oversight Agreement on Project Assumption and Program Oversight by and between Federal Highway Administration, California Division and the State of California Department of Transportation (CALTRANS).

17.01.01.01 Objectives

There are a number of objectives for this chapter:

- To provide a comprehensive, practical guide and reference for the Local Programs function;
- To define the local agency projects by type and funding, and to describe the respective requirements for each;
- To describe the extensive revisions in the state funding apparatus brought about by the enactment of STIP reform legislation, the Transportation

© 1994-2025 California Department of Transportation. All rights reserved.

Funding Act, Government Code Section 14529 *et seq*. (formerly known as SB 45).

- To emphasize the fundamental shift in Department policy by delegating the majority of future STIP funding decisions to regional transportation authorities and local agencies as well as the authority and responsibility to develop and certify their own projects; and,

- To assist local agencies that are seeking federal aid or which use local or state funding for projects on the State Highway System (SHS) by describing the processes and procedures to obtain or utilize this funding.

17.01.01.02 Background

This manual is a compilation of information from many sources, including federal and state laws, regulations, operating processes, and guidelines. STIP legislation significantly and fundamentally changed the funding resources/processes for transportation projects. It has transformed the traditional statewide program from a project delivery document to a funding management tool for developing transportation projects. It acknowledges that although the Department is the owner-operator of the State Highway System (SHS), the regional agencies have the lead responsibility for resolving urban congestion problems, including those on state highways.

The STIP consists of two broad programs: an Interregional Transportation Improvement Program (ITIP), where projects are nominated by the Department; and a Regional Transportation Improvement Program (RTIP), where projects *both on and off the SHS* are nominated by regional authorities. Department utilizes 25% of available statewide transportation funds for the ITIP. The remaining 75% is available to regional agencies for the RTIP. The RTIP is further divided by formula into county shares for projects nominated in the RTIP.

17.01.01.03 Reengineering

This chapter also reflects the changes brought about by Department "reengineering" efforts for local assistance projects. These comprehensive revisions were necessitated by the Department's management decision to transfer responsibility for implementing their own projects to Local Public Agencies (LPAs) whenever possible while at the same time commensurately reducing Department involvement in these projects.

© 1994-2025 California Department of Transportation. All rights reserved.

For these federal-aid projects, the objective of the "reengineering" changes has been to provide the LPAs with broad delegations, latitude, and responsibility for developing their own projects. However, under Section 23 of the Code of Federal Regulations (23 CFR), Department remains responsible for the administration of federal-aid transportation projects. In 1995, the FHWA Division Administrator confirmed that, although the reengineering concept of transferring broad project development responsibility to LPAs was acceptable, the traditional Department responsibility with regard to Uniform Act compliance would remain unchanged and could not be delegated to LPAs.

Because of the substantial changes required to implement the Transportation Funding Act, the "reengineering" effort must be considered as continuous since policy and procedural revisions are regularly being made in furtherance of the commitment to ensure more autonomy at the local/regional level. At the same time, we are continuing to fulfill our stewardship and oversight responsibilities to FHWA.

In the past, prior to the reduction in Department involvement, ample staff was generally available to perform the respective Right of Way Local Programs' functions, including playing an active role in assisting local agencies in developing their federal-aid projects while concurrently meeting our oversight responsibilities. One of the by-products of this substantial level of involvement was the common knowledge we shared with FHWA and the sponsoring LPAs that (with few exceptions) local agencies desiring to do so were successfully utilizing federal funding while completing their projects in compliance with all applicable laws and regulations.

With the passage of the STIP reform legislation and TEA-21, there has been a substantial increase in the funds available for local/regional transportation projects. The increased number of projects, in tandem with the revised procedures, has understandably prompted a surge in the number of questions and requests for assistance as LPAs have begun exercising their newly delegated authority, unfettered by the prior Department's routine involvement throughout the project development process. Fortunately, neither of these landmark legislative acts changed the *way* we in Right of Way do business in Local Programs (e.g., approve projects/funding, monitor projects for Uniform Act compliance, etc.). We just do *more* of it.

Consequently, as LPAs continue to deliver their own projects, the major ongoing challenge for the Region/District Local Programs staff is to simultaneously provide assistance to LPAs in furthering their projects while performing an appropriate level of monitoring to assure compliance with the Uniform Act.

© 1994-2025 California Department of Transportation. All rights reserved.

This has placed substantial emphasis on the need for careful consideration in planning monitoring/oversight activities. We acknowledge that all projects need not be monitored at the same level and each Region/District must develop a means of evaluating LPA projects based on the size, complexity, prior experience with the sponsoring agency, etc. Given the wide diversity in the scope of projects from Region/District to Region/District, this system will permit the Right of Way Local Programs Coordinator to assign priorities and determine monitoring needs. In this way, LPAs that need the most assistance and monitoring can receive a commensurate amount of staff time.

For an additional discussion of the monitoring responsibilities, see Section 17.03.00.00.

17.01.01.04 Types of Projects

This chapter contains applicable instructions for the following types of projects:

1. Federal-aid local assistance projects (formerly known as local streets and roads projects). These are also variously referred to as "Local Grant," "Local Entity," "Local Assistance," or "Off-System" projects.
2. Special Funded projects. These are projects on the State Highway System (SHS). They are also referred to as "Measure" or "On-System" projects. They are sponsored by local public agencies using various funding sources including local sales tax measures, development impact fees, and private sources.
3. Privately funded SHS projects. A privately funded or private developer project is any project on the SHS that is entirely funded by a private entity and is not sponsored by an LPA. All such projects require some form of agreement with the Department (usually a Highway Improvement Agreement) which contains the respective roles and responsibilities of the state and the developer. Private developers do not have the ability to condemn property and therefore must agree on a mutually acceptable price with the property owner. The State is not concerned with the method of determining Fair Market Value (FMV), but the property owner must be offered at least current FMV for their property. And, if necessary, the private entity must notify all property owners of their right to compensation for relocation assistance benefits, including moving expenses, as outlined in the Caltrans Right of Way Manual.

© 1994-2025 California Department of Transportation. All rights reserved.

NOTE: Although usage of the terms "On-System" or "Off-System" is widespread, care must be taken because FHWA also uses these same terms to refer to projects "on" or "off" the Federal Aid Highway System. For FHWA purposes, projects "on" the Federal Aid Highway System include the following:

- Projects on the Interstate Highway System
- Projects on the National Highway System
- LPA Projects which utilize federal aid in any phase of the project

For information on the Federal Aid Highway System, please refer to the FHWA website.

17.01.01.05 Identifying Projects with Right of Way Issues

Any project can have right of way issues. Almost all transportation projects require some property rights and/or the relocation of utilities. Both federal and state laws require that people/businesses affected by transportation projects be treated equitably and fairly.

The need for property can be permanent or temporary, in fee (control of all rights), or in easement (use of some of the rights), and may be a direct or indirect result of the project.

The Department has developed a comprehensive right of way checklist (see Exhibit 17-EX-01) to assist LPAs in determining whether real property or property rights issues are involved in their projects.

© 1994-2025 California Department of Transportation. All rights reserved.

17.02.00.00 – ROLES AND RESPONSIBILITIES

17.02.01.01 FHWA – General

The federal agency with the major transportation role is the U.S. Department of Transportation (US DOT). Within the US DOT, FHWA has the primary responsibility for transportation projects undertaken with federal funding that are discussed in this Manual. FHWA has the authority and responsibility for implementing and monitoring federal laws, regulations, and executive orders affecting these projects. Other agencies within US DOT include the Federal Aviation Administration (FAA), Federal Railroad Administration (FRA), National Highway Traffic Safety Administration (NHTSA), Federal Transit Administration (FTA), Maritime Administration (MARAD), Office of Inspector General (OIG), Office of the Secretary (OST), Office of Hazardous Materials Safety (PHMSA), and the Saint Lawrence Seaway Development Corporation (SLSDC).

Caltrans has obtained major delegations of authority from FHWA under the provisions of MAP-21, the Moving Ahead for Progress in the 21st Century Act (P.L. 112-141), the 1991 Intermodal Surface Transportation Efficiency Act (ISTEA), TEA-21, and previous transportation acts. Caltrans has, in turn, passed on these delegations to LPAs whenever possible. With these delegations go the responsibility for initiating and completing each project phase in accordance with the appropriate state and federal laws and regulations without extensive FHWA or state involvement.

ISTEA established provisions for Congress to adopt a National Highway System (NHS) of approximately 155,000 miles of major roads in the United States. In November 1995, the President signed the legislation defining the new NHS. On October 1, 2012, Section 1104 of MAP-21 added to the NHS those roads that were at that time functionally classified as principal arterials but not yet part of the System. The NHS was expanded to about 230,000 total miles with these additions. It includes all Interstate routes, a selection of urban and rural principal connector highways, the defense strategic highway network and strategic highway connectors. In California, about 180 miles of local agency principal connectors were selected to be part of the NHS.

© 1994-2025 California Department of Transportation. All rights reserved.

17.02.01.02 FHWA Role

For all federal-aid projects, FHWA is responsible for the following project activities:

- Obligation of federal funds.
- Oversees Caltrans NEPA approval, as FHWA has delegated authority to Caltrans for approval of the National Environmental Protection Act (NEPA) measures except for projects that qualify for a Programmatic Categorical Exclusion.
- Execution of Project Agreements.

FHWA approval is required for all Conditional Certification No. 3 and Special Certification No. 3 with Work-Around on Interstates, unless delegated to the Department.

NOTE: The Federal Uniform Act must be followed on all federal-aid, local assistance projects. This applies if federal funds are used in any phase of the project.

Exhibit 17-EX-02, "Flow Chart of Right of Way Procedures," provides an overview of the right of way process for federal-aid projects.

17.02.01.03 Process Reviews

Although substantial responsibility for the administration of local assistance projects has been delegated to LPAs, Caltrans is required to accept and sign all ROW Certifications for projects with federal-aid. FHWA has retained the overall responsibility for compliance with the Uniform Act and performs periodic reviews to ensure various federal and state requirements are met.

17.02.01.04 Title VI, 1964 Civil Rights Act

LPAs must comply with all the requirements of Title VI of the 1964 Civil Rights Act on federal-aid projects. This is to ensure that all services and/or benefits derived from any right of way activity will be administered without regard to race, color, gender, or national origin. (23 CFR 200 and 710, Subparts B and E.)

© 1994-2025 California Department of Transportation. All rights reserved.

In addition, U.S. DOT Mandate 1050.2A introduced language required in Right of Way contracts, deeds, permits to enter and other real property documents, as applicable, to ensure compliance with Title VI.

The below referenced two clauses must be included in RW contracts and are to be standalone separate clauses.

"The parties to this contract shall, pursuant to Section 21.7(a) of Title 49, Code of Federal Regulations, comply with all elements of Title VI of the Civil Rights Act of 1964. This requirement under Title VI and the Code of Federal Regulations is to complete the USDOT-Non-Discrimination Assurance requiring compliance with Title VI of the Civil Rights Act of 1964, 49 C.F.R. Part 21 and 28 C.F.R. Section 50.3."

"No person in the United States shall, on the grounds of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be otherwise subjected to discrimination under any program or activity that is the subject of this contract."

17.02.02.01 Local Public Agencies Roles

Regional and local agencies have significant transportation roles. Regional Transportation Planning Agencies (RTPAs) and Metropolitan Planning Organizations (MPOs) develop Regional Transportation Plans and have the primary responsibility in responding to intraregional transportation needs. Local agencies with transportation roles include city and county planning, and traffic and public works departments. All of these agencies also work together with the state and FHWA to provide for both interregional and local transportation needs.

All cities and counties in California lie within the jurisdiction of an RTPA, MPO, or one of the County Transportation Commissions (CTCs).

NOTE: There are a number of counties throughout the State that have formed County Transportation Commissions (CTCs). They share the same acronym with the State of California Transportation Commission (see below) and care should be taken while reading the text not to confuse which entity is being discussed.

It is the responsibility of the LPAs to ensure that right of way activities performed by their staff or a private consultant are in compliance with state and federal regulations, as outlined in this manual.

© 1994-2025 California Department of Transportation. All rights reserved.

It is also the responsibility of the LPA to ensure early engagement and collaboration with Caltrans District Local Programs unit, so they have the opportunity to conduct oversight and monitoring of LPA activities, to support timely certification of the project.

17.02.03.01 State Roles

The state agency with the major transportation role is the California State Transportation Agency (CalSTA). Within CalSTA, the Department has the responsibility for the planning, development, construction, operation, and maintenance of the state's highway system.

17.02.03.02 California Transportation Commission (CTC)

The CTC is an independent state commission responsible for programming and allocating funds for the construction and maintenance of the highway, and passenger rail and transit improvements throughout California. It advises and assists the Governor, the Secretary of CalSTA, and the Legislature in formulating and evaluating state policies and procedures for transportation programs. Other functions performed by the CTC include the following:

1. Adopting the State Transportation Improvement Program (STIP) including an estimate of the state and federal funds that will be available.

2. Adopting *STIP Guidelines* for the implementation of the 1998 State Transportation Funding Act.

3. Allocating funds for the State Highway Operation and Protection Program (SHOPP) for maintenance, operational safety, and rehabilitation projects.

4. Submitting an evaluation of the Department annual budget to the Legislature, showing Department's ability to deliver a balanced transportation program along with the adequacy of transportation revenues.

5. Adopting Guidelines for monitoring Local Assistance projects to protect the state's funds and to ensure that they are spent in a timely manner. These are entitled *Guidelines for Allocating, Monitoring and Auditing of Funds for Local Assistance Projects.*

© 1994-2025 California Department of Transportation. All rights reserved.

6. When condemnation becomes necessary, adopting Resolutions of Necessity for projects on the State Highway System which are funded with STIP and SHOPP dollars.

17.02.03.03 State Transportation Improvement Program (STIP)

The STIP is a multiyear planning and budgeting document adopted by the CTC in even-numbered years. The transportation improvements funded through the STIP may be on the SHS, rail systems, or local streets and roads. There are two broad programs that constitute the STIP:

1. Interregional Improvement Program (IIP):

   The Department funds its projects from the IIP after discussions with regional and local agencies, county transportation commissions, and transportation authorities. The Interregional Transportation Improvement Plan (ITIP) is the *document*, which lists the nominated projects. The ITIP replaces the Department's proposed STIP (PSTIP). Each county receives a fixed percent of the ITIP. Eligible projects include freeways, conventional highways, intercity rail, grade separations, and mass transit improvements. Twenty-five percent of all STIP funds is set aside for the ITIP.

2. Regional Improvement Program (RTIP):

   Each RTPA has the responsibility under the STIP reform legislation to develop, in consultation with the Department, a Regional Improvement Program (RTIP) of projects within its jurisdiction. Eligible projects include conventional improvements to state highways, grade separations, soundwalls, rail transit, local streets and roads, and pedestrian/bicycle facilities. Seventy-five percent of the STIP funds is set aside for the RTIP.

The Department and regional agencies consult with each other in the development of the ITIPs and RTIPs. As part of this consultation, Department advises LPAs as far in advance as possible which projects are likely to be included in the ITIP and where joint funding may expedite the project. This process is a reciprocal one, permitting regional agencies to also advise the Department of projects which are proposed for programming in the RTIP. Concurrently, federal regulations require that projects be included in a Federal Transportation Improvement Program (FTIP) in order to be eligible for federal funding. The responsibility for identifying projects while preparing a FTIP is shared between the Department and LPAs.

© 1994-2025 California Department of Transportation. All rights reserved.

A new project *on* the SHS may not be included in either an ITIP or an RTIP without a complete Project Study Report. (See Section 17.04.02.06, "Project Report/Project Study Report [PR/PSR])." For projects *not* on the SHS, the equivalent of a Project Study Report must be prepared.

17.02.04.01 Department's Role

The Department has the overall responsibility for building and maintaining a statewide multimodal transportation system. This includes balancing state and regional needs for funding availability and allocation.

The Department shall have overall responsibility for the acquisition, management, and disposal of real property interests on its Federal-aid projects, including when those projects are carried out by the Department's sub-grantees or contractors. This responsibility shall include ensuring compliance with the requirements of this part and other Federal laws, including regulations. (23 CFR 710.201[a]). This information is set forth in the Caltrans Right of Way Manual. This Manual establishes procedures for appraisal, acquisition, relocation assistance, property management, and the other right of way functions and activities, and is intended to assist right of way personnel in complying with both federal and state laws, regulations, directives, and standards. Local agencies which use federal funds for their transportation projects do so with the understanding that they must conduct all right of way activities in accordance with the Caltrans Right of Way Manual.

17.02.04.02 Department's Role – Local Assistance (Off System) Projects

As noted above, the Department has obtained major delegations of authority from FHWA on federally assisted local transportation projects. Department has passed many of these delegations to LPAs. This effort, referred to as "reengineering," greatly reduced the traditional Department's role in preliminary engineering (design), right of way, and construction review. At the same time, other areas such as project authorization, consultant selection, and reimbursement payments were streamlined to eliminate multiple reviews. The Department's role for federal-aid local assistance projects is discussed at considerable length in Section 17.03.00.00.

© 1994-2025 California Department of Transportation. All rights reserved.

17.02.04.03 Department's Role – Special Funded (On System) Projects

The rapid growth and availability of "special" funding for transportation projects on the SHS is evidence of the determination by a majority of voters to control both the scope and the timing of improvements to the regional transportation infrastructure by willingly taxing themselves to finance these projects. The Department strongly supports and acts in partnership with cities, counties, RTPAs, MPOs, and private developers in the construction of these projects on the SHS. This active stance on Department's part is evenly reciprocated by locally elected officials, as a reflection on their ability to achieve the goals of the voters they represent.

It is important that Department staff and our LPA partners maintain a clear understanding of our mutual and reciprocal responsibilities. The Department has a much greater role in special funded projects than in the federal-aid local assistance projects because the state is the ultimate "owner-operator." Project sponsors should be made aware of this greater level of involvement at the outset of the development process. All projects on the SHS, regardless of funding, must comply with Department standards, practices, and procedures. The Department actively participates in the project development, right of way, and construction processes. All these roles in implementing Special Funded projects are discussed at considerable detail in Section 17.04.00.00.

17.02.04.04 Right of Way Headquarters' Role

The Right of Way Headquarters' responsibilities for both local assistance and special funded projects include the following:

A. Interpreting federal and state laws and regulations dealing with LPA transportation projects.

B. Developing policies and procedures for incorporation into the Right of Way Manual Chapters for LPA projects.

C. Ensuring that relevant informational material is disseminated to the Regions/Districts for distribution to LPAs.

D. Coordinating with other Headquarters Right of Way functions as well as the Headquarters Division of Design, Division of Local Assistance, and the Legal and Accounting Service Centers.

© 1994-2025 California Department of Transportation. All rights reserved.

E. Coordinating information and policy matters between Regions/Districts to ensure uniformity of operating measures and procedures.

F. Advising and assisting Region/District Local Program Coordinators in meeting their responsibilities.

G. Coordinating training opportunities for Caltrans Local Programs staff as well as LPAs and assisting Regions/Districts in providing training to LPAs.

H. Regular communication with each Region/District to evaluate the performance of the Local Programs function.

I. Reviewing and coordinating legislative matters affecting Local Program projects.

J. Providing staff assistance as necessary to the Chief, Division of Right of Way and other Department management.

17.02.04.05 Region/District Role – Engineering

At the inception of either a federal-aid local assistance or a special funded project, the project sponsor should contact the District Local Assistance Engineer (DLAE). The DLAE has overall responsibility for liaison with all LPAs in the Region/District.

17.02.04.06 Region/District Role – Right of Way

Each Region/District is responsible for designating a Right of Way agent as the Coordinator for Local Program projects. Inasmuch as the Local Programs function encompasses all phases of right of way, the Coordinator ideally should be an experienced agent with a broad knowledge of all aspects of right of way and contract administration. Furthermore, as the Local Programs Coordinator is representing the State in dealing with both FHWA and LPAs on transportation projects, strong interpersonal and communication skills are considered prerequisites.

The Right of Way Coordinator's responsibilities include the following:

A. Acts as liaison with the DLAE and the Division of Local Assistance on all LPA projects.

B. Acts as the primary contact for all LPA projects, which involve right of way or rights in real property.

© 1994-2025 California Department of Transportation. All rights reserved.

C. Approves/disapproves the qualifications of those LPAs seeking approval to perform their own right of way functions. This includes renewal upon expiration of the qualification term.

D. Maintains a list of all LPA projects with sufficient detail to track the status of the project.

E. Attends field reviews (staff time permitting) at the inception of the project.

F. Performs monitoring and oversight as needed. (See following Sections 17.03.00.00, Federal-Aid Local Assistance Projects for monitoring, and 17.04.00.00, Special Funded Projects for oversight.)

G. Approves Specific Authorization for utilities (see Chapter 14 of the Local Assistance Procedures Manual).

H. Reviews and accepts LPA's Right of Way Certifications for their projects and approves Right of Way Certifications on certain Special Funded projects. Acceptance and/or approval of Right of Way Certifications shall be done at the Senior Level or above.

I. Reviews, facilitates, approves, and executes TEA/EEM documents when grant funds are used for land acquisition. This includes the preparation of the appropriate escrow amendments and instructions as necessary.

J. Confirm that LPA's perform property management duties and the sale of Excess Lands in accordance with the Caltrans Right of Way Manual.

© 1994-2025 California Department of Transportation. All rights reserved.

17.03.00.00 – FEDERAL-AID LOCAL ASSISTANCE PROJECTS (OFF-SYSTEM PROJECTS)

17.03.01.00 General

For a local federal-aid project, the Local Public Agency (LPA) is responsible for the conception, planning, programming, environmental investigation, design, right of way (including the cost estimate), choice of consultants, the Right of Way Certification, construction, and maintenance. The LPA must ensure that its staff, consultants, and contractors comply with all applicable state and federal laws, regulations, and procedures in developing, implementing, and constructing its projects. All Right of Way activities will be subject to Caltrans oversight.

17.03.02.01 Funding and Programming – Roles of Metropolitan Planning Organizations and Regional Transportation Planning Agencies

Transportation planning involving the funding for local projects begins at the regional level. The plans are developed by Regional Transportation Planning Agencies (RTPAs), Metropolitan Planning Organizations (MPOs), and County Transportation Commissions (CTCs). The results of these efforts are incorporated in the Regional Transportation Improvement Plan (RTIP).

The RTIP is submitted to the Department and FHWA for approval and to the CTC for funding. RTIP projects, which involve federal funding, are included in an FTIP. Before an LPA project can be eligible for federal participation, it must be in an approved FTIP. This is the LPA's responsibility.

The CTC encourages the Department to assist regional agencies responsible for preparing a federal TIP, recognizing that federal regulations require that projects in counties with urbanized areas be included in the FTIP in order to qualify for federal funding.

After inclusion of the project in an FTIP and funding is programmed in the RTIP, the LPA should then work with the District Local Assistance Engineer (DLAE) before proceeding with project implementation. The DLAE will coordinate all the necessary authorizations from FHWA. As noted above, the primary Department responsibility for the administration of federal-aid local assistance projects rests with the DLAE.

© 1994-2025 California Department of Transportation. All rights reserved.

This section of the Right of Way Local Programs Manual was previously dedicated to Federal-Aid Local Assistance Projects (a.k.a. Local Streets and Roads projects) that are NOT on the State Highway System.

Instead of updating this section, we will direct you to the Local Assistance Procedures Manual, Chapter 13 – Right of Way, which was released on July 9, 2004.

Chapter 13 includes valuable information about the right of way process that, indeed, will assist the local agency in completing the right of way portion of their transportation project.

Additionally, each Caltrans District Office has a staff of knowledgeable right of way agents who will be happy to assist you with all of your right of way needs. This includes any information regarding Utility Relocations (see Chapter 14 of the Local Assistance Procedures Manual) which is part of the right of way process. We encourage you to take advantage of this valuable resource.

For information about Local Agency projects that are ON the State Highway System, or any portion thereof, please see the following section in this Manual, Section 17.04.00.00.

© 1994-2025 California Department of Transportation. All rights reserved.

17.04.00.00 – LOCAL PUBLIC AGENCY PROJECTS ON THE STATE HIGHWAY SYSTEM

17.04.01.00 Local Public Agency Projects on the State Highway System – Background

The focus of this chapter is projects on the State Highway System (SHS) sponsored by Local Public Agencies (LPAs). All LPA projects on the SHS, within the existing or proposed right of way, are subject to the requirements of the Right of Way Manual (R/W Manual).

Projects having as little as $1 in federal funding in any phase of the project are classified as Federal-aid projects. Projects with no federal dollars in any phase of the project are not Federal-aid projects. Both types of projects on the SHS are subject to the same provisions of Department policies and procedures, including the R/W Manual.

The final design and PS&E for on-system projects must be approved by the Department and must conform to Department standards and practices. Right of Way certification for each project must conform with RW Manual and match approved project PS&E. The Certification includes confirmation that right of way construction contract obligations are properly included in the PS&E, and confirmation that the right of way as shown on the construction plans is consistent with the LPA's Certification.

The Department is the owner-operator of the SHS. After construction is complete and the project is accepted, the Department remains responsible for operations and maintenance and retains tort liability, which explains why there is such a comprehensive level of involvement. All SHS projects must be developed in accordance with Department standards and practices, including planning, design, all right of way activities (including, but not limited to, appraisals, acquisition, utility relocation, etc.), and construction.

Background and guidelines for these projects are found in Deputy Directive 23 (DD-23-R2), "Roles and Responsibilities for Development of Projects on the State Highway System, dated December 4, 2018." (See Exhibit 17-EX-07.)

Prior to a Local Public Agency (LPA) beginning work on any project on the SHS, there must be an executed Cooperative Agreement (see the Project Management Manual, Chapter 20 [internal Caltrans link]) and/or an Encroachment Permit must have been issued (see guidance for administration of the Design Evaluation Engineering Report [DEER] project

© 1994-2025 California Department of Transportation. All rights reserved.

delivery process in the Project Delivery Procedures Manual [PDPM, Chapter 9, and the Encroachment Permit Manual, Section 500.10, Oversight Projects]).

17.04.01.01 Partnership Projects

Either the Department or an LPA sponsors this type of project. There is a variety of funding sources, which may include tax measure proceeds, local, state or federal monies, and direct contributions to the local agency from developers. The Department may be only a financial contributor, but may also be responsible for certain aspects of the projects such as construction management. Roles, responsibilities, and funding obligations must be defined in one or more Cooperative Agreements, regardless of the amount contributed by the project sponsor or the Department. (For additional detail, see Section 17.07.00.00, "Cooperative Agreements.")

17.04.01.02 Privately Funded Projects

Owners or developers of property adjacent to or near the SHS can use their own funds to construct, repair, or improve any portion of the highway. Some of these projects are undertaken to mitigate impacts or to improve access to the development. Privately funded projects are defined as projects on the SHS, which are sponsored by a private, nonpublic entity and have no funding in a State programming document.

When a new, privately funded project is proposed, a decision must be made in designating the project sponsor. The Department strongly encourages LPAs to sponsor privately funded projects to demonstrate community acceptance of the project and to improve coordination with other local agencies. If a proposed privately funded project is sponsored by an LPA, it will then be processed as a locally funded project.

If an LPA does not sponsor the project, the Department will work directly with the private sponsor. As the owner-operator responsible for assessing the impact of new projects on the existing SHS, the Department is responsible for the preparation of the PSR at Department's expense. It is the responsibility of the private sponsor to provide suitable engineering data, as well as technical and financial information needed for the Department to prepare the PSR. The private sponsor may prepare and submit a draft PSR, at its own expense, to expedite the project development process. The sponsor is responsible for performing all subsequent project development, right of way, and construction activities, with the Department providing oversight at the private project sponsor's expense.

© 1994-2025 California Department of Transportation. All rights reserved.

A Highway Improvement Agreement accompanied by an Escrow Agreement, if applicable, will be required for all privately funded projects. The private sponsor must follow the Department's Right of Way Manual for projects on the SHS.

17.04.01.03 Public Toll Roads

These projects use locally generated funds to build toll roads, which will ultimately be part of the SHS. The toll revenues are used to reimburse the costs in constructing the facilities.

17.04.02.01 Project Estimates

The Right of Way estimate is the first step in building a credible budget. The reliability of estimates for project costs at every stage in the development process is necessary for sound project management. The elements of an estimate allow R/W Planning and Management to forecast capital outlay support, personnel requirements, capital outlay expenditures, and future programming needs.

For projects where the Department is responsible for preparation of the Right of Way Data Sheet, the Region/District's R/W Estimating units are often called on to provide cost estimates with little lead time and with only very preliminary studies available. As the project design is progressively refined, alignment changes routinely occur with widespread and consequential impacts. Accordingly, when establishing right of way widths, initial consideration should always be given to the need for maintenance access, drainage, noise barriers, material sites, construction work areas, etc.

