Notes:

* NAAQS: National Ambient Air Quality Standard(s). These are the Federal criteria pollutant primary and secondary ambient air quality standards. Conformity regulations apply when an area is designated nonattainment, or attainment with a Maintenance SIP, for one or more criteria pollutants by the U.S. EPA. Transportation Conformity only applies in ozone, carbon monoxide (CO), particulate matter (PM10 and PM2.5), and nitrogen dioxide (NO2) areas.

Air Pollution Control District and Air Quality Management District contact information can be obtained from the [California Air Resources Board](#). Links above were current as of October 2021.

For contact information related to State and Regional transportation planning agencies, refer to the [Caltrans Transportation Planning](#) web site.

Maps and other materials related to nonattainment area designations in California can be found at the California Air Resources Board and at [EPA Region 9](#).

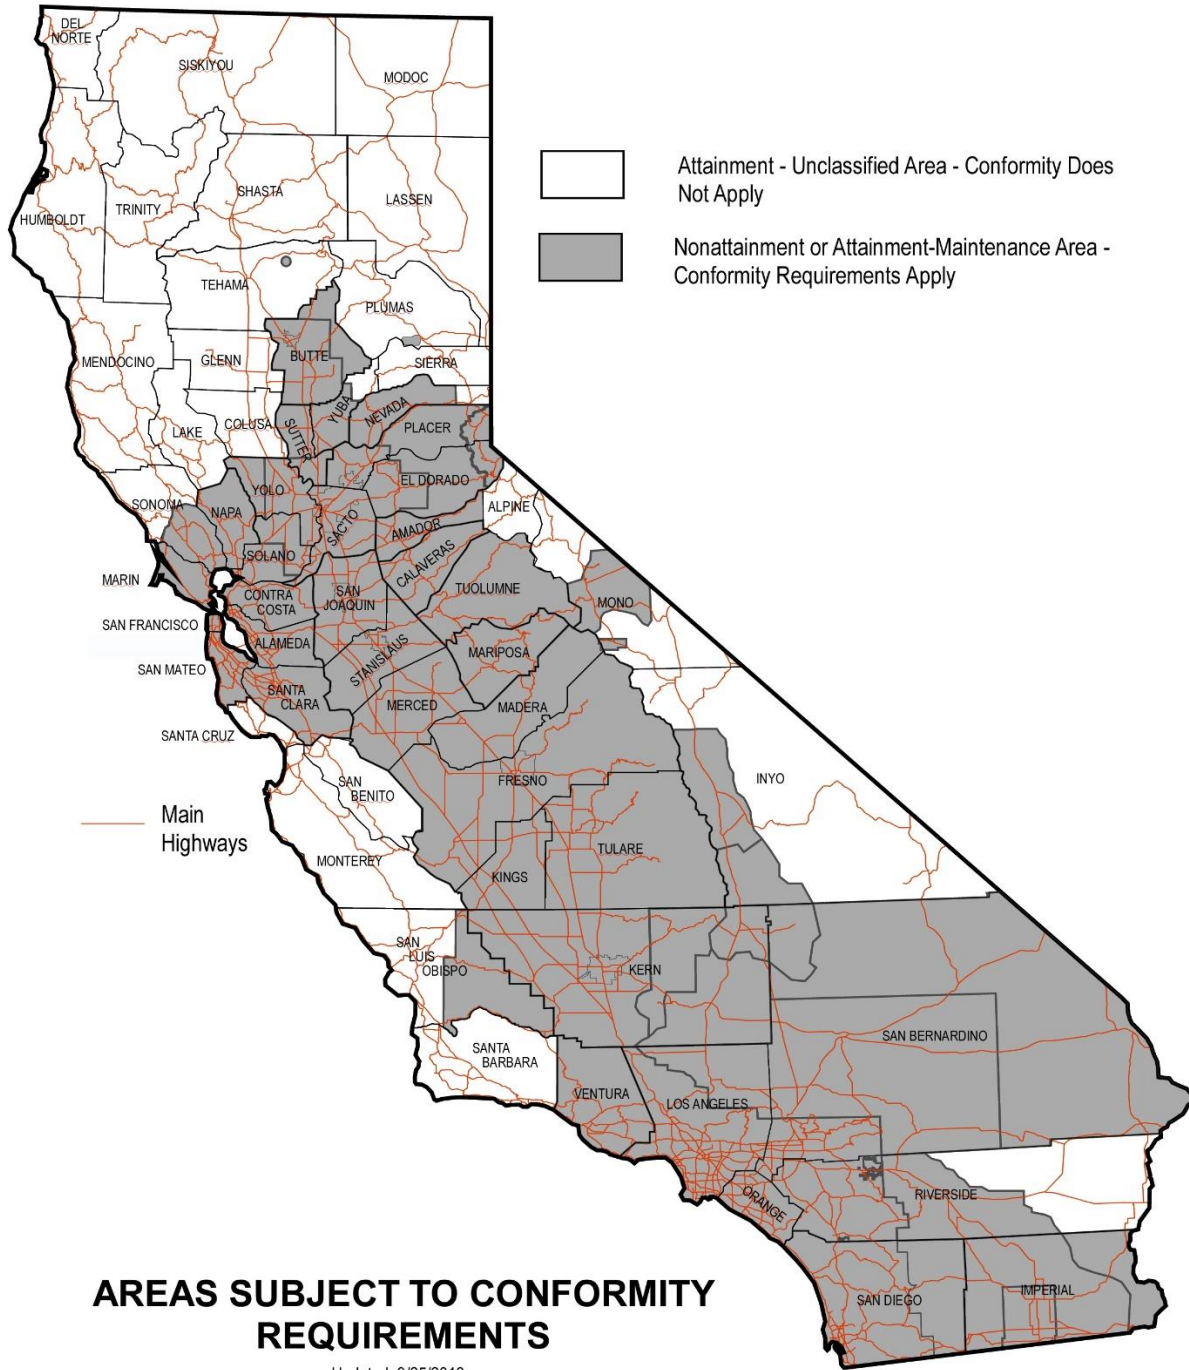

Entities are included in this table only if they are designated by U.S. EPA as nonattainment or attainment (with a Maintenance SIP) under the Federal Clean Air Act and the U.S. EPA "Green Book, for pollutants that trigger Transportation Conformity requirements under Federal [Clean Air Act Section 176\(c\)](#) and 40 CFR 93 Subpart A. Many additional areas fail to attain one or more State air quality standards, and the Los Angeles County portion of the South Coast air basin is nonattainment for the 2008 Lead (Pb) NAAQS. Compliance with State standards is important for environmental analysis purposes but is not part of the Conformity process under the Federal Clean Air Act.

For more information regarding Transportation Conformity, including links to legislation, regulations, and guidance, see the [Federal Highway Administration](#) and EPA conformity web sites.
