Subject: Borders for Vendors doing Traffic Safety Devices

Randy

Attached are all the files needed to hand out to the vendors developing drawings for Traffic Safety
Devices.

1. There are 3 DGN files. Each contains a border for a specific license (Civil, Mechanical and
   Structural)
2. The PDF (Border4Vendor_instructions) is a document that explains the files Caltrans is giving
   to the vendor, what is expected from the vendor and how to use the Caltrans fonts.
3. The PDF (borders_for_vendors_instructions_April2017) contains instructions to the vendor
   on how to utilize and complete the borders for submission.   A few of the instructions are
   for the district inserting the TIFF files in an advertised project plan set.   This is the only file
   that the district needs.
4. The Caltrans fonts are provided in a ZIP.   There is one for vendors using MicroStation and
   one for vendors using AutoCad.

Let me know if you have any questions or if there is something else you can think of.

Thanks, Jeff