Estimates, even at an early stage, are often viewed as a Department financial commitment by LPAs that use the data to develop their project's budget. In the case of tax measure initiatives, project sponsors do not have the option of raising additional funds if there are cost increases and are consequently left with a serious shortfall of funds and/or the need to reduce the number or size of their projects during the life of the tax measure. This can become a very critical and sensitive issue. It is therefore very important that estimates are made with care and are based on the best information available at the time.

When LPAs are preparing their own project estimates, the Right of Way estimates must be prepared by Right of Way staff of a Qualified Local Agency or a Right of Way Consultant that has either an Appraisal License or a Real Estate License with a minimum two years of experience and the

© 1994-2025 California Department of Transportation. All rights reserved.

knowledge necessary to estimate the value of all types of real estate needed for transportation projects.

When an estimate is prepared by a consultant with a real estate license, the consultant should have at a minimum, completed basic appraisal courses and practical experience as an appraiser. Additional courses in building cost estimating and a working familiarity with various cost estimating resources are recommended. Although estimates are opinions, they are expected to be as solidly based as possible using appraisal principles. The estimator is not expected, however, to put in the time and effort that goes into an appraisal.

The estimator is allowed to use indicators of value that may not typically be acceptable in appraising. To prepare an estimate, the estimator will use this information as well as less direct indicators of market value such as:

- Staff appraisals of comparable properties.
- Assessor's information.
- Multiple listing service sales data.
- Observed listings.
- Information from brokers.

The Right of Way Local Programs Coordinator should provide assistance whenever possible. For additional detail, refer to Chapter 4, "Estimating," in this Manual.

17.04.02.02 STIP Requirements

Locally funded projects, prior to authorization to proceed with project development, should have an approved PSR, environmental clearance and, as applicable, be included in the STIP. During development of each STIP cycle, the Regional Transportation Improvement Plans (RTIPs) should incorporate locally funded projects where a concept has been agreed on and there is a firm funding commitment by a resolution or other documentation from the LPA even if they are not included in the STIP. Locally funded project costs in the STIP include all Department project support costs for each of the following four components:

1. All permits/environmental studies;
2. Preparation of the PS&E;
3. Right of Way Acquisition; AND
4. Construction/construction management, engineering (including surveys and inspections).

© 1994-2025 California Department of Transportation. All rights reserved.

If the Department and an LPA agree, they may recommend that a new locally funded project will be jointly funded. In this case, the LPA will nominate its share in the RTIP and the Department will nominate the interregional share in the ITIP.

17.04.02.03 Support Budget for Locally Funded Projects

All locally funded projects on the SHS must be included in the District's database, whether PMCS or PRSM, even if they are not included in the STIP. The Department *or* LPA Data Sheet is the source from which resources are entered into PMCS via the COST screens.

NOTE: Failure to include all locally funded projects will result in the Local Programs' oversight PYs being under allocated.

PMCS and PRSM databases must also be regularly updated to reflect the project's current status, e.g., workload, production, or scheduling changes. This is crucial to ensure the oversight PYs are properly budgeted.
In preparing a support budget for work on locally funded projects, a Region/District must plan for activity in two general areas:

1. The Region/District's support budget must include effort performed in preparation of the PSR, the environmental document, oversight, project certification, and general advice and assistance for LPAs undertaking the projects. These estimates must be considered in light of the Region/District's experience with acquiring agencies as to the degree of oversight and assistance necessary to certify projects. The Region/District must properly flag LPA projects so that budget personnel can identify the resources needed. The projects' PMCS Cost Screen should reflect full right of way effort as though Right of Way was doing the work. As a general rule of thumb, Right of Way oversight or contract administration is estimated at 10% of total PY effort. The Right of Way Coordinator must maintain close liaison with the unit developing locally funded projects, whether it is the DLAE or Project Development staff to obtain the latest estimates of the type and number of projects expected.

2. In Regions/Districts where reimbursed work is performed, the costs must be specifically budgeted before the work may be undertaken.

© 1994-2025 California Department of Transportation. All rights reserved.

17.04.02.04 Project Report/Project Study Report (PR/PSR)

The Project Report (PR) and Project Study Report (PSR) are essentially feasibility studies, which develop both the project's scope and schedule. These documents identify alternate proposals for the project and contain preliminary analyses of the costs, impacts, and requirements. They also detail a crucial element: whether the project results in significant capacity improvement, which is defined as either an increase in capacity more than two miles long or the construction of a major freeway-to-freeway interchange. The combined PR/PSR was designed for noncomplex, noncontroversial projects.

For locally funded projects, Right of Way participates in the preparation of the PSR as part of the project development team and by producing a R/W Data Sheet which contains the estimated R/W capital outlay requirements for the project, as well as an estimate of the amount and type of work to be performed.

17.04.02.05 Final Design/Plans, Specifications, and Estimate (PS&E)

The final design and PS&E must be approved by the Department and must conform to Department standards and practices. See Deputy Directive 23 (DD-23-R2) "Roles and Responsibilities for Development of Projects on the State Highway System, dated December 4, 2018," Exhibit 17-EX-07.

17.04.02.06 FHWA Role – Mixed Funding

Locally funded projects can have a mixture of funding, including both State and federal as part of the LPA's share. When projects utilize federal funding for right of way acquisition or construction or when modifications are made to an Interstate freeway in which FHWA has already participated, FHWA role is the same as outlined in Section 17.02.01.02.

17.04.02.07 NEPA/CEQA

All locally funded projects must comply with the California Environmental Quality Act (CEQA). Any project where Federal-aid funds are used or where modifications are made to an Interstate freeway in which FHWA has already participated, must comply with the National Environmental Policy Act (NEPA).

© 1994-2025 California Department of Transportation. All rights reserved.

17.04.02.08 Hazardous Waste Studies

All transportation projects on the SHS require the investigation and avoidance, if possible, of any exposure to hazardous waste products. Examples of hazardous waste include petroleum products, pesticides, organic compounds, heavy metals, or other compounds that are injurious to human health or the environment. All projects, which include the purchase of right of way, excavation, or the demolition/modification of structures, will require at a minimum an Initial Site Assessment to determine if any known or potentially hazardous waste exists within the project area. The Department's hazardous waste policy and procedures are set forth more fully in Chapter 7, "Appraisals," Chapter 8, "Acquisition," and Chapter 12, "Clearance and Demolition," of this Manual, and Chapter 18 of the Project Development Procedures Manual.

17.04.03.01 Advance Right of Way Activities

In order to avoid loss of federal funds as well as ensure project approval, regular right of way acquisition activities (a written offer) must not be conducted by an LPA on a proposed project prior to completion of the environmental process. The LPA may, however, commence "regular" project appraisals if the following has occurred: (1) the draft environmental document must have been circulated, (2) the public hearing process completed, (3) a preferred alternative has been approved, and (4) the project is not controversial. This policy is necessary to avoid any possible allegations of such acquisitions predetermining the proposed project location and design alternatives.

In all other instances, preliminary regular right of way activities that can be performed are those necessary for completion of the environmental impact assessment and preparation for public hearings. If the project does not meet the criteria stated above, "regular" appraisals cannot commence nor should the property owner be contacted. Activities that can be performed are limited to obtaining general appraisal information for later appraisals as well as work on relocation assistance studies and preliminary utility relocation efforts up to, but not including, the issuance of the Notice to Owner to Relocate.

© 1994-2025 California Department of Transportation. All rights reserved.

17.04.03.02 Advance Acquisitions

Some limited acquisitions may take place prior to completion of environmental and hearing requirements. These acquisitions may include the following, which are also discussed in the Acquisition Chapter in this Manual. It is emphasized that each type of acquisition described below may only take place prior to environmental approval and location selection if:

- The LPA shows compliance with applicable acquisition rules. (For details, refer to Chapter 8, "Acquisition," in this Manual.)

- Advance acquisitions (hardship and protection) shall not influence the environmental process for the project, including decisions relative to the need to construct the project or the selection of specific alternative locations.

- A Categorical Exemption package along with a request for either a hardship or protection acquisition has been submitted to FHWA and approved.

17.04.03.03 Advance Acquisition – Procedures

LPAs making such acquisitions are encouraged to use Department procedures to consider and evaluate advance acquisition requests in conformance with State and Federal criteria. All decisions to acquire under these guidelines should be thoroughly documented (for details, refer to Chapter 5, "Early and Advance Acquisition; Corridor Preservation; Hardship and Protection; Donations and Dedications" in this Manual. Also if the environmental and route location processes have not been completed, the advance acquisition must not influence the environmental assessment of the proposed project, nor can they influence the decision relative to the need to construct the project or the selection of a specific location.

All advance acquisitions must comply with Title VI of the Civil Rights Act of 1964 and the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 as amended.

© 1994-2025 California Department of Transportation. All rights reserved.

A request to acquire hardship or protection acquisitions prior to completion of environmental clearance requirements must be authorized in advance by FHWA's regional office if FHWA has already approved the project with the proposed acquisitions. This prior FHWA approval for the advance acquisition is required if federal reimbursement will be requested, in accordance with 23 CFR 710.503(a) and Federal money is utilized for any phase of the project, even if the right of way costs will be paid with the LPA's own funds.

Close cooperation and communication between the Region/District R/W Local Programs Coordinator, Acquisitions, and the LPA are necessary in order to ensure that eligible costs are neither prematurely submitted for reimbursement nor overlooked entirely when they in fact become eligible for reimbursement.

17.04.03.04 Hardship Acquisition

A hardship is defined as a situation where unusual personal circumstances accrue to an owner of property and are aggravated or perpetuated by reason of a pending transportation facility purchase and cannot be solved by the owner without acquisition by the LPA. See Chapter 5, "Early and Advance Acquisition; Corridor Preservation; Hardship and Protection; Donations and Dedications" of this Manual. FHWA retains approval of hardship acquisitions on all Federal-Aid projects, in accordance with 23 CFR 710.503.

17.04.03.05 Protection Acquisition

A protection acquisition is one required to prevent development of property in the path of a proposed project route that would cause higher acquisition and construction costs and relocation of people and businesses if deferred. FHWA retains approval of protection acquisitions on all Federal-Aid projects when federal reimbursement will be sought, in accordance with 23 CFR 710.503. See Chapter 5, "Early and Advance Acquisition; Corridor Preservation; Hardship and Protection; Donations and Dedications" of this Manual.

© 1994-2025 California Department of Transportation. All rights reserved.

17.04.03.06 Early Acquisition Options Under MAP-21

LPAs may undertake Early Acquisition Projects before the completion of the environmental review process, subject to the requirements in 23 CFR 710.501.

Options Under MAP-21 (Moving Ahead for Progress in the 21st Century Act)

Signed into law July 6, 2012, local agencies may request approvals from Caltrans (and FHWA where applicable) to initiate early acquisition right of way activities prior to completion of the NEPA environmental review process for proposed federal-aid highway projects.

Right of Way regulations for federally assisted highway programs may, under certain circumstances, allow the agency to initiate early acquisition for corridor preservation, access management, or other purposes.

In order to maintain eligibility for federal assistance, local agencies must strictly adhere to guidelines outlined in the Code of Federal Regulations 23 CFR 710.501 and 23 USC 108.

To determine if early acquisition is an option for a project, the local agency must choose an alternative outlined in accordance with MAP-21 regulations. Consult with the Right of Way Local Programs Coordinator in your area to determine agency eligibility.

The four alternatives the local agency may be able to utilize to initiate right of way activities under early acquisition include:

1. State-funded early acquisition without Federal Credit or Reimbursement.
2. State-funded early acquisition eligible for future credit.
3. State-funded early acquisition eligible for future reimbursement*.
4. Federally Funded Early Acquisition (Stand-alone Project).

***NOTE:** Alternative #3 requires advance concurrence from the Governor. Local agencies must provide written approval from the Governor prior to utilizing this alternative. Caltrans does not have approval from the Governor to exercise this option.

Additional information on Early Acquisitions can be found in Chapter 5 of the Caltrans Right of Way Manual.

Specific compliance criteria for each option can be found on this Early Acquisition Table on FHWA's website.

© 1994-2025 California Department of Transportation. All rights reserved.

District Local Programs and Acquisition units will collaborate to process any such requests from local agencies, with complete submittals to HQ Local Programs for discussion and joint review with the HQ policy owner of Chapter – 5 Early Acquisition. While ultimate approval authority remains with the policy owner of Early Acquisitions, HQ Acquisitions and Condemnation Section, HQ Local Programs will take the lead to process the request through the HQ Early Acquisition policy owner and obtain all required approvals, including from FHWA, if applicable.

Additional information can be found in Chapter 5 of this manual.

17.04.03.07 Dedications

A dedication is the setting aside of property for public use, without compensation, as a condition prior to the granting of a permit to construct, a zoning variance, or a conditional use permit, etc. The project's timing, i.e., when the additional right of way is required for the highway improvements, dictates whether the Department or the LPA (usually City or County) accepts title to the parcel at the time of dedication. The property owner will normally initiate the request to the LPA that triggers the dedication. Valid dedications can however be accepted throughout the project development process.

There are a number of situations in which dedications occur. Some examples are as follows:

1. When the additional right of way is required for highway improvements that are being constructed in conjunction with a developer's project.

2. When LPAs require the dedication of property rights in conformance with the agency's adopted General Plan. In these cases, in exchange for permits, variances, or land use changes, LPAs require the dedication of property to the setback or the ultimate right of way line as reflected in their General Plan.

© 1994-2025 California Department of Transportation. All rights reserved.

17.04.03.08 Donations (Contributions)

A donation is the voluntary conveyance of property, without compensation, for the improvement of a current or future public project. Donations of right of way may be accepted from a property owner(s) voluntarily, when advised of their right to compensation. The owner/owners must be provided with an appraisal of the real property to be acquired, or a waiver valuation, if appropriate, unless the owner/owners release the LPA from such obligation. The waiver of just compensation and/or release from obligation to provide an appraisal must be documented, in accordance to 49 CFR 24.108. Exhibit 17-EX-08 has been approved for this purpose and should be used whenever donations are offered and accepted. The offer to donate should originate with the property owner and must not in any way result from an act of coercion or suggestion by the LPA.

Property owners who offer to donate should be advised of their right to reserve airspace development rights as set forth in Streets and Highways Code 104.12, which states if leased property was provided for SHS purposes through donation or at less than fair market value, then the lease revenues shall be shared with the donor or seller if so provided by contract when the property was acquired.

Donations may be made at any time during the development of a project. However, any document executed for the purpose of a donation prior to approval of the environmental clearance of the project shall clearly state that:

1. All alternatives to a proposed alignment will be studied and considered.

2. Acquisition of property shall not influence the environmental assessment of a project including the decision relative to the need to construct the project or the selection of a specific location; and

3. Any property acquired by donation shall be revested in the grantor or successors in interest if such property is not required for the alignment chosen after completion of the environmental clearance and public hearing, if required.

Once the environmental and route location process requirements are satisfied and regular Right of Way activity is under way, donations may be accepted by the acquiring agency as part of their regular acquisition program, provided the restrictions referred to above are followed.

© 1994-2025 California Department of Transportation. All rights reserved.

17.04.03.09 Donations (Credit for Local Match)

The fair market value of donations can be considered eligible as local matching funds whenever federal funds participate.

17.04.03.10 Acquisition of Excess

To avoid involvement in an excess lands disposal program, Regions/Districts as a general rule should not acquire or accept title to future excess land in the Department's name in conjunction with the acquisition of the rights of way on locally funded projects. If the excess is acquired, the acquisition should be via a second deed vesting the excess land portion in the LPA. Where right of way lines are indefinite, excess may be acquired in the Department's name with the understanding that all excess land acquired by the state will be deeded back to the LPA for their disposal upon completion of the highway construction. FHWA does not participate in the purchase of property not incorporated into a project, as defined by 23 CFR 710.203(b) and (b)(6) except those identified as "uneconomic remnants", as defined in 49 CFR 24.102(k).

17.04.03.11 Sale or Exchange of Excess Property

Locally funded projects may involve the acquisition of property that becomes excess to Department needs as a result of interchanges being removed or reconfigured, ramps being relocated, etc.

Streets and Highways Code Section 118 permits the Department to sell or exchange right of way when it is determined that the property is no longer needed for highway purposes. On these projects, in the furtherance of our partnership approach, it is the Department's policy to cooperate with the LPA sponsor in making possible the exchange of state excess for property acquired by the LPA.

A valuation of the property involved will be completed by the Department's Right of Way staff. The value of the property acquired for state highway improvements should normally be of equal or greater value than the value of state excess property to be exchanged. If the state excess has greater value, the entities should normally pay the state the cost difference. However, the value of the state highway facility improvements financed by the entity may be factored into exchange values if it is in the best interest of the state. The real property exchange should be considered during early stages of project development whenever possible and addressed in the appropriate project development document (PSR, PSR/PR, etc.). Terms and conditions of

© 1994-2025 California Department of Transportation. All rights reserved.

the property exchange should be included in the Cooperative Agreement. The property exchange is subject to CTC approval.

NOTE: Where State funds participate in right of way acquisition, either on or off the State Highway System, the proportionate share of proceeds from the sale of excess real property shall be returned to the Department. The LPA shall contact the Department's Right of Way Liaison in their area prior to the sale of excess real property.

17.04.04.01 Utility Relocation

In order to ensure utilities are relocated in timely fashion, it is crucial that early liaison be established between the utility companies and the design unit. This early involvement will help determine where potential conflicts exist, where possible design changes would preclude the need to relocate the utility and, if utility relocation is required, allow the utility company to budget the necessary staffing and capital outlay required to carry out the relocation activity on a schedule compatible with the project certification requirements.

Utility relocation can commence after the environmental document is approved and continue concurrently with the property acquisition process. Although it is preferred to have all utility relocations completed before the highway construction begins, utility relocation work may continue through the construction process. All utility relocations must comply with state and federal laws and conform to Department specifications. For additional discussion, refer to Chapter 13, "Utility Relocations," in this Manual and Chapter 14, "Utility Facilities," in the Local Assistance Procedures Manual.

17.04.04.02 Utility Master Contracts

The Department has entered into master contracts with a number of the larger utility owners for the apportionment of relocation costs on freeway projects. These contracts are to be applied in lieu of otherwise applicable Streets and Highways Code sections and are applicable to all freeway projects on the SHS no matter what the source of project funds or the agency responsible for project design. The terms of the Master Contract determine the cost apportionment, but as a general rule, utility activities fall under the Master Contract terms whenever those activities support the construction, maintenance, improvement, or repair of the freeway, regardless of whether such activities take place within the right of way, outside the right of way on other public property, or outside the right of way on private property. In order that the Department not be inadvertently assessed utility activity costs which ought to have been paid by the LPA, it is extremely important that the

© 1994-2025 California Department of Transportation. All rights reserved.

Cooperative Agreement contain utility relocation clauses that are not modified unless Region/District Right of Way Utility Relocation section has been consulted and has agreed in writing to any proposed clause changes. The only exception to the use of the Master Contract is when the freeway improvement project is an LPA-imposed mitigation requirement arising as a result of developer request for property improvement. In this case the developer will be responsible for all utility relocation costs in accordance with applicable case law.

17.04.04.03 High and Low Priority Utility Facilities

All underground high and low priority utility facilities within the State Highway rights of way shall be handled in accordance with the Department's utility policy as referenced in the Project Development Procedures Manual Chapter 17, Encroachments and Utilities.

17.04.04.04 Agreement for Positive Location of Underground Utilities (Pos-Loc)

In an effort to accelerate project delivery and eliminate discovered utility work, the Department has implemented the Positive Location ("Pos-Loc") Program. Pos-Loc is a project delivery activity using state administered contracts to expose underground utilities for state highway projects, using vacuum excavation methods.

The Department has entered into a standard "Agreement for the Positive Location of Underground Utilities" with willing utility companies that call for the Department to pay 100% of all positive location (pothole) work for all projects on the State Highway System.

Local Public Agencies responsible for delivering Utility Relocation Services for projects on the State Highway System are required to implement this policy.

Please refer to the Right of Way Utilities website for information regarding utility companies that have executed Positive Location Agreements and names of the Department's Utility Coordinators in your area. Additional information regarding the Positive Location Agreement process can be found in Chapter 13, "Utility Relocations," of this Manual.

© 1994-2025 California Department of Transportation. All rights reserved.

17.04.05.01 Cooperative Agreements

After the PSR is approved, the LPA(s) and the Department jointly develop and execute a Cooperative Agreement(s) which contains all the respective responsibilities and funding roles for the various phases of project development and construction. All locally funded projects on the SHS with construction costs *greater* than $1,000,000 require Cooperative Agreements. Please see Section 17.07.00.00 for further discussion.

NOTE: Projects with construction costs *less* than $1,000,000 can also be quite complex due to funding or other factors. A Cooperative Agreement is the only practical way to adequately memorialize the respective agreements and responsibilities in projects involving right of way and/or right of way utilities. The Department should enter into a Cooperative Agreement in all such cases and the $1,000,000 threshold figure should be ignored.

17.04.05.02 Tracking of Right of Way Expenditures

It is crucial that each Region/District have a responsible Right of Way Project Coordinator/Administrator to track the monthly/total expenditures for each project from the inception of the Right of Way activities. Some of the responsibilities are to ensure that each Cooperative Agreement is current and adequately funded. If additional resources are needed, the Cooperative Agreement must be amended. If resources have been exhausted, all right of way activities must stop and cannot continue until an amendment has been executed and additional resources secured.

17.04.05.03 Capital Support Reimbursed Work

The Region/District's Right of Way staff may perform work for LPAs on Locally Funded projects on the State Highway System and be reimbursed pursuant to a Cooperative Agreement. Any new or revised Cooperative Agreements for reimbursed work require individual approval from your Deputy District Director for Program and Project Management.

© 1994-2025 California Department of Transportation. All rights reserved.

17.04.05.04 Reimbursed Supervision

On some locally funded projects, when the appropriate approvals provided for above have been obtained, the Department will provide supervision of an LPA's right of way activities. In this context, reimbursed supervision includes providing the necessary review and approvals to complete the Right of Way phase of the project.

NOTE: The difference between the Department (or a qualified LPA) providing "oversight" and "supervision" involves the *approval* of work products. These review/approval responsibilities must be included in the Cooperative Agreement.

17.04.05.05 LPA Qualification Requirements

Qualified LPAs may perform the right of way functions for which they have been approved. Nonqualified LPAs must utilize one of the options listed under Section 17.05.07.01. (See Section 17.05.00.00, "Local Agency Qualifications," and Section 17.06.00.00, "Consultant Qualifications.")

17.04.06.01 Locally Funded Projects – Duties

In addition to the general duties described at Section 17.02.04.03, other Right of Way duties may include the following:

A. Coordinating with the Region/District Planning and Management Branch to ensure that *all* locally sponsored and funded projects are included in PMCS/PRSM and are updated as necessary on the Status of Projects report.

B. Coordinating/assisting in the preparation of the Project Study Report, the Project Report, cost estimates, etc.

C. Coordinating/assisting with the preparation of Cooperative Agreements or Highway Improvement Agreements.

D. Coordinating the Department's line functions (e.g., appraisals, acquisition, relocation, etc.) when their assistance is necessary in performing oversight or when the state performs these functions as reimbursed work.

E. Providing oversight during the right of way phase (if these functions are performed by others) to ensure that all right of way activities and

© 1994-2025 California Department of Transportation. All rights reserved.

"deliverables" conform to state standards. (See Section 17.04.06.02, "Oversight [Quality Assurance]).

F. Accept the Right of Way Certification. (See Section 17.08.00.00, "Project Certification.")

17.04.06.02 Oversight (Quality Assurance)

The Department, as the ultimate owner-operator of the SHS, will always be liable for maintenance and operation of the System and retains tort liability once the completed project has been accepted. Furthermore, as also discussed above, on locally funded projects, the Department plays an active role in the project development process. Department approval is required for the Project Report and the PS&E. The Department usually prepares the environmental document (which may require extensive Right of Way involvement). During the right of way phase, we are very much concerned with the quality of the work product and therefore with the qualifications of the parties performing this work. It is therefore in our best interest to become as involved in the projects as staff time permits. Project sponsors, whether LPAs or private entities, are responsible for funding these projects, but often need Department involvement to become familiar with the development process and requirements. For our purposes here, this involvement is referred to as oversight. The Department funds its oversight activities on locally funded projects unless the project is privately sponsored. On private projects, the project sponsor is responsible for the cost of oversight.

Oversight is an intensive level of Department staff involvement in providing review of all right of way activities and acting as a resource for information on Right of Way Manual requirements. LPAs negotiating Cooperative Agreements should be made aware as early in the process as possible that Department staff will play an active role in reviewing the right of way activities for the project. (See Exhibit 17-EX-11, "Functional Responsibilities," Oversight.)

Oversight responsibility begins with providing the LPAs all applicable manuals, handbooks, guidelines, etc., containing the federal and state requirements and regulations. It can include assistance in preparing and reviewing the Project Study Report, maps, cost estimates, R/W data sheets, utility relocation arrangements and schedules, and any other requirements for the project. It can also include qualifying LPAs to perform their own right of way functions and assisting nonqualified LPAs to retain qualified consultants. Of particular concern to the state, oversight should include the review of a representative sampling of "deliverables," i.e., right of way maps, appraisals, acquisition files

© 1994-2025 California Department of Transportation. All rights reserved.

(deeds, contracts, diaries, etc.), RAP files (claims, payments, diaries, etc.), and review and approval of the LPA's R/W Certification.

The District R/W Local Programs Coordinator will monitor R/W activities at any time during the project. Most monitoring will be performed on a real-time spot-check basis to ensure that such activities are performed in compliance with state and federal laws and regulations, to include the Uniform Act, Federal Stewardship requirements, the FHWA Project Development Guide, and the Caltrans Right of Way Manual. All R/W functional areas are subject to review. This includes project delivery right of way activities such as appraisals, acquisitions, utility relocations, etc. and may include additional right of way responsibilities like property management and disposal of excess lands. These reviews should occur at each R/W activity, so any deficiencies discovered can be corrected, prior to moving onto the next R/W activity. (e.g., Appraisals reviewed prior to start of Acquisitions, Acquisition contracts reviewed prior to offer, Administrative Settlements reviewed prior to contract execution, etc.) Spot-check monitoring will normally be limited to no more than 25% of the total work performed. Additional reviews must be made only when violations are discovered and then only to determine if the violations are prevalent or one-time occurrences (see Monitoring Findings below). The reviewer must bring all violations discovered to the attention of the LPA. It is the LPA's responsibility to ensure correction. The selection of projects that will be monitored will be at the discretion of the district based on staff availability, familiarity with the LPA, the project, and consultants which may be used, as well as the complexity of the R/W issues. Monitoring will usually use checklists or outlines to guide the review. Both entry and exit conferences should be conducted to advise LPA staff of the scope and findings of the monitoring findings. A written report will usually be provided to the LPA.

Oversight responsibilities extend beyond the project certification and include whatever efforts are necessary to ensure that the right of way acquired for the project is properly conveyed to the Department and that our requirements are satisfied pertaining to system integrity (e.g., title, description, and monumentation).

© 1994-2025 California Department of Transportation. All rights reserved.

17.04.06.03 Expenditure Authorizations – Oversight

As noted above, each locally funded project will be the subject of a Cooperative Agreement. (See Section 17.07.00.00, "Cooperative Agreements.") When the Agreement is being developed and in particular after the Agreement is approved, the Local Programs' role is *usually* one of oversight. Each Cooperative project will have an Expenditure Authorization (EA) assigned. Local Programs staff may be involved in activities from a project's inception through the end of construction. Consult the Division of Right of Way's Time Charging Manual (internal Caltrans link) for appropriate time charging codes.

17.04.07.01 Appraisal Requirements

Purchase of the required right of way can be made only after a written appraisal of its market value has been made per 49 CFR 24.102 (c)(1) and approved to establish just compensation per the 49 CFR 24.103 requirement. Per 49 CFR 24.104, all projects on the SHS require an appraisal review process which at a minimum:

A. Requires a qualified reviewing appraiser review the appraisal to assure it meets applicable appraisal requirements and shall, prior to approval, obtain any necessary corrections or revisions.

B. If the reviewing appraiser is unable to approve or recommend approval of the appraisal as an adequate basis for the establishment of just compensation and it is not practical to obtain an additional appraisal, the reviewer, acting as reviewing appraiser, may develop appropriate appraisal documentation to support an approved or recommended value.

C. Requires a signed statement, which identifies the appraisal report reviewed and explains the basis for such recommendation or approval. In addition, any damages and/or benefits to the remainder must be identified in the statement.

© 1994-2025 California Department of Transportation. All rights reserved.

17.04.07.02 Dual Appraisal Requirements

While the Department no longer requires dual appraisal reports for unusually complicated parcels or parcels exceeding $500,000 in value, it is our responsibility to point out appraisal situations where it may be prudent or helpful to have two appraisal opinions. It is the LPA management's responsibility to decide if they are comfortable with only one appraisal when the values may be several hundred thousand dollars of measure money, compared to the cost of a second appraisal.

Section 7.01.00.00 in Chapter 7, "Appraisals," in this Manual contains the Department's recommendations for dual appraisals.

17.04.07.03 Access Control – Private Property Benefits

Access control changes that directly benefit or serve private property require that compensation be paid for the increased value of the property. If a private property owner would like to purchase a break in the access control, the property owner must pay the State for the "added value" that will be created to the benefitting property. This added value is determined with a "before and after" appraisal. The property owner is also responsible to reimburse the State for the cost of the staff appraisal completed.

For additional information, refer to Chapter 7, Section 7.04.07.00.

17.04.07.04 New Public Road Connection – Benefits

If the proposed access opening or modification is for the purpose of allowing a new public street connection, compensation as defined above will be required unless the street clearly serves a public purpose and there are no abutting private properties that would receive a preponderance of benefit due to increased development potential.

NOTE: For additional discussion of these policies, refer to Chapter 26 and Chapter 27 of the Caltrans Project Development Procedures Manual.

© 1994-2025 California Department of Transportation. All rights reserved.

17.04.08.01 Locally Funded – Power of Eminent Domain

As Implementing Agency for Right of Way, the LPA will acquire property for state highway purposes and take title first in its own name (Streets and Highways Code Section 113 for Cities and Streets and Highways Code Section 760 for Counties). Caltrans acceptance of title and ultimate vesting in the State will occur after completion of the project's Right of Way Close Out activities. See Deputy Directive 23 (DD-23-R2), Roles and Responsibilities in Development of Projects on the SHS (Exhibit 17-EX-07).

NOTE: When Caltrans is the Implementing Agency for RW, title will be taken in the State's name. As a condition of Caltrans taking title as the RW Implementing Agency, Caltrans shall also be the Implementing Agency for Construction.

In general, there are no comparable legislative provisions authorizing transit/transportation/measure authorities to acquire property by condemnation or take title to property acquired for state highway purposes. In the absence of specific statutory authority, local traffic authorities do not have power to take title to real property to be used for state highway purposes. Conversely, the state is not authorized to take property by eminent domain in the name of the traffic authority.

17.04.08.02 Acquisition Settlements

The decision as to the most effective way to acquire the necessary rights of way is the responsibility of the LPA. The Department's *usual* role is limited to oversight. Within this context, LPAs must review and approve their own administrative authorizations and/or settlement amounts, exchanges, etc., according to the criteria contained in the Right of Way Manual. The Department's role is to ensure that such acquisitions are in conformance with the Uniform Act and that such actions do not deprive the property owner of just compensation.

As part of the oversight process, District R/W staff should review some or all, LPA Administrative Settlements to ensure that the settlement language strongly supports any increase is based on and supported by the guidelines contained in 49 CFR 24.102(i).

Administrative Settlements are not to be used in lieu of an updated appraisal report. Please refer to Chapter 8, Section 8.01.28.00 Administrative Settlements of this manual for specific guidelines in determining whether an administrative settlement should be made.

© 1994-2025 California Department of Transportation. All rights reserved.

Whenever the Department is performing acquisition for an LPA on a reimbursed basis and an administrative settlement or statutory offer is proposed, the LPA must be involved in and approve any amount over the approved appraisal.

17.04.09.00 Condemnation When LPA is Implementing Agency for RW – General

The power of eminent domain can only be exercised if the condemning authority can establish:

- The necessity of the project,
- The project location is most compatible with the greatest public good and least private injury,
- And the property is necessary for the project.

State statute allows the California Transportation Commission, cities and counties to hear and adopt resolutions of necessity for the acquisition of property needed for projects on the State Highway System. The exercise of eminent domain to acquire property for state highway purposes can be accomplished only by the state (Department) or by the county or city in which the property is located.

When the LPA is the Implementing Agency for RW and has authority to condemn under California Eminent Domain Law, Code of Civil Procedures, the steps involved in taking resolution requests to a local board begin during the draft cooperative agreement phase. The decision to take Resolutions of Necessity to the Local Board of Supervisors or City Council is made for the project in its entirety.

When the LPA, city or county, is the project sponsor and implementing agency for Right of Way, the LPA shall hear the resolutions. For city-sponsored projects, the city council must pass a resolution, by two-thirds vote, agreeing to hear the Resolutions of Necessity for the project. For county-sponsored projects, the county must pass a resolution, by four-fifths vote, agreeing to hear the Resolution of Necessity for the project. LPAs that do not have authority to condemn under California Eminent Doman Law, Code of Civil Procedures shall coordinate with a LPA that has authority within the project area.

NOTE: If the LPA having authority to condemn elects to have Caltrans undertake the role of Implementing Agency for RW, the Department will perform all right of way work including assumption of this condemnation task.

© 1994-2025 California Department of Transportation. All rights reserved.

The cost for providing Design, Right of Way, and Legal services is reimbursable to Caltrans and must be included in the Cooperative Agreement, Right of Way Services Agreement, or applicable amendments thereto. In addition, prior budgetary authority for reimbursable work must be obtained. See section 17.07.00.00 Cooperative Agreements of this chapter for more detailed discussion. Access the standard Cooperative Agreement Articles.

17.04.09.01 Notice of Intent

The local agency, as Implementing Agency for R/W is required to follow the Department's Notice procedures. Please see Chapter 9, Section 9.01.04.00. A Notice of Intent to adopt a Resolution of Necessity can only be served after the grantor has been given a reasonable amount of time to consider the offer presented. The Notice of Intent cannot be served immediately following the offer to acquire. Per 49 CFR 24.102(f) Appendix A, a reasonable amount of time given can vary significantly, depending on the circumstances, but thirty (30) days would seem to be the minimum time property owners should be given.

17.04.09.02 Resolution of Necessity

The resolution must satisfy all of the requirements of the Code of Civil Procedures (CCP), Title 7, Chapter 4, Article 2. When the LPA is the Implementing Agency for R/W, all legal activities associated with the eminent domain activities, including process of the resolution package, must be performed by the LPA's Legal Counsel.

The Resolution of Necessity must contain a general statement of the public use for which the property is being acquired and must reference the appropriate statute for the property rights to be acquired by eminent domain. Frequently cited references are:

- Streets and Highways Code Section 102 allows for acquisition by eminent domain for state highway purposes
- CCP Section 1240.410 – the acquiring agency is acquiring a remnant of such size, shape or condition that it will have little market value
- CCP Section 1240.510 – the property is being acquired from another public agency for a compatible use
- CCP Section 1240.610 – the property is being acquired from another public agency for a more necessary public use
- CCP Section 1240.220 – the public agency is acquiring additional property for future use, requires owner's consent

© 1994-2025 California Department of Transportation. All rights reserved.

- CCP Section 1240.150 – entire parcel is to be acquired when the remainder would be of little value to the owner, requires owner's consent

The resolution must also contain a general location and extent of property rights to be acquired to allow for reasonable identification. The resolution document must declare the public finds each of the following:

- Public interest and necessity require the project
- The project is located in a manner to provide the greatest public good and least private injury
- The property is necessary for the project
- An offer has been made to purchase the property in accordance with Section 7267.2 of the Government Code

17.04.09.03 Request to Appear

Statute allows the property owner fifteen days within which to request an appearance before the board hearing the resolution request. If a Request to Appear is not timely, then the right to appear has been waived and the resolution will be heard as a consent item. Exceptions to timely requests may be granted jointly by the delivering agency and the governing body. The reasons for exception will be documented in every case. Possible reasons are documented illness or documented travel.

If the owner requests an appearance, then the local agency must follow a review process in accordance with Caltrans Right of Way policies and procedures. The review process may require postponement of the date the resolution is heard before the CTC, County Board of Supervisors, or City Council.

The Condemnation Evaluation Meeting and Condemnation Panel Review Meeting provide a forum where property owners can meet with Local Agency Right of Way and Local Agency and Caltrans Design managers in an effort to resolve design issues. These reviews address the concerns of the property owner. It is important that Caltrans as owner-operator and decision-maker be included in the review process. Occasionally, certain acceptable design exceptions with minor impact can satisfy the property owner's concerns. The Condemnation Evaluation Meeting and the Condemnation Panel Review Meeting may be combined only when there are no design issues. If there are no design issues, then the decision to combine the two meetings is made by the LPA.

© 1994-2025 California Department of Transportation. All rights reserved.

17.04.09.04 Condemnation Responsibilities (LPA as Implementing Agency for RW)

In preparation for condemnation, the LPA will *normally* provide the following:

A. Current title reports with indications of each interest to be named in the lawsuit and updates of such reports as necessary.

B. Relocation assistance certificates of occupancy indicating names of persons of other entities in possession of the property.

C. An adequate legal description of the property.

D. Right of Way/Parcel maps as required for condemnation complaints.

E. All notices and reports necessary to obtain Resolutions of Necessity including reports and/or presentations where an owner seeks to exercise his right to appear before the appropriate governing body to contest the necessity for the taking.

F. Documents necessary to deposit the just compensation with the State Treasurer.

G. Necessary information for obtaining orders of possession.

H. All efforts required to process suit papers and to file, serve, and prepare proof of service documents for required summons, complaints, and orders for possession.

I. An authorized representative from the LPA who will appear at the hearing before the appropriate governing body to adopt the Resolution of Necessity.

© 1994-2025 California Department of Transportation. All rights reserved.

17.04.09.05 Condemnation Trials Responsibilities (LPA as Implementing Agency)

In preparation for trial, the LPA will *usually* provide the following:

A. A copy of the LPA's staff appraisal report.

B. Relevant acquisition files and data, including copies of parcel diaries, correspondence, and other related material.

C. Engineering witnesses familiar with the property to be acquired, the proposed project and the improvements associated therewith.

D. All maps, exhibits, and photographs required for trial.

E. Expert appraisal witnesses.

17.04.10.01 Property Management – Income

Pursuant to Streets and Highways Code Sections 104.6 and 104.10, lands may be leased which are held for state highway purposes and are not presently needed therefor on such terms and conditions as the director may fix and to maintain and care for such property in order to secure rent therefrom. Except for any rent required under the California Toll Bridge Authority Act (Division 17, Chapter 1), or any bond indenture executed under that act, to be deposited in some other fund, all such rent shall be deposited to the credit of the State Highway Account in the State Transportation Fund.

17.04.11.01 Local Agency Relocation Assistance Appeals Process

Whenever the LPA or their consultant is proposing to perform relocation assistance work, the LPA must have an appeal process that meets the Uniform Act/CFR requirements and is approved by the Department prior to commencement of relocation assistance activities. According to 49 CFR 24.10(b), a written appeal shall be considered by the Agency regardless of form. There is no mandatory format for an appeal; however, see RW 10-06 for a suggested format.

© 1994-2025 California Department of Transportation. All rights reserved.

The District must approve the process and the Appeals Board members or hearing officers designated by the LPA. The submittal to the Department should include the following:

1. Assurances that all persons receiving relocation assistance will be advised of their right to appeal.

2. The names and qualifications of prospective members of an Appeals Board or appeal review officers. (Note: Appeals Board members should not be persons who are involved in the relocation claims process nor any supervising persons involved in the claims process.)

3. The LPA's plan for hearing appeals in a timely manner and advising the appellant of the outcome of the hearing.

4. Assurances that all appellants who do not receive the total relief requested will be advised of their right to seek judicial review.

17.04.12.01 Project Certification

The LPA sponsor is responsible for certifying that physical and legal possession of the necessary right of way has (or will be) obtained, including payment to property owners/deposit of funds into escrow, that all occupants have vacated the property, and that all acquisition and relocation activities comply with applicable state and federal laws. The certification must be submitted to the Department for acceptance only after the department has conducted real-time monitoring and review of RW deliverable documents. For additional information on real-time monitoring, see Section 17.04, and for additional discussion of the Certification process, see Section 17.08, "Project Certification," and Chapter 14, "Right of Way Certification," in this Manual.

© 1994-2025 California Department of Transportation. All rights reserved.

17.04.13.01 Acceptance of Title by Caltrans

The LPA sponsor is responsible for delivering title to the right of way acquired for the project to the Department free and clear of all encumbrances detrimental to Department's present and future uses.

The Department, as owner/operator, will accept the completed LPA-sponsored project into the SHS, provided the project was approved and that right of way was acquired in accordance with Department policies, practices and procedures, including terms of the project Cooperative Agreement. To ensure compliance, the following procedures have been adopted:

A. LPA-Sponsored Projects (Public Projects)

1. The LPA prepares and submits to the Local Programs Coordinator the acquisition documents (Right of Way Contract, Grant or Easement Deed, escrow instructions, etc.) for each acquisition transaction.

2. The Coordinator reviews and approves the transaction and arranges for the authorized District Right of Way representative to acknowledge acceptance of the deed.

3. Upon acceptance, the Region/District will submit the Deed and escrow instructions to the title company.

4. The title company, upon receipt of a check from the LPA (or the Department, if appropriate), will close escrow, issue a policy of title insurance as in the amount specified in the escrow instruction letter, and record the deed vesting title in the LPA or state, free and clear of all liens and encumbrances except as otherwise stated.

B. Private Developer-Sponsored Projects (Private Projects):

1. The Developer acquires the necessary rights of way with title vested in the developer's name.

2. The Developer provides the Department, prior to the issuance of an encroachment permit, a Right of Way Certification and acquisition package consisting of a Grant Deed vesting title in state's name, a Policy of Title Insurance, and escrow instructions for each parcel acquired.

© 1994-2025 California Department of Transportation. All rights reserved.

3. R/W reviews the certification and acquisition package(s) and prepares a Memorandum of Settlement.

4. R/W confirms that the certification and acquisition documents are correct, signs R/W Certification, and notifies the Encroachment Permits Branch.

5. The state grants the encroachment permit to Developer.

6. Prior to acceptance of the completed project by the Department, the Grant Deed conveying title to the state is recorded and a policy of title insurance naming the state is issued.

17.04.14.01 Assessment Districts

In order to minimize future controversy, in cases where LPAs wish to utilize assessment district procedures in acquiring rights of way, the following procedure has been established:

A. Requirements for Prior Department and FHWA Approval (Where Necessary)

For each project where the local share is to be provided by an assessment district (construction and/or right of way reimbursement), the LPA sponsor shall receive prior Department approval of its intended assessment district procedures. If the project has federal aid, FHWA approvals are also required.

B. Procedure for Securing Approval

At the field review stage, the LPA seeks the Department and FHWA's approval (when necessary), submitting its intended assessment procedures and a description of the method its valuation engineer will use to determine individual assessments.

The District forwards the assessment procedures to Headquarters for approval.

The request, when appropriate, is then forwarded to FHWA for approval. Each level of approval should be obtained before Right of Way activities are commenced.

© 1994-2025 California Department of Transportation. All rights reserved.

C. Criteria to be Used in Granting Approval

The following criteria will be used by the Department and FHWA (where appropriate) to determine whether the proposed assessment district is consistent with the requirements of 49 CFR 24 A-C.

1. All property to be acquired must be appraised in accordance with existing procedures.

2. The assessment may not be made on a formula which would automatically increase an owner's share if the owner successfully secures a higher payment through the judicial or negotiation processes.

3. An assessment must be based on a relationship attributable to the special benefit each individual property owner receives and not by the costs and amount of right of way acquired. A consistent method of assessment will be done on a districtwide basis.

4. The inclusion of severance in deriving the method of assessment may conflict with the concept of all properties being benefited by the project unless the damages are offset by benefits, as actually determined, in an after condition.

5. Funds received from property owners in the assessment district cannot duplicate Federal funds to be applied to the highway project, but must be limited to the local share of the total project cost.

© 1994-2025 California Department of Transportation. All rights reserved.

17.05.00.00 – LOCAL AGENCY QUALIFICATIONS

17.05.01.01 Qualifications – General

Federal regulations (23 CFR 710.201) assign the Department the overall responsibility for the acquisition of right of way on all federal-aid highway projects and also require the Department to have a right of way organization adequately staffed, equipped, and organized to meet this responsibility. A Local Public Agency (LPA) may acquire right of way on federal-aid projects only if the Local Public Agency is qualified in accordance with this manual section, or meets the requirements under Section 17.05.07.01, "Nonqualified LPAs – Options." Further, unless State forces are performing the right of way activities, the Department's policy requires using only qualified Local Public Agencies, or their qualified consultants, for locally funded projects on the State Highway System, regardless of whether the projects have federal aid. Note: For projects on the State Highway System, right of way work performed by other than the Department must be funded with "Local Agency" funds.

Department procedures for qualifying LPAs to perform the work authorized by their level of certification for projects with federal funding, both on and off the State Highway System, are detailed in this section. As part of the qualification process, the Department reviews organization charts and education and experience levels of staff. The accounting system of the LPA must be evaluated to determine its ability to accommodate segregation of federally participating and non-federally participating activities. For projects on the State Highway System, the LPA must submit for review and concurrence, on a project-by-project basis, work plans, timelines with milestones, and staffing plans. Selection criteria, including education and experience requirements, have also been developed for evaluating the qualifications of consultants to work for LPAs. These selection guidelines are discussed in Section 17.06.00.00, "Consultant Qualifications."

NOTE: The Department is charged with the responsibility for imposing sanctions in cases of material noncompliance with State and Federal law and requirements. Sanctions may include the loss of qualification status as well as loss of some or all federal funding for the project. Chapter 20 of the LAPM provides a detailed discussion of deficiencies and sanctions.

© 1994-2025 California Department of Transportation. All rights reserved.

17.05.01.02 LPA Qualification Requirements

LPAs may be qualified to perform all right of way functions or only for individual functions (such as acquisition), depending on the qualifications of their staff and number of staff available to perform the technical work and subsequent reviews.

To be qualified, an LPA must:

- Be adequately staffed, trained, and organized to do right of way work properly and timely,

  AND

- Agree to conform to Department policies and procedures in order to meet state and federal requirements.

The above staffing requirements may be met by furnishing a staffing and organization chart, including duty statements and résumés of staff's experience.

It is the Region/District's responsibility to determine if the LPA is adequately staffed and has the necessary expertise at all levels of staff involvement. The Coordinator must document these determinations to certify an agency as qualified, and notify the LPA of qualification approval and recertification requirements.

When work is to be performed on the State Highway System, the Local Public Agency must provide current staffing information along with work plans and timelines with milestones on a project-by-project basis. The Authorizing Document for the project triggers the need to begin the qualification process. The timing for the review will coincide with the initiation of the Draft Cooperative Agreement for the project. If the plans do not allow adequate staffing or time for completing the right of way activities, then the Department will either suggest modifications or request that the LPA submit revised plans and timelines in order for the LPA to comply with State and Federal law and requirements.

© 1994-2025 California Department of Transportation. All rights reserved.

17.05.01.03 Levels of Qualification for LPAs

The LPA may have experienced staff, but not in sufficient number to be qualified for every right of way function. The following levels of qualification can be obtained with prior Department's Region/District approval:

- Level 1 – Staff is qualified to do technical work in one or more specific functional areas. These areas will be shown in the qualification approval. As an example, some smaller rural agencies have sought approval to perform only appraisal or acquisition functions. Level 1 approvals are good for up to three years and for projects "ON" the State Highway System, they require review and approval on a project-by-project basis.

- Level 2 – Staff is qualified to do technical work in some but not all functional areas. There is sufficient staff to perform these functions on more than one project at a time. Level 2 approvals are good for up to three years and for projects "ON" the State Highway System, they require review and approval on a project-by-project basis.

- Level 3 – Staff is large enough and qualified to do technical work in all functional areas. Level 3 approvals are good for up to three years and for projects "ON" the State Highway System, they require review and approval on a project-by-project basis.

17.05.02.01 Procedures for Obtaining Qualification Status

A. The LPA contacts the Region/District Right of Way Coordinator requesting approval of qualification status.

B. The Region/District meets with the LPA to explain state and federal requirements and what must be done to become qualified. A Right of Way Headquarters Local Programs representative may participate in the meeting if requested by the Region/District. The Region/District should see that the LPA has all needed material, e.g., the Caltrans R/W Manual, the FHWA *Right of Way Project Development Guide*, any necessary policy and procedure memos, and current copies of Titles 23 and 49 of the Code of Federal Regulations (CFR).

© 1994-2025 California Department of Transportation. All rights reserved.

C. The LPA subsequently submits its organizational charts, staff résumés, duty statements, and agrees to adopt Caltrans procedural manuals for right of way activities on federal-aid and/or State Highway System projects. The LPA shall maintain sufficient access to Caltrans procedural manuals, either through hard copies or Internet access, so as to provide adequate direction to right of way employees on how to perform their assigned duties.

D. The Region/District will then conduct its investigation to determine if the LPA maintains access to current Caltrans procedural manuals and operates in conformance with state and federal requirements. This review will include an evaluation of the LPA's personnel to determine if they are adequately trained and experienced in right of way activities to perform to Department standards. Also, Caltrans Audits and Investigations' Accounting will evaluate the LPA's accounting systems to determine whether it meets requirements. The Department's experience with the LPA may be satisfactory and, thus, an audit evaluation may not be required. Regions/Districts should only initiate requests for audit evaluations when circumstances dictate, then the request should be processed through HQ R/W Local Programs. See 17.05.03.01.

17.05.02.02 Staff Training and Experience Requirements

Region/District must review LPA staff résumés and staff experience as a component of determining the LPA's level of qualification. Staff must have experience in government acquisitions with Uniform Act requirements. Part of the review includes review of sample work products, including timelines and completion of work product. Appropriate consideration should be given to references and past performance, including responsiveness to agency direction. Qualification evaluation criteria for LPA staff performing right of way activities must be appropriate for the functions under consideration for qualification. Educational background must include technical/professional training with particular emphasis on real estate-related courses. Examples of education and training are:

- Successfully completed coursework at an accredited college in Real Estate Principles and Practices, Real Estate Law, Real Estate Appraisal.
- Real Estate Certification from an accredited college.
- Successfully completed coursework from professional organizations such as IRWA or the Appraisal Institute, e.g., Appraisal Principles, Appraisal of Partial Acquisitions, Uniform Standards of Professional Appraisal Practices, Communication in Real Estate Acquisition, Reading Property Descriptions, etc.

© 1994-2025 California Department of Transportation. All rights reserved.

- Professional Designations, such as SR/WA Designation or MAI Designation.
- Licenses such as Real Estate Brokers License or Real Estate Sales License.
- Certification for Real Estate Appraisers as issued by the Bureau of Real Estate Appraisers.

Qualification evaluation criteria for LPA staff performing right of way activities include the following experience/professional background considerations for specific functional areas:

- To perform Appraisal work, the LPA employee must have:
  - Training and experience in the appraisal of rights for eminent domain purposes.
  - Knowledge of the Uniform Relocation Assistance and Real Property Acquisition Policies Act and State eminent domain law.
  - Successful completion of appropriate coursework from an accredited college and/or professional organization, for example: Appraisal of Partial Acquisitions, Principles of Real Estate Appraisal, Easement Valuation, Uniform Standards of Professional Appraisal Practices, etc.

- To perform Acquisition work, the LPA employee must have:
  - Training and experience in the acquisition of property rights for eminent domain purposes.
  - Knowledge of the Uniform Relocation Assistance and Real Property Acquisition Policies Act and State eminent domain law.
  - Successful completion of appropriate coursework from an accredited college and/or professional organization, for example: Communication in Real Estate Acquisition, Reading Property Descriptions, Eminent Domain Law, Legal Aspects of Easements, etc.
  - A real estate license is also helpful, but not necessary for an employee of a Local Public Agency.

- To perform Relocation work, the LPA employee must have:
  - Training and experience in relocation for eminent domain purposes.
  - Knowledge of the Uniform Relocation Assistance and Real Property Acquisition Policies Act and State eminent domain law.
  - Successful completion of appropriate coursework from an accredited college and/or professional organization, for example: Relocation Assistance, Business Relocation, Mobile Homes Relocation, Advanced Relocation Assistance, etc.

© 1994-2025 California Department of Transportation. All rights reserved.

- To perform Utilities work, the LPA employee must have:
    - Training and experience in preparing utility relocation estimates based on construction in the manner proposed, coordinating work to positively locate underground utility facilities including all High/Low risk utility facilities within the project limits.
    - Understand the determination of liability for cost of utility relocation and responsibility. Obtain and analyze data to allocate cost between the utility owner and local agency for all required utility adjustment work and to clearly document, support and set forth the basis of this finding in a Report of Investigation.
    - Training and experience in preparing Utility Agreements between the utility owner and local agency.
    - Training and experience in preparing Notices to Owner for utility facility adjustments.
    - Knowledge of Local, State and Federal laws, policies and procedures that deal with utility relocation.

- To perform Property Management work, the LPA employee must have:
    - Real Estate Broker's or Salesperson's License (when under the direct supervision of a Real Estate Broker) as issued by the California Department of Real Estate (required by law).
    - Minimum two (2) years experience at the working level in management of rental properties.
    - Knowledge of applicable sections of the Uniform Relocation Assistance and Real Property Acquisition Policies Act, State Eminent Domain Law, and Landlord Tenant Law.
    - Specific knowledge and experience appropriate for the proposed project.

17.05.02.03 Qualification Questionnaire

Historically, agencies were qualified only after answering an extensive questionnaire that covered all aspects of their organizations, policies, and staff experience. Completing the questionnaire is no longer a requirement, but we have included it as an information exhibit (see Exhibit 17-EX-12, Qualification Questionnaire) to simultaneously assist LPAs requesting qualification and Caltrans Right of Way Local Programs staff as an illustration of the depth of experience we are seeking for LPA qualification. At the same time, the questionnaire provides a convenient framework to help structure the interview and assessment of the applicant's level of qualification.

© 1994-2025 California Department of Transportation. All rights reserved.

17.05.03.01 Independent Office of Audits and Investigations (IOAI)

Caltrans may coordinate with the IOAI to evaluate an LPA before the agency will be approved for qualification. The primary objective is to determine if the LPA's accounting system is capable of accumulating and segregating reasonable and allowable project costs. Specifically, IOAI evaluates the LPA's billing procedures, procurement procedures, project management, internal controls, and accounting policies and procedures to ensure the LPA's right of way accounting procedures are in compliance with Department's fiscal requirements for Locally Administered Right of Way Projects and increase LPA's awareness of federal reimbursement requirements where necessary. Follow-up reviews will be made as necessary to ensure this capability is maintained.

When the Region/District Right of Way Local Programs Coordinator receives a request from an LPA for qualification, the district should decide if an accounting system audit is needed. If the District Local Programs Coordinator elects to pursue this, he/she should notify HQ R/W Office of Local Programs in writing and ask that IOAI perform the evaluation. The summary of the audit evaluation will go directly to HQ R/W and will be forwarded to the Region/District for integration into the local agency qualification request.

17.05.04.01 Region/District Approval

The Region/District R/W Manager or designee will approve the request (if appropriate) and notify the LPA by letter that its organization has been approved to perform right of way functions on its projects. Copies of the letter will be sent to the HQ R/W Local Programs Office Chief. At a minimum, the letter to the LPA apprising them of their qualification status should address the following primary points:

1. Effective term of the approval.
2. Specification of the functions they are receiving approval to perform.
3. Confirmation of their possession and use of the current Caltrans R/W Manual.
4. The LPA's obligation to inform the Department of any organizational or policy changes affecting their qualification within 7 days of the change.
5. Department will review their work for compliance.

© 1994-2025 California Department of Transportation. All rights reserved.

6. Qualified status can be withdrawn if deficiencies are found and not corrected or the qualifications of the staff change to the point where they can no longer meet the minimum requirements.
7. The LPA will be invited to attend FHWA and Department-sponsored classes.

In the event the LPA's qualifications cannot be approved, the Coordinator will inform the LPA of the necessary steps which must be taken to achieve approval.

17.05.05.01 Maintenance Procedures for Qualification Status and Requalification Process

The Regions/Districts will review all of their qualified LPAs on a project-by-project basis for work "ON" the State Highway System and at least every three years for work "OFF" the State Highway System to determine if staff and procedures are still adequate to perform right of way activities in the functions approved in conformance with federal and/or state regulations. The review and documentation should be completed as outlined below depending on the category.

A. Work "ON" the State Highway System

Right of way organizations that will be performing work "ON" the State Highway System involving right of way acquisition activities will be qualified on a project-by-project basis. In this category, the Coordinator will complete the following:

1. A Memorandum to File approving the Qualification for the Project including:

    a. A statement that the LPA has performed adequately for right of way on prior projects, if applicable.

    b. An updated organization chart for the LPA including résumés as necessary.

    c. A statement that the Local Public Agency has adopted current Caltrans procedural manuals to be used for the project to comply with current federal laws and regulations.

© 1994-2025 California Department of Transportation. All rights reserved.

2. Submission of a copy of the Memorandum and updated Organization Chart to HQ R/W Local Programs to update the qualification files.

3. Caltrans Audits and Investigations' Accounting System Evaluation, if necessary. When the Local Public Agency's accounting practices have already been evaluated, the Department's experience with the LPA may be satisfactory and, thus, an audit evaluation may not be required. Regions/Districts should only initiate requests for audit evaluations when circumstances dictate, then the request should be processed through HQ R/W Local Programs.

4. Notification of the LPA of approval in writing.

B. Work "OFF" the State Highway System

In this category are all Local Public Agencies that are performing work on federal-aid projects "OFF" the State Highway System involving right of way acquisition activities. The Coordinator will complete the following activities at least once every three years and keep the Qualification information in a file for each Local Public Agency:

1. Complete an in-depth review to determine if the LPA's organizational plan and policies and procedures have remained in substantial conformance with federal regulations. The review should encompass the areas outlined above.

2. If deficiencies are found, the Region/District should so notify the LPA and ask them to rectify the matter.

3. If the deficiencies are corrected or none are found, a summary of the review with a current organization chart should include a statement that, in the Region/District's opinion, there is reasonable assurance the LPA will perform right of way activities in compliance with requirements. The summary should also include the rationale for this opinion.

4. A copy of the memo is to be forwarded to HQ R/W Local Programs.

5. Caltrans Audits and Investigations' Accounting System Evaluation - Same as Category A.3. above.

6. The LPA is to be notified of the approval in writing.

© 1994-2025 California Department of Transportation. All rights reserved.

C. Requalification Process

Both Caltrans and qualified agencies shall track expiration date of qualification to ensure the application process for renewal is started prior to current expiration, to avoid a lapse in qualification status.

17.05.06.01 Appraisal Review Qualification

On federal-aid projects, a formal review of the appraisal is necessary to establish the Fair Market Value for the property. (See 49 CFR 24.104.) A consultant review appraiser must have a valid general license issued by the State Department of Consumer Affairs – Bureau of Real Estate Appraisers (BREA) and experience in eminent domain appraisals.

If the LPA receives a qualification of Level 1 or 2 without having the staff or means to perform the appraisal review function, the agency shall hire either a qualified consultant (see Section 17.06.00.00) **or** another agency qualified to perform the review.

NOTE: It must be noted that in instances where the LPA must hire a consultant or another agency to act as review appraiser, **only** the sponsoring LPA can determine the just compensation to be paid based on the approved appraisal; another agency or consultant cannot make that determination.

17.05.07.01 Nonqualified LPAs – Options

Local agencies that are not qualified to perform any or all of the respective right of way functions for a project must either hire another agency which is qualified to perform those functions or retain a consultant(s) who meets the Consultant Selection Criteria discussed in Section 17.06.00.00.

As part of the review process for projects on the State Highway System, the LPA must provide work plans, timelines with milestones, and staffing plans (including their plans for contracting with consultants or another LPA) for review and concurrence prior to execution of any consultant contracts covering right of way activities. This review should be triggered by the Authorizing Document and should be initiated at the time the Cooperative Agreement is being drafted.

© 1994-2025 California Department of Transportation. All rights reserved.

Nonqualified LPAs have the following options:

1. Contract with a qualified agency.

2. Contract with a qualified private consultant(s) to perform one or more right of way functions. Appraisal consultants must have a license issued by the State Bureau of Real Estate Appraisers; acquisition consultants must have a valid California Real Estate Brokers License or Sales License and work for a Real Estate Broker with a valid license; relocation consultants must have training and experience in relocation work under the Uniform Relocation Assistance and Real Property Acquisition Policies Act. For additional information, refer to Section 17.06.00.00 on consultant qualifications.

3. Contract with a R/W Project Management Consultant. The contract must include provisions requiring any subcontractors to meet the right of way qualification standards set forth for right of way consultants. The LPA must retain the ability to monitor and control the qualifications of any subcontractors through the contract process.

4. Utilize a mixture of LPA staff and the resources available above at Items 1 and 2.

5. Contract with a "turnkey" consultant. The contract must include provisions requiring the subcontractor meet the right of way qualification standards set forth for right of way consultants. The LPA must retain the ability to monitor and control the qualifications of subcontractors through the contract process.

© 1994-2025 California Department of Transportation. All rights reserved.

17.05.08.01 Rescinding LPA Qualification Status

If an LPA fails to maintain qualified staff, cooperate in correcting identified deficiencies, or perform in accordance with state and/or federal requirements, the Region/District shall notify the LPA in writing that the failure will result in a loss or reduction of its qualification status as well as jeopardize federal participation in the project. If, after this notification, the LPA fails to correct identified deficiencies or continues its noncompliance with state/federal regulations, the Region/District will notify the LPA that its qualification status has been rescinded. This notification should be signed by the District Director or designee. Copies of this notification will be forwarded to HQ R/W Office of Local Programs and the FHWA Division Administrator.

NOTE: At each of the above steps in the qualification process, the LPA must be informed in writing of all approvals and denials whenever application is made or reviews are performed.

17.05.08.02 Concurrent Penalties

It should also be emphasized that in a number of cases failure to correct deficiencies, particularly having to do with Uniform Act violations, can have far more serious consequences. As noted in Sections 17.03.00.00 and 17.04.00.00, failure to comply with Uniform Act requirements or to correct any such violations can result in the loss of federal funding for the parcel, the entire right of way portion of the project, and/or the entire project including construction depending on the seriousness of the violation.

© 1994-2025 California Department of Transportation. All rights reserved.

17.06.00.00 – CONSULTANT QUALIFICATIONS AND SELECTION CRITERIA

17.06.01.01 Consultant Qualifications – General

It is extremely important for the LPA to scope the work in compliance with the Uniform Act and select a R/W consultant who not only knows what the LPA's specific needs are, but has the qualifications to perform the work legally and ethically to meet those specific needs.

> The authority for the selection of private sector consultants to perform right of way functions on both local assistance projects (Off State Highway System) and locally funded projects (On State Highway System) with or without federal funding has been delegated to the Local Public Agency. The selection process will be administered by the LPA using the Consultant Selection Criteria and Guide (below). The Criteria establish recommended minimum levels of experience and permit the evaluation of prospective consultant firms. Work samples provided by the consultant should be reviewed by the LPA.

It is strongly recommended that the LPA engages Caltrans as early as possible during the consultant selection process and should invite Caltrans to participate on the hiring panel.

The LPA must advertise and seek competitive bids from consultants who meet the selection criteria for the right of way function needed on a project-by-project or time base method when there is State or Federal funding in the project.

17.06.02.01 Consultant Selection Criteria and Guide

RIGHT OF WAY ESTIMATING CONSULTANTS

To be used when an estimate of the cost of right of way requirements is needed for a project or an update to the right of way estimate is needed. When selecting consultants to prepare right of way estimates, care must be exercised to ensure that the candidates have expertise in appraisal fields of all types of real estate needed for transportation projects, acquisition for transportation projects, relocation for transportation projects, and utility relocation.

© 1994-2025 California Department of Transportation. All rights reserved.

The consultant is required to possess either an Appraisal License or a Real Estate License. The consultant must have a minimum of two (2) years experience and the knowledge necessary to estimate the value of all types of real estate needed for transportation projects, including, assessing severance damages to property acquisitions/remainders, the cost to relocate displacees under the requirements of the Uniform Act, and the costs associated with utility relocations.

When an estimate is prepared by a consultant with a real estate license, the consultant should have at a minimum, completed basic appraisal courses and practical experience as an appraiser. Additional courses in building cost estimating and a working familiarity with various cost estimating resources are recommended. Although estimates are opinions, they are expected to be as solidly based as possible using appraisal principles. Please see Exhibit 17-EX-21, Right of Way Data Sheet for Local Public Agencies.

APPRAISAL CONSULTANTS

To be used on projects where property rights are to be acquired for a project, whether those rights are temporary, permanent, in fee, or easement, or compensable damages accrue to property as a result of the project. The appraiser measures the fair market value of the rights to be acquired to include, assessing severance damages to property acquisitions/remainders.

When selecting appraisal consultants, care must be exercised to ensure that the candidates have expertise in the specific appraisal field appropriate for the contemplated project. The greater the complexity of the project, the greater the need for highly specialized and/or experienced appraisers. An Appraisal License is required by law for transportation projects on or off the State Highway System.

Appraisal Consultants are required to possess:

- Appropriate Appraisal license as issued by the California Department of Consumer Affairs – Bureau of Real Estate Appraisers in accordance to the degree, complexity and value of the appraisal required:
    a) Residential License for any noncomplex 1-4 family property with value of $1 million and Nonresidential property with a transaction value up to $250,000.
    b) Certified Residential for any 1-4 family property without regard to transaction value or complexity; and Nonresidential property with a transaction value up to $250,000.
    c) Certified General for all real estate without regard to transaction value or complexity.

© 1994-2025 California Department of Transportation. All rights reserved.

- Minimum two (2) years experience in appraisal of rights for eminent domain purposes.
- Successful completion of a course in appraisal of partial acquisitions for public agencies.
- Successful completion of a course in the Uniform Relocation Assistance and Real Property Acquisition Policies Act taught by a recognized organization.
- Specific knowledge and experience appropriate for the proposed project, including effects of State Eminent Domain Law on the appraisal process.

Appraiser Responsibilities under the Uniform Act:

- Property owner must be notified in writing of Agency's decision to appraise.
- Property owner or designee must be given opportunity to accompany appraiser during property inspection.
- Responsibility for delivery of Title VI information.
- Diary entry of notifications and contacts.
- Appraisal to contain minimum recognized standards for public acquisition according to requirements outlined in 49 CFR 24.103, Criteria for Appraisals.
- All appraisals must contain Appraiser and Review Appraiser Certificates.

REVIEW APPRAISER CONSULTANTS

Each appraisal must be reviewed by a qualified review appraiser and contain a Review Appraiser Certificate. The review appraiser is the person responsible for assurance of appraisal quality and completeness and accuracy of the value determination. The review appraiser must remain independent and must not be subject to undue influence or pressure from any source to arrive at a particular value or to accept inadequate appraisal reports. For this reason, it is recommended there be a distinct and separate association between the fee and review appraisers in order to maintain the integrity of the review process. It is essential the review appraiser understands his/her responsibility is to recommend an estimate of value for just compensation determination by the acquiring agency. **The Uniform Act requires that an official of the acquiring agency must make the final determination of just compensation.**

© 1994-2025 California Department of Transportation. All rights reserved.

Review Appraiser Consultants are required to possess:

- Certified Residential License for any 1-4 family property without regard to transaction value or complexity; and Nonresidential property with a transaction value up to $250,000 **or**
- Certified General License for all real estate without regard to transaction value or complexity.
- Minimum two (2) years experience in reviewing appraisals for eminent domain purposes.
- Successful completion of courses in the Uniform Relocation Assistance and Real Property Acquisition Policies Act.
- Specific knowledge and experience appropriate for the proposed project, including effects of State Eminent Domain Law on the appraisal process.

Review Appraiser Responsibilities under the Uniform Act:

- Confirmation of Analysis of Highest and Best Use, Damages, and Cost to Cure Damages.
- Confirmation of valuation.
- Confirmation of Calculations and Report Integrity.
- Prepare signed statement certifying value of appraisal reviewed, including an explanation of the basis for recommendation.

ACQUISITION CONSULTANTS

To be used when rights are to be acquired, whether those rights are temporary, permanent, in fee, or easement, or compensable damage payments are to be made as a result of the project.

When selecting acquisition consultants, care must be exercised to ensure that the candidates have expertise with the conditions affecting the acquisition that are present in the contemplated project. These may vary, and some factors to be considered include property type, type of occupancy, and project design/impact on remainder.

© 1994-2025 California Department of Transportation. All rights reserved.

Acquisition Consultants are required to possess:

- Real Estate Broker's or Salesperson's License (when under the direct supervision of a Real Estate Broker) as issued by the California Department of Real Estate (required by law). All Right of Way Contracts must be approved for content and signed or initialed by the Real Estate Broker.
- Minimum two (2) years experience in the acquisition of rights for eminent domain purposes.
- Successful completion of courses in the Uniform Relocation Assistance and Real Property Acquisition Policies Act taught by recognized organizations.
- Specific knowledge and experience appropriate for the proposed project, including knowledge of State Eminent Domain Law.

It is **extremely important** for the local agency to be fully aware of the acquisition consultant's qualifications and knowledge of the Uniform Act. If there are violations by the acquisition consultant or consulting firm, the local agency could jeopardize a portion of, or all of the federal funding for the entire project. If you have questions or concerns, please contact the Department's Right of Way Local Programs Coordinator in your area.

Acquisition Consultants Responsibilities under the Uniform Act:

- Ensure establishment of just compensation by local agency prior to initiation of negotiations, including mailing offer letters.
- Expeditious acquisition within 30 days of approved appraisal.
- Upon initiation of negotiations, offer of just compensation should be presented in person when possible.
- Summary Statement (basis for the appraisal) to be included with the offer of just compensation, at initiation of negotiations.
- Owner to be given reasonable time to consider offer and present material relevant to value determination (i.e., 30 days and a minimum of 3 contacts).
- Payment is required before taking possession (49 CFR 24.102[j]) Local agency is responsible for payment of all incidental expenses (title, escrow, surveys, prepayment penalties, etc.)
- Preparation of Administrative Settlements when it is reasonable and in the public interest (49 CFR 24.102[j]).
- Diary entries including, but not limited to, confirmation of delivering Title VI information if project is federally funded.
- By signing the Right of Way Contract, the authorized local agency official acknowledges responsibility for maintaining a complete file on each parcel.
- Follow record keeping requirements per 49 CFR 24.9.

© 1994-2025 California Department of Transportation. All rights reserved.

RELOCATION CONSULTANTS

To be used when there are occupants and/or personal property within the project area that must be relocated outside the project area. Occupancy may be residential or nonresidential, including agricultural uses. Relocation specialists may be used to prepare the relocation impact documents (part of the environmental clearance document) in the planning stage. It is important that a distinct separation be maintained between the Acquisition and Relocation functions, since the Uniform Act was not meant to be an expansion of just compensation, but a separate obligation of the displacing agency.

When selecting relocation consultants, care must be exercised to ensure that the candidates have expertise with types of occupancy affected by contemplated project, whether residential (owner-occupied), residential (tenant-occupied), personal property only, business, or nonprofit organization. The greater the complexity of the project, the greater the need for highly specialized and/or experienced relocation consultants.

Relocation Consultants should possess:

- Minimum two (2) years experience at the working level providing public agency relocation assistance.
- Successful completion of courses in the Uniform Relocation Assistance and Real Property Acquisition Policies Act taught by recognized organizations.
- Specific knowledge and experience appropriate for the proposed project, including State Eminent Domain Law.

UTILITY RELOCATION CONSULTANTS

Utility Consultants should be used when there are utilities within the project area that must be relocated. Utility Consultants may be used to prepare preliminary utility engineering documents as part of the environmental clearance document in the planning stage. FHWA requires that Caltrans approve all Utility Agreements prior to executing, since Caltrans acts on behalf of FHWA when signing Utility Agreements and advancing utility relocation work on federal-aid projects. These actions cannot be delegated to LPAs or other subgrantees. Any such Utility Agreements not approved by Caltrans would be unauthorized and invalid.

© 1994-2025 California Department of Transportation. All rights reserved.

When selecting Utility relocation consultants, a local agency must ensure that the candidates have expertise with Utility relocation. The greater the complexity of the project, the greater the need for highly specialized and/or experienced consultants. Local agencies are encouraged to include Caltrans District Right of Way Utility Coordinators on their selection panels.

Utility Consultants for all Local Agency Projects should possess the following:

- Training and experience in preparing utility relocation estimates based on construction in the manner proposed, coordinating work to positively locate underground utility facilities including all High/Low Risk utility facilities within the project limits.
- Understand the determination of liability for cost of utility relocation and responsibility. Obtain and analyze data to allocate cost between the utility owner and local agency for all required utility adjustment work and to clearly document, support and set forth the basis of this finding in a Report of Investigation.
- Training and experience in preparing Utility Agreements between the utility owner and local agency.
- Training and experience in preparing Notices to Owner for utility facility relocations.
- Knowledge of Local, State and Federal laws, policies and procedures that deal with Utility relocation, including but not limited to Chapter 14 of the Local Assistance Procedures Manual and Chapter 13 of the Caltrans Right of Way Manual.

Utility Consultants for Local Agency Projects "On the State Highway System" should also possess the following:

- Knowledgeable in Caltrans Project Development process, Caltrans Encroachment Policy, Caltrans R/W Utilities policy and procedures, and local encroachment policy and procedures.
    - Understanding R/W Utility activities timelines and schedules
    - Caltrans Encroachment Permits Manual Chapter 6
    - Caltrans R/W Manual Chapter 13 – Utility Relocations
    - Project Development Procedures Manual Chapter 17 – Encroachments and Utilities, Section 3 – Utility Policies, Article 2 – Policies
- Training and experience in preparing utility estimates (data sheet) based on proposed construction and scopes of work.
- Experience in coordinating with utility companies and Project Engineers for all utility activities.
    - Utility Verification
    - Utility Conflict

© 1994-2025 California Department of Transportation. All rights reserved.

    - Utility Relocation
    - Billings
- Knowledgeable in liability determination for cost of utility relocation.
    - Understanding Master Contracts between Caltrans and utility companies
    - State's Streets and Highways Code/Statutes relating to the Department of Transportation
    - Property rights
- Knowledgeable of the Utility relocation process.
    - Preparing Claim Letter, Report of Investigation, Notices to Owner, Utility Agreements
    - Requesting Encroachment Permits
- Knowledge of Local, State and Federal laws, policies and procedures that deal with Utility Relocation.

PROPERTY MANAGEMENT CONSULTANTS

To be used when tenants will be in occupancy of the right of way after the agency has acquired the property but prior to displacement.

When selecting property management consultants, care must be exercised to ensure that the candidates have expertise with types of tenancies affected by the contemplated project, whether residential, personal property only, business, or nonprofit organization. The greater the complexity of the project, the greater the need for highly specialized and/or experienced property management consultants.

Property Management Consultants must possess:

- Real Estate Broker's or Salesperson's License (when under the direct supervision of a Real Estate Broker) as issued by the California Department of Real Estate (required by law).
- Minimum two (2) years experience at the working level in management of rental properties.
- Knowledge of applicable sections of the Uniform Relocation Assistance and Real Property Acquisition Policies Act, State Eminent Domain Law, and Landlord Tenant Law.
- Specific knowledge and experience appropriate for the proposed project.

© 1994-2025 California Department of Transportation. All rights reserved.

RIGHT OF WAY PROJECT MANAGEMENT CONSULTANTS

May be used to coordinate and direct the work of other consultants as well as local agency staff. Will have primary responsibility to ensure the work products for the project satisfy all requirements of applicable laws, statutes, regulations, policies, and procedures.

Project Management Consultants should possess:

- Minimum five (5) years experience at a supervising, managerial, or oversight level in a right of way organization operating with the power of eminent domain.
- Knowledge of the Federal Uniform Relocation Assistance and Real Property Acquisition Policies Act and Article 1, Section 19 of the California Constitution (granting the power of eminent domain law).
- State Eminent Domain Law taught by recognized organizations. Successful completion of courses in the Uniform Relocation and Real Property Acquisition Policies Act.
- Familiarity with project management theories and techniques, including project scheduling, staff assignments, and coordination and communication with other project entities.

Project Management Consultant or Principal of the consulting firm's responsibilities:

- Ensure right of way process has been followed in accordance with the Uniform Act.
- Ensure consultants have appropriate licenses for the scope of work.
- Ensure Broker signs or initials all right of way contracts.
- Approval of all right of way files (signature in diary) that files are complete and in accordance to the Uniform Act with appropriate diary entries.

TURNKEY RIGHT OF WAY CONSULTANTS

Multifunctional right of way organizations that may be used to provide all right of way services required of a given project. Should be competent in each individual functional area. Staff are required to meet the criteria listed above in each of the Right of Way functions involved in the project. Turnkey consultants must have sufficient staff to preserve separation of the appraisal, appraisal review, and acquisition functions. An individual may be technically proficient in multiple functions, but may not be used as a turnkey consultant. All appropriate licenses/certifications are required for the type of services performed.

© 1994-2025 California Department of Transportation. All rights reserved.

17.06.03.01 Competitive Bidding

Competitive bidding is one of the cornerstones of a financially successful project. It should be stressed to LPAs that seeking bids from qualified firms will ensure that the agency is getting the most reasonable price. Prior to soliciting bids, careful consideration should be given to defining the scope of work for the consultant, estimating the cost of the consultant's work, determining the type of contract needed, and whether to seek bids on a project-by-project or time base method.

The project-by-project method is appropriate for use when an LPA has only one project or has an extensive project expected to last more than 36 months. Under this method, the consultant performs the tasks exclusively on the designated project until completion. All four commonly used contracts are suitable for use with the project-by-project method and include (a) Actual Cost plus Fixed Fee, (b) Cost per Unit of Work, (c) Specific Rates of Comparison, and (d) Lump Sum.
The time base method is appropriate for LPAs with multiple projects occurring simultaneously. This method is more cost effective as the LPA is not required to complete the competitive bid process for each individual project. Under this approach, the same consultant can perform right of way tasks on different projects during the contract term. The maximum contract length is 36 months. If the contract needs to be extended due to unforeseen circumstances, the LPA must complete a Request for Approval of Cost-Effectiveness/Public Interest Finding (Exhibit 12-F of the Local Assistance Procedures Manual [LAPM]) and submit to the DLAE along with a written justification. The contract may be extended once with a maximum length of 12 months. Of the four types of contracts noted above, it is not appropriate to use the Lump Sum contract with the time base method.

The LPA should be advised that caution must always be exercised in the choice of a consultant. Just because a particular consultant meets the threshold criteria, this should never be the only basis for retaining them. Other factors, such as experience on past projects as well as references, should be given careful consideration. Each project and each agency have unique demands; and just because a prospective consultant meets the broad qualifications contained in the Consultant Criteria, this does not also mean that the consultant can meet the LPA's requirements. The LPA is responsible for maintaining documentation concerning the consultant selection process. This information should be made available to the Department as part of the oversight process.

© 1994-2025 California Department of Transportation. All rights reserved.

17.06.04.01 Local Public Agency Liability for Consultants

LPAs should be reminded that, as noted above, they are responsible and accountable for the actions of their consultants in properly executing their duties and activities in accordance with the Uniform Act. The LPA retains the ultimate responsibility for signing the Right of Way Certifications and is accountable for the actions and performance of their consultants.

The consultant's work products will be subject to oversight by the Department's Region/District R/W Local Programs staff.

The Department has established broad criteria for use in evaluating the qualifications in the respective right of way functions, but the Department is not liable for the performance of the consultants selected by the LPA. Local agencies are responsible and accountable for the selection and performance of their consultants in properly executing their duties and activities in accordance with the Uniform Act. In the event the actions or performance of the consultant results in the loss of federal funds for the project, it is the sole responsibility of the local agency to reimburse these funds.

17.06.04.02 Consultant Contracts

In entering into consultant contracts, it should be stressed to the LPA that consultants must perform right of way functions to the same standards, practices, rules, and regulations as the LPA. The following additional discussion about contracting responsibilities should also be clearly conveyed to the LPA.

© 1994-2025 California Department of Transportation. All rights reserved.

17.06.04.03 LPA Responsibilities

In each contract, the LPA responsibilities include the following:

1. Appraisal Review – As noted above, when state or federal funds are used for any portion of the project, a formal review of the appraisal by a review appraiser is required. When the parcel is on the State Highway System, a formal review must be done, whether or not federal funds are used.

2. Establishment of Just Compensation – In projects involving the acquisition of right of way, it will be necessary for the LPA to determine just compensation. The Uniform Act requires that an official of the acquiring agency must make the final determination of just compensation. This action shall be in writing and signed and dated by the agency official prior to initiation of negotiations (ION). and mailing of offer letters. **This action cannot be delegated to a consultant.**

3. Assignment of a Contract Manager – The manager will serve as the contact person during the course of the project. The Contract Manager must be an employee of the LPA. The Contract Manager should be knowledgeable about all aspects of the project.

17.06.04.04 Contract Manager Responsibilities

The Contract Manager is responsible for the following:

1. Coordinating the review and approval of all consultant work products.

2. Approving requests for payment.

3. Coordinating all consultant activities for the project.

4. Providing interim and final contract completion reports.

5. Following the California Department of Transportation Right of Way Manual in the performance of any right of way activities.

© 1994-2025 California Department of Transportation. All rights reserved.

17.06.04.05 Contract Manager Qualifications

The Contract Manager ideally should have the following background:

1. Strong professional experience in the functional area under contract.
2. Familiarity with the project and contract objectives.
3. Understanding of management expectations.
4. Experience with the contract process.
5. The ability to communicate effectively.

17.07.00.00 – COOPERATIVE AGREEMENTS

17.07.01.01 Introduction

A Cooperative Agreement is a formal, legally binding contract between the Department (Caltrans) and a Local Public Agency (LPA) through which the parties to the agreement outline their high-level responsibilities regarding an improvement project on the State Highway System (SHS), including identification of: project component(s); sponsor (project advocate and securer of financial resources), implementing agency (responsible for the performance of work), and funding commitments. An agreement is not effective until fully executed by all parties.

NOTE: Section 138 of the Streets and Highways Code requires that all legally binding contracts, including Cooperative Agreements, be approved by either the Attorney General or an attorney employed by the Department. All Cooperative Agreements must be approved by an attorney in the HQ Legal Division.

A Cooperative Agreement should not be used when the other party to the Agreement is not a public agency and project partner. The most common type utilized is the standard two-partner agreement between Caltrans and a public entity involving one or more project development and construction components of a design-bid-build project type. Other formal types of cooperative agreements, including relinquishments, are identified and discussed in Chapter 16 of the Project Development Procedures Manual and the Cooperative Agreement Handbook (internal Caltrans link).

A project may require Cooperative Agreements among the Department and more than one entity, e.g., with two cities, a city and county, or a city and a transportation authority, etc.

The focus of this chapter is Agreements with LPAs for projects on the SHS.

© 1994-2025 California Department of Transportation. All rights reserved.

17.07.01.02 Authority to Enter into Agreements

There are various legal authorities for the Department to enter into Agreements with LPAs. The primary authorities are the Streets and Highways Code Sections 114 and 130.

- **Reimbursed Work**

Section 114 allows for expenditure of state funds by LPAs for the construction, improvement, or maintenance of any portion of a state highway system. It is the legal authority for Cooperative Agreements with LPAs where the Department reimburses them to perform work at the Department's expense such as the preparation of the PS&E. This section is also the authority for Agreements for work on SHS projects that are 100% funded by an LPA when the state performs work and is then reimbursed by the LPA.

- **Cooperative Projects**

Section 130 is the legal authority for Agreements where the state and the LPA are jointly participating in projects on the SHS. It allows the state and the LPA to apportion the expenses of the acquisition, construction, or maintenance for these projects. It is also the authority for Agreements covering projects on the SHS which are 100% funded by the LPA where the LPA also performs the work.

17.07.01.03 Participation Policy

Participation in joint projects may either be financial or in the form of services, materials, equipment, or any combination thereof. The basic determination governing the extent of the state's participation in a cooperative project (financial or otherwise) is whether the cost is commensurate with the benefits. Expressed in another way, the state should never proceed if the costs will exceed those incurred if the state were to develop the project on its own. For additional detail, refer to the Cooperative Agreement Handbook (internal Caltrans link).

Some projects on the SHS such as a new interchange or an interchange modification may, however, obligate the state to participate in part or all of the costs. The extent of the state's participation may also be determined by the availability of funding and/or programming by the CTC, and may also be controlled by Statutes or prior Agreements.

© 1994-2025 California Department of Transportation. All rights reserved.

17.07.01.04 Authorizing Documents

Before a district can enter into a cooperative agreement with a public agency, an authorizing document, such as a Project Study Report (PSR), Project Report (PR), supplemental Project Report (supplemental PR) or Permit Engineering Evaluation Report (PEER), that includes information demonstrating a need for a cooperative agreement must be completed. All the reports contain a section in which the cooperative features are fully discussed and justified and which will be repeated in the Cooperative Agreement. The PR would describe all the work, including right of way activities, to be performed by the support staff, e.g., who will do what work and why, who will pay, etc. (Refer to Chapter 16 of the Project Development Procedures Manual for detailed discussion.)

Approval of the Project Report (or any of the other reports) constitutes formal authority for the Region/District to initiate negotiations with the LPA regarding contents and wording of the Draft Agreement.

There are unusual circumstances when a special resolution of the CTC will be the authorizing document. These resolutions, however, do not address support costs, which must be covered in a Project Report. There are also circumstances when the need for a cooperative effort arises while a project is under construction. In such cases, please refer to the Cooperative Agreement Handbook (internal Caltrans link) for guidance and/or contact the district or HQ Office of Development and Improvement Agreements for further assistance.

17.07.01.05 Development, Preparation and Processing the Agreement

A District Director, working through the district Project Development Team (PDT), is responsible for the development of a cooperative agreement. The headquarters Office of Delivery Improvement and Agreements (ODIA) provides tools, training, and guidance to support PDTs with the development and completion of consistent and responsible cooperative agreements. Pre-approved articles, cooperative agreement templates, and an automated cooperative agreement assembly for efficient completion of a cooperative agreement may be accessed by District through the Caltrans intranet (internal Caltrans link). Development of the draft Agreement should start at the earliest possible stage of the development process to ensure prompt delivery of the project. If possible, the Draft should be prepared while the authorizing document is also in the draft stage.

© 1994-2025 California Department of Transportation. All rights reserved.

Refer to the Cooperative Agreement Handbook (internal Caltrans link).

17.07.01.06 Use of Pre-Approved Articles

Districts have access to pre-approved articles, cooperative agreement templates, and an automated cooperative agreement assembly for efficient completion of a cooperative agreement. These clauses have been cleared by HQ and Legal Division for district use without any additional review and approval. Any proposed modification of the clauses will require prior approval from HQ Local Programs.

17.07.01.07 Special Articles

The use of preapproved articles is encouraged because the review and approval process is retained at the district level. Changes to pre-approved articles require a full review through HQ and Legal. There may be situations, however, where jointly developed or specifically "custom-tailored" articles are necessary, particularly for local measure projects. These voter-approved projects often have unique funding/performance features, depending on the priorities and timetables of the LPA.

In these situations, careful preparation is necessary to completely set forth the roles and requirements of the parties, including the proposed schedule of performance for completing the respective stages of the acquisition/clearance process and the R/W Certification dates. For example, when the Department is performing the R/W functions and/or will obtain the Resolutions of Necessity from the CTC or appropriate body, additional time must be built into the project schedule. As noted above, the CTC has established procedures for a series of hearings with the property owners where they are given the opportunity to contest the taking of their property for the project. These hearings, referred to as the Condemnation Evaluation Meeting and Condemnation Panel Review Meeting (formerly known as the First and Second Level Reviews, respectively), extend the time required to initiate the condemnation process. Department policy requires a Condemnation Evaluation Meeting, and if necessary, a Condemnation Panel Review Meeting prior to seeking a Resolution of Necessity (RW Manual Chapter 9). This policy applies regardless of whether the Department and/or a Local Agency perform the R/W effort, or what body hears the RON request.

Pursuant to the pre-approved Right of Way article in the standard Cooperative Agreement, when an LPA is the Implementing Agency for Right of Way, the LPA must obtain the Resolutions of Necessity from its own governing body or secure another public agency with eminent domain

© 1994-2025 California Department of Transportation. All rights reserved.

authority to do so. In such cases, the Local Agency will conduct the Condemnation Evaluation Meeting and Condemnation Panel Review Meetings, as necessary. LPA shall consult with the Caltrans Project Delivery Team (PDT) to determine which PDT team members shall participate as part of the decision-making team for these hearings.

17.07.01.08 Legal Opinions

The Department's Legal Division is responsible for providing all legal opinions in all matters relating to the need or right to acquire property for the project or to the valuation of any such property. The Region/District must coordinate with the LPA and Department's Legal to ensure any required legal opinions are secured on a timely basis. The cost of securing any legal opinions should be covered in the Cooperative or R/W Services Agreement and will be at expense of the LPA.

17.07.01.09 Fiscal Policy

The Department has no legal authority or obligation to incur expenses in the absence of a formal executed agreement. Except where authorized by statutes, the Department shall not assume any obligation in any project undertaken by an LPA, including oversight of right of way activities performed by the LPA, prior to execution of an Agreement. Further, no obligations shall be incurred prior to the appropriation of resources by the Legislature, the allocation of resources by the California Transportation Commission (CTC) and/or the Department, and certification of funds by the Region/District's Budget Manager with confirmation by the Accounting Administrator in HQ.

NOTE: A commitment should not be made in an Agreement which constitutes a loan of funds to an LPA unless specifically authorized by legislation. The Department should not advance or loan an LPA its share of a cooperative project due to a local funding problem. The Department should either require an advance deposit from the LPA or cancel the project if the LPA is unable to finance its share of the project costs. Advance deposits may be made either for all of the estimated costs of the work or in increments. For additional details, see the Cooperative Agreement Handbook (internal Caltrans link).

© 1994-2025 California Department of Transportation. All rights reserved.

17.07.01.10 Region/District R/W Review

All Cooperative Agreements in which R/W is involved should be reviewed by the appropriate Region/District Branch to verify project right of way scope, cost and funding. Transmittal memos to the HQ Division of Local Assistance for proposed modifications to pre-approved or additional Right of Way articles must accompany the draft Agreement as recommended for approval by the Region/District R/W Division Chief. This is to assure that the Agreement is in conformance with policies and procedures applicable to R/W.

17.07.01.11 Utilities – Freeway Projects

The Department has entered into master agreements with a number of the larger utility owners for the apportionment of relocation costs on freeway projects. These agreements are to be applied in lieu of otherwise applicable Streets and Highways Code sections and are applicable to all freeway projects which are a part of the State Highway System, no matter what the source of project funds or agency responsibility for project design. The only exception is when the freeway or expressway improvement project is the result of a private development mitigation requirement, in which case the private developer will be responsible for all utility relocation costs in accordance with applicable case law.

The public agency responsible for project design shall assume the responsibility for the identification and location of all utility facilities within the area of project construction. All utility facilities not relocated or removed in advance of construction shall be identified on the project plans and specifications.

The terms of the Cooperative Agreement shall establish the responsibility of the LPA for the cost of protection, relocation, or removal of utility facilities located within the state highway right of way. Only those facilities that meet the state's encroachment policy shall be allowed to remain.

© 1994-2025 California Department of Transportation. All rights reserved.

17.07.01.12 Positive Location of Underground Utilities (Pos-Loc)

In an effort to accelerate project delivery and eliminate discovered utility work, the Department has implemented the Positive Location ("Pos-Loc") Program. Pos-Loc is a project delivery activity using state-administered contracts to expose underground utilities for state highway projects, using vacuum excavation methods.

The Department has entered into a standard "Agreement for the Positive Location of Underground Utilities" with willing utility companies that calls for the Department to pay 100% of all positive location (pothole) work for all projects on the State Highway System.

Local Public Agencies responsible for delivering Utility Relocation Services for projects on the State Highway System are required to implement this policy.

If a Cooperative Agreement is necessary for the project, it shall include the terms of the Positive Location Agreement.

Please refer to the Right of Way Utilities website for information regarding utility companies that have executed Positive Location Agreements and names of the Department's Utility Coordinators in your area. Additional information regarding the Positive Location Agreement process can be found in Chapter 13, "Utility Relocation," of this Manual.

17.07.01.13 High and Low Priority Utility Facilities

All underground high and low priority utility facilities shall be handled in accordance with the Department's "Utility Policy" as referenced in the Project Development Procedures Manual Chapter 17, Encroachments and Utilities.

17.07.01.14 Agreements/Encroachment Permits Policy

For special funded projects, whether tax-measure or locally or developer-funded, that require a Cooperative Agreement or a Highway Improvement Agreement (see discussion below), an Encroachment Permit shall *not* be issued for work within the state highway right of way until the Region/District's Permit Office receives a copy of the fully executed Agreement.

© 1994-2025 California Department of Transportation. All rights reserved.

17.07.01.15 Agreement Types and Usage

Agreements for R/W services generally fall into one or more of the following categories and are more fully described in later sections of this chapter:

A. Memoranda of Understanding
B. Project Cooperative Agreements – Roles and Responsibilities
C. Highway Improvement Agreements
D. Advanced Acquisition (Hardship and Protection) Agreements
E. Encroachment Permits (Occasionally)

17.07.01.16 Agreement Preparation

Cooperative Agreements that provide for project development activities, including right of way, are usually initiated by either the appropriate District Project Development or Project Management Branch (see also 17.07.01.05). Certain Agreements, such as Advanced Acquisition Agreements (see below) that are part of an overall Master Agreement with the LPA, may be initiated by the Region/District R/W Division. They may be reviewed by HQ R/W Local Programs, which has the responsibility to coordinate the technical and legal review on all Agreements with right of way provisions.

The Region/District Cooperative Agreement Coordinator and HQ Office of Development and Improvement Agreement should be consulted when the Region/District is preparing a draft agreement for R/W services. Regardless of the type of agreement, many of the clauses covering right of way activities will be identical.

17.07.02.01 Memoranda of Understanding – General

A Memoranda of Understanding (MOU), also referred to as Letter of Understanding or Letter of Intent, is an informal non-binding agreement occasionally entered into between the Department and LPA or private entity that outlines understandings and responsibilities for various components of project development and construction. An MOU is not a cooperative agreement. Caltrans most often uses MOUs on locally funded projects to reach conceptual agreement on project scope, funding, staffing, and processing.

The MOU constitutes only a guide to the obligations, intentions and policies of the parties involved and not intended for use as a funding or programming

© 1994-2025 California Department of Transportation. All rights reserved.

commitment. The preface of an MOU should include language to this effect. (Refer to Cooperative Agreement Handbook [internal Caltrans link], Chapter 9).

17.07.02.02 Process and Approvals

MOUs are usually prepared, executed, and processed without HQ or Legal review because they are not binding contracts.

See Cooperative Agreement Handbook (internal Caltrans link), Section 9.4 for form and content of an MOU. When requested, the HQ R/W Local Programs staff is available for advice.

The MOU is to be executed by the District Director (or his/her designee at the principal level) and an authorized representative of the other party.

In most cases, the MOU will be initiated, prepared, and processed by the Region/District Project Development Branch. If R/W issues are to be addressed, the Region/District's R/W section must be given the opportunity to provide input. It is important that the R/W Local Programs Coordinator establish and maintain liaison with Project Development to ensure that R/W is afforded that opportunity.

17.07.02.03 Sample MOUs

Cooperative Agreement Handbook (internal Caltrans link), Appendix I provides a sample MOU.

17.07.03.01 Cooperative Agreements – Roles and Responsibilities

The Department's policy is contained in Deputy Directive 23 (DD-23-R2) (see Exhibit 17-EX-07), Roles and Responsibilities for Development of Projects on the State Highway System, dated December 2018. It provides that the Department, as owner/operator of the State Highway System (SHS), has a statutory and inherent obligation to ensure that all modifications or additions to the SHS, regardless of project sponsor or funding source align with the State and Department's goals and objectives for development and delivery of sustainable highway improvement projects that add value to the public and meet or exceed stakeholder expectations for safety, operations and maintenance.

© 1994-2025 California Department of Transportation. All rights reserved.

Based on the foregoing, a cooperative agreement requires its parties adhere to the standards, policies, and procedures (or have an approved exception) that Caltrans would normally follow when it plans, designs, and constructs projects on the SHS. A cooperative agreement will not commit Caltrans to any arrangement that it does not have legal authority to pursue or the financial capacity to fund. See Cooperative Agreement Handbook (internal Caltrans link).

17.07.03.02 Process and Approvals

The Cooperative Agreement(s) should be entered into as soon after the Project Approval stage as possible—certainly prior to commitment to perform oversight and/or agreeing to perform R/W services that will be reimbursable by the LPA. See Section 17.07.01.05 Development, Preparation and Processing.

17.07.04.01 Highway Improvement Agreements (Privately Funded Projects) – General

Highway Improvement Agreements (HIAs) are utilized on state highways for privately funded projects costing over $1,000,000. Frequently, these projects require that additional right of way be acquired by the developer and subsequently conveyed to the state to become part of the highway system. They are similar to a Cooperative Agreement in form, content, and legal commitment.

Once a privately funded project is identified, a decision must be made to designate the project sponsor. As noted above, the Department strongly encourages LPAs to sponsor these projects to demonstrate community acceptance and to improve coordination with other LPAs. If an LPA sponsors a privately funded project, it becomes a "Locally Funded Project" (see above) and is processed as such. Where an LPA will not sponsor the privately funded project, the Department will work directly with the private project sponsor.

A Highway Improvement Agreement will be required for all privately funded projects. Prior to the execution of the Agreement, the Region/District shall require the private project sponsor to pay an advance deposit to cover the state's oversight costs until the HIA is executed and an escrow account, if applicable, is established.

As the owner/operator responsible for assessing the impact of improvements on the existing State Highway System, the Department is responsible for

© 1994-2025 California Department of Transportation. All rights reserved.

preparing the PSR at Department's expense. It is the responsibility of the private project sponsor to provide suitable engineering data and technical and financial information needed for Department to prepare the PSR. If the Department is unable to comply with the schedule desired by the project sponsor, the private entity sponsor may prepare and submit a draft PSR at its own expense. The private sponsor is responsible for performing and funding all subsequent project development, right of way, and construction activities, with Department providing oversight *at the sponsor's expense*. If requested by the private project sponsor, the Department may perform some of the services for which the private project sponsor is responsible on a reimbursed basis if Department has sufficient staffing resources and reimbursed budget authority.

17.07.04.02 Development, Process and Approvals

Highway Improvement Agreements are *usually* initiated by the Region/District Encroachment Permit Section, with input provided by all functional units, including RW. The formal process for authorization, development and approval of a Highway Improvement Agreement are the same as for all other types of cooperative agreements and discussed in detail in Section 17.07.01.04 and 17.07.01.05 of this chapter. As with all Agreements for projects on the SHS, it is imperative that the Local Programs Coordinator establish and maintain good communications with the Permit Section and other PDT members to ensure that all right of way issues, including utilities and railroads, are addressed.

The Agreements are executed prior to the issuance of an Encroachment Permit. R/W's *primary* concern is that an acceptable degree of title be conveyed to the State.

17.07.05.01 Agreements for Advance Acquisition – General

Agreements for Advance Acquisition (Hardship and Protection) between the Department and LPAs may be entered into as the need arises. They are generally entered into in advance of a formal Cooperative Agreement covering regular R/W services. The criteria required in order to establish a parcel's eligibility for hardship or protection acquisition is found in Chapter 5 of this Manual.

On locally funded and tax measure projects, the cost of all advance acquisition activities performed by the department will be borne by the LPA through the use of advance deposits.

© 1994-2025 California Department of Transportation. All rights reserved.

Refer to the Cooperative Agreement Handbook (internal Caltrans link) for further guidance.

17.07.06.01 Encroachment Permits – General

Encroachment Permit projects are projects on the SHS that are 100% funded by either an LPA or a private developer with construction cost under $1,000,000 and which are located within the existing or ultimate right of way. These projects follow established permit procedures. Normally no Cooperative Agreement is required.

On occasion, however, the sponsor requests the Department to perform project development work, such as right of way, for which the LPA is responsible. The Department may perform these activities on a reimbursed basis if there is sufficient staffing and reimbursed authority. A Cooperative Agreement will be required to set forth the responsibilities for the reimbursed services.

© 1994-2025 California Department of Transportation. All rights reserved.

17.08.00.00 – PROJECT CERTIFICATION

17.08.01.00 Definition

A Right of Way Certification is a written statement summarizing the status of all right-of-way-related matters with respect to a proposed construction project.

17.08.02.00 Purpose

The purpose of the Right of Way Certification is to document that real property interests have been or are being secured, and physical obstructions, including buildings, utilities, and railroads, have been or will be removed, relocated, or protected as required for the construction, operation, and maintenance of the proposed project. The Right of Way Certification also documents that right of way activities were conducted in accordance with applicable policies and procedures.

17.08.03.00 Projects on State Highway System Requiring a Right of Way Certification

When a Local Public Agency (LPA) performs right of way activities on a portion of a state highway, regardless of fund source, the LPA prepares the Certification as outlined in this chapter. This certification must match the approved PS&E reflecting RW involvement for the entire project. Where an Encroachment Permit onto the state highway right of way is required for construction to commence, a Certification consistent with policies outlined in this chapter must first be prepared and accepted. See Caltrans Encroachment Permit Manual, Section 202 for Oversight Projects and Project Development Procedures Manual (PDPM), Article 8 and Appendix I.

NOTE: For projects off the State Highway System that are administered through the Division of Local Assistance, please see the Local Assistance Procedures Manual (LAPM), Chapter 13, for guidance on right of way certification requirements. A Local Public Agency (LPA) must prepare a ROW certification for all federal-aid projects, regardless of phase.

© 1994-2025 California Department of Transportation. All rights reserved.

17.08.04.00 Unusual Project Circumstances/Conflicts

"Unusual circumstances" are defined as any deviation from the requirements or standard practices outlined in this chapter. When there are unusual circumstances in a project, a full explanation shall be forwarded to the Region/District Division Chief, R/W, for approval. The request shall be forwarded to the Local Programs Coordinator at least three months prior to the project advertising date. The Approval should be included in the Certification or in an attachment and made a part of the Certification.

17.08.05.00 Time Requirement for Right of Way Certifications Requiring FHWA Approval

For a full discussion of R/W Certifications and their usage, see Chapter 14, "Project Certification," in this manual.

17.08.06.00 Updating the Right of Way Certification

Right of Way Certifications prepared for state-advertised projects shall be updated when:

A. The Certification is one year old and the project it was prepared for has yet to be advertised,

B. At the request of the Project Manager or Project Engineer,

C. When dates or anticipated actions are no longer consistent with the current date of the Certification,

D. Any changes in project scope or right of way requirements,

E. When project description is no longer consistent with the PS&E.

For a full discussion of R/W Certifications and their usage, Chapter 14, "Project Certification" in this manual.

© 1994-2025 California Department of Transportation. All rights reserved.

17.08.07.00 Corrections, Additions, and Deletions to Certification

The Department shall not take action on verbal requests to alter significant, factual data in a Certification. There must be a written request from the LPA describing any change required. This request must then be attached to and made a part of the original Certification. Revised Certifications must have the word "Revised" clearly stamped in the upper center of the front page.

17.08.08.00 Functional Monitoring and Record Retention

R/W functional monitoring of LPA projects must be documented in the Region/District R/W Local Programs Project Coordinator's files. Such monitoring information, together with the original LPA or developer Right of Way Certification and any pertinent correspondence, will be retained by the Region/District R/W Local Programs unit in accordance with the Standardized Records Disposition Schedule for R/W Project Files. Also, a copy of the original Certification should be retained in the Local Programs project files.

17.08.09.00 Procedures for Certification of Privately Funded Projects on the State Highway System

The Department accepts the completed project (tax-measure or locally or privately funded) into the State Highway System provided the project was Department-approved, and the right of way was acquired and the project constructed in accordance with Department practices. See Caltrans Encroachment Permit Manual, Section 202 for Oversight Projects and Chapter 14, "Project Certification" of this manual.

A. The developer provides the Encroachment Permits Engineer a Right of Way Certification (Exhibit 17-EX-16) prior to state's granting an Encroachment Permit to the developer. This is required regardless of whether there is a highway improvement or not.

B. The Encroachment Permits Engineer transmits the Certification to R/W for review and acceptance.

C. Prior to accepting the certification, the R/W Local Programs Coordinator verifies Certification statements and obtains a policy of title insurance where required from the developer prior to accepting the Certification. Title insurance policies are required prior to Caltrans

© 1994-2025 California Department of Transportation. All rights reserved.

acceptance of the certification for projects where property is being conveyed from the Developer to Caltrans.

D. The R/W Local Programs Coordinator reviews and accepts the Certification on behalf of the District.

E. The R/W Local Programs Coordinator notifies the Permit Section the Certification has been accepted and sends copies to the Encroachment Permits Engineer.

F. The Encroachment Permit is then issued.

17.08.10.00 Prerequisites to Certification of a Project by an LPA

Prior to issuing a Right of Way Certification, the LPA shall review the draft PS&E to confirm pertinent data. Included in this review should be such items as project identification, location description, work description, and special provisions relating to utility, railroad and/or right of way clearance coordination. The Certification also includes confirmation that right of way construction contract obligations are properly included in the PS&E, and confirmation that the right of way as shown on the construction plans is consistent with the LPA's Certification.

Conflicts which could affect the construction contract such as utility, railroad, or clearance work to be done in coordination with construction must be identified in the Certification so that they can be called to the bidder's attention in the Bid Documents (Contract Special Provisions).

17.08.10.01 General Steps for an LPA Certification of a Project

A. LPA prepares the Right of Way Certification.

B. LPA transmits the Certification to the DLAE.

C. The DLAE sends the Certification, along with plans, maps, and other documents, to the Region/District R/W Local Programs Coordinator for review.

D. The R/W Coordinator reviews the LPA Certification for compliance with all applicable laws and procedures. Region/District functional

© 1994-2025 California Department of Transportation. All rights reserved.

monitoring records are included in the review. Further monitoring/review may be performed, if required, to check Certification accuracy.

E. Staff time permitting, the R/W Coordinator conducts field reviews to confirm all occupants within the right of way have been relocated and arrangements for utility relocation are being completed in conformance with regulations.

F. When the R/W Coordinator confirms that the LPA Certification statements are correct, the authorized R/W Representative will accept the Certification.

G. The R/W Coordinator returns the accepted original of the LPA Certification to the DLAE. A copy of the original Certification is kept in the Region/District Local Programs project file.

H. If the Department is advertising the project, the DLAE forwards four copies of the accepted Certification with the PS&E submittal to the District Office Engineer for bid package preparation. If the PS&E has already been processed, a copy of the original Certification will be submitted to the HQ Division of Local Assistance.

I. If any federal funds are involved in the project, HQ DLA processes the LPA Certification through the HQ Federal Aid Branch. In the event the project in question is on the Interstate System, the Federal Aid Branch forwards the Certification to the Federal Highway Administration.

17.08.10.02 Certification Levels

There are four levels of certification: Certification Nos. 1, 2, Conditional Certification No. 3, and Special Certification No. 3 With Work-Arounds. These levels correspond to the degree of control of the right of way that has been achieved for the project as outlined in 23 CFR Sections 635.309(c) l, 2, or 3, respectively.

For a full discussion of these Certifications and their usage, see Chapter 14, "Project Certification," in this Manual.

© 1994-2025 California Department of Transportation. All rights reserved.

17.08.10.03 Right of Way Certification Process in the Region/District

Right of Way Certification on LPA projects that will be advertised by the state will be handled in accordance with Sections 14.02.05.01 and 14.02.05.02 of the R/W Manual.

17.08.11.00 Certification Format

The method of Certification as specified under 23 CFR 635.309(c) entitled, "Physical Construction Authorization," is applicable to all federal-aid construction projects. The format also applies to all special-funded projects regardless of funding.

LPA Right of Way Certifications for all projects will be made using the Certification format shown in Exhibit 17-EX-18. The LPA should use only those portions of the format applicable to the certification level being prepared and the project being certified. The format contains specific language developed collaboratively with FHWA. Any deviation from the standard language requires HQ approval, otherwise the Certification may be invalidated. Any deviation from the format or the wording must be fully explained in the Certification and have prior Region/District R/W Local Programs' approval. Privately funded projects may be certified using the Certification format shown in Exhibit 17-EX-16.

17.08.11.01 Federal Aid in Right of Way and Utilities

When there is any federal aid in the right of way cost of a project to be advertised by the state, the Right of Way federal-aid project number(s) will be shown on the Right of Way Certification. If there is no federal aid in the right of way cost, the Right of Way Certification shall show "None." The Right of Way federal-aid project numbers are available from the Region/District's R/W Planning and Management unit.

The use of federal-aid for Construction should be confirmed with the Project Manager. Occasionally when the project is to be certified, the federal-aid project number for Construction may not have been received. In this case, "Pending" shall show for the Construction federal-aid project number.

The HQ or District Office of Office Engineer will add the Construction federal-aid project number to the Right of Way Certification at the time the project is listed for advertising as appropriate.

© 1994-2025 California Department of Transportation. All rights reserved.

17.08.11.02 Required Right of Way

All property rights required for a project must be reflected in the Right of Way Certification. Parcels to be included in a Right of Way Certification are regular right of way parcels acquired by deed, Final Order of Condemnation, Order for Possession, Right of Entry, Agreement for Possession and Use, license, permit, or other acquisition documents used by certain governmental entities. Temporary rights must also be listed in the Certification. These include Temporary Easements, Temporary Permits to Enter (Or Enter and Construct), etc. It is important to include the expiration date of any temporary rights in the Certification so they may be evaluated in terms of the final construction schedule.

17.08.11.03 Certifications with Agreements for Possession and Use or Rights of Entry

Certifying a project where Agreements for Possession and Use or Rights of Entry are used to control right of way should be minimized to the greatest extent possible. Such Agreements may be used sparingly, and only after an appraisal has been completed and the initial offer of settlement has been presented to the Owner.

Agreements for Possession and Use or Rights of Entry obtained prior to initiation of negotiations can be used *only* to certify control of right of way in emergency or other justified situations. If an LPA believes it is necessary to solicit these types of agreements from an Owner prior to completion of the appraisal and making the first written offer, they must obtain the prior approval of Region/District R/W Local Programs Coordinator. Specific guidelines for the use of Agreements for Possession and Use and Rights of Entry are found in Chapter 8, "Acquisition," of this R/W Manual.

LPA requests to certify projects utilizing such Agreements should be submitted to Region/District R/W Local Programs Coordinator with the facts justifying the proposed action. The request may be made in writing, in person, or in emergency situations by telephone.

Region/District R/W can approve all standard form Agreements for Possession and Use or Rights of Entry. All nonstandard agreements shall be forwarded to the HQ R/W Local Programs for approval. The LPA will be notified of the acceptance of their request in writing. LPA Certifications containing such agreements should include a reference to the prior approval. Certifications where all or a major portion of the parcel are controlled through these types

© 1994-2025 California Department of Transportation. All rights reserved.

of agreements shall be avoided except when public safety or emergency projects are involved.

17.08.11.04 Status of Affected Railroad Facilities

The "Affected Railroad Facilities" portion of the Right of Way Certification applies to a railroad's "operating property" only. The railroad determines which of their properties are "operating" or "nonoperating." Acquisition of railroad operating property will also be covered under Section 1 of the Certification, "Status of Required Right of Way."

A Clearance Letter from the Department's Office of Structures is required for ANY project with railroad involvement that is advertised by the State Office of the Office Engineer, even when the railroad arrangements were made by an LPA. Refer to Chapter 14, "Project Certification," in this Manual for additional information.

17.08.11.05 Material and Disposal Sites

List in the Right of Way Certification all optional or mandatory material or disposal sites which require a Local-Agency-secured agreement and which are being made available for use for the project being certified.

On some projects, bidders are advised of "available" sites that have been previously tested and approved for use. Contractors make their own arrangements for use of such sites. These sites are listed on the Right of Way Certification when the project does not require a previously secured agreement with the site Owner.

17.08.11.06 Status of Required Utility Relocations

An LPA Right of Way Certification is not to be issued until it can be stated that either there are no required utility relocations, the state will handle the utility relocation, or the LPA will handle the utility relocation. Use one or more of the clauses found in Chapter 14, "Project Certification," in this Manual to complete the Utility Portion of the Certification.

© 1994-2025 California Department of Transportation. All rights reserved.

17.08.11.07 High and Low Priority Underground Facilities

A statement concerning High and Low Priority Underground Facilities is no longer required in the Certification. The Office of Project Planning and Design is responsible for administration of the High and Low Priority Utility Facilities policy.

17.08.11.08 Right of Way Clearance

The LPA Right of Way Certification requires information concerning the disposition of improvements. Refer to Chapter 14, "Project Certification," of this Manual for appropriate clauses.

17.08.11.09 Compliance with Relocation Assistance Program Requirements

This section provides assurances that current policy and procedure have been followed relative to relocation advisory assistance payments. Detailed data regarding any remaining occupants and/or personal property are also provided. (See also requirements for Special Certification No. 3 With Work-Arounds.)

17.08.11.10 Cooperative Agreements

This is an optional section used as a check to ensure that needed Cooperative Agreements have been secured.

17.08.11.11 Certification – Authorized Signature

The LPA Right of Way Certification should be submitted with a resolution by the governing body that authorizes execution of the document. As an alternative, the appropriate agency, e.g., County Board of Supervisors or City Council, may adopt a resolution giving the Chairman of the Board, Mayor of the City, Public Works Director, Transportation or Traffic Authority or other responsible official a blanket authority to execute Right of Way Certifications. Certifications executed by this official would then be acceptable. If this second alternative is used, a copy of the original resolution need not accompany each Certification submitted to the Region/District. It will be sufficient to have a copy of the original resolution on file in the Region/District.

© 1994-2025 California Department of Transportation. All rights reserved.

In the cases when the Region/District will recertify the project, e.g., the state is doing part of the work, the Region/District Right of Way Certification will be issued over the signature of the Region/District Division Chief, R/W, or designee.

17.08.11.12 Indemnification by Local Agency for On-System Projects

The Department reviews and approves only those LPA Right of Way Certifications prepared for projects where Department advertises, awards, and administers the contract. As in the case with off-system projects, all other LPA-prepared Right of Way Certifications are "accepted" by the Department. It is, therefore, important that the LPA certify that any right of way acquired for a project which will subsequently be conveyed to the Department be acquired in accordance with our own policies and procedures. Use of this clause reaffirms that the LPA has overall responsibility and accountability for proper project certification.

Use of the "Indemnification by Local Agency" clause is required in all LPA Right of Way Certifications and has been incorporated into the Certification exhibits.

© 1994-2025 California Department of Transportation. All rights reserved.

17.09.00.00 – TRANSPORTATION ENHANCEMENT ACTIVITIES (TEA) AND ENVIRONMENTAL ENHANCEMENT AND MITIGATION (EEM)

17.09.01.01 EEM/TEA – General

There are two programs where funding is made available for LPAs with environmental objectives: one is state-funded and the other federally funded. The R/W Local Programs Branch will generally have similar responsibilities for each program. The state-funded program is entitled the Environmental Enhancement and Mitigation (EEM) Program. The federally funded effort is the Transportation Enhancement Activities (TEA) Program. They are similar in objectives and operations, but have different project approvals and funding mechanisms. The Department administers both programs. The primary responsibility for processing agreements for the TEA Program lies with each District's Local Assistance Engineer (DLAE). The EEM agreements are processed initially by the EEM Program Coordinator in Headquarters, Division of Local Assistance (DLA) with assistance from the DLAE where the project is located.

For our purposes herein, both programs require matching funds from the recipient and both permit use of the funds to acquire land, which triggers the majority of the R/W involvement. The eligible costs of acquiring land, in addition to the purchase price, may include appraisals, surveys, preliminary title reports/title insurance and escrow fees, legal fees and clearance/demolition expenses.

There are other issues that may involve R/W such as utility relocation, modifications to railroad facilities, or access impairment. After the projects are approved and funding is in place, the R/W effort is generally the same for each program.

The policies and procedures for both programs are described in the DLA Local Assistance Program Guidelines. The TEA Program is dealt with in Chapter 8 and the EEM Program is found in Chapter 20.

NOTE: Both the existing TEA funding program and the recent legislation commonly referred to as TEA-21 have the same acronym. Care should be taken so as not to confuse textual references to local agency transportation enhancement projects with the 1998 federal legislation.

© 1994-2025 California Department of Transportation. All rights reserved.

17.09.02.01 EEM – General

The EEM Program was established by the Legislature in 1989 with the addition of Section 164.56 of the Streets and Highways Code. The program receives $10 million in annual funding, subject to appropriation in each year's state budget. The purpose is to provide grants to local, state and federal agencies and nonprofit entities to mitigate the environmental impact of transportation projects *in addition* to any requirements of the environmental document. When the funds are used for property acquisition, compliance with the State Government Code (State Uniform Act) Section 7260 et seq. is required. This does not apply to private entities.

The grants are available for use in three broad categories:

1. Highway Landscaping/Urban Forestry

2. Resource Lands

3. Roadside Recreational

For further information about the EEM Program, see Chapter 20 of the Local Assistance Program Guidelines.

17.09.03.01 TEA – General

The TEA Program was one of the components in the 1991 ISTEA. Funding for TEA projects has been reauthorized in TEA-21. TEA procedures allow R/W donations to count toward the local funding share of a project. Donations must be from private ownership to public ownership for project purposes. Acquired right of way is not eligible as the match. Land that has been acquired previously and is already intended or available for use by the public does not qualify for donation credit.

Anyone seeking information about the availability of TEA funds and/or how to apply for them should be referred to the TEA website.

The purpose of the TEA Program is to provide federal aid to local and state agencies for transportation-related projects that enhance the quality of life in or around the transportation facility. As with the EEM Program, the funds are to be used for projects *over and above* any required mitigation for the project. TEA projects must be directly related to the surface transportation system. There are 12 categories of eligible uses for the funds. Some examples of common projects are bikeways, scenic land preservation, historic

© 1994-2025 California Department of Transportation. All rights reserved.

preservation of transportation facilities, landscaping or other types of scenic beautification, and preservation of railroad corridors for trail use.

17.09.03.02 Environmental Clearance

Projects in both programs require environmental clearance prior to funding approval. TEA projects require compliance with NEPA and EEM projects require compliance with CEQA.

17.09.04.01 Restrictive Covenants

When any of the project funds are used for land acquisition, both Programs place restrictions on the subsequent use of the lands. These restrictions are embodied in an Agreement Declaring Restrictive Covenants (ADRC) which is recorded along with the Grant Deed conveying the subject property to the applicant. The ADRC for the TEA Program is similar to the ADRC for the EEM Program. (For a sample ADRC for the EEM Program, see Exhibit 17-EX-19.) The ADRC limits the uses of the land to the purposes intended by the Program and protects the investment in the land should it be sold or no longer used for the approved purposes. Any subsequent transfer of the acquired property from the applicant to another party must be approved by the Department. Each ADRC includes exhibits for the Legal Description, Management and Maintenance of the property and Notice of Revocation of Restrictive Covenants.

NOTE: The ADRC must be signed by the Right of Way District Division Chief, or designee.

When the project funds are used for acquisition of a Conservation Easement only, the ADRC is not used. Contact the HQ EEM or TEA Coordinator for further details.

17.09.05.01 R/W Responsibilities

The DLAE should forward grant applications involving acquisition of real property or a conservation easement to the District Right of Way Office for their early review and involvement in these acquisition projects. By the time R/W becomes involved, the projects have already been reviewed, a specific amount of funding has been approved, and the CTC has allocated the funds. Thus, the role of the R/W Local Programs Coordinator, after the early review, is limited to either assisting the applicant, the DLAE and/or the TEA/EEM Program Coordinator in approving reimbursement for the acquisition expenses *after* the close of escrow or to facilitate the purchase *beforehand* by depositing

© 1994-2025 California Department of Transportation. All rights reserved.

the project funds in escrow accompanied by the appropriate escrow instructions.

NOTE: Although possible, condemnation is very rarely used in the TEA/EEM Programs. Most land purchases are the result of negotiations between a willing buyer and seller. Often the land has been for sale on the open market and both parties have agreed to the price. The Department's charge in these cases is to determine that the purchase price *fairly* represents the value of the land and to assist the parties as needed in the conveyance of the property. If there is a discrepancy between the purchase price and the appraised value, there should be some reasonable justification why the two amounts are different.

17.09.05.02 Reimbursement Procedures

A substantial number of TEA/EEM projects involve reimbursing agencies for the expenses already incurred in connection with land acquisition and related costs. In these cases, the following documentation will be submitted to the DLAE who will forward them for R/W review:

1. An appraisal in support of the purchase price.

2. A copy of the Grant Deed conveying the property to the applicant.

3. A copy of Policy of Title Insurance showing title vested in the applicant.

4. An invoice for reimbursement.

If the documents are in order, the Local Programs Coordinator should approve the invoice for payment and return the package to the DLAE. Any questions about the transaction may be referred to HQ Local Programs.

17.09.05.03 Responsibilities for Purchase Escrows

When the applicant requests that the Department deposit the funds directly into escrow for the purchase of the land, opening the escrow is the responsibility of the applicant. On these projects, the applicant will *usually* submit the following documents to the DLAE who, in turn, will forward them to the R/W Coordinator for review and approval.

1. Two copies of the Applicant-State Agreement

© 1994-2025 California Department of Transportation. All rights reserved.

2. An executed Agreement Declaring Restrictive Covenants (ADRC) including Exhibits

3. A copy of a preliminary title report

4. A current appraisal in support of the purchase price

5. A copy of the escrow instructions
(See item "C" below for additions to the escrow instructions.)

6. An invoice for payment

The R/W responsibilities include the following:

A. Reviewing the Preliminary Title Report, including the legal description to confirm that it adequately describes the property, and that there are no adverse conditions affecting title.

B. Reviewing the appraisal to confirm that the agreed-upon purchase price "reasonably" reflects the fair market value for the property. For most projects, this can be accomplished by a "desk review" of the appraisal.

C. Preparing the necessary escrow instructions on how the funds are to be used (e.g., for the purchase of the subject property when all of the escrow requirements have been met). On EEM projects, the escrow instructions should state that the Agreement Declaring Restrictive Covenants (ADRC) must be signed, along with the Grant Deed prior to close of escrow, and the escrow agent should forward copies of the recorded grant deed and recorded ADRC to Caltrans Local Programs within 60 days after close of escrow.

D. Approving the invoice for payment for the purchase price of the land, plus escrow closing costs.

When the documents are in order, the invoice should be approved and the package returned to the DLAE.

© 1994-2025 California Department of Transportation. All rights reserved.

17.10.00.00 – FEDERAL REIMBURSEMENT REQUIREMENTS

17.10.01.01 Introduction

Federal funds may participate in capital outlay costs made by LPAs for real property purchases or interests therein acquired in accordance with applicable state and federal law and FHWA regulations. Federal reimbursement is processed through the Division of Local Assistance. This section outlines some general federal reimbursement information, however, LPAs shall refer to the LAPM Chapter 3, Section 3.3, and Chapter 13, Section 13.12, for comprehensive information pertaining to reimbursement requirements.

17.10.01.02 Eligible Right of Way Costs

Reimbursable Project Costs
Salaries, wages, and related project costs may be reimbursable for the following activities. All costs must be broken down into eligible direct and/or indirect cost components.

Right of Way: Acquisition of Right of Way, real property, or rights thereto is included. It also includes the preparation of Right of Way plans, economic studies, and other related preliminary work, appraisals for parcel acquisition, review of appraisals, preparation for and trial of condemnation cases, management of properties acquired, providing relocation advisory assistance, utility relocation, and other related labor expenses.

Note: Right of Way rental income and the proceeds from the sale of excess land may be retained by LPAs if it is used for a valid Title 23 purpose. It is the LPA's responsibility to ensure they comply with Title 23 if this option is selected. For additional information about Right of Way topics, see LAPM Chapter 13 – Right of Way, Section 13.12.

© 1994-2025 California Department of Transportation. All rights reserved.

17.10.01.03 Authorization Procedures

Federal participation in right of way costs requires authorization from FHWA.

Federal-Aid Project Authorization (E-76)
Prior to the beginning of the reimbursable work, the project phase of work eligible for federal reimbursement must be formally authorized (approved) by Caltrans and the FHWA. The payment of federal funds is limited to the amounts approved on the Authorization to Proceed or E-76. To initiate a federal project authorization for a phase(s) of work, or to increase a prior authorization, the LPA must prepare the Request for Authorization package (see LAPM Chapter 3 – Project Authorization) that provides the information required by Caltrans and the FHWA to process the request in a timely manner.

Note: Costs incurred prior to the authorization date are not eligible for FHWA reimbursement except for At-Risk Preliminary Engineering, Emergency Opening, and Preliminary Engineering work that is part of the Emergency Relief program; see LAPM Chapter 3 (Section 3.3: At-Risk Preliminary Engineering); and except as provided in 23 CFR 710.503, for protective buying and hardship acquisition, and in 23 CFR 710.501, early acquisition.

For additional information about the phases of work and the project authorization process, refer to LAPM Chapter 3.

State-only Funded Project Allocation
For projects funded with state-only funds, reimbursable work begins the day of fund allocation. For more information on allocation procedures go to Local Assistance Program Guidelines (LAPG) Chapter 25 – State Programs for Local Agency Projects.

17.10.01.04 Reimbursement Procedures

Invoice Submittal
The LPA may submit monthly invoices for reimbursement of participating costs (costs eligible for state and/or federal reimbursement). Amounts claimed must reflect the cost of completed work, which has been paid for. The LPA must claim all reimbursable work within 180 days of project completion or prior to the expiration date of the project agreement, whichever comes first. Per the Master Agreement, an invoice must be submitted at least every six months to avoid being classified as inactive. Refer to the Inactive Projects webpage for more details.

© 1994-2025 California Department of Transportation. All rights reserved.

Towards the end of the State fiscal year (June 30), it is very important for LPAs to submit invoices timely for all incurred project costs so that accrued expenditures are properly identified on Caltrans financial statements.

Each fiscal year, the Division of Local Assistance (DLA) will notify LPAs regarding projects funded from lapsing appropriations (funds that will expire/not be available for spending after June 30 of that fiscal year). LPAs will be notified of the deadline for submitting invoices for these projects.

Additional information may be obtained from Caltrans Local Program Accounting (CLPA) through the District Local Assistance Engineer (DLAE). Payments made under these provisions are for expenditures paid by the LPA prior to claiming reimbursement from the California Department of Transportation (Caltrans).

Tracking Status of Invoices
As invoices are processed by CLPA, LPAs can monitor the status of their invoices by viewing the data at the Vendor Payment History webpage. This website is updated daily and contains all invoices for projects for the past 18 months.

17.10.02.01 Processing of Audits

Audits may be conducted by the Caltrans Internal Audits Office (CIAO) and the Independent Office of Audits and Investigations (IOAI), identifying potential findings and sanctions, common deficiencies, and recommended internal controls to improve compliance. This includes compliance with state and federal regulations, the Master Agreement, the Local Assistance Procedures Manual (LAPM), the Right of Way Manual (RWM), the Local Assistance Program Guidelines (LAPG), California Transportation Commission grant requirements, and all other applicable regulations. Refer to LAPM Chapter 20 – Audits and Corrective Actions for more details.

17.10.03.01 Final Vouchering

The last phase of a federal-aid participating project is final vouchering and closing the project. After the project has been completed, a final voucher must be prepared by the LPA and submitted to the FHWA. The Final Invoice, Final Detail Estimate, Final Right of Way Invoice, and the Final Report of Right of Way Expenditures are used as the basis for the total and participating final voucher costs which are submitted to the FHWA.

© 1994-2025 California Department of Transportation. All rights reserved.

17.10.04.01 Record Retention

2 CFR 200.334(c): Records for real property and equipment acquired with Federal funds must be retained for 3 years after final disposition.

Records must be maintained until 3 years after property is disposed of (i.e., indefinitely on ROW).

17.10.05.01 Financial Sanctions

The FHWA may withhold federal financial assistance if the certifying LPA fails to comply with the applicable State law and regulations implementing other provisions of the Uniform Act. The FHWA will notify the Department at least 15 days prior to any decision to withhold funds pursuant to 49 CFR 24.603(b).

© 1994-2025 California Department of Transportation. All rights reserved.

17.11.00.00 – DEFINITIONS AND REFERENCES

17.11.01.01 Definitions

California Environmental Quality Act (CEQA) – The state environmental legislation that applies to all projects in California and which establishes procedures for conducting an environmental analysis.

Capital Outlay – Capital outlay includes costs necessary to acquire and clear the rights of way for construction of the project. All capital outlay costs must be charged to a specific project. FHWA requires that all right of way capital costs be recorded in sufficient detail to determine eligibility for reimbursement. This includes the costs for land, improvements, damages, utility relocation, demolition and clearance, RAP, condemnation deposits, and construction contract payments.

Capital Outlay Support – The personnel and operating expenses to support the right of way functions that produce capital outlay payments. In addition to Right of Way, it includes environmental studies, design, and construction management.

NOTE: FHWA uses a different term, "Incidental Costs," when referring to these expenses.

Combined Project Study Report/Project Report (PSR/PR) – A single engineering report expediting the project development process for noncomplex, noncontroversial state highway projects funded by others and costing over $1,000,000 for construction.

Cooperative Agreement – An executed contract that specifies the respective roles and responsibilities of the Department and local governmental entities involved in developing a special funded State highway project.

Dedication – The setting aside of property for public use without compensation as a condition prior to the granting of a Permit to Construct, Zoning Variance, Conditional Use Permit, etc.

Design Engineering Evaluation Report (DEER) - If a locally funded project qualifies for the DEER QMAP review, it can use the DEER as a project initiation and approval document, therefore eliminating the need for a separate processing of the Project Initiation Document (PID). See Section 202 of the Caltrans Encroachment Permit Manual.

© 1994-2025 California Department of Transportation. All rights reserved.

Donations – The voluntary conveyance of property without compensation for the improvement of a current or future public project.

Draft Environmental Document (DEIS) – The draft of an environmental impact report (state) or environmental impact statement (federal) that is made available or circulated to the public for review and comment.

Encroachments – An encroachment is defined as any object or structure (e.g., towers, pipes/pipe lines, poles/pole lines, billboards, fences, etc.) within the state's right of way, but not a part of the state's facility. The Department's general policy is to allow utilities within conventional rights of way subject to reasonable conditions to provide for the safety of the traveling public. The policy with regard to freeways is more restrictive. Utilities are excluded from within access-controlled rights of way to the extent practical.

Encroachment Permit – A permit issued by the Department and required for any activity proposed by a local or private entity within, under, or over a state highway right of way. The permits allow temporary use of a highway right of way and include temporary breaks in access to the right of way for grading, excavating, removal of materials, etc.

Encroachment Permit Projects – These are projects on the SHS constructed by others with an estimated construction cost of $1,000,000 or less.

Final Environmental Document – The document prepared in response to public review and comment of an initial study (state), environmental assessment (federal), environmental impact or environmental impact statement (federal).

Freeway Agreement – A document executed by the Department and a city or county which establishes the freeway location/route and the location of frontage roads, and identifies which streets and roads are to be relocated, closed, and separated from or connected with the freeway.

Highway Improvement Agreement – An executed document that specifies the respective roles and responsibilities of the Department and private entities involved in developing a special funded state highway project.

Highway Project – Includes improvement projects which alter the physical features of a highway or freeway.

© 1994-2025 California Department of Transportation. All rights reserved.

Initial Project Report – A document required for projects financed by sales taxes which ties together the preliminary concepts of the Project Study Report with current engineering and fiscal constraints to identify the funding and schedule for a project.

Lead Agency – The governmental entity responsible for preparing environmental documents.

Local Public Agency (LPA) or Local Entity – A city, county, city and county, municipality, district, public transportation authority, or any other political subdivision or local government agency which may acquire right of way on the SHS or local assistance projects.

Local Assistance Projects – Within this chapter (to differentiate between these and Special Funded projects), Local Assistance projects are on local streets and roads and utilize Federal-aid funds in some portion of the project. They may also be referred to as local entity or local grant projects.

Note: There may also be other types of funds involved; e.g., state or local.

Local Nonsales-Tax-Measure Project – A state highway improvement project financed by local revenues obtained from sources other than the sales tax.

Local Sales-Tax-Measure Project – A state highway improvement project financed by revenues received from a **voter-approved** increase in the **retail** transactions-and-use tax.

Local Transportation Authority – A governmental body established by a county to develop and finance transportation improvements using sales tax revenues.

Metropolitan Planning Organization – The transportation organization in each urbanized area responsible for the comprehensive planning process resulting in programs for the development and operation of an integrated transportation system which facilitates the efficient and economic movement of people and goods.

National Environmental Policy Act (NEPA) – The National Environmental Law that establishes procedures for conducting an environmental analysis for a project involving federal action.

© 1994-2025 California Department of Transportation. All rights reserved.

Oversight – (See also definition in Manual section.) Activities concerning a special funded project which are performed by the Department to ensure the safety and integrity of the state highway system through adherence to its standards and practices for development of transportation projects and improvements. Oversight does not include Encroachment Permit activities unless it is so stipulated in a Cooperative Agreement. Oversight is also known as "Quality Assurance."

Permit Engineering Evaluation Report (PEER) – A "short form" project report documenting the engineering and environmental analysis of permit actions which affect operations and maintenance of state highway projects. See Section 202 of the Caltrans Encroachment Permit Manual and Project Development Procedures Manual Article 8 and Appendix I.

Plans, Specifications, and Estimate (PS&E) – The products of the final design phase which prepare a highway project for contract advertising.

Private Entity – Any nonpublic organization.

Project Development Team – An interdisciplinary group of managers, professionals, and technicians responsible for directing project studies; planning, developing and evaluating alternatives; and participating in community interaction regarding a proposed highway project.

Project Report – A report that summarizes detailed feasibility studies of the needs, alternatives, costs, and overall impacts of a proposed highway project, and includes an engineering decision document and the appropriate draft environmental document regarding the project.

Project Sponsor – The local or private entity with whom the Department works and negotiates an agreement for development of a special funded state highway project.

Project Study Report (PSR) – A feasibility study, including cost estimates, to develop project concept and scope that is used to obtain management conceptual approval before more detailed study is performed.

Public Projects – A public project is one which (1) utilizes public funds in any phase of the project regardless of the source of the funds, (2) includes LPA sponsorship through the use of a Cooperative Agreement between the LPA and the Department, or (3) involves the use of or threat to use the power of eminent domain by the LPA. All public projects require full compliance with all applicable laws and regulations.

© 1994-2025 California Department of Transportation. All rights reserved.

Relocation Impact Study (RIS) – All projects that displace any persons or businesses. A Final Relocation Impact Study (FRIS) must be completed for the Preferred Alternative route and included in the final environmental document.

Regional Transportation Plan – The annual plan of transportation improvements for an urban area that is adopted by a regional agency responsible for areawide transportation planning.

Regional Transportation Planning Agency – The regional planning organization composed of representatives from its member cities/counties responsible for preparing a balanced, coordinated, regionwide transportation system, including mass transportation, highways, and rail and aviation facilities.

Substantial Capacity Improvement – An increase of capacity on a state highway segment more than two miles long, or the construction or improvement of a major freeway-to-freeway interchange.

Strategic Plan – A plan developed by a local jurisdiction after passage of a sales tax ballot initiative that includes information on the description, priority, and delivery schedule of all projects proposed to be financed by sales tax revenues.

Special Funded Projects – A Special Funded project includes LPA sales-tax-measure projects, locally funded projects, privately funded projects, and public toll road projects (not the privatized toll roads) on the SHS that are developed and constructed using local or private funds. Other types of On-System projects include Encroachment-Permit and jointly funded or cooperative projects.

17.12.00.00 – FORMS AND EXHIBITS

17.12.00.01 Use of the Department's R/W Forms/Exhibits

As noted above, the Department "*has overall responsibility for the acquisition, management, and disposal of real property on Federal Aid projects.*" (23 CFR 710.201 [b].) The Department is also required to "*fully inform political subdivisions (LPAs) of their responsibilities in connection with federally assisted highway projects*." (23 CFR 201 [h].) This information is set forth in the Caltrans R/W Manual. The different chapters in this Manual establish procedures for all phases of right of way, including in particular, appraisal, acquisition, relocation assistance, property management, plus the other right of way functions and activities. This Manual is intended to assist both Department R/W Agents and LPA staff to comply with both federal and state laws, regulations, directives, and standards. Local agencies which use federal funds for their transportation projects do so with the understanding that they must conduct all right of way activities in accordance with the Caltrans R/W Manual.

This section contains all of the Exhibits referred to in this Local Programs Chapter. Our experience has shown us that one of the best practical means of assisting LPAs while performing the right of way portions of their projects is to provide standard forms and exhibits to accomplish most of the necessary functions/activities. In previous editions of this chapter, generic forms/exhibits for other chapters were included, ready for adaptation and use by LPAs. Providing these samples in this chapter is no longer practical because these forms have proliferated so extensively.

Therefore, users of this chapter seeking a particular form are hereby referred to the Forms and Exhibits Tables of Contents of Chapters 4 ("Estimating"), 7 ("Appraisals"), 8 ("Acquisition"), 9 ("Condemnation"), 10 ("Relocation Assistance"), and 11 ("Property Management") of this Manual. At the same time, users are encouraged to familiarize themselves with the contents of those chapters.

Unlike other Chapters within the Caltrans Right of Way Manual, Chapter 17 does not have a Delegation Matrix for signature acceptance. A Delegation Matrix reflects the associated policy and RW Manual reference for each delegated item. The matrix also distinguishes whether an item is delegated to the District or Headquarters (HQ) level, along with the lowest level of sub-delegation authorized. Chapter 17 Exhibits are LPA versions of existing Caltrans Exhibits, so any requiring acceptance from Caltrans (i.e. Certifications, Data Sheet, etc.) will be signed, in the same manner as

© 1994-2025 California Department of Transportation. All rights reserved.

delegated through the corresponding chapter in the RWM (i.e. Chapter 14 – Certifications, Chapter 7 – Appraisals, etc.).

© 1994-2025 California Department of Transportation. All rights reserved.

18.01.00.00 – INTRODUCTION

18.01.01.00 Railroads

This chapter prescribes policies, procedures, standards, and practices for the statewide railroad coordination required for the construction of transportation projects. The chapter is organized based on the usual sequence of events from project inception (planning) to project completion (construction). Although it is impractical to include all policy interpretations and instructional material, this chapter does contain the information required to complete Railroad Activities for right of way purposes.

In general, Departmental Railroad policies apply to public railroads. "Public railroads" are defined as those railroads either publicly, cooperatively, or privately owned that provide a product or service, either directly or indirectly, to the public for a fee.

18.01.02.00 Railroad Function

The responsibility for delivering the railroad requirements for a project is jointly shared between the District and Headquarters (HQ) Right of Way and Land Surveys (RWLS). This section covers the coordination needed between the District, (RWLS) Office of Railroads and Utilities, and the Railroad owner when there is railroad involvement on a project. Key Caltrans personnel are included but not limited to the District Railroad Coordinator (DRC), the Headquarters Railroad Liaison, and the Design Engineer. Under most circumstances or unless otherwise directed, the DRC is the primary liaison between the railroad and the Department. The Design Engineer provides vital assistance and guidance for understanding how the railroad and California Public Utilities Commission (CPUC) design requirements are joined with the Department's design standards. Specific duties are spelled out in the Chief Engineer's Memo of Roles and Responsibilities for State Highway Projects involving Railroads and can be found in the Exhibits section.

If project deadlines are to be met, district railroad personnel MUST:

- Be familiar with the contents of this Chapter.
- Know the project and understand the railroad involvement.
- Fully inform their counterparts in the HQ RW Office of Railroads and Utility Relocation of all correspondence and telephone contacts as problems arise.
- Be able to determine the services needed and the appropriate railroad agreement.

© 1994-2025 California Department of Transportation. All rights reserved.

- Have the ability to clear railroad concerns on construction projects through two separate but closely connected functions:
    1. Acquisition of railroad property rights and uses such as temporary construction easements, permits, permanent easements, and maintenance consent letters.
    2. Obtaining agreement(s) with the railroad for the physical construction of the project.

A railroad agreement is a formal legally binding contract between the California Department of Transportation and a Railroad Company or Authority whereby the parties to that Agreement agree to either share or cooperate in a project involving a railroad facility or corridor. An agreement is necessary to obtain Railroad approval of the project or work, acquire additional right of way, obtain access to the corridor, and/or secure flagging protection and inspection services. The type of document needed is dictated by the level of existing railroad involvement and the level of responsibility required from the State and the Railroad during and after construction. The more complex, the more in-depth the document needed for clearance. Depending on the railroad involvement, property rights are either secured as part of an executed Construction and Maintenance Agreement (C&M), condemnation, or another appropriate legal document. A railroad-issued right of entry is necessary for access to the railroad property during construction. Railroads will not execute a Caltrans right of entry giving the Department physical possession in advance of legal possession. For RW Certification, any railroad involvement must be cleared/addressed. Clearance is issued in the form of a Railroad Clearance Memo. Clearances can be issued when all possible railroad involvement has been addressed through a Construction and Maintenance Agreement (C&M) or Right of Way Agreement.

18.01.03.00 Definitions

A glossary of terms is included in the chapter's Exhibits. The terms are for purposes of the Railroad Coordination Chapter and the Department's DRC only. (Exhibit 18-EX-01).

© 1994-2025 California Department of Transportation. All rights reserved.

18.01.04.00 Railroad File and Diary

The diversity and complexity involved in the relocation of railroad facilities and their potential safety impacts make it mandatory that files be established and thoroughly documented. In addition, Federal Highway Administration (FHWA) regulations (23 CFR 645.119 [c][1][iv], Alternate procedure approval) require documentation of actions taken in compliance with State and Federal policies.

A separate railroad file should be established for each railroad owner on a project.

Each file shall contain all the mandatory components and shall be organized uniformly throughout the district.

The railroad file shall contain the following items, as applicable:

- Diary notes.
- A fully executed wet-ink original or an electronic version of the Railroad Agreement.
- Any correspondence with Project Engineers, the Resident Engineer, and with other Departmental Divisions.
- Any correspondence with the Railroad Owner.
- Any discussion, meeting, or review of importance that does not generate a document for the file must be recorded in the diary or a memorandum to the file.
- Close Out request to Railroad (e.g., final invoice).
- A GO-88B (if applicable).
- Form G (completed and submitted to CPUC).

In every instance, the author shall date and sign (or initial) all diary entries and notations in the file.

© 1994-2025 California Department of Transportation. All rights reserved.

18.02.00.00 – CHARGING AND EXPENDITURES

18.02.01.00 Charging Practices

The Department maintains a comprehensive cost accounting system, major segments of which involve accounting for employee time (support) and expenditure of funds (capital). Ensuring support and capital are correctly charged enables the Department to report expenditures and maintain financial control on active budgets and serves as the foundation for justifying and developing future budgets. Accurate time reporting also provides cost data for effective project management, preparation of annual financial statements and legislatively mandated reports, and billing of reimbursable work.

Before any work is performed on any project, the DRC will verify with P&M that a valid Expenditure Authorization (EA) has been established and that funds have been secured. Actual work performed or costs incurred must always be charged to the correct EA and Work Breakdown Structure (WBS) code. If a Railroad requires compensation for its review of the project, the District Railroad Coordinator should not contact the Railroad until there is a Preliminary Engineering Agreement in place and Right of Way Capital funding is available.

18.02.01.01 EA Phases

PHASE K (PA&ED)

- Charge very early preliminary engineering to Phase K (e.g., PID review).

PHASE 0/1 (Design – PS&E)

- Charge preliminary engineering to Phase 0 or 1 (e.g., data sheet, field review).

PHASE 2 (Right of Way Operations)

- Charge Capital Outlay Support charges to Phase 2 (i.e., staff/time charges for completing all RW Railroad work after PA&ED is complete).

- In some cases, where no other RW work is required, Phase 2 may not be established.

© 1994-2025 California Department of Transportation. All rights reserved.

PHASE 4 (Major Construction Contract)

- Charge capital outlay for Railroad Coordination work performed by the State's highway contractor to Phase 4. Only Construction can encumber and charge Phase 4.

- No Right of Way capital support/outlay charges shall be made to Phase 4.

PHASE 9 (Right of Way Capital Outlay)

- Charge the actual cost of the coordination work to Phase 9 (i.e., railroad company billing for State's share of the costs).

- No Railroad Capital Support charges should be made to Phase 9.

18.02.01.02 EA Splits, Combines and Revisions

Through the duration/life of a project, the EA may change for a variety of reasons. The Project Engineer/Manager may need to split or combine projects for delivery or programming reasons. These changes may occur at any time. If the EA changes during the Railroad Coordination stage, it is a good practice to include the original EA on all documents, along with the current EA. For example, EA 443329 (original EA 443309). That way, the document contains current information for accounting and charging but still retains the history of the project for tracking purposes.

18.02.02.00 Railroad Clearance Memo and Special Provisions

23 CFR 635.309 requires all Utility, Railroad, and Clearance work be completed in order to advertise a construction project or that necessary arrangements have been made for the work to be completed concurrent with the construction contract, and proper notification is to be included in the Office of Engineer's informational handout. It is a joint effort between the District and HQ RW Office of Railroads and Utility Relocation.

A Railroad Clearance Memo states that a project is ready to list. The contents of the clearance memo will be incorporated into the bid package as the special provisions of the informational handout. Section 2-1.06B of the Standard Special Provisions (SSP) provides the text for what is considered a "short clause." What is referred to as the "long clauses" are more detailed provisions found in an individual railroad's relations and insurance requirements. These can be attached as an exhibit to a railroad agreement or incorporated into the informational handout. The handout provides the

© 1994-2025 California Department of Transportation. All rights reserved.

contractor with the provisions that are in place between the railroad and the State for the project that the contractor is required to comply with. The clearance memo may contain additional special requirements not covered in the railroad's relations and insurance requirements that the contractor should be aware of. If required, the railroad's guidelines for shoring and demolition may be incorporated into the informational handout.

18.02.03.00 Agreement Types and Other Railroad Documents

Railroad agreements are the instruments used to secure the railroad involvement needed for a State Highway project. They describe the project's scope, provide a means to obtain the railroad's approval of project plans and specifications, provide a description and a cost estimate of the railroad work needed to support a project, describe post-construction maintenance responsibilities, secure right of way requirements, and address accounting and any legal issues.

A Construction and Maintenance Agreement and a Right of Way Agreement:

- Identifies the Parties (i.e., Railroad and State or Railroad, State and Local Agency) involved;
- Provides background information leading to the purpose of the Agreement;
- Defines the roles and responsibilities of the Parties;
- States the individual and mutual commitments of the Parties;
- States the scope of the project and the specific work to be completed by each Party;
- Is executed by all the Parties;
- Contains attachments that establish the location of the structure and the scope of the project and construction at the site;
- Obligates the State to reimburse the Railroad for identified expenses that occur after the effective date of the Agreement.
- Protects the interests of the Parties to the agreement and the best interest of California, its taxpayers, and the general public.

© 1994-2025 California Department of Transportation. All rights reserved.

Right of Way Agreement

A Right of Way Agreement is generally used to reimburse Railroads for railroad-provided activities when a C&M is not required or necessary. The activities include but are not limited to preliminary engineering plan review, engineering plan review, cost-to-cure work, flagging and inspection activities and can be funded from Right of Way Capital during the PS&E Phase or Construction Capital during the Construction Phase. A Right of Way Agreement must include an estimate of the anticipated expenses. All parties must sign the Right of Way Agreement prior to providing any reimbursement. At a minimum, an electronically signed agreement or three original copies must be executed by the parties. The Agreement can be in effect for up to 36 months but can be amended for additional time if needed. For additional assistance, contact the HQ Railroad Coordinator.

Construction and Maintenance Agreement

A Construction and Maintenance Agreement (C&M) is a legally binding contract between two or more parties that covers the construction or reconstruction of a highway/railroad crossing which transverses railroad tracks, facilities, and properties. It authorizes the Department to enter into an agreement with the Railroad to accomplish the work on the State Highway System, make payments to the Railroad, expend effort on a locally funded project, legally protects the interest of all parties to the agreement, and ensures the best interest of the Department, public, and taxpayers. According to the Standard Specifications, a bridge is defined as a structure that has a bridge number and carries a (1) utility, (2) railroad, or (3) vehicle, pedestrian, or other traffic over, under, or around obstructions or waterways. The C&M authorizes Caltrans on behalf of the State to contract with the Railroad(s) to accomplish work on the State Highway System, to pay the Railroad for required activities, and provides Caltrans the access rights to maintain and operate the bridge for highway purposes after construction. It is a four-step process (initiate, develop, execute, and manage) that creates obligations to do certain actions and involves considerations, mutual obligations, and mutual agreement. It provides a scope of work, sets a commitment for delivery, binds only the executing parties to its terms and conditions, and may be used in a court of law to resolve breach of contract requirements. It must also meet the State's requirements for an obligating document or agreement (SHC Section 138). This agreement is in effect while the crossing remains part of the State's highway system and/or unaltered.

A C&M Agreement consists of two sections: the engineering section covering the construction and maintenance aspects and the right of way section that covers the property rights required for project. The agreement covers the

© 1994-2025 California Department of Transportation. All rights reserved.

scope of the project, the obligations for the railroad, the State and/or local agency, and the mutual obligations during and after construction including Buy America requirements. It provides essential information for the project: plans for the structure's construction, insurance requirements, design and construction specifications, contractor requirements, cost estimates, location maps, and necessary right of way documents.

A complete set of railroad plans include a title sheet, horizontal alignment, vertical profile, layout plan, general plan if applicable, and cross sections, and they show the railroad right of way lines and the State' right of way lines along with other impacts. A preliminary set of plans is initially submitted to the railroad at 30% of completion in accordance with the requirements of the railroad involved. Failure to submit the plans on time, in the requested format or with the required identifying information, can result in costly delays to the project as well as risk of delivering the project on time. The DRC must receive preliminary plan approval (30, 60, and 90) from the Railroad before the C&M can be circulated for review. The railroad will not review a C&M until they have reviewed and approved Caltrans project plans at 90-100 percent complete. Because the Class I railroads deal with many agencies, turnaround on a C&M can take several months, therefore, a DRC must incorporate significant time to acquire an executed agreement. Once the Railroads have approved the C&M and project plans it takes at minimum 120 days after approval of the C&M to be fully executed.

© 1994-2025 California Department of Transportation. All rights reserved.

18.03.00.00 – ROLES AND RESPONSIBILITIES

18.03.01.00 District Responsibilities

The Deputy District Director of Right of Way shall designate at minimum an Associate RW agent as the District's DRC, who shall have sufficient depth of acquisition experience. The DRC will have full responsibility for railroad activities leading to clearance of projects for advertising.

18.03.01.01 District Railroad Coordinator (DRC) Responsibilities

The DRC should be familiar with the Exhibits of this Chapter as well as those sections in the chapters dealing with Appraisals, Local Programs, Local Assistance, Project Certification, Condemnation, and Acquisition in the Right of Way Manual. It is recommended that the DRC complete online Federal Railroad Administration (FRA) Roadway Work Protection training that meets the requirements of FRA 49 CFR 214.343. This training is mandatory for anyone who needs access to the railroad corridor. All Department employees working within the rail corridor or on railroad property must adhere to the railroad's established safety guidelines and regulations. The Office Chief for railroad coordination will authorize the DRC to implement the Department's policies and duties, including but not limited to the following specific directions:

- Act as the liaison between the Railroads and the District unless otherwise directed. Collaborate with Railroad staff, HQ Liaison, and Departments Legal on acceptable verbiage for Railroad Agreements.

- Review project plans and reports to identify railroad involvement and ensure conformity with railroad standards.

- Consult with District Design, Division of Engineering Design (DES), and the HQ Railroad Liaison to obtain preliminary design information.

- Conduct and coordinate a project field review with Railroad personnel for early involvement. This field review includes District Design, DES, and the HQ Railroad Liaison, as needed.

- Establish files that document actions taken or recommended during the life of a project.

© 1994-2025 California Department of Transportation. All rights reserved.

- Advise on railroad-related issues and participate with railroad involvement during ALL phases of project development and delivery. Assist in resolving any railroad-related issues that may occur during construction.

- Prepare datasheets/railroad involvement cost estimates based on possible railroad involvement. Update and revise the estimates, when necessary. These estimates are used for capital and support budgeting needs for current and future fiscal years.

- Obtain railroad agreement number(s) from HQ Liaison.

- Work with HQ RW Office of Railroads on all matters relating to railroads and project delivery including the preparation of the railroad clauses for the Office of the Engineer (OE).

- Act as the Department's primary point of contact with railroad owners for identifying, coordinating, and verifying all railroad involvement.

- Negotiate, interface, and/or resolve conflicts with a railroad.

- Actively participate in Project Development Teams.

- Coordinate with P&M on preparing a RW Certification for proposed construction projects.

- Provide oversight activities to Local Public Agencies (LPA) and consultants on state highway projects funded by others.

- Provide stewardship role to LPA on federally funded Local Streets and Roads projects.

- Coordinate with the Department's offices, divisions, branches, and external organizations, both public and private, to ensure the above directions are implemented.

- Responsible for inputting information into ROWMIS II.

© 1994-2025 California Department of Transportation. All rights reserved.

18.03.01.02 Division of Engineering Services (Structure Design)

Division of Engineering Services (DES) staff are a key resource only on structures for railroad plan consultation. DES' responsibilities include but may not be limited to:

- Preparation of preliminary structure advance planning studies for state highway projects with structures and railroad involvement.
- Collaboration with the DRC on projects including status of contacts with affected Railroad companies and specific project needs.
- Preparation of Railroad advance planning studies transmittal package for submission to the District Design Senior and DRC.
- Upon completion of an approved Project Plan, prepares railroad design package for all state highway projects with structures and railroad involvement.
- For Underpass Structures, prepares additional design information according to American Railway Engineering and Maintenance-of-Way Association's (AREMA) and/or railroad standards and guidelines. The Caltrans Library maintains a subscription to AREMA for district use.
- As part of the design approval and agreement phase of a project, submits all railroad design packages to District Design Senior for forwarding to the DRC and the Railroad.
- During the project's construction, reviews and approves contractor's submittals for the construction of temporary structures (such as falsework and shoring) and demolition ensuring the standards of the affected railroad are met.

© 1994-2025 California Department of Transportation. All rights reserved.

18.03.01.03 Headquarters Railroad Agreements Section Responsibilities

The primary role and responsibility of the Office of Railroads is to represent the State in all matters involving railroad as it pertains to state highway projects. The railroad agreement is the primary document for the railroads, districts, and other agencies on matters involving the state highways and railroads, including the negotiation, acceptance, and management of railroad agreements necessary for state highway projects. Liaisons shall monitor all railroad-involved projects to ensure project activities and negotiations are on track to meet established delivery schedules, issue Railroad Clearance Memo*, and work closely with the Legal Division to ensure that agreement commitments and responsibilities do not conflict with existing State statutes. RWLS is responsible for all Capital Outlay Support (COS), Maintenance, and Emergency projects. RWLS is not involved in Federal Section 130 Grade Crossing Improvement Program or State Section 190 Grade Separation Fund. Those responsibilities are those of the Department's Division of Rail.

*Certain levels of project clearance may be delegated to the Region or District.

The Section is responsible for but is not restricted to the following activities:

- Act as liaison between the various railroad companies and state and federal agencies regarding engineering matters and specific issues affecting the railroads.
- Act as liaison between district and Headquarters units, including railroad procedural guidance.
- Serve as a member of the Project Delivery Team on projects with complex railroad involvement.
- Obtain legal review of Construction and Maintenance Agreements and other related documents.
- Assist with property acquisitions from various railroad companies.
- Standardize railroad clauses for inclusion in project construction contracts.
- Negotiate directly with railroad companies on specific issues of statewide significance.

© 1994-2025 California Department of Transportation. All rights reserved.

- Assist the districts in preparing complex RW Agreements as needed.
- Review (for conformity with established procedures and delegated authority) and approve all nonstandard railroad property acquisition transactions.
- Process railroad invoices for railroad agreements and supplements thereto for construction work performed by railroad.
- Determine state's liability for extraordinary maintenance.
- Review documents and agreements for conformance with FHWA rules and regulations and obtain FHWA approvals as required.
- Consult with the California Transportation Commission (CTC) on Public Utilities Code 7551.3 (Valuation and Acquisition of Rail Right of Way) compliance and guidelines.
- Appear at CPUC hearings as an adviser or expert witness in cooperation with Legal.
- Request Extensions to expiration dates as authorized by CPUC decisions as necessary.
- Provide post-audit review to ensure conformity of C&M Agreements and supplements with RW Appraisal and Contract obligations.
- Update the Right of Way Manual covering matters required for railroad negotiations and project clearance.
- Participate in quality enhancement joint reviews (QEJR).

© 1994-2025 California Department of Transportation. All rights reserved.

18.03.01.04 Headquarters Railroad Liaison

The HQ Railroad Liaison supports the DRC, providing all possible assistance concerning railroad matters and right of way. It is the liaison's responsibility to maintain consistency in the Department's relationship and interactions with the railroads. The liaison's responsibilities include but are not limited to the following:

- Assist with standard procedures for property acquisition and negotiations with the railroad companies.
- Acts as liaison on specific right of way issues with the railroads, State agencies, and Federal agencies.
- Obtain legal review of railroad matters involving State Highway projects as necessary.
- Negotiate directly with railroads on specific statewide right of way issues.
- Review agreement drafts for compliance and conformity with Right of Way policies.
- Maintain the railroad section of the Right of Way Manual.
- Negotiate master agreements for railroad-provided services and manage those agreements.
- Handle all requests for a Resolution of Necessity and appearances before the CTC, in coordination with the District's DRCs.

© 1994-2025 California Department of Transportation. All rights reserved.

18.03.01.05 Role of Headquarters Legal Division

The Legal Division advises and assists the Headquarters Division of Right of Way and Land Surveys to ensure that railroad agreements comply with California Civil Code and Federal Regulations. To accomplish this role, the Legal Division is responsible for the following duties:

- Reviews and approves documents and agreements when requested.
- Draft a formal application to the CPUC on all railroad involvements (when required).
- Provides written legal opinions when requested.
- Represents the Department at all CPUC hearings, court actions, and involuntary abandonments.
- Represents the State in condemnation actions.

18.03.01.06 Role of the California Public Utility Commission

The California Public Utility Commission (CPUC) has regulatory and safety oversight over railroads and rail transit systems. That includes all aspects of railroad safety, rail transit safety, and rail crossing safety including the exclusive authority to authorize and regulate the construction of rail-highway crossings whether at grade or by way of overheads or underpasses. Districts' compliance with CPUC staff direction will be coordinated with the HQ Railroad Liaison and HQ Legal Division. The CPUC's authority is found in Article 12 of the California Constitution and its powers and jurisdiction are set forth in Sections 1201 through 1220 of the California Public Utilities Code. Exclusive power over crossings between public or private roads and a railroad is described in Section 1202.

18.03.01.07 Impacts of Other Federal Agencies

The Federal Railroad Administration (FRA) and the Surface Transportation Board (STB) govern all national rail operations and safety, so the safety requirements imposed on State projects must comply with those agencies' regulations and directives. Contact with these agencies is extremely rare and any contact will be made either through the Railroad Agreements Section or Headquarters Legal Division.

© 1994-2025 California Department of Transportation. All rights reserved.

18.03.01.08 Railroad Advisory Team Concept

A Railroad Advisory Team may be formed to assist the district in developing projects that require complex railroad involvement. The team may be comprised of representatives of the HQ Division of Engineering Services – Structures Branch, Legal Division, HQ RW, and the district, and can be convened upon a District's request.

18.03.01.09 Relations with the Railroads

Communication early in the project development phase is key to a successful outcome when dealing with a railroad. In addition, when setting up individual meetings with the railroad to discuss the project, the DRC should ensure that appropriate railroad representatives are invited to the project's public hearings.

The HQ Office of Railroad Coordination will meet quarterly with the major Class I railroads to discuss topics and issues of mutual importance. District input at these meetings is required.

18.03.01.10 Local Project Assistance

The DRC and HQ Railroad Liaison will coordinate the oversight and support activities based on the cooperative agreement governing the project. It is critical to recognize that project sponsors routinely allow the Department to adequately review the draft railroad agreements. The DRC should develop a realistic support cost estimate for the Project Sponsor with the assistance of HQ Railroad Liaison if needed.

© 1994-2025 California Department of Transportation. All rights reserved.

18.04.00.00 – DETERMINATION OF RAILROAD INVOLVEMENT

18.04.01.00 General

The DRC shall make a positive determination based on information provided on the project plans on whether there is railroad involvement in a project as early as possible, but no later than the Project Report stage. This will assist the DRC in determining the type of project certification needed (See RW Manual Chapter 14.03.05). The Railroad or CPUC representative may require a site visit or diagnostic meeting to discuss the project. The attendees should be the project design engineer, the railroad representative or Manager of Industry and Public Projects (MIPP), the CPUC representative, and the DRC. The HQ Railroad Liaison may also attend if necessary upon the request of the DRC.

For locally sponsored projects, the DRC will provide oversight on all State and Federally funded off-system and on-system projects. Oversight includes the activity of monitoring as well as the effort of assisting, guiding, and advising the LPA to ensure that railroad involvement is properly cleared and is accomplished in accordance with the Department's policies, procedures, standards, practices, statutes, contracts, and agreements.

For the purposes of determining the activities and documents necessary to obtain railroad clearance, proposed projects can be divided into four distinct categories:

- Category 1 – Projects with No Railroad Involvement
- Category 2 – Projects requiring only SSP Special Provision Language contained in Section 5-1.20C also known as the "Short Clauses."
- Category 3 – Projects Not Involving Grade Separations
- Category 4 – Projects Involving Grade Separations

If a proposed project does not fall within one of these categories, the DRC should seek assistance from the HQ Railroad Liaison. When making a determination of railroad involvement, the DRC should always move to the next category if there is ANY uncertainty regarding a project's ability to satisfy all of the criteria for a specific category.

© 1994-2025 California Department of Transportation. All rights reserved.

18.04.01.01 Category 1 – Projects with No Railroad Involvement

Projects in this category do not have any railroads near or within the project limits. For a project to be determined to have No Railroad Involvement, ALL the following criteria must be met:

1. All work activity, personnel, and equipment will be located and shall occur outside of a railroad's property, shall occur more than 25 feet from the centerline of any track, and have no potential to foul the track.

2. No work within the project limits shall be performed on any span of a structure (including that span's deck, piers, and/or abutments) that crosses over a railroad track.

3. There is no physical possibility of equipment, personnel, material, or debris entering a railroad's operating right of way during construction.

A Clearance Memo must be issued as there may be no railroad involvement, but a railroad is noted on the project layout. A clearance memo is needed for project delivery prior to the target right of way certification date.

© 1994-2025 California Department of Transportation. All rights reserved.

18.04.01.02 Category 2 – Projects Requiring Only Special Provision 5-1.20C Language

Projects in this category have railroads within the project limits, but the work is such that there is no direct impact on the railroad. A short clause advises the contractor on how to operate within the unique working environment of the railroad corridor and is included in the contract's supplemental information. ALL the following criteria must be met to qualify for a short clause:

1. The project does not satisfy Category 1 criteria.

2. All work, personnel, and equipment must be outside of the railroad right of way, and there is no potential to foul the track.

3. When work is being performed on a highway structure that crosses over a railroad, all such work must take place on the deck of the structure itself, inside the guardrails, and the structure must not have any openings that would allow material or debris to fall onto the railroad.

4. If a railroad is shown anywhere on the title plan sheet.

For Category 2 projects, contact with the railroad may be necessary. The DRC will submit the Short Clause to the District Office of the Engineer to be included as supplemental information in the project's contract bid package. The DRC shall issue the Clearance Memo for Category 2 projects prior to the target date for the right of way certification and must be issued prior to the project Ready to List (RTL) date. NOTE: If there is any uncertainty regarding the project's ability to satisfy these criteria, the determination to use Section 5-1.20C should not be made – continue to Category 3 or 4, as appropriate. For Projects meeting the criteria, these provisions are intended to draw the Contractor's attention to the presence of a railroad within the project limits and to instruct the Contractor to conduct activities in a manner that prevents people, equipment, material, and debris from entering railroad property. Section 5 of the Standard Specification contains other contractor requirements for working in and around a rail corridor that should be included in the railroad clearance letter as required.
DRCs should review the listed clauses for railroad involvement on a project found in the Department's Standard Plans and Specification Manual.

© 1994-2025 California Department of Transportation. All rights reserved.

18.04.01.03 Category 3 – Projects Not Involving Grade Separations

Category 3 applies only to projects that have railroad involvement but do NOT involve grade separated structures. Examples of such projects would include roadway improvements or modifications to at-grade crossings, or projects adjacent to railroads that involve work that is less than 25 feet from the centerline of the track. Exceptions are structure painting and maintenance, which are classified as Category 3. Non-grade separation projects that do not clearly meet the Category 1 or 2 criteria described above must be considered to have full railroad involvement unless specifically determined otherwise during the PS&E stage of the project. At a minimum, such involvement will involve railroad flaggers to protect railroad operations and property during construction. In some cases, railroad involvement will also involve items of work such as temporary or permanent track relocations, signal line relocations, or work on at-grade crossings such as the installation of new warning devices and/or crossing surfaces.

The DRC shall secure a Right of Way Agreement whenever railroad services such as preliminary plan review, project inspection, flagging, and a Railroad Right of Entry are necessary for the project. Any agreement should contain both standard legal provisions and project-specific provisions, a project map that includes the title sheet, layouts and details, the cost estimate for the work to be performed by the railroad, and the Railroad Relations and Insurance Requirements.

Early communication with the railroad involved is essential to delivering the project on time, so it is imperative the DRC arrange a meeting between the affected Railroad and the Project's Design Team to discuss the project's design and identify specific requirements. This meeting early in the project development will assist the DRC in identifying the type of documents needed.

If the project requires widening and/or impacts the existing warning devices at the crossing, a CPUC General Order 88-B (GO 88-B) is required. The DRC will need the Railroad's concurrence on the plans for the GO-88 B application.

The DRC shall submit a complete set of plans of the project at the location of the structure to the railroad for review and comment when the plans are at 30% completion. The railroad will expect the Project Design to address its concerns and recommendations, before issuing its concurrence for the project. This typically comes after the Railroad has received a set of plans reflecting 100% completion. The package should include a cover letter providing the location of the railroad interaction using the latitude and

© 1994-2025 California Department of Transportation. All rights reserved.

longitude of the structure, the County, nearest city or town, name of structure, and state route; a brief description of the project and its potential impact on the rail corridor; a copy of the title sheet for the project showing the project limits and the location(s) of the railroad(s) within those limits; and all sheets (including layouts and details) that show project elements that impact the railroad. The letter should also request an estimate for any identified railroad-required work on the project such as a shoofly or flagging.

The DRC should ensure that any agreement with the railroad includes updated railroad relations and insurance requirements pertinent to that railroad and that the latest set of requirements are made available to any contract bidder through the Office of the Engineer.

CPUC approval and an executed agreement are required before the Railroad Clearance Memo is issued in accordance with the Right of Way Delegation of Authority.

The Class I railroads require C&M Agreements for at-grade crossings, although the State's practice is to utilize that type of agreement only for graded crossings involving a structure. Under certain circumstances, the State will consider such a document, though. In the event a proposed project involving an at-grade crossing requires additional right of way or proposes a major reconstruction of the crossing, the DRC should notify HQ Office of Railroad Coordination immediately.

© 1994-2025 California Department of Transportation. All rights reserved.

18.04.01.04 Category 4 – Projects Involving Grade Separations

A grade separation occurs when a roadway crosses over or under a railroad line, utilizing some kind of structure. Where the roadway crosses over the railroad, the grade separation is referred to as an "overhead". Where the roadway passes underneath the railroad, the grade separation is referred to as an "underpass". The widening of an existing bridge or the construction of a new bridge are examples of a Category 4 project. Complex projects typically involve significant involvement from the railroad such as a track relocation or shoo-fly.

Category 4 projects will require coordination with the Railroad early in the project development stage, a CPUC authorization (either a GO 88-B or full application), and a Right of Way Agreement or a C&M Agreement. Early coordination and communication with the Railroad and Design Team is essential to identifying and resolving specific issues that could delay the project and it is strongly encouraged that the DRC coordinate a field diagnostic meeting with Design Team representative, Structures representative (if applicable), the railroad and CPUC representative as early in the PID/PS&E stage as possible to discuss the project. The DRC must send a complete set of plans for the location to the Railroad at 30% completion and later at 100%.

Once the railroad has given preliminary approval to the design, the DRC may begin to draft an update to the existing C&M Agreement or a new C&M Agreement, depending on the direction from the railroad. The procedures for developing the draft that set forth in should be followed. If additional right of way is required, the appraisal can also be started. The Railroad Clearance Memo will not be issued, nor the project certified for delivery until the railroad approves the design plans, the CPUC authorization is secured, and the C&M is executed.

© 1994-2025 California Department of Transportation. All rights reserved.

18.04.01.05 Railroads Within Two Miles

All highway projects that have an at-grade railroad crossing within two miles in any direction have the potential to negatively impact railroad traffic. These projects should be reviewed initially by the DRC for any impact on the nearby railroad and then, if necessary, by the railroad owner. When assessing the impact of a project on a nearby rail corridor, a highway project must take into consideration the same factors used to assess the safety requirements for any at-grade rail crossing: vehicle traffic counts and vehicle travel speed, whether the crossing meets the federal standards for signage/safety measures.

The CPUC GO-88 B and Chapter 8 of the MUTCD state that when there are road modifications, traffic control, or other impacts that change the way the public accesses an at-grade highway/railroad crossing, the project sponsor or road authority shall require interaction and/or communication with the rail authority. While there is no maximum distance for a project and a crossing stated in the MUTCD, Design teams should be mindful that projects within two miles of a highway/railroad crossing can still impact the safety of the traveling public over that at-grade crossing and be ready to provide a risk assessment to the railroad and CPUC.

While preemption timing is required for crossings within 200 feet of a traffic signal, an increase in vehicle volume or speed adjustment can impact the timing of the crossing's safety devices, regardless if the change is permanent or temporary. If possible, the DRC and/or the project sponsor, at the datasheet level, should reach out to the Design team and ask for their assessment of whether or not the project will have the potential to negatively affect traffic at the nearby crossing during or after construction.

Projects assessed and determined to be at risk of negatively impacting the crossing should be discussed with the railroad owner and the CPUC. If there is a concern regarding rail safety, it is required the railroad owner should be afforded the opportunity to review the plans. If it is determined that plans need to be submitted to the railroad owner for their review, that outreach should occur as early in the Right of Way process as possible to allow the project team sufficient time to respond prior to Right of Way Certification, and the Project Manager can determine if the project funding and schedule will be affected.

© 1994-2025 California Department of Transportation. All rights reserved.

18.04.01.06 Outdoor Advertising on Railroad Right of Way

An outdoor advertising sign located on the railroad right of way can either be there under a lease agreement (the advertising company leases the right to have its sign on the railroad's property) or is owned by the railroad. The DRC should work closely with appraisals and acquisitions to determine whether the acquisition of the signboard directly involves the railroad. The DRC will act as the liaison with the railroad's real estate group.

18.04.02.00 Programming

At the project feasibility stage, Right of Way will normally complete their portion of the Data Sheet to estimate any Railroad involvement. This is critical to ensuring adequate funding for railroad costs are allocated for both the PS&E and Construction phases of the project. The DRC shall provide the information requested on the RW Data Sheet attachment to Project Reports. This information includes:

- A determination of whether railroad facilities or rights of way are affected, and if so, the type of railroad involvement.

- When a railroad branch line or spur is affected, a project alternative should be included that avoids affecting the rail corridor to preserve or minimize the rail service.

- Number of train movements per day or week and the number of businesses and industries involved for all spur tracks and branch lines that terminate within the immediate vicinity of the project.

- Rough cost estimates to buy out businesses and industries, including an estimate of relocation costs. This information is obtained from the RW Estimating Section.

- Payment of damages if alternate forms of service are feasible, such as truck or team track.

- Estimated cost to construct facilities to perpetuate existing branch line or spur. This information is obtained from Project Development.

- Number of oversized and overweight loads incapable of being hauled over highways.

© 1994-2025 California Department of Transportation. All rights reserved.

- Estimate the need for, and cost of, railroad flagging for design and environmental studies.

- Estimated construction costs of work to be performed by the railroad. The DRC derives preliminary cost estimates from historical cost data. Final estimates will be provided by the railroad after the final plan review.

- Identify the date when any railroad-provided work must be completed and whether the work can be funded under Construction Capital or must be funded under Right of Way Capital.

18.04.03.00 Project Delivery

A project with railroad involvement can receive RW Certification when the following conditions are met:

- CPUC approval (if required) is granted;

- Railroad has approved (if required) the design plans;

- All Railroad Agreement(s) (if required) are executed by all parties; and

- The District has physical and legal possession of any required property rights.

Project construction advertising requires two separate railroad clearances – the RW Certification and the Railroad Clearance Memo. When the above matters are cleared, the DRC will submit the railroad clearance memorandum to the Project Manager or Office Engineer in accordance with District procedures, with a copy to HQ RW Office of Railroads and Utility Relocation.

18.04.03.01 Federal Aid Requirements

Federal aid requirements for railroad involvement are contained in 23 CFR 646.216. Full compliance is required to ensure federal participation on ALL Federally funded projects. When questions arise, HQ RW is to be consulted, and if necessary, FHWA concurrence will be obtained prior to project certification. Highway projects are required to be in compliance with the Buy America requirements set forth in 23 CFR 635.309, and these requirements are part of the Federal-Aid Policy guidelines.

© 1994-2025 California Department of Transportation. All rights reserved.

18.04.03.02 State Transportation Improvement Program (STIP)

STIP projects must have a right of way certification before the CTC will vote any construction funds; therefore, projects with railroad involvement must have all necessary railroad-related documents executed at the time of project certification.

18.04.04.00 Project Coordination

The DRC is an integral part of the Project Delivery Team (PDT). The DRC shall advise the PDT and/or Project Manager of potential railroad conflicts in proposed projects during the PID/PA&ED/PS&E phases.

18.04.05.00 Development of Projects with Railroad Involvement

- In the event the project creates a new route, prior to route adoption the DRC shall, analyze the route with respect to railroad involvement. (This rarely occurs.)
- The DRC will prepare notification of public hearings and furnish adopted route maps to railroad. (This rarely occurs.)
- The DRC shall send the preliminary design plan to the railroad.
- The DRC schedules an onsite field review with the Railroad, CPUC, and the District Design Engineer to review the project's impacts. Representation from other agencies and/or divisions should be included as appropriate.
- The DRC verifies and reviews railroad specification language.
- The DRC obtain fund certification for agreement.
- The DRC verifies railroad work is included in engineer's estimate for Construction Phase 4 Agreements.
- The process to obtain CPUC authorization for a new crossing is lengthy, the DRC shall plan to submit the application request at least 24 months before the authorization is needed for project delivery.

© 1994-2025 California Department of Transportation. All rights reserved.

- Railroad approves bridge general plans.
- Railroad approves bridge contract plans and contract specials.
- District Design prepares Certificate of Sufficiency of Right of Way requirements for bridge and roadway work and attaches Hazardous Substances Disclosure Document prepared by Environmental.
- RW appraisal is prepared.
- Railroad approves legal descriptions for right of way requirements.
- The DRC prepares agreement(s), i.e., C&M and/or Right of Way Agreement, Long Clauses, and CPUC Application along with Exhibits.
- If a formal application is needed, HQ Legal Division assists the DRC in filing the CPUC Exhibit.
- Execution of agreement and right of way documents.
- The DRC issues Railroad Clearance Memo and forwards it to the District Office Engineer.
- HQ RW Office of Railroad Coordination clears project for advertising, unless delegated.

18.04.06.00 Procedure for CPUC Authorization

CPUC authorization is granted either by a General Order 88 (GO-88) or a full application. Authority to construct a new public rail crossing is typically granted by the CPUC through the "formal application" process outlined in the Rules of Practice and Procedure, Rules 3.7 to 3.11, which results in an order signed by the CPUC. Whenever a new public railroad crossing is proposed, including the establishment of a public crossing at an existing private crossing location, a formal application may be required to authorize alterations to an existing crossing where all parties cannot agree on the alterations, or for projects not meeting the requirements of GO 88-B. CPUC involvement begins at the initiation of the project with a field diagnostic meeting with the railroad, DRC, and CPUC staff. Continuing communication with the CPUC staff will ensure the project's application is submitted correctly and timely to meet project delivery dates.

© 1994-2025 California Department of Transportation. All rights reserved.

Authority to modify an existing public rail crossing is typically granted through the General Order 88-B (GO 88-B) authorization process which results in an authorization letter from the Rail Crossings Engineering Section supervisor under authority delegated from the CPUC if General Order 88-B is applicable.

© 1994-2025 California Department of Transportation. All rights reserved.

18.05.00.00 – PROPERTY CLASSIFICATIONS

18.05.01.00 General

Since all railroads do not use the same criteria in classifying property and facilities as operating or non-operating, the districts should exercise caution in making such judgments. Consultation with HQ RW is advisable at the appraisal stage if items affected by the highway construction become questionable as to operating or non-operating property.

18.05.01.01 Operating Property – Definition

In general, the term "operating property" is used to describe those railroad facilities and property that are essential to conduct the railroad transportation business, and without which railroad service could not be provided to users. An example is the roadbed. For our purposes, the term "roadbed" refers to the bed on which the ties, rails, and ballast of a railroad rest.

Under some circumstances, however, certain railroad facilities such as warehouses, depots, and freight forwarding facilities may be classified as operating property.

In some instances, the railroad operator is not the railroad property owner. A smaller rail company will lease the corridor from the property owner, creating a tenant operator. An example would be Union Pacific Railroad (UPRR) as the property owner and San Joaquin Valley Railroad (SJVR) as the tenant operator.

18.05.01.02 Non-Operating Property – Definition

"Non-operating property" is property that is not essential to railroad operating requirements or property that is vested to a railroad company.

18.05.01.03 Operating Property – Degree of Title

Although easement title is the usual title the State acquires when railroad operating property is affected by a highway project, fee title may be obtained.

© 1994-2025 California Department of Transportation. All rights reserved.

18.05.01.04 Non-Operating Property – Degree of Title

The same degree of title should be obtained as is acquired for the project.

© 1994-2025 California Department of Transportation. All rights reserved.

18.06.00.00 – ACQUISITION PROCEDURES

18.06.01.00 RW Maps and Legal Descriptions

To expedite the acquisition of both operating and non-operating railroad properties, RW has agreed to furnish appraisal maps to the railroad as soon as possible after environmental clearance. To implement this, RW Engineering shall furnish the necessary number of appraisal maps (and legal descriptions if available) to the DRC at the same time it sends the appraisal maps to the Appraisal Branch. On maps furnished to the DRC, only the railroad parcel(s) should be colored. (This may vary by District).

The DRC shall forward the maps (and legal descriptions if available) to the railroad so the district and the railroad can begin their appraisals concurrently. The legal descriptions must go to the railroad as soon as possible for its review and comment. The DRC's letter of transmittal to the railroad should provide an estimated completion date for the staff appraisal.

18.06.01.01 Initiating Negotiations

Negotiations for any real property rights will progress with a railroad when the railroad issues its conceptual plan approval for the project's design. A first written offer must be sent to the affected railroad immediately after the appraisal is approved (can be the DRC or acquisition agent). The transmittal shall contain the legal description, RW Contract if applicable, and the appraisal with specific sales information that was used, if any. Depending on the railroad involved, a right of way contract may or may not be used for fee title acquisitions. DRCs should keep in mind that settlement authority lies with the HQ Office of Railroad Coordination and not with the district, so early involvement/coordination with the Railroad Coordinator is mandatory. Ideally, the property transaction should be agreed to between the parties before the Construction and Maintenance Agreement or Right of Way Agreement is fully executed by the railroad. Acquisition terms and conditions are typically incorporated into the C&M Agreement, including legal descriptions and maps of the area being affected or acquired. A copy of the deed for permanent rights is incorporated as an exhibit in the C&M. The railroad right of entry is an acceptable vehicle for obtaining temporary construction rights when there is no C&M. The DRC needs to be familiar with the procedure in place for each railroad located in his/her district.

© 1994-2025 California Department of Transportation. All rights reserved.

18.06.01.02 Milepost

Highway projects should be identified with the county, route, nearest city, the latitude and longitude of the location, the crossing's DOT number, the railroad subdivision, and railroad milepost, when corresponding with the railroad on new projects. A railroad milepost and Caltrans postmile use different numbering systems. After the railroad establishes a file number, that number shall be used in all future correspondence. If the proposed work is at an existing grade crossing, the CPUC grade crossing number shall be included in the identification on the correspondence.

18.06.01.03 Title Reports for Exchanges

In transactions involving exchanges of properties with a railroad, a copy of the preliminary title report or policy of final title covering the property to be conveyed to the railroad shall be furnished to the railroad if it is available.

18.06.01.04 Condemnation Process

When negotiations on the C&M Agreement stall or the DRC anticipates difficulty in delivering the document in time for right of way certification, it may be necessary to seek a Resolution of Necessity (RON) from the California Transportation Commission (CTC). DRCs are reminded that a project with railroad involvement cannot be delivered on a RON alone. CPUC approval is necessary as well, but a RON is essential to a request for a CPUC order to construct and demonstrate to the Public Utility Commission that Caltrans has the necessary property rights. Before seeking an Order for Possession, the District must have CPUC approval to demonstrate to the CTC that the property is necessary for the project. When working on the timeline for the project, DRCs must keep in mind that a request for a CPUC order can take several months and that the railroad has the option to request an appearance before the CTC. The CTC staff discourages RON applications for delivery or funding issues. The district must demonstrate the request is the clear result of a stalemate in negotiations with the railroad.

18.06.02.00 Railroad Contacts

HQ RW will periodically publish a list of railroad contacts for the DRC's reference. Each DRC is responsible for notifying HQ RW as changes occur to the railroads operating within their district.

© 1994-2025 California Department of Transportation. All rights reserved.

18.06.03.00 Railroad Payments

All railroad payments are processed by the HQ right of way Liaison.

18.06.03.01 Minimum Payment and Administrative Settlements

City of Oakland v. Schenck of 1925 established a nominal valuation for transverse crossings under certain circumstances. In transactions with railroads where the state is to receive a Grant, Quitclaim Deed, or an easement, it is permissible to make a minimum payment of $1,000 in addition to any processing fee required by the railroad. This minimum offer is applicable only when the appraised value of the property to be acquired is nominal. A district cannot negotiate or accept an offer in compromise without first obtaining HQ Office of Railroad Coordination written authorization. Districts must submit a request for administrative settlement to HQ Office of Railroad Coordination for any settlement over the amount of the approved appraisal.

18.06.03.02 Payments for Railroad Services Outside of Right of Way Acquisition

The railroads will submit invoices for agreed-upon reimbursement to HQ Right of Way Land Surveys. These invoices are received by HQ logged and reviewed by the appropriate Liaison. Any invoice over $2,500 will be sent to the Project Manager and/or Resident Engineer with a copy to the DRC for concurrence or dispute by a specified return date. The California Prompt Payment Act requires all undisputed invoices be paid within 45 days of receipt of the invoice. If the obligating document (i.e., C&M or RW Agreement) is funded under Phase-4 Construction Capital, HQ will process the invoice for payment. If the funding comes from Phase-9 Right of Way Capital, HQ will prepare the receiver package and submit it to the District's Planning & Management branch for final processing.

18.06.03.03 Right of Entry and Other Fees

The DRC must submit a check request packet to HQ Accounting. HQ does not require an executed copy of the document to issue the check. The DRC shall request the check be mailed to the DRC. The State Controller's Office will generate a warrant for fees the railroads demand in association with a right of entry or license. The State Controller's Office does not require an executed copy of the document to issue the warrant.

© 1994-2025 California Department of Transportation. All rights reserved.

18.06.03.04 Right of Way Agreements and Other Agreements

Please be aware if an invoice is received after a project EA has been closed or all the funds on a project have been expended, a Railroad Owner can submit a claim with Caltrans or submit an appeal with the Board of Government Appeals. It will depend on the dollar amount of the claim where the claim will be submitted.

For claims $12,500 or less, submit a claim (DOT ADM-3016).

For claims more than $12,500, file a Government Claim for Eligible Compensation.

18.06.03.05 Railroad's Lessees

The railroads generally will not clear lessees' interests but will insist that the State reach separate agreements with lessees before settlement with the State. The railroad may demand compensation for any perceived loss of revenue that is due to the termination of the lease with the lessee.

To ensure that payment is not made to a lessee for improvements for which the railroad claims ownership, the following procedure should be followed:

- Discuss the lessee's ownership of improvements, if any, located within the area to be acquired.
- Confirm ownership of the improvements with the railroad in writing.
- Once the railroad's concurrence has been obtained, commence negotiations with the lessee to acquire the affected improvements.

18.06.03.06 Purchase of Track

The purchase of existing railroad track is prohibited. Any deviation from this procedure must have HQ RW's prior approval.

© 1994-2025 California Department of Transportation. All rights reserved.

18.06.04.00 RW Agreements and Contract Clauses with Railroads

The Department has carefully considered the language of the clauses and they shall NOT be altered. If, in the district's opinion, situations arise that require modification of these clauses or the use of special clauses, the district must submit the contract to HQ RW for review and approval prior to submittal to the railroad.

18.06.04.01 Use of Railroad-Prepared Agreements/ Documents

Class I railroads prefer to use their document formats; however, they have agreed to use Caltrans' versions which are in compliance with State statutes. It is essential that the HQ Liaison and Legal review the document before the district or a local partner accepts or executes it.

18.06.05.00 Deed Clauses with Railroads

Districts are to use the appropriate pre-approved deed clauses for the railroad involved in the project available from the Office of HQ Railroad Coordination. Districts do not have the authority to negotiate any deviation from those clauses but should discuss any special language requirement with Headquarters at the earliest possible moment in the project development process.

18.06.06.00 Railroad Easement

An easement is the document used to gain temporary and/or permanent rights onto railroad property.

18.06.06.01 Standards of Acceptability

When acquiring an easement, the district should examine the deed or document by which the railroad obtained title, if practical, to determine the railroad's present and future rights of usage, such as the right to construct, reconstruct, or use other facilities on their right of way.

Easements from the railroads differ from easements received from other property owners. In some instances, the railroads may insert clauses that define the obligations and responsibilities of the two parties to the transaction.

© 1994-2025 California Department of Transportation. All rights reserved.

Upon receipt of an easement, the district shall review it for conformance with the provisions of this section.

Extreme care must be exercised to ensure that an easement does not cover an area used by the public but for which no recorded document exists.

Easements should contain a provision granting the Department the right to construct, reconstruct, upgrade, place, replace, remove, inspect, maintain, repair, alter, renew, improve, and operate pipelines, utility lines, track, railroad facilities, and communication lines above, below and on the surface of the property. Railroads reserve and shall have the exclusive right to grant such rights to third parties. Communication lines shall include, without limitation, transmission by conduit, fiber optics, cable, wire, or other means of electricity, voice data, video, digitized information, or other materials or information.

HQ Office of Railroad Coordination should be contacted concerning any problem that may arise. When an easement requires review by the Department, the district will transmit the easement to HQ Office of Railroad Coordination with its recommendations or comments.

While it is not possible to list every type of obligation that would be unacceptable in an easement, those listed in the following table are some of the objectionable clauses the railroad may ask to include in an easement.

OBJECTIONABLE CLAUSES

- Generally, easements should not call for any continuing state obligations.
- There should be no obligations to alter, reconstruct, or remove a facility at the request of the railroad, its lessees, subleases, or licensees except as provided for in the standard easements (historical indentures).
- There should be no obligation for the payment of funds for railroad work in the easement (historical indenture). The easement (historical indenture) may refer to the Construction and Maintenance Agreement or Service Contract which will cover work performed by the railroad.
- The State's construction should not be subject to approval by the railroad. Clauses may be inserted, however, that provide that the railroad may inspect the work and that they have the right to approve plans and specifications covering the work to be performed near the railroad tracks.
- There should be no provision allowing the railroad to supervise, direct, or change any of the methods or procedures of construction.
- There should be no provision allowing the railroad to do work if, in the railroad's opinion, the state does not perform the work satisfactorily.

© 1994-2025 California Department of Transportation. All rights reserved.

- Easements should not contain a provision for a reversion of the State's title based on non-use of the highway or highway facilities. The railroads will sometimes insert a clause that provides that the title shall revert if the facility ceases to be a highway. The only way a facility can cease to be a highway is by the CTC's action. Such terminology is acceptable when the State has an easement since subsequent abandonment of the highway by the CTC would cause a reversion to the owner of the underlying fee. However, terminology in connection with a reversion, such as "ceases to be used as a highway," is unacceptable since it calls for a reversion based on nonuse.
- Title should not be taken subject to subsequent leases, licenses, encumbrances, etc. Easements, however, usually provide that the State is to take title subject to prior leases, licenses, encumbrances, etc.

18.06.06.02 Easements for Highway Purposes

On a widening of an existing highway, the State may accept a description covering both the existing and the widened portion if the State's original rights were acquired by recorded document. The effect of accepting a document covering both portions will not destroy or impair the State's original rights since these rights are of record and may be disposed of only through the CTC's action.

18.06.06.03 Drainage Easements

When the State is obligated to relocate an existing culvert/drainage facility under the railroad tracks, the railroad may not permit it. No easement is required in this case, and the proposed construction may be covered by a Right of Entry or in the C&M or Right of Way Agreement.

In certain cases, the railroad may be obligated to replace the existing culvert/drainage facility at its own expense. To avoid delays, the district should contact HQ Office of Railroad Coordination as soon as the right of way requirements are determined for collaboration with legal.

Railroads' policy toward the granting of drainage easement is subject to change. If the project calls for a drainage easement, discuss the feasibility with the Railroad Manager of Industry and Public Projects.

© 1994-2025 California Department of Transportation. All rights reserved.

18.06.06.04 Easements in Limited Vertical Dimension (Aerial Easements)

See Section 8.01.30.00 for restrictive conditions that must be included in Aerial Easements. HQ Office of Railroad Coordination must be consulted about any deviations in wording to be used, and CPUC concurrence is required.

18.06.06.05 Standard Indentures

Currently, the railroads do not issue indentures; however, in the event one does, it typically will use their own specific clauses and are subject to frequent changes. Therefore, Indentures must be submitted to HQ Office of Railroad Coordination to obtain Legal approval for use.

18.06.06.06 License for Minor Installations on Right of Way

A License may be used whenever it is necessary to install minor improvements on railroad right of way for the State's benefit. If the facility is such that it must remain in place, a permanent right must be obtained.

18.06.07.00 Permits or Licenses

The DRC should be familiar with the individual requirements of the railroads he/she deals with in the district. Unless directed otherwise by the railroad representative, the district submits an application for the rights needed to support the State's construction activities. When work is contracted out, a Right of Entry must also be obtained by the Contractor per railroad instruction.

The application will include at minimum:

- Plans and location maps.
- Anticipated length of time the property will be occupied.
- Grading requirements, if any.
- Any other significant factors relevant to State's proposed work.

The DRC should ensure that the application complies with the individual railroad requirements.

18.06.08.00 Acquisition of Railroad Access Rights

Procedures are outlined in the table below.

ACQUISITION OF ACCESS RIGHTS EXAMPLES

Case No.	Factual Condition	Explanation
#1	Freeway to be constructed on new alignment; no public roadway previously existed; immediately adjacent to railroad operating or industrial property; no railroad property to be acquired.	The railroad has no legal right of access to the new facility and access rights need not be acquired from the railroad.
#2	Same factual condition as in Case #1, except that railroad property is to be acquired.	Access rights shall be acquired from the railroad using the applicable access clause in the conveyance documents.
#3	Freeway to be constructed along an existing public roadway immediately adjacent to railroad operating property; no prior document or agreement between the State and railroad exists which establishes the railroad's right of access to the existing public roadway; no railroad property to be acquired.	Access rights need not be acquired.

© 1994-2025 California Department of Transportation. All rights reserved.

ACQUISITION OF ACCESS RIGHTS EXAMPLES (Continued)

Case No.	Factual Condition	Explanation
#4	Same factual condition, but with a prior document or agreement.	If a prior document or agreement does exist between the State and the railroad, the district should request a legal opinion through HQ Office of Railroad Coordination to determine if loss of this right is compensable. The request should include the following: • RW map. • Plan showing proposed construction. • Copy of prior document or agreement. • Evidence of railroad's use of public roadway for ingress and egress. • Any additional pertinent information.
#5	Same factual condition as in Case #3, except that a new freeway is to be constructed immediately adjacent to railroad station ground, industrial, or nonoperating property.	Access rights should be acquired using the applicable access clause. Appraisal consideration should be given to payment of damages or other mitigating measures for the loss of access rights.
#6	Same factual conditions as in Case #3, except that a portion of railroad operating property is to be acquired.	Access rights should be acquired utilizing the applicable access clause in the conveyance documents.

Standard access clauses should be used when acquiring access rights from the railroads but should be modified to specifically define courses and distances over which access is to be acquired. The district should refer all railroad access control acquisitions to HQ Office of Railroad Coordination before completing the appraisal process and during negotiations should disagreements with the railroad occur.

18.06.09.00 Replacement of Railroad Improvements (Buildings)

The DRC must understand the impact of the project on railroad improvements, especially buildings and other unique railroad facilities when those improvements must be cleared. If clearance is required before construction funds are scheduled to be available or the improvements are more appropriately handled outside of the C&M, the DRC must bring that fact to the attention of Appraisals and the Project Manager. The HQ Liaison can assist the district in determining the best method to use for acquiring/clearing these improvements.

18.06.09.01 Determination of Use – Replacement

If the district's preliminary investigation indicates that an affected building is operating property, the district prepares a comprehensive report substantiating its determination and submits to HQ Office of Railroad Coordination. This is most important when it involves buildings such as depots, warehouses, or other railroad buildings since the structure may have to remain in place until a new facility is constructed. The report is sent to FHWA for approval to ensure that the replacement of the structure will be eligible for federal reimbursement. To comply with Section 106 or 4(f) requirements, the report must indicate if there are any historic stations, tracks, or railroad sites that are being used for recreational purposes.

On all non-federally participating projects, operating improvements located on operating property will be relocated or be functionally replaced. Non-operating property shall be acquired at fair market value.

If operating improvements are to be replaced, appropriate environmental clearance must be obtained.

© 1994-2025 California Department of Transportation. All rights reserved.

18.06.09.02 Buildings – Betterment and Credits

When an existing railroad building is to be replaced, the replacement facility must be constructed to meet current building code requirements. In constructing a replacement facility, only items that exceed the code requirements are considered betterments. The replacement cost must be approved by both the project sponsor and the railroad. Only those items specifically requested by the railroad in excess of the current code requirement and/or additional capacity are considered betterments. The credits to be applied against the construction of the new facility will be an amount equal to the railroad records of the depreciated value of the existing facility. See 23 CFR 646, as amended, for detailed instructions.

On federally participating projects, HQ Office of Railroad Coordination will confirm that FHWA concurs that the improvement to be replaced is an operating railroad facility. On all projects eligible for federal funds, the contract plans for the improvement, including credits, shall have prior FHWA approval.

18.06.10.00 Railroad Right of Entry

A right of entry (ROE) from a railroad is a key document before construction can commence. This document is a permit to be within the railroad corridor. It does not convey any real property rights. Both the project sponsor (i.e., Caltrans) and the primary contractor must obtain a Railroad ROE before the start of construction.

18.06.10.01 Types of Railroad Access Documents

There are many types of documents that permit access to the railroad property, such as a Rights of Entry (ROE), Maintenance Consent Letter (MCL) Permit, and a Temporary Occupancy Permit that allow access to the railroad's property. A right of entry is required when permanent or temporary rights are being accessed or needed for the project. The railroad will inform the DRC on a project-by-project basis.

© 1994-2025 California Department of Transportation. All rights reserved.

18.06.10.02 Standards of Acceptability

Care should be taken that Rights of Entry from railroads incorporate the following two features:

- Limited Liability by the State – Liability should be limited in accordance with Government Code Section 14662.5, which provides that the State may agree to indemnify other parties for any damages proximately caused by reason of State's operations under the agreement or using language stating that the State will indemnify the railroad insofar as it may legally do so.

  A typical clause approved by the Legal Division reads as follows:

  "Pursuant to the provisions of Section 14662.5 of the Government Code of the State of California, the State of California agrees to indemnify and hold harmless Railroad and agrees to repair or pay for any damage proximately caused by reason of the permission given hereunder."

- Limitation of Expenditures – Limitation can be accomplished by putting a dollar limitation in the Right of Entry or by reference to a C&M Agreement or a Service Contract.

A DRC does not need a fully executed Application or Railroad Right of Entry to request the application fee or right of entry fees. A payment request package must contain the Federal Participation Memo (Form RW 08-16) (internal Caltrans link), and Acquisition Invoice (Form RW 08-17) (internal Caltrans link), a copy of the demand which can be an email or instructions from the Railroad Owner containing their official letterhead, and a copy of the application or right of entry form.

© 1994-2025 California Department of Transportation. All rights reserved.

18.07.00.00 – END OF PROJECT/CLOSE-OUT PROCEDURES

18.07.01.00 General

A DRC should keep track of a project's progress and officially notify the Railroad representative and HQ when a project's construction or railroad work has been fully completed. The DRC should notify via email the railroad when a final inspection is needed, the railroad should record its final inspection, after which the railroad internally confirms with its engineering department and accounting so a final invoice can be issued. The railroad has 270 days to close out a project. Projects with federal funding may require close out within 6 months (180 days) of Construction Contract Acceptance (CCA). An agreement's funds cannot be disencumbered until the Railroad has officially confirmed a project is completed and a final invoice has been paid.

A Disencumbrance form should be completed by the DRC and emailed to the HQ Liaison so the agreement funds can be disencumbered in Advantage.

A Project Engineering Review (Phase 9) Agreement can be disencumbered once a project's construction commences or upon expiration.

Projects that have a GO-88, must file a Form G (if applicable) 30 days after end of project construction or end of construction work at the railroad location.

A Form G can cover more than one project. If you have three (3) or four (4) projects completed during the same period, they can all be combined on one Form G.

18.07.01.01 Relinquishments

A project may require the Department to acquire property rights that will be relinquished to a local Authority. As part of the relinquishment process, the DRC will notify the Railroad in writing of the transfer. The Railroad must be given a date that a response is to be received from them. A notice must be sent on two separate occasions to show due diligence on behalf of the Department. The Department must also have written acknowledgment from the local authority that it is in concurrence with this action.

© 1994-2025 California Department of Transportation. All rights reserved.

If the relinquishment involves a C&M an amendment must be executed acknowledging the local authority's assumption of the Department's responsibilities. The DRC will submit the Railroad's response as part of the CTC's relinquishment package.

Once the CTC approves the relinquishment, Surveys will record the document.
